look from drooping lids. Diplopia, one image seen below the other. Teeth decay at the edge of the gums and break off; are cupped, have serrated edges; dwarfed in size and converge at their tips. The typical eruption of *Syph*. is copper-coloured spots, but it covers many other forms, including pemphigus. The glandular system is affected throughout and nutrition impaired, leading to extreme emaciation. Burnett has recorded in his book on *Delicate Children* many instances of the power of *Syph*. to free stunted children from this constitutional blight. Further indications for *Syph*. are: Pains < and > gradually; are shifting, and require frequent change of position. Leucorrhśa; profuse, soaking through napkins and running to heels. Craving for alcohol in any form. Hereditary tendency to alcoholism. (Bacchus and Venus are close allies). The orifices of the body are all affected by syphilis, and *Syph*. has a great sphere in rectal pain and constipation. "Obstinate constipation for years; rectum seems tied up with strictures; when enema was used the agony of passage was like labour." Bones are affected, and especially bones of head and tibić. Nodes on the head. H. C. Allen says: "Syphilitics, or patients who have had chancre treated by local means, and as a result have suffered from throat and skip troubles for years, are nearly always benefited by this remedy at commencement of treatment unless some other remedy is clearly indicated." Thomas Wildes (*H. P*., xi. 267) gives his experience with *Syph*. In chancre he gives *Syph*. 1m (Swan)─according to Skinner's calculation this is much lower than 1m of the centesimal scale─one dose every night. The chancre increases for the first two weeks and then gradually fades away, not being followed by secondaries. Where the edges of the chancre assume the appearance of proud flesh in the third or fourth week, and become everted, jagged, and angry dark red, he gives *Lac can*. cm (Swan) every night for ten to fourteen days, until the sore takes on a more natural appearance, when *Syph*. 1m is again given to finish the case. For any remaining induration *Nit. ac*. 30, four times a day, is given. Headaches in great variety he cured with it; aphasia; ptosis; paralysis of tongue; facial paralysis; hemiplegia; "persistent pains in any part of the body;" catarrhal and nerve deafness; itching of nostrils; dark purple lines between alć nasi and cheeks. Itching scabby eruptions on face or breast; singly or in clusters, looking like herpes. Pain and pressure behind sternum. Epilepsy. Wildes cured with *Syph*. 1m a bookkeeper who for many months had had a piercing, pressing, excruciating headache over right eye extending deep into brain. It was so severe, he was losing continuity of thought and memory. Under *Syph*. every night the headache disappeared entirely in ten days and the mental faculties were fully restored; but in six weeks the whole eyebrow on that side broke out into a sickly, yellow, syphilitic eczema with a red, angry, and oozing base extending under the arch to the lid from canthus to canthus up into forehead and down the side of the nose. The cure of this was tedious, because, Wildes thinks, he did not stick to *Syph*., but changed the remedy. This man had had syphilis a few years before. In 1879 a lady, 26, extremely bright and intelligent, came to Wildes with a dreadful ozćna. She had also curvature of the spine and congestion of right ovary. Always delicate from a child. *Syph*. cured the ozćna and improved the health, but it "drove out a saddle to which the *Sepia* saddle

is but a shadow"—a furious inflammatory mass of syphilitic sores, scabs, and eczema, red and angry, with a fiery base extending from one malar prominence to the other, across nose up to eyes and forehead. This took eighteen months to cure. The ozśna never returned. A boy, 4, had an obstinate rash, a combination of prurigo and herpes, on chin, lips, cheek-bone, forehead, and hairy scalp; on arms, chest, back, bends of joints and on the joints, and on fingers and hands, nowhere profuse. In spite of authorities to the contrary, Wildes maintains that syphilitic rashes may itch, and that prurigo is infectious and is one of the initial stages of leprosy. This boy had a spot of eruption on the left thigh the size of the top-joint of a man's thumb. This was distinctly a leper spot. *Syph*. 1m caused the rash to come out strongly all over the body in patches, the face was one-third covered with a thick, yellow, scabby eruption. The remedy was continued and the boy got well, wonderfully improved in health, no longer nervous, growing well; sleeping well; appetite good. Girl, 16, had measles a year before which did not come out properly. A year and a half prior thereto subject to neuralgic headaches. Ailing about two years; very despondent, wants to die, headaches growing more violent. During the headaches the temple veins stand out, has pains all over the body, is very irritable, restless, *walking about much of the time*, does not wish to be soothed, *violent on being opposed*, has tremors and *seems on the verge of convulsions*, dazed, *absent-minded*, and almost *insane. Always washing her hands*. Was formerly constipated, but now subject to "a kind of diarrhśa." Menses never have come on properly, and for the past year have been very irregular, much delayed, scanty, and *always extremely painful*. Often feverish. Sleep anxious, distressed, and often *wakeful* and violently *restless*. The italicised symptoms indicated *Syph*., and under this she steadily recovered. A young lady contracted "lepra-syphilis" from vaccination. She had an immense blood-boil on her arm which would not heal. Face broken out with a lumpy fiery rash. With *Syph*. 1m at bedtime she recovered rapidly; the arm healed quickly and her face became free from eruption. Boy, 3, had cluster of yellow blotches on fingers and roots of nails, distorting the nails. The boy's father was epileptic. The boy was helped with *Fluor. ac*. and cured with *Syph*., the nails becoming straight. Many persons, says Wildes, after taking *Syph*. for a few days, complained of heavy, crushing, cutting pains across the base of the cerebellum; others of heavy aching and stiffness from base of neck up through muscles and cords of neck and into the brain; others of a heavy, clouded, dull feeling at base of brain with physical lethargy, and sometimes with dizziness, sometimes with confusion of thoughts and often a feeling as if going insane or about to be paralysed. Sometimes a far-away feeling, with a feeling of indifference to the future. Accompanying these there may come a heavy, dragging, dull feeling in lumbar region, with stiffness and want of elasticity. *Peculiar Sensations are:* A seething feeling as if hot water or hot oil running through all veins of the body, all night long. As if going insane or about to be paralysed. Tongue feels as if paralysed. A far-away feeling with apathy. As if head were pulled back by a weight. As if blood went to right inner canthus and temples and could get no further. As if sand in eyes. As if right eye were wide open and cold air

were blowing in it. Fluttering as of something alive in teeth. As if a worm in tooth. As if teeth had got out of place. Distress as if in omentum. As if rectum were tied up with strictures. As if urethra had been stuffed up and clogged. As if sternum was being drawn towards dorsal vertebrć. As if she would suffocate with rough. As if skin were drawn up in centre of chest on drawing back head. Coccyx as if swollen. As if toes on right foot were disjointed. Like growing-pains in limbs. As if bones were sawed. Palms and soles as if pricked by needles. As if throat tearing to pieces. As if top of head were coming off. As if teeth were loose. As of a nervous chill commencing in anus and running down legs. As if bitten by bugs. A number of *linear* pains have been observed in *Syph*. cases. G. H. Carr (*M. A*., xvii. 162) relates this case: An old man had been troubled two or three winters with an *intense cold pain* in both legs; it came on every night on lying down; and lasted all night, the only relief being by getting up and walking. Magnetic leggings had given most relief. *Syph*. mm, one dose daily, was given. He lost the pain for six weeks, when it returned in milder form. *Syph*. cmm was given, and he had no more pains all the winter. This medicine, he said "made his genitals ache so that he couldn't sit still." This lasted over a month. *Syph*. cm cured (*ibid*.) a lady of "asthma" that she had had for twenty-five years, the attack coming on *only at night after lying down*, or *during a thunderstorm*. Swan (*M. A*., xxviii. 239) says he gave crying infants, when they developed the propensity immediately after birth and did not cease, one dose of *Syph*. cmm, and it was difficult to make them cry after that. Yingling (*M. A*., xxix. 135) reports this case: Rev. D., 30, dark, free from venereal taint, had a constant dull, heavy ache above inner angle of right eye, very distressing, with an occasional *thrust as of an iron rod from the same spot* through to lower part of occiput. This thrust was excruciating. He was due to preach next day, but the pain quite incapacitated him, hence his appeal for help. Haggard look. *Syph*. cm, one dose, was given. He was free from pain before he reached home, next morning was perfectly well. The symptoms are < by touch (tibia; os uteri). Pressure = pain in spot middle of thigh; > throat; pressing teeth together > toothache. No position suits. Motion <. Raising arms laterally <. Walking > pain in hips and thighs. < At night. Warmth and cold < and >. Warmth > headache; of stove > pain in swollen wrist and big toe. Hot or cold things < toothache. Cold water > ophthalmia pains. Damp weather; warm, damp weather; thunderstorm; seaside <. > In mountains. < Winter.

Causation.—Sun. Damp weather. Thunderstorms.

SYMPTOMS.

1. Mind.—Loss of memory (n).—Loses remembrances of passing occurrences, names, dates, &c., while all occurrences previous to inception of disease are remembered as distinctly as ever (n).—Very nervous, weeping without cause.—Cross, irritable, peevish.—Irritable, excited, walking much of the time, does not want to be soothed, violent on being opposed, has tremors, seems on the verge of convulsions, dazed, absent-minded, always washing her hands.—Periodical neuralgia in head (neuralgia).—Very despondent, does not think will ever get better (s.s.).—Terrible dread of night; always < as night approaches; leaves her about daylight, which she prays for (spring cough).—Feeling as if going insane, or about to be paralysed.—A far-away feeling, with apathy and indifference to future.—Crying infants, who begin immediately after birth.

2. Head.—Vertigo on looking up, seems to be caused by heat.—Headache: linear, from or near one eye backward; lateral; frontal; from temple to temple; deep into brain from vertex; as from pressure on vertex; in either temple, extending into or from eye > by warmth; in bones of head; < by heat of sun; after sunstroke.—Sick-headache, pains intolerable, arteries of head full and pulsating violently; high fever, frequent retelling on trying to vomit; menses regular, but very scanty.—Lancinating pain in occiput, invariably < at night (n).—Neuralgic headache causing sleeplessness or delirium at night, always commencing about 4 p.m.; < at from 10 to 11 and ceasing at daylight.—Bursting sensation in vertex as from severe cold.—Pain from eyes through to occiput, with sensation of weight in occiput drawing head back; or as if it were pulled back; eyes ache and smart.—Constant linear headache, commencing at both angles of forehead and extending in parallel lines backward—a precursor of epileptic attack.—Heavy, crushing, cutting pain across base of cerebellum.—Heavy, clouded, dull feeling in base of brain.—Headache through temples, thence vertically like an inverted letter T.—Coronal headache (s.s.).—Headaches accompanied by great restlessness, sleeplessness and general nervous erethism.—Syphilitic headache for many months, piercing, pressing excruciating over r. eye; extending deep into brain; losing continuity of thought and memory; makes repeated mistakes in figures.—Suffusion and full feeling in face, throat, and head, with innumerable small enlarged cervical glands.—Sore, one and a half inches in diameter, on occipital bone, covered with a thick, yellow-white scab.—Dirty eruption on scalp.—Great loss of hair (n).

3. Eyes.—Red papulous eruption round l. inner canthus, with isolated pimples on side of nose, cheek and eyebrow; these pimples were red, with depressed centre, circumscribed areola, became confluent where they were most dense; pimples bleed when scabs come off; agglutination of lids.—Myopia (n).—Sharp, pulsating pain, occasionally at outer end of superior border of r. orbit, apparently in periosteum.—Upper lids swollen.—Ptosis: paralytica; eyes look sleepy from lowering of upper lid.—Diplopia, one image seen lower than the other.—Strabismus paralytica, eye turning inward, and pupil can only be turned outward as far as median line.—Chronic recurrent phlyctenular inflammation of cornea; successive crops of phlyctenules and abrasion of epithelial layer of cornea intense photophobia; profuse lachrymation; redness and pain well marked delicate, scrofulous children, esp. if any trace of hereditary syphilis remains.—L. eyeball covered with fungus-like growth, pain intense, < at night.—Acute ophthalmia neonatorum (n).—Redness and swelling of outer half of both lower tarsal edges.—Syphilitic iritis, intense pain steadily increasing night after night; < between 2 and 5 a.m., coming almost at the minute and ceasing same way (s.s.).—Pain in r. inner canthus as if blood went there and could go no farther, also in r. temple (rheumatic iritis).—Both eyes glued in morning; conjunctiva injected; photophobia, constantly wears a shade.—Eyes dull.—Infantile syphilis.—Ophthalmic pains, < at night, > by told water.—R. eye alone affected congestion of conjunctiva and sclerotica, with some chemosis; lids inflamed, esp. at outer canthus; sensation of sand in eyes; lids agglutinated in morning; great photophobia (hereditary syphilis).—Neuralgia every night, beginning about 8 or 9 p.m., gradually increasing in severity until it reached its height about 3 or 4 a.m., and after continuing thus for two or three hours gradually decreased and finally ceased about 10 a.m. (rheumatic ophthalmia).

4. Ears.—Intense earache in r. ear, incisive pains thrusting into ear; purulent watery discharge from ear with pain.—Gathering in l. ear which discharges a great quantity of pus (hereditary syphilis in a child).—Deafness gradually increasing until she could scarcely hear at all.—Complete deafness; nothing abnormal to be seen.—Catarrhal or nerve deafness with marked cachexia.—Calcareous deposit on tympanum.—Small, acrid, watery discharge occasionally from ears, no deafness (ozćna).

5. Nose.—L. side of nose, inside ala, itching.—Nose stuffed up and burning.—Attacks of fluent coryza.—Offensive, thick yellow-green nasal discharge; during sleep dry scabs form in both nostrils; following an application of salve for sore eyes; l. submaxillary gland, which had been swollen and indurated, softens, discharges and, after forty-five days, begins to heal slowly.—Ozćna syphilitica; (*Syph*. brought out an eruption of sores with a fiery-red base on nose and over frontal sinuses).—L. side of nose inside and out very sore, likewise lips and chin; sores itching and scabbing over.—Itching in nostrils.

6. Face.—Face drawn to one side, difficulty of speaking, masticating, blowing (n).—Spasmodic twitching of many muscles, esp. in face (paralysis agitans), with great melancholy and depression of spirits.—Facial paralysis r. side, thick speech, hemicrania, jactitation of r. eye and lid.—An old gentleman has had for some years cancer on r. malar bone; no rest, his agony excruciating in extreme (relieved).—Face pale.—Itching, scabby, eczematous eruptions singly or in clusters, looking like herpes.—Nose and cheeks covered with eruptions and scabs in layers rising to a point.—Dark purple lines between alć nasi and cheeks.—Lips and teeth covered with bloody mucus.—Sores on lips and chin, esp. l. side scabbing over.

7. Teeth.—Single small lunć cleft in upper incisors, permanent set, which incisors are dwarfed in their general dimensions, and converge at their tips; inherited syphilis (n).—Children's teeth are cupped.—Teeth decaying at edge of gum and breaking off (n).—Felt like a worm in tooth, could not tell which tooth.—Singular feeling as if teeth had all got out of place, and on closing jaws teeth do not come well together.

8. Mouth.—Tongue red and thick; two deep cracks running lengthwise in it; one on each side of median line.—Aphasia, difficulty of finding words; debility.—Tongue feels as if paralysed.—Fetid breath.—Tongue coated; white, edges indented by teeth.—Putrid taste in mouth before epileptic fit.—Tongue very red and thick; covered with herpetic eruption, two deep cracks running lengthwise on each side of median line, making it difficult to swallow (s.s.).—Tongue thickly coated, dirty, edges indented or serrated by teeth (n.).—Twenty ulcers in mouth, every part involved, top and under side of tongue, lips, buccal cavity, fauces and nose; septum of nose threatened, both alć nasi very painful, smarting with burning as if on fire; pains and burning prevented sleep; hungry but could eat nothing but fluids as mastication was impossible; tongue heavily coated white, large quantities of stringy, viscid, saliva running from mouth of a sweetish taste; a putrid, sickening odour filled whole house; all symptoms < toward night (s.s.).—Herpetic eruption in mouth, tonsils, hard palate and fauces, completely covering inside of mouth and throat, making it very difficult to swallow even liquids.—Syphilitic destruction of hard and soft palates.

9. Throat.—Chronic hypertrophy of tonsils (hereditary syphilis).—Chancrous ulcer extending across velum palati to l. pillar of pharynx (s.s.).—Acute pharyngitis (s.s.).

10. Appetite.—Appetite indifferent and capricious (psoas abscess).—Total loss of appetite for months, little or nothing satisfies him; formerly was generally ravenous.—Thirst.—Tendency to heavy drinking; alcoholism.—Aversion to meat.—Dyspepsia; flatulence, belching of wind; nervous dyspepsia.

11. Stomach.—Nausea.—Heartburn with pain and rawness from stomach to throat-pit, often with cough.—Vomiting for weeks or months due to erosion from superficial ulceration of lining of viscus, herpetic, of syphilitic origin.

12. Abdomen.—Pain or distress deep in abdomen as if in omentum.—Feeling of heat internally in hypogastric region.—Pain in r. groin followed by swelling of glands.—Large painless bubo in r. groin opened and discharged freely (s.s.).—Slight lancinating pain in one groin, < at night.—Inguinal bubo.

13. Stool and Anus.—Bowels torpid for five weeks (periodical neuralgia in head).—Obstinate constipation for many years; rectum seemed tied up with strictures, when injections were given agony of passage was like child-bearing.—Chronic constipation, with fetid breath, earthy complexion, gaunt appearance.—Stools very dark and offensive (infantile syphilis).—Bilious diarrhśa at seashore, painless, driving her out of bed about 5 a.m.; stools during day, later causing excoriation; face red, suffers from heat; occasional painless, whitish diarrhśa when at home, always > by going to mountains.—Fissures in anus and rectum.—Two indurated ulcers at mouth of anus somewhat sore; slight itching of anus (primary syphilis).

14. Urinary Organs.—Itching in orifice of urethra.—A sensation, in morning on going to urinate, as if male urethra were stuffed up or clogged, about an inch from orifice.—Scalding urine.—Urination difficult and very slow; no pain, but a want of power, so that he has to strain.—Urine infrequent, not oftener than once in twenty-four hours, scanty, of a golden-yellow colour.—Profuse urination after chill; passed during night nearly a chamberful.—Rich lemon-yellow scanty urine.—Frequent urging to urinate all night, at least from 7 p.m. until 5 a.m.

15. Male Sexual Organs.—Chancre on prepuce.—Buboes.—Burning in chancre size of a split pea, on prepuce above corona glandis; edges raised, bottom covered with lardaceous deposit; glans purple, on l. side covered by an exudation.—Chancre on penis, third in two years, all on same spot (s.s.).—Aching of genitals, could not sit still for over a month.—After suppressed chancre, disease attacked testes and scrotum, which became painful and swollen; this was supposed to be cured, but ever since, every few weeks, if exposed at all to damp weather would be seized with pain as if in kidneys, seemingly traversing ureters, but instead of passing into bladder followed spermatic cord, down groins and into testes; pain agonising, chiefly in cord, in present attack in r.; pricking in chancre.—Chancroid, phagedćnic, spreading rapidly; buboes commencing in each groin.—Inflammation and induration of spermatic cord.

16. Female Sexual Organs.—Uterus and all surrounding parts loose, soft and flabby; profuse, thick, yellow leucorrhśa; constant pain across small of back.—Yellow offensive leucorrhśa, watery or not, so profuse it daily soaks through napkins and runs to heels of stockings if much on her feet.—Profuse yellow leucorrhśa, < at night; in sickly, nervous children (inherited syphilis).—Soreness of genitals, and muco-purulent discharge, in a child.—Acrid discharge causing violent itching and inflammation of external organs, < at night from warmth of bed, parts very tender; itching and inflammation > during menses.—Nocturnal < of r. ovarian

pain, preventing sleep.—Sore on r. labium majus, extending to l. (s.s.).—Menstruation painful, two weeks too soon; pink-red, bright, profuse, running free for some days; napkins wash easily.—Painful menstruation.—Sensitiveness of os uteri, < to intolerable pain at menses, or on introduction of finger or penis; frequently causes abortion (n).—Sharp zigzag shooting pains in region of uterus.—Ovaries congested and inflamed; tendency to ovarian tumours.—Sore aching in l. ovarian region, extending to r. with darting pains.—L. ovary swollen, during coitus, at moment of orgasm, a sharp cutting pain like a knife, and twice there was smarting as of a sore; ovary swelled so much that its size and shape could easily be felt through abdominal walls (caused by *Buboin*).—Uterine and ovarian diseases with pronounced nervous disorders, esp. in married women.—Mammć sensitive to touch, feeling sore; during menses, and at other times.

17. Respiratory Organs.—Hoarse, almost complete aphonia, day before menses.—Diseased cartilages of larynx (tertiary syphilis).—Chronic asthma, in summer, esp. when weather was warm and damp; most frequently in evening, passing off at daybreak.—Pain and oppression at bifurcation of bronchia and in larynx, it hurts her to breathe.—Attacks of spasmodic bronchial asthma for twenty-five years; they come on only at night after lying down or during a thunderstorm, producing most intense nervous insomnia, entirely preventing sleep for days and nights.—Violent attacks of dyspnśa, wheezing and rattling of mucus, from 1 to 4 a.m.—Cough: hard cough < at night, when it is continuous, preventing sleep.—Hard, constant cough, with thick, yellow, tasteless expectoration.—Dry, racking cough, with thick, purulent expectoration, caused by a sensation of rasping or scraping in throat, always at night.—Whooping-cough with terrible vomiting.—Cannot lie on r. side, as it causes a dry cough.—Muco-purulent expectoration, greyish, greenish, greenish-yellow, tasteless.—Expectoration without cough, quite clear, white, feels like a round ball and rushes into mouth.

18. Chest.—Rattling in chest and throat.—Soreness of chest, with great anguish and inability to retain a recumbent position; in winter, severe bronchial cough succeeded asthmatic attacks; a regular type of chills and fever developed; suffered from this many years ago.—Pain in centre of chest as if skin were drawn up, on drawing the head back.—Lack of sleep produces a sudden faintness and sinking sensation in chest; three spells succeeded each other during a single night.—Oppression of chest to such an extent as almost to arrest breathing; asthma caused by sensation as if sternum were being gradually drawn towards dorsal vertebrć; expansion of chest difficult; confusion of mind as if unconsciousness might follow.—Sensation of pressure under upper part of sternum.—Pain and pressure behind sternum.—Angina; ptosis l. eye; facial paralysis l. side, slight aphasia; impotence (relieved).—Eczematous herpetic eruptions on chest.

19. Heart.—Lancinating pains in heart at night, from base to apex (Medor. has reverse).—Valvular disease of heart.

20. Neck and Back.—Heavy aching and stiffness from base of neck up through muscles and cords into brain.—Caries of cervical spine with great curvature in same region, directly forward; pain in curvature always < at night (no proof of syphilis).—Enlargement of cervical glands and a number of pedunculated pin-head warts on neck, cured by *Syco-syphilinum* (hereditary syphilis; girl, 10).—Enlargement of glands in different parts of body, particularly abundant about neck; indurated and slightly painful, causing a sensation of fulness and suffusion in face, throat and head (n).—Enormous swelling of glands of head and neck (Hodgkin's disease).—Rigidity of muscles.—A heavy, dragging, dull feeling in lumbar region, with want of elasticity.—Great pain in back in region of kidneys, < after urinating (s.s.).—Pains commencing in sacral regions internally, and apparently coming around to uterus.—Pain at coccyx at its junction with sacrum, sometimes in lower sacral vertebrć; < on sitting, with a sensation as if swollen, though it is not.—Caries of dorsal vertebrć with acute curvature, for five months, every night most intense neuralgic pains, commencing generally from 5 to 7 p.m., and never terminating till about 5 a.m.; < by least motion, and slightly > by warm poultices.—Psoas abscess first l. then r.—Nocturnal < of pains in back, hips and thighs.

21. Limbs.—Aching pains in limbs like growing pains.—Gradual rigidity of all joints after eruption; flexors seem contracted.—Rheumatic swelling of l. wrist and big toe, bluish red, with pains as if somebody sawed at his bones with a dull saw; > by heat of stove; < from sundown to sunrise; no appetite; has lasted two weeks (rheumatism).—Feeling of numbness in palms and soles, at times a prickly sensation as if numb parts were punctured by a great number of needles.—Excruciating arthritis; swelling, heat, and redness intense.—Rheumatism, muscles are caked in hard knots or lumps.

22. Upper Limbs.—Rheumatism of shoulder-joint or at insertion of deltoid, < from raising arm laterally.—Can only raise arms to a right angle with axilla; trying to force them higher causes muscles to suddenly become paralysed and they drop pendant (n).—Lameness and pain of arm on motion, < on raising arm up in front as if reaching; pain located about insertion of deltoid in upper third of humerus, not painful to pressure.—Fingers and thumbs have runarounds (infantile syphilis).—Always washing the hands.—Hands badly ulcerated on backs (s.s.).—R. second finger swollen and stiffened (s.s.).

23. Lower Limbs.—Swelling of legs from knees down, soles painful when standing on them; swelling goes down in morning, comes back at night.—Pains in lower extremities, excruciating, completely banish sleep; < from hot fomentations; > pouring cold water on them (n).—Cannot sit in a low chair, or squat down, owing to loss of control over knee and hip-joints (n).—Pains in long bones of lower extremities, also in joints (n.).—Dull pain over backs of feet to toes, began soon after getting into bed, lasting until 4 or 5 a.m.—For two or three winters intense cold pain in both legs, < in l., came on every night on lying down, lasting

all night; > by getting up and walking, and in warm weather.—Pain in three toes of r. foot as if disjointed.—Slight contraction of tendons beneath r. knee (psoas abscess).—Tearing pains in hip and thighs, < at night, > about daybreak, > by walking, not affected by weather (improved).—Redness and rawness with terrible itching between toes (s.s.).—Bubo with pain in spot on middle of r. thigh in front, only when standing and on deep pressure, which seemed to touch spot, which was apparently on periosteum.—Two ulcers larger than a crown piece, dirty stinking, slouching, with jagged, elevated edges, one on thigh above patella another on head of tibia; two large pieces of bone came away from head of tibia (s.s.).—Osteosarcoma in centre of r. tibia the size of half an ostrich egg, pains agonising at night, growth irregular, spongy, partly laminated, very hard (s.s.).—Contracted, painful feeling in soles, as if tendons were too short.

24. Generalities.—Utter prostration and debility in morning.—Epilepsy.—Dwarfed, shrivelled-up, old-looking babies and children.—Epileptic convulsions after menses.

25. Skin.—Pustular eruption on different parts of body; in patches on certain places, particularly on wrists and shins, where bones are nearest cuticle, and isolated other large pustules on other parts, these break, discharging an ichorous fluid for one or two days, then heal, leaving characteristic pockmark cicatrice; patches take longer to heal, discharging same fluid till healing process commences.—After healing of chancre a fresh pustular eruption appears on different parts of body, which, when pustules have discharged an ichorous liquid and healed up, leaves fresh coppery pockmarks *Medorr*. removed it permanently, causing it to turn yellow-brown, dry at edges and scale off, leaving skin permanently clear and free.—Biting sensation in different parts of body, as if bitten by bugs, at night only.—Syphilitic rash, very prominent on forehead, chin, arms and front of thorax, an abundance of fine scales peeling off; large prominent spot on centre of forehead, filled with fluid, as also are some smaller patches (s.s.).—Syphilitic bullć discharging freely on cheeks, under chin, on back of shoulders, on scalp and other parts of body (infantile syphilis).—Maculć; copper-coloured (s.s.).—Pemphigus, looking like a pock, often confluent and persistently reappears.—Skin bluish.

26. Sleep.—Great restlessness at night, impossible to keep leg in one position.—Absolute sleeplessness (vies with *Sul*. in producing quiet, refreshing sleep).—Wakes soon after midnight and cannot sleep again till 6 a.m.

27. Fever.—Great pains in head, whole body extremely cold, looked blue; wanted to be covered with blankets or couldn't get warm; no appetite; sleeping almost continually, could not be roused (s.s.).—Nervous chills preceded by pains in head, esp. occiput and scalp of that part; pains below waist, in pelvis, legs, esp. tibia, which is sensitive to touch; bowels torpid; cross, irritable, peevish; pains begin every day 4 p.m., culminate at midnight, disappear at daylight.—After retiring

nerve chill beginning in anus, running down legs; desire for stool, > by profuse urination and by eructations.—Fever: dry, hot, shortly after going to bed, parted lips, great thirst; 11 to 1 daily.—Sweat: profuse at night, sleepless and restless; esp. between scapulć and down to waist, with excessive general debility.

Luna.

Moon's Rays. Sugar of milk is exposed on a glass plate to the moon's rays and stirred with a glass rod meanwhile. The sugar of milk so charged is dynamised in the usual way (Fincke). Higgins made a preparation by exposing pure water to the moon's rays for three or four hours in South America and then dynamising the water so charged.

Clinical.—Acidity. Epilepsy. Headache. Inter-menstrual flow. Œdema. Physometra. Somnambulism. Worms.

Characteristics.—Goullon of Weimar contributed to *Zeit. des Berl. Ver. H. A.* (translated in *Rev. Hom. Belge*, January, 1897), a notable article on "*The Influence of the Moon on the Human Organism*," in which he mentions, among other interesting facts, that somnambulism is a lunar effect; that worm affections are most troublesome at the full moon, and that goître diminishes, more or less, during the waning moon. On this fact is based the following *Spongia-Luna* treatment, which he calls "infallible": Cut slices of sponge of the size of a finger. Grill them at a candle flame till they are brittle at the centre but still elastic at the borders. Triturate the whole and put 7 or 8 grams into half a litre (rather less than a pint) of rain-water or river-water. The bottling must be done three days before the new moon. Close the bottle and put it in a cellar, taking care to shake it once every day. Three days before the full moon the patient commences to take a tablespoonful night and morning. The greater part of the bottle will be finished during the waning moon. [*Spongia*, I may interpolate, is one of the remedies having < at full moon.] Goullon quotes the following remarkable case of somnambulism from the *Cercle Médical*: "A youth of fifteen, in good health in other respects, had been withdrawn from his apprenticeship, on account of his nightly promenades on roofs, and put in a private asylum. Although his room was oriented so that no actual moon-rays could reach, it, the moon nevertheless exercised a potent influence upon him. As soon as it reaches the horizon he gets out of bed, and carefully, with closed eyes, moves towards a window, so high that he has to jump in order to reach and open it. As it is barricaded with an iron trellis he gets down, and, crossing the corridor, goes to the outer door, above which is a window. With cat-like agility he climbs up to this, when he is seized by three warders, who take him back to his room, where, *only after the moon has set*, can he lie down and go to sleep. In the morning he remembers nothing. At full moon the symptoms are still more extraordinary." Among other maladies notably influenced by the moon is epilepsy, and

epilepsy < at full moon generally needs *Silic*. Skin diseases, according to Menuret, are frequently influenced by the moon. He instances a case of eczematous affection which increased with each waning moon, and was at its maximum intensity at the new moon, when it covered the whole face and chest, and was accompanied by unbearable itching. Then there was gradual improvement and the face became smooth, but scarcely had the full moon passed than all began again. Scabies and worm affections are < at full moon. Nervous affections, especially in subjects of sycosis, are frequently influenced by the moon. Moritz Hoffmann observed a young girl (daughter of an epileptic mother) whose whole body became swollen at every new moon, the swelling disappearing as the moon waned. [One of Swan's cases cured by *Luna* presented these symptoms: Excessive œdema of face, neck, and hands, with neuralgic pain in the swollen parts.] Mead tells of a child who was subject to convulsions at each waning moon. Gale remarked that with weakly persons there are two epochs at which excitability is most pronounced—the new moon and the full moon. Goullon quotes these words of Arago, which show that he had a proper estimation of the limits of physical analysis: "A deeper research is needed, for there is nothing to show that it is the light of the moon which is its only efficient agent. It must further be remarked that the nervous system, according to a large number of reports, constitutes an instrument far more delicate than the most subtle apparatus of actual physics. And, in fact, who does not know that the olfactory nerve detects in the air the existence of odorous particles of which chemical analysis cannot reveal the smallest trace?" The moon-rays have been treated as other "Imponderables" (see under *Magnetis Poli*, &c.) and attenuations prepared. Swan communicated to *H. W.*, xviii. 469, a proving of *Luna* 1m. made on a lady physician, Dr. S. J. W. The prover was menstruating at the time the proving was commenced, but was otherwise in good health. Repeated doses were taken for two days. The effects lasted four weeks. The majority of the symptoms were observed in the generative sphere, the head and the lower limbs. The pains were > in open air; > by cold-application; > by eructations and by passing flatus from vagina. < After sleep; < from milk. Swan appends to his article some clinical observations. These symptoms will be found in the Schema in brackets.

Relations.—*Compare:* Æthus., Mag. c. (< from milk). The following medicines have relation to the moon's phases (italics indicate those which have the relation more pronounced): < At *new moon*: Alum., Am. c., Bufo, Calc., *Caust.*, Clem., *Cup.*, Daph., Lyc., Saba., Sep., Sil. < At *full moon*: Alum., *Calc., Cyc., Graph.*, Kal. n., Nat. c., Nat. m., Saba., *Sep., Sil.*, Spo., *Sul.*, Teuc. < During *increasing moon*: Arn., Clem. < During *waning moon*: *Dulc.*, Thuj.

SYMPTOMS.

1. Mind.—Irritability on being spoken to.—Wants to be let alone.—Mind not clear.—Disinclined for mental or physical labour.—Sad, depressed.—Mental faculties, esp. ability to receive, retain, and express ideas, are most powerfully

affected by the full rays of the moon in tropical countries; the influences being most felt the day before the full moon.

2. Head.—Slight giddiness, with slight bitter taste l. side of tongue, with increased saliva.—While reading, sharp pain just above root of nose, followed instantly by pain in l. temple, then general headache (15 minutes); pain in l. temple returns later (half-hour after third dose); also deep burning, scraping pain in l. upper frontal bone, temporarily > by eating; later > by a walk in open air.—Pain in occiput, changing to lame feeling on retiring, and preventing turning in bed with ease.—Woke 3 a.m. with very severe headache; later drank cup of tea, which was immediately returned, tasting sour.—Headache > by magnetic passe.—(Severe frontal headache during menses speedily cured with 1m.).—(Congestion of blood to head with sensation of great fulness, 8 a.m.)

3. Eyes.—Weakness of eyes and feeling of sand < by the medicine.—Sharp stinging sensation, leaving a smarting.—(Stinging in r. eye cured with c.m.).—(Swelling of eyelids and profuse discharge of purulent matter with a painful smarting and profuse lachrymation; without heat, or change of colour.)

5. Nose.—Sensation of a cold in head.—Coryza, sneezing, and pain in occiput.—4 p.m. sensation of heavy cold in head with lachrymation.—Discharge of yellowish-green mucus from nose.

6. Face.—(Œdema of face.)

8. Mouth.—Bitter taste l. side of tongue with increased flow of saliva.—Repeated later after eighth dose, with stinging in r. eye.—Recurred on waking, with faint feeling in stomach.—Increased flow of saliva, all day.

9. Throat.—Some soreness in throat.

11. Stomach.—(Is excellent in sour eructations, esp. if tasting of ingesta.).—No appetite; slight nausea.—Desires something, she does not know what.—Flatulency with burning in stomach.—Burning < after drinking milk.—Immediately ejected cup of tea during headache, the tea tasted sour.—Woke at midnight with severe heartburn and great distress in stomach; had to get out of bed.

12. Abdomen.—Colic, commencing two inches above umbilicus and seeming to pass directly upward to stomach, causing desire to bend forward.—Faint feeling in stomach on awaking and sensation of great distension and slight pain round umbilicus, > by eructations.—Pain through liver and spleen, 3 p.m.

13. Stool and Anus.—Urgent desire for stool, immediately > by passing flatus.

14. Urine.—Urine profuse, clear, and watery, at times darker.

16. Female Sexual Organs.—Menses less free, strings of dark blood; colic pain above umbilicus > by eructation.—Sharp pain l. side of vagina, leaving dull aching which seems to extend through l. external parts, then grows suddenly sharper, again returning to vagina and passing through to rectum.—Sharp pains fly from vagina through abdomen, ceasing in stomach-pit.—This pain was > later by passing flatus from vagina.—Bearing-down sensation.—Menses returned two days after ceasing.—After returning intense itching of labia majora extending into vagina, > bathing with cold water.—After a bath, followed by a short nap, woke suddenly with dull, heavy, dragging pains in pelvic region, with urgent desire to urinate, and general restless, languid feeling.—Cramp-like pains in pelvic region, as if uterus were being contracted by a strong electric current; at intervals.—(Excessive increase of menstrual flow, amounting to hæmorrhage.)

18. Chest.—After ascending stairs, a peculiar heating sensation, beginning at lower extremity of sternum and extending outwards, following Somewhat attachment of diaphragm on each side to a point under each arm; at same time warm glow down arms to finger-tips; "lost in l. (5 minutes).

19. Heart.—On retching, peculiar feeling round heart as though it stopped beating, > by eructations, < by lying down.—Suffocative sensation round heart.—Pulse rapid.

20. Neck and Back.—Very severe pain in sacral region, in evening.

22. Upper Limbs.—Slight rheumatic pains in shoulders, esp. l.

23. Lower Limbs.—Sharp, quick pain in l. cervical nerve, intermittent every few seconds.—Sharp pain in l. great toe.—Swollen feeling, and sensation as if tightly bound in r. calf and in hypochondria.—Pain like growing-pain above l. knee, > walking.—After retiring, aching in bones of lower limbs, with pain in lumbo-sacral region.—Great lameness in anterior tibial region from walking.—Acrid yellow leucorrhœa through day, with backache and pain in r. ovary; great itching, which was not > till cold wet cloth applied after retiring.

24. Generalities.—(Excessive œdema of face, neck, and hands, with neuralgic pains in the swollen parts.)

25. Skin.—Stinging itching r. side of body as if an insect was biting the parts, felt most on foot, leg, and forearm.

26. Sleep.—Symptoms < on waking.—Felt as if had not slept enough.—Dreams: horrible; of death; of murder; waking in affright.

27. Fever.—Woke 6 a.m. with severe chill, after which he had headache; felt sick and weak all day; at night had horrible dreams of death.

Lupulus.

Humulus lupulus. Hop. N. O. Cannabinaceæ (of the Urticaceæ). Tincture of the seeded spikes. Trituration. Tincture of Lupuline (small resinous granules covering the scales).

Clinical.—Dyspepsia. Dysuria. Gonorrhœa.

Characteristics.—*Lupulus* has had a somewhat extensive proving, to the symptoms of which have been added the effects of working with hops and of sleeping in rooms where hops were stored. The "hop-pillow" remedy for sleeplessness is well known; and this sleep-provoking effect passes into delirium and stupefaction. In a child of twelve, who remained several days in a room where hops were being picked, there was: Frequent starting up from deep sleep with violent delirium, from which he could only be aroused with great difficulty, when he recognised the bystanders, but immediately fell backward into stupor. It was months before he recovered. The effects which remained were: Dilated pupils; mental indolence; unsteady movements; erythema. Among other symptoms of *Lupulus* are: Burning in urethra during urination. Nausea and vomiting. Turning sensation in stomach. Fermenting in abdomen. Twitching of tendons. Faintness. > In open air.

Relations.—*Compare:* Urt. urens, Cann. ind., Cann. s., Op. *Antidoted by:* Coffee.

SYMPTOMS.

1. Mind.—Frequent starting from deep sleep with violent delirium, from which he could only be aroused with great difficulty, immediately lapsing again into stupor.—Mental functions remained indolent several months.

2. Head.—Vertigo, stupefaction.—Confusion.—Rush of blood to head and eyes.—Heat in head and face; with confusion and dull headache.—Headache: insupportable; drawing; dull pressure.—Violent pulsating of temporal arteries.

3. Eyes.—Pupils remained dilated several months.

8. Mouth.—Tongue thickly coated, dry.

9. Throat.—Strong pulsation of carotids.

11. Stomach.—Appetite lost.—Great thirst, no appetite.—Eructations: nauseating; tasting of hops.—Nausea.—Vomiting.—Sensation: of increased warmth in stomach;

of turning with nausea without diminished appetite; of turning with feeling of hunger, but without appetite.

12. Abdomen.—Fermentation and dull pains in abdomen.—Dull griping in lower abdomen with nausea.

13. Stool.—Stool softer than usual, with urging so great he could hardly reach the closet.—Stool retarded.

14. Urinary Organs.—Burning in urethra during micturition, not > by coffee.—Urine retarded.—Diuresis.—Urine dark brown, clear.

15, 16. Sexual Organs.—Diminishes and allays sexual appetite.

17. Respiratory Organs.—Respiration deep, almost stertorous.

19. Heart.—Pulse slow and intermittent.

22. Upper Limbs.—Great twitching of tendons.

23. Lower Limbs.—Paralytic weakness.

24. Generalities.—Movements difficult and unsteady for months.—Occasionally the smell made him so faint and dizzy he was obliged to go into the open air.—Drawing in almost all muscles in short paroxysms, < between shoulders, and in muscles of arms and hands; pains rheumatic, shift from place to place.

25. Skin.—Scarlatina-like erythema, esp. over face; with here and there small pustules.

26. Sleep.—Sopor.—Great drowsiness.

27. Fever.—Pulse slow.—Profuse, greasy, clammy perspiration.—Profuse perspiration with high temperature.

Lycopersicum.

Lycopersicum esculentum. Solanum lycopersicum. Tomato. Love-apple. N. O. Solanaceæ. Tincture of ripe fruit. Tincture of fresh plant.

Clinical.—Backache. Coryza. Deltoid rheumatism. Diabetes. Diarrhœa. Eyes, affections of. Gout. Headache. Leucorrhœa. Metrorrhagia. Obesity. Rheumatism. Throat sore.

Characteristics.—There is a popular impression that eating Tomatoes is a cause of cancer. The impression is not strong enough to prevent the universal use of them,

and I have been unable to discover any basis for the idea. Cooper gave *Lycopers*. in a case of rodent ulcer and caused sharp pain and temporary spread of the disease. Cooper commends the use of them in cases of obesity. I know of one instance in which the slightest indulgence in them brings on an attack of gout. When raw they require mustard or other condiment, being cold to the stomach. Gross made a proving of *Lycopers*. It caused sticking and pressing pains; a sense of paralysis; peevishness and loss of memory; pressing and boring pains in head; stopped catarrh. Some women cannot eat tomatoes without getting backache, leucorrhœa, or metrorrhagia. In Gross's proving the headache was < in evening, she was obliged to rise in the night to urinate. The mind symptoms were <, and the headache > by leaning the head against something. Dr. Herbert H. Roberts, of Derby, Conn., has published (*N. A. J. H.*, October, 1900) provings made by himself, two with the 3x and two with the 30x tinctures. "The original tincture was made from the thoroughly ripened fruit, great pains being taken to thoroughly macerate the seeds as well as the pulp." Dr. Roberts' symptoms seem to me of great importance. They will be found marked "(R.)" in the Schema. The rheumatic and congestive symptoms were mostly produced by the 3x, the nervous symptoms mostly by the 30x. Roberts remarks that the natives of Mexico and California eat quantities of the ripe fruit to prevent rheumatism. Very decided rheumatic pains were developed both by Gross and Roberts. The right deltoid was very markedly affected, and should make *Lycopers*. a companion to *Sang*. in shoulder pains. The headaches were very intense and characteristic, in some great soreness remained after the pain had gone. This is a not uncommon feature; and neuralgic headaches with this concomitant or sequela should call *Lycopers*. to mind. A coryza < out of doors should make *Lycopers*. a useful alternative to *Cepa*, which has > out of doors. < By noise. < By motion. (Gross's rheumatic pains were bad both by rest and motion.) The headache in one instance was completely > by tobacco smoke. > In warm room. > By external heat. Right side principally affected, symptoms proceed from right to left, but left side is not so severely affected. Polyuria was a feature of both provings, and with the great thirst should give *Lycopers*. a place in diabetes. Dark-complexioned people seem to be *suited to* its action from two cases recorded by Roberts. (*1*) Widow, 50, dark complexion, large, stout, grey eyes. Sudden attack of grip. Very severe aching pains all over, up and down back, limbs, head. Beating, throbbing in head, beginning in occiput, spreading all over head, settling with great violence in temples. Excruciating pain back of eyes and in balls as if they would burst with the pressure. Light causes pain. Delirium. Severe, deep, racking cough. Thirst for large quantities. Pupils contracted. *Lycopers*. 3x every hour, cleared away the fever and acute symptoms by the following morning, and rapidly cured the remaining cough. (*2*) Man, 40, dark complexion, black hair and eyes, tall, thick-set. Severe bursting, throbbing pain beginning in occiput and settling with great force in temporal and frontal regions; eyes painful, < from light; pupils contracted. Thirst for large quantities. Temperature 104°F. Pulse full flowing. *Lycopers*. 3x every hour given in evening

removed headache before midnight. Next day right tonsil swollen and inflamed; sore on swallowing; feeling of a lump there. Temperature 101°. Rapidly got well.

Relations.—*Antidoted by:* Tobacco smoke. *Compare:* Bell., Hyo., Dulc., Caps., Sol. t., Sol. n. (botan.); Ant. t. (weakness of cervical muscles). In coryza, Cepa (but Cepa has > open air, Lycopers. < open air). Contracted pupils, Op. Deltoid rheumatism, Sang. Diabetes, Uran. nit. Headache; sore throat; right side; Bell. Headache < on coughing, < in open air, Caps.

SYMPTOMS.

1. Mind.—Thoughts disappear, < when leaning head against anything; forgets everything he wishes to recollect.—Peevish about trifles, < by weakness of memory.—Unusually active for short periods, followed by longer periods of dulness (R.).—Cannot keep mind fixed on work (R.).—Very irritable, noises greatly annoy (R.).

2. Head.—Giddiness with inclination to faint on attempting to walk (R.).—Heavy confusion; dulness of the head.—Heaviness of head with weakness of cervical muscles.—Sensation as if head were compressed from both sides.—Very severe nervous headache all over head, but settling in back of eye and temples with great force; pupils contracted; complete > from tobacco smoke (R.).—Intense throbbing, bursting headache, beginning in occiput and spreading all over head, settling with great violence in occipital and temporal regions (R.).—Boring; therewith the skin of forehead becomes painfully tense.—Pressure beneath frontal bone as if the brain would be forced out, > leaning head against something; evening, and continuing awhile after going to bed.—Bursting pain in head, esp. vertex; and when coughing (R.).—Dull pain with occasional sharp shooting pain in temples (R.).—Sensation as if a nail were sticking into r. parietal region.—Boring in l. occiput.—Boring, pressing pain in r. occiput (R.).—Dull, heavy pain in occiput (R.).—Sore, bruised feeling in whole head after pain had ceased (R.).—Head, esp. scalp, sore to touch (R.).

3. Eyes.—Eyes: dull, heavy; ache and feel sore and burn, intense aching as if eyeball being much contracted (R.).—Lids feel heavy and swollen (R.).—Pupils minutely contracted (R.).—Light painful (R.).—Letters run together when reading (R.).—Eyes water on close work (R.).—Keeps wiping eyes to see clearly (R.).—Twitching in l. inner canthus (R.).

5. Nose.—Stopped catarrh.—Profuse watery coryza excoriating alæ; drops down posterior nares; saltish taste; markedly < out of doors (R.).

6. Face.—Face flushed (R.).—Pallid (R.).—Pressure in r. zygoma.—Stitch in l. cheek.—Stitches in l. zygoma.

8. Mouth.—Itching and tickling in roof of mouth (R.).—Tongue: coated thick yellow; thick and white, more in centre (R.).—Foul breath (R.).—Foul taste (R.).

9. Throat.—Constant desire to clear throat.—Throat slightly sore on swallowing.—Mucous membrane of pharynx pale, tip of uvula and arches of pharynx red and inflamed (R).—Burning raw feeling r. side of throat, changing to l.; l. side slightly sore (R.).—Swelling of l. tonsil, doubtfully malignant, is much relieved in an elderly woman (Cooper).

11. Stomach.—Thirst for large quantities of water (R.).—Great flatulency between 10 a.m. and 11.30 a.m. (R.).—Violent eructations of gas with taste of food (R.).—Burning sensation in stomach towards evening and during evening (R.).

12. Abdomen.—Great flatulency of abdomen (R.).

13. Stool and Anus.—Brownish, watery diarrhœa (R.).—Stool brownish, yellow, frothy, no urging, painless (R.).

14. Urinary Organs.—Must rise at night to urinate (Gross, also R).—Constant debility when in open air; not at all in warm room (R.).—Increase of watery constituents of urine, not of total solids (R.).

16. Female Sexual Organs.—Profuse leucorrhœal discharge (immediately).—In some cases, what was thought to be too frequent menstruation (with depressing backache), brought on by free use of canned tomatoes, the flow would return whenever this food was eaten for a few meals.

17. Respiratory Organs.—Hoarseness towards night (R.).—Husky voice (R.).—Hoarseness: with constant tickling in pit of throat; with constant desire to clear throat (R.).—Cough: deep, harsh; starting from irritation in lower chest (R.).—Dry, hacking cough coming on at night and keeping him awake (R.).—Explosive cough (R.).—Expectoration white and in lumps (R.).—Expectoration early in morning with more later in day (R.).

18. Chest.—Slight sticking beneath l. side of sternum; without difficulty of respiration.—Oppression in chest; in lower lobe of r. lung (R.).—Relief of soreness and tenderness of scirrhous breast (Cooper).

19. Heart.—Fine stitching pains at base of heart (R.).—Lame pain in region of heart (R.).—Pulse 100, full and flowing (R.).

20. Neck and Back.—Rheumatic pain near attachment of trapezius muscle to spine (R.).—Heavy dragging in r. scapula (R.).—Intense aching through whole back, esp. lumbar region (R.).—Intense aching through back and limbs even after headache had stopped (R.).—Backache in lower dorsal and lumbar region, making them

gloomy and depressed (in women from eating tomatoes).—Cannot get into a comfortable position (R.).

21. Limbs.—Intense aching, rheumatic pain in muscles of all limbs (R.).—Lame, tired feeling in all limbs, with great exhaustion (R.).

22. Upper Limbs.—Sharp (rheumatic) pain in r. deltoid and pectoral muscles; < lifting arm upward and outward (R.).—Dragging in r. deltoid (R.).—Gnawing pain in middle of r. arm on motion (R.).—Twinges, and rheumatic pain, in r. elbow-joint (R.).—Sticking on inner side of l. forearm.—Sensation of numbness and weight as if arm asleep (R.).—Tingling along r. ulnar nerve and branches (R.).—Benumbing, aching pain through r. hand and wrist, with occasional stitches through ball of r. thumb.—Lameness of l. wrist, hand, and fingers, where it is painful even when not moving it (R.).—Sharp cutting pain extending through l. wrist and palm when pressing hand firmly against anything (R.).

23. Lower Limbs.—Painful sticking behind articulation of l. hip.—Intense aching pain in lower limbs (R.).—Sharp sticking pain along course of r. crural nerve (R.).—Rheumatic aching along crural nerves (R.).—Dull aching pains along border of r. fibula to os calcis, where it is < (R.).—Sticking above r. external malleolus, during rest and motion.—Dull aching pains deep in r. lower leg as if in bones, < by continued motion (R.).—Cramps in r. calf when raising foot from floor (R.).—R. calf lame and sore (R.).—Rheumatic pain in r. ankle (R.).

24. Generalities.—All night lies on back, from sensation of paralysis.

25. Skin.—Erythematous lupus much relieved (Cooper).

26. Sleep.—Very restless sleep (R.).—Unable to fall asleep in evening, tosses about, every position uncomfortable.—Frequent waking and tossing, limbs when pressed feel paralysed.—Wakened by insignificant dreams.—Confused, disagreeable dreams (R.).

27. Fever.—Chilliness towards night, preceded by thirst for large quantities of water (R.).—Chilliness with sweat (R.).—Temperature from 100.5° to 101° F.—Sweat on awaking confined to a strip about four inches wide along whole length of back.

Lycopodium.

Lycopodium clavatum. Muscus terrestris repens. Pes ursinus. Clubmoss. Wolf's-claw. (Hilly pastures and heaths in Central and Northern Europe, Russian Asia, and North America. Common in Great Britain, especially the North.) N. O. Lycopodiaceæ. Trituration of spores. Tincture of spores.

Tincture of fresh plant. Etherial tincture of spores (ether dissolves the spore cases).

Clinical.—*Abdomen, distended*. Abortion. Albuminuria. *Aneurism*. Angina pectoris. *Aphasia*. Asthma. *Axilla, offensive perspiration of. Biliousness. Borborygmi*. Bright's disease. *Cancer*. Cataract. *Constipation. Consumption*. Corns. Cough. Cramps. Cystitis. Debility. *Diphtheria*. *Distension*. Dropsies. Dysentery. Dysmenorrhœa. *Dyspepsia*. Ear, eczema behind. *Eczema*. Ephelis. Epistaxis. *Epithelioma. Excoriation*. Eye, inflammation of; polypus of canthus. *Face, eruption on. Feet, perspiring*. Fibroma. *Flatulence*. Gall-stone colic. Glands, swelling of. Goître. *Gout. Gravel*. Hæmaturia. Hæmorrhoids. Hair, falling out. Hands, chapped. *Heartburn*. Heart, diseases of. *Hemiopia*. Hernia. Hydropericardium. Hypochondriasis. Hysteria. Impotence. Influenza. Intermittents. Intertrigo. *Irritation*. Labour-pains, abnormal. *Lip, cancer of. Liver, derangement of. Liver-spots. Locomotor ataxy. Lungs, affections of. Menstruation, disorders of*. Metrorrhagia. Nævus. Nymphomania. Otorrhœa. Panaritium. Paralysis. Paralysis agitans. *Peritonitis*. Phlegmasia dolens. Physometra. *Plica polonica. Pneumonia*. Polypus, of eye; of ear; of nose. Proctalgia. Prostatitis. Pylorus, affections of. Quinsy. Renal colic. *Rheumatism*. Rhagades. *Sciatica. Sleep, abnormal. Speech, disordered*; stammering. Strains. Sunstroke. *Taste, abnormal. Throat, sore. Tongue, coated*; cramp in. Typhoid fever. *Urine, abnormal*. Varicosis. Warts. *Water-brash*. Whooping-cough. *Worms. Yawning*.

Characteristics.—*Lycopodium* is one of the pivotal remedies of the materia medica, and an intimate acquaintance with its properties and relations is essential to a proper understanding of the materia medica as a whole. The spores from which the attenuations are made have been called "vegetable sulphur" (probably on account of their use for producing stage-lightning at theatres), and *Lyc*. ranks with *Sulphur* and *Calcarea* in the central trio around which all the rest of the materia medica can be grouped. The *Lycopodiums* stand between the mosses and the ferns, and in past eras occupied a most important place in the world's vegetation as fossils show. In the old school the function of *Lyc*. has dwindled into its use as an "inert" coating for pills and an "inert" powder for dusting on excoriated surfaces. Earlier practitioners did not consider it as by any means inert. Teste mentions that it is recorded of a decoction of the plant that it has caused vomiting. The use of the powder in intertrigo was not regarded as a physical one but as medicinal. It was praised by Wedel, Lantilius, Gesner, and others in (*1*) cardialgia and flatulent colic of children and young girls; (*2*) diseases of children; (*3*) nephritic colic and calculi—which is about as much as some homœopathists know about it at the present day. But Mérat and de Lens speak of its internal use in: Rheumatism; retention of urine; nephritis; epilepsy; and pulmonary diseases. In Poland it is used for powdering the hair in "plica polonica," a decoction being used internally and also externally at the same time. The comparative fruitfulness of the two schools of medicine may be accurately measured in the history of this drug: in the old school it has dwindled into an "inert" powder; in homœopathy, by means of

the scientific methods of developing and investigating drug action it possesses, all the old virtues of *Lyc*. have been confirmed and precisionised, and a new world of medicinal action added to them. Teste puts *Lyc*. at the head of a group containing *Nat. m., Viol. tric*., and An*t. c*. Among the common characters he attributed to them are: Primary action on digestive organs and adjoining glands; on liver and larger intestines rather than stomach. Aversion to bread and < from eating bread and foods made of fermented and fermentable dough. Frequent and painful eructations. Sour eructations; vomiting; distension; alternate diarrhœa and constipation. Pale, whitish, cloudy, mucous urine, often fetid. Premature and profuse menses. Peevishness. Rush of blood to head. Falling of hair; with crusty scalp eruption. Inflammation of eyes and lids. Deficiency of vital heat. Contraction of tendons, especially hamstrings. These are general features common to the group. *Lyc*. acts profoundly on the entire organism, on solids and fluids. It causes paralysis and paralytic weakness of limbs, of brain, suppurative conditions, even gangrene. It is *particularly suited to:* Persons of keen intellect, but feebler muscular development; upper part of body wasted, lower semi-dropsical; lean and predisposed to lung and hepatic conditions; herpetic and scrofulous constitutions; hypochondriacs subject to skin diseases; lithic acid diathesis, much red sediment in urine, urine itself transparent; sallow people with cold extremities, haughty disposition, when sick, mistrustful, slow of comprehension, weak memory; weak children with well-developed heads but puny, sickly bodies, irritable, nervous, and unmanageable when sick, after sleep cross, pushing every one away angrily; old women and children. In my experience it has been more indicated in persons of dry temperament and dark complexion; but this is not by any means exclusive. Undernourished states suggest it. But it is impossible to get the best therapeutic results for this great remedy without an intimate knowledge of certain leading characteristics. *Lyc*. will cure any case in which the totality of symptoms correspond with symptoms of the remedy; but it will be found that in a large proportion of cases in which this is the case, there will be present some symptoms which are peculiarly characteristic of the remedy, constituting what are called keynotes. Practice on keynote symptoms alone is an absurdity; but the right use of keynote symptoms is an immense saving of labour. The *Lyc*. keynotes are very pronounced, and though I cannot say that one is more important than another, I give them in this order. (*1*) < From 4 to 8 p.m. [In one case cured by *Lyc*. it was: "Bad from 4 to 6; better at 8; gone at 9."] In any case, when the symptoms are < from 4 to 8 p.m., the chances are very great that the rest of the case will correspond to *Lyc*., no matter what the disease may be. The times may not be accurately at these hours, and still *Lyc*. may be the remedy. < At 4 p.m. or from 4 to 6; and the condition may continue into the night without the 8 p.m. alleviation. But the grand characteristic is 4 to 8. (*2*) The second keynote is in *direction*, right to left. Any affection commencing on the right side and spreading to the left is likely to require *Lyc*., whether it be headache, sore throat, chest affection, abdominal affection, pains in ovaries—if the affection begins on the right side and spreads to the left *Lyc*. must be studied. Cutting pains shooting from right to left in

any part indicate *Lyc*. In this it is complementary to *Lach*., which has just as characteristically the opposite direction. *Lyc*. is a right-side medicine; but right-sidedness is not so characteristic as the direction right to left. These two features are perhaps the most valuable keynotes, in the materia medica. After them in importance, and scarcely less important, come others. (*3*) > From uncovering. This is general, but it applies to Sufferings in the head more particularly. If a patient complains of headache, no matter of what kind, and if the headache is distinctly > by taking off the hat or other covering, *Lyc*. will probably be the remedy. This is the great dividing line between this remedy and *Sil*., another great headache medicine: in *Sil*. cases the patient must wrap up the head. > From loosening the garments is in the same category. (*4*) The next characteristic is somewhat of an opposite kind: > From warm drinks; < from cold food and drink. This does not refer to gastric complaints alone, but to headache, sore throat, and any other condition. (*5*) Fan-like movement of alæ nasi occurring in cerebral, pulmonary, and abdominal complaints. The movements are usually rapid, never slow, and are not synchronous with the breathing. In the same order with this are spasmodic movements of facial muscles: angles of mouth alternately drawn up and relaxed; and spasmodic movements of tongue, it cannot be protruded; rolls from side to side like a pendulum. One prover had a kind of cramp in the tongue when speaking, cutting off the end of every sentence. Nodding and side to side movement of the head. Loosvelt (*H. W*., xiv. 396) has found that "half-open condition of the eyes during sleep" is a strong indication for *Lyc*., and has led him to make cures in cases of bronchitis, pneumonia, and typhoid when other remedies have failed. The "fan-like movement" of the alæ nasi led Halbert to the cure of a case of nervous asthma (*H. W*., xxxiii. 545): Mrs. S., 28, had periodic attacks of spasmodic asthma, always ushered in by unusual excitement and attended by peculiar mental depression. The attack for which Halbert saw her was induced by a violent fit of anger, and persisted longer than usual. Extreme despondency and melancholy, would have nothing to do with her friends. Fan-like motion of alæ nasi. Constriction of throat, like globus, but always induced by regurgitation of food. Excessive appetite easily satisfied. Fulness of abdomen with flatulence. Constipation, dry, hard stools. Dyspnœa. Slight cough with chest constriction; > in open air. All symptoms < 4 to 8 p.m. *Lyc*. 6x trit. cured. (*6*) Suddenness; sudden flashes of heat, lightning-like pains; sudden satiety. Pains and symptoms come and go suddenly, as with *Bell*. (*7*) Sensation as if a hand were in the body clutching the entrails (also as with *Bell*.). (*8*) Restlessness > by motion. (*9*) Right foot hot, left foot cold. (*10*) Burning pains > by heat; burning like hot coals between scapulæ. Burning stinging in breasts. (*11*) Dryness of parts: of mucous membranes; of vagina; of skin, especially palms. Prominent among mental symptoms is *Fear*: of being alone; of men; of his Own shadow. *Apprehensiveness*: susceptible to natural causes of fear which make a profound impression on bodily organs, as the liver; mental states resulting from fear. Profound sadness and inclination to weep. Peevish. Forgetful. Avaricious. Imperiousness. *Lyc*. is a remedy for misers. The headaches are in great variety, but the modalities will generally decide: < 4 to 8

p.m.; from eating; from warmth of bed; from becoming heated during a walk; from heat in general; from mental exertion; > in open air; in cool place; by uncovering. Hair falls out. Ophthalmia: conjunctiva looks like red flesh. *Lyc*. has cured desperate cases of facial neuralgia with the general characteristics of the drug. The facial appearance is pale and yellow; deeply furrowed; looks elongated. Sordes in teeth. *Lyc*. is in the front rank among flatulent remedies. Incarcerated flatulence; more in intestines than stomach; painful with > by eructations. There is the sinking sensation at epigastrium; and it is < in the night, waking up the patient; or < in afternoon. This sensation becomes translated into canine hunger, but as soon as a morsel of food is swallowed there is distension and fulness to the throat, preventing him eating any more. Sour stomach, sour taste, sour vomiting. Thirst for little and often, but drinking cold water = nausea. Great weakness with the vomiting. Cord-like tension across hypochondria. Flatulence incarcerated, pressing outward, sensation as if something moving up and down in bowels. Great sensitiveness in liver region. [This sensitiveness is a characteristic of *Lyc*., as it is of its complementary remedies, *Lach., Kali iod*., and *Iod*. It has led me to cure many cases of sciatica having this characteristic: cannot bear to lie on painful side it is so sensitive. Especially in case of right-side sciatica of this description. Gums, epigastrium, abdomen, right side of chest, eruption round anus, all soft parts are sensitive. Touch and pressure < all these; only > tearing in head.] The flatulence presses on rectum and bladder. There is out-pushing also in right inguinal ring; and *Lyc*. has cured many cases of right inguinal hernia, especially in children. *Lyc*. is one of the great remedies for constipation where purgatives have been abused. Spasmodic constriction of rectum. Constipation of infants. The urinary symptoms present no less important characteristics than the gastric. Renal colic, with stinging, tearing, digging pain in right ureter to bladder, as if some small calculus was tearing its way to bladder. Aching in back before micturition. Child cries before micturating; red sand is found on diaper. Aching in kidneys < before > after urinating. The catamenia are too early and too profuse. Extreme sadness and irritability before, ceasing with the flow. Cutting pain right to left. Left leg colder than right. Borborygmi under left ribs in front. Ill-humour. Bearing-down pains and headache. Intolerance of tight clothing. Sensation as if a hand were in body clutching the entrails. Though a right-side remedy, it must not be supposed that *Lyc*. is exclusively so. It has cured left ovarian pain, dull aching, < on raising the limb or turning in bed. It is of great service in pregnancy (nausea; varices; excessive fœtal movements); and in labour (unsatisfactory pains). The "burning" of *Lyc*. is exemplified in the cure of a case of puerperal fever having these symptoms: Feels as though hot balls dropped from each breast through to back, rolling down back, along each leg, and dropping off heels; this alternated with sensation as if balls of ice followed same course. Phlegmasia dolens. *Lyc*. has a very large range in respiratory affections. Salt sputa; milky; greenish yellow; thick yellow muco-pus. Dry burning catarrh of nose, larynx, throat, chest. A very characteristic cough of *Lyc*., which I have verified, is this: "Dry teasing cough in emaciated boys". The cough of *Lyc*. is provoked by: Irritation from deep breathing;

stretching out throat; and by empty swallowing. A patient of mine to whom I gave *Lyc*. 30 developed this symptom: "Pain under sternum as if food lodged there and she could not breathe through it." Cough,< on waking. All the blood-vessels from the heart to the capillaries are affected by *Lyc*. It has cured both nævus and aneurism, and relieved many conditions of disordered heart. It is also one of the most important remedies in varicosis. Excessive sensitiveness is a note of *Lyc*.: Cannot bear any strong smells. Cannot endure noise. Sensitiveness to sound has a curious development in this symptom: In the evening she continues to hear the music she has heard during the day. "Heaviness of the arm" is a special feature among the general paralysing effects of *Lyc*. Skinner cured with *Lyc*. c.m. this case: A lady had burning in right arm with paralysis, preventing her grasping anything with the right hand. Had had much worry. Irritability before menstrual period, > by the flow. < From 6 to 7 p.m. With the burning was a sharp pain shooting up the arm; but it was not the pain which caused the paresis. Nash mentions that the sphere of *Lyc*. in impotence is considerable. It covers the case of old men who marry again and find themselves impotent; and the case of young men who have become impotent from masturbation or sexual excess. The desire is strong but the power is absent; penis small, cold, relaxed. P. C. Majumdar records (*Ind. Hom. Rev*., x. 1) the case of a boy, 14, who had general dropsy and anasarca consequent on the subsidence of an enlarged spleen under allopathic medication. There was afternoon fever (< 4 to 8 p.m.), slight chilliness, but no thirst; difficult breathing on lying down, urine scanty and high coloured, bowels constipated, heart's action weak but regular. *Apis* caused the urine to be more free, but a troublesome diarrhœa set in. *Apocy*. 6x removed the diarrhœa, but had no effect on the dropsy. *Lyc*. 30 was now given purely on the symptoms, and quickly cleared up the case. S. A. Jones (*Amer. Hom*., xx. 283) calls attention to the irritability of *Lyc*., and instances the cure of a boy of typhoid with excessive tympanites when the case seemed almost hopeless, the guiding symptoms being: "When awake exceedingly cross, irritable, scolding, screaming, behaving disagreeably," which was quite different from his usual nature. *Lyc*. 30 was given. The same writer (*H. R*., xi. 351) relates an involuntary proving of *Lyc*. from inhalation of the fumes in the course of chemical experiment, *Lyc*. powder being added to a boiling mass. The writer (apparently a medical man) had at times whilst engaged in the experiments: Frightful headaches (occiput, vertex, and through right eye), always > by *Mag. phos*. In addition he discovered 12.5 per cent. of albumen in his urine, which had been tested a short time previously and found normal. Other characteristic symptoms of Lyc. were present, and all disappeared, including albuminuria, when the experiments were abandoned. H. Goullon (*H. R*., vi. 155) cured this case of cystitis: A man, 55, subject to attacks of enteralgia, was seized two days after such an attack with a severe cystitis, with fever and palpitation of the heart. The calls to micturate were increased, and he could hardly reach the vessel quick enough to prevent premature escape of the urine, so severe and sudden was the urging. During and sometimes after the passage there was intense burning pain, "as if molten lead were flowing through the urethra." During the height of the pain he

grasped the penis to obtain relief. The urine, which was discharged in very scanty quantities, looked turbid, almost loamy, had a dirty brownish-red colour, and a peculiar odour of malt. *Lyc*. 12 was given, six drops in half a wineglassful of water: a teaspoonful every three hours. Cured in twenty-four hours. J. E. Winans (*Med. Adv*., xix. 499) points out the appropriateness of *Lyc*. to the effects of chewing tobacco. Allen records under *Tabac*. this symptom: Convulsions, head firmly drawn back, with rigidity of muscles of back of neck; *constantly recurring rigid* tetanic spasms, muscles of back being principally affected, till death a week after he chewed the tobacco." Winans had a very similar case from the same cause-clonic, opisthotonic spasms as of cerebro-spinal meningitis—which he cured with *Lyc*. c.m. and m.m. given after each tetanic seizure. Other *Lyc*. symptoms verified by him are: "Forehead *cold*, but *becomes warm if lightly covered*" (*Sil*.); and, in pernicious intermittents "a long-lasting chill coming on 9 a.m., and generally passing off *without subsequent heat or sweat*." Drysdale has recorded (*B. J. H*., xlii. 203) the cure of a young woman whose hands were covered with warts. One 2 gr. tablet of *Lyc*. 6 trituration was given at bedtime. The warts soon began to shrivel, and in less than six weeks were all gone. The sphere of *Lyc*. in metrorrhagia is illustrated by a case of Waszily's (quoted *H. W*., xxviii. 320): Mrs. O., 44, menses after being absent eight months had come on and lasted fourteen days. She felt particularly well, and had walked out, when a violent flooding came on, and she had to be taken home in a carriage and put to bed. Dark blood with large clots flowed from her, < every movement; no pain. Previous day had much flatulent distress. *Lyc*. 30, two globules on the tongue. After that one large clot passed and nothing more. Rapid recovery followed. Among the *peculiar sensations* of *Lyc*. are: As if everything was turning round. As if temples being screwed together. As if brain vacillating to and fro. As if head would burst. As if head opened. Pain in head as if caused by wrong position. As if eyes too large. As if hot blood rushed into ears. As if sulphur vapour in throat. Front teeth as if too long. Vesicles on tip of tongue as if scalded and raw. As if a ball rose up in throat. As if hard body lodged in back of throat. As if everything eaten was rising up. As if œsophagus was being clutched and twisted. As if steam rising from stomach to head. As if something were moving up and down in stomach. As if suspensor ligament of liver would tear. As if stomach would fall down. As if drops of water were falling down. As if heart hung by a thread. As if gimlets were running into spine. As if dogs with sharp teeth were gnawing her. Tension as from a cord in diaphragm. As if chest constricted with tight waistcoat. (Cramps in chest accompanying stomach affections is a strong indication for *Lyc*.) Burning as of hot coals between scapulæ. As if hot balls dropped from each breast through to back, rolling down back, along each leg and dropping off heels; alternating with balls of ice. As if water spurted on back. As if lying on ice. The symptoms are < by touch, pressure, weight of clothing. Riding in carriage = nausea. < Morning on waking; < afternoon, 3 p.m., 4 p.m., 4 to 6 p.m., 4 to 8 p.m., 5 p.m., 6 p.m.; < evening before midnight. < After eating, even if ever so little. < Wrapping up head, even wearing hat or bonnet. < In warm room. < Getting warm by

exercise. Warmth of bed < headache and irritation of skin, but > toothache, rheumatism, and other symptoms. Great desire for open air. > In open air; by uncovering. Must be fanned, especially wants to be fanned on the back (burning between shoulders). > By warm, < by cold food and drink. < By wet weather; by stormy weather; especially by wind. < From moistening diseased parts. Rest <; motion >. Lying down > headache; pain in epigastrium. Lying on back > cough. < Lying on right side in liver affection. < Lying on painful side (sciatica). < Lying on left side. < By rising from a seat; > after. < From lamplight; from looking fixedly at any point. < From eating cabbage; vegetables, beans and peas, with husks; bread, especially rye bread and pastry. < From wine. < From milk. < Before menstruation. < From suppressed menstruation. [*Lyc*. is very prone to cause aggravations, especially when highly attenuated, and hence it is necessary to give it with caution. Unless the indications are quite clear it is better to start a case on an allied remedy. I gave Miss E. *Lyc*. 30 for constipation. Soon after taking it she had pains in upper abdomen in all directions; urging to stool without ability to pass it; much flatus which could neither be got up nor down. *Lyc*. 1m. was now given, a few globules dissolved in water, a teaspoonful at bedtime. All symptoms vanished. On rising a second teaspoonful was taken, and after this the bowels were well relieved. On another occasion she took *Lyc*. 1m. in the evening, and immediately felt her throat tight and uncomfortable; but this passed off and she went to bed. At 5 a.m. she woke with choking; had the greatest difficulty in getting her breath. She managed to reach a bottle of *Bell*. 3, and a dose of this relieved her at once.—A patient for whom *Lyc*. 5 had, to her great delight reduced the gouty swellings about her finger-joints, till she could get rings on she had not been able to wear for years, was obliged to discontinue it on account of the distressing headaches it caused.—Mr. W. had every Sunday afternoon attacks of pain like biliary colic. They came on at 5 p.m. and lasted till 1 a.m. The pain started from right of gall bladder, travelled to middle line, and then passed downwards. In the attack he was cold and yet sweated. Bowels constipated. *Lyc*. 1m., one dose every alternate day. A powder of the same was, given to be dissolved in water, of which a teaspoonful was to be taken every twenty minutes in the event of an attack. During the week he felt better, but on the next Sunday he had the worst attack he had ever had, and the *Lyc*. given to be taken frequently did not relieve at all. *Nux* 30 was next given night and morning. The next Sunday was passed without any pain, and he felt much better generally. Cases of this kind could be multiplied indefinitely, and I have known some very good prescribers almost abandon this remedy on account of unexpected aggravations.]

Causation.—Fear. Fright. Chagrin. Anger. Vexation. Anxiety. Fevers. Over-lifting. Masturbation. Riding in carriage. Tobacco-chewing. Wine.

SYMPTOMS.

1. Mind.—Silent, melancholy, and peevish humour; despair of eternal salvation.—Desponding, grieving mood.—Sadness when hearing distant music.—Anguish, esp. in region of epigastrium, with melancholy and disposition to weep; esp. after a fit of anger, or on the approach of other persons.—Sensitive disposition.—Dread of men; desires to be alone, or else aversion to solitude.—Excitement after a glass of wine, almost mischievous.—Must laugh if any one looks at her to say anything serious.—Inclined to laugh and cry at same time.—Irritability and susceptibility, with tears.—Irascibility.—Obstinacy.—Estrangement and frenzy, which manifest themselves by envy, reproaches, arrogance, and overbearing conduct.—Disposition to be very haughty when sick; mistrustful; does not understand anything one says to them; memory weak.—Avaricious.—Character, mild and submissive.—Complete

indifference.—Aversion to speaking.—Fatigue from intellectual exertion, and incapability of devotion to mental labour.—Giddiness.—Inability to express oneself correctly; misapplication of words and syllables.—Confused speech.—Confusion about everyday things, but rational talking on abstract subjects.—Inability to remember what is read.—Stupefaction.—Dulness.

2. Head.—Dizziness and vertigo, as from intoxication.—As soon as she sees anything turning about she feels as if her body were turning about.—Whirling vertigo, esp. when stooping, or in a warm room, with inclination to vomit.—Headache from vexation.—Headache, with disposition to faint, and great uneasiness.—Headache with vertigo.—Heaviness of the head.—Headache when shaking or turning head, and also at every step on walking.—Cephalalgia above eyes, immediately after breakfast.—Semi-lateral headache in evening, < beyond endurance by intellectual labour.—Aching as if head would be forced asunder and as if brain were swashing to and fro, < walking, ascending steps, and rising from stooping; could not work and could scarcely step without vertigo.—Throbbing after every paroxysm of cough.—Pressive headache sometimes as if a nail were being driven into the head, or with tension, which is < by lying down; < at night when lying in bed, and on getting warm while walking in open air; > when walking slowly in open air, from cold, and when uncovering head.—Stitches in temples, mostly on r. side, from within to without; < in evening and at night when lying in bed, from heat and exertion of the mind; > from cold and in open air.—Thrust in temples during difficult stool.—Pain at vertex during moderate pressure at stool.—Headache after breakfast.—Tearing, boring, and sensation of scraping on external head, during night.—Screwing together in forehead, during menses.—Jerking in r. frontal bone extending to root of nose and eyebrows.—Tearing headache, esp. in afternoon or at night, principally in the (r.) forehead, but often also in whole head, in eyes and nose, extending to teeth, with inclination to lie down.—Stupefying headache, with heat in temples and ears; dryness of mouth and lips; < from 4 to 8 p.m., when rising up, and on lying down.—Pressing headache on vertex < from 4 to 8 p.m.; from stooping, lying down, exertion of the mind, and followed by great weakness.—Tearing in forehead or in r. side of head, extending down to neck, with tearing in face, eyes, and teeth; < on raising oneself up, > on lying down and in the open air.—Shooting headache.—Throbbing in brain on leaning head backward.—Throbbing in head after lying down in evening.—Congestion in head, with heat, sometimes in morning on rising up in bed.—Shaking and resonance in brain at every step.—Boring, scraping, and tearing in scalp, esp. at night.—Involuntary movements and convulsive trembling of head.—Head turned involuntarily to l.—Involuntary nodding: now to r., now to l.; slow at first then constantly more rapid.—Involuntary shaking makes him dizzy.—Shaking head on stepping hard.—Great tendency to take cold by the head.—Eruption on the head, with abundant and fetid suppuration, sometimes with obstruction of the glands of the nape and neck.—The hair becomes grey early.—Baldness; the hair falls out, first on the vertex, later on the temples (after diseases of the abdominal viscera; after parturition), with violent burning, scalding,

itching of the scalp, esp. on getting warm from exercise during the day.—Scurf over whole scalp, child scratches it raw in night and then it bleeds.—Contracted sensation with feeling as if the hair would be pulled up.—Hair falls off scalp, but increases on other parts of body.

3. Eyes.—Aching in the eyes.—Gnawing, burning, and shooting pains in eyes (and lids), esp. in evening, by candle-light.—Smarting in eyes.—Sensation of coldness in eyes, evening.—Dryness of eyes; and lids; as if dust in them; difficult to open.—Smarting and burning.—Swelling and painfulness of lids.—Inflammation of the eyes and lids.—Stye.—Styes on the internal canthus.—Agglutination of eyelids, esp. at night, and lachrymation, < by day, and in a cold wind.—Twitching of the eyelids.—Troubled sight, as from feather-down before the eyes.—Photophobia.—Itching in canthi.—Dim, hot eyes.—The eyes are wide open, insensible to light, fixed.—Dryness of eyes, in evening.—Sparks before the eyes, in the dark.—Must wipe mucus from eye in order to see clearly.—Purulent mucus.—Myopia or presbyopia.—Hemiopia perpendicularis (sees only l. half of objects, esp. with r. eye).—The characters are confused when reading.—Obscurity, black spots, glittering, and sparks before eyes.—Eyes dazzled and irritated by candle-light in evening.

4. Ears.—Otalgia in open air.—Congestion in the ears.—Ulceration of the ears.—Discharge from the ears.—Hearing excessively sensitive to least noise; music occasions fatigue.—Tinkling and buzzing in ears.—Roaring, humming, and whizzing in ears.—Sensation as if hot blood rushed into ears.—Congestion of blood in ears.—Singing in the ears as from boiling water.—Ringing in r. ear; every noise has peculiar echo deep in ear.—Hears in evening music she heard played during day.—Hardness of hearing.—Moist scabs on and behind ears.—Has improved deaf-mutism (Cooper).

5. Nose.—Scurf in nose; crusts and elastic plugs.—Nostrils ulcerated, scabby, obstructed by mucus at night.—Swelling of nose, with acrid, fetid, and corrosive discharge.—The ichorous discharge from the nose begins in r. nostril; scarlatina or diphtheria.—(Patient bores and picks nose.—Convulsive movements of muscles of nose.—Fan-like motion of the nostrils in pneumonia.—Bleeding from nose, on blowing it, and epistaxis, principally in afternoon.—(Nose-bleed in morning from r. nostril.).—Excessive acuteness of smell.—Coryza with acrid discharge, making the upper lips sore.—Coryza of almost all kinds.—Dry coryza, with obstruction of the nose, confusion in head, and burning pain in forehead.—Dryness of the posterior nares.—Obstruction of nostrils, esp. at night, and which prevents respiration except through the mouth.—Stoppage: towards morning; in evening; child's breath often stopped in sleep for fifteen seconds even when mouth is open.

6. Face.—Paleness of face, < in evening.—Face yellow and earthy, with deep wrinkles, blue circles round eyes, lips bluish.—Circumscribed redness of the cheeks.—Face red and bloated, with eruptions and red spots.—Swelling and tension

of face.—Tearing in bones of face.—Painful sensation of coldness in face.—Twitching and convulsive movements in muscles of face.—At first l. angle of mouth drawn outward, then r.—Muscles of lips and cheeks drawn together making mouth pointed, followed by broad distension of mouth.—Frequent attacks of transient heat in face.—Eruption on face, sometimes with itching.—Ephelis.—Tetters on face, which are furfuraceous, and yellow at the base.—Lips pale and bluish.—Soreness of corners of mouth.—Swelling of upper lip.—Eruption and excoriations on the lips and their commissures.—Eruptions on face, humid and suppurating.—The lower jaw hangs down.—Ulcers on the red part of the lower lip.—Itching eruption round the chin.—Swelling of the submaxillary glands.

7. Teeth.—Odontalgia only at night, > by hot drinks, and by heat of bed.—Dull pains in teeth, with swelling of the cheeks and gums.—The teeth ache as if suppurating; are excessively painful on touching them; and when chewing; front teeth loose or too long.—Cramp-like drawing, tearing, and jerking, or pulsations in teeth, esp. during or after a meal.—Grinding of teeth.—Yellowness of the teeth.—(Fistula in the gums.).—The gums bleed violently on being touched; when cleaning teeth.—Gumboils.—Swelling of gums, with shocks, tearings, and shootings.—Ulcers in the gums.

8. Mouth.—Dryness of the mouth, without thirst, with tension of the parts, the tongue heavy, and speech indistinct.—Torpor of the interior of mouth and tongue.—Exhalation of a putrid odour from the mouth, esp. in morning when awaking.—Buccal hæmorrhage.—Tongue foul and coated.—Involuntary movements of the tongue.—In talking, all the words of a sentence were spoken completely and distinctly except the last, which was stammered; it seemed as though the tongue were affected by a peculiar cramp; no amount of attention to this was of any avail; it lasted four weeks and gradually disappeared of itself.—Stiffness of the tongue; vesicles on tip of tongue; they feel scalded and raw.—Soreness of tongue.—Ulcers on and under tongue (from tobacco).—Convulsions of the tongue.—The tongue is painful and swollen in different places (tubercles on the tongue).—The saliva becomes dry on the palate and lips and is converted into tough mucus.—The posterior part of the mouth is covered by tough mucus.—Dry and bitter mouth (in the morning).—Tongue dry; becomes black and cracked.—Tongue is darted out and oscillates to and fro; in sore throat.—Tongue distended, giving patient silly expression; in angina or diphtheria.

9. Throat.—Sensation of constriction in throat, with obstructed deglutition.—Dryness of throat.—Pain, as from excoriation, in throat.—Burning pain in throat, with nocturnal thirst.—Sensation in throat, as if a ball were ascending from the pit of the stomach.—Feeling on l. side of a lump moving up and down.—Inflammation of throat and palate, with shooting pain, which obstructs deglutition.—Swelling and suppuration of tonsils.—The ulceration of the tonsils begins on r. side.—The pharynx feels contracted, nothing can be

swallowed.—Hawking of hard greenish-yellow masses; granular; of bloody mucus.—Sticking in region of r. parotid.—Sticking in throat during cough.—Sticking preventing sneezing.—Sensitiveness of the submaxillary glands.—Ulcers, like chancres, in the tonsils.—Goître.

10. Appetite.—Loss of appetite.—Mouth clammy or bitter, esp. in morning, often with nausea.—Nausea in pharynx and stomach.—Nausea in morning and when riding in a carriage.—Sourness in mouth, esp. in morning, or sour taste of food.—Absence of thirst, or burning thirst.—Nocturnal thirst.—Loss of appetite, sometimes with the first mouthful.—Sudden satiety.—Immoderate hunger.—Bulimy.—Aversion to: cooked or warm food; rye-bread; meat; coffee; tobacco smoke.—Craving for sweet things.—Inability to digest heavy food.—After a meal: hepatic pains, oppression and fulness in chest and abdomen, nausea, heat in head, redness of face, pulsation and trembling over whole body, hands hot, palpitation of heart, colic, &c.—Sourness and diarrhœa after taking milk.

11. Stomach.—Violent risings in afternoon.—Incomplete eructations, burning, rising only into pharynx, where they cause burning.—Sour eructations, the taste of which does not remain in mouth, but the acid gnaws in the stomach.—Burning, sour, greasy or bitter risings.—Sour regurgitation of food, esp. of milk.—Pyrosis, esp. after a meal.—Violent hiccough by fits, esp. after a meal.—Nausea when in a room, which disappears in open air, and *vice versâ*.—Frequent continued nausea, esp. in morning, with bitter taste in mouth.—Nausea, caused by the motion of a carriage.—Sensation of nausea in stomach in morning.—Heartburn.—Cancer of the stomach.—Water-brash, sometimes every second day, with flow of bitter water.—Vomiting of food and bile, esp. at night, or when fasting in the morning.—Vomiting of bitter, greenish matter.—Vomiting of blood.—Vomiting between the chill and heat in intermittent fever.—Vomiting after a meal with salivation; during menses.—Gnawing, griping sensation in region of the stomach.—Slow digestion.—Pains in stomach, with shivering and deadness of the hands after a slight chill.—Periodical pains in stomach, > by heat of bed.—Aching in stomach, in evening, and after every meal, sometimes with a bitter taste in mouth.—Compressive or contractive pains in stomach.—The pains in the stomach manifest themselves principally in morning; in open air; after a meal; or after drinking wine; they are sometimes > in evening, and are often accompanied by cramps in chest and difficulty of respiration.—Swelling of epigastrium with painful sensibility to the touch.—The clothes round the stomach cause uneasiness.—Stitches in l. side of pit of stomach, apparently externally.—Pain in epigastrium caused by cough.

12. Abdomen.—Tension round hypochondria, as from the pressure of a hoop.—Pressure and tension in liver; esp. on satisfying one's appetite.—Cramp-like pain in diaphragm, and contusive pain in liver, on stooping.—Pain when walking in upper part of r. hypochondrium, as if the suspensor ligament of the liver would tear.—Pressive pain in r. hypochondrium, at times took away the breath, became a

sticking.—Pain in liver as from a blow, < by touch.—Violent gall-stone colic.—Sharp pain in dorsal hepatic region, in r. shoulder and arm.—Liver region sensitive.—Griping; and rumbling in splenic flexure.—Inflammation and induration of the liver.—Immediately after a (light) meal the abdomen is bloated, full, distended.—Has a great appetite, but a small quantity of food fills him up and he feels bloated.—Aching pains in abdomen.—Fulness and distension of stomach and abdomen.—Weight in the abdomen.—Sensation of something heavy lying on l. side of abdomen.—Brown spots on abdomen.—Hardness in the abdomen.—Dropsical swelling of the abdomen.—Contractive cramp-like pains in the abdomen, which is distended.—Tearing, drawing, tension, and pinching in abdomen and sides of abdomen.—Clawing in hypogastrium, with suspended respiration.—Cutting pains, esp. above the navel.—Pain above the navel, on touching the part.—Burning pain in the abdomen.—Hernia on the r. side.—Tearing shootings, pulsation, and pressure in the inguinal ring, as if hernia were on the point of protruding.—Cramp-like pains in abdominal muscles, esp. at night.—Incarcerated flatus.—Imperfect expulsion of flatus.—The flatulence cannot pass and causes much pain.—Great deal of noisy flatulence in the abdomen, or particularly in the r. hypochondriac region; there seems to be a constant fermentation in the abdomen, which produces a loud croaking sound.—Sometimes much rumbling of wind in l. hypochondriac region.—Dyspepsia with loud croaking in the abdomen.—Affections of the inner lower belly.—Full, distended abdomen with cold feet.—Gurgling and borborygmi in abdomen, esp. on l. side.

13. Stool and Anus.—Constipation of long standing.—Hard stools with ineffectual desire to evacuate.—Desire for stool followed by painful constriction of rectum or anus.—Small stool, with the sensation as if much remained behind, followed by excessive and painful accumulations of flatulence.—Hæmorrhage from rectum, even after a soft stool.—Feeling of fulness in rectum continues after a copious stool.—Contractive pain in perinæum, after scanty, hard stool.—Stitches in the rectum.—Diarrhœa (during pregnancy), with earthy colour of the face.—During stool: burning and biting at anus; pressure; tenesmus; ringing in ears; headache; pain in back as if broken; hæmorrhage.—After stool: flatulent distension.—Constriction of the abdomen, sometimes with ineffectual want to evacuate, and difficult evacuation.—Constipation or diarrhœa in pregnant women.—Fæces: pale and of a putrid odour; thin brown; pale green mixed with hard lumps; thin yellow or reddish-yellow fluid; shaggy reddish mucus (urethral tenesmus, dysentery); green, stringy, odourless mucus.—Discharge of mucus, or of blood, during evacuation.—Lumbrici.—Pains in the anus after a meal and after an evacuation.—Itching and tension in the anus.—Incisive pains, shootings and pain as from excoriation in the rectum.—Spasms in rectum.—Contraction of rectum so that it protrudes during a hard stool.—Piles swollen, protruding, burning sticking, protruding during soft stool, painful on touch and when sitting.—Hæmorrhoidal excrescences in anus and in rectum, with prolapsus recti.—Itching eruption in anus.—Itching and tension at the anus (evening in bed).—Painful closing of anus.—Protrusion of the varices.—Distension of the varices of the rectum.

14. Urinary Organs.—Urgent want to urinate, with too frequent emission, with discharge of large quantities of pale urine.—Frequent micturition by night, with scanty and rare discharges by day.—Dark urine with diminished discharge.—Greasy pellicle on the urine.—Involuntary micturition.—Discharge of blood from the bladder, painless.—Old thickening of bladder with irritable urethra.—Foamy urine.—Urine deep coloured, with yellow or reddish sediment.—Clear, transparent urine, having a heavy, red, crystallised sediment in the bottom of the chamber.—In typhus fever, where the patient is in a very low state, and cannot retain the urine, we may see this sediment on the sheets; also in colic of babies, with much sediment of this kind on the diaper.—A very severe pain is felt in the back every time before urinating; causing patient to cry out; retention of urine; patients will get into position to urinate, but wait a great while before the water comes, accompanied by the characteristic pain in the back, which ceases when the urine flows; children often cry out with pain before urinating.—Turbid, milky urine, with an offensive purulent sediment; dull pressure in region of bladder and abdomen; disposition to calculi; cystitis.—Hæmaturia from gravel or chronic catarrh.—Renal calculus and gravel.—Emission of blood instead of water, sometimes with paralysis of the legs, and constipation.—Incontinence of urine.—Smarting when urinating.—Itching in urethra during and after emission of urine.—Shooting pinchings and incisive pains in the bladder and urethra.—Stitches in the bladder.—Stitches in the neck of the bladder and in the anus at the same time.—Burning in urethra and glans.—Urine burning hot, like molten lead.

15. Male Sexual Organs.—Shooting, drawing, and incisive pain in the glans.—Bastard gonorrhœa, with a deep red and smarting pustule behind the glans.—Excoriation between scrotum and thighs.—Dropsical swelling of genital organs.—Immoderate excitement, or absence of sexual desire.—Repugnance to coition, or disposition to be too easily excited to it.—Impotence of long standing.—Weakness or total absence of erections.—Penis small, cold, relaxed.—Itching of the internal surface of the prepuce.—Excessive pollutions, or absence of pollutions.—Emission too speedy or too tardy during coition.—Falling asleep during coition.—Lassitude, after coition or pollutions.—Flow of prostatic fluid, without an erection.

16. Female Sexual Organs.—Nymphomania with terrible teasing desire in external organs.—Itching, burning, and gnawing in vulva.—Pressure towards the outside, above the vulva, and extending as far as the vagina, when stooping.—Expulsion of wind from the vagina.—Chronic dryness of vagina.—Shooting pains in labia, when lying down.—Excoriation between the thighs, and at the vulva.—Burning pain in the vagina, during and after coition.—Catamenia (too early) too profuse, and of too long duration.—Catamenia suppressed readily, and for a long time, by fright.—Before menses: shivering, sadness, melancholy; bloatedness of the abdomen.—During menses: delirium, with tears; headache; sourness in the mouth; pain in loins; swelling of feet; fainting; vomiting of sour matter; cuttings, colic; and pains in the back.—Menstruation too late; lasts too long; sometimes

suppression of; profuse, protracted; flow partly black, clotted, partly bright red or partly serum; with labour-like pains followed by swooning; with sadness; suppressed by fright.—May find females at change of life with one side of the body greatly hypertrophied.—Fœtus appears to be turning summersaults.—Metrorrhagia; at menopause; dark blood with large clots pour from her.—A rumbling begins in upper abdomen and descends to lower, when a flow of blood follows, and so on successively.—Leucorrhœa: milky, yellowish, reddish, and corrosive; sometimes preceded by cuttings in abdomen.—Varices on the genitals.—Disposition to miscarriages.—Swelling of the breasts with nodosities.—Excoriation and moist scabs on nipples.—Stinging in nipples.—Milk in breasts without being pregnant.

17. Respiratory Organs.—Crawling scraping in trachea, at night.—Hoarseness, with roughness, and pain as from excoriation in chest, after speaking.—(Voice feeble and husky.).—Whizzing breathing in daytime, with sensation of too much mucus in chest; loud rattling.—Voice weak and dull.—Cough after drinking.—Obstinate dry cough in morning.—Nocturnal cough, < before sunrise, which affects the head, diaphragm, and stomach.—Dry cough, day and night.—Cough excited by a tickling, or as if produced by the vapour of sulphur, or by taking a deep inspiration, generally with a yellowish grey and saltish expectoration, sometimes with great weakness of stomach, fever, nocturnal sweat, and emaciation.—Cough with expectoration through the day and without expectoration during the night.—Whooping-cough from irritation in trachea as from fumes of sulphur, in the morning and during the day, with expectoration of fetid pus or of mucus streaked with blood.—Cough < from 4 to 6 p.m., frequently on alternate days, from exertion, from stretching the arms out, stooping and lying down, when lying on l. side, from eating and drinking cold things, in the wind, or in warm room.—Cough (morning), with copious expectoration of greenish matter.—Copious expectoration of pus, when coughing.—Cough, with expectoration of blood.—When coughing, shocks in the head, shortness of breath, smarting and concussion in chest, or pains in region of stomach.

18. Chest.—Short respiration during almost every effort, also in children, esp. during sleep.—Continued oppression of the chest, < by walking in open air.—Rattling of mucus and stertorous respiration.—When breathing, twitching and shooting in chest and sides of chest.—Pain as if from a bruise in the chest.—Constant pressure in the chest (it feels raw internally).—Weight in the chest.—Tension in anterior part of chest.—Lancinations in the chest, esp. on l. side, and principally when sneezing or coughing, on laughing, or on the slightest movement, sometimes with inability to remain lying on affected side, and difficult respiration.—Pain as from excoriation in the chest, esp. after speaking.—Stitches in the l. side of chest, also during an inspiration.—Typhoid and neglected pneumonias.—Hepatisation of the lungs.—Paralysis of the lungs.—Hydrothorax.—Itching on the chest.—Stitches in the side, alternately with toothache and pains in the limbs.—Painful eruption and maculæ hepaticæ on the chest.

19. Heart.—Palpitation of the heart, esp. during digestion, or in bed in evening, sometimes attended with anxiety and trembling.—Accelerated pulse, with cold face and feet.—Palpitation of the heart with flapping of the wings of the nose; enlargement of the heart; hypertrophy in general.—Cramp and constriction, dyspnœa, stitches beneath short ribs, extending to small of back and shoulders; sharp pains shooting into heart, sensation of stoppage of circulation at night, with fright and then sweat, pulse quick and unsteady (angina pectoris).—Dyspnœa, cyanosis, hasty eating and drinking (heart disease).—Beating of temporal arteries and carotids.—Heart sounds heard loudly on lying down at night, keeping patient awake.—(Hypertrophy.).—(Aneurism.).—(Hydropericardium.).

20. Neck and Back.—Traction and contraction from the nape of the neck to the occiput.—Rigidity of the nape of the neck, sometimes caused by lifting a weight.—Maculæ hepaticæ in the nape of the neck.—Tetters on nape of neck and under armpits.—Furunculi under armpits.—Stiffness, swelling, and induration of one side of neck.—Painful stiffness of l. side of neck.—Burning as of red-hot coals between scapulæ.—Swelling of glands of neck and of the shoulder, with shooting pain.—Weakness and paralysis of muscles of neck.—Painful eruption on neck.—Large clusters of red pimples around neck, with violent itching.—Soreness of the neck.—Goître.—Violent sacral pains, which do not permit sitting upright.—Pains in the back and loins, esp. when moving, stooping, and lifting anything, often accompanied by constrictive pains in abdomen.—Shootings in loins on rising up after stooping.—Drawing, tearing, and shooting pains in back and loins, with difficult respiration, chiefly when seated, and also at night.—Pain in back and r. side, from congestion of the liver.—Stitches in region of kidneys, < from pressure; extending into rectum.—Distortion of the spine.

22. Upper Limbs.—Tearings and shootings in the joints of shoulder and elbow.—Rheumatic tension in r. shoulder-joint.—Pain in bones of arms at night.—Weakness of arms when at work.—Difficulty in moving arms as if rheumatism were creeping on, with nodes on fingers.—Pain as from a sprain in r. wrist-joint.—Swelling of axillary glands.—Nocturnal aching pains, in the arms and elbow.—Drawing pain in arms.—Jerking in shoulders and arms, also during it siesta.—Paralytic weakness of arms.—Arms and fingers easily benumbed, even at night, or only when raising them.—Biting, itching, and maculæ hepaticæ in the arms.—Arthritic stiffness of the elbow and wrist.—Tetters on the arms.—Erysipelatous inflammation in the forearm, with suppuration.—Dryness of the skin of the hands.—Burning sensation in the palms.—Red and painless swelling of the hands.—Warts on the hands and fingers.—Deadness of fingers and hands.—Involuntary trembling of the hands.—Red swelling and arthritic tearing in joints of fingers.—Arthritic nodosities and stiffness in fingers.—Stiffness of the fingers during labour.—Itching pimples between the fingers.—Panaritum.—Contraction and twitches in the fingers.—Chilblains.—Gouty contraction of palmar fascia: sudden pain runs down arm (l.?) causing fingers to

stiffen and draw away from each other and to draw towards hand, as though palmar fascia were contracting (Cooper).

23. Lower Limbs.—Rheumatic tension in l. hip.—Pain as from a sprain in hip.—Periodical pains, from coxo-femoral joint to foot, every fourth day.—Tearing: beneath r. hip; in l. hip-joint.—Drawing along sciatic nerves to feet, evening, in bed.—Pain in muscles about joints, on pressure, sitting or lying.—Pain in r. hip > walking in open air.—Pain from r. hip-joint to feet when walking, he must limp.—Tearing in legs and knees, extending to tibia and instep, esp. in evening and at night.—Soreness in inner side of l. thigh, with biting itching extending to genitals.—Brown spots on inner side of thighs, inflamed with burning pain.—Uneasiness, shocks, and trembling in legs and feet, esp. in evening and at night.—Involuntary shaking in legs, or alternate separation and bringing together again of the thighs.—Burning and biting itching in the legs, esp. in the hams.—Curvature and stiffness of the knees.—Swelling (and stiffness) of the knees.—Swelling of the knee, with perspiration.—Swelling of the legs, with large, red, burning spots, and pains which prevent walking.—Paralysis of the legs, with emission of blood instead of urine, and constipation.—Tetters on the legs and calves of the legs.—White swelling in the knee.—Cramps and cramp-like pains in the calves, esp. when walking, and at night.—Burning pain in legs.—Ulcers in the legs, with nocturnal tearing, itching, and burning heat.—Pain in the soles when walking.—Cramps in the feet and toes.—Swelling of the feet and of the malleoli, or of the soles (with shooting pain).—Coldness of the feet.—One foot (r.) hot the other cold.—Cold sweat on feet, sometimes copious, and with excoriation of the skin.—Stitches in r. big toe (evening).—Rhagades in the heel.—Cramp in the toes.—Bending of the toes when walking.—Contraction of the toes.—Corns on the feet, sometimes with shooting pain.

24. Generalities.—Affections in general of r. eye; r. side of face; r. hypochondrium; r. abdominal ring; l. chest; l. lower extremity; general symptoms r. side (though they may spread to the l.); hair of head; rectum; bladder; hands; fingers; finger-joints; back part in the lumbar region, and ankles.—Hard hearing; smell too sensitive.—Deep furrows on the face; same on forehead; sensations in the temples.—Collection of water in the mouth, i.e., "mouth waters.".—Pains in different parts as from flatus: over r. hip; below chest; in lower abdomen, &c.—Obstructed evacuation; painless diarrhœa.—Anything running from r. to l.—Apoplexia; erethism of blood accompanied with flashes of heat; chlorosis.—Consumption resulting from badly treated pneumonia.—Crooked legs; ankles weak; painless paralysis; old sprains; tension, tightness of the joints.—Enlargement of the bones.—Drawing and tearing in extremities, < at night and during repose; sometimes also in the afternoon; every second day, and esp. in windy and rainy weather, > by heat.—Shooting pains, internal and external.—Painful stiffness of muscles and joints, often with torpor and insensibility of the extremities.—Numbness of the limbs.—Great liability to strain the back, which, when it occurs, is often followed by stiffness in nape of

neck.—Cramps and contraction of limbs.—Alternate spasmodic and involuntary extension and retraction of some of the muscles, or some of the extremities.—Shocks and jerks in some of the limbs or throughout the body, during sleep and on waking.—Cramps, internal and external, < at night.—Attacks of epilepsy, sometimes with cries, foam at the mouth (loss of consciousness, throws the arms and limbs about), and great anguish of heart (imagined he would have to die).—Dropsical and inflammatory swellings.—Varices.—Arthritic nodosities.—Swelling of the glands.—Inflammation of the bones, with nocturnal pains.—Distortion and softening of the bones.—Ulceration of the bones.—The symptoms are frequently < towards 4 p.m., and begin to abate towards 8 p.m., the weakness excepted.—Periodical sufferings.—The whole body feels bruised.—Ebullition of blood throughout the body, esp. in the evening, with inquietude and trembling.—Sensation, as if the circulation of the blood were suspended.—Internal weakness.—Great nervous excitability.—Weakness and lassitude in limbs, < during repose, or on waking in morning.—Fatigue, esp. in the legs, after a very short walk, accompanied by a burning sensation in the feet.—Fear of movement, with constant desire to remain lying down.—Total prostration of strength, with falling of the lower jaw, eyes cloudy and half closed, and slow respiration through the mouth.—Great emaciation, also with children.—Fainting fits, esp. in evening, and sometimes also on lying down, with loss of consciousness, cloudiness of sight, and great listlessness.—Trembling of limbs.—Want of vital heat.—Great desire for, or marked repugnance to fresh air, with excessive sensitiveness to cool air.—Great tendency to take cold.—< From east winds.

25. Skin.—Gnawing and itching in daytime, on getting heated, or in evening, before lying down.—Tendency of the skin to become chapped.—Painful eruptions.—Nettle-rash (chronic).—Large red spots on skin.—Itching maculæ hepaticæ.—Abundant ephelis.—Insensible tetters, of a yellowish brown, wrinkled or moist, purulent, full of deep cracks and thick scabs.—Large furunculi, which return periodically.—Mercurial ulcers. Bleeding ulcers, with shooting pain, which burn while being dressed, or with nocturnal tearing and itching.—Fistulous ulcers, with callous, red edges, reversed and shining, sometimes with inflammation and swelling of the part affected.—Excoriated places on the skin of children; the sore places are humid.—Intertrigo; raw places bleeding easily.—Skin unhealthy, corrosive vesicles.—Nævus maternus.—Vascular tumours.—Warts.—Corns which are very sensitive, or with tearing pains.—Exanthema in general, particularly with biting sensation; moist; scurfy; tearing and painful.—Want of action of the skin.—Itch, burning; creeping.—Skin scurfy; sticky; clammy.—Brown mortification.—Pale swelling.—Salt rheum.—Varices suppurating.—Chilblains.—Great dryness of the skin.

26. Sleep.—Frequent, and sometimes interrupted, yawning.—Inclination to sleep during day and early in evening, with sleep retarded by mental activity and excessive nervous excitement.—Disturbed and restless sleep, with anxious and

frightful dreams, and frequent waking with fright.─Loud coughing during sleep; screaming while asleep.─Sopor.─Hunger at night when waking.─Unrefreshing sleep.─Soporous sleep in typhoid and exanthematous fevers.─Voluptuous, vivid, mournful dreams; dreams of murder or of the occupations of the day, &c.─Anxious dreams of fatal accidents.─Jerks, cries, starts with fright, or bursts of laughter, or tears and groans during sleep.─(Sleeps with eyes half-opened,).─Sleeps with mouth open.─At night, jerking and restlessness in the legs, headache, anguish, nightmare, ebullition of blood and palpitation of heart, stomach-ache, colic, asthmatic sufferings, &c.─Lying on l. side is difficult on account of the palpitation of heart and stitches.─It is impossible to remain lying down at night on account of every position being uneasy.─Child sleeps all day and cries all night.

27. Fever.─Shivering in evening, sometimes only on one side; or every second day, with heat, or followed by sweat without heat.─Chilliness in the afternoon from 4 to 8, with sensation as of numbness in hands and feet.─Chilliness in evening in bed, preventing sleep.─One-sided chilliness, mostly on the l. side.─Chills and heat alternating.─Want of vital heat.─Tertian fever, with sour vomiting and bloatedness of the face and hands after the shivering.─Transient heat.─Burning heat, with short respiration.─Flashes of heat over whole body, mostly towards evening, with frequent drinking of small quantities at a time; constipation and increased micturition.─The perspiration is frequently cold, smelling sour, or offensive, or smelling like onions, or bloody.─Intermittent fever.─Nausea and vomiting and then chilliness, followed by perspiration (without previous heat).─Chilliness in the evening till midnight, this is followed by heat, in the morning sour-smelling perspiration.─Great heat and redness of the cheeks, alternating with chilliness.─Shaking chill 7 p.m., and great coldness as if lying in ice, with traction through whole body, upon waking up from sleep, which is full of dreams, covered with perspiration, perspiration is followed by violent thirst.─Typhus fever (with threatening paralysis of the brain).─Malignant fever, with malevolence and ill-humour on waking, or with nervous excitability, without heat of the head or redness of the face, red spots on the cheeks, great weakness, sweat without any mitigation, tongue red and dry, and constipation.─Slow fever, with viscid sweat, at night.─Fever, with total prostration of strength, lower jaw hanging down, eyes clouded and half-closed, and respiration slow, with the mouth open.─Sweat principally in face, easily excited during the day by slight exercise.─Febrile sweat by day.─Nocturnal sweat, often fetid or viscid, principally on chest and back.─Pulse only accelerated in the evening and afternoon.─Sensation as if circulation stood still.

Lycopus.

Lycopus Virginicus. Bugle-weed. Virginia horehound. (Shady and wet places in U.S.) N. O. Labiatæ. Tincture of fresh plant in flower.

Clinical.—Aneurism. Bites of reptiles. Bright's disease. Cough. Diabetes. Exophthalmos. Hæmoptysis. Headache. Heart, diseases of. Pericarditis. Phthisis. Snake-bites. Tarentula bites. Typho-malarial fever.

Characteristics.—According to Hale *Lycopus* is mentioned by Rafinesque as "partaking of the properties of *Digitalis, Sanguinaria, Cimicifuga*, and *Spigelia*," and as being "one of the mildest and best narcotics in existence." He commends it specially as a substitute for *Dig*., as having the advantage over it of being non-poisonous; as useful in hæmoptysis and "wherever it is required to quell inordinate motions of the blood." This gives a very good picture of the *Lcps*. place and action, which homœopathy has made good use of and developed. The association of *Lcps*. with *Dig., Act. r*., and *Spi*. particularly shows a very clear insight into the action of the remedy, which an experience of mine seems to confirm. Miss S., 25, came to me in October, 1899. About three years previously she had manifested the first symptoms of exophthalmos, which was ascribed by her mother to a prescription of *Macrotyn*, in low potency, taken for pains in the eyes and continued for a long period. The first symptoms were sore throat with ulcerations, then the goître appeared, and the heart became painful, its action intermittent, with breathlessness and inability to take exertion. After a course of *Thyroidin*, and later of *Thuja* 30 (she had been much vaccinated), *Lcps*. 12 was given, and this tool, away all the heart pains. Attacks of influenza complicated the case later on, and other remedies had to be given. Now the patient is doing very well under *Spig*. 30, as far as the heart is concerned, though no impression has been made on the goître, which is small. The heart sounds are normal. Stammers Morrisson made an extensive proving of *Lcps*., and developed unmistakable heart symptoms. Two cases by Proell (*H. W*., xxiv. 546) bring out a very important feature of the action of this drug, namely, on the consequences of *suppressions*, in his cases, of suppression of hæmorrhoidal flux. The patients were each 60 years of age, a man and a woman, both fair with light eyes, tall, very irritable, with *weak innervation of the heart* without decided organic disease. Both had had, years before, hæmorrhoidal flux which stopped suddenly. Both were hypochondriacal and had noise in left ear. This last symptom was the chief thing the man complained of, along with throbbing in the head preventing sleep. Neither *Cact., Kalm*., nor *Gels*. helped radically (though *Cact*. had once given prompt help when he had had blood-spitting). The *night after taking Lcps*. he was a little better, and in the forenoon came a bleeding from the rectum (about three tablespoonfuls, after defecation), with great general relief. The lady had glycosuria, cataract of left eye, and every third night was restless. *Lcps*. 1x (same dilution as in the other case), one drop in evening. The following night was excellent, and in the morning came an abundant

bleeding from the rectum with great relief. In a case cured with *Lcps*. by Morrison (of U.S.)., quoted by Hale, the sufferings were associated with the menstrual period, which was exactly regular but intermittent in flow. The first symptom appeared within three or four hours of the onset of the flow, and was a deep-seated pain with heat in occiput. Then followed a train of symptoms, among them nausea, and when the nausea came on the occipital pain was better. This is quite a feature of *Lcps*.: the symptoms *shift about*. In Proell's cases there was a shift from rectum to heart and head. Pains also shift from heart to eyes, from head to heart, from heart to left wrist and right calf, and back to wrist and heart. The characteristic heart is a feeble heart, with distress and weak pulse. Cardiac irritability with depressed force. This may be found with organic disease as well as without. When this condition exists and has other symptoms associated with it—in the head, throat, eyes, and elsewhere—*Lcps*. will most likely be needed. If in addition there is a history of suppressed discharge the indications will be all the stronger. *Lcps*. is a remedy of *accompaniments*. The heart condition has many associated symptoms not directly referable to the heart. When pulmonary complaints are associated with loose stools *Lcps*. will very likely be the remedy. There is a characteristic cough with hæmoptysis associated with feeble heart action, deep, violent in evening and night without waking, expectoration sweetish, renewed by change to cold weather and cold winds. Stanley Wilde (*H. W*., xxv. 108) cured a desperate case of pericarditis associated with bronchitis with *Lcps*. Ø; also a case of palpitation with darting pain in heart in a young woman, following an attack of acute rheumatism two years before. Briggs of Fort Lovell (*St. Louis Periscope*, ix. 329), relates the cure of a patient of Tarentula bite by application of a liquid made of *Lycopus*. He says the Cherokee Indians allow themselves to be bitten by rattlesnakes, centipedes, and tarentulas, chewing as an antidote large quantities of *Lycopus* and swallowing the juice. H. W. Felter, an eclectic, is quoted (*H. R*., xv. 430) as commending *Lcps*. in: passive lung hæmorrhages; wild, tumultuous beating of heart (which often precedes lung hæmorrhage); cough of phthisis. It does not disorder the stomach, he says, but acts as a tonic and appetiser. Motion, exercise, walking, ascending, all <. At the same time lying down = cardiac depression; and lying on right side < constriction of thorax. There is restlessness, must change position in spite of weakness. By friction. < In morning; (aching down spine, > after rising). < Towards sunset and in evening. At night, violent cough. The muscular pains are > in warm room and in bed; but not > by direct warmth. Open air = faintness and slight nausea; change to cold weather and cold winds = renewed cough. Cold air < rheumatoid pains. Pains shift generally r. to l.

Relations.—*Antidote to:* Act. r. (?). *Compare:* Lamium (botan.; piles); Ocim. can. (botan); Iber., Kalm., Spi., Cratæg., Cact., Dig., Hydr. ac., Lauro., Pru. spi. (heart); Sang.

Causation.—Suppressed hæmorrhoidal flow.

SYMPTOMS.

1. Mind.—Increased mental and physical activity in evening.—Stupid, with lack of expression, during menstrual flow.—Mind wanders from one thing to another.—General wakefulness and morbid vigilance.—Slight obtusion of intellect, with dull aching through sinciput; increased power of concentration.

2. Head.—Vertigo, tends to stagger to r.—Pressure in forehead, < l. portion.—Aching in frontal eminences, l. to r., < l.—Pain in forehead and temples, > by nausea.—Noise and throbbing in head preventing sleep, after suppressed hæmorrhoids, Lycopus relieved the head and then restored the flow.—Headaches: frontal then occipital; over eyes and frontal eminences; pains, aching, pressive, pressing out, congestive; often succeeded by laboured heart and cardiac depression; accompanied by intellectual obtuseness.

3. Eyes.—Eyes feel weak, as if system was fatigued.—Eyes feel full and heavy; pressing outward with pressure in front of head.—Dull pain in l. supraorbital region.—Neuralgic pain in r. supraorbital region and l. testicle.—Protrusion of eyes with tumultuous action of heart (exophthalmic goître).

4. Ears.—Burning in r. ear.

5. Nose.—Sneezing and slight nasal catarrh.

7. Teeth.—Toothache in r. lower molars, then subacute pain, first in l. then r. frontal eminence, in r. molar, then r. temple, then l. molar, then l. temple, again to r. molar, then to loins with frontal oppression.

9. Throat.—Rawness at back of r. palate extending to l.—Burning in spot on soft palate, following headache.

11. Stomach.—Nausea from back of fauces, > by eructations that taste of tea and the drug; succeeded by persistent giddiness while sitting, and staggering while walking.—Nausea and faintness.—Circumscribed pain and compression in region of stomach.—Indigestion with pain and distress in gastric region.—Gastritis; enteritis; diarrhœa; dysentery.

12. Abdomen.—Tugging pain in spleen.—Tenderness in l. hypochondrium.—Flatulence and rumbling.—Aching in inguinal canal, < walking, > from upward pressure; with pain in testicles; bearing down as from hernia.

13. Stool and Anus.—Severe colic followed by profuse forcible diarrhœa; stools shining, dark brown, offensive; tenesmus with first part of semi-solid movement.—Increased action of bowels, diarrhœic symptoms, could have a

passage at any time, but sphincter is under perfect control.—Diarrhœa in jaundice from weakened heart.—Diarrhœa with griping and rumbling.—Constipation lasting six or seven days, stools dry and clay-like.—(Restores hæmorrhoidal flow after suppression and relieves other symptoms.)

14. Urinary Organs.—Drinks large quantities of water; passes nine to eleven quarts of urine a day; fearful thirst, nothing but coldest water would satisfy; very irritable unless spoken to very softly; disinclined to talk, even to her own family (diabetes).—Diabetes mellitus, great thirst, and emaciation.—Tenderness in bladder.—Bladder feels distended when empty; dull pain in l. lumbar region.—Profuse flow of limpid watery urine, esp. when heart is most irritable.—Urine: scanty, thick, muddy, œdema of feet; cloudy; acid; containing mucus, epithelia) cells and minute crystals, oxalate of lime, spermatozoa.

15. Male Sexual Organs.—Neuralgic pain in testicle with supraorbital pain.—Acute aching in testicles while sitting, 1 p.m., or with occasional darting pains, changing to r. then l. after rising; from r. to l. then both, with aching in inguinal canal.—Sharp darting through l. testicle.—(Lcps. relieved the pain in testicle in a case of orchitis, but had no influence on the inflammation.)

16. Female Sexual Organs.—Menorrhagia and metrorrhagia.—Menses: intermit for ten or twelve days; last from half an hour to six hours.—Vagina very hot, os uteri engorged and swollen.—Puffing of parts on and around pubes and vulva, dilated condition of vagina.—(When heart's action was tumultuous œdema of pubes was <.)

17. Respiratory Organs.—Constriction of larynx, 7 p.m.—Breathing: oppressed, with sighing breathing 7 p.m.; wheezing; dyspnœa as from bronchial cold, < during exercise, esp. going up stairs.—Cough: with hemiplegia and feeble heart action; deep, violent in evening and night without waking; renewed by change to cold weather, and by cold winds.—Expectoration pale, sweetish, unpleasant tasting, at times difficult.—Cough and irritation of lungs; with hæmoptysis, feeble, quick, irregular action of heart.

18. Chest.—Constriction across lower half of thorax, impeding respiration, with subacute pain; < lying on r. side.—Febrile action, quick, weak pulse, occasional hæmoptysis, l. apex affected (incipient phthisis).—Pulmonary disease associated with looseness of bowels.

19. Heart.—Constrictive sensation in cardiac region, tenderness; pulse quick and irregular in force.—Acute darting pains in heart, with intermissions of heart-beat.—Throbbing pain in cardia, pressure in forehead "And eyes.—Oppressed feeling in brain followed by pain an inch below and to outer side of l. nipple.—Rheumatoid aching in precordial region and at apex, followed by pains in l. wrist, inner side r. calf, and subclavicular region, and again in l. wrist and region

of apex.—Cardiac erethism; debility of heart, marked by the influences of some smouldering inflammation, generally in lungs.—Cardiac irritability, profuse flow of watery limpid urine.—Palpitation in cardiac hypertrophy with dilatation.—Palpitation and cardiac distress, < morning and evening and when thinking of it.—Action of heart tumultuous and forcible, could be heard several feet from bed.—(It renders heart-beat slower, fuller, and more regular.).—On lying down, cardiac depression with dull, heavy beating.—Palpitation from nervous irritation with plethora.—Excessive flatulence which < the palpitations.—Can only walk a few steps without having to stop and get breath; l. arm, head, leg, and foot œdematous; occasionally a sharp, shooting pain from sternum to l. scapula.—Menses appear regularly, begin with deep pain and heat in occiput, and, later, pain in forehead and temples; faintness and nausea follow and occipital pain is >; aversion to smell of food; exophthalmos; menses intermittent; during menses, stupid; pubes swollen, vagina hot, > by ice locally; constipation, stools dry, clay-like, with exophthalmos, heart tumultuous and swelling of parts <; when heart quiet œdema of pubes >; urine scanty, thick, muddy; all symptoms > after menses (Lcps. cured).—Aneurism of large vessels near heart.—Pulse: many symptoms are < and > according to weakness or strength of heart's action.

20. Neck and Back.—Acute pain at 7th cervical vertebra.—Slight rheumatoid pain in l. supra-scapular muscle.—Congestive pain in nape, with severe continuous dorsal and lumbar pain, < lower l. side.—Rheumatoid pains: scapular muscle; lower dorsal region; sent from apex of heart by friction to l. subscapular region, then to mid-dorsal and later to apex.—Severe continuous aching in lumbar region.—Sharp pains first in lumbar region, then in l. leg, extending up thigh, then in r.; feels weak as if over-fatigued.—Severe aching down spine, < from friction, passing off after rising, morning.

21. Limbs.—Muscular rheumatoid pains, affecting articulations and tendons, < by motion and cold air, not > by friction, or cold affusion, or direct warmth, but > in warm room or in bed; rheumatic pains around heart; irregular and intermittent pulse; < towards sunset.

22. Upper Limbs.—Rheumatoid pains in forearm and wrists, with trembling of hands.—Hands unsteady, writing difficult.

23. Lower Limbs.—Rheumatoid pains in knees, legs, thighs, wandering to back, slight lameness, unsteady gait.—L. leg feels shorter than r. and so sounds when walking.—Unsteady feeling when walking.

25. Skin.—Prickings as if bitten by insects.—Troublesome urticaria, esp. on l. forearm and r. leg, before retiring.

26. Sleep.—Sleep restless, full of troublesome dreams.—Wakeful on retiring, though fatigued.

27. Fever.—Stupid, will not answer questions; is waxy, cold; pulse very low yet full and large, soft and compressive; hæmorrhage from bowels; tawny expressionless face; veins full and face bloated; eyes expressionless and seem to project from their sockets; fever not high; chokes and swallows. (typhoid malaria).

Lysidinum.

Ethylene-Ethenyl-diamine. Methylglycoxalidine (Merck). Trituration. Solution.

Clinical.—Gout. Lithiasis. Oxaluria. Uric acid diathesis.

Characteristics.—*Lysidin*. occurs in red-white crystals. The solution is a thick pinkish liquid. Clifford Mitchel (*H. W*., xxxiii. 277) has given the 50 per cent. solution in ten-drop doses well diluted in aerated water, thrice daily, in two cases of oxaluria, one recent in a young man, one in an old man and of long standing. In the second case the distressing lumbar pain was removed by a few doses though it had persisted for a number of days.

Relations.—*Compare:* Nitro-mur. ac., Oxal. ac., Sars., Urotrop.

Macrotinum.

Macrotyn. Resinoid of Actæa racemosa. Trituration.

Clinical.—Dysmenorrhœa. Eyes, affections of. Headache. Lumbago. Melancholy. *Myalgia. Rheumatism*.

Characteristics.—I have already mentioned *Macrot*. under *Act. r*., from which it is derived; but as Dr. Scipio's proving (with the 3rd trit., from 9 to 24 grains being taken daily) brought out some features not noted in the *Act. r*. proving, I think it best to give it an independent mention. Muscular weakness, excessive restlessness, > by moving about in spite of the weakness; melancholy, and irritable; dulness of intellect—these were prominent general features. But the most important distinctive feature is > of symptoms (other than dysmenorrhœa, pains) by onset of menses. C. A. Howell (*Med. Adv*., xxi. 231) cured with *Macr*. 2x, every two hours, a woman, 63, who, after an interval of eleven years, began again to menstruate at 60, slightly but regularly, and who had the following symptoms, which appeared suddenly at the time the flow was due, but failed to come on: Intense pain at occiput < at every throb of heart. Retraction of head and neck. Neuralgic pains in limbs. Pulse 96; temperature 99°. The pain was relieved by *Macr*. in a few hours and the flow came on.—Symptoms of the mind, eyes, and breasts are < before menses and > as soon as flow sets in. (*Act. r*. has < of mental symptoms during menses). Backache is > after menses.

SYMPTOMS.

1. Mind.—Melancholy; at times irritable; > when menses come on.—Fear: apprehensive, of impending danger, or incurable disease.—Sits for a long time thoughtless; moving hands and feet; frequent sighing.

2. Head.—Headache in evening, > as soon as eructations and nausea set in.—Dull headache commencing in occiput, gradually extending to vertex and forehead; temporarily > by pressure; by sleep; next day soreness in eyeballs, < by pressure.—Severe, sharp pains over l. eye, extending through head to occiput.

3. Eyes.—Dark circles round eyes week before menses, disappearing when menses come on.—Twitching of upper lids.—Eyeballs feel enlarged and to pressure.—Muscæ volitantes before r. eye, morning.

6. Face.—Face suddenly becomes flushed and hot.

8. Mouth.—Sense of taste impaired.—Dry, sticky feeling in mouth.

9. Throat.—Dryness in throat, causing frequent trembling and coughing.

11. Stomach.—Nausea and eructation in evening.—Faint feeling in epigastrium, extending over whole chest and head, followed immediately by throbbing sensation over whole body.—Faintness in epigastrium (as from a sudden fright) brought on by meeting an acquaintance.

12. Abdomen.—Sharp cutting in umbilical region, early in morning, > by stool.—During menses, bearing down with tight sensation round hips.

13. Stool.—Alternate constipation and diarrhœa.

14. Urinary Organs.—Frequent desire, with profuse flow of pale urine.

16. Female Sexual Organs.—Menses scant and dark; clotted; afterwards increased in quantity.—Suppression of menses for six weeks.—Dysmenia; pain not > for several hours after flow has begun.

18. Chest.—Darting pains in chest (both sides), with palpitation of heart.—Sudden, sharp pains a little below l. nipple.—Breasts feel sore; heaviness in limbs before menses.

19. Heart.—Pain in the heart, extending down l. arm to fingers, with palpitation.—Wakes at night with palpitation.

20. Neck and Back.—Sensation in neck as if muscles too short.—Pain in whole back as if muscles bruised.—Pulsating pains in back; > by pressure; > after menstruation.

22. Upper Limbs.—Weakness in both arms and inability to move them.—Pain in l. shoulder, shooting down to fingers.

23. Lower Limbs.—Heaviness of legs as if very tired.—Muscles of calves feel too short.

24. Generalities.—Whole muscular system seems exhausted after the least exertion.—Great restlessness.

26. Sleep.—Disturbed sleep.—When failing asleep starts up suddenly for fear of falling, or to avoid danger.—Dreams of being on high places and in danger of falling.

Magnesia Carbonica.

Magnesić carbonas levis. Light carbonate of magnesium of B. P. Magnesia carbonate 3($MgCO_3$) $Mg(HO)_2$. $4H_2O$. Trituration.

Clinical.—*Antrum of Highmore, affections of*. Ascarides. Catarrh. Constipation. Cornea, opacities of. Cough. Deafness. Debility. *Diarrhśa*. Dyspepsia. Eyes, inflammation of. Hernia. Menorrhagia. *Menstruation, delayed*. Metrorrhagia. Nervousness. Neuralgia. Neurasthenia. *Pregnancy, nausea of; toothache of*. Spleen, pain in. *Taste, disorded*. Tinnitus. *Toothache*. Tumours.

Characteristics.—*Mag. c*. is the leading partner in the well-known "Pulv. Rhei Co." of the B. P., still better known as "Gregory's Powder," one of the terrors of an allopathic nursery. The proportions are: *Mag. c*., six parts; Rhubarb powder, two parts, and Ginger powder one part. A curious point about this mixture is that *Mag. c*. and *Rheum* are antidotal in Homśopathic practice, both having much acidity, and green, sour stools. "Fluid Magnesia" (*Liquor Magnesić Carbonatis*), a much more palatable dose, as my early memories tell me, is made by impregnating water in which freshly precipitated carbonate of magnesia is suspended with CO_2. One fluid ounce contains gr. xiii. of *Mag. c*. The properties of *Mag. c*. from the old-school standpoint are summed up as "laxative, antacid, antilithic." Guernsey says of it: "We often use *Mag. c*. with great advantage for complaints arising in people who have been taking this drug to 'sweeten the stomach.' " In order to obtain a proper notion of the power and sphere of this great remedy it is best to put out of mind all thought of its old associations. We shall then be able to view it in its entirety and its old uses will be seen in their proper relations. *Mag. c*. has many points of contact with *Gels., Cham*. and *Ars*. in nervous irritation and sleeplessness. But the nervousness of *Mag c*. is of the type of nerve exhaustion. "Water containing *Magnesia* and that coming from magnesian limestone districts is peculiarly soft to the feel. There is reason for supposing that this softness has a soothing effect upon the nervous system when used in the form of baths—*e.g*., Buxton and Matlock in England, Schlangenbad, Wildbad, Rehme, and it may be Gastein in Germany. It is often found that the physical characteristics of substances correspond with their dynamic influences, and thus with *Magnesia*; it very frequently is required for nervous systems that demand a permanently soothing and sustaining influence. Its effects on the skin are reflected upon the primć vić or *vice versâ*; for, on the mucous surfaces, quite apart from its antacid action, it proves soothing and sustaining" (Cooper). An indication given me by Cooper has been of immense service in numbers of cases.—It is "worn-out women"—that is, the state of nervousness induced by excess of the cares and worries of life. *Mag. c*. 200, repeated three or four times a day, has given untold relief to many a patient of this kind. When constipation and heaviness are present these will be removed at the same time. One leading note of *Mag. c*. is sensitiveness, mental and bodily, sensitive to touch, sensitive to cold air. Effects of shocks, blows, or mental distress.

The least touch causes starting. This sensitiveness passes into neuralgic pains of the highest intensity, neuralgia, lightning-like; < on left side, insupportable during repose; must get up and walk about. The sufferings of the pregnant state—neuralgia, toothache, nausea—come into this category. An extra tax is made on the woman's strength at this period, and as so often happens the daily tasks go on as usual during the greater part of the time, so that a "worn-out" condition is induced. *Mag. c*. is of great value here. *Mag. c*. is to exhausted nerves what *Chi*. is to exhaustion from loss of fluids. But it must not be supposed that *Mag. c*. is a "nerve" medicine only. Tumours, even bony ones, have yielded to it; and it has been credited with the cure of cataract. I have no definite experience with it in cases of this last, though I have thought I observed improvement in some. But I have many times removed with it corneal opacities left by ulceration; and I practically cured with it a tumour of the right malar bone. The patient was a sea-captain, aged 50. I had saved a relation from some operation, and for this reason he came to me. Except for his trouble, which was steadily getting worse, he was quite healthy. His face was quite distorted; right cheek bulging out, nose pushed over to left side, right nostril stretched out. The malar bone was especially prominent near the wing of the nose. This was the only part that was tender. The tumour was softish as if cystic. There was no discharge. Inside the mouth the right side of the hard palate bulged into the mouth and was slightly tender to pressure. The tumour was the seat of a constant gnawing pain; but the thing that troubled him most was *sensitiveness to cold winds and cold weather*. This was so great that he was afraid he would have to give up his calling. This led me to give *Silic*. 30 in the first instance (on February 27, 1895); but *Sil*. only increased the pain. One night he awoke feeling all his back aching. I worked up the case more carefully and found this under *Mag. c*.: "Throbbing pain in antrum of Highmore with swelling of right malar bone"; and "facial neuralgia, left side, shooting like lightning; < from touch, *draught, change of temperature*; cannot stay in bed, must walk the floor." Putting these together I prescribed (on March 13th) *Mag. c*. 30, giving four doses a day. March 28th Much less pain. Face much reduced, swelling softer, fluctuating. Swelling inside mouth softer." April 10th: "Very much better. Tumour smaller and softer." August 14th: "Face almost normal in appearance. Swelling inside mouth quite gone. Has no pain whatever, no sensitiveness to cold air. Had finished medicine in middle of July." He now joined his ship, and as he was generally away for years at a time that was the last I saw of him, but I gave him a supply of *Mag. c*. to take with him. The *sensitiveness* in this case was not that of nerve exhaustion, but it was sufficient to confirm the choice of the remedy, and it teaches us that it is never wise to narrow down the meaning of symptoms too closely. So whilst *Mag. c*. is *suited* to "persons, especially children, of irritable disposition, nervous temperament; lax fibre; sour smell" (Hering); and to "worn-out women, and dark-haired, sensitive people, spare-and thin" (Cooper); it is just as ready to cure a tough old sailor, impassive and stolid, provided he has sufficient *Mag. c*. symptoms about him. A knowledge of the temperaments of remedies often saves much trouble; but it must be used with brains. Two cases (related by A. I. Harvey) illustrating the

power of *Mag. c*. in neuralgia are quoted in *Amer. Hom*., xxii. 12. (*1*) Carpenter, 50, light complexion, spare, had had facial neuralgia two years coming in attacks, lasting from three to seven days, at intervals of two or three weeks. Pain sharp, shooting, from left side of face and head, < at night, from pressure, from jar. *Mag. c*. cured promptly after failure of *Spig*. (*2*) Blacksmith, 22, light complexion, full figure. For several years he had attacks of facial neuralgia coming on after taking cold. Pain very severe in left orbital region, shooting down into eye and face, and back to occipital region begins in morning, grows worse till noon, then subsides. No pain at night, rests well. *Spig*. and *Kali bi*. failed. *Mag. c*. cured promptly. Cooper mentions it, as a possible remedy in pyorrhea alveolaris. In the homśopathic nursery *Mag. c*. is just as indispensable a blessing as it is in the allopathic nursery an indispensable curse. For children who are puny and sickly; who refuse their milk and get pain in the stomach if they take it, diarrhśa, colic, stools green, like the scum of a frog pond, jelly-like lumps; aphthć; marasmus, *Mag. c*. is a sovereign remedy. On September 25, 1899, I was written to from France about an infant girl seventeen months old. Up to three months before she had been perfectly well. Then diarrhśa came on. At first had ordinary stools which became loose; then green; sometimes very white, or bright slimy-yellow mixed with blood., and every time the bowels acted (*i.e*., every hour or hour and a half) she screamed before, during, and after the action. At the time of writing the stools were one or two in the night and three or four during the day. Still watery but seldom undigested. Always thirsty, but cannot take milk. Vomits food. Face pale, drawn; dark under eyes. Emaciated. So weak can hardly stand. Has eight teeth. I sent *Mag. c*. 30 to be taken four times a day. Report received October 6th. "Well. Was better after two doses. Can take cow's milk freely now."─The acidity for which allopaths give *Magnesia* is a true enough indication; but not for the reason they give: Sour stools; sour sweat; sour smell of whole body; sour eructations from cabbage; sour vomiting; sour breath; sour taste-all these are caused and cured by *Mag. c*. Persons of lax fibre and sour smell are suited to *Mag. c*. The whole body feels tired and painful, especially the legs and feet; aching; restless. Spasmodic affections of stomach and intestines. Unrefreshing sleep; more tired on waking than on going to bed. Inordinate craving for meat in children of tubercular parentage. There is much suffering at the menses in women. They are preceded by labour-like pain, cutting colic, backache, weakness, chilliness. A grand characteristic is: Flows only at night or when lying, ceases when walking. The period is usually late and scanty. Flow acrid, dark, pitch-like, difficult to wash off. During pregnancy there is vomiting and toothache. *Sensations* of *Mag. c*. are: As if everything was turning round. As if hair was pulled. As if white of egg had dried on face. As if teeth too long. Throat as if scraped by an awn. As if rectum pricked with needles. Back as if broken. The pains are < by rest; insupportable; must get up and walk about. Rheumatic pains are < after a long walk,> by warmth, < in bed. Walking fatigues; = involuntary urination; prickings in rectum; smarting leucorrhśa. Walking stops menses. Cannot put left foot on ground when walking. Raising arm < pain in shoulder. Kneeling < vertigo; < 2-3 a.m.

(sleeplessness); 4 a.m., intolerable pain in rectum. Symptoms generally < evening and especially at night. < From uncovering; great aversion to it. Eating warm food <; = anxiety and warmth through whole body. Milk <. Warmth of bed < toothache. Cold < toothache. Cold water > toothache for a short time; then <. Wet and rainy weather = itching of scalp. Draught < facial neuralgia. There is periodicity with *Mag. c.*: every second day, every three weeks; "all symptoms < every third week." Touch and pressure < almost, all symptoms; but pressure in abdomen > menstrual flow. Pain is < on the side lain on. Smoking < headache.

Relations.—*Antidoted by:* Ars. and Cham. (neuralgia); Merc. sol., Nux, Puls. and Rheum (abdominal troubles). *It antidotes:* Acet. ac. *Compatible:* Caust., Pho., Pul., Sep., Sul. *Complementary:* Cham. *Compare:* Mag. m., Mag. p., Alo.; Ant. c. (headache from smoking); Calc. and Rhe. (sour stools); Nux (sour breath); Coccul. and Sep. (< from kneeling); Ip. (nausea and grass-green stools). Coloc. (griping pains with drawing up of legs; Coloc. has not the green slimy stools of Mag. c.); Cham. (neuralgia, > moving about, anxiety, restlessness, griping before stools; stools of Cham. more yellowish green like chopped eggs); Calc. (sour stools, intolerance of milk, imperfect nourishment: Calc. has head-sweat, cold, damp feet, enlarged abdomen); Ratan. (toothache of pregnant women); Sang. (rheumatism of right deltoid; Nux m., of left). Lyc., Nit. ac., Sil.; Lac can., Lac def. (intolerance of milk); Am. m. (menses < at night); Graph. (coryza during menses; Mag. c., coryza and sore throat before menses; Merc., pain in head with coldness and coryza < before and at menses).

Causation.—Vexation. Fit of passion. Mental distress. Shocks, blows. Pregnancy. Dentition. Cutting wisdom teeth. Injudicious feeding. Milk.

SYMPTOMS.

1. Mind.—Inquietude and fear, with trembling and heat.—Anxious, with perspiration all day.—Uneasiness, with trembling of hands and absence of mind.—Sad mood with indisposition to talk.—Anxious and warm through whole body esp. in head, while eating warm food.—Trembling, anguish, and fear, as if some accident would happen all day, going off after going to bed.—Ill-humour in evening.

2. Head.—Vertigo in evening, with swooning.—Vertigo: when kneeling; when standing as if everything was turning round; in morning after rising with inclination to vomit and accumulation of water in mouth.—(Continual giddiness, can hardly stand, with numbness of l. arm.—Vertigo, staggers in the street and fears to go out, lest people should strike against her.—Oppression and heat on vertex.—Much headache all day, gets up giddy and everything looks dark in morning.—Stuffy feeling in head and chest in a nervous woman.—Headache in temples every morning, generally l. and over eye, < stooping; never in occiput.—R.

T. C.).—The head is fatigued by intellectual labour.—Heaviness and dizziness in head, early in morning, when rising, going off after a walk.—Pressure in forehead. Violent, darting headache after vexation (1 to 10 p.m.).—Lancinating headache early in morning after rising.—Pulsating sensation in forehead.—Heat in head and hands with redness of face, alternating with paleness of face.—Bruised sensation on vertex.—Pain on top of head as if hair were pulled.—Rush of blood to head.—Headache in bed at night, also during sleep, > by sitting up.—Pressive pain at vertex, during intellectual labour, or when in company.—Tension and pulling pain in occiput, as from stiffness of nape of neck.—Drawings in forehead, with nausea.—Thrilling headache, with sensation of heaviness, after a fit of passion.—Shooting pains in head, also at night, in side which presses pillow.—Congestion in head, with internal heat, esp. when smocking.—Desquamation of scalp, which itches, esp. in rainy weather.—Falling off of hair.

3. Eyes.—Inflammation of eyes, with redness, shootings, sensation of burning, and confused sight.—(Drawing pain across eyes, feels as if each half of head were being drawn together.).—Graves's disease, prominent eyeballs (improved).—Distension of ball of eye.—Agglutination of eyelids in morning.—Dryness of eyes, or violent lachrymation.—Opacity of cornea.—Black spots before sight.—Obscuration of crystalline lens (cataract).

4. Ears.—Inflammation of external ear, with redness and pain, as from ulceration.—Great sensitiveness to slightest noise.—Hardness of hearing, with humming in ears, esp. in a room.—Hardness of hearing with whizzing before the ears.—Whizzing, fluttering, and buzzing in r. ear with hardness of hearing.—Tinkling, rumbling, and a sensation as if a bird were flapping its wings in ears.—[The remaining ear symptoms are supplied by Cooper]: Constant roaring in head like steam, < when covered, with pain in occiput.—Noises as of bells, and sometimes of water rushing in l. ear, with numb feelings elsewhere.—Nervous deafness; exhausted hearing.—Nervous deafness; cannot bear a person to shout in her ears, pain across the lower back, stiffness, cannot turn in bed, the least excitement makes her tremble and turn cold; faints after exertion.—Deafness in a dark-haired woman caused by worry; hearing goes when over-tired; sensitive to interference.—May be said to be for deafness of middle and old age what Calc. is for the deafness of childhood.—Deafness rapidly progressing with heat on vertex, headache and tinnitus.—Deafness < on taking cold, and irregular but distressing tinnitus and a dead weight on vertex causing her to hang down her head.—Deafness from cutting wisdom teeth (relieved).—Loud explosions in ears waking her at night go away, and old swellings of glands that had disappeared return.—Earache (l.) with numb feelings and dull, heavy, singing noises.—Tinnitus (man, 29) constant, at times like a church bell, at others like a gas-jet, < when excited and after exertion.—In a nervous, excitable, impetuous girl of twenty, dark-haired, lifelong deafness which became suddenly worse after a fright five weeks before; much pain in l. groin at menstrual period, falls down in a faint and legs ache; hears best in

street; after *Mag. c*. 30 pains at period went, spirits got better, and hearing in one ear (l.) got quite well.─Deafness, hearing goes in an omnibus, or when many are speaking, can hear in church till organ plays, exhausted by watching or anxiety, not by fatigue.─Deafness which comes on from fright or in a cold (in girl of twenty-nine, subject to recurring deafness and to headaches in l. eye extending along the l. side of head and a feeling of numbness in head).─Deafness, tuning-fork hearing imperfect, agitation and worry causes palpitation; slightest unexpected touch on body brings on tinnitus aurium, which seems to come from throat and back of neck; headache on vertex on rising in morning and confined bowels.

5. Nose.─Epistaxis in morning.─Vesicular eruption in nose, with pressive pain.─Stoppage of nose.─Dry coryza, which admits of respiration only through mouth (waking one at night).─(Chronic affections of nose.)

6. Face.─Discoloured, pale, earthy complexion.─Alternate redness and paleness of face.─Slovenly appearance.─Tension of face, as if albumen were dried on the skin.─Much pain in malar bones, at night, preventing sleep; or they may appear swollen.─Nocturnal pains in cheek bones, digging, boring, and tearing, insupportable during repose, and forcing removal from place to place.─(Tumour in r. cheek bone, painful, very sensitive to cold wind).─Throbbing pain in antrum of Highmore with swelling of r. malar bone.─Swelling of cheek bone, with throbbing pain.─Swelling of face, which is bloated and covered with tubercles.─Eruption of tetters round (lower part of) mouth.─Hard, little nodosities in both corners of mouth.

7. Teeth.─Toothache from motion of a carriage.─Nocturnal pains in teeth, which force patient to get up and walk about, insupportable in a state of repose, and generally burning, boring, or like the pain of ulceration, or tearing, drawing, and jerking, extending to temples, with swelling of cheek on side affected, stiffness of nape of neck, and neck, and twitching in fingers and feet.─Throbbing and shooting in teeth after a meal.─Toothache < by cold.─(Toothache, l. side, coming on irregularly.).─Toothache during pregnancy.─Ailments from cutting wisdom teeth.─Looseness of teeth (with swelling of gums).

8. Mouth.─Soreness of mouth with rawness and tenderness and minute ulcerations at tip of tongue, which is fissured and red, saliva acid and roof of mouth intensely irritable.─Violent pain in roof of mouth, cheeks, eyes, nose > hot fomentations; sometimes maddening pains and flashes before sight, with feeling of coldness all over, and of pins and needles in arms and fingers on going to sleep.─Burning vesicles on gums, on inside of cheeks, lips, and palate, they bleed from the least contact.─Bitter or sour taste in mouth.─Dryness of mouth, esp. night and morning.─Sanguineous saliva.─Vesicular eruption in mouth, and on tongue.─Small tubercles in mouth, which bleed and burn on slightest touch.

9. Throat.—Sore throat, with shooting pain when speaking and swallowing.—Burning pain in throat and palate, with dryness and roughness, as if it contained bearded ears of corn.—Frequent rising of mucus in throat (morning) with roughness and dryness of fauces.—Soft, fetid tubercles of colour of peas are hawked up.

10. Appetite.—Loss of taste.—Bitter taste, with a white tongue, and viscid mucus on tongue and teeth (going off after rinsing the mouth).—Acid taste in mouth.—Violent thirst (for water), esp. in evening and at night.—Desire for fruit; for acid drinks.—Aversion to green food.—Great desire for vegetables, with dislike for meat, and *vice versâ*.

11. Stomach.—Acid risings.—Frequent risings, with pains in stomach.—Nausea and vertigo during a meal, followed by retching, and vomiting of bitter or saltish serum.—Pressive contractive pain in stomach, sometimes with sour risings.—Sensation of insipidity and emptiness in stomach, with nausea and inclination to vomit (> after dinner).—Pain, as from ulceration, in stomach (with great sensitiveness to pressure).

12. Abdomen.—Colic, pressing, spasmodic.—Contractive pain.—Griping, cutting, and rumbling in whole abdomen, followed by thin, green stools, without tenesmus.—Induration and shooting pains in hepatic region.—Excessive distension and tightness of abdomen, with sensation of heaviness.—Cramps in abdomen, followed by leucorrhśa.—Pinchings, cuttings, and acute drawings in abdomen.—Inguinal hernia.—Affections of the l. abdominal ring; great amount of flatus, which is sour when eructated.

13. Stool and Anus.—Constipation.—(Constipation of neurasthenia.—Constipation with l. ovarian pain, or with heartburn.—R. T. C.).—Frequent and ineffectual want to evacuate, with scanty fćces, or only an emission of wind.—Greenish, frothy, and mucous diarrhśa (esp. in children, which looks like the green on a frog pond), with cutting pains.—Stools with white floating lumps, like tallow; always preceded by griping, < on r. side.—Diarrhśa of a sour smell (of children).—Ejection of ascarides and lumbrici.—Shootings in anus and rectum, esp. while suffering from tenesmus.

14. Urinary Organs.—Secretion of urine, more copious than usual, watery, and of a pale or greenish colour.—Frequent emission of urine, even at night.—Involuntary emission of urine; when walking, or rising from a seat.—White sediment in urine.—Sensation of burning and excoriation when urinating.—Bladder and rectum become irritable (from 200th.—R. T. C.).

15. Male Sexual Organs.—Diminished sexual desire.—Absence of erections.—Flow of prostatic fluid during the emission of flatus.—Scrotal hernia.—Frequent pollutions.

16. Female Sexual Organs.—Backache and general flabby condition (in women).—Menstrual flow more profuse during night than day, with dragging pains, > from pressure on abdomen and stooping.—No menstrual discharge during the pains; only after them.—Sensation of bearing down towards groins, as if preparatory to catamenia, with cutting pains in abdomen.—Catamenia retarded, or completely suppressed; too scanty; or premature, and accompanied by a variety of sufferings.—Constant headache, at each excessive menstrual period.—Falls down in a dead faint at each menstrual period, with aching pains in limbs, which feel useless, and l. ovarian pain.—Emission of deep-coloured, thick, glutinous, and pitch-like blood, with the catamenia.—Before the catamenia: pains in loins, colic, bulimy, frequent risings, and nausea.—During catamenia: dejection, shivering, pains in head, paleness of face, pains in loins, and cramp-like, pressive pains in abdomen, which arrest the menstrual flux.—Discharge of white and corrosive mucus from vagina, sometimes preceded by cramps in abdomen.—Toothache of pregnant females.—Sore throat before menstruating.

17. Respiratory Organs.—Cough excited by a tickling in throat, with a serous and saltish expectoration.—Expectoration only in morning of thin or tough mucus or of dark blood tasting salt.—Cough < in evening till after midnight.—Cramp-like cough at night.—Cough in morning, with expectoration of a yellowish pus.—Expectoration of tubercles as big as a pea, and very offensive in smell.—Expectoration of blood when coughing.

18. Chest.—Oppression of chest, with sensation of constriction.—Oppression of chest, with shortness of breath, esp. when walking.—Pressure and sensation of heaviness, or incisive and shooting pains in chest.—(A lady, 32, without chest symptoms, took *Mag. c*. 200 through the day, and at night brought up quantities of phlegm, with constant cough, and movement of bowels.—R. T. C.).

19. Heart.—Pain as of excoriation, and shootings, in l. side of chest, and in region of heart.—Palpitation of heart and whole l. side painful, with nightmare (in patient taking *Mag. c*. 200; otherwise she felt lifted up and stimulated.—R. T. C.)

20. Neck and Back.—Stiffness in nape of neck.—Stiffness in neck.—Tearing, and successive pullings, in nape of neck.—Shootings in loins.—Much pain in head and r. shoulder; pain as if dislocated on raising arm.—Contusive pains in sacrum and back, at night.—Pain in back and small of back at night, as if broken.

22. Upper Limbs.—Wrenching pain in shoulder-joint, while in motion.—Pain in top of shoulder-joints, generally r. side, which prevents raising arm.—Fits of tearing in shoulder, esp. at night, with tingling, extending to fingers, and inability to move arms, in consequence of the acuteness of the pain.—Drawing pain in arms and hands.—Cracked skin of hands.—Cramp-like tension in joints of fingers.—Heat in fingers.—Red and inflammatory swelling of fingers.—Spreading blisters on hands and fingers, with stinging.

23. Lower Limbs.—Restlessness in legs.—Drawing pain in legs and feet.—Itching of buttocks, with red spots after scratching.—Painful swelling in ham.—Cramps in calves of legs at night.—Burning places on shin.—Furunculi on legs.

24. Generalities.—Painful sensitiveness of whole body.—Drawing and tearing in limbs.—Rheumatic pains in limbs.—Rheumatic pains in shoulders.—Neuralgic lightning-like pains.—Painful shocks in different parts.—Frequent falling, without loss of consciousness, when walking or standing.—Epileptic fits.—Dazed feeling, packs and unpacks her clothes on a journey, without consciousness of having done so.—Relaxation of whole body.—Lassitude, principally in feet, and when seated.—A short walk tires much.—Restlessness in the limbs, in the evening, after sitting a long time.—The symptoms manifest themselves, or are <, at night, and during repose.—The symptoms, which appear when in the sitting posture, are > by movement.

25. Skin.—Violent itching, and great dryness of skin.—Violent itching over whole body.—Large nodosities between the skin and the flesh, with shooting pains.—Nettle-rash with much swelling in feet and hands, and up both sides of face, knuckles disappear in the swelling, and ears sing and buzz and become deafened (in woman, 30, from the 200th.—R. T. C.).—Small, painless, red tetters, which ultimately exfoliate.—Spreading blisters.—Small blood boils (lower legs).—Corroding vesicles.

26. Sleep.—Frequent and violent yawning.—Inclination to sleep during day.—Sleeplessness, sometimes from oppression in abdomen, or from anxious uneasiness and internal heat, with great dread of being uncovered.—Sleeplessness; from flatus; cutting wisdom-teeth; exhaustion.—Many anxious dreams, with talking, cries, and starting from fright.—Dreams of fire, flood, robbers, quarrels, money, pleasures, misfortunes, dead persons, &c.—Sleep at night unrefreshing, with fatigue as great in morning as before going to bed in evening; early awakening, with difficulty in again going to sleep.—Cannot sleep after 2 or 3 a.m.

27. Fever.—Shivering in evening.—Chill and chilliness with external coldness in evening, and after lying down, slowly going off.—Chill running down back.—Heat mostly in the forenoon, frequently with perspiration on head only.—Heat after evening chill.—At night, anxious internal heat, with restlessness and aversion to being uncovered.—Perspiration with thirst, from midnight till morning.—Morning sweat.—Sensation of heat in morning, without perspiration and without thirst.—Nocturnal sweat, often fetid and greasy (colouring the linen yellow).—Sour sweat.

Magnesia Muriatica.

Chloride of magnesium. Magnesia chloride. Mg Cl_2. Solution. Trituration.

Clinical.—*Biliousness*. Bladder, paresis of. Cardialgia. *Cold*. Constipation. Deafness. Diarrhœa. Dysmenorrhœa. Dyspepsia. Foot-sweat. Headache. Heart, affections of. Hæmorrhoids. Heartburn. *Home-sickness*. Hysteria. *Leucorrhœa. Liver, affections of. Menstruation, painful*. Nocturnal emissions. Ozæna. Palpitation. Pregnancy, nausea of. *Smell, disordered*. Spleen, enlarged. Stomach, disorders of. *Taste, disordered*. Tinea ciliaris. Urine, straining to pass. Uterus, pain in; induration of. Waterbrash. Whooping-cough.

Characteristics.—Whilst *Mag. c*. and *Mag. sul*. are recognised old-school remedies, I can find no mention of *Mag. mur*. or *Mag. Phos*. in modern text-books. *Mag. m*. first appeared in Hahnemann's *Chronic Diseases*. The general feature of *Mag. c*. appears in many symptoms, notably those of nervous disturbance and hysteria. The salt, says Guernsey, "is found in many mineral waters, and in seawater. It has a very bitter taste, and is decomposed by heat." The note about the sea-water is important. *Mag. m*. is like *Nat. mur*., and *Aq. mar*. in the relation to seaside effects. *Nat. m*. is particularly indicated in constipation," biliousness," and generally disordered health, which appear as soon as the patient goes to the seaside. *Mag. m*. is indicated when excessive weakness is felt after a sea-bath. The chief *Localities* of its action are: Head; r. hypochondrium; inner region of liver; rectum and large intestine; bladder; uterus; heart; feet. It is *especially suited to:* Diseases of women; spasmodic and hysterical complaints complicated with uterine diseases. Headache at menstrual period in hysterical women. Women after suffering months or years from attacks of indigestion or biliousness. Enlargement and congestion of liver Puny, rickety children during dentition. Men with disordered livers; and sexual disorders. Teste, who places *Mag. m*. in his *Ferrum* group, says that *Mag. m*. and *Mag. c*. "have been used for the cure of cachexia occasioned by long and painful diseases." He says he has seen *Mag. m*. produce great improvement in this case: "Hydrarthrosis of left knee, with emaciation of left thigh, consequent on a wandering neuralgia, which, after having commenced in the form of cystitis with (non-venereal) discharge from urethra, had successively invaded the shoulder, left elbow, eyes, and lastly, knees, where it had become seated." A connection between liver disorder and nasal obstruction has often been traced, and *Mag. m*. has a large number of symptoms in both. The nasal symptoms have led to its successful use in ozæna. One case cured had redness, swelling and scaliness of nose, and sweat about the head and feet. *Mag. m*. is one of the leading remedies in foot-sweat. Burning in soles, evening, must put feet out of bed. In liver affections there is enlargement, sensitiveness < from touch, and < lying on r. side; tongue large, coated, indurated. It is especially suited to liver affections in children who are puny and rickety, and have eruptions about the eyes. The constipation of *Mag. m*. is very distinctive, and

has led to the cure of many extremely obstinate cases. The characteristic stool is *knotty* and *conglomerate*, like sheep's. It may remain in this condition, or it may crumble at the anus. Painful urging before stool; burning at anus after. As well as intestinal atony, there is atony of bladder: urine can only be passed by bearing down with abdominal muscles. The hysterical symptoms are marked: spasms, fainting, globus. Bearing down in uterine region; uterine spasms. Menses black or pitch-like, accompanied by pains in back when walking, pains in thighs when sitting. Leucorrhœa after every stool or following uterine spasms. Hysterical headaches. Patient is anxious, restless, always < by mental exertion; during or after dinner seized with nausea, eructations, trembling and faint spells, > by eructations. Palpitation < when quiet, > moving about. Perversions of taste and smell are marked in *Mag. m*., and I have frequently restored with it loss of taste and smell after influenza. Among the *Sensations* of *Mag. m*. are: As if some one was reading after her. As if boiling water was on side of head. As if hair pulled. As if tongue burnt; mouth scalded. Stools as if burnt. The *pains* are mostly boring and spasmodic contractive pains; dragging down. There is much burning and heat. R. M. Skinner reports (*Med. Adv*., xxiv. 383) this case: A farmer had been treated allopathically three months for chills, which were checked, but the man did not feel well. Spleen very large, sensitive, felt heavy when he walked or rode. Constipated, goes three or four days without a stool. It was for this that he sought advice. Abdomen distended. hard, especially in ileo-cæcal region. Cold on left side and a crawling feeling, like a cold snake. Beating in umbilical region as if his heart beat there. *Mag. m*. 20 one dose on the tongue. At 8 p.m. the bowels began to act and went on acting with the exception of one hour till 3 a.m. He complained next morning that the medicine had "almost killed him," and he looked thin and tired. No further medicine was given, and in ten days he had no complaint, and the spleen was normal in size and without tenderness. In a large proportion of *Mag. m*. cases the *Conditions* will give the leading indications. There is general hyperæsthesia and < by touch or pressure; but the head pains are > by hard pressure; eye pains > by pressure, and the menstrual pains > by pressing on back. There is great sensitiveness to cold and disposition to catch cold, > wrapping up head warmly; but the skin eruptions on face, head, and eyes are < in warm room; cough < in room. Most symptoms except headache are > in open air. Sea-bathing = bloody expectoration; great weakness. Rest <; motion > (this is especially marked and peculiar in reference to palpitation). < Lying down. Palpitation is > lying on left side. Liver symptoms < lying right side, < on side lain on. [Also lying on left side = sensation of something (liver) dragging to that side.] Rumination < while walking. < At meals (fainting). > By eructations (nausea and trembling). < After coitus (pain in testes and cords). Mental exertion <.

Relations.—*Antidoted by:* Cham., also Camph., Ars., Nux. It *antidotes:* Merc. (metrorrhagia). *Compatible:* Bell., Sul., Nat. m., Pul., Sep. *Compare:* Hysteria, Mosch., Asaf., Val., and Castor. Uterine spasms, Ign. (Mag. m. may have induration); Caust. and Secale (both have *continuous* spasm). Erections and burning in penis, Pic. ac., Nat. m. Enlarged liver, < by touch and lying on right

side, Merc. Foot-sweat and head-sweat, Sil. (Sil. is offensive); scrofulous and rickety children, headache > wrapping, Sil. Congestion of liver, enlargement, feeling of weight and pressure, Ptelea (Ptel. is > lying right side). Rumination, Sul. (Mag. m. is while walking). Nervous restlessness, Zn. > Motion, Rhus. Heart symptoms > by motion, Gels. Lips chapped and serrated, Nat. m. < After coitus, Kal. c., Bro. Enlarged liver of children, Calc. ars. Sensitiveness to noise, Ign., Nux, Ther. Eructations tasting like onions (Sinap., breath smells of onions). Leucorrhœa two weeks after menses, Bar., Bov., Con. Menstrual headache, Mag. c. (Mag. m. more hysteria).

Causation.—Sea-bathing.

SYMPTOMS.

1. Mind.—Uneasiness and lachrymose humour.—Peevishness and chagrin.—Aversion to conversation; prefers solitude.—Repugnance to exertion.—Nervous excitability, with tendency to weep readily.—Excited; unhappy; fitful; emotional.—Fearful and inclined to weep.—Anxiousness in room, > in open air.—While reading, felt as if some one was reading after her, and she must keep reading faster and faster.

2. Head.—Stupefaction as from intoxication.—Vertigo in morning, on rising, and during dinner; disappears in open air.—Heaviness in head, with a dizziness which causes falling down.—Pains, > by covering up head.—Sensation of numbness in forehead.—Compressive sensation in head from both sides, with a hot feeling, and with beating in forehead when pressing upon it.—Tearing and stitches in temples, with great sensitiveness of vertex, as if the hair were raised by pulling.—Tearing and stitches in r. temple, extending to eye; necessity to press eyes together.—Griping and raging in both temples, with a feeling as if he would become dizzy and lose consciousness; disappearing on pressing the head with both hands, in evening after lying down (5th day).—Tensive pressure in forehead and sinciput, with confusion and cloudiness in head, principally on awaking and when lying; > from exercise in open air and when wrapping head up warm.—Squeezing, as from a claw, and noise in temples, in evening, in bed, with sensation as if vertigo and loss of consciousness were coming on.—Jerking, or shooting and pulsative tearings, in head.—Congestion, with heat, painful humming, and ebullition in head.—Painful undulation and whizzing as of boiling water on side upon which one rests.—Quotidian headache.—Nervous pullings in head and face, extending to teeth, with a sensation of confusion in head.—Throbbing, jerking tearing in occiput.—Boils on head.—Great sensitiveness of scalp.—Nodes on occiput, tearing, painful to touch.—Tendency of head to sweat.

3. Eyes.—Inflammation and burning pain in eyes, with redness of sclerotica.—Lachrymation and burning in eyes, when looking at anything in broad

daylight.—Nocturnal agglutination of eyelids.—Yellow colour of sclerotica.—Green halo round candle in evening.

4. Ears.—Pulsation in ear.—Dulness and hardness of hearing, as if something were placed before ear.—Shootings, acute pullings, and boring in ears.—Itching of herpes behind ears.—Great sensitiveness to noise.—Buzzing in ears.

5. Nose.—Scabs in nostrils, sometimes with painful sensibility of nose, when touched.—Excoriation of nostrils.—Discharge of corrosive serum from nose.—Stoppage of nose, with want of breath.—Pain as from excoriation, and of burning in nose.—Swelling, redness, induration, and heat of lower part of nose, which are < in morning.—Troublesome dryness of nose.—Nocturnal obstruction of nose.—Coryza, with loss of taste and smell; and emission of yellow and fetid mucus on blowing nose.—Ulcerated nostrils.—Loss of smell.

6. Face.—Pale, yellowish, or earthy complexion.—Drawing pains in nerves of face.—Tension in face, with cramp-like pain in bones of face.—Facial eruption.—Pimples on forehead, itching in evening.—Lips cracked.—Sensation of roughness on internal surface of lips, when touched by tongue.—Large and transparent vesicles on the red of the lips (of lower lip, itching, afterwards burning).

7. Teeth.—Toothache, aggravated to highest degree by contact of food.—Sensation of elongation in upper incisors.—Painful swelling and easy bleeding of gums.

8. Mouth.—Dryness of mouth at night.—Dryness of mouth and throat without thirst.—Rhagades in tongue with violent burning.—Tongue coated white early in morning.—Copious accumulation of serous saliva in mouth.—Sensation in interior of mouth as if it had been burnt.—Burning in tongue as from fire.—Tongue coated white early in morning; or tip and edges clean, large, flabby, yellow.—Bad taste, with poor appetite.

9. Throat.—Sensation, as if throat were excoriated and raw, < in evening, and at night.—Hawking up of viscid and thick mucus from the throat, often mixed with blood and very tenacious.—Dryness and roughness of the throat with hoarse voice.

10. Appetite.—Frequent thirst.—Violent thirst (3 a.m.).—Bulimy and craving in stomach, followed by nausea.—Hunger, without knowing what is wanted.—Poor appetite, with bad taste in mouth.—Desire for dainties.

11. Stomach.—Regurgitation of food, while walking.—Violent hiccough during and after dinner, which = pain in stomach.—Sensation as if a ball were ascending from abdomen into œsophagus; > by eructations.—Increased hunger, followed by nausea.—Eructations tasting like rotten eggs, like onions.—Nausea, esp. in morning, on first rising.—Frequent nausea with fainting, day and night.—Constant nausea,

earthy colour of face and nervous excitability, with tendency to shed tears.—Aching in stomach, with nausea.—Tension, and pain as from ulceration, and as from a bruise in stomach, with excessive sensitiveness to touch.—Throbbing in pit of stomach.—Heat in stomach.—Painful commotion in stomach, when walking and in the act of planting the foot.

12. Abdomen.—Movings about in epigastric region, then in lower abdomen, > by emission of flatus, forenoon.—After each dose burning in pit of stomach, spreading to throat; if she has waterbrash it disappears.—Fermentation in abdomen.—Tension and shooting in hepatic region.—Affections of r. hypochondrium; inner region of liver.—Congestion of l. lobe of liver.—Burning in r, hypochondrium, up to r. scapula; when putting foot forward in walking.—Aching pains in liver, also when walking, or pressing the part, < lying on r. side.—Hardness and tightness of abdomen.—Violent and constant distension of abdomen, with constipation.—Painful hardness of abdomen, and esp. of r. side.—Cramp-like pains in abdomen, esp. in evening, and sometimes followed by leucorrhœa.—Tearing in abdomen.—Dragging down from region of r. ovary to thigh.—Cuttings, pinchings, and acute drawing in abdomen.—Stinging shootings in the muscles of the abdomen.—Colic (in the evening) in hysteric persons, extending to thighs, followed by fluor albus.

13. Stool and Anus.—Hard, difficult, slow, and insufficient evacuations.—Obstructions of bowels from induration of fæces.—Hæmorrhoids pain during normal stool.—Burning and smarting in anus during and after stool.—Stools crumbling as if burnt.—Stool crumbles at verge of anus.—Fæces knotty, like sheep-dung.—Violent tenesmus, with scanty evacuation, or only an emission of flatus.—Chronic tendency to diarrhœa.—Violent diarrhœa of mucus and blood.—Greenish, yellowish, or brownish evacuations.—Fæces coated with mucus and blood.—Ejection of tænia.

14. Urinary Organs.—Frequent want to urinate, day and night, with scanty emission.—An emission can be accomplished only by contraction (bearing down) of the abdominal muscles.—Torpor of urethra.—Urine, pale-yellow, followed by burning in urethra.—Urine passes only by drops, always some seeming to remain behind.—High-coloured urine, loaded with lithates, accompanies the uterine symptoms.

15. Male Sexual Organs.—Violent itching in genital organs and in scrotum, extending as far as the anus.—Frequent erections; early in morning with burning in penis.—Burning in back after coition.—Pain in testicles (on touching or moving them) and cords (with swelling) after unrequited sexual excitement.—Nocturnal involuntary emissions, with or without dreams; scrotum relaxed and loose, often covered with sweat; constipation; indigestion; biliousness; itching at anus.—Scrotum relaxed.

16. Female Sexual Organs.—Catamenia too early and too copious.—Suppressed menses.—Black and coagulated blood during catamenia.—During catamenia: paleness of face, with pains in loins and depression; fainting; pain in l. leg.—Cramps in uterus, sometimes with pains extending to thighs, and leucorrhœa.—Leucorrhœa, esp. during movement, or preceded by cramps in abdomen.—Scirrhous induration of uterus.—Leucorrhœa immediately after stool.

17. Respiratory Organs.—Hoarseness, with roughness and dryness of throat.—Hoarseness in the morning after rising.—Tingling in larynx.—Bloody expectoration brought on by sea-bathing.—Dry cough, in evening, and at night, with burning pain and sensation of excoriation in chest.—Cramp-like cough at night, with violent tickling in throat.

18. Chest.—Oppression of chest, in region of heart.—Oppression in pit of stomach.—Sudden feeling of weight in chest, with obstructed respiration during dinner.—Tension and contraction in chest.

19. Heart.—Shootings (stitches) in heart, which impede respiration.—Pain at apex of heart, a pricking as of needles and pins, with pain under l. scapula as if knife were hacking the bone.—Palpitation of heart, when seated, disappearing on motion.

20. Neck and Back.—Swelling of glands of neck.—Pain as from bruises above and in small of back and both hips, with sensitiveness of the parts to touch.—Shooting, tearing, and burning pains in the back.—Contractive and cramp-like pains in loins.—Tearing stitches in loins.—Burning in back after coitus.—Drawing in loins after a stool.—Gnawing in spinal cord.—Burning and bruised feeling between scapulæ.—Tearing in r. scapula, then in hip; in both scapulæ.

21. Limbs.—Lancing, drawing, and tearing in extremities (Possart).

22. Upper Limbs.—Drawing and paralytic tearings in shoulder-joint, extending as far as arm and hand, < by movement.—Numbness of arms in morning, on waking; or in evening in bed.

23. Lower Limbs.—Great lassitude in legs, even when seated.—Heaviness of legs.—Jerking tearings in hips.—Uneasiness and tension in thighs.—Aching pain, or paralytic pulling in the knee.—Cramps in calves, at night.—Burning pain in soles, in evening.—Sweating of feet.

24. Generalities.—Boring or contractive cramp-like pains.—Paralytic drawing and tearing in limbs.—Indurations after inflammations.—Attacks of spasms, and of hysterical weakness.—Hysteria, which may occur several times in a day or night.—Liability to take cold.—Bodily weakness, which sometimes appears to proceed from stomach.—Sensation of uneasiness (soreness), and of painful weariness, in whole body, with acute sensibility to least noise.—General uneasiness

in evening in bed, as soon as she closes her eyes.—Sensation as of boiling water on side on which one rests.—The majority of the symptoms present themselves when the patient is seated, or at night, and are generally > by movement.—Uneasiness in evening in bed on closing the eyes.

25. Skin.—Tingling in different parts of the skin.—Formication of the skin (face, chest, and soles of feet).—Itching pimples, with burning pain after scratching.—Pustular eruptions.—Eruption of small red papulæ.—Furunculi.—Swelling of the glands.

26. Sleep.—Great inclination to sleep during day, with yawning and indolence.—Retarded sleep and sleeplessness, caused by heat, with thirst, and great agitation in whole body on shutting the eyes.—Anxious and frightful dreams, with talking and cries during sleep.—Sleep unrefreshing; tired in morning.—Jerking in body, when lying awake at night.—Nightmare.

27. Fever.—Shivering in evening, which disappears in bed.—Chill in evening from 4 to 8, even near warm stove.—Chill, followed by heat in evening till midnight.—Heat in evening with perspiration only on head.—Perspiration with thirst, from midnight till morning.—Sweat after midnight.—Pulse accelerated with ebullitions while sitting.

Magnesia Phosphorica.

Phosphate of Magnesia, Hydric magnesia phosphate. ($MgHPO_4 7H_2O$.)
Trituration.

Clinical.—Catheterism. Chorea. Colic. Convulsions. Cough. Cracks. Cramps. Dentition. Dysmenorrhœa. Headache. *Intercostal neuralgia. Locomotor ataxy*. Membranous dysmenorrhœa. Meningitis. *Menstruation, painful. Neuralgia*. Rectum, prolapse of. School-headache. Sciatica. Stomach, cancer of. Sobbing, spasmodic. Tic-douloureux. Toothache. Vaginismus. Whooping-cough. Writer's cramp.

Characteristics.—*Mag. Phos*. is one of the most important of Schüssler's original additions to the materia medica. It has had a very fine proving in the potencies, conducted by H. C. Allen (*Med. Adv*., xxxiii. 386-415), but I will first give Schüssler's own account: *Phosphate of Magnesia* is contained in—blood-corpuscles, muscles, brain, spinal marrow, nerves, teeth. Disturbance of its molecules results in—pains, cramps, paralysis. The pains are—shooting like lightning, or boring; often combined with or alternating with a sensation of constriction; at times wandering; > by warmth; > by pressure; < by light touch. It will cure: Headache, toothache, pains in limbs when of this kind; also cramps in

stomach, pains in abdomen usually radiating from umbilical region, > by hot drinks, by bending double, by pressing on abdomen with the hand, sometimes accompanied with watery diarrhœa. Spasms of various kinds—of glottis, whooping-cough, lockjaw, cramps of calves, hiccough, tetanus, chorea, spasmodic retention of urine, &c. In caseous tuberculosis and lupus *Mag. p*. has a place. When the cells near the caseous masses are too weak to expel them, it is because they are deficient in *Mag. p*., and *Mag. p*. given medicinally will enable them to do it.—This sketch of Schüssler's is confirmed in every point by Allen's proving, and by the clinical use of *Mag. p*. in the highest attenuations. Moreover, there is a very strong family resemblance between these features and those of *Mag. c*. and *Mag. m*. But it is only right to say that Schüssler arrived at them by a way of his own, which shows that there are other means besides provings of finding the keynote symptoms of remedies. Allen adds to the above that the pains *rapidly change place*; that *cramping* is the most characteristic type of the *Mag. p*. pains. Dread of cold air; of uncovering; of touching the affected part; of moving; of cold washing. It is best *adapted to*: thin, emaciated persons of a highly nervous organisation, of dark complexion; to affections on the *right* side of the body; to complaints from standing in cold water; complaints of dentition; headaches of school children; professional neuroses (*e.g*., writer's cramp); after-effect of catheterism. Nash says *Mag. p*. is in the first rank as a *pain* remedy, and it has all kinds of pain (though *cramping pain* is the most characteristic) except *burning* pain, and this distinguishes it from Ars., since both have > from heat. Allen's proving brought out canker sores in mouth, sore lips, and cracked lips. A patient of mine who suffered intensely from cracks at the corners of the lips found nothing relieve so well as *Mag. p*., and it did it best in the ix strength. Higher were tried. Hering says it is *suited to:* Young and very strong persons; teething children. Allen says that though it is best adapted to emaciated persons, it acts promptly in stout, fleshy persons when well indicated. The attacks (of pain, &c.) are often attended with great prostration, and sometimes with profuse sweat. "Languid, tired, exhausted; unable to sit up." *Mag. p*. is more often called for in men than *Mag. c*., but the indication, "worn-out women," answers for both. The affections of *Mag. p*. are often periodic. I cured with *Mag. p*. 6x a very severe attack of chorea in a girl of six. The spasms were general, but they affected the speech to such an extent that she could not make herself intelligible. Rappaz, of Montevideo (quoted *H. M*., xxix. 178) cured with *Mag. p*. a young man of 17 of cerebral meningitis which began with violent pain and inflammation in left eye, with terrific pains in head and delirium and intense fever. He was at first treated allopathically, without success. When Rappaz first saw him he was hemiplegic, with frequent and alarming convulsions, crying out violently, involuntary passage of fæces and urine; dilated pupils, dropped jaw, escape of saliva, speech and comprehension difficult. Under *Mag. p*. 6x in water general improvement set in. Later the 12x was given, and in two months he was well. W. T. Ord cured Miss G., 48, of pain in back extending down right sciatic nerve and up spine, following influenza, with *Mag. p*. 3x, 5-gr. doses. The pains were shifting, > by rest, < at night. The parts were tender

to pressure and numb. Pains sometimes tense in paroxysms, compelling her to cry out. Anxiety; depressed vitality. Skinner has cured with *Mag. p*. a case of prolapse of rectum with feeling as if rectum were torn, the symptoms being > by heat. The symptoms are < by: Motion; *cold air; draught of air; cold wind*; COLD WASHING; TOUCH; lying on the back stretched out; when eating. > By: HEAT; WARMTH; PRESSURE; BENDING DOUBLE (the italics and capitals are H. C. Allen's). < Walking; especially in open air; abdominal pain compels walking about, which >.

Relations.—*Antidoted by:* Bell., Gels., Lach. (cough). *Compare:* Cham. (vegetable analogue; but Cham. has < from heat). Shifting pains, Puls., Lac c. Neuralgia recurring violently every night, > warmth, Ars. Dysmenorrhœa, Caul., Act. r., Xanthox., Cact., Lil. t., Col. Colic > bending double, Col. > From hot drinks, Lyc. Meteorism, Lyc. Hydroa, cracks on lips, Nat. m. Headache from occiput to eye > warmth, Sil. *Chemical relatives:* Mag. c., Mag. m., Mag. s. Horizontal double vision, Gels. Neuralgia from standing in cold water, Calc. Spasms during dentition, Bell. (Bell. has fever, Mag. p. not). Dysmenia, Puls. (Puls. < by heat, Mag. p. >).

Causation.—Dentition. Cold winds. Cold bathing. Standing in cold water. Working with cold clay. Study. Catheterism.

SYMPTOMS.

1. Mind.—Illusions of the senses; sobbing, crying, lamenting all the time about pain in affected parts; with hiccough.—Mental depression and anxiety.—Drowsiness on every attempt to study.—Very forgetful.—Dulness and inability to think clearly.—Indisposition to study; to mental effort.—Mind seems clearer; can think and study more clearly after a few doses of Mag. p.—Persistent depression of spirits.

2. Head.—Headache: pains shooting, darting, stabbing, shifting; intermittent and paroxysmal.—Headache: excruciating; spasmodic; neuralgic or rheumatic; always > by external application of warmth.—Nervous headache, with sparks before eyes; diplopia.—During the night, severe throbbing pressure on vertex, l. side, deep in brain.—Dull headache, as if brain too heavy (after protracted mental effort).—Headache > towards evening, but changes to a pressure above eyebrows, esp. r.—Headache beginning in, or worst in occiput, and constant whilst attending school.—Severe headache; face flushed, red; pain began in occiput, extended over whole head; sick at stomach; aches all over; < 9 or 10 a.m. to 4 or 8 p.m.—Pressive pain in head down through middle of brain.—Pain through temples, top and back of head, with sensation of fulness, < lying down.—Sensation of a strong shock of electricity beginning in head and extending to all parts of body.—Severe headache began in occiput on waking, extending over head, located over both eyes, with severe nausea, and terminated 5 p.m. in a pronounced chill.—Severe pricking over

head and forehead, as if rubbed with a fine brush (after becoming warm from eating).—Pustules or large pimples (like blood-boils), with redness and rawness, appeared on r. side of scalp, but did not suppurate.—Large, white, shining scales can be combed out in handfuls twenty times a day.—Scalp feels rough like a grater, and the fine particles combed out feel like sand.

3. Eyes.—Double vision (horizontal); sparks; rainbow colours; photophobia.—Pupils contracted.—Dark spots before eyes on attempting to read.—Dull vision from weakness of optic nerve.—Nystagmus; strabismus, spasmodic; ptosis, < r. side.—Twitching of lids.—Neuralgia: supra-orbital or orbital; intermittent, darting, lightning-like pains, < (or entirely) r. side, > by warmth, exquisitely sensitive to touch; with increased lachrymation.—Itching and heat in lower l. lid.

4. Ears.—Nervous otalgia, intermittent and spasmodic; > by heat.—Sharp intermittent pains behind r. ear, greatly < by cold air or washing face in cold water.

5. Nose.—Alternate stuffing and profuse gushing discharge (of a white, thin substance), < from l. nostril.—Smarting and raw feeling in l. nostril.

6. Face.—Neuralgia: supra- and infra-orbital, r. side, intermittent, spasmodic, lightning-like pains, < by touch and pressure, > by warmth.—Neuralgia of r. upper jaw and teeth, begins with greatest fierceness 2 p.m., and lasts till he gets warm in bed; pains sharp, lightning-like, < by cold, > by heat; face swollen as if stung by bees.—Boring, pinching, nipping pains, driving him out of bed, soon spreading over entire r. side of face.—Pains radiating all over r. side of face from infra-orbital foramen, < by touch; by opening mouth to eat or drink; by cold air; by walking or riding in cold wind.—Faceache < when body gets cold.—Face distorted from pains and weakness; cramping colic.—Lock-jaw.—Hydroa on upper lip.—Convulsive twitching of angles of mouth.—Neuralgia from washing or standing in cold water.—Sensation of painful contraction of jaw-joint for several days, with a nervous backward jerking.

7. Teeth.—Toothache; < after going to bed; changes place rapidly; < eating or drinking, esp. cold things, > by heat; teeth sensitive to touch or cold air.—Severe pinching, stabbing, neuralgic pain over root of r. bicuspid; can be covered with point of finger; < by cold, > by heat; could not brush teeth with cold water for months.—Neuralgic pain in a filled tooth which had never ached before.—Complaints of teething children; spasms during dentition, without febrile symptoms.—Ulceration of teeth, with swelling of glands of face, throat, and neck, and swelling of tongue.—Severe pain in decayed or filled teeth (in seven persons; three of them had to discontinue the proving and be treated by a dentist).

8. Mouth.—Tongue: coated slightly yellow, crampy colic; clean or slight coating, with pain in stomach; coated white with diarrhœa; a bright red, rawness in mouth;

coated heavily; coated white all over; sticky and coated a dirty yellow.—L. side of tongue sore; biting, burning, smarting like a canker-sore; eating is painful.—Taste as of sour bread; slightly bitter; as of bananas (a bit of one had been eaten the day before).—Bad taste in mouth on waking; rawness in mouth; feels as if cankered; warm food seems hot and burning.—Bad taste; food does not taste right; coffee tasteless; fulness in bowels; belching of gas.—Sour taste on waking in night.—Mouth very sore; eating difficult; sores red and raw-looking on inside of cheeks, gums, (l.) lips, tongue, not in corners of mouth; < by touch, particles of food caused smarting and burning.—Mouth feels scalded, or as if he had been smoking strong, hot cigars.—Mouth coated with a sticky substance that rolls up in little shreds.—Mouth full of water tasting like potato water.—Taste of magnesia and chalk (after each powder of 200 and 1,000, the prover not knowing what she was taking).

9. Throat.—Spasmodic constriction of throat on attempting to swallow liquids, with sensation of choking.—Throat very red and sore, muscles of r. side of neck esp. sore, must hold head to r. side, without >.—Flow of mucus through posterior nares into throat; with sneezing and tingling in nose and on tongue.—Sensation of a corn-husk lodged in upper part of throat, with constant inclination to swallow.

10. Appetite.—Appetite: small, with faceache; unusually good, but food disagreed, leaving an uncomfortable feeling all forenoon.—Aversion to coffee.—Acids taste stronger than usual.—Appetite remains good, though food does not taste right.

11. Stomach.—Spasmodic sobbing (like a hiccough) for three days, ceasing with the second dose in water.—Hiccough thirty times a minute; for sixty days life in danger (*Mag. p*. soon restored health).—Hiccough with retching day and night for three days; ejected matter was coagulated milk, bile and mucus, with great pain causing lamentations.—Burning, tasteless eructations come on about three hours after eating in the evening; < by physical exertion, > by drinking hot water; heartburn.—Eructation of food tasting of injesta.—Constant nausea.—Bilious vomiting, at times streaked with blood.—Nausea and vomiting attend headache and flatulent colic.—Gastralgia: soreness and extreme sensitiveness of epigastrium to touch; some eructation and sour vomiting; at 12 every day; > by eating.—(Cancer of stomach; intolerable burning pain; vomiting; hiccough;—after *Ars*. failed, *Mag. p*. made the patient comfortable for six months.).—Distension of stomach; very restless.—Fulness after eating.—Spasmodic pains in stomach, with clean tongue.—Intense cutting, shooting, cramping pains in region of stomach and epigastrium, extending sometimes towards back and abdomen.—Flatulent distension of stomach, with constrictive pain, > by warmth and bending double.—A drink of cold water starts a colicky pain in stomach, which radiates to bowels, very severe, > by doubling up; by walking about; by rest; by belching.

12. Abdomen.—Sharp twinges in r. hypochondrium, on border of lower ribs.—Constrictive, aching pain around body at lower margin of ribs, as of a

lameness from lifting.—Severe griping colic-pain, at times shooting up towards stomach, > by hot applications.—Abdominal pains caused great restlessness; walked about hurriedly, said he must have relief; lying on stomach gave short relief, the pains compelled him to walk again.—Abdominal muscles sore, with tendency to constipation.—Colic: generally radiating from navel, > bending double, or from pressure with hand; often accompanied by a watery diarrhœa.—Incarcerated flatulence.—Cramps in abdomen, pains round navel and above it towards stomach, thence radiating to both sides, towards back; now violent cutting compelling screaming; then shooting and contracting, like a spasm; cannot bear to lie on back stretched out, must lie bent over.—Swelling of r. abdomen over ascending colon; on lying down a marked ridge became prominent, painful on pressure, continued four weeks.—Pain begins in bowels to r. of navel while walking in cold air, > warmth of room.—Sharp, cutting pain in r. abdominal ring, as if hernia would protrude, > hard pressure.—Sharp, burning pain in a spot about an inch in diameter.—Bloated, full sensation in abdomen, must loosen clothing, < sitting, > walking about.—Much flatus in bowels, passing off freely on walking; < after evening meal.—(Cramps and wind-colic in horses; wind-colic of cattle, meteorism of cows).

13. Stool and Anus.—Immediately after breakfast, sudden diarrhœa; stools frequent; at first thick, dark brown, mushy; then lighter; almost white and watery; finally mixed with blood.—Next day, 9 a.m., same diarrhœa returned in milder form; > of pain while at stool, followed by chilliness; stools light brown, then lighter and more watery.—Dysentery: with cramp-like pains, > by pressure or bending double; with spasmodic retention of urine; cutting, darting, lightning-like pains in hæmorrhoids.—Pains so severe as to cause fainting.: pains very severe in abdomen and rectum, esp. latter; pain like a prolonged spasm of abdominal muscles.—Constipation in infants, with spasmodic pains at every attempt at stool, indicated by a sharp, shrill cry; much rumbling and flatulent colic.—Itching and scratching feeling in anus.—Tedious stool, hard at first, soft afterwards, followed by burning in anus.—Chronic constipation in rheumatic subjects.—At 7 a.m. profuse stool, like yellow clay mixed with water (enough for three ordinary movements), followed in an hour by one neither so large nor so loose, which > the pain in bowels.

14. Urinary Organs.—Spasm of bladder; of neck of bladder; spasmodic retention; tenesmus, with constant and painful urging.—Nocturnal enuresis from nervous irritation.—When urinating, violent, shooting, burning pains; mucous discharge from urethra.—Vesical neuralgia after use of catheter.—Sensation as if no muscular contraction.—(A bright, shiny discharge from urethra for three years, in an old man.).—Deficiency or excess cif phosphates.—Gravel.—Cutting pain in bladder before urinating.—Restless sleep from urging.

15. Male Sexual Organs.—Almost constant sexual desire since beginning of proving, with no bad effects from indulgence (which is unusual with the prover).

16. Female Sexual Organs.—Menstrual colic; pain precedes flow.—Menses six to nine days too soon.—With menses: great weakness; intensely sore, bruised feeling all through, abdomen, could hardly be up at all, but was much < lying down.—Labiæ swollen and at times intensely painful.—Flow dark, fibrinous, stringy.—Dysmenia; pains (cutting, drawing, pressing, cramping) severe, intermittent, < r. side, > from heat; > by flow.

17. Respiratory Organs.—Cough: dry, spasmodic, violent; constant, can't speak for cough; face crimson from violence of cough; uncontrollable, seemed she would choke; retching choking with cough < warm room, > open air.—A violent dry cough came on after the headache left; not excited by anything in particular.—(Spasmodic, convulsive sobbing.)

18. Chest.—Darting pains in chest, < r. side; which radiate from pain in bowels.—Oppression: desire to take deep breath; < on first entering warm room, > after being in it a short time; < walking.

20. Neck and Back.—Sore pain in head, back of neck, and lower part of back.—Aching in small of back; sensation as if a section of vertebra was missing.—Dorsal spine, for about six inches, very painful and sensitive to touch for weeks.

21. Limbs.—Sensation in limbs like a streak of electricity, followed by soreness of muscles.—Aching feeling in arms and legs; weak and trembling.

22. Upper Limbs.—Rheumatic pain in l. forearm from elbow to hand, < from wrist to knuckles.—Darting pain in arms.—Skin of fingers feels as if stretched too tightly; followed by pain in elbow-joint, then in wrist.—Throbbing pain in r. wrist near ulna.—R. shoulder-joint lame.—Rheumatic, aching pain in r. shoulder, going to arm; > heat, < motion; coming on when retiring, disturbing sleep; lasts all night, disappearing in morning after moving about (every night for three weeks).—Tingling in fingers of l. hand.—Stinging pain in first joint of l. thumb, extending to next, like that of a panaritium.—First joint of fingers of both hands swollen, though painless.

23. Lower Limbs.—Every night neuralgia, now in lower limbs, in tibia or in thighs, now on l. now on r. side, mostly with spasmodic muscular contractions; during day perfectly well.—R. hip lame, < walking.—Sharp pain in l. knee, followed by numbness.—Tingling in l. toes.—Legs ache after getting into bed.—Burning, stinging pain in bunion on l. foot.—Feet so tender and corns so painful could not wear her ordinary shoes.—Burning, stinging, smarting, lancinating pain in corns.

24. Generalities.—Convulsions: whooping-cough.—Spasms without fever.—Crampy contraction of fingers; staring, open eyes.—Every twenty-three days, spasms.—Tires easily.—Shooting, tingling, electric pains all over body.

25. Skin.—Barber's itch.—Herpetic eruption, with white scales.

26. Sleep.—Drowsy; fall asleep and awake as from an electric shock, then fall asleep again.—Sleepy when attempting to study.—Spasmodic yawning, severe, as if it would dislocate the jaw; caused tears to flow.—Drowsy at time of rising.—Sleep disturbed by troublesome dreams; wakes with impression that some one is in the room; saw some one standing near.—Restless sleep from pain in occiput and back of neck.—Feels sick and prostrated on waking in the night.—(Relieves sleeplessness in flatulent and gouty subjects.)

27. Fever.—Chilly after dinner in evening, 7 p.m.; chills run up and down back, with shivering, wants more clothes.—Chilliness, evening, when going from warm room into open air; shaking and chattering of teeth as with an ague chill; > entering warm room.—A crop of boils took possession of him, terminating in a five weeks' attack of remittent fever.—Severe chill 9 a.m.; lasts three hours; was compelled to go to bed, where he lay and shook; neither heat nor sweat followed.—Creeping chills up and down spine, followed by suffocating sensation; must throw off covering; no thirst.—Exhausted sensation compelled him to go to bed; chill for an hour, at end of which exhausted feeling passed off; cough and catarrhal symptoms followed chill; no fever.—Bilious fever.

Magnesia Sulphurica.

Sulphate of Magnesia. Epsom Salts. Magnesia sulphate. $MgSO_47H_2O$. Trituration.

Clinical.—Cough. Diabetes. Diarrhśa. Dysentery. Dysmenorrhśa. Enuresis. Epithelioma. Eyes, pains in. Hernia. Intermenstrual hćmorrhage. Leucorrhśa. Lumbago. Menorrhagia. Neuralgia. Toothache. Warts.

Characteristics.—The ancient reputation of *Mag. sul*. as a "refrigerant cathartic" under the familiar name of "Epsom Salts," or "salts" *par excellence*, has overshadowed its homśopathic uses. But *Mag. s*. is something more than a "refrigerant cathartic." Fatal poisoning has occurred from an overdose, death apparently occurring from collapse; and the proving of the salts produced many symptoms of utter prostration. Recently old-school authorities have discovered in this "cathartic" a remedy for dysentery. It is the chief ingredient in many laxative mineral waters and popular saline aperient mixtures. The provings bring out effects common to the other *Magnesias*: Tearfulness; restless uneasiness; pains in facial

bones; sensitiveness to touch; > by walking. The diuretic action of the drug with great thirst has led to its successful use in diabetes. The diarrhśa is accompanied with great thirst. The chill is accompanied or followed by thirst. Shuddering in back from below upward. The toothache is < coming into a room out of cold air, < by contact with food, whether cold or warm. It is also > in bed. According to *Med. Press* (Sept. 9, 1891), eight cases of new growth having all the outward characters of epithelioma have been cured by Graves with teaspoonful doses of a solution of three drachms to the pint. Warts are allied to epithelioma, and H. T. Webster (quoted *H. R.*, x. 542) has cured many cases in children, giving as much of the salts as would lie on a clime (sixpenny piece) three times a day. One boy was literally covered with warts, his face being much disfigured. One girl of 16 was cured of large warts on her hands. F. H. Pritchard (*H. M.*, xxxv. 691) gives his experience with *Mag. s.* (1/2 gr. in a teaspoonful of water) in summer diarrhśa, with vomiting of food, *copious* yellowish, slimy, and stinking stools, and later merely watery serum. The first sign of improvement was that the stools became bile-tinged, after which they soon became of thicker consistency.
The *copiousness* of the stools seemed to be the cardinal indication.

Relations.—*Compare:* Mag. c., Mag. m., Mag. p. In diabetes, Nat. s. Sadness, weeping, foreboding anxiety, Act. r., Pul. Stinging in fauces between acts of deglutition, Ign. Eructations, Hep. Apprehension, Lyc.

SYMPTOMS.

1. Mind.—Melancholy and disposition to weep, with apprehension, and restless uneasiness.—Tendency to fly into a passion; everything is taken in bad part.—Prostration; almost beside herself with anxiety; she thought she would die; with earthy colour of face.—Foreboding anxiety, as if some accident would happen.—Errors of imagination; patient believes that he sees persons who are absent.

2. Head.—Stupidity; head feels as if it were compressed in a vice.—Vertigo (with heaviness of head and spontaneous closing of eyes), causing a tendency to fall forwards in morning, and after dinner.—Boring in vertex.—Pressive headache, and sensation as if head were squeezed in a vice, much < by moving eyes.—Compressive pain in head, with heat in head, and redness of face.—Tearing and shooting in head, esp. in temples.—Congestion, with pressive pain and heat in forehead.—Sensation in forehead on stooping as if something would fall forward.—Sensation of wavering and shaking of brain at every movement.—Shivering during the violent pains in head.

3. Eyes.—Pains in eyes, as if protruding from orbits when looking aside.—Violent pains in eyes, esp. r., as if it would start out of socket.—Dimness of eyes, with frequent drowsiness.—Burning in eyes, pains in evening and in morning, but

chiefly by candle-light.—Shooting pains in eyes.—Lachrymation, with photophobia.—Supra-orbital neuralgia, l. side.

4. Ears.—Shooting pains in ears.—Tinkling in ears.

5. Nose.—Pain, as from ulceration in nose, esp. when it is touched.—Epistaxis, at night (with diminution of the headache).—Copious secretion of thick and yellow mucus in nose.—Fluent coryza, with loss of smell, indistinct speech, and pain, as from excoriation, in nose and chest.—Rough voice and frequent flow of water from nose.

6. Face.—Earthy colour of face.—Tearing in bones of face (r. facial bones or in l. malar bone).—Dryness and burning in lips, in evening.

7. Teeth.—Odontalgia, generally in evening, sometimes on returning from a walk, or caused by hot or cold things, as well as by contact of teeth with food; the pains are generally jerking, pricking, or throbbing, and disappear in bed.

8. Mouth.—Dryness of mouth, with sensation of numbness.—Roughness of tongue.—Vesicles on edges of tongue, with incisive pains.

9. Throat.—Sore throat, with shooting pains at night, < by deglutition.—Stinging in fauces, more between than during acts of deglutition.—Dryness and sensation of numbness in throat.—Accumulation of mucus in throat.—Frequent mucus in throat, which can neither be swallowed nor hawked up.—Expectoration of sour mucus.

10. Appetite.—Bitterness or sweetish bitterness in mouth, esp. in morning.—Thirst, esp. morning and evening.—Thirst early in morning on rising, going off after breakfast.—Thirst in evening, particularly during menses.—Want of appetite and repugnance to all food, even when thinking of it.—Dislike to meat.

11. Stomach.—Empty, mucous, bitter, and putrid risings.—Regurgitation of fluid, preceded by a quivering in stomach.—Disgust and nausea, with accumulation of water in mouth.—Vomiting, first of food, then of mucus.—Sensation of coldness in stomach, with inclination to vomit, in bed, in morning.

12. Abdomen.—Lancinating pains in l. hypochondrium, esp. when sitting, or in evening, before and after a meal.—Tension, hardness, and fulness of abdomen even after a moderate meal.—Violent shooting pains in whole abdomen, but esp. round the navel.—Painful drawing in abdomen.—Tension in abdomen, pressure towards groins, as if they were going to burst, when stretching body.—Rumbling in abdomen, with emission of flatulence.—Itching of l. inguinal region, not removed by scratching.

13. Stool and Anus.—Fćces at one time hard, at another soft.—Acid diarrhśa of children.—Liquid stools with tenesmus.—Diarrhśa preceded by rumbling in abdomen.—Soft stools early after rising.—Loose evacuations, with violent thirst.—Ejection of ascarides during every evacuation.—Neuralgia of rectum, stabbing pain, comes on two days after a material dose of Epsom salts.

14. Urinary Organs.—Increased secretion of urine.—Emission of urine at night (involuntary).—Emission of urine, drop by drop.—Urine of a clear or greenish colour.—Shootings in orifice of urethra, after emission of urine.

15. Male Sexual Organs.—Frequent stinging about penis when sitting or walking.—Erections without amorous fancies or sexual desire.

16. Female Sexual Organs.—Catamenia too early and too copious, with thick, black menstrual blood.—Catamenia too feeble.—Flow of blood in the intervals of catamenia.—During the catamenia, heaviness of head and shivering; bruised pain in small of back; pain in groins.—Thick and copious leucorrhśa, with contusive pain in sacrum and thighs.—Burning leucorrhśa, esp. during movement.

17. Respiratory Organs.—Deep hollow bass voice (as in catarrh).—Dry cough, with burning from larynx to pit of stomach.—Dry cough in evening in bed, during which he falls asleep.—Dry and shaking cough after waking in morning, and which compels sitting up.—Cough in morning with expectoration, and pain as from excoriation, in chest, throat, and palate.

18. Chest.—Pressure on chest, with impeded respiration, esp. in morning, or in bed, at night.—Burning pains in chest, sometimes when coughing.—Painful burning in chest when coughing, as if a piece of the lungs would come out.—Oppression of chest with burning in chest when walking.—Burning in middle of chest.—Burning in sternum.

20. Neck and Back.—Tension in nape of neck and between shoulders with stitches, particularly in morning, on rising, with great sensitiveness to touch, > by walking.—Contusive pain in back, on waking in morning.—Tearings in back, at night, which compels movement from side to side.

22. Upper Limbs.—Jerking in arms.—Tearing in shoulders and arms.—Rheumatic pains in l. elbow, in l. wrist-joint.—Tingling in fingers, going off by rubbing.—Tearing and shooting in hands and fingers, with contraction of these parts.—Trembling of hands.—Tearing in tips of fingers, at nigh.

23. Lower Limbs.—Nocturnal pains in legs and loins.—Heaviness, at one time in hips, at another in loins.—Rheumatic pain in hip, in l. femur.—Tearing in legs, and esp. in thigh-bones, and shootings in toes, which are contracted.

24. Generalities.—Tearings (rheumatic) in limbs, esp. at night.—Great lassitude and soreness in whole body, with trembling, and weakness of the feet.—Great languor, with staggering gait.—Bruised sensation.—A peculiar sick feeling, like exhaustion and prostration, with dry Warmth of skin and drawing pains.

25. Skin.—Itching blotches, either hard or as from nettles, with burning, after scratching.—Small red tetter (on arms), with violent itching.—Stinging itching spots on skin with tendency to boils, < when undressing.—Warts.

26. Sleep.—Sleep, early in evening.—Sleeplessness at night, caused by violent pains in head, abdomen, and loins (which do not allow him to lie on his back).—Many dreams, sometimes disagreeable and anxious (with starting).

27. Fever.—Shivering and shuddering (in back from below upwards), esp. in evening, disappearing in bed.—Chilliness with thirst, early in morning after waking.—Shaking chill with violent headache in evening, 9 p.m., going off in bed, succeeded by thirst.—Cold feet all day, although otherwise he feels hot.—Shivering at night, with thirst until noon; perspiration in afternoon, or after lying down.—Heat on sitting up in bed, with vertigo, perspiration on forehead, and redness of face.—Heat of head, with coldness of rest of body.—Alternations of heat and shuddering, redness and paleness of face.—Perspiration at night or in morning, often accompanied by thirst.

Magnetis Poli Ambo.

The Magnet. (General symptoms of the magnet produced by touching either pole indiscriminately while handling the magnet, or by laying the whole of the magnetic surface upon the body.) Trituration of Sugar of Milk after exposure to the influence of the entire magnet. Dilution of distilled water similarly exposed.

Clinical.—Fainting. Hæmorrhage. Orchitis. Paraphimosis. Prolapsus ani. Rheumatism. Toothache. Ulcers.

Characteristics.—The effect of the Magnet as a whole and of each pole separately was tested by Hahnemann, and the symptoms are mainly from his pathogenesis. In his preface he says he does not expect "ordinary mechanical, materialistic and atomistic heads" to be able to regard diseases as "immaterial alterations of the vitality, or pure dynamic derangements of our state of health, and medicinal powers as merely virtual, almost spiritual, forces"; but he asks how they can reconcile with their materialistic notions the fact that "a single *imponderable* spark from a Leyden jar gives a shock to the strongest man, and yet no ascertainable ponderable substance is communicated to his body?" Of the symptoms of the

Schema he says they "occurred from various powerful magnets brought in contact with various sensitive individuals, without distinction of the poles. They were observed in experiments conducted for half a year for the purpose of ascertaining the proper and most efficacious mode of stroking the steel with magnets, in which a horse-shoe magnet, capable of lifting a weight of twelve pounds, was held in the hands, which were held in contact with both poles for an hour at a time," with additional symptoms from Andry, Thouret, Unzer, and De Harsu. "Although each of the poles presents something peculiar in its power of altering the human health, yet each of them seems, when applied twice or oftener, to produce alternating actions which resemble those of the opposite pole" (*M. M. P.*). For curative purposes Hahnemann recommended a very much milder application of the magnet. (The popular use of electric rings for rheumatism is analogous to this.) The method of attenuating media saturated with emanations from the magnet does not seem to have occurred to Hahnemann. My own experience with the magnetisms is confined to *Mgt. p. aust*. 2m., but that is sufficient to give me confidence in prescribing attenuations of these remedies when their indications arise. The leading symptoms of *Mgt*. are: Burning lancinations throughout the body pains as if broken in joints, where cartilages of two bones touch shootings and jerkings; disturbed sleep; headache as if a nail were driven in. The symptoms are < by motion and on awaking. The toothache is < from cold and on contact with anything cold. Touch < pain in joints. Heat > uncovering.

Relations.—The action lasts from 10 to 14 days. *Antidoted by:* Ign., Electr., Galv., Zn. (imposition of Zinc plate). *Compare:* Mgt. arct., Mgt. aust., Fer. magnet., Mang. ox. Burnt smell in nose, Anac. Prolapsus ani, Pod., Caust., Ign.

Compare also: Bell., Lyc., Nux, Petr., Pul., Stram., Sabi., Teuc.

SYMPTOMS.

1. Mind.—Busy precipitation.—Absence of mind.—Irresolution.—Inadvertence.—Tendency to anger and rage.

2. Head.—Vertigo, esp. in evening after lying down, as if about to fall, or as from concussion in head.—Vertigo, with staggering, when walking; objects seem to waver before eyes.—Headache from over-strained memory and reflection.—Pain, as of a bruise, in head, on waking in morning.—Digging, stupefying headache, which is immediately dispersed by movements of flatus.—Cephalalgia, as if a nail were driven into the head, as if caused by a wound, esp. after a fit of anger.—Jerking tearing in head, appearing at intervals.—Rushing or buzzing noises in whole head.

3. Eyes.—Itching in eyes, esp. the lids.—Pupils dilated.—Scintillation of white light, beyond the range of vision, in the twilight.—Sparks before the eyes.

4. Ears.—Humming in ears.—Diminution of hearing.

5. Nose.—Aberration of smell; a smoky or mouldy scent is perceived.

6. Face.—Perspiration on face, without heat, in morning.—Jerking tearing in upper jaw.—Violent burning lancination in muscles of face, in evening.—Swelling of lips, with salivation, in evening.—Small pimples, with pain, like that of a wound, on lips.

7. Teeth.—Odontalgia, after drinking anything cold, or from contact with cold air.—Pressive, jerking odontalgia, in isolated shocks.—Odontalgia, in carious teeth, with swelling of gums.

10. Appetite.—Fetid breath.—Metallic taste in mouth.—Insipid taste of tobacco and beer.—Many things have a mouldy taste.—Speedy satiety.—Good appetite in evening.

11. Stomach.—Abortive risings.—Risings, with smell and taste of horn-scrapings.—Sour regurgitation, when stooping.—Stomach-ache, with cramp towards upper part, agitation, which allows no rest whatever, heaviness of tongue, paleness of face, and coldness of body.

12. Abdomen.—Pressure and anxious fulness in abdomen, esp. during mental exertion.—Noisy grumbling and borborygmi in abdomen.—Production of much flatus.—Flatulent colic.—Expulsion of flatulence, with painful pressure.

13. Stool and Anus.—Constipation, as from contraction of rectum.—Painless diarrhœa, with flatulence.—Hæmorrhoidal, smarting pain in anus, after evacuation, with constriction in rectum.—Blind hæmorrhoids.—Prolapsus recti.

15. Male Sexual Organs.—Burning sensation in region of spermatic vesicles, which excites sexual desire.—Dulness of sexual feeling, and aversion to coition.—Erection, without amorous thoughts.—Retraction of prepuce behind the glans.—Swelling of epididymis, with pain during movement and when touched.

16. Female Sexual Organs.—Catamenia premature, profuse, and of too long duration.

17. Respiratory Organs.—Paroxysms of dry cough at night.—Spasmodic cough, esp. after midnight, when awake, or during reflection.—Nocturnal dyspnœa, excited by mucus in trachea, which is easily detached in morning.

18. Chest.—Burning, insupportable lancinations in muscles of chest.

20. Back.—Jerking in the spine, as from something alive.—Painful sensibility of the joint of the sacrum, in morning, in bed, when lying on side, or by day, when stooping.—Wrenching pain in shoulder-joint, or pain as from the starting of a tendon in wrist.

22. Upper Limbs.—Drawing pains in joints and muscles of arms, often from head to fingers.—Tearing jerking in muscles of arms, after remaining some time in the cold.—Red spots in palms, like vesicles.

23. Lower Limbs.—Attacks of cramp in calves of legs, and toes, after waking in morning.—Burning lancinations in heels, and in corns on the feet.

24. Generalities.—Burning sensation in the limbs and joints.—Burning lancinations in the fleshy parts.—Wrenching pain in the limbs.—Pains, as of a fracture, in the joints, esp. in evening and morning, in bed, and principally during movement.—Burning lancinations across all parts of body, in different directions.—Shuddering, which traverses the whole body.—Shaking in the body, with fright, or shocks, which cause violent bending and straightening of the body, sometimes with loss of consciousness.—Long-lasting swoons; during which she feels her pains, but is not able to speak or move.

25. Skin.—Tendency of old wounds to bleed afresh.—Ulcers painful, like new wounds.—Small furunculi.—Small pustules, with lancinating, drawing pain.

26. Sleep.—Disturbed sleep, with talking, snoring, and continued tossing.—Waking at 3 a.m.; and falling into a drowsy lethargy towards sunrise.—Lying on the back, with the hand under the head, the legs wide apart, and the mouth half open, with snoring respiration.—Amorous, lascivious dreams.—Jerking of the body before going to sleep.—After waking in morning, headache, with pain, as of a fracture, in all the joints, which forces constant change in position of limbs.

27. Fever.—Dry heat, with need to be uncovered, at night, and in morning, in bed.

Magnetis Polus Arcticus.

North Pole of the Magnet. Attenuations of saccharum lactis or water charged with the influence of this pole.

Clinical.—Amenorrhœa. Clairvoyance. Hernia. Panaritium. Salivation. Sleep disturbed. Somnambulism. Toothache. Vertebræ, cervical, cracking in.

Characteristics.—The symptoms of *M. p. arct.* were obtained by applying it in the region of the 4th to 6th dorsal vertebræ, at a distance of four or five fingers' breadth from the body. A number of well-characterised symptoms were experienced in the teeth and jaws. There was swelling, heat, and redness of one cheek. Swan reports this case cured by C. M. Conant; Mrs. S. C., 31, blonde, had pain in left lower jaw as if out of joint; < morning, on moving it; sensation as if head of bone were squeezed and crowded into socket. *M. p. arct.* 1m cured (*Organon*, iii. 343).

Sensations of coldness are marked. There is coldness where the magnet is applied. The eyeball feels cold, as if it were a lump of ice in the socket. On the other hand there is a sensation as if the blood was rushing towards the point touched by the magnet. One symptom of the proving, occurring in a half-waking state, suggests an approach to somnambulism. He thinks out a "difficult subject in the best form in a foreign language"; but when awake he cannot remember distinctly the subject. Several provers complained of faintness. One had "sensation of dryness and lightness in the body with want of strength." Sensation as if scalp adhered to skull. Symptoms are > uncovering. Headache is < lifting or moving arm. < On waking. Toothache < breathing through the mouth.

Relations.—*Antidoted by:* M. p. aust., Ign., Zn. *Compare:* Sensation as if teeth being pulled out, Ipec. < Raising arm, Bar. c., Con., Cup., Fer. One cheek red, Cham. See also under Magnetis p. amb.

SYMPTOMS.

1. Mind.—Peevishness, and inclination to weep, with shivering.—Mildness, submission.—Indolence when seated, as if power of moving were lost.—Irresolution, followed by prompt execution, after a resolution has been once formed.—Speaking loud while quite alone and engaged in business.—Fickleness.—Anxious hesitation and restlessness.—Loss of sense.—Loss of ideas.—Weakness of memory.—Tendency to make mistakes when writing.

2. Head.—Vertigo, as from intoxication, with staggering, when walking in open air, and instability when standing.—Semi-lateral drawing, with vertigo, from middle of head towards ears, like the oscillation of a pendulum.—Cephalalgia when lifting or moving eyes.—Depressing cephalalgia, as from a weight.—Cephalalgia, as if brain were about to burst.—Tension of integuments of head, as if they adhered too closely to the cranium.

3. Eyes.—Eyes prominent and fixed.—Icy coldness of (weak) eye, as if a lump of ice lay in orbit instead of the eye.—Restless movements of eyes.—Lancinations, itching, and jerking drawing in eyelids, with lachrymation.—Painful sensation of dryness in eyelids, on awaking in morning.

4. Ears.—Murmuring in ears, and internal heat, as from boiling water.—Deafness, as if caused by a band over ears.

5. Nose.—Aberration of smell; smell of rotten eggs, or of fresh plaister, or dust.—Epistaxis, preceded by pressive cephalalgia in forehead.—Redness and heat in point of nose, followed by red spots, hot, and plainly circumscribed, on cheeks.

6. Face.—Paleness in face.—Tension in face.—Painful squeezing in maxillary joint, with sensation, while moving it, as if it were dislocated.—Swelling of one cheek only.—Trismus.

7. Teeth.—Odontalgia in carious teeth, at intervals, as if they were being extracted.—Pains in carious teeth, with gums swollen and painful when touched.—Pains in (carious) teeth, < after a meal, and by heat, > in open air, and when walking.—Odontalgia, with red, hot, swollen cheeks.—Odontalgia, with shocks, which traverse the periosteum of the jaw, or with drawing, pressive, or else tearing, digging, or burning lancinating pains.—Incisors set on edge, when breathing through the mouth.—Numbness and insensibility of the gums, on the cessation of the toothache.

8. Mouth.—At night, collection of saliva in mouth, so profuse that every time he wakes the pillow is quite wet.—Itching in point of tongue, compels him to scratch it.

10. Appetite.—Voracity in evening.—Loss of taste.—Acid taste in the mouth.—Tobacco has a bitter taste.

11. Stomach.—Frequent empty risings.—Continued pyrosis, esp. after supper.

12. Abdomen.—Production and incarceration of much flatus.—Flatulent, pressive colic.—Shocks in abdomen, as if something in it were falling, or blows proceeding from abdomen, and passing upwards through chest, as far as the throat.—Inflation of abdomen.—Pressure and boring towards inguinal ring, as if preparatory to a rupture, with relaxation of the inguinal ring.

13. Stool.—Obstinate constriction of abdomen, and constipation.—Hard fæces, of a large size, difficult to evacuate, often preceded by drawing, dysenteric pains in the hypogastrium.

14. Urinary Organs.—Increased secretion of urine.—Deep-coloured urine.

15. Male Sexual Organs.—Immoderate erections, with frequent pollutions.—Excitement of sexual desire.

16. Female Sexual Organs.—Menses too feeble; suppressed.

17. Respiratory Organs.—Dry, asthmatic, suffocating cough, < by walking in open air.—Spasmodic, shaking cough, in evening, when going to sleep, and which hinders sleep.—Spasmodic, suffocating cough, towards midnight, produced by irritation in bronchia, shaking the head and whole body, and exciting heat until a general perspiration ensues, with cessation of the cough.—Constant want to cough, in evening, which is removed only by restraining the cough.

20. Neck and Back.—Cracking in the cervical vertebræ during movement.—Pains in back, as if broken, on bending it backwards.

22. Upper Limbs.—Inflammation of back of hand, with pulsative pain.—Heaviness in arms, hands, and fingers.

23. Lower Limbs.—Pains, as of a fracture, in hip-joints and lower limbs.—Great lassitude in lower extremities, which feel as if they would break when walking.—Pain, as from excoriation in toes, and corns on the feet.

24. Generalities.—Great lassitude, and painful weariness of the whole body, with dejection, esp. in morning and in open air, as during sultry weather.—Drawing sensation in periosteum of all bones, as at commencement of intermittent fever.—Digging lancinations, which are more painful the deeper they are, in different parts of body.—Lancinating shocks, throbbing, trembling, coldness, and sensation as if the blood were driven towards the parts touched by the magnet.—Over-excitement, with trembling, uneasy restlessness in limbs, and great nervous weakness.

25. Skin.—Tingling and lancinating itching in skin.—Burning sensation, or burning tearing in tetters.—Panaritium.

26. Sleep.—Violent spasmodic yawnings, with wrenching pain in maxillary joint.—Strong disposition to sleep by day.—Coma.—Profound sleep at night, during which the patient generally lies on the back.—Many vivid dreams (sometimes lascivious).—Sings in her sleep, is wakened by it; falls asleep again, recommences to sing and again wakes up from it.—Waking in evening, after going to sleep, in consequence of a violent shock in the head, and muscles of the neck.—Tossing during sleep, with troublesome heat, and urgent inclination to be uncovered, without thirst.—Imperfect waking in morning (2 a.m.), with perfect inner consciousness, vivid memory, great concourse of ideas, and reflections on some important subject.—Almost as if in a zoomagnetic sleep-talking state; but when fully awake he cannot remember distinctly the subject of his thoughts.

27. Fever.—Sensation of coldness, or of coolness over whole body.—Chilliness.—Cool hands, with cool perspiration upon them, and over whole body.—Shuddering, followed by transient heat, and swelling of veins of hands.—Sensation of heat over whole body, with coldness of hands and lower extremities.—Cold sweat on hands and soles of feet.

Magnetis Polus Australis.

South Pole of the Magnet. Attenuations of media saturated with emanations of the pole.

Clinical.—Cough. Dislocation, easy. Frost-bite. Heart, palpitation of. Hernia. *Ingrowing toe-nails*. Levitation. Menorrhagia. Varicosis.

Characteristics.—I have cured so many cases of ingrowing toenail with *M. p. aust*. 2m, that I invariably give it in the first place when there are no symptoms plainly indicating another remedy. Here are the symptoms in Hahnemann's Schema which led to this use: "Sore pain on the inner side of the nail of the big toe when walking, as if the nail had grown into the flesh or, the side, very painful on being slightly touched (8h);" and "the shoe presses on the toes and on the nail of the big toe when walking, as from corns." The accurate response to these symptoms on the part of the attenuated *M. p. aust*. proved to me the possibility of attenuating and so fixing this "imponderable" for use as an ordinary homœopathic remedy. Swan has collected a number of cases from different authors in *Org*., iii. 342. Berridge (*Org*., iii. 53) reports this case: Miss X. had for three weeks aching in middle of front of left lower leg (where she has had varicose veins for eight months), when standing, or *when the leg is hanging down*, removed by placing it horizontally; frequent feeling of hot water running down affected part, but only *when leg is down*; at times throbbing there *when leg hangs down*. *M. p. aust*. c.m., one dose. The hot-water feeling never returned; the pain ceased in two days.—Pinching, squeezing sensations and bruised pains predominate. Faintness comes on when walking, and is < when sitting; There is great rush of blood to the brain early In the morning in bed. The symptoms are < when walking in open air; < when sitting; < hanging limb down.

Relations.—*Antidoted by:* M. p. arct., Ign., Zinc. *Compare:* Mgt., Galv., Electr. In fetid cough, Caps. Rush of blood to head, Ast. r. Toe-nails, Graph., Sil., Nit. ac., Thuj. See also under Mgt.

SYMPTOMS.

1. Mind.—Moroseness and ill-humour, with aversion to conversation.—Dislike to society and to laughing faces.—Passion and rage.—Instability of ideas.

2. Head.—Vertigo, as from intoxication, with staggering gait.—Great rush of blood to brain early in morning, in bed.—Heaviness, tingling, and digging in head.—Shocks in head, sometimes with tearing.

3. Eyes.—Dryness and smarting in eyelids, esp. when moving them, < morning and evening.—Lachrymation.—Amblyopia.

7. Teeth.—Tearing, jerking odontalgia, < by hot things.

8. Mouth.—Accumulation of watery saliva in the mouth.—Speech embarrassed, as by a swelling of the tongue.

9. Throat.—Burning sensation in gullet.

11. Stomach.—Metallic taste, at one time sweetish, at another acidulous, on and under the tongue.—All kinds of food appear insipid.—Extreme indifference to food, drink, and tobacco-smoke.—Bulimy at noon and evening, sometimes during the febrile shiverings.—Aching in scrobiculus during mental exertion.

12. Abdomen.—Pinching in abdomen caused by a current of air.—Noisy borborygmi and grumbling in abdomen.—Pressive, flatulent colic, with pinchings, and inflation of abdomen.—Sensation, as if inguinal ring were dilated, preparatory to a rupture, with painful sensibility of that part, when coughing.

13. Stool and Anus.—Soft, loose fæces, preceded by gripings.—Evacuation of liquid fæces, with a sensation as if flatus were about to be discharged.—Contraction and painful constriction in rectum and anus, which hinder the expulsion of wind.

14. Urinary Organs.—Involuntary emission of urine, from paralysis of sphincter vesicæ, esp. at night.—Emission of urine, drop by drop, with torpor of urethra.—Very feeble stream of urine.—Frequent emission of urine at night.

15. Male Sexual Organs.—Strong disposition to emission.—Emission (very unusual) in a hemiplegic patient; paralysis < after the emission.—Impotence, with sudden cessation of all enjoyment, in the moment of greatest excitement.—Pain in penis, as if some fibres were torn or plucked away.—Painful retraction of testes at night.—Swelling of testes, with tearing shocks, and sensation of contraction.

16. Female Sexual Organs.—Catamenia premature and profuse.—Metrorrhagia.

17. Respiratory Organs.—Cough and coryza, with expectoration of greenish mucus, and shortness of breath.—Paroxysms of fetid cough at night, when sleeping.—Want to take full inspirations, like sighing, with involuntary deglutition.

18. Chest.—Oppression of the chest, as if the respiration were tremulous, and produced an impression of coolness.—Drawing pressure in both sides of sternum, with anguish of conscience, which allows no rest.

19. Heart.—Violent palpitation of the heart, with great heat in cardiac region.—Palpitation of the heart, during which it seems that it is not the heart that palpitates.

20. Back.—Pressive, burning pain in loins, during repose and movement.—Pain, as of a fracture, or wrenching pain in joints of sacrum, and lumbar vertebræ.

22. Upper Limbs.—Tingling along arms, like slight shocks.—Painful and rapid jerking along arms.—Heaviness and lassitude in arms.—Gurgling along arms and veins of the arms.—Tingling and throbbing in ends of fingers.—Panaritium.

23. Lower Limbs.—Jerking throbbing in tendons of ham, with contraction of legs, esp. during movement.—Pressive tearing in the patella.—Throbbing in muscles of feet, after walking.—The knees give way during movement.—Easy dislocation of joint of foot, when making a false step.—The feet are painful when he lets them hang down when sitting; all over them there is a fine throbbing.—Sensibility and pain, as from a wound, in nail of great toe.—The toenails penetrate the flesh.

24. Generalities.—Drawings in fingers, joints of fingers, feet, and ankles.—Lancinating pulsative pains in roots of nails, as if about to suppurate.—Pains, with pinching or burning lancinations in different parts of the body.—Contusive pains in limbs and joints, as if the patient had been lying on flints.—Liability to suffer from a chill.—Tendency of nose, ears, hands, and feet to be frozen by a moderate degree of coldness.—Sudden lassitude when walking, with anxiety and heat, or sudden inclination to sleep.—Lightness of whole body.

26. Sleep.—Urgent inclination to sleep, evening and morning; closing of the eyes without power to sleep.—Sleeplessness with over-excitement before midnight.—Confused, frightful dreams.—Prolonged dreams on the same subject, with fatiguing meditation.—Dreams of incendiary fires.—Slow, noisy, snoring *expiration* before midnight; after midnight *inspiration* is of the same character.—Lying on the back during the night.—Congestion in head in morning, which compels lying with head high.

27. Fever.—Excessive dread of open air, which penetrates to the very marrow of the bones, even when the weather is hot; with ill-humour and inclination to weep.—Shuddering, with cloudiness before eyes, trembling and tossing of limbs, without shivering, followed by heat in head and face.

Magnolia Glauca.

Sweet Magnolia. Sweet Bay. N. O. Magnoliaceæ. Tincture of the flowers.

Clinical.—Asthma. Fainting.

Characteristics.—Our knowledge of *Mag. gl.* is based on two observations by S. A. Jones and T. F. Allen of the effects of the flowers on three persons. The

symptoms were these: "Sense of great oppression about his chest;" "strong tendency to fainting (these occurred in a man). A lady had: "Oppression of chest; could not expand the lungs; with a feeling as if she had swallowed food without chewing, and it distressed her stomach." In a doctor it "increased the pain of inflammatory gout;" and "evidently increased the paroxysm of a pain which came on every afternoon." The *Treasury of Botany* says: "*M. glauca* is a low-growing, deciduous tree, called in America Swamp Sassafras, from the nature of the locality in which it grows, and from the resemblance in its properties to *Laurus sassafras*. It is also called Beaver-tree, because the root is eaten by beavers, which animals also make use of the wood in constructing their nests."

Magnolia Grandiflora.

Magnolia grandiflora. Yolotxochitl. (Mexico.) N. O. Magnoliaceæ. Tincture of the flowers.

Clinical.—Aneurism. Angina pectoris. Heart, affections of. Inter-menstrual flow. Rheumatism. Vertigo.

Characteristics.—In his *Handbook* Allen gives a full pathogenesis of *Mgl. grand*. It produces bruised and constrictive and rheumatic pains in various parts, and particularly the joints. Pains rapidly change their place or alternate. Alternating pains between spleen and heart. The rheumatic action of the drug is particularly manifested in the chest and heart. A marked action was developed in the female sexual sphere, and an inter-menstrual flow was observed. Allen gives as indications for it: Rheumatic pain in clavicles. Crampy pain in heart, alternating with lancinations. Pain in heart with suffocative constriction of throat. Aortic aneurism, crampy pain in heart, dry cough, nausea, with vertigo and angina pectoris. Rheumatic pains in back, especially when alternating with similar pains in different parts. Muscular rheumatism of left arm.

Relations.—*Compare:* Mgl. gl., Illic. anis. (botan). In rheumatism, K. bi., Kalm. Inter-menstrual hæmorrhage, Ham., Bovist., Bell., Cham., Elaps.

SYMPTOMS.

1. Mind.—Apprehensiveness; that she will die.—Nervous, easily frightened, illusions and hallucinations of sight, with sharp pains in eyes.—Repugnance to all occupation.—Ill-humour; with burning in hands.—Sadness.—Uneasiness.—Confusion; and dulness.—Memory weak; lost.

2. Head.—Vertigo: in evening, > going to bed, with goneness at stomach; with flushing of face; with dislike for physical labour; beginning with blurring of sight;

as from seasickness; causing loss of appetite.—Lancinations in head: < l. side; after eating; and in r. ear.—Headache: with griping in abdomen; with flushes of heat; congestive, throbbing.—Pain in temples: on bending forward; in l. temple.—Migraine.—Pain in occiput and upper dorsal region.—Pain in occiput as from a blow.—Weight in occiput.

3. Eyes.—Pain in eyes: from sunlight; sharp, with nervousness and with visions.—Lids heavy sensation in lids as after weeping.—Vision weak; blurred.

4. Ears.—Lancinations in l. ear travelling to shoulder.—Pain: in r. ear; in morning; sharp in l.; sharp, travelling to throat.

6. Face.—Lancinations in jaw-joints.—Pain in r. side; in joints; < pressure, also impeding opening of mouth.—Sharp pain going to ear.

7. Teeth.—Shooting in teeth.—Soreness of teeth, impeding mastication.

8. Mouth.—Pain in mouth > by tepid water.

9. Throat.—Fauces red.—Pain in throat on turning head; waking him frequently at night.—Constriction < r. side; < bending forward.—Burning; and dryness; with pain in pit of stomach and often extending to abdomen; preventing sleep.—Sensation of mucus, with fruitless attempts to remove it.—Difficult swallowing; of saliva.

10. Appetite.—Appetite lost after vertigo; lost, with lassitude.

11. Stomach.—Sensation as from hunger, with acidity.—Nausea in morning on rising, > by breakfast.—Nausea as from tobacco.—Pain in stomach: as from languor; with griping in intestines; extending to hypochondria; as from a blow; rapid, pulsating, and in l. side of abdomen; burning, extending to chest.—Emptiness; with general lassitude, vertigo, and nausea.

12. Abdomen.—Flatulence.—Griping; with ineffectual desire for stool.—Pain in abdomen: from pressure; with diarrhœa; in hypochondria, with suffocation; alternately in spleen and heart.—Contusive pain in liver and spleen, extending to stomach.—Pain in hypogastrium; in l. groin.—Lancinations in liver and spleen.

13. Stool.—Constipation.

14. Urinary Organs.—Straining on passing water.

16. Female Sexual Organs.—Congestion of l. ovary, with pain extending to l. thigh.—Thick white or yellow leucorrhœa, with straining when urinating, also with constipation.—Bloody flow in interval between menses.—Menses delayed; pale and scanty; of coagulated blood for two days, then normal; painful.—Before menses:

pain in small of back, hypogastrium and thighs, with headache, flushes of heat to face, nausea, and chill.

17. Respiratory Organs.—Hoarseness.—Dry cough during the day, > night by going to bed.—Suffocation: when walking fast; when lying on l. side; after a meal, with desire for stretching with uneasiness; in paroxysms.

18. Chest.—Stitches in sides of chest; in r. side.—Pain: with emptiness of stomach and lassitude; with suffocation and headache; in r. side, with suffocation; rheumatic, in r. clavicle; rheumatic, in r. side, then in heart, causing fear of death, with general coldness; contusive, with headache; erratic, in sides.—Constriction as from a band just beneath axilla.—Tired feeling.—Stiffness of sides of chest; as from exposure to a draught when over-heated.

19. Heart.—Stitches; waking him frequently.—Pain in heart: morning on rising; in morning on deep breathing; when lying on l. side; on deep breathing; with fear; with lassitude; with itching of feet; extending to back; acute; alternating with pain in l. shoulder; rheumatic, and in l. shoulder.—Soreness after disappearance of pain.—Sensation as if heart had stopped beating.—Pulse weak and frequent.

20. Neck and Back.—Weight in neck with tiredness of spine.—Stiffness of neck, and contusive pain; stiffness and tiredness, and in back.—Stitches in r. side of back.—Pain in back: and in left side of chest; in dorsal and sacral regions; burning; tingling burning, as from over-exertion of arms; sharp, in sacrum; sharp, in lumbar region.—Tiredness impeding motion.

21. Limbs.—Sharp, erratic or rheumatic pains.—Lancinations anteriorly in elbows, and in popliteal spaces.—Sprained pains in joints.—Limbs tired stiff.

22. Upper Limbs.—Pain in l. upper arm with weakness.—Pain in l. shoulder extending to heart; from l. shoulder to l. ear.—Stinging in arms.—Arms weak.—Rheumatic pains in wrists.—Uneasiness in hands, compelling constant rubbing.—Sharp pain in metacarpal joint of r. thumb.

23. Lower Limbs.—Stiffness of lower limbs.—Rheumatic pains: in thigh, with uneasiness in l. leg; in l. knee; in tibia; in soles.—Pain: in hip; in thighs, morning on rising, > noon, with tiredness.—Legs tired as after running.

24. Generalities.—Contusive pains in all parts.—Rheumatic pains in different parts, > morning by rising.—Pricking in whole body.—Soreness, > by exercise.—Heaviness as from want of sleep.—Weakness, with loss of consciousness as to actions, defective hearing and sensation as if everything were at a great distance.—Debility, with loss of appetite, also with burning in hands and feet.—Aversion to motion; to going out.—Stiffness from slightest exposure to draught of damp air.—Stiffness: > in dry weather; causing sleeplessness, with pain

in heart and apprehension.—Cardiac and rheumatic pains generally > in morning, sometimes after rising; > of pain in dry weather.

25. Skin.—Itching: of feet; general, sometimes with uneasiness of legs.

26. Sleep.—Yawning during the day, with sleepiness.—Sleepless early in morning.—Extravagant dreams.

27. Fever.—Chill in afternoon, then fever lasting into night.—Erratic chill.—Heat: with burning in throat and headache; flushing, with sweat; of hands; hands and feet; upper limbs.

Maize. Zea.

Zea mays. Maize. Indian Corn. N. O. Gramineć (Tribe, Phalarideć).

1. STIGMATA MAIDIS. Corn Silk. Green pistils. Tincture: One part, by weight, of the Silk to two of alcohol. Fluid Extract. (Z. St.)

2. SHUCKS. Decoction or tincture of the husks of Maize after the removal of the grain. (Z. sh.)

Clinical.—Albuminuria (St.). Cystitis (St.). Dropsy (St.). Gonorrhśa, chronic (St.). Heart, failure of (St.). Malaria, chronic (Sh.). Renal colic (St.). Pyelitis (St.). Urine, retained; suppressed (St.).

Characteristics.—Two parts of Maize have been used in medicine, the pistils (*Stigmata maidis*) and the husks (*Shucks*), but I think it best to take them together. I have distinguished them under the heading CLINICAL by (St.) and (Sh.). The grain of Maize in bulk appears to be capable of generating a poisonous gas, as four men were suffocated, one fatally, on opening a cargo of maize for the purpose of discharging it in the London docks (*H. W.*, xxxv. 436). Corn silk has been used in: (*1*) Irritable conditions of the urinary tract; ureters, bladder, urethra. (*2*) As a powerful diuretic in renal disorders unconnected with cardiac involvement. (*3*) Heart and urinary conditions combined. J. H. Cook gives an account of it in *Med. Cent.* (iv. 589). He quotes the results of Dumont's investigation of its action on the heart: (*1*) It makes the heart's action slower and stronger. (*2*) Regulates its rhythm. (*3*) Its diuretic action is manifested first. (*4*) Its action is more powerful and evident in cardiac affections with dropsy. (*5*) With the disappearance of the dropsy arterial tension increases and venous tension diminishes. Cook gives this case: Mr. X., 63, florid, robust, temperate, had been many months under treatment with the following condition, traced originally to cooling off too rapidly when perspiring: Intense prostration, intermittent pulse, dyspnśa. The urine contained much

albumen, mucus, and some blood; specific gravity 1010. Great tenderness over entire abdomen, especially in region of ureters. Under remedies he would improve for a few days, when a slight chill would be followed by fever, and the symptoms would come back in full force. The microscope revealed pus cells and granular epithelial cells in abundance. *Z. st*. was now given, a teaspoonful of the fluid extract every four hours. In less than a week there was visible improvement. The constant calls to urinate (every forty-five minutes) ceased, and the patient could go through the night without being disturbed more than once or twice. The specific gravity of the urine increased, and pus, blood, and albumen disappeared. Only a little abdominal tenderness remained, which did not prevent the patient from attending to his business and enjoying life. Hansen has confirmed the value of *Z. st*. in 20-drop doses of the fluid extract in organic heart disease with dropsy, much śdema of lower limbs, and scanty urination. He mentions also as suitable cases: (*1*) Renal lithiasis with nephritic ulcer and discharge of small calculi, red sand, and blood. (*2*) Chronic pyelitis from catarrh, (*3*) Chronic retention of urine with great tenesmus after urinating. (*4*) Suppression of urine with lack of solids and low specific gravity. (*5*) Vesical catarrh, tenesmus of neck of bladder, ammoniacal urine, much mucus. (*6*) Chronic gonorrhśa, prostate involved, painful urination. The other use of *Zea* (*Z. sh*.) was communicated to the profession by Dr. J. W. Pruitt (*Arkansas Eclect. Med. J*. quoted *H. R*., viii. 494). Pruitt learned it from the people. "Shuck tea" is a popular remedy for chronic malaria. Pruitt's son took a chill in the Arkansas river bottom. The chills were stopped with the usual remedies, *Cinchonidia, Iron, Piperine*, &c., but every fourteen days would come back with increased severity. Presently gastric symptoms set in, with anćmia, and other symptoms of chronicity. "Shuck tea" was recommended by a lay friend, and was taken for one day only. There was never a chill after. Pruitt thenceforward used *Z. sh*. largely, and he found it was in the chronic cases only that it was beneficial.

Relations.—*Compare:* In bladder affections, Trit. r., Sabal ser. Renal colic, Oc. c. Heart, Dig., Stroph. Malaria, Malar.

Malandrinum.

Nosode of the disease in horses called "Grease." Trituration of Sugar of Milk saturated with the virus. Solution of the virus.

Clinical.—Acne. Boils. Fistula. Impetigo. Knock-knee. Measles. Skin, unhealthy. Small-pox. Vaccination, ill effects of.

Characteristics.—According to Jenner, the origin of cow-pox is infection of the udders of cows by contact with grass on which a horse infected with "Grease" has trodden. This assertion is to some extent confirmed by the experience of

homśopaths, who have found in *Maland*. a very effectual protection against infection with small-pox and against vaccination. Straube made provings of the 30th potency (*H. R*., xv. 145; *H. W*., xxxv. 504). It has been used on inferential grounds with great success in ill effects of vaccination (I have cured with it cases of unhealthy, dry, rough skin remaining for years after vaccination); in small-pox, measles, and impetigo. Burnett has cured with it a case of knock-knee in a child who was constantly handling his penis. Burnett's indications are: "Lower half of body; greasy skin and greasy eruption. Slow pustulation, never ending, as one heals another appears." Impetigo, ecthyma, fat, greasy-looking pustular eruptions are particularly acted on by this remedy. Heath (*Amer. Hom*., xxiv. 141) has cured with *Maland*. 30 fistula in a pony's neck, following strangles. A. L. Marcey (*H. R*., xiv. 530) relates a striking experience with *Maland*. 30. In the presence of a small-pox epidemic he vaccinated himself, taking at the same time *Maland*. 30 night and morning. The vaccination did not take. It was twice repeated and still did not take; nor was smallpox contracted. Called to vaccinate four children in a family whose parents were recovering from small-pox, he vaccinated all and gave *Maland*. 30 to *three* of them at the same time; the remaining child was the only one whose vaccination "took." This was so severe that *Maland*. had to be given to modify its intensity, which it did effectually. The other three were re-vaccinated but none "took." Of five children, from six to seventeen years of age, only the eldest had been vaccinated, and he had a good scar. All except the eldest were given *Maland*. and were vaccinated, and none of the four "took." The eldest took small-pox. *Maland*. was then given, and in a few days he was convalescent. In another case of small-pox *Maland*. was given, and the disease only lasted a few days, the eruption drying up. In Straube's proving the symptoms were < in evening. The Schema is made up of Straube's symptoms. Burnett considers *Maland*. a very deeply acting remedy, and one not to be repeated oftener than once a fortnight.

Relations.—*Compare:* In bad effects of vaccination, Variol., Vaccin., Thuj., Sabi., Ant. t., Apis, Sil. In general; children handling genitals, Medor. (but Maland. has deeper action). In pustular eruptions, Hep., Merc. *Compare also:* Castor equi., Hippozćnin, Hippomanes.

Causation.—Vaccination.

SYMPTOMS.

2. Head.—Dizziness.—Frontal and occipital headache.—Dulness.—Impetigo covering head from crown to neck and extending behind ears.—Thick, greenish crusts with pale, reddish scabs, itching < in evening.

3. Eyes.—Red stripes under eyes.

4. Ears.—Profuse, purulent, greenish-yellow discharge, mixed with blood.

8. Mouth.—Tongue: coated yellow, with red streak down middle (typhoid); cracked and ulcerating down middle; swollen.

11. Stomach.—Vomiting of bilious matter; nausea.

12. Abdomen.—Pains around umbilicus.

13. Stool.—Dark, cadaverous-smelling stool.—Yellowish, foul-smelling diarrhśa.

15. Male Sexual Organs.—(Child constantly handles his penis.)

16. Female Sexual Organs.—Vagina closed with impetiginous crusts, yellowish-greenish-brown in colour.

20. Back.—Pain along back, as if beaten.

21. Limbs.—Sore pains in limbs and joints.—Run-arounds on nails of hands and feet.

22. Upper Limbs.—Impetiginous crusts on extensor sides of forearms.

23. Lower Limbs.—Pains, esp. in l. tibia, with petechić-like patches on anterior aspect of l. leg from knee to ankle.—Petechić on both thighs, < l.—(Knock-knee.)

25. Skin.—Small-pox.—Measles; also as preventive.—Impetigo covering back of head, extending over back to buttock, and even into vagina; covering labić.—Impetigo on extensors of forearms.—Boils.—Malignant pustule.—Bad effects of vaccination (dry, harsh skin).—Small, dusky red spots on legs, not disappearing on pressure.—(Typhoid fever.—Petechial typhus.)

Malaria Officinalis.

[In the summer of 1862 G. W. Bowen, of Indiana, allowed vegetable matter to decompose in water in glass jars, for one week (No. I.), two weeks (No. II.), and three weeks (No. III.). At each stage provings were made by inhaling the gases given off. Later some drops were taken internally. For curative purposes a tincture was made by adding ten drops of the No. II. (in which the fibre was not altogether decomposed) to ninety drops of alcohol. Bowen's cases were all treated with this. Boericke and Tafel made a 30th tincture of this and Yingling inhaled it. This resulted in his proving. Later Yingling obtained from B. and T. the 30th attenuation of No. III. (in which decomposition of the fibre is complete), and had this run up into the higher attenuations. These were used in his clinical experiences.]

Clinical.—Ague. Bilious fever. Camp fever. Constipation. Consumption. Diarrhœa. Fever. Gout. Hay-fever. Liver, affections of. Malaria. Malaria cachexia. Neuralgia. Rheumatism. Spleen, affections of.

Characteristics.—Living in a malarial region, Bowen hit upon the idea of finding remedies for the prevalent malarial complaints he had to deal with by producing experimental malaria and finding antidotes thereto. He hired persons to inhale the gases from jars containing vegetable matter in various stages of decomposition. In the first stage the odour was not very offensive. The effects were: "Headache, nausea, distress in stomach, tongue coated white." These developed in from one to two hours after inhaling, and lasted two or three days. In the second stage the effects do not come on until from twelve to twenty-four hours. Then there were: "Fearful headache, nausea, aversion to food, distress through hypochondriac region, first in the spleen, then liver and stomach, and on the third day the chills." Then antidotes had to be resorted to. No. III., which was "fetid to a fearful degree," produced no result except nausea within three or four days. Then came, first, extreme lassitude, continued fever, pains and aches impeding locomotion. When taken internally the results were more severe. No. I caused: Bilious colic, nausea, cramps, diarrhœa, and headache. No. II.: Liver, spleen, kidney and stomach involvement; daily or tertian intermittents with rigors. No. III. set up a typhoid state or semi-paralytic state, and compelled the provers to take to their beds (*New, Old, and Forgotten Remedies*, in which the chief papers on this remedy will be found collected.—I have added later experiences from recent numbers of *H. R*). George Herring has recalled an observation by Casanova that malaria antidotes phthisis, and Herring relates an experience of his own in a converse sense. On board a Liverpool steamer he put into Aspinwall on the swampy isthmus of Panama for nine days. On the ship's return several of the sailors were prostrated with Panama fever, whilst Herring, who had formerly suffered from tubercular disease of the lungs, remained unaffected. From which it would seem that a consumptive habit may be antidotal to malaria. Bowen gave to a lady, apparently in the last stage of consumption, herself the last survivor of five, all the rest having died of the same disease as well as several in the preceding generation, a dose from the watery solution of No. II. On the fifth day she had a fairly perceptible chill, and a harder one the sixth and seventh days. Antidotes were here called into requisition, but when cured of her malaria she was also cured of her consumption. Bowen relates these cases: (*1*) Mrs. R., 45, weighing 245 pounds, could scarcely walk for two years from rheumatism in back and limbs. *Malar*. 1x, ten pilules three or four times a day. In one week all rheumatism and lameness gone. (*2*) Mr. S., foreman in a large saw mills, his work involving frequent wettings, had rheumatism of malarial nature, < by *Quinine* and external applications. *Malar*. 1x. In three days he was better, and soon got quite well of his pain and improved greatly in general health. (*3*) I. S., 55, veteran and pensioner. Bronzed in colour. Unable to walk for years. There were heart, chest, and hæmorrhoidal troubles, which were remedied, but still he could not walk or get out of a chair. He said his back had been injured when in the army. *Ruta* and *Rhus* enabled him to get up one

or two steps; but Bowen finally concluded that the complaint was really rheumatism of malarial origin. He gave *Malar*. 1x, ten pilules three or four times a day. In a week he rode to Bowen's house and walked up and down the flight of steps alone. In five more days he walked three miles in one morning. He put on flesh and seemed ten years younger. (*4*) Miss R., 20. Dull headaches, dizzy and drowsy at all times, < mornings. Eyes weak, blurring, reading difficult. Laryngeal irritation with cough and secretion of bloody mucus. Slow pulse. Right arm gets numb and has to be rubbed. Cold extremities; poor appetite but food does not distress her. Urine red, scanty. Bowels sluggish but stools natural. Menses regular, rather scanty. Very forgetful. *Malar*. 1x, ten pilules every three hours. Better in three days; in a week nearly well. A month later there was a slight defect of vision in left eye, inclined to be drowsy, somewhat forgetful, singing causes some irritation in the throat. *Malar*. was again given night and morning, and she became quite well (*H. R*., xv. 449.) With *Malar*. 2 Bowen cured a stout lady, 60, of very severe gout in both feet, preventing her standing without aid and keeping her awake at night (*H. R*., xv. 296). Yingling's cases cured with the potencies of *Malar*. III. are reported *H. R*., xiii. 442. (*1*) A Kansas volunteer, 28, after a week in camp in rainy, chilly weather had chill and fever, continuous nausea, vomiting bile, retching. Tongue white, thick coat. Mouth *feels* dry but *is* moist. Thirst for large quantities. Symptoms were moderated by *Ip*., and later *Bry*., but not removed. Skin, eyes, and face very yellow. *Malar*. 1m. Improvement set in and in a week was in better health than usual. (*2*) Mrs. S. A. H., 63, shooting pains all over muscles; bones ache. Diarrhœa in morning; stools thin, yellow, foul. Bitter taste; parched mouth; tongue white. Stretching and gaping. *Malar*. 1m. cured quickly. In other cases the following symptoms were removed (each letter refers to a separate case): (*a*) Chilly with flushes of heat. Great desire for fresh air. Cannot breathe on account of pain in liver, < lying down, must jump up; > by hard pressure on liver. During day no trouble and no tenderness; raves, sings, and talks all night. (*b*) Ague every other day begins about noon. Weak and drowsy between attacks (has taken much *Quinine*). (*c*) Drawing or pricking feeling in region of liver (left after the second dose). (*d*) Dumb chills. (*e*) When in open air seems cold and shakes inside till she fairly cramps. Aching under right scapula. Cramping in liver. (*f*) Dryness at root of tongue. (*g*) A constant hacking cough, half-minute guns, when talking and when turning over in bed. (*h*) Steady dull ache in liver region > after urinating. In the proving the symptoms were > by eating, and there was a great desire to stretch.

Relations.—Malar. belongs to the same order of remedies as Pyrogen (product of decaying *animal* tissues). Bowen found the best *antidotes* to Malar.: Nux and Bry. for the effects of No. I.; Bry. and Ars. for No. II.; Rhus and Bry. for No. III. Eupat. perf. and Chi. gave negative results. *Compare:* Spleen, Cean. Liver, Bry., Lyc., Cholest., Chel. Pain under right scapula, Chel. Effect of damp and wetting, Lemn., Dulc. Half minute-gun cough, Coral, Coc. c. > After urinating, Lith., jamb. Intermittents, Ip., Cedr., Nat. m., Menyanth, &c.

Causation.—Wetting. Camp life.

SYMPTOMS.

1. Mind.—Feels stupid and sleepy.—(Very forgetful.)

2. Head.—Feeling as though he would become dizzy.—Waving dizziness on falling asleep.—Dizziness on rising from reclining position.—Dull aching through forehead.—(Dull headache, dizzy and drowsy.)

3. Eyes.—Aching above inner angle of r. eye.—Eyes feel heavy and sleepy.—(Eyes weak, blurring, reading difficult.)

4. Ears.—Drawing pain in r. external ear.

5. Nose.—A kind of concentration of feeling at root of nose and just above, as though I should have a severe cold like hay-fever.

6. Face.—Itching on r. cheek over malar bone (and various parts of face and limbs); > by slight rubbing or scratching.—Face becomes warm as if flushed; and spreads over body.

8. Mouth.—Pain in upper l. teeth.—Sensation on point of tongue as if a few specks of pepper were there.—Saliva more profuse than usual, keeps him swallowing often.—Had a good night's rest and felt better and brighter from that time (curative).—(Bitter taste, parched mouth; tongue white.)

11. Stomach.—Unusually hearty appetite (for supper).—Odour from cooking is pleasing, but no desire for dinner; on sitting down eats a good dinner with relish.—Feels better after eating dinner.—Easy belching, several times, no taste.—Qualmish.—Nausea.

12. Abdomen.—Sense of heat in abdomen.—Tired feeling through abdomen and chest.—Sensation as though he would have a very loose stool (it passed off without).—Sensation in spleen as though it would ache.—Pain in abdomen to r. of navel.—Uneasiness in lower abdomen.—Liver, spleen, and kidneys affected.—(Cannot breathe on account of pain in liver, < lying down, > hard pressure.).—(Drawing or pricking in liver).—(Cramping in liver; pain under r. scapula.)

13. Stool and Anus.—Diarrhœa.—Diarrhœa in morning, stools thin, yellow, foul.

17. Respiratory Organs.—Shallow breathing, which seems from languor, desire to breathe deep, occasionally.—Residence in malarial districts is said to cure phthisis.—A consumptive constitution is protected against malaria.—(Singing causes some irritation in the throat.)

18. Chest.—Tired feeling through chest and abdomen.

19. Heart.—When leaning face on l. hand, elbow on table, perceptible feeling of heart-beats through upper body and neck.

20. Neck and Back.—Neck feels tired, with slight aching in upper part on moving the head.—Lumbar region tired as though it would ache.—(Rheumatism of back and limbs, with lameness.).—(Stiff neck, and r. arm and shoulders painful and helpless.).—(Aching under r. scapula; cramping in liver.)

21. Limbs.—Chilly sensation in l. forearm; soon followed by chilly feeling in hands and fingers; feet are cold with sensation as if chilliness were about to creep up the legs; a few moments later knees feel cold.—A sense of coldness ascending from body from the legs.—Gout.

22. Upper Limbs.—Aching in both elbows.—Aching and tired feeling in wrists; tired ache in the hands.—Arms tired.

23. Lower Limbs.—Pain, upper part of r. ilium.—Tired ache in knees and for some distance above and below.—Pain in top of l. instep.—Aching in an old (cured) bunion on l. foot.—Legs weary from a short walk.—Legs restless, feel like stretching and moving them.

24. Generalities.—General sense of weariness; from a very short walk; esp. through pelvis, sacral region, and upper thighs; strong desire to lie down.—A kind of simmering all through the body.—Typhoidal, semi-paralytic condition (No. III.).—Rheumatism.—Rheumatic paralysis and emaciation.

25. Skin.—(Skin, eyes, and face very yellow.)

26. Sleep.—Impelled to lie down, and on falling asleep a sense of waving dizziness passes all over, preventing sleep.—Gaping, yawning, and desire to stretch.

27. Fever.—(When in open air seems cold and shakes inside till she fairly cramps.).—Coldness ascending over body from legs.—Face feels warm as if flushed, also head; spreads over body, as if feverish.—A feeling as if he would have a chill, then as if he would become feverish, though neither is very marked.—Intermittents: quotidian; tertian (No. II.).—Chills for one hour followed by fever for six hours (No. II. given to a consumptive patient, whom it cured).—(Ague every other day, weak and drowsy between attacks.).—(Dumb chills.)

Mancinella.

Hippomane mancinella. Manchineel. Manzanillo. N. O. Euphorbiaceć. Tincture of fruit, leaves, and bark.

Clinical.—Asthma. Blindness. Borborygmus. Cholera infantum. Colic. Diphtheria. Eyes, affections of; inflammation of. Hair falling out. Headache. Nervous affections. Śsophagus, stricture of. Scarlatina anginosa. Sore throat. Stomatitis. Tongue, patched. Typhoid fever.

Characteristics.—*Manc*. is a species of the Euphorbiaceć, and has all the virulent properties of the family in a high degree. It is one of the trees around which the upas legends have clustered. "It is certain that the juice, which resembles pure white milk, does possess a considerable amount of acridity, and that some persons suffer great pain from incautiously handling it. . . . Perhaps its most dangerous property is that of causing blindness, if by chance the least drop of the milk, or smoke of the burning wood, comes in contact with the eyes. Dr. Seeman states that at Veraguas some of the ship's carpenters were blinded for several days by the juice getting into their eyes while cutting down Manchineel trees; while he himself suffered from temporary loss of sight from merely gathering specimens; and that the same accident happened to a boat's crew from making a fire. Salt water is said to be an efficacious remedy" (*Treas. of Bot*.). *Manc*. was introduced into homśopathy by Bute, who proved it. It was also proved by Mure and Ackermann. The symptoms induced were very intense. Burning was experienced in all parts, vesication and ulceration of the skin and mucous membranes. Head, eyes, throat, abdomen and rectum were the parts most affected. A leading feature of many symptoms was < by drinking cold water. Cough < from drinking water. There is general > from heat when lying down; but warmth of stove < headache; and there is inclination to uncover. Cough is < at night. Among *peculiar sensations* are: Head feels as, if bruised; or as if it had been exposed to the sun. Ears as if closed.—Electric thrusts in upper part of throat. As if flames rising from stomach. As if stomach drew together in a lump and then suddenly opened. Head as if hollow; as if lying on something hard. As if something alive in stomach. *Med. Cent*. (ii. 112) quotes from *Revist. Omeop*. the case of a lady who for several years was possessed with the fixed idea that she would become insane. She had become a wife and mother, but still the idea possessed her. Happening to see in Puhlmann's *Therapeutics* that *Manc*. has "fear of getting crazy," she took *Manc*. 12 and was permanently cured.

Relations.—*Compare:* Crot. t., jatro., Euphorb. (bot.); Canth. (erythema; vesication of skin; scarlatina); Caps. (burning pains < by cold water); Ars.

SYMPTOMS.

1. Mind.—Sudden vanishing of thought, forgets from one moment to next what she wishes to do.—Everything irksome.—Fear: of getting crazy; of evil spirits.—Averse to work and answering questions.—Sadness.—Anxiety; before menses.—Homesick.—Bashful and taciturn; timid look.—< From anger and after eating.

2. Head.—Vertigo: stupefying; with loss of consciousness; morning on rising.—Sense of lightness (or emptiness) in head while walking about room.—Sticking pressure from vertex through brain, at noon.—Sudden Sticking in r. temple and above eye.—Stitches: in temples; in head with sleeplessness; over l. eye.—Headache: with impatience; caused by candle-light; < from warmth of stove.—Pulsating pains in head and neck, preventing writing.—Whole head feels as if bruised, or as after exposure to sun.—Itching of scalp; hair falls out after severe acute diseases.

3. Eyes.—Blue circles round eyes.—Intense inflammation causing blindness for some days.—Much swelling of lids.—Objects waver before eyes.—Sensation of heaviness and dryness of eyes and lids.—Burning: in eyes, headache from candle-light; of eyelids, only when closing them.

4. Ears.—Ears feel as if closed.—Redness and heat of ears.—Ringing, roaring, drumming; noise like voices in ears.

5. Nose.—Pressure at root of nose.—Dryness.

6. Face.—Face: swollen; pale; pale, yellow, bloated.—Heat rising to face; soon after, painful itching, stitching, and burning, lasting all day; next morning face swollen; towards noon minute vesicles with yellow fluid; next day, desquamation.—Lips pale; pricking pains.—Lower lip hangs down.—Numerous small vesicles on chin which desquamate.

8. Mouth.—Very bitter taste.—Taste: bloody; < after sleep.—Tongue: coated white except in several, sharply defined clean spots; coated white as in aphthć; dry; burning.—Unendurable burning and prickling in mouth, not > by cold water.—Whole mouth and tongue covered with small vesicles.—Saliva: increased; yellow; fetid.—Offensive breath, perceptible to herself.—Large blisters on palate.

9. Throat.—Great elongation of uvula.—Heat in pharynx and down śsophagus without thirst.—Great dryness, on waking; stitches.—Choking sensation rises in throat when speaking; prevents drinking though thirsts for cold water.—Great swelling and suppurating of tonsils with danger of suffocation; whistling breathing.—White, yellowish, burning ulcers on tonsils and in throat.

10. Appetite.—Thirst: for cold water; and aversion to wine and alcohol.—Aversion to meat and bread.—Can take only liquid food on account of soreness of mouth.

11. Stomach.—Drinking water < bloatedness and pain in stomach.—After drinking water; colic; pain in abdomen.—Ineffectual desire to eructate or gag with excessive nausea.—Continual choking sensation rising from stomach as pressure of wind, with weakness and palpitation.—Repeated green vomit.—Sour, greasy vomit with aversion to water; on vomit floats a white mass like coagulated fat.—Vomiting of food, followed by severe colic and profuse diarrhśa.—Vomiting > headache.—Burning: in stomach and throat, with nausea; in pit of stomach.—Pit of stomach swollen and sensitive to pressure.—Distension and pain in region of stomach.—Sensation as of flames rising from stomach.—Sensation as if stomach drew together in a lump and then suddenly opened.

12. Abdomen.—Rumbling in l. side when bending to r.—Sudden sticking in l. hypochondrium.—Pain in l. hypochondrium in a spot as large as a florin, compelling her to press there with hand; rumbling in l. side when lying on r., also with every respiration; none when lying on l. side.—Wandering pains in abdomen.—Pains through bowels after drinking water.—Loud rumbling; renewed by every motion and deep breath, with headache which is much < near warm stove.—Colic: after drinking water; with diarrhśa (at midnight), with fainting, constipation alternating with diarrhśa.—Abdomen: distended; sore as if bruised; rash on.

13. Stool and Anus.—Fulness in rectum with hollow feeling in stomach.—Profuse diarrhśa with colic and vertigo.—Many bloody stools with colic, inclination to sleep, and vertigo.—Greenish stools without blood.—Diarrhśa: with burning in abdomen and anus; alternating with constipation; with cutting in abdomen and much discharge of flatus.—Stools: frequent, thin, watery, with vomiting; painful, black, fetid, bloody, with tenesmus.—After stool: pulsation in anus, discharge of fetid blood from piles.—Constipation.

14. Urinary Organs.—Tired feeling in region of kidneys (as if bruised) with inclination to rub parts, and frequent stretching back of body.—Stitches in bladder before and at beginning of urination.—Burning in urethra.—Urine: brown; whitish, clouded on standing.

15. Male Sexual Organs.—Increased sexual desire.—Itching on scrotum.

16. Female Sexual Organs.—Pale menstrual flow; colic.—Before menses: congestion of head.

17. Respiratory Organs.—Nasal tone of voice.—Choking sensation rising into throat hindering speech.—In larynx: scraping; cutting; tension.—Whistling breathing.—Asthma, chronic.—Frequent hawking with nausea.—Violent cough and

painful stitches in trachea from slightest exertion.—Cough: < night; after drinking.—Expectoration > oppression of chest.

18. Chest.—Constriction of chest.—Rattling in l. chest.—Suffocative attacks with pulsation in chest while coughing, or as soon as he begins to talk.—Pain in centre of sternum, < from pressure and from breathing.

19. Heart.—Needle-like stitches in heart.—Palpitation.

20. Neck and Back.—Painful stiffness of neck, esp. after sleep.—Stitches in l. scapula and l. breast at intervals.—Painful stiffness in small of back.

21. Limbs.—Icy coldness of hands and feet.

22. Upper Limbs.—Trembling and heaviness of arms; of hands.—Hands numb on waking.—Painful stiffness of finger-joints.—Hands as if too thick; asleep; heavy and clumsy.—Blue finger-nails.

23. Lower Limbs.—Quivering and jerking in legs in attacks.—Trembling of legs.—Needle-like stitches in legs; under heel from within, out.—Tingling in feet when sitting.—Burning in soles; with dry feeling.—Desquamation of soles at end of fever.—Large vesicles, esp. on soles.

24. Generalities.—Lassitude and indescribable uncomfortable feeling in limbs; much stretching.—Fainting with intestinal colic.—Convulsions.

25. Skin.—Redness of skin (hands).—Small vesicles, followed by desquamation.—Sequelć of scarlatina.—Favours rapid healing of wounds.—Fungoid growths, esp. syphilitic.

26. Sleep.—Great sleepiness; ineffectual desire to yawn.—Wakes as from electric shocks on neck (above larynx).—On awaking, hands asleep, heavy.—After sleep: mouth bitter; throat dry; neck stiff.

27. Fever.—Chill: icy cold hands and feet.—Flushes of heat, with sensation as if flames rose out of region of stomach, on account of which he threw off clothes.—Burning heat, with inclination to cover.—Moderate fever, severe headache, must lie down.—Cold sweat.—Fever with tingling of skin, desire to uncover, painful swelling, profuse micturition.

Mandragora.

Mandragora officinarum. Atropa mandragora. Mandrake. N. O. Solanaceć. Tincture of plant without the root.

Clinical.—Constipation.

Characteristics.—The mandrake does not derive its name from the shape of the human body which the root of the plant sometimes takes, but from the name by which it was known to the Greeks, *Mandragora*, and which signifies injurious to cattle. In legend and poetry the mandrake figures largely. It is said to be the "Insane root" spoken of by Macbeth, and it is mentioned by name in *Antony and Cleopatra* and *Romeo and Juliet*. *Mand*. must not be confounded with *Podophyllum*, which is also sometimes called "Mandrake," as also is *Bryonia dioica* in this country. *Mand*. is known to homśopathy through some experiments of Dufresne made on himself and another by repeatedly smelling, at short intervals, the expressed juice of the plant, "which has a nauseating odour like adder's flesh"; and also by an experiment of W. B. Richardson's. There are two varieties of *Mand. offic*., the vernal and the autumnal. The plant Dufresne used was the *Vernalis*. The symptoms were very similar to those of *Belladonna*, to which it is botanically closely related. There was a restless excitability and bodily weariness. Great desire for sleep. The unpleasant symptoms go off at night in bed, and are succeeded by a gentle perspiration. The effects were removed by free indulgence in wine, coffee, and cigars. With regular dieting they lasted much longer, and were removed by *Nux, Camph*., and *Bell*, "Inactive bowels with white, hard stools," was one symptom. There is exaggeration of sounds, and enlarged vision.

SYMPTOMS.

1. Mind.—Restless excitability, hysterical.

2. Head.—Heaviness and confusion of head.—Sense of fulness in vessels of brain.

3. Eyes.—Pupils dilated.—A peculiarly enlarged and confused vision.

4. Ears.—Exaggeration of sounds.

5. Nose.—Coryza.

8. Mouth.—Tongue benumbed.—Singular taste and sensation of acidity and dryness.

13. Stool.—Inaction of bowels, with white hard fćces when bowels are induced to act.

17. Respiratory Organs.—Hoarseness.—Slight cough with expectoration.—Difficult breathing.

24. Generalities.—Lingering uneasiness and coldness after removal of other symptoms.—Bodily weakness.

26. Sleep.—Desire for sleep.

27. Fever.—Shivering in afternoon.—Coldness remains after other symptoms.

Manganum.

MANGANUM ACETICUM. Acetate of Manganese. Manganous Acetate. $Mn(C_2H_3O_2)_2$ $4H_2O$. Solution.

MANGANUM CARBONICUM. Carbonate of Manganese. Manganous Carbonate. $MnCO_3$. Trituration.

Clinical.—Anæmia. Ankles, weak. Asthenopia. Asthma. Bones, pains in. Brain, concussion of. Climacteric flushings. Cough. Deafness, catarrhal. Dysmenorrhœa. *Ears, affection of*. Gall-stones. Gout. Headache. *Heel, rheumatism of*. Hoarseness. Itch. Jaundice. Laryngeal phthisis. *Laryngitis*. Lichen. Myopia. Palate, affections of. Paraplegia. Parotitis. Periostitis. Pityriasis. Psoriasis. Rhagades. Rheumatism. Tongue, affections of. Yawning.

Characteristics.—The metal Manganese was isolated in 1774, in the year Priestley discovered Oxygen. It was introduced into the materia medica by Hahnemann, who made provings of the acetate and carbonate. The symptoms of the two have not been kept separate. Manganese is a metal "having a remarkable affinity for, and in some respects a close resemblance to, iron, of which it is an extremely frequent associate." Its medicinal as well as its physical relationship with iron is very close. It has an action on the blood-forming process like iron, and has been successfully used in cases of anæmia. There is one curious symptom they have in common: Cough > by lying down. If there is any difference, the *Mang*. cough is more apt to be deep, and it is also < in damp weather. Guernsey summarises the *Mang*. effects thus: "The bones are very sensitive; red spots on the skin, which are elevated, owing to the affections of the bones. Ankles are particularly affected; children may have this trouble and be unable to walk. Typhus fever when the parotid gland is swollen and the *bones are very sensitive to touch*; affections of the internal ear; upper part of chest. Hoarse voice; drawing sensation of the muscles." I have frequently verified the "cough > lying down," and also this sensitiveness of the bones. Where this occurs in connection with any other condition indicating *Mang*. it is sure to do good. There are single nodes on the palate (I recently cured in an

elderly lady a flat growth on centre of palate with *Mang*. 30); bluish nodes on the skin; malignant ulcers with blue borders following slight injury. The skin will not heal, slight scratches ulcerate. Inflammation of bones and joints with insupportable nightly digging pains. Anæmia (menses too frequent and too scanty in anæmic girls); laryngeal phthisis; tuberculosis. Chlorosis, if gastric symptoms and loss of appetite predominate. Every part of the body feels extremely sore when touched. This last is quite a keynote of *Mang*. Rheumatic patients cannot bear any weight on their heels. Rheumatic symptoms with dark, almost blue spots on skin. *Mang*. has some remarkable paralytic symptoms. Paralysis with inclination to run forward if he tried to walk. Paralysis begins below, extending upward. Paraplegia. Paralysis from degeneration of anterior portion of cord. The tongue symptoms of *Mang*. are very pronounced. Hansen (*H. W*., xxiv. 64) cured with *Mang. ac*. 6 a case of neuralgia of the tongue following the healing of a little ulcer on surface near left border, after pencilling with lunar caustic. Shortly after the healing the patient (man, 60) had severe stinging burning at l. edge of tongue and inner side of l. cheek touching the tongue. In this state he came to Hansen after allopathic treatment. Several medicines having been given without result, *Mang. ac*. was chosen, and made a rapid and permanent cure. In an article on *Mang*. by F. H. Pritchard (*Minn. Hom. Mag*., v. 151), who cites this case, the action of the metal is thus summarised: (*1*) On mucous membranes: congestion and increased as well as decreased secretions. (*2*) Liver: a powerful cholagogue inducing inflammation and fatty degeneration. (*3*) Blood: destroys red corpuscles and = anæmia. (*4*) Bones and periosteum: sensitiveness of bones with periostitis. (*5*) Skin: fissures; excoriation; suppuration. (*6*) Cerebro-spinal system: paralysis and progressive muscular atrophy. Pritchard quotes observations of Grille that workmen in manganese mines do not get itch; and those who come to the work with itch get cured of it. "Suppuration of skin round joints" is a characteristic of Lippe's. The manganese waters of Cransac cause: "Ill-humour, weeping, despondency, sudden palpitation." The headaches of *Mang*. are boring, pressing, and proceed from above downwards. There is also a headache like concussion on every step or movement. A. W. Palmer (quoted *H. W*., xxxii. 366) reports this case of catarrhal deafness cured with *Mang*. 6: Miss H., 38. Dull hearing; dry throat with hoarseness; itching in ears; loud rumbling, < night, r. ear, crackling on blowing nose; *deafness in damp weather*. The last was the guiding symptom. Cooper gives me the following ear-cases in which *Mang. ac*. has proved curative: (*1*) A nodous appearance of malleus handle; thickened irregularly, with history of bilious headaches and of previous discharges from the ears. The tympanal membrane has a granular appearance. Purple glazed appearance of malleus handles, which are thickened and prominent, upper segment of membrane also purple and glazed. (*2*) Chronic periostitis of the meatus and middle ear, with otorrhœa, left ear. (*3*) Otorrhœa with earache, pain shoots up from teeth to ear; the earache is worse after early dinner, up till 8 or 9 p.m. ("Pains extend to and concentrate in ears from other parts.") (*4*) Sensitive ears, takes cold and gets headache; history of gall-stones and jaundice; sleepy and headache in afternoon, bitter taste in morning, lips glued together; whistling

tinnitus worse in a cold. (Whistling tinnitus, *Mang. ac*.; explosions, *Mag. carb*.; rasping, shrill tinnitus as well as cardiac tinnitus, pumping, *K. iod*.). (*5*) Deafness, woman, 36, dating from 14, from over-strain in singing, when she lost voice and hearing for six months; left hearing returned, right remained deaf, worse after a cold or if over-excited or worried; subject all life to bilious attacks which last twenty-four hours and leave suddenly; head throbs, can't put it down on a pillow; headache comes on in morning on awaking and reaches a height at 3 or 4 p.m. and keeps on till next morning. (Bilious headaches went away and the hearing of right ear improved under *Mang. ac*. 200.) (*6*) Subject to sore throats and unpleasant breath, tinnitus as of blood rushing fast through the ears (whistling?), membranes translucent, anæmic, malleus handles thickened and "skeletonized"; hearing, right 1 in., left 5 in. After taking *Mang. ac*. 3x, two pilules thrice daily, steady improvement went on, till hearing was right 10 in., left 20 in.; the deafness was worst in a noise. (*7*) Deaf from childhood, granular membranes. *Mang. ac*. 200 caused in a patient of Cooper's a woman, 53, excitement with feeling of whistling through the ears and general fulness of the head with swellings of hands and feet and a stinging as if frost-bitten; sight became dim with tightness round head, felt low-spirited and continual flushings. Among the *Sensations* of *Mang*. are: Head as if larger. As if pit of stomach enlarged. Ears as if stopped. Throat as if excoriated. Trachea as if closed with a film. As if bowels drawn together. As if tendons shortened. Nearly all symptoms are < at night, or else in morning. Lying down >. Raising head, bending forward, bending double >; bending backward <. Lying on feather bed < (asthma). Motion, laughing, talking, walking <. Cold <. Cold, rainy weather <. Touching with cold things <. Open air >. Sitting bent over a fire > pain in abdomen. Contractive pain in head and dryness of lips and palate are > indoors. > or < by change of weather. > By eating; > by swallowing. Eating = pressure in stomach and abdomen < from cold food. After eating: cramp pain in jaws; pain in rectum. Smoking > hoarseness.

SYMPTOMS.

1. Mind.—Peevishness and taciturnity, with concentration in self.—Low-spirited and reflective.—Fretful.—Bitterness and long rancour.—Not pleased with joyous music but immediately affected by the saddest.—Abstraction of mind.—Dulness of the senses.

2. Head.—Vertigo when sitting or standing; he is near falling forward; painful concussion of brain from shaking head, from walking, with aching in head and at same time in epigastrium; rush of blood from nape over vertex to forehead during motion, with stupefaction and confusion of senses while standing.—Head heavy, with sensation as if it were increased in size.—Burning and aching pains in head, which disappear in open air.—Tensive, shooting, and drawing pain in head in open air, > in a room.—Congestion in head, with pulsation, as if brain were going to suppurate, > in open air.—Painful jarring of brain, when moving.—Pressing, boring headache in temples, extending towards eyes and forehead, going off on bending forward, but returning on sitting up, or on bending head backward.—Stitches (like needles) and darts in the l. side of forehead.—Frequent rising of heat in head, with thirst.—The headache which comes on in a room is > in the open air, and *vice versâ*.—Cold feeling at small spot on vertex.

3. Eyes.—Aching (pressing) in eyes when they are fatigued, or by candle-light in evening.—Burning heat and dryness of eyes.—Dim-sightedness with burning in eyes.—Eyelids swollen and painful when moved (and to touch).—Agglutination of eyelids in morning.—Pupils dilated or contracted.—Confused sight.—Myopia.

4. Ears.—Otalgia.—Drawing pains in ears, commencing from other organs.—Pains extend to and concentrate in ears from other organs.—Shootings in ears when speaking, swallowing, laughing, and walking heavily.—Hardness of hearing, as from stoppage of ears, removed by blowing nose, < or > according to change of weather.—Buzzing and rumbling in ears.—Detonation in ears, when blowing nose, and swallowing, and crashing sound when yawning.—Whistling tinnitus.—Whizzing and rushing in ear.—Swelling of l. parotid, with a reddish hue, in typhus.

5. Nose.—Dry coryza and obstruction of nose.—Coryza, with loss of smell, and secretion of thick mucus.—Painful crampy tearing between root of nose and eyebrow.—Sometimes dry and sometimes fluent coryza.—Redness, excoriation, and inflammation of nose during coryza.

6. Face.—Pale, sunk, wan face.—Violent tearing and squeezing between root of nose and eyebrows.—Jerking shooting pains from lower jaw to temples, when laughing.—Lips parched, dry, with shrivelled skin, without thirst.—Clear vesicles on upper lip.—Eruptions and ulcers at commissures of lips.—Cramps in jaws after a meal.—Drawing cramp in muscles in region of l. mastoid process, so that he had to incline his head to r. side.

7. Teeth.—Painful sensitiveness of teeth.—Violent pains in teeth, which pass rapidly to other parts.—Tearing in molars and adjacent parts, with great dejection and inquietude, esp. in morning and evening.—Pains as from ulceration in teeth, < until they become insupportable, by contact with anything cold.—Toothache, lasting four or five days and returning esp. in forenoon, and 10

to 12 p.m.; sucking = acute jerking in teeth.—Most violent toothache; at first sudden in two hollow back teeth, extending thence into zygoma, neck, or ear, and again returning; with prostration so he could scarcely walk; obliged to lie down, with internal restlessness and oppression; somewhat > by biting anything elastic, or laying forehead on table, much < on sitting upright; with great dilatation of pupils.

8. Mouth.—Sensation of soreness and of a hard substance posteriorly on palate: when not swallowing; disappearing after eating bread at 8 a.m.—Flat tumour in centre of hard palate.—Accumulation of (bitter) saliva in mouth.—Smell of clay in mouth, in morning.—Burning vesicles on the (l. side of) tongue.—Burning pains < in tongue at night in room, > in open air.—Nodosities on tongue; warts.—Very salt taste on tongue, posteriorly, morning after waking, > by eating.—Tubercles and burning blisters on tongue.—Furred tongue and general biliousness.

9. Throat.—Sore throat, with incisive pain, and pain as from excoriation, when not swallowing.—Dull shootings on both sides of pharynx, and as far as ears, when swallowing.—Dryness and scraping in throat, with a sensation as if a leaf or film obstructed the larynx.—Dryness of palate and lips.

10. Appetite.—Insipid and oily taste.—Absence of thirst.—Repugnance to food from a feeling of satiety.

11. Stomach.—Sensation of burning sourness, rising from stomach, like pyrosis.—Heat and burning in stomach, ascending to chest, sometimes with great agitation.—Dragging pains in region of stomach, as if epigastrium were dilating, accompanied by nausea.—Pain after eating food in weakly females.

12. Abdomen.—Aching in hypochondria.—Pressure in hypochondria.—Abdomen large, distended.—Pressive pain, as from excoriation, in abdomen and epigastrium.—Contraction, with sensation of heat from middle of abdomen to chest, with nausea.—Cuttings in umbilical region, when taking a deep inspiration.—Movements (when walking) in abdomen, as if intestines were striking against each other.—Excessive emission of wind.

13. Stool and Anus.—Constipation.—Difficult, dry, knotty evacuations.—Evacuations of consistence of pap, several times a day.—Loose and tenacious stools.—Frequent rumbling in rectum.—Colic and incisive pains in rectum, during evacuation.—Successive pullings and tearing pains in rectum.—Stool very pale yellow, sandy, preceded by griping.—Contractive pain in rectum when sitting.—Contractive pains in anus, yellow, granular stool with tenesmus; preceded and accompanied by griping in abdomen and sides, only > by pressing abdomen with the hands, disappearing after the stool; together with shaking chill.

14. Urinary Organs.—Frequent want to urinate.—Violet-coloured and earthy sediment in urine.—Darting in urethra when emitting flatus.—Cutting in middle of urethra between acts of micturition.—Lancinations in urethra, when not urinating.—Incisive pains in region of bladder.—Enuresis in daytime came on in a boy of five when taking *Mang. ac*. 200 (R. T. C.).

15. Male Sexual Organs.—Sensation of weakness in genital organs, with burning and jerking drawing pains in spermatic cord, extending to glans penis.—Itching on top of glans.—Stitches in prepuce.—Itching in interior of scrotum, which cannot be removed by scratching and rubbing.

16. Female Sexual Organs.—Catamenia too early; too frequent and too scanty.—Discharge of blood between periods.—Pressure in genital organs.—Leucorrhœa.—Climacteric flushings.

17. Respiratory Organs.—Obstinate hoarseness, esp. in morning, and in open air, as from chronic inflammation of the larynx; > from smoking.—Sensation as if larynx were closed.—Catarrh, with coryza and hoarseness.—Dry cough, excited by reading aloud, or speaking long, with troublesome dryness, roughness (and constriction) in larynx.—Deep cough without expectoration, ceasing on lying down, and recurring next day.—Cough > lying down.—In morning, copious expectoration of small globules of yellowish green mucus, almost without cough.—Spitting of blood.

18. Chest.—Breath hot and burning, with disagreeable heat in chest.—Lancinations in chest and sternum, which take a downward direction (also running up).—Bloody expectoration from chest.—Bruised pain in chest.—Bruised pain in upper chest when stooping, > when raising head.—Throbbing in chest.—Debility and despondency cease in a case of scirrhus of breast after a single dose of *Mang. ac*. 200 (R. T. C.).

19. Heart.—Sudden shocks in heart and in sides of chest from above downwards.—Pulse irregular, sometimes rapid, sometimes slow, but constantly weak and soft.

20. Neck and Back.—Red swollen streak on l. side of neck.—Rigidity of nape of neck.—Tearing pains along entire spine, during rest and movement.—Pain in small of back on bending backwards.

22. Upper Limbs.—Drawing and tearing, beginning at shoulder and extending to arms, hands, and fingers.—Pain as from a sprain in shoulder-joint.—Tensive pain in joints of arms and hands.—Boring and digging in bones of arm, as if in marrow.—Tension in elbow-joint (and carpal-joints), as if tendons were too short.—Itching tetter in forearm.—Cramp-like pains in hands.—Sensation of tension

in hands.—Inflammatory swelling and ulceration of little finger.—Fissures in bends of finger-joints.

23. Lower Limbs.—Jerkings of muscles of legs on slightest movement.—Cramp-like drawings, or jerking shootings in thigh.—Pain, as from tensive rigidity in legs.—Tearing pain round knee.—Want of firmness and trembling of knees.—Swelling and inflammation of malleoli, with lancinations extending into legs.—Burning in sole of foot.—Excoriation between toes.

24. Generalities.—The bones are very sensitive; red spots on skin, which are elevated, owing to the affections of the bones.—Ankles are particularly affected; children may have this trouble, and be unable to walk.—Typhus fever, where the parotid gland is swollen and the bones are very sensitive to touch.—Affections of internal ear; upper part of chest.—Hoarse voice: drawing sensation of muscles.—Stools with sand or gravel.—Dull shooting and jerking in different parts of the body.—Pulling and tearing pains, esp. in limbs.—Drawing and tension in limbs and joints, as from contraction of tendons, esp. when extending limbs.—Arthritic pains in joints (and periosteum), with shooting, jerking, and digging, < in evening, and often semi-lateral or crossways.—Red and shining (rheumatic) swelling of joints, sometimes in consequence of a chill.—Inflammatory swellings and suppurations.—Inflammations of bones, with searching and insupportable pains at night.—All bones, particularly in lower limbs, sensitive to touch; in typhus.—Excitement, low spirits, flushing, whistling through ears, fulness of head with tightness around it, dim vision, swelling of hands and feet and a stinging as if frost-bitten (from *Mang. ac*. 200).—Weakness and tremor, esp. in joints.—Paraplegia.—Paralysis first of lower limbs.—Staggers and tends to run forward if he tries to walk.—Sensation of uneasiness in the whole body, but esp. in the stomach, with peevishness.—On slightest touch sensation over whole body as if it were ulcerated.—Most symptoms appear during night.—The symptoms which have manifested themselves in a room are > in open air, and *vice versâ*.—Many symptoms are > or < by a change of weather.

25. Skin.—Burning all over skin, in evening, and when rising from bed.—Itching tetters.—The skin does not heal easily; every injury tends to ulceration.—Excoriation and fissures in bend of the joints.—Voluptuous itching; > by scratching.—Itching in hollow of knee and on shin.—(Psoriasis.).—Suppuration of skin round joints.

26. Sleep.—Great weariness, with inclination to sleep, towards eight o'clock in evening.—Many very vivid and anxious dreams, of which a distinct remembrance is retained.—Frequent yawning.—Sleeplessness with flatus and sallow complexion.

27. Fever.—Chilliness generally in evening, with icy cold hands and feet.—Shivering in evening, with shooting headache, without thirst.—Shiverings, with transient heat in head.—Chill with heat of head and stinging pain in forehead,

which continues after the chill.—Feverish heat in chest and cheeks, with painful sensitiveness of whole body to touch.—Sudden flushes of heat in face, on chest, and over back.—Profuse perspiration with short, anxious breathing.—Nocturnal sweat, sometimes only in neck and legs, which compels scratching.—Pulse very uneven and irregular, sometimes rapid, sometimes slow, but constantly soft and weak.

Manganum.

MANGANUM ACETICUM. Acetate of Manganese. Manganous Acetate. $Mn(C_2H_3O_2)_2$ $4H_2O$. Solution.

MANGANUM CARBONICUM. Carbonate of Manganese. Manganous Carbonate. $MnCO_3$. Trituration.

Clinical.—Anæmia. Ankles, weak. Asthenopia. Asthma. Bones, pains in. Brain, concussion of. Climacteric flushings. Cough. Deafness, catarrhal. Dysmenorrhœa. *Ears, affection of*. Gall-stones. Gout. Headache. *Heel, rheumatism of*. Hoarseness. Itch. Jaundice. Laryngeal phthisis. *Laryngitis*. Lichen. Myopia. Palate, affections of. Paraplegia. Parotitis. Periostitis. Pityriasis. Psoriasis. Rhagades. Rheumatism. Tongue, affections of. Yawning.

Characteristics.—The metal Manganese was isolated in 1774, in the year Priestley discovered Oxygen. It was introduced into the materia medica by Hahnemann, who made provings of the acetate and carbonate. The symptoms of the two have not been kept separate. Manganese is a metal "having a remarkable affinity for, and in some respects a close resemblance to, iron, of which it is an extremely frequent associate." Its medicinal as well as its physical relationship with iron is very close. It has an action on the blood-forming process like iron, and has been successfully used in cases of anæmia. There is one curious symptom they have in common: Cough > by lying down. If there is any difference, the *Mang*. cough is more apt to be deep, and it is also < in damp weather. Guernsey summarises the *Mang*. effects thus: "The bones are very sensitive; red spots on the skin, which are elevated, owing to the affections of the bones. Ankles are particularly affected; children may have this trouble and be unable to walk. Typhus fever when the parotid gland is swollen and the *bones are very sensitive to touch*; affections of the internal ear; upper part of chest. Hoarse voice; drawing sensation of the muscles." I have frequently verified the "cough > lying down," and also this sensitiveness of the bones. Where this occurs in connection with any other condition indicating *Mang*. it is sure to do good. There are single nodes on the palate (I recently cured in an elderly lady a flat growth on centre of palate with *Mang*. 30); bluish nodes on the skin; malignant ulcers with blue borders following slight injury. The skin will not heal, slight scratches ulcerate. Inflammation of bones and joints with insupportable nightly digging pains. Anæmia (menses too frequent and too scanty in anæmic girls); laryngeal phthisis; tuberculosis. Chlorosis, if gastric symptoms and loss of

appetite predominate. Every part of the body feels extremely sore when touched. This last is quite a keynote of *Mang*. Rheumatic patients cannot bear any weight on their heels. Rheumatic symptoms with dark, almost blue spots on skin. *Mang*. has some remarkable paralytic symptoms. Paralysis with inclination to run forward if he tried to walk. Paralysis begins below, extending upward. Paraplegia. Paralysis from degeneration of anterior portion of cord. The tongue symptoms of *Mang*. are very pronounced. Hansen (*H. W*., xxiv. 64) cured with *Mang. ac*. 6 a case of neuralgia of the tongue following the healing of a little ulcer on surface near left border, after pencilling with lunar caustic. Shortly after the healing the patient (man, 60) had severe stinging burning at l. edge of tongue and inner side of l. cheek touching the tongue. In this state he came to Hansen after allopathic treatment. Several medicines having been given without result, *Mang. ac*. was chosen, and made a rapid and permanent cure. In an article on *Mang*. by F. H. Pritchard (*Minn. Hom. Mag*., v. 151), who cites this case, the action of the metal is thus summarised: (*1*) On mucous membranes: congestion and increased as well as decreased secretions. (*2*) Liver: a powerful cholagogue inducing inflammation and fatty degeneration. (*3*) Blood: destroys red corpuscles and = anæmia. (*4*) Bones and periosteum: sensitiveness of bones with periostitis. (*5*) Skin: fissures; excoriation; suppuration. (*6*) Cerebro-spinal system: paralysis and progressive muscular atrophy. Pritchard quotes observations of Grille that workmen in manganese mines do not get itch; and those who come to the work with itch get cured of it. "Suppuration of skin round joints" is a characteristic of Lippe's. The manganese waters of Cransac cause: "Ill-humour, weeping, despondency, sudden palpitation." The headaches of *Mang*. are boring, pressing, and proceed from above downwards. There is also a headache like concussion on every step or movement. A. W. Palmer (quoted *H. W*., xxxii. 366) reports this case of catarrhal deafness cured with *Mang*. 6: Miss H., 38. Dull hearing; dry throat with hoarseness; itching in ears; loud rumbling, < night, r. ear, crackling on blowing nose; *deafness in damp weather*. The last was the guiding symptom. Cooper gives me the following ear-cases in which *Mang. ac*. has proved curative: (*1*) A nodous appearance of malleus handle; thickened irregularly, with history of bilious headaches and of previous discharges from the ears. The tympanal membrane has a granular appearance. Purple glazed appearance of malleus handles, which are thickened and prominent, upper segment of membrane also purple and glazed. (*2*) Chronic periostitis of the meatus and middle ear, with otorrhœa, left ear. (*3*) Otorrhœa with earache, pain shoots up from teeth to ear; the earache is worse after early dinner, up till 8 or 9 p.m. ("Pains extend to and concentrate in ears from other parts.") (*4*) Sensitive ears, takes cold and gets headache; history of gall-stones and jaundice; sleepy and headache in afternoon, bitter taste in morning, lips glued together; whistling tinnitus worse in a cold. (Whistling tinnitus, *Mang. ac*.; explosions, *Mag. carb*.; rasping, shrill tinnitus as well as cardiac tinnitus, pumping, *K. iod*.). (*5*) Deafness, woman, 36, dating from 14, from over-strain in singing, when she lost voice and hearing for six months; left hearing returned, right remained deaf, worse after a cold or if over-excited or worried; subject all life to bilious attacks which last

twenty-four hours and leave suddenly; head throbs, can't put it down on a pillow; headache comes on in morning on awaking and reaches a height at 3 or 4 p.m. and keeps on till next morning. (Bilious headaches went away and the hearing of right ear improved under *Mang. ac*. 200.) (*6*) Subject to sore throats and unpleasant breath, tinnitus as of blood rushing fast through the ears (whistling?), membranes translucent, anæmic, malleus handles thickened and "skeletonized"; hearing, right 1 in., left 5 in. After taking *Mang. ac*. 3x, two pilules thrice daily, steady improvement went on, till hearing was right 10 in., left 20 in.; the deafness was worst in a noise. (*7*) Deaf from childhood, granular membranes. *Mang. ac*. 200 caused in a patient of Cooper's a woman, 53, excitement with feeling of whistling through the ears and general fulness of the head with swellings of hands and feet and a stinging as if frost-bitten; sight became dim with tightness round head, felt low-spirited and continual flushings. Among the *Sensations* of *Mang*. are: Head as if larger. As if pit of stomach enlarged. Ears as if stopped. Throat as if excoriated. Trachea as if closed with a film. As if bowels drawn together. As if tendons shortened. Nearly all symptoms are < at night, or else in morning. Lying down >. Raising head, bending forward, bending double >; bending backward <. Lying on feather bed < (asthma). Motion, laughing, talking, walking <. Cold <. Cold, rainy weather <. Touching with cold things <. Open air >. Sitting bent over a fire > pain in abdomen. Contractive pain in head and dryness of lips and palate are > indoors. > or < by change of weather. > By eating; > by swallowing. Eating = pressure in stomach and abdomen < from cold food. After eating: cramp pain in jaws; pain in rectum. Smoking > hoarseness.

SYMPTOMS.

1. Mind.—Peevishness and taciturnity, with concentration in self.—Low-spirited and reflective.—Fretful.—Bitterness and long rancour.—Not pleased with joyous music but immediately affected by the saddest.—Abstraction of mind.—Dulness of the senses.

2. Head.—Vertigo when sitting or standing; he is near falling forward; painful concussion of brain from shaking head, from walking, with aching in head and at same time in epigastrium; rush of blood from nape over vertex to forehead during motion, with stupefaction and confusion of senses while standing.—Head heavy,

with sensation as if it were increased in size.—Burning and aching pains in head, which disappear in open air.—Tensive, shooting, and drawing pain in head in open air, > in a room.—Congestion in head, with pulsation, as if brain were going to suppurate, > in open air.—Painful jarring of brain, when moving.—Pressing, boring headache in temples, extending towards eyes and forehead, going off on bending forward, but returning on sitting up, or on bending head backward.—Stitches (like needles) and darts in the l. side of forehead.—Frequent rising of heat in head, with thirst.—The headache which comes on in a room is > in the open air, and *vice versâ*.—Cold feeling at small spot on vertex.

3. Eyes.—Aching (pressing) in eyes when they are fatigued, or by candle-light in evening.—Burning heat and dryness of eyes.—Dim-sightedness with burning in eyes.—Eyelids swollen and painful when moved (and to touch).—Agglutination of eyelids in morning.—Pupils dilated or contracted.—Confused sight.—Myopia.

4. Ears.—Otalgia.—Drawing pains in ears, commencing from other organs.—Pains extend to and concentrate in ears from other organs.—Shootings in ears when speaking, swallowing, laughing, and walking heavily.—Hardness of hearing, as from stoppage of ears, removed by blowing nose, < or > according to change of weather.—Buzzing and rumbling in ears.—Detonation in ears, when blowing nose, and swallowing, and crashing sound when yawning.—Whistling tinnitus.—Whizzing and rushing in ear.—Swelling of l. parotid, with a reddish hue, in typhus.

5. Nose.—Dry coryza and obstruction of nose.—Coryza, with loss of smell, and secretion of thick mucus.—Painful crampy tearing between root of nose and eyebrow.—Sometimes dry and sometimes fluent coryza.—Redness, excoriation, and inflammation of nose during coryza.

6. Face.—Pale, sunk, wan face.—Violent tearing and squeezing between root of nose and eyebrows.—Jerking shooting pains from lower jaw to temples, when laughing.—Lips parched, dry, with shrivelled skin, without thirst.—Clear vesicles on upper lip.—Eruptions and ulcers at commissures of lips.—Cramps in jaws after a meal.—Drawing cramp in muscles in region of l. mastoid process, so that he had to incline his head to r. side.

7. Teeth.—Painful sensitiveness of teeth.—Violent pains in teeth, which pass rapidly to other parts.—Tearing in molars and adjacent parts, with great dejection and inquietude, esp. in morning and evening.—Pains as from ulceration in teeth, < until they become insupportable, by contact with anything cold.—Toothache, lasting four or five days and returning esp. in forenoon, and 10 to 12 p.m.; sucking = acute jerking in teeth.—Most violent toothache; at first sudden in two hollow back teeth, extending thence into zygoma, neck, or ear, and again returning; with prostration so he could scarcely walk; obliged to lie down,

with internal restlessness and oppression; somewhat > by biting anything elastic, or laying forehead on table, much < on sitting upright; with great dilatation of pupils.

8. Mouth.—Sensation of soreness and of a hard substance posteriorly on palate: when not swallowing; disappearing after eating bread at 8 a.m.—Flat tumour in centre of hard palate.—Accumulation of (bitter) saliva in mouth.—Smell of clay in mouth, in morning.—Burning vesicles on the (l. side of) tongue.—Burning pains < in tongue at night in room, > in open air.—Nodosities on tongue; warts.—Very salt taste on tongue, posteriorly, morning after waking, > by eating.—Tubercles and burning blisters on tongue.—Furred tongue and general biliousness.

9. Throat.—Sore throat, with incisive pain, and pain as from excoriation, when not swallowing.—Dull shootings on both sides of pharynx, and as far as ears, when swallowing.—Dryness and scraping in throat, with a sensation as if a leaf or film obstructed the larynx.—Dryness of palate and lips.

10. Appetite.—Insipid and oily taste.—Absence of thirst.—Repugnance to food from a feeling of satiety.

11. Stomach.—Sensation of burning sourness, rising from stomach, like pyrosis.—Heat and burning in stomach, ascending to chest, sometimes with great agitation.—Dragging pains in region of stomach, as if epigastrium were dilating, accompanied by nausea.—Pain after eating food in weakly females.

12. Abdomen.—Aching in hypochondria.—Pressure in hypochondria.—Abdomen large, distended.—Pressive pain, as from excoriation, in abdomen and epigastrium.—Contraction, with sensation of heat from middle of abdomen to chest, with nausea.—Cuttings in umbilical region, when taking a deep inspiration.—Movements (when walking) in abdomen, as if intestines were striking against each other.—Excessive emission of wind.

13. Stool and Anus.—Constipation.—Difficult, dry, knotty evacuations.—Evacuations of consistence of pap, several times a day.—Loose and tenacious stools.—Frequent rumbling in rectum.—Colic and incisive pains in rectum, during evacuation.—Successive pullings and tearing pains in rectum.—Stool very pale yellow, sandy, preceded by griping.—Contractive pain in rectum when sitting.—Contractive pains in anus, yellow, granular stool with tenesmus; preceded and accompanied by griping in abdomen and sides, only > by pressing abdomen with the hands, disappearing after the stool; together with shaking chill.

14. Urinary Organs.—Frequent want to urinate.—Violet-coloured and earthy sediment in urine.—Darting in urethra when emitting flatus.—Cutting in middle of urethra between acts of micturition.—Lancinations in urethra, when not

urinating.—Incisive pains in region of bladder.—Enuresis in daytime came on in a boy of five when taking *Mang. ac*. 200 (R. T. C.).

15. Male Sexual Organs.—Sensation of weakness in genital organs, with burning and jerking drawing pains in spermatic cord, extending to glans penis.—Itching on top of glans.—Stitches in prepuce.—Itching in interior of scrotum, which cannot be removed by scratching and rubbing.

16. Female Sexual Organs.—Catamenia too early; too frequent and too scanty.—Discharge of blood between periods.—Pressure in genital organs.—Leucorrhœa.—Climacteric flushings.

17. Respiratory Organs.—Obstinate hoarseness, esp. in morning, and in open air, as from chronic inflammation of the larynx; > from smoking.—Sensation as if larynx were closed.—Catarrh, with coryza and hoarseness.—Dry cough, excited by reading aloud, or speaking long, with troublesome dryness, roughness (and constriction) in larynx.—Deep cough without expectoration, ceasing on lying down, and recurring next day.—Cough > lying down.—In morning, copious expectoration of small globules of yellowish green mucus, almost without cough.—Spitting of blood.

18. Chest.—Breath hot and burning, with disagreeable heat in chest.—Lancinations in chest and sternum, which take a downward direction (also running up).—Bloody expectoration from chest.—Bruised pain in chest.—Bruised pain in upper chest when stooping, > when raising head.—Throbbing in chest.—Debility and despondency cease in a case of scirrhus of breast after a single dose of *Mang. ac*. 200 (R. T. C.).

19. Heart.—Sudden shocks in heart and in sides of chest from above downwards.—Pulse irregular, sometimes rapid, sometimes slow, but constantly weak and soft.

20. Neck and Back.—Red swollen streak on l. side of neck.—Rigidity of nape of neck.—Tearing pains along entire spine, during rest and movement.—Pain in small of back on bending backwards.

22. Upper Limbs.—Drawing and tearing, beginning at shoulder and extending to arms, hands, and fingers.—Pain as from a sprain in shoulder-joint.—Tensive pain in joints of arms and hands.—Boring and digging in bones of arm, as if in marrow.—Tension in elbow-joint (and carpal-joints), as if tendons were too short.—Itching tetter in forearm.—Cramp-like pains in hands.—Sensation of tension in hands.—Inflammatory swelling and ulceration of little finger.—Fissures in bends of finger-joints.

23. Lower Limbs.—Jerkings of muscles of legs on slightest movement.—Cramp-like drawings, or jerking shootings in thigh.—Pain, as from tensive rigidity in legs.—Tearing pain round knee.—Want of firmness and trembling of knees.—Swelling and inflammation of malleoli, with lancinations extending into legs.—Burning in sole of foot.—Excoriation between toes.

24. Generalities.—The bones are very sensitive; red spots on skin, which are elevated, owing to the affections of the bones.—Ankles are particularly affected; children may have this trouble, and be unable to walk.—Typhus fever, where the parotid gland is swollen and the bones are very sensitive to touch.—Affections of internal ear; upper part of chest.—Hoarse voice: drawing sensation of muscles.—Stools with sand or gravel.—Dull shooting and jerking in different parts of the body.—Pulling and tearing pains, esp. in limbs.—Drawing and tension in limbs and joints, as from contraction of tendons, esp. when extending limbs.—Arthritic pains in joints (and periosteum), with shooting, jerking, and digging, < in evening, and often semi-lateral or crossways.—Red and shining (rheumatic) swelling of joints, sometimes in consequence of a chill.—Inflammatory swellings and suppurations.—Inflammations of bones, with searching and insupportable pains at night.—All bones, particularly in lower limbs, sensitive to touch; in typhus.—Excitement, low spirits, flushing, whistling through ears, fulness of head with tightness around it, dim vision, swelling of hands and feet and a stinging as if frost-bitten (from *Mang. ac*. 200).—Weakness and tremor, esp. in joints.—Paraplegia.—Paralysis first of lower limbs.—Staggers and tends to run forward if he tries to walk.—Sensation of uneasiness in the whole body, but esp. in the stomach, with peevishness.—On slightest touch sensation over whole body as if it were ulcerated.—Most symptoms appear during night.—The symptoms which have manifested themselves in a room are > in open air, and *vice versâ*.—Many symptoms are > or < by a change of weather.

25. Skin.—Burning all over skin, in evening, and when rising from bed.—Itching tetters.—The skin does not heal easily; every injury tends to ulceration.—Excoriation and fissures in bend of the joints.—Voluptuous itching; > by scratching.—Itching in hollow of knee and on shin.—(Psoriasis.).—Suppuration of skin round joints.

26. Sleep.—Great weariness, with inclination to sleep, towards eight o'clock in evening.—Many very vivid and anxious dreams, of which a distinct remembrance is retained.—Frequent yawning.—Sleeplessness with flatus and sallow complexion.

27. Fever.—Chilliness generally in evening, with icy cold hands and feet.—Shivering in evening, with shooting headache, without thirst.—Shiverings, with transient heat in head.—Chill with heat of head and stinging pain in forehead, which continues after the chill.—Feverish heat in chest and cheeks, with painful sensitiveness of whole body to touch.—Sudden flushes of heat in face, on chest, and over back.—Profuse perspiration with short, anxious breathing.—Nocturnal

sweat, sometimes only in neck and legs, which compels scratching.—Pulse very uneven and irregular, sometimes rapid, sometimes slow, but constantly soft and weak.

Manganum Muriaticum.

Chloride of Manganese. $MnCl_2$. Solution in water.

Clinical.—Ankles, painful; weak. Bone pains. Borborygmus. Constipation. Eructations. Rheumatism.

Characteristics.—*Mang. mur*. was proved by Lembke. The few symptoms obtained were manifested chiefly in the cranial bones, stomach, left shoulder, right knee, and ankles. The stomach pains were < by external pressure.

SYMPTOMS.

2. Head.—Vertigo and reeling when walking in open air, < looking down, on descending or stooping (an old symptom revived).—Boring in r. cranial bones; tearing in r, occipital bone.

6. Face.—Pressive pain in r. jaw-joint.

11. Stomach.—Eructations of air (sour).—Pressure in stomach < by external pressure.

12. Abdomen.—Frequent rumbling.

13. Stool.—Stool harder and scantier than usual.

22. Upper Limbs.—Violent pain in front part of l. shoulder-joint, < by pressure, rolling arm about its axis, and by any motion of arm.—Pain in articulation of l. thumb.

23. Lower Limbs.—Drawing pain with weary feeling in r. thigh while sitting.—Violent drawing pain inner side r. knee.—Pressure in r. knee extending into leg; a bruised sensation remains in ankles; afterwards same pain in l. ankle.—Pressure and drawing in ankle and ankle bones.—Pressure in l. foot.

Manganum Oxydatum Nativum.

Native Black Oxide of Manganese. Pyrolusite. MnO_2. Trituration.

Clinical.—Colic. Diarrhœa. Tibia, pain in.

Characteristics.—Lembke proved this. It caused a good deal of painful disturbance in the abdomen, with loose stools, pressive heat in the head, and pains in the leg bones. A tendency to become fatigued and heated were noticeable features. Burning and pressing pains predominate.

SYMPTOMS.

2. Head.—Dulness in fore-part of head, caused by pressure on head.—Heaviness and heat in sinciput.—Jerking burning in skin of forehead, obliging scratching, with heat in skin.—Pressure on forehead with vertigo.—Tearing in side of head and face.

3. Eyes.—Violent burning sensation below eyes (though the skin was cool).

4. Ear.—A peculiar pressure deep in l. ear.

11. Stomach.—Nausea several times towards noon.—Pressure in stomach.—Cutting in stomach.

12. Abdomen.—Violent persistent stitches in l. hypochondrium < by inspiration and pressure.—Violent cutting in umbilical-region shooting upward.—Violent colic and thin, light stool, after which the pain, esp. in umbilical region, continued and was < by pressure; other stools followed.

13. Stool.—Light-coloured, thin stool, followed by cutting in umbilical region; in morning (13th d.).—Stool harder than usual (9th and 10th d.); delayed, hard and scanty (1st d.).

14. Urinary Organs.—Urine rather increased.

17. Respiratory Organs.—Very frequent scraping and scrapy tickling in larynx, followed by dry cough.

18. Chest.—A peculiar pressure deep behind sternum.

20. Back.—Peculiar sensation of heaviness and pressure in l. lumbar region < bending to l.

22. Upper Limbs.—Prickling in l. hand.

23. Lower Limbs.—Boring in bones below r. (and l.) knee.—Very violent pinching pain in r. ankle, standing = pain, < by motion.

24. Generalities.—More easily made tired, hot and perspiring.—Pressure and boring in several bones.

27. Fever.—Much heat of whole body.—Much internal heat and much less sensitiveness than usual to cold air generally.

Manganum Sulphuricum.

Sulphate of Manganese. MnSO4 4H2O. Solution.

Clinical.—Bile, excess of. Gastritis. Liver, affections of; inflammation of. Toothache.

Characteristics.—"This Salt of Manganese," says Cooper, "deserves more attention than seems to be at present given to it. It has been proved to cause vomiting, paralysis without convulsions, and inflammation of the stomach and small intestines, as well as of the liver, spleen, and heart in animals, and C. G. Gmelin, who experimented with it, records also its property of causing such an extraordinary secretion of bile that nearly all the intestines were coloured yellow by it, and the large intestines had a wax-yellow colour communicated to them. Mr. Ure, acting on Dr. Pereira's suggestion, found it act on man as a purgative and cholagogue in doses of one to two drachms in half a pint of water. It has, however, caused vomiting and sweating as well as purgation (Pereira, *Mat. Med*., 4th ed., vol. i. p. 677), and is uncertain in its action (from an allopathic point of view). In one case of hepatic derangement where the stools were composed of large quantities of bile, *Mang. sulph*. 1x cured. The same preparation caused the following: Toothache, in a bad tooth, on right side, upper jaw; shooting darting extending up the whole side of face and head and corresponding side of neck and shoulder and side of chest; painful parts tender to touch; pain is driven away by applying a hot smoothing-iron to near the surface of skin. According to Rutherford, Mang. sulph. is a powerful intestinal, but a feeble hepatic stimulant."

Matthiola Græca.

Matthiola Græca. Stock Gilliflower. N. O. Cruciferæ. Tincture of fresh plant.

Clinical.—Abscesses. Cancer.

Characteristics.—Cooper has studied this remedy, with which he has cured abscesses in hollow viscera and one case of cancer of stomach, abscesses in glands of neck discharging twenty-five years. He considers a leading indication for it "concentrated juices," which should be compared with the action of its relative

Crucifer, *Thlaspi bursa pastoris*, which has cured obstruction of bile duct from inspissated bile. Cooper relates a case which seems to indicate that Morphia causes neuralgia and that *Matt*. antidotes Morphia. A man had neuralgia of *right* arm from working in a damp house. *Morphia* was given. Then neuralgia of the *left* arm came on with numbness and paralysis. *Lobel. acet*. gave some relief. One dose of *Matt. g*. Ø completely cured. When the man came under Cooper's care he was spending ten shillings a week on Morphia.

Relations.—*Compare:* Cheir. ch., Thlasp. b. p., and Cruciferæ generally.

Medorrhinum.

Glinicum. Nosode of Gonorrhœa. Attenuations of the Virus.

Clinical.—Asthma. Clonic spasms. Corns. Diabetes. Dysmenorrhœa. Epilepsy. Eyes, inflammation of. *Favus*. Gleet. *Gonorrhœa, suppressed. Gonorrhœal rheumatism*. Headache, neuralgic. Liver, abscess of. Masturbation. Ovaries, pains in. Pelvic cellulitis. Polypi. Priapism. Psoriasis palmaris. Ptosis. Renal colic. Rheumatism. Sciatica. Shoulder, pains in. Stricture. Urticaria. Warts.

Characteristics.—*Medorrh*. is one of the most important of the nosodes. The constitutional nature of the gonorrhœa poison has within recent years been recognised in the old school as well as the new. Noegerath of New York and Angus Macdonald in this country have pointed out a causal connection between post-partum pelvic cellulitis and latent gonorrhœa in the husband. Macdonald published several fatal cases. The effects of the poison, constitutional or acute, may be taken as data for homœopathic prescriptions; but the virus has had an extensive proving in the potencies, and the symptoms there recorded have been largely verified in practice. The nosodes may be used according to their indications in exactly the same way as other homœopathic remedies, and not merely for manifestations of the disease from which they are derived. At the same time, a knowledge of the origin of obscure disorders, especially if hereditary, will often give the clue to the remedy required. Deschere published a case in point: Miss X., 23, had chronic blepharitis since eleven. Her suffering was intense. Light, especially gas-light, was intolerable, and this prevented her from going into society. She could not read in the evening, and in the morning the lids would be closed, and she suffered much on getting them separated. There was much discharge. Before coming under Deschere she had been under strict homœopathic treatment all the time. Deschere remembered treating her father for gonorrhœa before his marriage, and he suspected the taint had reappeared in this form. *Medorrh*. was given in high potency, single doses repeated as the effect of each wore off, and she was entirely cured. A case of favus which had resisted all the external applications that allopaths could devise, and which had such an

appalling odour that the patient, a little boy, had to be isolated from the family, was traced by Skinner to the same hereditary cause and cured with *Medorrh*. 1m. Many cases of stunted growth and arrested development in children are due to latent gonorrhœa and syphilis, and unless this factor is discerned and taken into consideration in prescribing, no great good will be achieved. I have cured on this hypothesis extremely offensive body odours in children with *Medorrh*. One important point in distinguishing between the sycotic or gonorrhœal taint and that of syphilis is in the time aggravation, and consequently in the indications for this. *Syph*. has < from sunset to sunrise, as also have all the great anti-syphilitic remedies. *Medorrh*. has < from sunrise to sunset; always brighter in evening, < in early morning hours. With *Medorrh*. there is intense nervous sensibility, especially to touch of garment or a lock of hair by any one not *en rapport*. Sensibility is exalted almost to clairvoyance. As if in a dream. Starting at slightest sound. Tremor; spasms. There is a state of collapse and a desire to be fanned. Among the *Peculiar Sensations* are: As of sticks in eyes, lids, and inner, canthi; as if cold wind blowing in eyes; as if upper lid had a cartilage in it. As if something crawling in ear and nose. Lump in stomach. Tumour right side of abdomen. As if left lung collapsed or paralysed. As if an abscess between left pectoralis major and minor muscles. As if blood was boiling hot in veins. As if all bones were out of joint.—The pains seem to tighten the whole body, especially the thighs. There is scarcely a spot on the body that is not full of pain. Obstinate rheumatism. Sequelæ of acute rheumatism. D. C. McLaren relates in *Hahn. Advoc*. (quoted *Amer. Hom*., xxii. 408) a case which illustrates the power and sphere of this nosode. A young French Canadian of delicate constitution, after working in a factory all winter, began coughing in spring and running down in health. He returned home and came under McLaren's care in May. The cough persisted and prostration increased, in spite of carefully selected remedies, and the patient took to his bed. It was then observed by McLaren that the cough and general condition was > *from lying on the face*. This, coupled with a knowledge of there being a syphilitic taint in the boy's parentage, suggested *Medorrh*., which was given. The next day a profuse gonorrhœal discharge appeared, and the cough and all threatening symptoms promptly disappeared. Exposure to contagion had occurred several weeks before, but from lack of vitality the disease could not find its usual expression and was endangering the patient's life. Ernest Nyssens ("La Sycose de Hahnemann," *Jour. Belge d'Hom*, vi. 244) quotes some important observations by old-school authorities on constitutional gonorrhœa. Wertheim in a case of gonorrhœal cystitis watched the entrance of the gonococcus into the blood stream. With the gonococcus taken from the blood of this patient he made cultures to the fifth generation. A youth who had never had venereal disease volunteered for inoculation with this. The subacute urethritis which resulted was so grave, and, in spite of all, became complicated so cruelly with cystitis, epididymitis, prostatitis, synovitis, and pleuro-pneumonia, that Wertheim asked whether the gonococcus did not redouble its virulence by passing into the blood. Louis Jullien and Louis Sibut (from whose paper Nyssens quotes the above) witnessed the following case in

Saint Lazare hospital: Louisa M., 17, entered the hospital June 8th with urethro-vaginitis, and was treated with tampons (*tiges*) of Ichthyol dissolved in glycerine (1 to 5). The urethritis ran a normal course till July 6th, when this condition was reported: The patient has had sufferings in the abdomen for a week, but has made no complaint. However, they became so acute the previous night that an injection of Morphia was given. Rectal temperature 100.2. Tongue saburral. Right side abdominal pain. In spite of rigid contraction of the recti muscles there seemed to be a swelling deep down, but the observers were not certain it was not a swelling of the muscles themselves. Intestinal functions normal; rectum empty. An eruption of roseolous spots appeared on the body, abdomen, and chest, so exactly like those of typhoid that the possibility of this was discussed. There was also acute pain in muscle of right calf. This pain persisted the following day when the abdominal pains had disappeared. *July* 9.—Right knee painful, swollen. At same time synovitis of left wrist, dorsal aspect, the tendons attacked being the extensor proprius of thumb and index. Temperature normal. *July* 10.—Very few and slight traces of the eruption. Right arm the seat of acute lancinating pain, especially at the level of the deltoid "V," deep down near the bone at the insertion of the tendon (probably a hygroma). On examining the tendo Achillis, pain at the level of the left ankle, nothing to the right at the same level, but the pain is above all acute along the inner border of the right tibia, to five or six centimetres from the flat surface. This part is œdematous and painfully sensitive. Another painful spot in the abdomen is behind the right anterior superior iliac spine, and beside the navel (probably muscular). The urethral discharge contained abundant bacilli besides gonococci. Treatment by daily injection of one centigramme of *Merc. cor*. was commenced. The next day there was sharp fever, saburral tongue. The abdominal pains were frankly muscular. Trace of albumen in the urine. Next night there was delirium, and epistaxis in the morning. This case went on to recovery. Another case, also in a girl of seventeen, of phthisical history, and even complicated with syphilis, presented the same order of symptoms, along with epistaxis, hæmoptysis, albuminuria, endocarditis with suffocative attacks and violent palpitations, ending in permanent disablement. These cases may be regarded as provings of *Medorrh*. from the homœopathic stand-point.—The rheumatic symptoms are of extreme intensity, and *Medorrh*. will cure many cases where the symptoms correspond. I have cured many cases of dysmenia with it, following Burnett. Burnett cured with *Medorrh*. 1m: (*1*) A patient who had fits at every menstrual period, the fits coming on in the early morning. (*2*) A man who had clonic spasms, the legs suddenly shot up from the bed. (*3*) A case of right wrist rheumatism. (*4*) Polypi having their origin in a chronic suppurating discharge. (He regards *Medorrh*. as "the mother of pus and catarrhs"). (*5*) Masturbation in children. (*6*) Albuminuria when the urine contains some mucus as well. (*7*) Sycotic asthma, < 2 to 4 a.m. (*8*) Psoriasis palmaris. Gilbert (*Trans. Amer. Inst*., 1895, quoted *H. R*., xi. 71) traces rickets to hereditary gonorrhœa; there are often in these cases glandular enlargements, and the patient is > at seaside. In such cases he gives *Medorrh*. (When there is syphilitic paresis and the patient is > in the mountains, he

gives *Syph*.). In acute bowel troubles in rickety children he finds *Medorrh*. of great value.—Thomas Wildes (*H. P*., xii. 70) considers that favus and scald-head and ophthalmia tarsi simplex (margins scaly, scurfy, often angry red, falling of lashes) are due to suppressed gonorrhœa in one or both parents. The red, angry condition of skin may extend from face or scalp, down neck and back to perineum and genitals. (*1*) Girl, 11, had been treated by many physicians with salves and ointments to the general impairment of her health. Face mottled with a profusion of red scurfy sores, eyelids involved and nearly denuded of lashes; hairy scalp one diffuse mass of thick yellow scabs, from beneath which oozed a highly offensive mixture of ichor and sebum. Passing down neck, back, perineum and involving genitals and pubes was a *fiery red band* as broad as the child's hand, oozing a pale yellow serum which caused the clothing to stick to the body. Wildes told the mother he could cure the case, but it would certainly get worse the first three months. This was not objected to. *Medorrh*. c.m. (Swan) was given, one dose on the tongue. The external appearance grew rapidly worse, but appetite, sleep, and general health steadily improved, and in nine months she was completely well. (*2*) Child, 6, since infancy horribly disfigured with tinea capitis. Scalp a mass of dense scabs exuding fetid ichor, the only semblance of hair being a few distorted stumps ending in withered roots. One dose cured in a few months, and at the time of Wildes' writing patient was a healthy and extremely talented young lady and the possessor of a luxuriant head of chestnut hair. Wildes thinks that suppression of favus when derived from gonorrhœa in the father leads to hydrocephalus, capillary bronchitis, severe teething diarrhœas, cholera infantum, &c.; if derived from the grandfather, suppression leads to consumption and lingering diseases. *Fiery red rash* developing about the anus in babies a few days old; constipation with hard, dry stools; when the nurses say "baby's water scalds it terribly," the indications for *Medorrh*. are clear. Wildes regards the latent gonorrhœal taint as the true explanation of many of the disease-manifestations included by Hahnemann under Psora. Burnett in a way confirms this, as he traces gout to a sycotic origin. Wildes regards *Medorrh*. too dangerous a remedy to give in acute cases whether of gonorrhœa, rheumatism, or scarlatina, on account of the intensity of the aggravation it is liable to cause; though single doses are often useful when there is a tendency to sinking in dangerous cases of cholera infantum. Among other diseases Wildes traces to the same source are: Vascular meningitis in infants and cerebro-spinal meningitis. In the former the efficacy of *Medorrh*. is doubtful, but in the latter it is very efficacious after *Act. r*. has allayed the first acute symptoms. In the convalescent stage *Lyc*. has been his chief remedy. He quotes from old-school authorities the following conditions traceable to latent gonorrhœa communicated from husband to wife: Ovarian tumours, oophoritis, salpingitis, metritis, parametritis, endometritis, and even peritonitis,—*Medorrh*. is the remedy in single doses, but it is rarely if ever to be given in the *acute stages* of a disease. In general motion <, rest >. Lying on face or stomach > cough. Stretching out <. Leaning head forward <. Leaning far back > constipation: can only pass stool so. (I cured with *Medorrh*. 200 a most aggravated case of constipation on this indication. The

patient said he was obliged to lean far back on the seat or he could not get rid of the stool. He was passing urine containing long white mucous shreds. Many years before he had had gonorrhœa.) There is great sensitiveness to draught of air; takes cold easily. At the same time there is great desire to be fanned. < In the sun; by warmth of bed; entering a warm room (cough). Salt-water bathing > sore throat and cold in head. Damp weather > pain in limbs. Craving for ice. Chronic rheumatism of joints is < inland, > near sea. The early morning < (especially 3 to 4 a.m.) is a leading characteristic of *Medorrh*. and all sycotics.

Relations.—*Antidoted by:* Ipec. (dry cough); *Compatible:* Sulph. (especially when stool drives out of bed). *Compare:* Pic ac. (inability to walk right; priapism); Camph. and Sec. (collapse, skin cold yet throws off all covering); Verat. (collapse with cold sweat); Syph. (reverse aggravation—sunset to sunrise); as if in a dream, Ambr., Anac., Calc., Can. i., Con., Cup., Rhe., Stram., Val., Ver., Ziz. > By leaning back, Lac c. Fish-brine odour, Sanic.

SYMPTOMS.

1. Mind.—Forgetfulness: of names; later of words and initial letters.—Time moves too slowly.—Dazed feeling; a far-off sensation, as though things done to-day occurred a week ago.—Loses constantly the thread of her talk.—Seems to herself to make wrong statements, because she does not know what to say next, begins all right but does not know how to finish; weight on vertex, which seems to affect the mind.—Difficulty in concentrating his thoughts on abstract subjects.—Could not read or use mind at all from pain in head.—Thinks some one is behind her, hears whispering; sees faces that peer at her from behind bed and furniture.—One night saw large people in room; large rats running; felt a delicate hand smoothing her head from front to back.—Is sure she is going to die.—Sensation as if all life were unreal, like a dream.—Wild and desperate feeling, as of incipient insanity.—Cannot speak without crying.—Suicidal.—Is in a great hurry; when doing anything is in such a hurry that she gets fatigued.—Spirits in the depths, weighed down with heavy, solid gloom, > by torrents of tears.—Is always anticipating; feels most matters sensitively before they occur and generally correctly.—Dread of saying the wrong thing when she has headache.—Apprehensive.—Fear of the dark.—Feeling as if he had committed the unpardonable sin and was going to hell.—Irritated at little things.—Very impatient.—Great selfishness.

2. Head.—Vertigo: when stooping; slightly > lying; < on movement.—Sensation of tightening in head causing intense vertigo.—Frontal headache: with nausea; feeling of a tight band across forehead, < leaning head forward; as if skin were drawn tight; with fluent coryza; with pressure back of eyes, as if they would be forced out; extending over brain to neck.—Brain seems weary; slightest sound annoys and fatigues her.—Wakes with headache over eyes and in temples; < from sunlight.—Pain in centre of brain; in evening sharp pain through temples; pains commence and cease suddenly.—Brain exceedingly tender and all mental work

irksome.—Pain in l. parietal bone when the wind blows on it.—Pain circling through head and around crown.—Terrible pains all through head in every direction, with continuous and violent vomiting, followed by aching in sacrum and down backs of legs to feet.—Constant headache < while coughing; light (through the eyes) seems to hurt it.—Intense headache for three days, with inflammation of eye.—Intense cerebral suffering, causing continual rubbing of head in pillow, rolling from side to side.—Dull pain in cerebellum.—Intense burning pain in head, < in cerebellum.—Tensive pains in head as if she would go crazy; could not read or use mind.—Aching pain in base of brain, with swelling of cords of neck.—Head feels heavy and is drawn backwards.—Pain in back of head and in r. eye.—Hair lustreless, dry and crispy; electrical.—Intense itching of scalp; quantities of dandruff.

3. Eyes.—When eyes were shut, felt as if pulling out of head to one side or other; when open all things seemed to flicker.—A blur over things; numberless black, sometimes brown spots dancing over her book; sees objects double; things look very small; sees imaginary objects.—Neuralgic pain in eyeballs: when pressing eyelids together; < when rolling them.—Feeling of pain and irritation, and sensations of sticks in eyes, lids, and esp. inner canthi, redness and dryness of lids, congestion of sclerotics and sensation of a cool wind blowing in eyes, esp. inner canthi.—Ptosis of outer end of both upper lids, particularly L, requiring exertion to open them. Decided tendency to irritation of edges of lids.—Hardness of upper lid, as if it had a cartilage in it.—Swelling under eyes.

4. Ears.—Nearly total deafness of both ears, with very little noise; had to use a trumpet.—Partial or transient deafness; pulsation in ears.—Singular sensation of deafness from one ear to the other, as if a tube went through head, while yet there was an over-acuteness of hearing.—When whistling, the sound in ears is double, with peculiar vibration as when two persons whistle thirds.—Quick, darting pains in r. ear, from without inward; pains followed each other in quick succession.—Ringhole in l. ear sore and almost gathered.

5. Nose.—Intense itching in nose, internally near point, had to rub all the time.—Very great burning in both nostrils when breathing through them.—Coldness of end of nose.—Entire loss of smell for several days.—Nose goes to sleep.—Epistaxis.—Nose inflamed, swollen.—Posterior nares obstructed, > by hawking thick, greyish mucus, followed by bloody mucus.—Soreness and crawling feeling, as of a centipede in l. nostril in morning.

6. Face.—Greenish, shining appearance of skin.—Blotches on skin.—Flushes of heat in face and neck.—Fever blisters near corner of r. upper lip, small but very sore.—Enormous fever sore on lower lip near l. commissure.—Sweat of face; on upper lip.—Neuralgia of r. upper and lower jaws, extending to temple.—Face covered with acne; dry herpes; freckles.—Tendency to stiffness in jaws and tongue.

7. Teeth.—Teeth have serrated edges, or are chalky and easily decay.—Sore teeth, particularly eye teeth; feel sore and soft.—Yellowness of teeth.

8. Mouth.—Taste: coppery on rising; disagreeable; bad in morning.—Tongue coated: brown and thick; thickly in morning, with bad taste: white at base, the rest red; white, with papillæ showing through.—Tongue blistered.—Small sores, pustules (canker sores) on edge, tip, and under tongue, very painful; also inside lips and in throat.—Foul breath in morning.—Dryness of mouth; feels burnt.—Blisters on inner surface of lips and cheeks, skin peeling off in patches.—Stringy mucus comes out of mouth during sleep.

9. Throat.—Throat: scraped; sore, stiff; dry; swallowing painful.—Back part of throat constantly filling with mucus from posterior nares.—Sore throat and cold in head > by salt-water bathing.

10. Appetite.—Appetite: ravenous, immediately after eating; lost.—Thirst enormous; for liquor.—Craves: salts; sweets; hard, green fruit; ice; sour things; oranges; ale.

11. Stomach.—Hiccough.—Nausea: with frontal headache; after drinking water; after dinner; always after eating; before eating.—Violent retching and vomiting for forty-eight hours; first glairy mucus, then frothy and watery, and lastly coffee-grounds; accompanied by intense headache, with great despondency and sensation of impending death; during paroxysm was continually praying.—Vomiting thick mucus and bile; black bile without nausea, tasting bitter and sour, with considerable mucus.—In pit of stomach: sensation of pins forcing through flesh; sick gnawing not > by eating; trembling; burning.—In stomach: feeling of lump after eating; cramps; clawing, < drawing up knees.—Intense pain in stomach and upper abdomen, with a sensation of tightness.—Sensation of sinking and agonising sickness at stomach, with a desire to tear something away.

12. Abdomen.—Terrible pains in liver, thought she would die, they were so acute.—Grasping pain in liver and spleen.—Intense agonising pain in solar plexus; surface cold; eructations tasting of sulphuretted hydrogen and, after eating, of ingesta; applied r. hand to pit of stomach and l. to lumbar region.—Tensive pain in r. side of abdomen, as of a hard, biconvex body; with heat and gnawing aching pain, continued a short time; it was between spine of ilium and recti muscles.—Darting pain from centre of r. ovarian region to lower edge of liver.—Beating as of a pulse in abdomen vertically.—Cutting in r. lower abdomen running into r. spermatic cord; r. testis very tender.

13. Stool and Anus.—Bilious diarrhœa, verging on dysentery, with mucous stools.—Pains of most intense kind (threatening cramps) in upper abdomen (darting and tearing pains) coining on at stool; stool diarrhœic, thin and hot, but not copious; after stool, profound weakness and mild cramp in l. calf.—Profuse bloody

discharges from rectum, sometimes in large clotted masses, followed by shivering.—Black stool.—White diarrhœa.—Stools tenacious, clay-like, sluggish, cannot be forced, from a sensation of prolapsus of rectum.—Can only pass stool by leaning very far back; very painful, as if there was a lump on posterior surface of sphincter; so painful as to cause tears.—Constriction and inertia of bowels with ball-like stools.—Child, æt. 15 months, brought on a pillow to clinic, apparently dead; eyes glassy, set; could not find pulse, but felt heart beat; running from anus greenish yellow, thin, horribly offensive stool.—Oozing of moisture from anus, fetid like fish brine.

14. Urinary Organs.—Intense renal colic; severe pain in ureters, with sensation as of passage of calculus; during kidney attack, great craving for, ice.—Dull pinching pain in region of supra-renal capsules at 11 a.m.; fingers cold at same time; great pressure in bladder, greater than amount of urine warrants; urine scanty and high coloured.—Pain in renal region, profuse urination >.—Urine: high coloured; strong-smelling; covered with thick, greasy pellicle; intensely yellow.—Slow flow; cutting across root of penis transversely just as last drops are voided; intermittent.—Diabetes.—After urination, syncope.

15. Male Sexual Organs.—Emissions during sleep: watery, causing no stiffness of linen; transparent, consistence of gum arabic mucilage, too thick to pour, and voided with difficulty; thick, with threads of white, opaque substance.—Impotence.—Intense and frequent erections day and night.—Pains along urethra while urinating, drawing burning.—(Suppressed gonorrhœa).

16. Female Sexual Organs.—Great sexual desire after menses in a single woman.—A great deal of pain in l. ovary, with a sensation as if a sac was distended and if pressed would burst; sensation as if something was pulling it down, causing it to be sore; pain when walking passed to l. groin, as if leg pushed something, with a great amount of heat.—Tense pains passing diagonally in r. ovary, followed by a bubbling sensation.—Intense, excruciating, neuralgic pains in whole pelvic region, extending downwards through ovarian region to uterus; cutting like knives, forcing tears and groans.—Distinct soreness and nervous pain in one spot in lower part of uterus on l. side, < walking or moving l. leg.—Profuse menses; dark clotted, stains difficult to wash out; also bright blood, with faintness and some pain.—Intense menstrual colic, causing drawing up of knees, with terrible bearing-down, labour-like pains, with pressing of feet against support, as in Labour.—A burning pain in lower part of back and hips during menses.—After very profuse menses, neuralgia in paroxysms in head, with twitching and drawing in of limbs and cords of neck, which were like wires; pain in lower abdomen, with profuse yellowish leucorrhœa.—Itching of vagina and labia, thinking of it makes it <.—Small chancres on edge of r. labia (had no sexual intercourse for three years, never had venereal disease).—Short, shooting pains, passing outwards, chiefly in breasts.—Breasts as cold as ice to touch, esp. nipples (during menses), rest of body warm.—Large but not painful swelling of l. breast.—Breasts and nipples very tender to touch, also

inflamed.—Soreness of nipples, a gummy secretion drying on orifice; when picked off nipple bleeds freely.

17. Respiratory Organs.—Hoarseness, esp. while reading, with occasional loss of voice.—Choking caused by a weakness or spasm of epiglottis, could not tell which; larynx stopped so that no air could enter, only > by lying on face and protruding tongue.—Dryness of glottis, very annoying, with pain during deglutition; great hoarseness.—Soreness in larynx, as if ulcerated.—Tenacious mucus in larynx.—Sensation of a lump in larynx; severe pain on deglutition.—Bronchial catarrh spreading into larynx, swelling of tonsils and glands of throat extended also into ears, causing transient deafness.—Great oppression of breathing every afternoon about 5 p.m.; sense of constriction.—Has to fill lungs, but no power to eject air.—Breath hot, feels so even when breathing through the nose.—Cough from tickling under upper part of sternum.—Incessant dry cough, < at night; wakes just as she is falling asleep; < from sweet things.—Terrible, painful cough, as if larynx would be torn to pieces and as if mucous membrane was torn off, with profuse discharge of viscid greyish mucus, mixed with blood.—Cough < on lying down, > lying on stomach.—Expectoration: yellow white, albuminous, or little green, bitter balls; ropy, difficult to raise; as if flecked with infinitesimal dark spots.

18. Chest.—Sharp pain in bottom of l. lung.—Chest sore to touch, at times burning extends over chest; cold seems to < it; a piece of ice seems to cool it for an instant, then it is hotter; lung feels as if beaten or bruised.—Singular sensation through chest, bounded by a line drawn across lower end of sternum and another about middle; as if there was a cavity extending from side to side, filled with burning air, which dilated in puffs in all directions and could be felt impinging on walls of cavity.—Pain in r. shoulder as though it came from l. straight through.—Constricted sensation at bottom of both lungs; dull, heavy pain at top of l. lung.—Coughing gives great pain in chest, as if it was painfully contracted.—Incipient consumption.—Pain and soreness through chest and mammæ.—Sensation of an abscess between pectoralis major and minor.—Great soreness to pressure of muscles of lower l. chest front and back, soreness when moving l. shoulder-blade.

19. Heart.—Palpitation after slight exertion.—With heat in chest, heart felt very hot, beat very fast and felt large, accompanied by a bursting sensation.—Feeling of a cavity where heart ought to be.—Pain in heart: acute, sharp, quick; dull; quick.—Intense pain in heart, seemed to radiate in different parts of l. side of chest; < from least movement.—Burning in heart, went through to back and down into l. arm.

20. Neck and Back.—Drawing in cords of neck, causing desire to throw head back.—Spasms of neck muscles, notably sterno-mastoid, drawing chin firmly down to breast.—Contractive pain from superior angles of scapulæ, passing to seventh dorsal vertebra, drawing shoulders back tight as if bones would be

crushed; < moving shoulders, neck, or arms.—Intense burning heat, commencing in back of neck and extending gradually down spine, with a contractive stiffness extending into head and seeming to thicken the scalp.—Weak, stiff, aching back.—Heat in medulla and spine for a whole week.—Whole length of backbone sore to touch, also ribs of l. side.—Lumbago caused by straining or lifting.—Pain in back of hips, running around and down limbs.—Pain in sacrum and coccyx.

21. Limbs.—Almost entire loss of nervous force in legs and arms; exhausted by slightest effort.—Numb sensation in l. arm, hand, and leg; l. leg goes to sleep.—Eruption under and on toes and on hands and feet.

22. Upper Limbs.—Rheumatic pain in top of l. shoulder, < from motion; occasional little darts of pain if kept still.—Rheumatic pain in (r.) shoulder and arm.—Brown, itching eruption on l. shoulder.—Cold numbness outer side of arms just below elbow.—Cracking of joints, esp. elbows.—Much pain in l. arm; cannot hold a paper; veins become enlarged; < raising arm.—Trembling of arms and hands.—Burning of hands, wants them fanned and uncovered; always cold hands.—Backs of hands rough.—Small yellow spots on hands.—Transverse depression on nails, as if they were bent.—Consumptive incurvation of nails.

23. Lower Limbs.—Woke with sharp pain in l. hip, preventing stooping, walking difficult; like a stiff neck.—Legs heavy as lead; walking difficult, esp. up and down stairs.—Numbness, paralysed feeling, in l. leg from knee to hip.—Longs to stretch legs.—During heavy thunderstorm very sharp pains in knees start upwards; pains < by stretching.—Aching in legs with inability to keep them still in bed, < when giving up control of himself, as when trying to sleep (> after Lil. t.).—Trembling in legs from knees down (< l.), burning in feet.—Cramps in soles and calves at night.—Ankles turn easily when walking.—Sudden intense pain in l. ankle, back of joint, on going to bed, could not move limb or body without screaming; could find no position of comfort.—Burning in feet, wants them uncovered and fanned.—Cold feet with chills all over.—Œdema of feet followed and > by diarrhœa.—Soreness in ball of foot under toes.—Cold, sweating feet.—Old foot-sweats, < during winter for seven years.—Great toe covered with tettery scales.—Corns very tender.

24. Generalities.—Gangrene.—Trembling.—Spasms.—Epileptiform spasms, foaming at mouth.—Opisthotonos.—Risus sardonicus.—Collapse.

25. Skin.—Yellowness of skin.—Intense and incessant itching, fugitive, < towards night, sometimes confined to one side.—Itching (and pricking) all over, < back, vagina, labia, and < thinking of it.—Fiery red band passing down neck, back, and perineum, and involving genitals and pubes.—Fiery red rash about anus in babies; "the water scalds it terribly.".—Scald-head.—Tinea capitis, eyelids involved.—Copper-coloured spots (syphilitic) remaining after eruptions, thin yellow-brown and detach in scales, leaving skin clear and free.—Small

pedunculated warts, with pin-heads, like small button mushrooms, on various parts of body and thigh.—Favus.—Fetid odour of body.

26. Sleep.—Sleepy, yawning, chilly.—Spasmodic yawning, cannot suppress it; followed by spasm of glottis.—Asleep, but hears everything, answers questions as if awake.—Bites tip of tongue in sleep.—Sleeps at night on her knees with face forced in pillow.—Can only sleep on back with hands over head; if she lies on either side, the contents of lower part of chest and abdomen seem to press on each other and cause discomfort.—Dreams: horrid; painful; exhausting; that she is drinking; of walking; of ghosts and dead people.—Wakeful; slept towards morning.—Great restlessness at night; sleepy but could not sleep.

27. Fever.—Creepy chills running down back and all over body in a zigzag course.—Chills: up and down back; several times a day.—Chilly 3 to 4 p.m.—Cold hands with coldness extending all over body.—Flashes of heat alternating with chills.—Coldness: r. hand, then l.; a slight flush of heat succeeded, then sensation of a foreign substance in r. eye, then in l.—Must be fanned all the time, throws clothes off, yet surface is cold; burning mostly subjective of hands and feet, wants them uncovered and fanned.—Fever: with or without thirst; with gushes of perspiration in face; followed by languor; with nervous restlessness from midnight to 3 a.m.; at 11 a.m. preceded by cold feet; fell asleep during fever; after fever, sweat on palms, feet and legs; with rapid pulse at night; in afternoon; and malaise.< 10 a.m. to 1 p.m.—Great tendency to sweat on exertion; sensitive to cold.—Profuse sweat about neck.—Night-sweats.

Medusa.

Medusa (various species). Jelly-fish. Sea-nettles. Class, Acalephæ. Tincture of living animal taken in summer.

Clinical.—Lactation, abnormal. Nettle-rash. Urine, suppression of.

Characteristics.—The effects of encountering jelly-fish whilst bathing are well known. These have been studied experimentally, and in addition the effects of drinking two cupfuls of a decoction, warm, by a woman affected with disease of the stomach and leucorrhœa has been recorded. In this case there was rapidly produced œdema, anxiety, and difficult speech. Secretion of urine, which had been suspended for days, returned, and milk came into the breasts three years after the birth of her last child. Pricking heat and numbness of skin of face, arms, breasts, and vesicular eruption; followed later by desquamation.

Relations.—*Compare:* Ast. fl., Homar., Murex, Sepia, Apis, Bombyx, &c.

SYMPTOMS.

1. Mind.—Extreme anxiety with difficult speech.

3. Eyes.—Eyes puffed and œdematous.

6. Face.—Face (eyes, ears, nose) puffed and œdematous (soon).

14. Urinary Organs.—Secretion. of urine, which had been suspended for twelve days, returned.

16. Female Sexual Organs.—Secretion of milk re-established in a woman's breasts three years after birth of last child; she had had twelve children and had not suckled any of them, having had no milk (effect of two cupfuls of a decoction).

25. Skin.—Desquamation.—Burning sensation very soon after contact; in five minutes a slight redness; then lentil-shaped elevations.—Vesicular eruption.—Pricking heat, numbness, and burning of skin of face, arms, shoulders, and breasts (soon).

Melastoma.

Melastoma Ackermani. N. O. Melastomaceæ. Tincture of leaves.

Clinical.—Diarrhœa. Perinæum, pains in. Prostatic affections.

Characteristics.—Mure figures and describes this plant. He made a proving of the leaves. On the second day of the proving the prover lost an inveterate diarrhœa with colic. The most notable symptoms were a pain in the perinæum and testicles; and shuddering followed by heat without sweat.

SYMPTOMS.

2. Head.—Vertigo.—Headache with sensitiveness of scalp.

8. Mouth.—Digging in teeth.—White tongue.—Copious saliva.

11. Stomach.—Sour stomach.

12. Abdomen.—Borborygmi.—Pain in abdomen.

13. Stool and Anus.—Tenesmus with constriction of sphincter.—Heat and pricking at anus.—Fearful pain and pulling from perinæum to anus when sitting; not ceasing in any position, lasting six hours.—Lancinations in perinæum, urethra, and testicles.—(Inveterate diarrhœa and colic cured.)

14. Urinary Organs.—Pricking in urethra.—Urine: profuse; light foaming; red, odourless, with bloody clots; fetid; white sediment; albuminous.

15. Male Sexual Organs.—Hardness of penis without erection.

19. Heart.—Palpitation of heart.

20. Back.—Pain in loins.

23. Lower Limbs.—Weakness of thighs.—Œdema of legs.

24. Generalities.—Prostration.

25. Skin.—Eruption on lips, esp. upper.—Itching and heat at night.—Pricking over feet, ankles, and wrists.

26. Sleep.—Drowsy in daytime.

27. Fever.—Chills followed by sweat.—Violent chills followed by heat without sweat.—Intense heat.

Melilotus.

Melilotus alba and Melilotus officinalis. Melilot. Sweet Clover. White and yellow varieties. N. O. Leguminosæ. Tincture of whole fresh plant in flower. (It would be well to include a specimen of both plants in the tincture.)

Clinical.—Blushing. Congestion. Cough. Dysmenorrhœa. Epilepsy. Epistaxis. Fear. Hæmoptysis. Headache. Insanity. Leucorrhœa. Melancholia. Ovaries, neuralgia of. Pneumonia. Shyness. Spasms.

Characteristics.—*Melilot*. was first proved by Bowen in 185l. A second proving was made by him fifteen years later. He used both the yellow and the white varieties, and his symptoms are marked ("B.") on the Schema. In *Med. Adv*. xx., 321, H. C. Allen published a further proving of *Melilot. alb*., arranged in Schema, with the symptoms of Bowen. Allen used the entire plant. His proving entirely confirmed Bowen's and added many symptoms thereto. Bowen says of his proving: "All the provers had fearful headaches and profuse hæmorrhages except myself. I did not lose blood from my nose and so have the engorgements it caused relieved from the pressure, but it evidently left the blood-vessels enlarged, for since that time my brain and mental faculties have been more active than ever. I needed less food and sleep; could lose two or three nights in a week and not feel the loss. My nervous system was as perfect as any one's ever was, *except* my sympathetic

nerves, which became almost a total wreck, so much so as to disqualify me from any forensic effort whatever. My belief is that *Melilotus* was the cause of its deflection from normality, and from this fact its probable efficacy in certain forms of insanity and nervous affections ought to be determined." The great feature of the *Melilot*. action is *engorgement*. The headaches and other affections are all attended with this, the engorgement tending to hæmorrhages, profuse, bright red, which give relief. An intensely red or even purple face attending any affection should call *Melilot*. to mind. In a schoolboy I cured with *Meli*. 30 very distressing recurrent headache, accompanied by an intensely red face whilst the pain was on; and with the same attenuation, I gave great relief in a case of melancholia in a young woman. H. C. Allen (*Med. Adv*., xxi. 514) has relieved with *Meli*.: "Fear of danger; fear of being arrested," in mental cases. Bowen (*Med. Adv*., xxiii. 417) removed these symptoms in different cases: (*1*) Wants to run away. Wants to kill himself. Vicious. Threatens to kill those who approach. Thinks there is a devil in his stomach contradicting all he says. (*2*) Wants to run away and hide as she insists that everyone is looking at her. Very nervous and timid. Says she dares not talk loud as it would kill her; she whispers. (*3*) Mania to escape and kill himself, with insomnia. In this last case *Meli*. produced so much improvement that the friends discontinued treatment and neglected precautions, and the patient finally shot himself. Cases 1 and 2 were permanently cured. Here is a typical case of *Melilotus* headache reported by C. F. Barker (*Clinique*, Feb., 1900). Miss X, 19, tall, blonde, for several years had severe, nervous, and congestive headaches. The attacks recurred two to four times a month and were so severe that they compelled her to keep her bed twenty-four hours. The pain, mostly in temples and forehead, was a congested, full sensation, with flushed face, drowsy, stupid feeling, and sometimes much nausea. Trivial things seemed to provoke the attacks. Spectacles had been supplied by oculists and teeth freshly stopped by dentists, diet, rest from study, and outdoor exercise had all failed to relieve. *Meli*. 4x was given, and she had only two attacks in six months, and those very slight. A writer in *Hom. News* (xxxiii. 124) tells of a Frenchman who came to him complaining of an incessant headache so bad that he thought he would die. A dose of *Meli*. was given on the spot, and the doctor, thinking *Nux vomica* indicated, went into the next room to get it. He returned in five minutes and found the patient on his hands and knees shaking his head. The doctor, thinking him crazy, asked what he was doing. He replied that the pain was entirely gone and he was only trying various attitudes and motions to make sure. Bowen has used *Meli*. successfully in all kinds of congestive or nervous headaches, nasal and pulmonary hæmorrhages, congestion of spinal cord, pleura, lungs, ovaries; menstrual colic; palpitation and nervousness; cramps in stomach; spasms; convulsions; and for relieving brain-pressure and irritation in insanity. He always gives it in pellets medicated with the 1st centesimal dilution. In addition to the blushing and epistaxis as accompaniment the headaches have other features. They are > by profuse urination; > by lying down; > by application of vinegar. One prover had a sensation of waving in the brain. As well as the relief by discharges, there is an alternation of pains with *Meli*.: from right temple to right

knee; pains in head alternating with pains in back. A periodicity is noticeable. Walking < most symptoms and sitting >, but a pain in the sacral region has the opposite. Many symptoms appear in forenoon and wear off during day. The headaches are apt to be more frequent in hot weather; but there is < after exposure or getting feet wet; on approach of storm; in rainy, changeable weather. > by hæmorrhages; by flow of urine.

Relations.—According to H. C. Allen the action lasted about thirty days, the indolence and prostration being the first symptom to appear and the last to disappear. *Compare:* Bell., Amyl, Glon., and Sang. in congestive headaches (but Bell. has < lying down and < from application of vinegar cloths). In epistaxis *after* headache, Ant. cr. (but with Ant. cr. the epistaxis does not necessarily relieve). Waving in brain, Act. r. Rheumatic pains > moving, Rhus. Hæmoptysis, bright blood, Ip., Millef. Discomfort from constipation, Op. Congested head and nose-bleed, Erig. Red face with throbbing carotids, Bell. *Compare also:* Trifol. (botan).

SYMPTOMS.

1. Mind.—Irascible, impatient, discontented, fault-finding.—Fairly furious; had to lock him in room for 24 h. (B.).—Indolent, unable to fix mind, stupid, indifferent.—Total inability to study, memory will not retain anything.—Omits words and letters in writing.—Loss of consciousness (with gushing of blood from nose) (B.).—Shyness and blushing.—Wants to go home.—Thought there was something supernatural in always waking a few minutes before 3 a.m.—Fear: of danger; of being arrested.—Panic fear.—Suspicious.—Increased mental power (B.).—Attacks of weeping without much depression.—Religious melancholy, with intensely red face.

2. Head.—Vertigo; on moving.—Sensation of tension and wave-like movement in brain with vertigo and nausea.—Swaying sensation in brain with tired pain.—Headache > from nose-bleed.—Terrible headache; with vertigo, faintness, and nausea; throbbing and sensation as if all the blood-vessels of the brain would give way and cause some lesion of that organ; with frequent and profuse urination (B.).—Headaches so intense as to cause a purple redness of face and bloodshot eyes, culminating in epistaxis till > (B.).—Headaches: periodical; nervous; every week; every four weeks; more frequent during winter months (B.).—Headache: intense in l. supraorbital region; < by motion, by thinking; > lying down; on talking disappeared from temple and settled in occiput; ceasing to talk it returned, could be distinctly felt migrating (B).—Sick headache; > by epistaxis or menstrual flow; blood bright red (B.).—Periodical nervous headache every week, or once in four weeks, more frequent in winter.—Violent congestion of head, with heaviness, fulness and throbbing as if the blood would burst through nose, eyes, and ears, with dizzy, sick feeling that is < from motion.—Throbbing frontal headache preceded by great prostration.—Intense frontal headache preceded by hot, flushed face and

feverish sensation.—Throbbing headache in r. eminence from 9 a.m. till noon.—Sharp pains in r. temple, alternating with sharp pains in r. knee.

3. Eyes.—Eyes hot, very heavy, and as if pressed outward.—Sensation as if eyes too large and pressed out; as if lids would not cover them.—Eyelids very heavy.—Vision dim, blurred, rubs eyes.—Unable to focus.—Floating bodies before eyes when studying.

4. Ears.—Sensation of puffing of wind from ears.—Each act of swallowing caused the wind to puff from both ears.

5. Nose.—Excessive dryness of nose; obstructed.—Dry, hard clinkers.—Profuse and frequent epistaxis; bright red blood; with general relief (B).—Epistaxis with high fever and violent congestion of head and face.

6. Face.—Great redness of face and head, with throbbing in carotids.—Face highly congested, very red, almost livid (B.).—Face hot, flushed, all day, feverish.—Face hot, flushed 3 p.m.—Very red face preceding hæmorrhages, nose, lungs, uterus.

9. Throat.—Throat sore l. side, swallowing difficult, painful.

10. Appetite.—Ravenous about 10 a.m., with onset of frontal headache.—Appetite capricious, esp. morning; impaired.

11. Stomach.—Gastric discomfort, flatulence, fulness, and other symptoms appear when constipated.—Acid eructations all day, causing burning and smarting (B).

12. Abdomen.—Much distension; flatulent; < during menses.

13. Stool and Anus.—Constipation: no movement for 3 to c days then daily movement for 3 or 4 days.—No desire for stool till there is large accumulation, when there is a very difficult, painful stool with constriction in rectum and discharge of stringy, glassy, milk-white mucus; each succeeding passage less painful until normal, then constipation sets in again.—Heavy throbbing and fulness in rectum from internal piles (B.).—Severe shooting cutting in rectum while walking, > sitting down.

14. Urinary Organs.—Frequent and profuse urination.—Urine profuse watery, and relieving the dull, congestive headache.

16. Female Sexual Organs.—Leucorrhœa; pain and soreness in back and pelvic regions; excited by walking.—Menses at proper time, but scanty and intermittent; thin, watery, pale, offensive.—During menses: headache; vertigo; stiffness in back and limbs; with dull, heavy, bearing-down pain in pelvis.—Severe sharp sticking, shooting pains in external genitals (esp. labia), momentary but frequently recurring

and very annoying, causing starts (at close of menses).—Severe stitches or cutting pains through uterus (B.).—Ovarian neuralgia.

17. Respiratory Organs.—Cough: harsh, dry, spasmodic; horribly distressing, causing great anxiety; towards night a slight expectoration, difficult, with slight >; so heavy and oppressive finally could not lie on either side (B.).—Cough from fulness of chest > by epistaxis (B.).—Hæmoptysis, blood bright red.—Smothering sensations; cannot get air enough.—Breathing difficult from weight on chest; fulness of chest and head; violent congestion of the lungs.—Tickling in throat with cough and spasmodic breathing causing extreme nervousness (B.).—Weight on chest causing difficult breathing; sensation of smothering; frequently examined clothes to see if 8 they were not too tight (B.).

20. Back.—Broken sensation in lumbo-sacral articulation; on sitting and esp. sitting upright; constantly changes position to get relief; wants to strike the part or press it; > standing or walking (seemed to alternate with headache).

21. Limbs.—Uneasy sensation in large joints.—As if had taken hard cold; stiff and sore on rising, > by careful movement.—Rheumatic pains in all joints on approach of rain-storm or in rainy, changeable weather.—Extremities cold.

22. Upper Limbs.—Arms heavy; too much prostrated to lift them without effort.

23. Lower Limbs.—Numbness and aching in knee-joints; r. then l.—Gnawing throbbing in r. knee-joint; wants to stretch it but stretching does not >.—Rheumatic pain in r. leg, esp. about knee, > moving.—Soreness about hip-joints.—Cutting pains in knees alternating with headaches.

24. Generalities.—Tired; bruised; listless; sleepy; chilly.—Engorgements of any part or organ.—Spasms, eclampsia, convulsions, epilepsy.—Hæmorrhages.

26. Sleep.—Drowsy; sleepy; stupid.—Alternate sleep and wakefulness through night.—Dreams: unpleasant, of bickering.—Insomnia: cannot sleep after 3 am.; awakes regularly a few minutes before 3 a.m.—Head seemed too high (although he had no pillow).—Sleep prevented by unpleasant things (unconnected, meaningless) coursing through brain.

27. Fever.—Chilly 10 a.m., begins in back, loins, or occiput, passing in waves up to vertex.—Chilly 12-1 p.m., with sharp pains in cardiac region of stomach and much flatulence.—Chilly all forenoon.—Uncomfortably chilly; feet and hands colds.—Febris nervosa stupida.

Melitagrinum.

The nosode of Eczema capitis. Dr. Skinner's Fluxional Centesimal attenuations.

Clinical.—Crusta lactea. Eczema capitis.

Characteristics.—Dr. Skinner has given a brief account of this nosode, introduced by him, in *H. W.*, xvii. 89. He prepared it from the lymph and blood of a case of eczema capitis. Cases treated by Dr. Theobald with *Melit.*, given to him by Dr. Skinner, were published in *H. W.*, xvii. 19. Very severe cases were cured with *Melit.* c.m. (F.C.) given in single doses at considerable intervals. In one case there was an initial aggravation.

Menispermum.

Menispermum Canadense. Moonseed. Yellow Parilla. N. O. Menispermaceæ. Tincture of root. Trituration of Menisperminum.

Clinical.—Backache. Headache. Itching. Spine, pain in. Tongue, swelling of.

Characteristics.—Very considerable doses were taken in the proving of *Menispermum*. The most notable symptom was an intense headache combined with aching all down the back. Yawning and stretching were also a marked and frequent concomitant of headache and backache. *Meni.* is botanically related to *Coccul.*, and the backache recalls the spinal action of the latter. But the *Coccul. vertigo* and intoxication were not elicited. *Dryness* was a common feature-mouth, throat, skin. Itching was very intense, as with *Coccul*. The *Conditions* were well marked: < At night. < By warmth of bed. > Walking in open air.

Relations.—*Antidoted by:* Bry., Chi. *Compare:* Coccul.

SYMPTOMS.

1. Mind.—Low-spirited, but attends to business rapidly.—Low-spirited but absent-minded.—Quick-tempered.

2. Head.—Headache, pressive from within out.—Intense headache, feels as if it would burst, with pain whole length of back (4th d.); lasted three or four days; > by Bry.; > walking in open air.—Headache: intense during night; with stretching and yawning; with feeling of fulness.—Severe headache through temples and occiput.

3. Eyes.—Eyes feel dry and swollen; during the night.

5. Nose.—Much sneezing.—Discharge of nasal mucus; excoriating.—Nostrils: dry, esp. l.; itch painfully; are sore.

6. Face.—A few pimples on face.

8. Mouth.—Tongue: coated (yellow), thicker at back, with raised papillæ; dry and parched; swollen; as if burnt.—Mouth and throat dry during night.

9. Throat.—Throat dry and parched; without soreness.

11. Stomach.—Appetite and thirst increased.—Some nausea on waking.

12. Abdomen.—Pain in umbilical region.

13. Stool and Anus.—Tenesmus with regular stool.

14. Urinary Organs.—Urine: high-coloured and scanty; yellow; white thready clouds floating through.

17. Respiratory Organs.—Morning expectoration less and of lighter colour (curative).—Hurried respiration during the night.

20. Back.—Pain whole length of back, with intense headache; with yawning and stretching.

21. Limbs.—Aching in thighs, elbows, and shoulders; in external muscles of thigh and upper arm, also under l. scapula.

22. Upper Limbs.—Drawing in brachialis anticus.—Jerking near l. elbow.

23. Lower Limbs.—Aching: in bones of legs; upper part of l. femur and l. hip-joint.—Legs sore as if bruised, with pain in bones.

24. Generalities.—Stretching and yawning.—Laziness.—The pains were like those caused by large doses of Quinine and were > by China.

25. Skin.—Itching all over body, esp. buttocks, < warmth of bed.

26. Sleep.—Yawning and stretching with backache and headache.—Sleeps late and heavy in morning, disinclined to rise.—Restless; troubled and confused dreams; sudden starting from sleep.—Dreams: pleasing; of innumerable rats which creep under clothes; of cannonading.

27. Fever.—Chilly.—Skin cold and dry with some itching.—Face not and the pimples bleed easily.

Mentha Piperita.

Mentha piperita. Peppermint. N. O. Labiatæ. Tincture of whole plant. Dilutions of essence.

Clinical.—*Cough, dry*. Headache. Hoarseness. Influenza. Pruritus. Throat, sore. Voice, weakness of.

Characteristics.—A remarkable proving of *Menth. pip*. was made by Demeures, who took a single drop of the tincture, the effects of which lasted into the third month. A case of fatal poisoning with the essence is on record. The patient, a boy of six, took between 1 and 2 ounces and died in two hours. When seen he was insensible, eyes fixed, pupils unmovable, stertorous breathing, cold skin, lips livid. The most remarkable symptom of the proving was the cough, and this has been fully confirmed. It was a dry cough, excited by air entering larynx, by reading aloud, by exposure to cold, by shocks of any kind. Demeures says he cured with *Menth. pip*. every case of influenza that came under his care in the winter of 1847-8. "It is to dry cough, however caused, what *Arn*. is to injuries and *Aco*. to inflammatory complaints. It relieves even the cough of consumptives." A single globule of the 30th sufficed. Demeures gave it to singers a short time before singing, and it greatly helped them to hold the voice. After the proving Demeures found that he could rise earlier than usual and yet feel bright and fresh, whereas before it he could not. Gibson Miller (*J. of Hcs*., v. 34) relates this case: Teacher, 43, since whooping-cough in boyhood had a dry, spasmodic cough, < in cold weather. The inhalation of the smallest quantity of *smoke*, either of coal, wood, or tobacco, at once induced a most distressing paroxysm. < By the least breath of air or any fog. Scarcely any expectoration. Husky on attempting to sing. *Menth. pip*. 30 completely removed the cough and enabled him to sit in a room full of tobacco smoke and sing with clearness. Hansen commends it in—Bilious colic with great accumulation of gas; severe pain of shingles; and as an external remedy in pruritus vaginæ.—The symptoms were < rising, > lying down in bed. > Whilst eating. < Cold air; smoke; reading aloud; stooping; turning head; writing.

Relations.—*Compare:* The Labiatæ. < From smoke, Ign. < Fog, Hyper. < Rising, > lying down, Bry. < Cold air, Rumex c.

Causation.—Early rising.

SYMPTOMS.

1. Mind.—Eager for work; despatches it quickly.—(Cured mental dulness, which previously always followed early rising.).—Insensible.

2. Head.—Confusion.—Headache: tension towards both ears; < on rising, > returning to bed.—Acute lancinations from ear to head, on stooping or turning head.—Frontal headache from one temple to the other.—(Hair ceases to fall out.)

3. Eyes.—Flashes before eyes when writing.

4. Ears.—All day when walking, shooting from one ear to the other, as if abscesses were forming, < l.—When writing sharp lancinations extend from l. ear to all l. teeth.

5. Nose.—Tip of nose sore to touch (11th d); swollen but not painful (21st d.)

8. Mouth.—Very severe toothache in lower molars when chewing a bit of sugar.

9. Throat.—Throat dry and painful on swallowing, as if a pin stuck crosswise in pharynx.—Momentary lancinations in parotids; > during breakfast and dinner.—Throat externally painfully sensitive to touch.

11. Stomach.—In evening two hours after dinner, weight in stomach which seems to extend to ears.

17. Respiratory Organs.—Entire trachea from larynx to pit of throat painful to touch.—Husky voice from reading aloud.—(Given to a singer a few hours before he is to sing, this remedy will certainly enable him to hold out to the end without straining his voice.).—Frequent cough.—Dry cough, excited by merely speaking; expectoration every morning of thick mucus like the core of a boil (4th to 8th d.).—Dry cough continues; it is not caused by titillation, nor by mucous accumulations in the bronchi, but merely by the passage of air into the larynx (9th d.).—Least feeling of cold excites a cough (11th to 21st d.); reading aloud; tobacco smoke and smoke of all kinds excites it.

20. Neck.—All muscles round neck are painful to touch.

23. Lower Limbs.—Sensation under r. foot at extremity of metatarsus, as if shoe sole was too tight there.

25. Skin.—Every scratch becomes a sore.—Pimples with much itching near l. ear, with heat in part.—Frequent itching behind r. ear.—Formication in arm and hand when writing.

26. Sleep.—Sleep good, refreshing.—Waking early.

Mentha Pulegium.

Mentha pulegium. Pennyroyal (English). N. O. Labiatæ. Tincture of plant.

Clinical.—Headache. Salivation, nocturnal.

Characteristics.—*Pennyroyal* is a common domestic remedy for menstrual disorders. Berridge's provings with the 40th were all made on men, so its properties in the female sexual sphere remain untested. Berridge's proving brought out an affinity for the right side of the head, right eye, and left kidney, shoulder and hand. The symptoms were all < when thinking of them.

Relations.—*Compare:* Hedeom. puleg., Menth. pip. In < by thinking of symptoms, Pip. methys., Oxal. ac.

SYMPTOMS.

2, 3. Head and Eyes.—Aching in bones of forehead and sides of head; < r. after sunset.—Headache: r. lower forehead, forcing tears from r. eye; r. temple with pressing behind eyes, first r. then both, < towards evening and in night.—Empty feeling in r. side of head.—Itching all round base of skull and roots of hair.

8. Mouth.—Flow of saliva from l. (side lain on) corner of mouth in night, waking him.

9. Throat.—Stitches down l. Eustachian tube into l. side of throat, > pressing under l. ear.

12. Abdomen.—Stitches in r. hypochondrium, sometimes in middle of sternal region.—Severe cutting stitches in l. groin and side while sitting.

16. Female Sexual Organs.—*Menth. Pu*. is a popular ecbolic, and acts painlessly and without much irritation or forcing down. It often causes faintness (Cooper).

18. Chest.—Woke on r. side, and as soon as he had turned to l. sharp cutting pain in r. chest for two minutes.

20. Back.—Bruised, stiff feeling in small spot, upper part of r. scapula; with aching and empty feeling r. side of head.—Sharp cutting in region of l. kidney, shooting up l. side to l. chest; > getting up.

21. Limbs.—Aching pain in bones of legs and arms, chiefly r., > by night's rest.

22. Upper Limbs.—Two sudden successive jerks upward of l. shoulder and upper arm while lying on l. side.—Unable to hold a jug with l. hand when pouring out water, hand trembles.

24. Generalities.—Jerk of whole body directly after waking.—Rheumatic pains flying about, chiefly r. side.—Sensation as of blood circulating quicker than usual.

26. Sleep.—Veins swollen at night; troublesome dreams.

27. Fever.—General creeping chilliness over back and half-way down front of l. thigh.

Menyanthes.

Menyanthes trifoliata. Buck-bean. Bitterklee. N. O. Gentianaceæ. Tincture of whole plant.

Clinical.—Amaurosis. Chest, affections of. Cramps. Fidgets. Headache, pressive. Heart, pains in. Intermittent fever. Jerkings. Paralysis.

Characteristics.—The *Buck-bean* (or "Bog-bean," as it is also called in Ireland and in Lincolnshire) is a water plant, and abounds in the fen districts, where it is in great local repute as a remedy for ague. Hahnemann proved it and well defined its sphere of action. Teste, who also proved it, found it very similar to *Drosera*. Both these drugs caused in him, as one of the first symptoms, obscuration of sight, a sort of white mist, or vibrations, < in open air or during a walk. This was so intense that he did not dare to cross a street. The pains of *Dros*. and *Meny*. were the same in character, but those of *Dros*. were more intense. This analogy has not proved as close in other respects as Teste imagined it would. The main features of *Meny*. are (*1*) chill; (*2*) sensations and pains of tension and compression; and (*3*) spasmodic jerkings and visible twitchings; these are < during rest, and may be associated with neuralgia. As soon as the patient lies down the legs jerk and twitch so that he cannot rest. "When sitting, the outstretched thigh and leg are four times spasmodically jerked up, but when standing or in drawing up the knees towards him, this is not perceptible." *Meny*. has cured many cases of fidgets. "jumps," "fidgets," and "urinary difficulties in women" are Burnett's leading indications for *Meny*. The twitching may appear in any part. Stitches, numbness, tension, and especially cramp-like and paralysing pains are very distinctive. The pressure is severely felt in the head—Headache: pressing in vertex from above downwards, > during hard pressure with the hand; when ascending stairs, as of a heavy weight pressing on the head and brain at every step. With the headache there is often associated icy coldness of hands and feet. The tension culminates in a sensation as if the skin were several sizes too small and he was being crowded into

it. R. Farley (*Med. Adv*., xxi. 240) reports this case: Miss D. W., long a sufferer from spinal irritation, had terrible attacks of bursting headache, a terrible tension in membranes of brain in paroxysms, which caused her to scream. Began in right side of nape, ascended to forehead, and then spread over whole brain. Terrible sensation of loneliness with the pain; begged her mother to stay with her. < From light, noise, jar, even if one walked lightly across the room. > From sitting bent, and by hard pressure on nape and vertex. *Meny*. 30 every ten minutes relieved immediately, and removed completely in two hours.

Relations.—*Antidoted by:* Camph. *It antidotes:* Effects of Quinine and China. *Compatible after:* Cupr., Lach., Lyc., Pul., Rhs., Ver., *Compare:* < Ascending, Calc. Headache > hard pressure, Ver. Weight on vertex at every step, Cact., Glon., Lach. Intermittent fever, with cold extremities, Lach. (but Lach. has livid skin, great prostration, and filiform pulse). Icy cold feet and legs, Calc., Gels., Carb. v. Bursting headache pushing skull open, Sil. (Sil. > warmth, Meny. > pressure). Pressive headache, Puls., Paris, Mag. m. Fidgets, Pso., Caust., Zinc. Compare also, the Gentians.

Causation.—Injuries to nerves (tooth broken in). Quinine.

SYMPTOMS.

1. Mind.—Anxiety and apprehension.—Anxiety about the heart, as if something evil were going to happen.—Indifference to everything.—Tearful sadness.—Taciturn and self-reflecting.—Buffoonery and excessive gaiety.

2. Head.—Constant heaviness of head.—Compressive, or pressive headache, with a sensation when going upstairs as if a very heavy load were resting on forehead, > by pressing the hand on head.—Pressive pain from both sides of head.—Head bewildered and confused in a room, with slowness of conception, > in open air.—Tensive headache.—Burning pains on skin of forehead.—Drawing pain in r. lobe of cerebrum from below upward, ending in occiput.—Single stitches in l. side of brain up to crown.—When sitting, drawing in occiput.—After eating, emptiness of head.—External gnawing at vertex.

3. Eyes.—Cloudiness of eyes, when reading (everything becomes black before eyes).—Frequent spasmodic stiffness of eyelids.—Pressing in eyes.—Mist and flickerings before eyes.

4. Ears.—Tinkling in ears.—Cracking in ear, when chewing.—Discharge from ears (esp. after exanthemata).—Shootings in ears.—Feeling of coldness in ear.—Tinnitus when chewing.

5. Nose.—Nauseous smell before nose, like that of rotten eggs.—Tension in root of nose.

6. Face.—Redness and heat of face during sleep.—Heat in face, with. coldness of feet.—Visible (painless) twitching in muscles of face and eyelids.—Pain and cracking in the articulation of jaw when masticating.

8, 9. Mouth and Throat.—Sensation of paralysis on l. side of palate, when yawning and coughing.—Great dryness of throat without thirst.—Dryness of palate, causing a stinging when swallowing.—Dryness and roughness in throat, which impede deglutition of saliva.

10. Appetite.—Desire for meat, and dislike to bread and butter.—Sweetish bitterness in mouth.—Frequent empty risings.—Troublesome confusion in head, after a meal.—Bulimy, sometimes, after eating.

11. Stomach.—Contractive cramps in stomach.—Continual rumbling in stomach, as if it were empty.—Heat in stomach, followed by excessive hunger.—Sensation of coldness extending up œsophagus, with great nausea, following pressure in stomach.

12. Abdomen.—Sensation of coldness in abdomen, esp. when pressing upon it with the hand, or in the morning when rising.—Pain, as from excoriation, in abdominal integuments.—Distension and fulness of abdomen, as if overloaded by food, with undiminished appetite, together with a sensation as of incarcerated flatulence, and frequent ineffectual efforts to emit flatus; fulness much < by smoking tobacco.—Distension of abdomen by abundant flatus.—Pinchings in abdomen.

13. Stool and Anus.—Constipation.—Hard fæces, with pinchings in abdomen.—Bleeding, hæmorrhoidal tumours.

14. Urinary Organs.—Frequent want to make water, with scanty emission.

15. Male Sexual Organs.—Increase of sexual desire, without excitement of the imagination, or erection.—Both testicles drawn up, r. more than l.—Spermatic cord painful to touch.

17. Respiratory Organs.—When speaking hoarse and rough voice, with obstruction of ears, as if something had been introduced into them.—Stitch in anterior regions of larynx, impeding deglutition.—Dyspnœa.—Spasmodic contraction of larynx, with excitation to cough, when drawing breath.

18. Chest.—Shooting compression on both sides of chest.—The stitches in (r.) chest are < during motion, and when breathing.—Aching in chest after dinner.

19. Heart.—Stitches in region of heart.—Anxiety about heart as if some evil impending.—Drawing pain in præcordia, < after eating.

20. Neck and Back.—Rigidity and heaviness in muscles of neck (throat) and of nape.—Troublesome contusive pain in loins, when seated, and when stooping.—Dull and boring shootings in l. shoulder-blade, extending across spine.—Extremely painful tearing between scapulæ, extending downwards, esp. on deep breathing; disappearing when sitting; immediately returning on walking; during rest there remains a sensation of soreness.

21. Limbs.—Cramp-like pains in all limbs.

22. Upper Limbs.—Paralytic tearing and spasmodic drawings in arms, hands, and fingers.—Spasmodic stiffness of arms, with involuntary retraction of fingers.—Cramp-like pains in muscles of (l.) lower arm, extending as far as palm of hand (almost like paralysis).—Painful starting in (r. upper) arm and little finger.

23. Lower Limbs.—Contusive pain in thighs.—Shocks and convulsive movements in thighs.—The (r.) thigh and leg are spasmodically jerked upward, when sitting with the leg outstretched, > when standing or when drawing up leg.

24. Generalities.—Jerking (painless) of muscles in different parts (face, thigh), principally during repose.—No thirst at any time.—Jerking pain in outer parts, also pinching pain in outer parts.—Tension: in root of nose; in arms, hands, fingers; in skin, as if it was several sizes too small and he was crowded into it.—Shooting pains, and pinching in limbs and joints (arthritic affections).—Great general debility, esp. on walking, often accompanied by shivering.—Majority of sufferings < during repose, and towards evening > by movement, or by pressing the hand on part affected.

26. Sleep.—Agitated sleep, with vivid, unremembered dreams.

27. Fever.—Pulse slow during cold stage and accelerated during fever.—Predominance of cold.—Icy coldness of hands and feet.—Chill, which is > by heat of stove and only remains in back.—Shuddering over the upper part of body (with yawning), or in legs, with uprising of hair, as after a long walk, or after listening to some frightful tale.—Sensation of coldness, esp. in fingers.—Intermittent fever, with coldness in abdomen.—Heat in evening, mostly on head, with cold feet.—Perspiration in evening as soon as he lies down, continuing all night.

Mephitis.

Mephitis putorius. Skunk. N. O. Mustelidæ. Alcoholic dilution of the liquid contained in the anal glands.

Clinical.—Asthma. Blindness. Choking, easy. Cold, sensitiveness to. Eyes, affections of. Laryngismus. Sight, weak. Whooping-cough.

Characteristics.—*Mephitis* was proved by Hering in the 30th. Among the symptoms he developed was "choking while eating or drinking," and "cough on reading aloud, while talking, and after drinking; caused by choking." Lower ribs painful to touch or pressure, esp. < on coughing or sneezing. Neidhard gave *Meph*. to "a young man afflicted with symptoms of consumption," in whom it produced "a spasmodic cough with a crowing sound, lasting all night and returning several times." This homœopathic aggravation suggested to Neidhard to use *Meph*. in whooping-cough, and this is his conclusion, quoted by Hering: "If the facts collected since 1851, which are numerous, do not prove that *Meth*. will supersede all other remedies in whooping-cough, it certainly may be considered a valuable specific. In order to ensure its full success, it should be exhibited in the lower dilutions, from one to three, at least in severe cases." Guernsey gives it as: "Whooping, or any other kind of cough which is very violent, coming on spasmodically, and seeming as though each spell would terminate life." Farrington says the note of *Meph*. is nervous exhaustion. In whooping-cough the catarrh is slight, whoop decided; < at night and after lying down. Suffocative feeling; *cannot exhale*; vomits food sometimes hours after eating. Asthma of drunkards; of consumptives (after *Dros*.). T. M. Stewart reports (*H. R*., xvi. 71) the case of a man, 47, who had a constant hacking cough coming on during conversation. For this the uvula was amputated. As soon as he recovered from the operation the condition was this: "Coughs after reading aloud, or drinking any fluid; cough spasmodic, hollow, hoarse, < at night and on lying down; loose in mornings." *Amb., Cham., K. bi., Rumex, Pho*., failed to relieve; *Meph*. 1m. cured promptly.—Another point about *Meth*. is the rush of warmth it causes to various parts. It enables patients to endure extreme cold; makes them less chilly in cold weather. Washing in ice-water is pleasant. Awakens at night with congestion to legs. Legs uneasy as if they would become insensible. Fidgety feet. A short sleep seems to refresh. A. M. Cushing calls attention to the possibilities of the remedy in weak sight (*H. R*., iv. 237), and tells of a friend of his who had a dose direct from the skunk injected into his eyes: "It was as though fire had entered his eyes." For a time he was totally blind; but when his sight returned it was so keen that he could count the panes in a window said to be two miles distant. In another case, after getting the poison out of the eye, there was for weeks after a sensation on opening the lids as of breaking glass. On Farrington's advice it was antidoted by *Crotal*. Rest and lying down <. Sitting up and motion >. < Night and daybreak. Warm stove > colic from cold. > Cold washing. Ice-water < asthma. Touch <.

Relations.—According to Hering, Meph. has a very short action. *Antidoted by:* Camph., but only temporarily. Crotal. relieved eye symptoms. *Follows well:* Dros. (in cough of consumptives). *Compare:* Whooping-cough, Coral. (Coral has smothering *before* the cough and great exhaustion after). Dros. (Dros. has frequent spells of barking cough; < after twelve midnight; holds sides; vomits if cannot raise sputa). Cough < from reading or writing, Aur., Nux, Plat. Cough in night, Rumex (< 2 a.m.), Sticta (with splitting headache). Awakes at night with congestion to legs, Aur. Short sleep seems to refresh, Flu. ac., Menth. Night-blindness, Bell. Aversion to tobacco-smoke, Ign. Easy choking, Lach. Fidgety feet, Tarent., Meny., Zinc., Caust., Ars., Asaf., Asar., Act. r., Aur., Sticta. Loquacity, Agar., Lach. Nervous symptoms generally, Castor, Mosch.

SYMPTOMS.

1. Mind.—Ill-humour about trifles or imaginary troubles.—Unfitness for intellectual labour, caused by too lively an imagination, excessive loquacity, as from drinking too much.—Excitement, with heat in head.—Dejection, with painful muscles.—Indolence, with desire to stretch.

2. Head.—Vertigo on stooping suddenly, when seated, when moving the head, when turning in bed, or in the evening.—Confused dulness in the head, as if it had grown larger, accompanied by ill-humour and nausea.—Violent headache, with sensation of fulness, as if caused by a weight or by pressure, esp. in the occiput.—Violent pain in head as if a fulness were pressing upwards.—Sensation in (back of head) various parts, as if the finger were pressed into them.—Pain above eyes.—Headache from motion of a carriage, or else in evening.

3. Eyes.—Lancination in eyes like the pricking of needles.—Pains in eyes on turning them (in certain directions), as if some foreign body were in them, or as if they were much fatigued.—Heat, burning, and aching in eyes, esp. morning and evening.—As of fire thrown into eye.—Sensation on opening the lids as of breaking glass.—Aching (pressing) of eyelids, and burning on margins, as if a stye were forming.—Injection of veins in sclerotica.—Redness of conjunctiva, as from ecchymosis.—Myopia.—Confusion of letters when reading (they become blurred, he is unable to discern them, they run together).—Inability to read small print.—Nocturnal blindness.—While the sight is weak there are generally pains in eyes or head.—Eyes affected principally in evening.

4. Ears.—Tearing in the ears, or in the jaw and teeth.—Otalgia.—Itching heat, redness, blisters, and erysipelas in the external part of the (r.) ear.

5. Nose.—Dryness of the nose.—Epistaxis.—Prolonged inclination to sneeze.—Fluent coryza, with pain, as from excoriation in the chest.

7. Teeth.—Pains in teeth which are carious (molars), esp. in lower jaw.—Sudden shocks in roots of teeth.—Drawing and tearing in teeth.

10, 11. Appetite and Stomach.—Nausea, with scraping in throat (emptiness in stomach), and sensation as if the head were swollen, when fasting.—Sobbing eructations.—Risings, > by discharge of flatus.—Tendency to choke, when drinking and speaking.—Troublesome and ineffectual want to hawk.—Metallic (coppery) taste.—Desire for salted food.—Hunger, alternating with absence of appetite.—Absence of appetite in morning, and also repugnance to tobacco-smoke.—Painful weariness, and desire to sleep after a meal.

12. Abdomen.—Pains in hypochondria.—Rheumatic pains in r. side (pressure), or pains as from flatulency (in l. side).—Aching (in region of liver) in stomach, with colic.—Sensation of emptiness in stomach and nausea.—Colic, as from diarrhœa, but without evacuation.—Aching and movements in abdomen, as if caused by a chill, with sensation of coldness, trembling, and want to urinate, relieved when near fire.—Pains in abdomen in evening.

13. Stool and Anus.—Evacuations infrequent, but liquid.—Diarrhœa.

14. Urinary Organs.—Frequent want to make water, esp. at night, with emission of clear urine.—The urine becomes turbid (in morning), and deposits a sediment, in evening, after an attack of fever.

15. Male Sexual Organs.—Itching in scrotum.—Heat in genital organs.

16. Female Sexual Organs.—Excoriation of genital organs, in females, and swelling of labia majora.

17. Respiratory Organs.—Cough when reading aloud, when speaking, and after a fit of choking whilst drinking (liability to have something get into larynx).—Cough in morning, with expectoration proceeding from catarrh.—Mucus expelled by a fit of coughing every morning.—Catarrhal sufferings.—Pains in (l.) ribs, when touched, but esp. when coughing and sneezing.—Cough with fluent coryza and soreness in chest.—Pain, as from excoriation, in back part of ribs, and in chest, when taking a deep inspiration, and when moving the back.—Rattling cough every morning.—Whooping-cough, < at night and after lying down; with convulsions; with complete suffocative feeling, he cannot exhale; vomiting of all food some hours after eating, bloated face.—Pains in chest (on last l. short rib) when touching and pressing on it; but esp. when coughing and sneezing.—Asthma, as from inhaling vapour of sulphur; of drunkards; during sleep.

20. Neck and Back.—Pains in (r.) side of neck.—Tension in muscles of nape.—Pain, and a sort of paralysis, in back and in all limbs.—Lancination in spine during motion.—Contusive pains in loins in morning.

22. Upper Limbs.—Rheumatic pains in arms, with paralytic drawings, > by movement.—Uneasiness in (l.) arm, which is, as it were, insensible.—Trembling in arm on resting upon it.—Jerking in hand.—Distressing sensation in first phalanx of finger, which renders it needful to stretch and crack it.

23. Lower Limbs.—Drawing and rheumatic pains in thighs, hip, and foot, but chiefly in leg.—Contusive pains in knee.—Cramp-like and sudden pain in (l.) foot, which causes patient to hop.—Uneasiness in legs, as if they were about to go to sleep.—Lancinations in foot.—Pain in heel, resembling gout.—Pricking or sensation of pinching in great toe (as if it were being pinched off).—Burning in little toe.—Constant pains and burning in corns.

24. Generalities.—Rheumatic pains.—Shifting pains, with want to urinate.—Occasionally a sensation as if struck by electric sparks.—Convulsions.—Sensation of paralysis, esp. during the pains.—Great dejection and lassitude, during which the muscles are painful when touched or exercised.—Indolence, with desire to stretch, and stretching.—Internal agitation of whole body, with sensation of unspeakable uneasiness.—Slight quivering of the nerves, as far as interior of bones, causing a good deal of anxiety.—Many symptoms manifest themselves in morning.

26. Sleep.—Great inclination to sleep, so great that patient will fall asleep even when in company.—Diurnal sleepiness, with sound sleep at night.—Frequent yawning, which causes tears to flow.—Very vivid dreams, the recollection of which is retained.—Dreams of fire, water, distressing losses, of spitting of blood, &c.—Nightmare.—Asthma during sleep.—Waking at night, with rush of blood to, and heat in limbs (lower legs).—Somnolent heaviness in morning, with burning in eyes and tearing in limbs; greatly > by a change of position.—Frequent and early waking, often with a feeling of good health.

27. Fever.—Coldness in evening, with want to make water, and colic, as if preceding diarrhœa.—Heat in head, in genital organs and in legs, at night.—Increased heat, esp. in morning, with skin less sensitive to cold and cold water.—Washing with cold water is found very agreeable.

Mercurialis Perennis.

Mercurialis perennis. Dog's Mercury. N. O. Euphorbiaceæ. Tincture of whole fresh plant in flower.

Clinical.—Amblyopia. Breasts, swelling of; pain in. Conjunctivitis. Dysmenorrhœa. Epiphora. Flatulence. Menses, late. Pannus. Ptosis. Rheumatic affections. Spleen, affections of. Tongue, paralysis of. Trachoma. Vertigo.

Characteristics.—*Dog's Mercury* is a common plant with poisonous properties, on account of which it is avoided by cattle. It was proved by Hesse. Like other Euphorbians, it has exceedingly acrid properties, and many of its symptoms resemble closely those of the more corrosive salts of *Mercury*: prevalence of burning symptoms; irritation of eyes and nose; tenesmus after stool, &c. "Compared with other Euphorbians," says Cooper, "it dries up the mucous surfaces, causing burning locally and a general drowsiness, whilst most Euphorbians set up violent irritation and diarrhœa from the first. Moreover, its action is not expended on the skin so soon as that of the others." Among the most characteristic symptoms is "vertigo by going downstairs." The dryness of the mouth and throat is more remarkable than in any other remedy, even sugar refuses to melt in the mouth. Eating < the dryness. The breath from the mouth is hot and dries the lips. There is also hot breath in the nose, but cold breath in the nose is more characteristic. "Tension" is a leading note of the remedy running through the symptoms ("pain as of a hand tied tightly across the forehead" is a characteristic of David Wilson's); also dragging and especially dragging down; in small of back with rectal pains; in groins and thigh as if a hernia might appear. A very remarkable action is that on the female generative organs, and puts *Merls*. in the front rank of remedies for amenorrhœa, scanty and delayed menses, and dysmenorrhœa, accompanied with orgasm, pains, and swelling of breasts. Among the *peculiar sensations* are: Heaviness in head as if pressed on pillow with a weight. Numbness of head and dulness of mind. Conscious of having a nose; also I have noted (but am unable to trace the authority), "she feels as if she has two noses." Head confused as if inflated. As if intoxicated. Rolling, throbbing, trembling, and orgasm in all the veins. The liver and spleen are influenced; "warmth in spleen" is one symptom. Tension in rectum and back. Touch <. Headache < indoors, > by cold. Sunlight < eyes. Open air = blinking.

Relations.—*Antidoted by:* Aco., Bell. *Compare:* Euphorb., Croton, Acalypha, &c. In < descending stairs, Borax. Straining after stool, Merc. Dragging pains, Lil. t. Numbness of head, Graph. (feels like wood). Also: Asaf., Caust., K. bi., Kre., Lach., Led., Mag. m., Nat. m., Nit. ac., Nux, Nux m., Rhod., Sul., Thuj.

Causation.—Blow on head.

SYMPTOMS.

1. Mind.—Excited mood; like intoxication.—Morose, quarrelsome.—Fretful, ill-humoured.—Difficulty in collecting his senses.—Coma.

2. Head.—Giddiness on descending stairs.—Whirling vertigo.—Head confused as if inflated.—Scalp feels tense and numb, is moved with difficulty.—Tension and heaviness of head with sensation of heat.—Tension in head, esp. forehead and above eyes; on stooping changing to a pressing-out pain.—Burning on vertex.—Shooting in l. forehead and temple, < coming indoors.—Aching in

forehead > by cold and pressure.—Numbness of occiput and vertex; after a blow on head.

3. Eyes.—Eyelids feel heavy and dry, it is difficult to move them.—Pain; burning; forcing-out sensation in eyes.—Weakness of upper lids.—Trembling and twitching of upper lids (esp. l.).—Blinking of eyes.—Dilated pupils with great sensitiveness of eyes to light.—Asthenopia; as of a cloud, veil, or cobweb before sight.—Watery eyes.

5. Nose.—The breath from nose is cold.—Crawling and burning of nose.—Breath hot in nose; sensation of heat rising from stomach into nose.—Conscious of having a nose, nostrils feel sore.—(Feels as if she had two noses.)

6. Face.—Feeling of coldness in face.—Feeling of tension in face and head.—Great redness of cheeks.—Lips dry and parched, with increased thirst.

8. Mouth.—Dryness of mouth, it is difficult to move tongue and impedes chewing.—Burning in mouth and tongue.—Tongue feels heavy and dry, numb, insensible, with loss of taste.—Burning blisters on tongue, inside of lips and cheeks; they form very painful spreading ulcers.—Tongue painful if it touches palate as if there were blisters on it.

9. Throat.—Burning dryness in throat.—Ulcers on palate, tonsils, and back of pharynx.

10. Appetite.—Increased thirst with dry lips and mouth.—Great dryness in mouth while eating.—After eating: biting burning on tongue; nausea; vomiting.

11. Stomach.—Chilly feeling or burning in stomach.—Belching >.—Vomits food as soon as eaten.—Tumour inside pit of stomach size of hen's egg, < pressure; cannot bear clothing.

12. Abdomen.—Abdominal pulsation.—Violent twinging in l. hypochondrium.—Pressure in liver region extending to spleen.—In spleen: warmth; gnawing; pressure < lying down.—Sticking in liver.—Gnawing from pit of stomach to gall-bladder.—Rumbling; movings and workings in abdomen; emission of much flatus.

13. Stool and Anus.—Dragging pressing in rectum (and burning and smarting in anus) with pressure and tension in small of back.—Dragging; burning; crawling; itching in anus.—Diarrhœa with constant colic.—Thin stools.—Profuse soft stool followed by some straining.

14. Urinary Organs.—Burning; prickly burning in urethra.—Crawling in urethra and prepuce, with crawling in anus and tearing and dragging in small of back.—Frequent urging; with burning; micturition somewhat increased.

15. Male Sexual Organs.—Dragging in inguinal region, at times sticking pain, < walking, at times extending down into spermatic cord, sometimes one, sometimes both.

16. Female Sexual Organs.—Menses: shorter, with abdominal cramp; too late.—Menses profuse, violent orgasm of blood, great anxiety so that she nearly fainted, oppressed breathing, heat over whole body, esp. head and face, anxious sweat; limbs heavy, trembling; next day great swelling and painfulness of breasts; on third day headache, faint-like weakness, compelled to lie down; menses only appeared that night, were scanty, and only lasted three days instead of seven (from gr. vi. of extract of root).

17. Respiratory Organs.—Breath hot, almost burning, lips almost made sore by it.—Breathing: stertorous; difficult, esp. r. side.

18. Chest.—Pressure and painfulness on chest; in forepart; and in stomach with dyspnœa.—Sticking in l.; throbbing in r. chest.—Orgasm with dysmenorrhœa.

19. Heart.—Orgasm in heart region.—Constriction.—Whirling, rushing, throbbing in heart, stomach, and upper abdomen; then rolling, throbbing with trembling and orgasm in all the veins, without heat; abdominal aorta felt distinctly beating while sitting; dulness and stupefaction of head as if blood mounted violently upward; pulse accelerated and full.—Palpitation with oppression, as if chest would be constricted, after stooping.

20. Back.—Aching in nape.—Flushes of heat in back.—Drawing tearing along r. scapula, extending into upper arm.—Tensive dragging and dragging tearing in small of back (with anal symptoms).

21. Limbs.—Tearings; stitches; burning, smarting, tearing in limbs, almost in the skin, esp. of hands and feet.—Tired and weary.—Weakness of arms and legs as if she would fall to l. without vertigo.—(Headache.)

22. Upper Limbs.—Jerking, sticking, drawing tearings throughout upper limbs.—Stitches in finger-tips.—Veins of hands distended.

23. Lower Limbs.—Dragging in l. thigh as if hernia would occur.—Tearing from side of l. palm down front of thigh.—Jerking tearing in l. patella.—Painful ache in knees.—Pressive tearing pain in tibiæ.—Sticking tearing in toes and tips of toes.

24. Generalities.—Feeling of emptiness and weariness in whole body.—Persistent pains in muscles on motion.

25. Skin.—Pimples on chin; with biting itching.—Burning; itching; tearing on skin.

26. Sleep.—Frequent yawning and weariness.—Dizzy sleepiness.—Sleep unrefreshing, full of dreams.—Dreams of animals.

27. Fever.—Cold over the whole body, with hot flush in face; must be warmly covered, then sleeps and perspires.—Cold over whole body, emanating from r. side, particularly from r. arm, shuddering, great debility, sleepiness.—Gooseflesh on the cold r. arm, extending over whole body; after midnight an offensive perspiration on both sides, particularly on arms.—On going to bed in evening chill, during night and towards morning heat with intense thirst; perspiration in morning.

Mercurius. Mercurius solubilis Hahnemanni.

(*1*) MERCURIUS OXYDULATUS NIGER.

Mercurius solubilis Hahnemanni. Dimercuros ammonium nitrate. $_2(NH_2Hg_2)NO_3H_2O$. [A mercurial preparation devised by Hahnemann as a substitute for the corrosive mercurial salts in use at the time, and at once adopted in all countries on account of its much milder and more efficacious anti-syphilitic qualities. It was prepared by precipitating Mercury from its solution in nitric acid by means of caustic ammonia. This is the preparation Hahnemann used in his proving.] Trituration.

(*2*) MERCURIUS VIVUS.

Hydrargyrum. Argentum vivum. Chamćleon minerale, &c. Metallic Mercury. Quicksilver. Hg (A. W. 199.8). [Although Hahnemann proved Mercurius solubilis, he recommended the use of triturations of the pure metal in practice as being the simplest mercurial preparation, and more easily obtained and equally available with Merc. sol. for prescribing on the symptoms of the latter.] Trituration. [Decoction: water in which quicksilver has been boiled for half an hour.]

Clinical.—[The letters *s* and *v* indicate the preparation—Solubilis or Vivus—mentioned in the *Prescriber* in connection with the malady the name of which they follow; they are not intended to indicate a preference of one over the other.] *Abscess (s)*. Anćmia. Aphthć. Appendicitis. *Balanitis (s). Bone, disease of (s)*. Brain, inflammation of. *Breath, offensive (s). Bronchitis (s). Bubo (s)*. Cancrum oris. *Catarrh (s)*. Chancre. *Chicken-pox (s). Cold (s)*. Condylomata. *Cough (s).*

Dentition, abnormal (s). Diarrhśa (s). Dysentery. *Dyspepsia (s). Ecthyma (s)*. Eczema. Emaciation. *Excoriation (s). Eyes, affections of (s)*; gouty inflammation of. Fainting. Fevers. Fissures. *Glandular swellings (s). Gout (s). Gum-boil (s). Gums, unhealthy (s). Heart, affections of (s). Herpes (s)*. Hydrophobia. *Jaundice (s). Joints, affections of (s)*. Leucorrhśa; in little girls. *Liver, affections of (s). Lumbago (s)*. Mania. *Measles (s). Melancholia (s)*. Meningitis. Mollities ossium. Mucous patches. Mumps. *Noises in the head (s). Odour, of body, offensive (s)*. Ovaries, affections of. *Pancreatitis (s). Parametritis (s)*. Parotitis. Peritonitis. *Perspiration, abnormal (s). Phimosis (s). Pregnancy, affections of (s.). Prostate, disease of (s). Purpura (s) (v). Pyćmia (s). Ranula (s). Rheumatism (s) (v)*. Rickets. Rigg's disease. *Salivation (s). Scurvy (s). Small-pox (s)*. Stomatitis. *Suppuration (s)*. Surgical fever. *Syphilis (s). Taste, disordered (s). Teeth, affections of (v). Throat-deafness (s). Throat, soreness of (v). Tongue, affections of (s) (v)*; mapped (v). *Toothache (s). Tremors (s). Typhus fever (v). Ulcers (s). Vaccination (s)*. Vomiting (s).

Characteristics.—No pains have been taken to keep distinct *Merc. sol*. and *Merc. viv*., and I do not find it practicable to attempt to separate them. Though *Merc. sol*. was the preparation Hahnemann proved, he recommended *Merc. viv*. as a superior preparation for homśopathic prescribing in his preface to the proving. *Mercurius solubilis Hahnemanni* was invented by him in his pre-homśopathic days in response to a general desire for a mercurial preparation which should be at once soluble and non-corrosive, and it at once took its place in pharmacy, a place it has never lost. The method of developing the medicinal power of metallic mercury by graduated trituration was a later discovery, though there was a suggestion of it in the well-known *Hydrargyrum cum cretâ*. To the symptoms of Hahnemann's pathogenesis of *Merc. sol*. are added observed effects of *Mercury* in those engaged in working with the metal, in patients taking *Mercury*, and effects in those applying mercurial inunctions to patients—many having been severely affected by absorbing it through their hands. There is no difference between these effects and the symptoms of the proving so far as the general characteristics are concerned. In the finer characteristics there must be differences. The symptoms of the proving are in general more particularly characterised than the effects of *Merc. viv*. For instance, "At night severe toothache, and when that went off great chilliness through the whole body," belongs to the *Merc. sol*. proving; and so do these: "Vertigo: when sitting at his desk there was whirling in the head, as if he were drunk, he rises up and walks about the room staggering, then anxious heat breaks out over him, with nausea but not to the length of vomiting; at the same time some headache." "From occiput a strong, tearing, continued pain, which went into the forehead and there pressed." The symptoms of nose-bleed and the more finely characterised throat symptoms ("stitches on tonsils"; "stitches into ear on swallowing"; "something hot rises into throat.,"), were produced by *Merc. sol*., so were the majority of the symptoms in the male and female sexual organs. But this is not to say that *Merc. viv*. will not answer equally well, or even better, for curing them. The only bit of comparative experience I have in the action of the two is this: in a case of cold in

which *Merc*. seemed indicated, *Merc. sol*. 30 was given and failed, and *Merc. viv*. 30 promptly cured.—We of the present generation can hardly form a conception of the havoc wrought by *Mercury* in the days when it was considered necessary to "touch the gums" in all cases for which *Mercury* was prescribed before any good could be hoped for. The motto, "Salivation is Salvation," tells its own tale. "It was quite an event," says Teste, "when in the sixteenth century the discovery was made that *Mercury* will cure syphilis without the patient being salivated. One error, however, being substituted in place of another, it was supposed that the sweat, the diuresis, or the diarrhśa which followed the exhibition of *Mercury*, replaced the absent salivation; the gross humoralism which prevailed at that period did not allow of another explanation. For a graphic picture of a practice which was part of the ordinary routine until recent times, I quote the following from Bransby Cooper's *First Lines of Surgery*, 6th ed., p. 348: "*Mercury* acts upon some individuals like a poison [!] they are seized with palpitations of the heart, tremblings of the limbs, oppression of the breathing, and irregular pulse. When such indisposition takes place in a person employing *Mercury* we conclude that this mineral is actually producing a deleterious impression on the system [!]. It was noticed by the late Mr. Pearson that every year, when it was the custom to salivate freely, a certain number of individuals thus treated died suddenly in the Lock Hospital. They were first affected as I have described, and, on attempting to make the slightest effort they dropped down dead. Mr. Pearson learned from experience [!] that these deaths arose from the deleterious action of *Mercury* on the constitution, and the derangement of the system thus excited he proposed to call the *Mercurial erethismus*." Homśopathy has filled out this picture in full detail, and turned this deadly blundering to curative account. There was a fitness in naming this metal after the volatile deity. It provides us with weather-glasses and thermometers, and it turns those who are under its influence into weather-glasses and thermometers likewise. [An electrician, who at one time was required to work with his hands frequently in a trough filled with quicksilver, thereafter could not bear the slightest shock of electricity, though before he could stand very strong ones.] And herein lies one of the grand characteristics of the remedy: as the thermometer is sensitive to *changes* either to *hot or cold*, so is the *Merc*. patient. Other remedies are predominantly one or the other: Merc. is both— < by heat and < by cold. This is keynote No. 1. No. 2 is "< at night." This is a strong point of correspondence with syphilis. Especially is this noticeable in the bone pains. No. 3 is: Profuse sweat accompanying nearly all complaints and which *does not relieve*; it may even aggravate. Guided chiefly by these two indications: "Profuse sweat with no relief" and "< at night," I have cured many cases of rheumatic fever with *Merc. viv*. 12, without any other remedy. Keynote No. 4 is: The mercurial odour. The mercurial patient is offensive; breath excessively fetid; sweat offensive, mawkish, sweetish. Keynote No. 5 is *tremor*. This symptom is so pronounced and universal that it renders *Merc*. the best general remedy in paralysis agitans. There is tremor of head, of hands, of tongue. Tremors commencing in the fingers. It is the tremor of weakness and paralysis; and as described by B. Cooper it may attack the

heart and cause sudden death on the smallest effort. Short of this there is great tendency to fainting; extreme exhaustion after a stool. The tremors may become jerkings and even convulsions. Extreme restlessness. The mind is as weak and tremulous as the body; everything is done hastily. Hurried and rapid talking. On the other hand: slow in answering questions; loss of memory; of will power. Embarrassment. Absent-minded. Imbecility. Time seems to pass slowly. Desire to flee. Homesick. Suicidal. Murderous. *Merc*. is Hahnemann's typical antisyphilitic remedy, as *Sul*. is the typical antipsoric, and *Thuja* the typical antisycotic. In selecting *Merc*. as the remedy for syphilis the old practitioners were so far right, but they did not know how to give it. *Merc*. so far corresponds to syphilis that many undoubted cases of mercurial poisoning have been diagnosed by experts as syphilis. Bones, glands, and skin are affected. Inflammation leads to induration, induration to ulceration. *Merc*, corresponds accurately to the true Hunterian chancre. *Merc*. ulcers have a grey, lardy, ashy, or cheesy base. There are burning or stinging pains in them. Another great feature of *Merc*., almost constituting a keynote, is the tendency to the formation of pus. In the suppurative stage of small-pox it is specific. Flow of pus, and particularly bloody pus, from any orifice calls for *Merc*. Pus forms in cavities in abscesses, which burn and sting. Discharges are yellow-green in colour. Gonorrhśa. Fetid ear discharge. *Merc*. is a great solvent: it dissolves metals out of their ores and it dissolves living tissues, inducing excessive emaciation. Lowly organised tissues as indurations, exostoses, and some tumours are melted first. Śdema and dropsies are absorbed; rheumatic swellings. If the doses of *Merc*. are large and dropsies disappear rapidly under them, the tissues themselves may disappear also in offensive rapidly decomposing ulcers. The bones soften so that they will bend. Whilst *Merc*. intensifies the action of the absorbents, it may also paralyse them, hence enlargement of glands, with pricking pains, inflammation, suppuration. Next to syphilis, the liver has been the chief excuse for mercurialism, in the past, and *Merc*. certainly has a powerful liver action. The liver is congested, enlarged, inflamed, stitches in the liver, sensitiveness in the liver and *inability to lie on right side*. This "< lying on r. side" is a very characteristic condition of *Merc*., and when present *Merc*. should always be considered. Along with the liver the stomach is disordered. Sweets disagree; aversion to meat, wine, brandy, beer, coffee, greasy food, butter. There is the characteristic flabby, coated, teeth-indented tongue, foul breath, and intense thirst. Throat dry and forepart of tongue moist. *Merc*. is rarely indicated when the tongue is dry. Sliminess is a general characteristic. Slimy stools; stools acrid, knotty, containing pus, viscid. Just before stool a sick, painful, faint feeling comes on. During stool there is tenesmus, or tenesmus and no stool. Dysentery with much straining; never-get-done feeling when there is no more to come. Diarrhśa with slime. "*Merc*. is rarely indicated in these troubles where there is no slime" (Guernsey). *Merc*. affects profoundly the generative organs of both sexes. It has stinging, cutting pains in ovaries; cutting pains from l. to r. in lower abdomen. "Stinging" is very frequent in mercurial pains, and "stinging pain in ovaries is just as likely to need *Merc*. as *Apis*" (Kent). Almost all kinds of eruptions are produced by *Merc*. Scurfy,

syphilitic, pustular, moist, oozing, offensive eczema. Shingles. Small-pox. They are all < by warmth and at night and < by cold. In olden times it was recognised that a patient under a "course" of *Mercury* must be very careful not to catch cold. This gives one indication for *Merc*. in abnormal tendency to catch cold. But for this condition it must not be too frequently repeated, as it will aggravate it. The patient needing *Merc*. is sensitive to every draught and yet < by warmth the nasal secretion is acrid, and the nose red and excoriated; dirty-nosed children" (Guernsey). Old catarrhal smell in the nose inside nostrils smarting and burning. Aching, tearing, and out-pressing in the bones. "*Kali iod*. is better for the same bursting in the face, running coryza, and < from heat and warmth of the bed" (Kent). [I find that a much larger percentage of cases of acute cold come under the indications of *Cepa* and *Chlorum* than under those of *Merc*. or any other related remedy. In chronic colds I think first of *Psor*.] The eyes are very markedly influenced by *Merc*.; also the bones round the eye: "Whenever cold settles in the eye in gouty and rheumatic patients" (Kent). Every degree and kind of inflammation and ulceration is produced by *Merc*. and its salts. J. J. Hirsch, of Prague (*H. R*., vii. 220), relates some striking experiences with a preparation of *Merc. viv*. which he learned from an old allopath. Quicksilver is boiled in water for half an hour, two teaspoonfuls being given every two hours. Hirsch's cases were those of acute inflammation of the brain, in which *Bell*. was indicated, and in one of which *Merc*. (in the ordinary homśopathic preparation) had already been administered in vain. This is the case: A black-haired girl, 9, had malignant scarlatina, which commenced six days before Hirsch (who came as consultant) saw the case, signs of brain inflammation having set in on the third day. Hirsch found her unconscious, sharply defined redness of cheeks, pulse 120, hot skin. Piercing screams were emitted from time to time; boring head in pillows; chewing motion of jaws; gnashing teeth. Lips brown and dry; not much thirst; water not accepted readily; but milk seemed to be relished. Reddened patches here and there, especially along neck. Under the "decoction," which was given to the girl on Hirsch's suggestion, she slowly but steadily improved, and in a week was convalescent.—Among the *Sensations* of *Merc*. are: Vibration in forehead. Head as if in a vice; as if growing larger. As of sparks being emitted from eyes; as of a body underneath lids; as if feathers came from corners of eyes. As if a wedge driven in ear; as if ice in it; as if cold water running out of it. Cracklings in head as from metal plates. As if weight on forehead; as if weight hanging on to nose. As if teeth were loose; were fixed in a mass of pap. As if hot vapours rising into throat; of worm rising into throat, must swallow it down; of apple core sticking in throat. As if mammć would ulcerate. As if everything in chest was dry.—Stabbing pains and stitches, burning, boring, digging, stinging, and dragging pains. Soreness and sensitiveness. Itching; voluptuous itching. *Merc*. is more particularly *suited to:* Light-haired persons with lax skin and muscle; women and children. Scrofulous children. (*Merc*. has relation to psora and sycosis as well as syphilis.) The symptoms are < by touch or pressure. < At night; before falling asleep. < Blowing nose. < During a catarrh. < From cold air. < From taking cold. < From lamplight;

firelight. < During perspiration; on getting warm in bed. < Before stool. < During urination and after. < Lying on right side. < Motion; walking; slightest exertion. < Evening. Rest >. Coitus >. Weeping >. < Touching anything cold (= pain in abdomen). < Bending forward (digestion immediately disordered). < After eating (if he eats ever so little it causes a dragging down in stomach).

Relations.—*It antidotes:* Bad effects of sugar; stings of insects; ailments from Arsenic or Copper vapours, Aur., Ant. t, Lach., Bell., Op., Phyt., Val., Chi., Dulc., Mez., Thuj. *It is antidoted by:* Aur. (suicidal mania; caries of bones, especially of patella and nose); Hep. (mental symptoms-anxiety, distress, suicidal and even homicidal mood-bone pains, sore mouth, ulcers, and gastric symptoms); Nit. ac. (periostitis, bones and fibrous tissues; bone pains < at night; aching in shins in damp weather; ulcers in throat, especially of secondary syphilis); Chi. (chronic ptyalism); Dulc. (ptyalism < by every damp change); K. iod. (syphilis and mercurialism, combined, bones, periosteum, glands; ozćna; thin, watery discharge, upper lip sore and raw; repeated catarrhs after Mercury, every little exposure to damp or wet air = coryza; eyes hot, watery, swollen; neuralgic pains in one or both cheeks; nose stuffed and swollen and at same time profuse watery, scalding coryza; sore throat < every fresh exposure); Kali mur. (scorbutus, fetor); Asaf. (bone affections.—Asaf. is distinguished by extreme sensitiveness of diseased parts; extreme soreness of bones round eye); Staph. (depressed system; wasted, sallow, dark rings round eyes, spongy gums, ulcers on tongue); Iod. (glands); Mez. (nervous system; neuralgia in face, eyes, anywhere); Bell., Caps., Carb. v., Fer., Guaiac., Stilling., Sul., Thuj "all symptoms agreeing, Merc., *high*" (Guernsey). *Incompatible:* Sil. (Merc. and Sil. should never be given immediately before or after each other). *Compatible after:* Aco., Bell., Hep., Lach., Sul. *Before:* Ars., Asaf., Bell., Calc., Chi., Lyc., Nit. ac., Pho., Pul., Rhus, Sep., Sul. *Compare:* Bell. (very close analogue, often complementary; commencing abscess; difficult swallowing fluids; sharp pain through tonsils; pains come suddenly); Hep. (chilliness; something sticking in fauces); Meny. (coldness in ears); Puls. (thick yellow nasal discharge—but that of Puls. is always bland; otitis); Nux (coryza and sore throat—Nux has *scraped* feeling; Merc. is always smarting, raw, or sore.—Dysentery: with Nux tenesmus ceases after stool; with Merc. not, there is the never-get-done feeling); Aco. (dysentery of hot days and cold nights; often precedes Merc., and Sul. follows in like conditions); Lept. (bilious troubles, horribly offensive stools—the *griping* of Lept. continues after stool but not tenesmus); Dig. (gonorrhśa); Euphr. (eyes); Ars. (Merc. < by heat of, but > by rest in bed—Ars. > by heat of, but < by rest in bed); Sul. (itch, pustulous, eczematous eruptions); Spo. (orchitis); Pho. (profuse sweat without >); Ant. c. (dirty tongue; inflammation of eyes < glare of fire or sunshine); Arg. n. (eyes); Kali i. (stitching pains through lungs; Merc. right or left and shooting in different directions; Kal i., from sternum to back < from any motion); Borax (sore mouth); Coloc. (dysentery—Col. > after stool, Merc. <); Chel. (bilious pneumonia); Cham. (diarrhśa; dentition); Caust. (gonorrhśa); Mag. m. (liver pains < touch, < lying right

side); Plumb. and Chi. s. (testes); Syph. (syphilis; < heat of stove or bed; < night): Lyc. (hepatitis; tenderness; right to left, wash-leather tongue; sinking immediately after meals); Sul., Puls., and Cham. (< in bed at night); Nit. ac. (dark persons; Merc. fair); Crocus (nose-bleed in tough strings); Sang. (tongue as if burnt); Bry. (wash-leather tongue; < motion; stone in stomach); Apis (stinging pain; fetid breath; ovarian affections); Sabal. (stinging pains in ovaries); Dolichos (itching of gums; jaundice); Magnt. aust. (ulceration of nails); Psor. and Medorrh. (foul body smell); Arn. (foul breath); Mez. (decay of teeth—Merc. of crowns; Mez. of roots); Led. and Sars. (bloody seminal emissions); Sul. (pruritus vulvć < night, < from contact with urine, which must be washed off); Lac c. and Con. (breasts painful, as if would ulcerate at every menstrual period); Chel. and Kal. c. (affect lower lobe right lung; stitches through to back); Kal. c. (suppuration of lungs after pneumonic hćmorrhages); Pic. ac. (boils in auditory meatus); Teucr. and Thuj. (polypi); Can. i. (time passes slowly); Dulc. (sensitive to cold and damp; cold settles in the eyes; furfuraceous eruptions); Graph. (coryza during menses; Mag. c. coryza and sore throat before and at menses; Merc., dull pain on forehead, with coldness, especially in women, with coryza < before or at menses).

Causation.—Fright. Suppressed gonorrhśa. Suppressed foot-sweat.

SYMPTOMS.

1. Mind.—Great anguish, restlessness (is constantly changing from place to place), and agitation, with fear of losing the reason, or with excessive internal torment, principally in evening, or in bed at night, as if conscious of having committed some crime.—(Post-partum mania; wants to throw child on fire.).—Inclined to sopor, coma.—Moral dejection, with great listlessness, discouragement, dread of labour, and disgust to life.—Great indifference to everything.—Does not even care to eat.—Apprehensions.—Desire to flee with nightly anxiety and apprehensions.—Ill-humour, disposition to be angry, and to fly into a passion, great susceptibility, humour quarrelsome, mistrustful, and suspicious.—Moroseness and repugnance to conversation.—Groans.—Continuous moaning and groaning.—Excitement, and great moral irritability, with a tendency to be easily frightened.—Bad effects from fright, leaving one in a state of great anxiety and < at night.—Home-sickness with nightly anxiety and perspiration.—Distraction, inadvertence, difficulty of conception.—Entire-unfitness for meditation, and tendency to make mistakes while speaking.—Answers questions slowly.—Weakness of memory; and will-power lost.—Instability of ideas, which constantly drive away each other.—Raving.—Delirium; mental derangement of drunkards.—Intellect weak; imbecile.—Low muttering delirium.—Fits of mania or dementia, with disposition to shed tears.—Hurried and rapid speech.—Loss of consciousness and of speech.—Fury, with dread of liquids.

2. Head.—Cloudiness, intoxication, and dizziness, principally in morning, on waking, and on getting up.—Vertigo, principally on getting up, or on raising up

head, or when seated, or when lying on back (vertigo with headache); as well as during or after a walk in open air, or in evening, and often with nausea, cloudiness of the eyes (everything becomes black before eyes), distressing heat, and want to lie down.—Vertigo as if one were on a swing.—Dull and stupid feeling with dizziness.—Heaviness, fulness, and aching in head, as if forehead were squeezed by a bandage, or as though cranium were on the point of bursting (with fulness of brain).—(In the evening) painful sensibility of brain, with fatigue of head by noise, > by resting head upon the arm.—Compressive headache, the head feels as if it were in a vice, with nausea; < in open air, from sleeping, eating and drinking; > in room.—Violent headache, which forces compression of head between the hands.—From occiput a strong, tearing, continued pain which went into forehead and there pressed.—Heat and burning, or tearing and drawing pains, or shootings in head, often only semi-lateral, and extending to ears, teeth, and neck.—Burning in head, esp. in l. temple, < at night when lying in bed, > on sitting-up.—Inflammation of the brain with burning and pulsation in forehead, with sensation as if head were in a hoop; < at night, > after rising.—Weakness in head like a dulness, as if there was a vibration in forehead and turning about in a circle.—Constant rotary motion of head, even when lying.—Ebullition, boring, and digging shocks, and throbbings in head.—Pain, as from a bruise, in brain, while in bed, in morning.—Nocturnal cephalalgia.—Pains in bones of head, and exostosis in the cranium.—Sutures open; large head; precocious mental development.—Swelling of head; soreness of the scalp; sharp and burning pains in integuments of cranium.—Sensation of subcutaneous ulceration in whole head, < at night when becoming warm in bed; > after rising.—Tearing in one (l.) side of head and temple, extending from neck, with insupportable heat and perspiration, < at night and in heat of bed, > towards morning and while lying quiet.—Tension over forehead as from a tape or hoop, < at night in bed; > after rising and from laying hand on it.—Congestion of blood to head with heat in it.—Hydrocephalus.—Sensation of tension of scalp.—Scalp is painful to touch; < when scratching, which is followed by bleeding.—Tearing and stinging in bones of skull.—Itching on hairy scalp, and forehead and temples; < from scratching, when it bleeds and becomes erysipelatous.—Dry, stinging, burning, fetid eruption like yellow crusts, on forepart of head and temples, when scratching inflammation and erysipelas.—Exostoses, with sensation of subcutaneous ulceration on touching them, < at night in bed.—Open fontanelles with dirty colour of face, restless sleep, and sour-smelling night-sweat.—Falling off of hair; mostly on sides of head and temple; with humid eruptions on head or after clammy perspirations of head; with itching at night in bed; < from scratching; with burning, with great tendency to perspiration.—Great chilliness with contractive tearing pain of the scalp, extending from forehead to neck.—Fetid, sour-smelling, oily perspiration on head, and on icy-cold forehead, with burning in skin: < at night in bed, > after rising.—Dry eruption on head; small scabs in hair, sometimes with burning itching; moist scabs, with excoriation of scalp, and destruction of hair.—Sweat on head and forehead, sometimes cold and viscid.

3. Eyes.—Eyes confused, dull, and surrounded by a livid circle.—Pressure in eyes, as from sand, principally when fixing the attention on any object.—Shootings, itching, tickling and burning in eyes, principally in open air.—Eyes red, inflamed, with redness of conjunctiva or sclerotica, and injection of vessels of sclerotica, or of external canthi.—Profuse lachrymation, principally in evening.—Blear-eyedness.—Amaurotic dimness before l. eye.—Twitching of lids.—Excessive sensitiveness of eyes to light, and to brightness of the fire.—Firelight dazzles eyes greatly.—Eyes inflamed, with swollen inverted tarsi.—Pupils dilated.—Inability to open eyes well, as if agglutinated to balls.—Pustules in conjunctiva, and ulcers in cornea.—Eyelids red, inflamed, swollen, ulcerated on margins, and covered with scabs.—Sensation as if a cutting instrument were under eyelid.—Tumour in eyelid, like a stye.—Nocturnal agglutination of eyelids.—Spasmodic closing of eyelids, with difficulty in opening them.—Scabs round the eyes.—Amblyopia and confused sight, as in looking through a mist (periodical loss of sight); momentary loss of sight; black points, hovering flies, flames and sparks before eyes.—Apparent motion of letters, when reading.

4. Ears.—Tearing, shooting and drawing pains in ears, sometimes with a sensation of coldness, as if there were ice in ear, increased by heat of bed.—As if ice-cold water running out of ears; comes suddenly, lasts a few minutes and recurs; violent itching in ears in intervals.—Ear and auditory tube inflamed, with cramp-like and shooting pains.—Soreness of internal ear.—Meatus swollen with much earache when chewing.—Small ulcers in front of l. membrana tympanis.—Discharge of pus from ear, with ulceration of external ear.—Excoriation and ulceration of the concha auris.—Purulent otorrhśa and fungous excrescences in ear, with tearing in side of head affected, and in face.—Flow of blood from ears.—Discharge of cerumen.—Subcutaneous tumour, and furfuraceous and moist pimples on the lobe.—Hardness of hearing, sometimes with obstruction of ears, which ceases when swallowing or blowing nose (or the obstruction is caused by enlargement of tonsils), or with an extraordinary reverberation of all sorts of sounds in ears.—Tinkling, roaring, ringing, and buzzing in ears, principally in evening.—Obstinate tinnitus.—Painful sensitiveness, and inflammatory swelling of parotids.—Inflammatory swelling of the r. parotid gland with stinging.

5. Nose.—Swelling of the bones of the nose (external nose, as bridge of the nose, may swell up very large on both sides), with painful sensitiveness to touch.—Itching in nose.—Tension, pressure, and sensation of heaviness in nose.—Blackish colour of nose.—Inflammatory swelling and shining redness of nose, with itching.—Scabs in nostrils (bleeding when cleansed).—Discharge of a greenish fetid and corrosive pus from the nostrils.—"Dirty-nosed children.".—Frequent and profuse bleeding from nose, even during sleep, and sometimes when coughing.—Obstruction and dryness of nose.—Frequent sneezing.—Dry coryza, with obstruction in nose, or fluent coryza, with copious discharge of corrosive serum.—Putrid smell from nose.—Painful pustule in nose.

6. Face.—Face, pale or yellowish, or lead-coloured, or earthy (with dull eyes without lustre).—Features discomposed and drawn.—Circle of bluish red round the eyes.—Feverish heat and redness of cheeks.—Bloatedness and swelling of face, principally round eyes.—Swelling of one (r.) side of face with heat and toothache.—Swelling of cheek.—Tearing in bones and muscles (of one side) of face.—Aching and pricking in zygomatic process.—Sensation of tension of skin on face and head.—Sweat on face.—Red and tettery spots on face.—Yellowish scab on face, with discharge of a fetid humour, constant itching day and night, and bleeding of the part after having been scratched.—Crusta lactea.—Lips rough, dry and blackish, with burning when they are touched.—Salt taste on lips.—Swelling and ulceration of lips.—Yellowish scabs, purulent pustules, and small ulcers on the lips and round the chin.—Burning pimples with yellow crusts on lips.—Fissures, rhagades, and ulceration in (lips and) corners of mouth.—Distortion of mouth and convulsive movements of lips.—Masseter muscles contracted so that speech was difficult.—Atrophy and exfoliation of alveolar processes.—Clenching and immobility of jaws, with inflammatory swelling of lower jaw, and tension in muscles of neck.—Lockjaw with stinging pains and engorgement, and inflammatory swelling of submaxillary glands, with shooting or pulsative pains, or without pain.—Caries of jaw.—Facial paralysis from cold, r. or l. side: almost specific (R. T. C.).

7. Teeth.—Tearing, shooting, or pulsative pains in carious teeth, or in roots of teeth, often extending to ears, and over whole cheek of side affected, sometimes also with painful swelling of cheek or of submaxillary glands, salivation, and shivering.—The nightly pulsating toothache extends to ear.—Appearance or aggravation of toothache, principally in evening, or at night, in heat of the bed, where it is insupportable; renewed by fresh air, as well as by eating, and taking anything hot or cold into mouth.—The teeth are set on edge, grow black, loosen (they are painful when touched by tongue), denuded of gum, and fall out.—Itching, burning, and redness of gums.—Gums are fungous, and bleed easily.—Bleeding of gums when touching them ever so little.—Retraction and swelling of gums, principally at night, with burning pain and sensation of excoriation, on touching them, and when eating.—Gums livid, discoloured, and very sensitive.—Upper border of gums looks indented, the indentation being white and ulcerated.—The swollen gums have white, elevated, ulcerated, pointed edges.—Ulceration of gums.

8. Mouth.—[This remedy covers in general, affections of mouth and fauces; r. side of fauces; r. side of neck; nape of neck (*i.e.*, affections appearing in any of the mentioned places); rarely give *Merc.* if the tongue is dry.—Guernsey].—Putrid smell from the mouth.—Bluish colour, excoriation, and inflammatory swelling of inside of mouth.—Burning pain, vesicles, blisters, aphthć and ulcers in the mouth.—Stomacace.—Sensation of dryness in mouth and palate, or accumulation of tenacious mucus.—Ulceration of orifice of salivary duct, and profuse discharge of excessively fetid saliva, which is sometimes bloody (or tenacious).—Tongue moist, coated with white and thick, or dry, brown, or blackish mucus.—(Excoriated

patches like islands on tongue in children, with craving for fat, *v.*).—Hardness, inflammatory swelling (suppuration), and ulceration of tongue, with shooting pains.—Longitudinal furrow on tongue with pricking pains.—Needle pricks in tip of tongue.—Tongue swollen, soft flabby, the edges become indented by the impression of teeth.—Tongue red and swollen; ulcerated; black, with red edges; moist with intense thirst; grey patches on edges, dirty-yellow coat on upper surface.—Aphthć in the mouth; bluish and spongy; ulcers spread without penetrating the flesh.—Inflammation and superficial ulceration of the mucous membranes of mouth.—Salivary glands swollen and painful; saliva fśtid or tastes coppery.—Rigidity, insensibility, and immobility of tongue.—Sensation in tongue as if burnt.—Quivering of tongue.—Rapid and stammering speech; entire loss of speech.—Loss of speech and voice; she hears everything well, but can only reply by signs and grimaces; sunken features, weeping about her condition; cannot sleep, feels very exhausted; good appetite, thirst for beer; fćces and urine passed easily; lasted three days; (almost complete relief by *Hyo.*).—Ranula.—Ulceration and caries of palate.

9. Throat.—Continuous painful dryness of throat; the mouth being full of water.—Painful dryness of throat, which impedes speech.—Pain, as from excoriation and smarting in throat, or sensation of heat, which ascends into gullet.—Shooting pains in throat and in tonsils, principally when swallowing.—Elongation and swelling of uvula.—Suppuration of tonsils.—Pressure and pains as from excoriation and ulceration, in śsophagus.—Syphilitic ulcers in mouth and throat.—Inflammatory swelling and redness of back parts of mouth and throat.—Erysipelatous inflammation of all soft parts of mouth and throat.—Inflammation and redness of palate.—Angina esp. with stinging pains < by empty deglutition at night and in cold air.—Throat and fauces of a coppery red colour and swollen.—Accumulation of thick and tenacious mucus in throat.—Sensation as if there were a tumour, or some foreign body in throat, which it is necessary to swallow.—Constant want to swallow.—Sensation as if a worm rose up so that he must always swallow, whereby it goes off somewhat though he does not feel anything go down.—When swallowing shooting in tonsils, stitches into ears.—Painful, difficult, and sometimes spasmodic deglutition, with danger of suffocation.—Burning in throat as if from a hot vapour ascending from stomach, with dryness in throat when swallowing, and continuous desire to swallow, with accumulation of water in mouth.—Inability to swallow the least liquid, which escapes through nostrils.—The pains in throat commonly extend to ears, parotids, submaxillary, and cervical glands; they are < for the most part by empty deglutition, as well as at night, in fresh air, and when speaking, and they are often accompanied by salivation.

10. Appetite.—Putrid, salt, sweetish, or metallic taste.—Bitter taste, principally when fasting, in morning.—Rye-bread has a bitter or sweetish taste.—Acid and mucous taste during a meal, also at other times.—Saltish taste on lips.—Violent burning thirst, day and night, with desire for cold drinks, and principally for milk

and beer.—Desire for wine and spirits.—Insatiable appetite and craving (or complete loss of appetite), with apparent insipidity of food.—Appetite only for bread and butter; aversion to butter.—Bulimy, with great weakness.—Canine hunger, even after eating.—Want of appetite.—No wish for food, which, however, is agreeable to the taste when eaten.—Thirst more decided than appetite.—Speedy satiety when eating.—Stomach feels replete and constricted.—Dislike to all food, principally solid nutriment, meat, sweetmeats, cooked victuals and coffee.—Has no appetite for dry food, likes liquid food.—Great weakness of digestion, with continued hunger, and pressure in stomach, frequent risings, pyrosis and many other inconveniences after a meal.—Bread is heavy on stomach.

11. Stomach.—Excessive nausea and inclination to vomit, often with incisive and pressive pains in stomach, chest, and abdomen, anxiety and inquietude, headache, vertigo, cloudiness of eyes, and transient heat.—The nausea often increases after a meal, and is accompanied by a sensation in throat, as if things sweetened with sugar had been eaten.—Rising of air.—Risings, principally after eating, and often of a putrid or bitter or sour and rancid taste.—Violent empty risings.—Regurgitation (of ingesta) after eating and drinking.—Pyrosis, regurgitation of a rancid liquid, and hiccough during and after a meal.—Retching and vomiting of mucous or bitter matters, or of bile.—Violent vomiting with convulsive movements.—Burning, violent pain, and excessive sensibility (esp. to touch) in the stomach, and in the precordial region.—Tension, fulness, and pressure as from a stone in pit of stomach, principally during or after a meal, however little may have been eaten; stomach hangs down heavily.—Sharp constrictive pain in precordial region.—Cramp-like pains in stomach, even after a very light repast.

12. Abdomen.—Painful sensitiveness of hepatic region, with shooting, burning pains, < by every movement of body, or of the parts affected.—Region of liver swollen, painfully sensitive to contact; cannot lie on r. side.—Chronic atrophy of liver, with emaciation and dessication of the body.—Swelling and hardness of liver.—Complete icterus.—Abdomen hard and inflated, with soreness when touched, principally in umbilical region.—Colic which only passes off in a recumbent position.—Violent colic (with diarrhśa), with cuttings, lancinations as if by knives, painful contractions and pinchings in abdomen, principally at night or in cool of evening, esp. when he touches or takes hold of anything cold.—Tension, distension, and pressure, as by a stone, principally in umbilical region (and painfulness to contact).—Burning in abdomen, round the navel.—Excessive and insupportable pains in abdomen, which cease only on lying down.—Pain in abdomen, as if caused by a chill.—Sensation as if intestines were loose, and moving about in abdomen, when walking.—Intestines feel bruised if he lies on r. side.—The pains in abdomen are often accompanied by shivering, or by heat and redness of cheeks, as well as by great sensitiveness of abdomen, and of precordial region, to all contact, and to least pressure.—Sensation of emptiness in the abdomen.—Sufferings from flatulency, principally at night, with distension of abdomen, borborygmi, and rumbling.—Cutting stitch in lower abdomen r. to

l.; < walking.—Tension, aching, and lancinations in groins as by knives.—Inflammation of peritoneum and of intestines.—Boring pain in r. groin.—Obstruction and inflammatory swelling of inguinal glands, with redness and painful sensitiveness, when walking and standing.—Affections of inner region of liver; external belly, which may be hard and sensitive to touch; inguinal ring, either one (H. N. G.).—Painful hard, hot, sensitive swelling in ileo cćcal region.—Ulceration and suppuration of inguinal glands.—Buboes.—Abdomen externally cold to touch.

13. Stool and Anus.—Stool: acrid; bloody; knotty; containing pus; viscid.—Complaints before stool (a sick, painful, faint feeling comes on just before).—Complaints during stool; tenesmus; tenesmus without stool; diarrhśa with slime (*Merc*. is rarely indicated in these troubles where there is no slime.—H. N. G.).—Constipation, with hard, tenacious and knotty fćces, which cannot be expelled without straining.—Fćces of small shape; ribbon-like.—Ineffectual, but frequent want to evacuate, esp. at night, and sometimes with tenesmus, protrusion of hćmorrhoids, and nausea.—Loose and dysenteric evacuations, principally at night, with colic and violent cuttings, urgent want to evacuate, tenesmus and burning in anus, pyrosis, nausea and risings, anguish, heat or cold sweat on face, shivering and shuddering, exhaustion and trembling of all limbs.—Diarrhśa (preceded by colic), caused by the fresh air of evening.—Chilliness between the diarrhśic stools.—During a diarrhśic stool nausea and eructations.—Scanty evacuations of sanguineous mucus.—Evacuations which are mucous, or bilious, or putrid, or acid, or of a greenish or brownish colour, or reddish, or yellow, like sulphur; or a greyish-white.—Fćces of consistence of pap, or frothy, or like hash.—Evacuation of corrosive and burning fćcal matter.—Discharges of bloody mucus accompanied by colic and tenesmus; dysentery.—Discharge of blood, or of mucus, from rectum, even with evacuations that are not loose, and when not at stool, sometimes with tenesmus in anus.—Protrusion of hćmorrhoids.—Ejection of ascarides and lumbrici.—Itching, shootings, and excoriation in anus.—After stool prolapsus ani; or when pressing and straining to stool.—Prolapsus recti, which, when it protrudes, appears black and bloody.—Evacuation of substances undigested, or black, and like pitch; blood and mucus, undigested, smelling sour, excoriating anus.

14. Urinary Organs.—Urine acrid; turbid; too frequent; complaints while passing, and after.—Affections of urethra.—Continued want to urinate, day and night, sometimes with abortive efforts, or with scanty emission.—The stream of urine is excessively small.—Irresistible, sudden desire to urinate.—Frequent and copious emission of urine, as in diabetes, with great emaciation.—Involuntary emission of urine.—Urgent want to urinate, with incontinence of urine.—The quantity of urine emitted is greater than the quantity of fluid drunk.—Wetting the bed at night.—Emission of urine drop by drop.—Urine of a deep colour, or red, or brown, or white, as if mixed with flour or chalk, or of the colour of blood.—Offensive, turbid urine, which forms a sediment.—Sanguineous, pungent, or sour-smelling

urine.—Corrosive and burning urine.—Thick sediment from urine.—White and flock-like clouds in urine (or as if containing pus; scanty, fiery red).—Emission of hard mucus, or of flocks, and white threads during or after the emission of urine.—Discharge of blood from urethra.—Incisive and contractive pains in renal region, at night.—Pulsation, incisive pains, burning and shooting in urethra, even when not urinating.—Inflammation of orifice of urethra, and discharge of thick, yellowish, or serous, whitish matter.—Thick greenish (or yellow) discharge from urethra, more at night, (gonorrhśa) with phimosis; chancroids.

15. Male Sexual Organs.—Increase of sexual desire, and great lasciviousness, with frequent erections and pollutions.—[Erections: little boys may have this, lasting all night, causing emaciation; boys often pull and tear at the prepuce all the time, which may cause great emaciation, and result in death; adults often have this pulling, a kind of itching being the cause, and a feeling as if he "must do so"; collection of smegma behind glans.—H. N. G.].—Total loss of sexual power.—Painful nocturnal erections, and sometimes sanguineous pollutions.—The penis is small, cold, and flabby.—Glans cold and shrivelled.—Voluptuous itching, tingling, tearing, and shooting in glans and prepuce.—Puffing, or inflammatory swelling of prepuce, sometimes with burning pain, fissures, rhagades, and eruptions.—Burning in urethra during coitus.—Purulent secretion between prepuce and glans, sometimes with swelling, heat, and redness of front part of penis.—Swelling of the lymphatic vessels along the penis.—Vesicles and phagedćnic ulcers (chancres) with lard-like, or cheesy, bases, and raised margin, on glans and prepuce.—Sensation of coldness in testes.—Testes, hard and swollen, with shining redness of scrotum, and dragging pain in testes and spermatic cords.—Itching, tingling, and shooting in testes.—Profuse perspiration of parts when walking.—Excoriation between the parts and thighs.—Sloughing of scrotum.

16. Female Sexual Organs.—Suppression of catamenia.—Catamenia too copious, with uneasiness and colic.—Metrorrhagia.—Discharge of blood in an old woman, eleven years after menses had ceased.—Before catamenia: dry heat, with ebullition of blood, and congestion in head.—Congestion of blood to uterus.—Inflammation of ovaries and uterus.—During catamenia: redness of tongue, with deep-coloured and burning spots, salt taste in mouth, teeth set on edge, and gums blanched.—Leucorrhśa in general; complaints concomitant to leucorrhśa.—Leucorrhśa always < at night; greenish discharge; smarting, corroding, itching, burning after scratching.—Purulent, corrosive leucorrhśa, with itching in the parts, > by washing in cold water.—Hard tubercles on labia majora.—Itching pimples, and nodosities in labia.—Itching of genitals, < from contact of urine.—Inflammatory swelling in vagina, with a sensation as if it were raw and excoriated.—Swelling of labia, with heat, hardness, shining redness, great sensitiveness to touch, and burning, pulsative, and shooting pains.—Prolapsus uteri et vaginć; feels > after coitus.—Sterility with too profuse menstruation.—Easy coitus and certain conception.—Hard swelling in breasts, with pain as from ulceration (at every menstrual period), or with suppuration and actual ulceration;

ulcerated nipples.—Milk in breasts instead of menses; in breasts of boys or girls.—Excoriation of breasts.—The infant rejects the milk.

17. Respiratory Organs.—Catarrh, with febrile shivering, hypochondriacal humour, dislike to all food, and constipation.—Catarrh with cough, hoarseness, fluent coryza and sore throat.—Continual hoarseness and loss of voice.—Nasal voice.—Burning and tickling in the larynx with hoarseness.—Dry cough, sometimes fatiguing and shaking, principally in bed, in evening, or at night, also during sleep, and on waking in morning, excited by a tickling, or a sensation of dryness in chest, and < by speaking.—Cough, as if caused by irritation in stomach.—Convulsive cough, with retching.—Spasmodic cough (whooping-cough); two paroxysms follow one another rapidly, from tickling in larynx and upper part of chest, at night, without cough during day, with expectoration of acrid yellowish mucus, which is sometimes mixed with coagulated blood, tasting putrid or salty.—Cough < in night air, at night and when lying on l. side.—Dyspnśa (sensation of spasmodic contraction when coughing or sneezing).—Pains in head and chest when coughing, as if these parts were about to burst; or shootings in occiput; or pain as from excoriation in chest, and pain in loins.—Inclination to vomit and fits of choking, when coughing.—Cough with expectoration of pure blood.—Bloody sputa in tuberculosis.—Hoarse cough, with sensation of dryness and shootings in throat.

18. Chest.—Difficult respiration, as from want of breath, or short and loud respiration.—Breath having a bad smell.—Shortness of breath when going upstairs and when walking quickly.—Anxious oppression of chest, and difficulty of respiration, with want to take a deep inspiration, chiefly after a meal, or with attacks of suffocation at night, or in evening in bed, when lying down (on l. side).—Sensation of dryness in chest.—Want of breath, with squeezing and tension in chest, and sensation, on least movement, or attempt to speak, as if life were coming to an end.—Sharp pains, and sensation as if muscles of chest were bruised.—Aching in chest, sometimes penetrating to back, with inability to take a full inspiration.—Burning in chest, sometimes extending to throat.—Soreness and burning in chest.—Lancinations (as if caused by knives) in chest and sides, or as far as the back, principally when breathing, sneezing, and coughing.—Stitches in r. chest through from scapula; inflammation of lungs.—Sensation as of a contraction and of swelling, and pain as from excoriation and ulceration, in chest.—Suppuration of lungs after hćmorrhages, or after pneumonia.—Emphysema of lungs.

19. Heart.—Palpitation of heart; on slightest exertion.—Fainting.—Fatal syncope.

20. Neck and Back.—Burning and drawing pain in back and in nape of neck.—Indurated lymphatics.—Rigidity and rheumatic swelling of nape of neck, and of neck.—Shootings in muscles of neck.—Engorgement and inflammatory swelling of glands of neck, with shooting and pressive pains.—Shooting pains, instability, and weakness in loins.—Pain as from a bruise in sacrum, back, and

shoulder-blades.—Erysipelatous inflammation extending from back like a girdle around abdomen (zona).

22. Upper Limbs.—Sharp (rheumatic) pains in shoulders and arms, principally at night, and when moving them.—Jerking in arms and fingers.—Hot and red (arthritic) swelling of elbow, as far as hand.—Itching miliary eruption on arms.—Furfuraceous and burning tetters on forearms and on wrist.—Tremor of hands, with weakness; could neither feed nor dress himself.—Cracking, weakness, and sensation of paralysis in hand.—Sweat on palms.—Eruption like moist itch on hands, with violent nightly itching.—Cramp-like contraction of hands and fingers.—Swelling of joints of fingers.—Deep and bleeding fissures and rhagades in hands and fingers.—Cramp-like pains, and tendency to become stiff in hands when using them.—Swelling of wrist, with pain on touching or moving it.—Rigidity of wrists.—Painful stiffness of r. wrist-joint.—Ulceration at the nails.—Exfoliation of fingers (of finger-nails).—Deadness of fingers.

23. Lower Limbs.—Sharp and lancinating (rheumatic) pains in hip-joints, as well as thighs and knees, chiefly at night, and during movement, and often with a sensation of coldness in diseased parts.—Tearing in the hip-joint and knee, < at night, or with pulsating pain, suppuration commencing.—Burning in nates.—Soreness between thighs and genitals.—Burning in periosteum of tibić.—Drawing in tibia.—Great weakness, heaviness, and painful weariness in thighs and legs.—Weakness and giving way in knees, could scarcely stand.—Sensation of rigidity, of torpor and cramps in thighs.—Itching pimples on thighs.—Śdematous, transparent swelling, of thighs and legs.—Dropsical swelling of legs.—Tension in hams, as if tendons were too short.—Itching miliary eruption in legs.—Tetters on thighs and legs.—Contraction of legs, and cramps in calves of legs and toes.—Swelling of instep or heels, with sharp or shooting pains.—Wrenching pains in foot.—Coldness and sweat in feet.—Painful swelling of metatarsal bones.—Swelling of toes.—Ulceration at nails.

24. Generalities.—Śdema of face, hands, and feet with anćmia.—Cellulitis with lumpiness in any region.—Periostitis then necrosis.—Tearing and drawing, or shooting pains in limbs, chiefly at night, in heat of bed, which renders the pain insupportable.—Red and shining inflammatory swellings.—Inflammations ending in exudations and suppurations.—Nocturnal pains in bones.—Softening of the bones, so they will bend (rickets); enlargement of; caries of; inflammation of; prickling of; tearing in.—Affections of shoulder-blades; shin-bones; bones of the leg.—Sufferings < at night, or in evening, also from fresh (evening) air.—Throbbings, sensation of dislocation, and arthritic pains in joints, with swelling.—Rheumatic and catarrhal inflammations.—Rheumatic pains, with profuse sweat, which affords no relief.—The patient feels much better in morning and during repose, and esp. when lying down than when seated or walking.—Whole body feels as if bruised, with soreness in all bones.—Great agitation in limbs, with pains in joints, principally in evening.—Great fatigue, weakness, and rapid loss of

strength, with great uneasiness of body and mind.—Ebullition of blood, and frequent trembling, even after least exertion.—Sanguineous congestions (to head, chest, and abdomen) and hćmorrhages.—Great tendency of limbs to become numb.—Contractions of some parts.—Cramps, convulsive movements, and nocturnal attacks of epilepsy, with cries, rigidity of body, distension of abdomen, itching in nose, and thirst.—Sensation of coldness in outer parts; burning pain of inner parts; cutting in inner parts; darting pains in outer parts; darting in bones.—Sallow-coloured face.—Eructations; vomiting of bile.—Blackness of outer parts; bleeding from inner parts; restlessness of body; inflammation of inner parts, also of mucous membranes; secretion of mucus increased from any of mucous membranes.—Scurvy, particularly where there is much salivation; wasting away of soft parts; strictures after inflammation; inflammatory swellings, parts which are usually white turn red; zona or shingles.—Tonic spasms and tetanus.—Cataleptic rigidity of body.—Fainting fits.—Paralysis of several of limbs.—Emaciation and atrophy of whole body.—Excitability and sensitiveness of all the organs.—Cannot lie on r. side.

25. Skin.—Yellow colour of the skin, with perspiration which imparts a yellow colour to linen.—Skin dirty yellow, rough and dry.—(Jaundice.).—Engorgement, inflammation, and ulceration of the glands, with pulsative and shooting pains, hard swelling, red and shining, or without any perceptible alteration in skin.—Miliary, urticarial, pimpled, or pustular and purulent eruptions.—Exanthema burning; pock-shaped (hence, think of this remedy in small-pox); of scarlet colour; with swelling; purulent exanthema, *i.e.*, ulcerating; ecchymoses appear, of black and blue spots, without receiving any external injury.—Erysipelas.—Spacelus; brown mortification.—Tetters in general; burning suppurating.—Ulcers in general; with burning on edges; hard on edges with bloody pus; with corroding pus; with ichorous pus; having too little pus; too thin pus; thin, tenacious, sticky pus; swollen, inflamed; looking like lard; prickling; pulsating; painful on the edges; swollen on edges.—Flat, painless ulcers, pate, covered with phlegm-like pus; on scalp, skin of penis, &c.—Primary and secondary syphilis; round coppery red spots shining through skin.—Itching pimples, which burn after being scratched.—Eruptions which resemble scabies, and which bleed readily.—Wounds ulcerate easily (and become gangrened).—Erysipelatous inflammations.—Spots red and raised, or maculć hepaticć, or which resemble scorbutic spots.—Small and very itchy pimples, which ulcerate, and become encrusted.—Tettery, excoriated, and oozing spots, or dry, itching, and mealy tetters.—Desquamation of skin.—Phagedenic ulcers, or bluish, fungous, and easily bleeding, or superficial, and appearing as if bitten by insects, or secreting an ichorous and corrosive pus.—Chancrous ulcers.—Violent and voluptuous itching over whole body, principally in evening, or at night, < by heat of bed, and sometimes attended by burning after scratching.—Thickening of periosteum; exostosis and caries; abscess in joints; great brittleness of bones.

26. Sleep.—Excessive sleepiness, day and night; deep and prolonged sleep.—Great sleepiness during day.—Inclination to sleep without the power to do so.—Sleep retarded in evening, and too early awakening in morning.—Failing asleep late; complaints preventing sleep (as toothache, or any severe pain or trouble, &c.); sleeplessness in general before midnight.—Very light and unquiet sleep, with frequent awaking, starts, and fright.—Sleeplessness from nervous excitability.—Frequent, anxious, horrible, fantastic, historical, vivid and voluptuous dreams; dreams of robbers, of dogs that bite, of rebellion, of floods, of discharges of firearms, &c.—At night, restlessness, anxiety, agitation and tossing, uneasiness, pains, heat or sweat, ebullition of blood, cries, tears, palpitation of the heart, vertigo, and many other affections.—On going to sleep: < of the pains, starts, and frightful spectres before the sight.—During sleep: talking, groans, sighs, short respiration, with mouth open and hands cold; on waking, sweat, cries, tears, and incoherent expressions.

27. Fever.—Chilliness early in morning, when rising, but more so in evening after lying down, as if cold water had been thrown over him, and not > by heat of stove.—Chilliness at night with frequent micturition.—Chilliness between the diarrhśic stools.—Internal chilliness with heat of face.—Heat while in bed; as soon as one rises chilliness.—Heat after midnight with violent thirst for cold drinks.—Heat with anxiety and constriction of chest alternating with chilliness.—Perspiration towards morning, with thirst and palpitation of heart; from least exertion even when eating.—Perspiration in evening before going to sleep.—Very debilitating night-sweats.—Perspiration gives no relief, and accompanies all ailments.—Intermittent fever.—Chilliness in evening in bed, afterwards heat with violent thirst.—Chilliness and heat without thirst, towards morning thirst; during perspiration, palpitation of heart and nausea, the perspiration smells sour or fetid.—Coldness, shivering, and shuddering over whole body, principally after having slept, either by day and night, or only at night, or in evening, and in morning in bed, and sometimes with bluish colour of skin, icy coldness in hands and feet, muscular palpitations, convulsive movements of head, arms, and legs, contusive pain in limbs, and inclination to lie down, trembling in limbs, sharp pains in head, want to urinate, somnolence, &c.—Ebullitions with trembling from slight exertion.—Heat in face and head, with redness and burning of cheeks, and coldness, or shivering, or shuddering over whole body; or heat, mingled with shiverings or sweats.—During the heat, insatiable thirst, great desire for milk, and < of pains when uncovered.—Febrile attacks at night, or in evening; fever, with inflammatory symptoms, or with putridity; slow and hectic fever.—Pulse, irregular, or quick, strong, and intermittent, or weak, slow and trembling (generally full and fast, with violent beating in arteries).—Copious, excessive, and colliquative sweats, both day and night, in morning, in evening after lying down, and when eating, and sometimes fetid, clammy, sour, or oily, giving linen a yellow colour, and burning the skin.—Sweat, with nausea and inclination to vomit, great fatigue, thirst, anxiety, obstructed respiration, stitches in side, &c.

Mercurius Aceticus.

Subacetate of Mercury. Mercurous acetate. $HgC_2H_3O_2$. Trituration.

Clinical.—Chancre. Eyes, affections of. Dyspnœa. Dysuria. Favus. Sternum, pressure on. Throat, sore. Ulcers.

Characteristics.—Hahnemann made a separate proving of *Merc. ac*., which has furnished a few symptoms, not greatly differing from those of *Merc*. The throat lancinations were < by coughing rather than by swallowing. Cold water < the inflammation of the penis; bathing with tepid water >. Hahnemann has bracketed a symptom referring to the menses which came on at the new moon, four days before their proper time. The medicines whose action is influenced by the moon's phases are not numerous, and this is worth remembering. "Pressure in lower sternum and dyspnœa on standing erect" is a noteworthy symptom. "Margins of ulcers become painful." Hansen says that "burning in the urethra during urination and at other times" has been confirmed in practice; and that Donner of Stuttgart has cured with it a very painful syphilitic ulcer in urethra. Hansen commends it in tinea favosa on a syphilitic base; and for lancinating pains in tabes syphilitica.

Relations.—See Merc. *Compare also:* Luna.

SYMPTOMS.

3. Eyes.—Inflammation of angles of eyes, with burning itching, morning and evening.

9. Throat.—Dryness in throat, which impedes speech, with cough; pressive lancinations in lower part of throat, rather when coughing than when swallowing.

14. Urinary Organs.—Burning in urethra when making water.—Frequent emission of urine.—Copious emission in morning, but slow, as if duct were compressed, and with tenesmus.—Cutting pain on emitting last drop of urine.

15. Male Sexual Organs.—Penis inflamed and swelled at extremity, with burning and lancinations which awaken patient at night; are < by cold water and > by tepid water.—Contractive pain in testes.

16. Female Sexual Organs.—Internal swelling of the labia majora.—(Menses four days before the time, at the new moon.)

18. Chest.—Pains in chest as though it were raw, or as if an ulcer were within.—Pressure on sternum, just above scrobiculus, with difficulty of breathing when standing upright, even when he did not walk.

22. Upper Limbs.—Tearing in hands with enlargement and redness of the joints.

25. Skin.—Itching eruption on skin, and burning sensation after scratching; the margins of ulcers become painful.

27. Fever.—Shuddering in morning, preceded by drawing pains in limbs, heat at night, esp. after midnight, with a sensation of perspiring; profuse perspiration while moving about.

Mercurius Biniodatus.

Mercurius iodatus ruber. Mercuric iodide. HgI_2. Trituration.

Clinical.—Antrum, pain in. Asthma. Coryza. *Diphtheria*. Eczema. Eyes, inflammation of. Hæmorrhoids. Laryngitis. Liver, syphilis of. Malaria. Nose, polypus of; diseased bones of. Parotitis. Post-nasal catarrh. Quinsy. Rheumatism. Spleen, enlarged. Syphilis. Testicles, syphilitic enlargement of. Typhus fever.

Characteristics.—*Merc. bin*. was introduced and proved by the American Provers' Union in 1856, and is an important addition to the mercurial group. It acts more intensely on the lymphatic glands and cellular tissue than *Merc. v*., which it otherwise closely resembles. It has been extensively tested in throat affections. It acts more on the left side, or primarily on the left. The symptoms are < on empty swallowing; also < on swallowing food. Cases have been recorded in which small doses of *Merc. bin*. 3x or 2x have cut short an attack of asthma; or, if taken at bed-time, have prevented an expected attack from developing during the night. The explanation proffered is that *Mercury*, and especially its iodides, render the blood incapable of holding in solution large quantities of uric acid and urates, which are presumably the irritant factor in an asthmatic attack. But the pathogenesis of *Merc. bin*. has oppressed breathing, and if the general *Merc*. conditions are present it is quite capable of acting dynamically.—Headache is < in open air. Eyes < by bright light; psoric eye affections. Right side of nose is inflamed. The liver, spleen, and pancreas are affected; and also the bladder and male sexual organs. Wandering rheumatism. Troublesome dreams. It *acts well in* old cases of syphilis, particularly in persons of lax fibre, scrofulous, and those who have taken much *Mercury*. The symptoms are < after sleep. < After dinner. < Afternoon and evening. Open air > head. Getting warm walking > deafness. Cold air, cold washing, getting wet <. Touch and pressure <.

Relations.—*Antidoted by:* Hep. *Compatible after:* Bell. *Compare:* In syphilitic eruptions, Bad., Carb. an., Nit. ac. Ophthalmia Jequirity. Wandering rheumatism, K. bi. < After sleep; left to right, Lach. Dreams of water, Merc. protiod. In affections of antrum. Mg. c., Merc. c.

Causation.—Wetting. Washing floor. Weather changes.

SYMPTOMS.

1. Mind.—The head is worse; but he is good-humoured, even merry.—Low-spirited; disposed to cry.—Ill-humoured and bad taste on waking in morning.

2. Head.—Vertigo; everything seems to reel round her.—Sensation as if bound by a tight cord in frontal region.—Dulness in head and slight pressing pain in l. side, as during coryza; > walking in open air.—Pain in head with heat.—Great heat in vertex with pulsation, 11 p.m.—Small pustules on head.—Pain in bones of head, chiefly occipital.—Syphilitic tumour in brain.

3. Eyes.—Inflammation, with burning, watering; < bright light.—Albuginea inflamed and painful.—Psorophthalmia; trachoma; granular lids; pannus.

4. Ears.—Hearing dull; > evenings; ears close for a few moments at a time; coryza.—Earache (r.).—Wax increased.—Itching in both ears.—Swelling of parotid and neighbouring glands.

5. Nose.—Coryza: with headache; dull, hearing, > getting warm walking; r. side nose hot, swollen; much sneezing and running from head; hoarseness.—Whitish yellow or bloody discharge; affection of posterior nares, with raw sensation; nasal bones diseased; turbinated bones swollen.—Hawks mucus from posterior nares.—Crusty eruption on wings of nose.—(Polypus l. side.)

6. Face.—Pressive sticking; heavy aching in upper jaw.—Aching pain in l. cheek and l. eye, which seems slightly inflamed.—Parotitis (r.).—Lips slimy and sticky on waking.—Eczema rubrum on chin.

7. Teeth.—Fine stinging in teeth; painful jerks.—Toothache < by chewing; < after eating; with ill-humour.—Gums swollen, excessively tender.

8. Mouth.—Profuse flow of saliva, and aching in teeth of lower jaw.—Taste: bitter; slimy; metallic.—Mucous membrane inflamed with burning.—Mucous patches.—Nodules.—Boils in mouth.

9. Throat.—Much phlegm in throat and nose; hawks it out.—Sensation of a lump in the throat, with disposition to hawk it out; hawks up a hard, greenish lump.—Throat feels as if scalded on waking.—Inflammation and swelling of l. tonsil, velum elongated causing cough, next day both tonsils involved (l. to r.).—Painful swelling of tonsils and submaxillary glands.—Fauces dark red.—Diphtheritic patches, and superficial ulcers in throat.—Diphtheria r. side < from empty swallowing; throat sensitive to touch.—Tubercular sore throat.

10. Appetite.—Thirst for small quantities.—Wants food more salted.

11. Stomach.—Heartburn after dinner.—Loud and bitter belching.—Sinking.—Pain in epigastrium on pressure.

12. Abdomen.—Aching and fulness in r. hypochondrium.—Sudden cutting in liver.—Heavy pain in liver, pancreas and spleen.—Transient drawing pain followed by lameness in l. hypochondrium; l. waist feels sore on bending.—Enlarged malarial spleens and livers.—Abdomen distended at navel; sore to pressure.—Colic; uneasy sore feeling.—Buboes.

13. Stool and Anus.—Stool: copious, yellow brown, and somewhat watery, and coated with mucus and slightly bloody; preceded by colic, urging and slight tenesmus remained.—Pain in anus as if piles would appear.—Inveterate piles.

14. Urinary Organs.—Bright's disease.—Ulcers in bladder.—Frequent urgent desire.—Increased flow of urine; thick and dark when passing; red.

15. Male Sexual Organs.—Desire, esp. on going to sleep; emissions.—Sensitiveness of r. testicle and cord.—Sharp shooting stitches in end of penis through glans.—Gonorrhœa; discharge free and mucoid; patches of induration, along urethra.—Hard, red swelling in front of prepuce, and painless hard chancre in centre.—Sarcocele of l. testicle; syphilis.—Bubo, discharging for years; indolent chancre.

16. Female Sexual Organs.—Yellowish leucorrhœa.—Stony hardness of fibroid tumour.—Great soreness in whole breast.

17. Respiratory Organs.—Cough: from elongated uvula; with sore throat; with a little loose, whitish, slimy sputum.—Profuse yellow sputum.—Hoarse and husky, after getting a little wet in a shower.

18. Chest.—Constriction across chest.—Catching pain under r. breast, oppressing breathing.—Swelling of bronchial glands from atmospheric changes.

19. Heart.—Sticking pain in heart.

20. Neck and Back.—Swollen neck glands, with toothache, scarlatina, &c.—Spine sore and painful.

21. Limbs.—Rheumatic pains, now here, now there, mostly muscular.

22. Upper Limbs.—Rheumatic pains in shoulder-joint.—Axillary glands suppurate.—Strained feeling in middle of humerus as if about to break.—Palm of l. hand cracked, horny, several oozing rhagades.

23. Lower Limbs.—Aching in bones from hips to ankles.—Pains from calves up to sacrum.—Unbearable pains in legs towards evening, > on moving.—Pain of syphilitic ulceration in front of leg.

25. Skin.—Pustules, with inflamed base, sore to touch; itching slightly, scab over, but pus oozes.—Small fissures and cracks.—Lupus.—Condylomata.—Freckles; liver spots.—Syphilitic eruptions and ulcers.

26. Sleep.—Dreams: frightful; of travelling; swimming; lascivious.—Symptoms appear or are < on waking.

27. Fever.—Intense shivering, then feverishness; copious sweat at night.—Fever with grippe.

Mercurius Biniodatus *cum* Kali Iodatum.

("A canary yellow salt formed by the chemical union of one equivalent of Red Iodide of Mercury and two equivalents of Iodide of Potassium. Freely soluble in water."—Hale.) Double Iodide of Mercury and Potassium. HgK_2I_4. Solution.

Clinical.—Catarrh. Catarrhal fever. Cold. Facial paralysis. Hay-fever. Influenza. Nose, polypus of.

Characteristics.—Hale, who introduced this preparation, says of it: "It causes profuse discharge of watery mucus from the nose with sneezing, coughing, and watering of the eyes." He has used it with excellent effect in the treatment of inveterate colds, and this experience I can confirm. It may be confidently used where indications for its three elements are found, as all three are strongly represented in the salt. Cooper commends it in acute facial paralysis from cold. J. R. Haynes (*H. P.*, xi. 216) relates some experiences with this salt in the 6th attenuation. Mrs. X. had a violent attack of catarrhal fever; dull, heavy, frontal headache, not affected by motion; felt stupid; irritating water running from eyes; free watery discharge from nose; tongue coated white; whole pharynx purplish red; painful deglutition. Throat and mouth filled with mucus; sticky taste in mouth; muscular soreness all over body. Pulse go. Skin hot and dry. Hoarse cough in fits compelling to sit up. Copious yellowish frothy sputum giving but little relief. *Merc. k. i.* 6, one grain in half a glass of water, a teaspoonful every two hours, soon cured. Many cases of influenza with symptoms like these were cured. Haynes says if *Merc. k. i.* does not quickly relieve and completely cure it is of no use to repeat it; *Rhus* or *Dulc.* will probably be needed.

Relations.—*Compare:* Hippoz., Cepa, Pso. Facial paralysis Merc. sol., Caust.

Mercurius Corrosivus.

Mercurius corrosivus sublimatus. Corrosive sublimate. Mercuric chloride. $HgCl_2$. Trituration. Solution.

Clinical.—*Antrum of Highmore, affections of. Aphthć*. Appendicitis. *Bones, affections of*. Bright's disease. *Cancrum oris. Chancre. Diarrhśa. Dysentery. Eczema. Enteric fever. Eyes, affections of. Gums, affections of. Intestines, ulcerated*. Intussusception. Iritis. Jaundice. *Kidneys, inflammation of. Labour, puerperal fever. Measles. Miscarriage. Mouth, affections of. Mumps. Śsophagus, stricture of. Paralysis*. Paraphimosis. *Pemphigus. Perimetritis, Peritonitis*. Prosopalgia. Rigg's disease. Supra-orbital neuralgia. *Syphilis. Tabes mesenterica. Taste, disordered. Tenesmus. Throat, inflamed. Tongue, affections of. Uvula, elongated*.

Characteristics.—The chief effect of the Chlorine element in this salt appears to be to intensify the mercurial action. Mer*c. cor*. is *Merc. viv*. with a much greater rapidity of action. Phagedena is the type of *Merc. cor*. ulceration. Chancres spread with great rapidity. The burning of *Merc. cor*. is more intense. The dysenteric straining is more excessive. For this reason *Merc. cor*. is more generally prescribed In dysentery than *Merc. viv*., and it has even become a recognised remedy in the old school. As with other ulcerating remedies, *Merc. cor*. is a powerful disinfectant. Being much less irritating than *Carbolic acid*, it has taken the place of the latter as the leading antiseptic. Before the proper degree of dilution had been ascertained many patients were poisoned by its external use. *Merc. cor*. has some of its most characteristic symptoms in the urinary sphere. The urine is albuminous, scanty, hot, bloody; may be retained or suppressed. There is intense vesical tenesmus. In some of the poisoning cases the bladder was found after death firmly contracted into a small hard lump. "Tenesmus vesicć, with intense burning in urethra and discharge of mucus and blood with the urine or after it," is a keynote for *Merc. cor*. When this accompanies dysentery *Merc. cor*. is the remedy. In such cases the rectal and vesical tenesmus will go together. A patient of mine who had had under allopathic treatment an injection of a solution of *Merc. cor*. (gr. vi to two ounces) injected into his urethra for gonorrhśa, not only suffered intensely in the urethra at the time, but for years afterwards had a painful spasm of the rectum every time he had coitus. The tenesmus is < (or at any rate not >) after stool. This is the note of *Merc. cor*. In the diarrhśa calling for *Merc. cor*. there is the "never-get-done feeling" long after all has passed that there is to come. This is also the indication in intussusception. Membranous threads in stool; much pure blood; weakness, faintness, shuddering. *Merc. cor*. is a true gonorrhśa remedy, but local injections of it are not the right form of administration. The indications are: Greenish-yellow, or bloody, watery discharge, with violent burning, urging, and painful erections; dark purplish swelling; glans has a dark red or gangrenous appearance; phimosis or paraphimosis. The chancres of *Merc. cor*. spread with

great rapidity. Serpigenous ulcers; ulcers with ragged edges which will eat away half the penis in a few days. The sore throat of *Merc. cor*. is also characterised by the rapid spread of the affection and by the intensity of the burning pains. The mouth is specifically affected. There is one useful bit of practice in this connection which I learned from Dr. McKechnie. Long uvulas sometimes give rise to irritating coughs. If to the uvula is applied on a brush a little of a low trituration of *Merc. cor*. it will in many cases immediately, and often permanently, relieve the trouble. In syphilitic eye affections *Merc. cor*. is a leading remedy. The inflammatory symptoms are of the most violent character. Burning, agonising pains with excessive photophobia causing excoriation of cheeks. Tearing pains in bones and around eyes. Scrofulous no less than syphilitic ophthalmias with these characters yield to *Merc. cor*. Near to the eyes are the superior maxillary bones and their antra. These are affected by *Merc. cor*. The nasal catarrh is thick and glue-like; acrid excoriating. The gullet is very markedly affected. *Constriction* is a leading note of the remedy. Any attempt to swallow (solid or liquid) causes violent spasm and immediate ejection. Cutting as from a knife in throat. There is raging thirst for cold things. Desire for cold food and intolerance of hot things. Skin affections of many kinds are met by *Merc. cor*., including syphilitic roseola and small-pox and condylomata. In addition to the upper jaw and cranium, the sternum, ribs, and tibić are prominently affected. When present in cases of enteric fever, pains in the tibić may form an indication for *Merc. cor*. along with the symptoms of intestinal ulceration; also affections of the tibić occurring as sequelć of enteric. Like *Merc. viv., Merc. cor*. has a distinct place in rheumatism and rheumatic fever.─A case of poisoning by *Merc. cor*. is quoted from Eisenhardt in *Brit. Med. Jour*., July 18, 189l. A woman, 37, drank a tumblerful of tepid water in which a 5 per cent. sublimate pastille had been dissolved. Immediately she felt nausea, faintness; knees so weak she could not crawl into bed. Directly she was put to bed violent choking sensation set in, and she vomited bile-stained mucus. In an hour and a half, when Eisenhardt saw her, the symptoms were intensified, and in addition there were: General trembling movements, especially in upper part of body. Unable to speak; she indicated by signs pain in stomach, pharynx, and head. Pulse rapid, soft. Temperature subnormal. Pupils contracted. She had taken (with great difficulty) a quart of milk. Whites of eggs were also given, and later oil of *Camphor* and hypodermic injections of *Morphine*. There was temporary suppression of urine, but the kidneys acted in twenty-four hours. Tea and black coffee favoured diuresis but were quickly vomited. The vomiting gradually ceased. On the third day profuse salivation set in, and ulcerating stomatitis with bloody and slimy stools and scanty and occasionally albuminous urine. Emaciation; falling out of hair; failure of sight. In a fortnight she could stand, and was convalescent in a month. Unna reports two cases, in elderly women, of poisoning by sublimate lotion, lint, and gauze after ablation of the breast. The dressings were removed the second day in each case. The first symptoms were intense irritation of the skin and diffused redness of the part. The wounds failed to heal by first intention. Widespread dermatitis followed, and in the course of a few days a diffuse

erythema spread over the whole body, creeping onwards like "water on blotting paper." Some fever, general malaise, nausea, restlessness. In one case the eruption lasted three weeks and changed its type; "scattered urticarial and erythematous itching spots on all parts of the body suggested that there was at that period a poisoning of the more central nervous system" (Calcott Fox quoted in *Brit. Med. Jour*., December 13, 1890). R. C. Markham (*Med. Adv*., xxi. 524) records a cure with *Merc. cor*. after the failure of *Merc. viv*. in a case of dysentery. The symptoms were: (*1*) Stool: bloody mucus. (*2*) Tenesmus after stool. (*3*) Cutting colic below umbilicus. (*4*) Nausea. (*5*) Perspiration before and after stool, most pronounced on lower part of body and thigh. Symptoms 3 and 5 were not found under *Merc. viv*., but were under *Merc. cor*. The patient felt better within ten minutes of receiving a dose of *Merc. cor*. 1m. (I give the case, as it is a striking one, but I am unable to find the indications he names under *Merc. cor*. in Bell's work on *Diarrhśa*, from which Markham says he obtained them. My editions are third and fourth.) The Conditions of *Merc. cor*. are in the main those of *Merc*. Motion > pain in hip-joints. < By coitus. Dysentery and summer complaints from May to November. Notable Concomitants are: Vesical tenesmus and tibial pains. According to Teste, *Merc. cor*. is suited to males, and *Merc. sol*. to females. *Merc. cor*. will act in men on indications for *Merc. sol*. He lays this down as a positive law, and without going into the details of experience on which it is based, he mentions this as a "curious fact": Both *Merc. cor*. and *Merc. sol*. antidote *Sepia*, which antidotes them in turn but imperfectly. But "*this neutralisation of Merc. cor. by Sepia, and vice versâ, does not take place thoroughly except in the case of males, nor does the neutralisation of Merc. sol. by Sepia, and vice versâ, take place thoroughly except in females*."

Relations.—*Antidoted by:* (Poisonous doses) White of egg. *Dynamic antidotes:* Silic. (Hering), Merc. sol., Sep., Lobel. i. (Teste). Also antidotes to the Mercuries generally (*see* Merc.). *Compatible after:* Aco., Arg. n. (which follows Puls.). *Compare:* Throat, Caust. Iritis, Aur., K. iod. Typhoid, peritonitis, pain in tibia, Lach. Uvula, Hyo. Strawberry tongue, Fragar vesc., Bacil. Desire for cold water, Ars., Pho.; for cold food, Pho. (Lyc. > hot drinks.) Antrum of Highmore, Mag. c., Merc. bin. < After coitus, K. ca. Dysentery, Nux (but Nux has > after stool). Intussusception, Thuj. Burning in throat, Ars., Ars. iod., Caps. Spasm of throat, Bell. (Bell. has full, strong pulse, and no burning pains; Merc. cor. quick, weak, irregular pulse).

SYMPTOMS.

1. Mind.—Anxiety preventing sleep.—Weak intellect; he stares at persons who talk to him, and does not understand them.—Depressed; low-spirited.—Ill-humoured.—Ill-humoured, during which nothing pleases; alternating with hilarity.—Stupor and delirium.

2. Head.—Vertigo with coldness, cold perspiration; with deafness when stooping.—Heaviness of head.—Congestion to head and face, with burning of the cheeks.—Violent frontal headache.—Stitches in the forehead.—Pain like a drawing in pericranium.—Chilliness on head, lancinating pains in muscles on back of head.—Syphilitic tumours of brain.—Profuse sweat on forehead.—Swelling of head and neck.—Hair falls out.

3. Eyes.—Eyes inflamed and prominent.—Look fixed.—Burning and dryness of eyes.—Inflammation of eyes, pain pressing, burning, the pupils lose their roundness, are angular, eyes feel too small.—Inflammation of the iris, with irregular-shaped pupil.—Pupils contracted, with red face.—Eye sparkling, very movable.—Pupils contracted and insensible.—Excessive photophobia and acrid lachrymation.—Redness of conjunctiva.—Pains behind eyeballs, as if they would be forced out.—Lids everted, swollen, red, excoriated, burning, and smarting; edges covered with thick crusts or pustules.—Tearing as if in bone above l. eye, near root of nose, and in other parts of the bone.—Objects appear smaller.—Double vision.—(Retinitis: hćmorrhagic; albuminuric.—Iritis.—Kerato-iritis.—Episcleritis.—Hypopion.—Phlyctenular ophthalmia.)

4. Ears.—Inflammation with stitches in ear.—Discharge of fetid pus from ear.—Violent pulsation in ears, < l.—In afternoon burrowing and lancinations in l. ear so violent he involuntarily weeps and cries for three minutes; later no traces of it.

5. Nose.—Swelling and redness of nose.—Fluent coryza, loss of smell; rawness and smarting in nostrils.—Frequent nose-bleed.—Ozćna, discharge from nose like glue, drying up in posterior nares; perforation of septum.

6. Face.—Face and cheeks swollen, hard, bright red, puffy, bloated.—Distortion of features; paleness of distorted face.—Tearing in l. zygoma.—Tearing in upper jaw, in antrum, towards eye, followed by swelling.—Intense prosopalgia darting along jaws > by day < night; < 4 to 10 p.m.—countenance pale; anxious, as if exhausted.—Śdematous swelling of face; paleness; albuminuria.—Yellow colour of face.—Face covered with cold perspiration.—Lips black; dark-red swollen lip; lips excessively swollen and tender; dry and cracked; incrusted with a dry secretion.—Swelling and turning up of upper lip.—Stiffness of jaws; soreness.

7. Teeth.—Looseness of teeth; they pain; fall out.—Sordes.—Soreness in teeth and gums aching at night.—Gums swollen and spongy; bleed easily; detached from teeth; ulcerated.—Gums are covered with a false membrane and become gangrenous.

8. Mouth.—Lips and tongue whitish and contracted.—Tongue coated with thick white mucus, or dry and red; papillć elevated like a strawberry; coated white and swollen and stiff.—Tongue excessively swollen and inflamed; red with black coat;

covered with a greyish white crust; moist edges, red; pale dirty yellow posteriorly and edges.—Swelling of lips, mouth, tongue, and throat.—Mouth dry with unquenchable thirst.—Mouth inflamed; dry, burning, and parched, as if scalded.—Burning in mouth and gums.—Fetid breath.—Exudations and ulcers on mucous membranes of mouth and throat.—Ptyalism with salty (or very bitter) taste; bloody, yellowish, tough, acrid.—Accumulation of tenacious saliva, expectorated with difficulty.—Painful burning in mouth extending to stomach.—Discharge of albuminous mucus from mouth.—Swelling of tongue with ptyalism.—Swallowing not so painful as depressing the tongue.

9. Throat.—Pricking in throat as from needles.—Tonsils swollen and covered with ulcers.—Swelling of throat to suffocation, inability to swallow any fluid, with heat in mouth, tongue, and throat.—Violent burning, raw, stinging, smarting pain in throat and śsophagus, < by slightest external pressure.—Pharynx dark red, painful to contact.—Dryness of fauces.—Uvula swollen, elongated, dark red.—External throat and glands of throat enormously swollen.—When he makes the effort to swallow, retching and vomiting.—Spasms of śsophagus and stomach on attempting to swallow a drop of liquid.—Burning in śsophagus.—Taste in mouth, metallic or salty.

11. Stomach.—Burning from pit of stomach to mouth; in stomach.—Swelling, distension of pit of stomach, not permitting the least touch.—Violent unquenchable thirst for cold water.—Repugnance to hot food, desire for cold.—Drink frequently regurgitates through nose.—Painful retching and vomiting.—Vomiting of albuminous matter; of tough mucus; of blood; streaks of blood in the matter vomited; vomiting of stringy mucus, of green bitter substances like coffee-grounds, with coagulated blood; of bile; incessant green bilious vomiting; of pus.

12. Abdomen.—Pains in liver and r. shoulder.—Stitches as if in middle of liver.—Bloated abdomen, painful; very painful to least touch.—Cutting below navel.—Bruised pain in abdomen, esp. in cćcal region and over transverse colon.—Pressive pain in inguinal glands.—Lancinating drawing in l. inguinal region.

13. Stool and Anus.—Diarrhśa; yellow, green, bilious, bloody; with membranous shreds; of fćces with mucus and dark clotted blood.—Burning in rectum and anus; during stool.—Fćces loose, with bilious and fetid evacuations, green or brown, or composed of thin and sanguineous mucus, accompanied by almost incessant cuttings in abdomen and discharge of small quantities of bloody mucus; almost unsuccessful pressing, straining and tenesmus.—Ineffectual want to evacuate.—Tenesmus with dysenteric discharges, vomiting of bile, cramps in calves, and stitches in side.—(Spasm of rectum after coitus.).—Painful bloody discharges; with vomiting.—Dysentery.—Corrosive ichor oozes from anus, excoriating the parts.—Itching about anus (while walking).—Very persistent distressing tenesmus and cutting colicky pains; after stool burning and tenesmus of

rectum and bladder; stools hot, frequent, scanty, nothing but mucus tinged with blood.—Stool pasty, dark green, bilious, blackish, offensive.—Constipation; tenacious fćces.

14. Urinary Organs.—Tenesmus of bladder; suppressed urine.—Increased discharge of urine.—The urine is only passed in drops, and with great pain.—Urine scanty, brown, with brick-dust sediment; bloody; albuminous containing filaments, flocks or dark flesh-like pieces of mucus, epithelial cells of tubuli uriniferi in a state of fatty degeneration.—Gonorrhśic discharges, first thin, then thicker (greenish, < at night), and then smarting pain when urinating, with stitches in urethra.—Burning in urethra, more before micturition.—Paraphimosis.

15. Male Sexual Organs.—Violent erections during sleep.—Fine, painful stinging in l. testicle.—Penis and testes enormously swollen.—Chancres assuming a phagedenic appearance, and secreting a thin, ichorous pus.

16. Female Sexual Organs.—Menses too early and too profuse.—Leucorrhśa of a yellowish white, with sweetish, nauseous smell.—Intense inflammation of the vulva.—Painful glandular swellings about nipple.—Nipples crack and bleed; severe pain when attempting to nurse.

17. Respiratory Organs.—Hoarseness; aphonia.—Burning, cutting, and stinging in trachea, with loss of voice.—Respiration slow, interrupted, sighing.—Difficult respiration.—Spasm of glottis when swallowing.—Hollow, dry, shaking cough.—Cough, with expectoration of mucus tinged with blood.

18. Chest.—Constriction of chest, breathes with pectoral muscles.—Oppression of chest.—Stitches in chest, through thorax (r. lower side).—Nocturnal shootings across chest.—Hćmoptysis.

19. Pulse.—Pain in precordial region.—Palpitation of heart in sleep.—Pulse: small, intermittent, irregular; rapid.

20. Neck and Back.—Pains in head, back, and limbs; kidneys affected.—Glands of neck hard and swollen.—Pott's disease; lies on back with legs drawn up.—Tonic cramps; tension in l. scapula; tearing.

21. Limbs.—Coldness in extremities, they look purple, with small, spasmodic, frequent pulse.—Rheumatic pains after gonorrhśa suppressed by *Copaiva*.—Paralysis in all limbs; trembling.

22. Upper Limbs.—Rheumatic pains in l. shoulder and shoulder-blade.—Sensation in l. axillary glands as if they would swell up; frequent lancinations.—Deltoid muscle feels relaxed.—Whole arm up to shoulder is much swollen, red, and covered with vesicles.

23. Lower Limbs.—Pains in lower limbs as from pin-pricks.—Stitches in hip-joint, > on motion.—Stitches in r. hip-joint.—Shootings in coxo-femoral joint, during repose and movement.—Myalgia of thigh muscles.—Pain in tibić.—Sensation as if legs had gone to sleep.—The muscles of thigh and calf feel relaxed.—Cramps in calves.—The feet are icy cold.

24. Generalities.—Painful drawings in periosteum (like those which precede an intermittent fever) with heat in head.—Periostitis (upper and lower jaws).—Inflammation of lymphatic vessels.—Twitches, convulsive contractions.—Convulsive twitchings of muscles of face, arms, and legs, and convulsions of limbs.—Violent starts, with shaking of whole body, on going to sleep.—Trembling.—Paralysis of upper and lower extremities.—Glandular swellings.—Lies on back with knees bent up.—Great debility.—General anasarca.—Feeling of coldness, esp. of head.—Shivering, provoked by slightest exercise, and also by open air (even when weather is warm), sometimes with cutting pains and tenesmus.—Heat on stooping, and feeling of relief on raising the body again.

25. Skin.—Burning and redness of skin, with formation of small vesicles.—Severe and stubborn eczema of sweating parts of body exposed to the fumes.—Condylomata.—Syphilitic rash.—Phagedćnic ulcers.—Serpigenous ulcers.—Chancre.—Small-pox.—Swelling of glands (neck, buboes).—Grey colour of. nails.

26. Sleep.—During sleep, violent hiccough.—Somnolence.—Frequent yawning and stretching.—Sleepless at night; when trying to go to sleep violent starts; starting from sleep.—Sleeplessness on account of vertigo; on account of anxiety.—Dreams: of conflagrations and murder.

27. Fever.—Pulse small, weak, intermitting, sometimes trembling.—Chilliness from least movement and in open air, generally with colic.—Chilliness in evening, esp. on head.—Chilliness at night in bed.—Heat when stooping, and coldness when rising.—Surface cold and covered with profuse perspiration, esp. on forehead; cold perspiration, often only on forehead.—Clammy, cold perspiration; offensive, toward morning.—Whole skin covered with cold perspiration, with anxiety.—Night-sweat.—Burning and stinging heat in skin.—Great heat of skin; at night with anxiety, preventing rest.—External heat with yellowness of skin.

Mercurius Cyanatus.

Bicyanide of Mercury. Mercuric Cyanide. Hg $(CN)_2$. Solution. Trituration.

Clinical.—*Diphtheria*. Dysentery. *Enteric fever*. Hæmorrhages. Kerato-iritis syphilitica. Phlebitis. *Throat, sore*. Varicosis.

Characteristics.—The history of this remedy is a romantic one. When Dr. Alexander Villers was an infant he had diphtheria. Known remedies had failed to arrest the disease, and his father, Dr. Dominic von Villers, was in despair. Taking counsel with his friend, Dr. Beck (of Monthey in Switzerland), the latter was struck with the likeness of the case to the effects of *Merc. cy*. in some poisoning cases, reports of which he had just been reading. He suggested the remedy A small quantity of the salt was procured and an attenuation rapidly made and administered. Improvement soon set in, and recovery happily followed. The patient, saved by *Merc. cy*., lived to do most brilliant work with the same remedy when practising in St. Petersburg, and *Merc. cy*. has taken a sure place at the head of remedies for this affection. The local symptoms are very clearly defined, and among the general symptoms profound prostration, coldness, and cyanosis are leading indications. Villers had better results with the 30th than with any lower attenuation. *Merc. cy*. is also a very efficient prophylactic in diphtheria. In the sensational New York poisoning case of February, 1899, Mr. Henry C. Barnett, the victim, was treated for diphtheria by his doctors before the cause of the illness was discovered. Beck (*Rev. Hom. Fran*., xii. 153) mentions among the leading symptoms: extreme feebleness, trembling, syncope. Icy coldness; general coldness with nausea. Diphtheritic membrane in throat, mouth, and at anus. Nash reports as particularly indicating it a chronic sore throat of public speakers, with rawness in spots and a broken-down appearance, as if about to ulcerate, and this additional condition—"it hurts the patient to speak." Hæmorrhages occur, dark and persistent. Swallowing is impossible or = severe cutting pains. Thought of food = retching. There are varicose veins with great tenderness on left leg. Symptoms are < after eating.

Relations.—*Compare:* Ar. tri., Caust., Hep., K. bi., Phyt., Echin., Lach., Gels.

SYMPTOMS.

1. Mind.—Excitement, anger, raved furiously at attendant.—Excessive ill-humour after eating a little too much.

2. Head.—Vertigo with singing in ears, < sitting up.—Very severe, tearing headache, esp. forepart, < night.

3. Eyes.—Eyes: sunken; fixed; injected; pupils dilated.—(Syphilitic kerato-iritis; much inflammation; severe nocturnal pains.)

4. Ears.—Ringing in ear.

5. Nose.—Profuse epistaxis several times a day for two weeks.

6. Face.—Face: flushed; cyanotic; pale and wan.

8. Mouth.—Teeth painful; gums swollen, covered with white adherent layers, under which is found a violet border.—Tongue: pale with a yellowish streak on base; swollen with red edges; grey, metallic-looking coat; eight blisters on l. margin and on soft palate, opening and becoming irregular ulcers; afterwards on r. margin.—Lips, tongue, and inside cheeks dotted with greyish-white ulceration.—Large grey leathery ulcer in mouth.—Inflammation of whole buccal cavity; salivation; fetid breath; great pain on swallowing.—Taste: bitter; disagreeable; styptic; metallic.

9. Throat.—Great redness of fauces with difficulty of swallowing.—White opalescent coating, like mucous patches on faucial pillars and tonsils.—Roughness of throat, difficult swallowing.—Follicular tonsillitis, < r.—(Chronic sore throat of public speakers; raw, sore, broken-down appearance, raw in spots; it hurts to speak.—Nash.).—Diphtheria; profound prostration.—Uvula œdematous.

11. Stomach.—Aversion to food.—Intense thirst, but drinks are speedily vomited.—Burning thirst, vomits but not ingesta; cannot endure soups or hot drinks, which always seem too salt.—Incessant hiccough.—Violent retching from merely thinking of sugared water.—Milk >.—Epigastrium sensitive to pressure.

12. Abdomen.—Abdomen soft, not painful on pressure.—Excessive colic < by every evacuation.

13. Stool and Anus.—Round anus: small piles; pains (and in rectum) when sitting; sensitive light red swelling; diphtheritic deposit.—Frequent urging to stool with tenesmus.—Frequent diarrhœa preceded by severe colic.—Offensive, green, slimy stools.—Bloody stools.—Scanty stools.—Obstinate constipation (later effect).

14. Urinary Organs.—Micturition painful.—Urine: albuminous; amber yellow; retained; completely suppressed.

15. Male Sexual Organs.—Semi-erection of penis (persisting even after death).—Dark blue colour of scrotum and penis (persisting after death).

17. Respiratory Organs.—Slight cough.—Hoarseness; talking = pain in throat.

19. Heart.—Violent and abrupt beating of heart.—Strong palpitation.

21. Limbs.—Slight spasms of extremities.

22. Upper Limbs.—Severe pain in l. calf; the veins of the part form two hard cords meeting above popliteal space, very painful to slightest touch; leg swells when standing.—(Inflammation of articular cartilages of r. wrist, with œdema of forearm.)

24. Generalities.—Great weakness; cannot stand up.—Repeated fainting.—Great debility during diarrhœa; at last he fell to the ground in a swoon.

25. Skin.—Skin moist and cold.—Scarlatina.

26. Sleep.—Drowsiness with easy waking.

27. Fever.—Icy coldness.—Great sensitiveness to cold.—Extremities very cold; in evening.—Skin moist and cold.

Mercurius Dulcis.

Subchloride of Mercury. Calomel. Mercurous chloride. HgCl. Trituration.

Clinical.—Catarrh. Condylomata. Conjunctivitis. Deafness. Diarrhśa. Eustachian tube, affections of. Gastro-malachia. Meningitis. *Peritonitis, plastic*. Prostatitis. Throat, sore.

Characteristics.—*Merc. dulc*. is responsible for a large amount of the mercurialisation of the past and for some of the present. As a comparatively mild and slow-acting form of mercurial, it has none of the corrosive effects of the perchloride, but it has all the power of the metal in it nevertheless, and it has had its own share of disasters. For constipation and any affection which could be ascribed to the liver, blue pill was at one time about the only recognised remedy. Some homśopaths have adopted a modification of this by prescribing *Merc. dulc*. 1x in two- or three-grain doses as a direct purgative. But as *Merc. dulc*. has caused both constipation and diarrhśa, it is probable that the action is roughly homśopathic. The Schema is made up for the most part of toxicological and clinical symptoms; though a proving of potencies has been made. It is especially scrofulous children who are liable to remittent bilious attacks who are benefited by *Merc. dulc*. The keynote of *Merc. dulc*., in this as in other complaints is *pallor*: "pallid as a corpse," and with this a "flabby bloatedness" of appearance. Pale, scrofulous children who have swelling of cervical and other glands. Skin flabby and ill-nourished. Another leading feature of *Merc. dulc*. is inflammation with plastic exudation. I have seen *Calomel* in old-school practice rapidly resolve and cure a violent meningitis, with wild delirium, in a girl of five. In this case there was probably plastic exudation on the membranes. Plastic peritonitis. Gluing up of Eustachian tube with catarrh. Scrofulous inflammation in general and particularly

of the eyes. Soreness round anus is a leading indication in many affections when it occurs as a concomitant.

Relations.—*Antidoted by:* Hep. *Compare:* In stringy stools, Sul. ac. Catarrhal inflammation of middle ear, Kali m. Eustachian tube closed; deafness of old age, Kali m.

SYMPTOMS.

1. Mind.—Agitated.—Apprehensive.

2. Head.—Heaviness across forehead.—Falling off of hair.

3. Eyes.—Gummy secretion on edges of lids; later, smarting and indistinct vision.—Eyes: red; dry; photophobia.—Symptoms < after exercise, and when heated from exercise.—Scrofulous ophthalmia.—Ciliary blepharitis.

4. Ears.—Deafness, occasioned by a swelling, which compresses Eustachian tube.—(Deafness of old age.).—Scrofulous otitis.—Itching in external meatus.—Sudden fluttering in l. ear for a few moments.

5. Nose.—Violent epistaxis.—Dry, crusted nostrils.—Sore r. nostril.

6. Face.—Face flushed.—Pallid as a corpse.—Swelling of cheeks.—Exfoliation of lower jaw and death.

7. Teeth.—Violent burning in teeth; teeth become bare, shake, and fall out; gums swollen and bleeding when touched.

8. Mouth.—Difficulty to open mouth.—Ulcers in mouth, bleeding throughout night.—Aphthć on tongue.—Salivation sometimes with hćmorrhage.—Flow of horribly fetid, dark saliva, which attacks lips and cheeks; tongue and whole mouth have black appearance.

9. Throat.—Excessive ulceration of throat.—Difficulty of swallowing.

11. Stomach.—No appetite.—Urgent thirst.—Vomiting.—Weight and pain at epigastrium.

12. Abdomen.—Violent pain in abdomen; griping; tenderness.—Bloated, hot, painful abdomen (gastro-malachia).

13. Stool and Anus.—Diarrhśa; with vomiting.—Stools-watery, greenish; coppery green, like chopped eggs; grass-green; stringy; mucous, bloody, dysenteric; black with great epigastric oppression, sinking.—Constant disposition to stool.—Obstinate

constipation.—Rectum: burning; tenesmus.—Soreness round anus.—Condylomata round anus.

14. Urinary Organs.—Urine increased (2nd d.); diminished (3rd, 4th, and 5th d.).

15. Male Sexual Organs.—Acute inflammation of prostate, after suppressed gonorrhśa; burning, pressing pains; intense dysuria; urine scanty.—Stinging and itching just back of corona glandis.

16. Female Sexual Organs.—Broad, moist, burning condylomata around external genitals, perinćum and anus, of exceedingly offensive smell.

18. Chest.—Great oppression in chest and in region of heart.

21. Limbs.—Trembling of hands and feet.

22. Upper Limbs.—Rheumatic stiffness and catching pain in muscles of legs and knee-joints.—Cramps in calves at night.

25. Skin.—Desquamation of skin, esp. of hands and feet.—Phagedćnic ulcers, with white bases, and painful and inflamed margins, in mouth, palate, face, genital and other parts.—Copper-coloured eruption.

27. Fever.—Feverish heat, profuse nocturnal sweat, tearing pains in limbs, prostration of strength, and trembling.—Fever, sometimes hot, putrid.

Mercurius Nitricus.

Nitrate of Mercury. Mercuric nitrate. $Hg(NO_3)_2$. Trituration.

Clinical.—Condylomata. Eyes, affections of. Gonorrhśa. Malaria. Mucous patches. Syphilis of nerves. Vegetations.

Characteristics.—In the form of *Liquor Hydrargyri Nitratis acidus* and *Unguentum Hydrargyri Nitratis* of the old school this salt of mercury has achieved a reputation as "a stimulating application" to indolent ulcers, to the eyelids in ophthalmia, and in a variety of skin diseases such as herpes, ringworm, impetigo, lepra, psoriasis, rupia. The homśopathic authority for it is Hansen, who considers that *sticking pains* are its special indication, and also *sticking itching*. Eye affections with burning, sticking pains, photophobia, and epiphora. Mucous patches with sticking pains. Gonorrhśa with frequent burning, sticking itch on corona glandis and in sulcus coronarius. Vegetations. Hansen says Donner commends it in syphilis of the nerves and of the bones. The Schema is compiled

from poisoning cases. Among the symptoms are cachexia; tremors; frequent fainting; pains so intolerable he calls for a knife to kill himself. Coldness predominates, but there is the nitric acid flush of the face.

Relations.—*Compare:* Merc. dulc. in stinging and itching behind corona glandis.

SYMPTOMS.

1. Mind.—Delirious.—Extreme anxiety.—Rolled on the ground with excessive pain, and called for a knife to kill himself.—Memory poor.—Stupor approaching narcotism.

2. Head.—Dizziness.—Headache.

3. Eyes.—Eyes sunk.—Pupils somewhat dilated but react.

4. Ears.—Ringing in ears.

6. Face.—Face: flushed; pale and livid; pale, expressive of frightful anxiety.—Features contracted.—Lips bluish red.

8. Mouth.—Blue line round margin of gums (esp. round incisors and canines).—Gums swollen and bleeding.—Tongue: furred; cannot be protruded.—Tongue and lips burned, parched, painful.—Mucous membrane of mouth inflamed and swollen, painful.—Salivation.—Coppery taste.

9. Throat.—Throat: dry; sore, red, painful.

11. Stomach.—Much eructation and frothy discharge from mouth with occasional vomiting.—Vomit: glairy tenesmus; bilious; bloody.—Extreme epigastric pain.

12. Abdomen.—Considerable pain on pressure over region of stomach and abdomen generally.—Pain in hypogastrium.

13. Stool and Anus.—Tenesmus.—Severe diarrhśa with colic.—Bloody stools followed by collapse and death.—Constipation.

14. Urinary Organs.—Severe pain in voiding urine.—Urine: high-coloured.—Suppression of urine.—Urćmia (urea was found in blood drawn from the arm during suppression of urine).

15. Male Sexual Organs.—Marked diminution of sexual power.

16. Female Sexual Organs.—Severe pelvic pains and incessant passing of blood from bowels followed, as an aggravation, the local application of Merc. dulc. to womb.

17. Respiratory Organs.—Voice feeble; almost extinct.

18, 19. Chest and Heart.—Continuous spasmodic movements of chest.—Obscure heart sounds.—Pulse small, thin.

21. Limbs.—Tremors severe, difficult prehension and walking.—Spasms, twitchings, incoordination.—Cramps in lower extremities.

25. Skin.—Where the liquid touched a brown eschar is left.

26. Sleep.—No sleep for several nights.

27. Fever.—Skin: cold; cold, clammy; cyanosed extremities.—Violent chill.—Hot skin; fever.—Profuse perspiration.

MERCURIUS VIVUS. Mercurius.

(*1*) MERCURIUS OXYDULATUS NIGER.

Mercurius solubilis Hahnemanni. Dimercuros ammonium nitrate. $_2(NH_2Hg_2)NO_3H_2O$. [A mercurial preparation devised by Hahnemann as a substitute for the corrosive mercurial salts in use at the time, and at once adopted in all countries on account of its much milder and more efficacious anti-syphilitic qualities. It was prepared by precipitating Mercury from its solution in nitric acid by means of caustic ammonia. This is the preparation Hahnemann used in his proving.] Trituration.

(*2*) MERCURIUS VIVUS.

Hydrargyrum. Argentum vivum. Chamćleon minerale, &c. Metallic Mercury. Quicksilver. Hg (A. W. 199.8). [Although Hahnemann proved Mercurius solubilis, he recommended the use of triturations of the pure metal in practice as being the simplest mercurial preparation, and more easily obtained and equally available with Merc. sol. for prescribing on the symptoms of the latter.] Trituration. [Decoction: water in which quicksilver has been boiled for half an hour.]

Clinical.—[The letters *s* and *v* indicate the preparation—Solubilis or Vivus—mentioned in the *Prescriber* in connection with the malady the name of which they follow; they are not intended to indicate a preference of one over the other.] *Abscess (s)*. Anćmia. Aphthć. Appendicitis. *Balanitis (s). Bone, disease of (s)*. Brain, inflammation of. *Breath, offensive (s). Bronchitis (s). Bubo (s)*. Cancrum oris. *Catarrh (s)*. Chancre. *Chicken-pox (s). Cold (s)*. Condylomata. *Cough (s).*

Dentition, abnormal (s). Diarrhśa (s). Dysentery. *Dyspepsia (s). Ecthyma (s)*. Eczema. Emaciation. *Excoriation (s). Eyes, affections of (s)*; gouty inflammation of. Fainting. Fevers. Fissures. *Glandular swellings (s). Gout (s). Gum-boil (s). Gums, unhealthy (s). Heart, affections of (s). Herpes (s)*. Hydrophobia. *Jaundice (s). Joints, affections of (s)*. Leucorrhśa; in little girls. *Liver, affections of (s). Lumbago (s)*. Mania. *Measles (s). Melancholia (s)*. Meningitis. Mollities ossium. Mucous patches. Mumps. *Noises in the head (s). Odour, of body, offensive (s)*. Ovaries, affections of. *Pancreatitis (s). Parametritis (s)*. Parotitis. Peritonitis. *Perspiration, abnormal (s). Phimosis (s). Pregnancy, affections of (s.). Prostate, disease of (s). Purpura (s) (v). Pyćmia (s). Ranula (s). Rheumatism (s) (v)*. Rickets. Rigg's disease. *Salivation (s). Scurvy (s). Small-pox (s)*. Stomatitis. *Suppuration (s)*. Surgical fever. *Syphilis (s). Taste, disordered (s). Teeth, affections of (v). Throat-deafness (s). Throat, soreness of (v). Tongue, affections of (s) (v)*; mapped (v). *Toothache (s). Tremors (s). Typhus fever (v). Ulcers (s). Vaccination (s)*. Vomiting (s).

Characteristics.—No pains have been taken to keep distinct *Merc. sol*. and *Merc. viv*., and I do not find it practicable to attempt to separate them. Though *Merc. sol*. was the preparation Hahnemann proved, he recommended *Merc. viv*. as a superior preparation for homśopathic prescribing in his preface to the proving. *Mercurius solubilis Hahnemanni* was invented by him in his pre-homśopathic days in response to a general desire for a mercurial preparation which should be at once soluble and non-corrosive, and it at once took its place in pharmacy, a place it has never lost. The method of developing the medicinal power of metallic mercury by graduated trituration was a later discovery, though there was a suggestion of it in the well-known *Hydrargyrum cum cretâ*. To the symptoms of Hahnemann's pathogenesis of *Merc. sol*. are added observed effects of *Mercury* in those engaged in working with the metal, in patients taking *Mercury*, and effects in those applying mercurial inunctions to patients—many having been severely affected by absorbing it through their hands. There is no difference between these effects and the symptoms of the proving so far as the general characteristics are concerned. In the finer characteristics there must be differences. The symptoms of the proving are in general more particularly characterised than the effects of *Merc. viv*. For instance, "At night severe toothache, and when that went off great chilliness through the whole body," belongs to the *Merc. sol*. proving; and so do these: "Vertigo: when sitting at his desk there was whirling in the head, as if he were drunk, he rises up and walks about the room staggering, then anxious heat breaks out over him, with nausea but not to the length of vomiting; at the same time some headache." "From occiput a strong, tearing, continued pain, which went into the forehead and there pressed." The symptoms of nose-bleed and the more finely characterised throat symptoms ("stitches on tonsils"; "stitches into ear on swallowing"; "something hot rises into throat.,"), were produced by *Merc. sol*., so were the majority of the symptoms in the male and female sexual organs. But this is not to say that *Merc. viv*. will not answer equally well, or even better, for curing them. The only bit of comparative experience I have in the action of the two is this: in a case of cold in

which *Merc*. seemed indicated, *Merc. sol*. 30 was given and failed, and *Merc. viv*. 30 promptly cured.—We of the present generation can hardly form a conception of the havoc wrought by *Mercury* in the days when it was considered necessary to "touch the gums" in all cases for which *Mercury* was prescribed before any good could be hoped for. The motto, "Salivation is Salvation," tells its own tale. "It was quite an event," says Teste, "when in the sixteenth century the discovery was made that *Mercury* will cure syphilis without the patient being salivated. One error, however, being substituted in place of another, it was supposed that the sweat, the diuresis, or the diarrhśa which followed the exhibition of *Mercury*, replaced the absent salivation; the gross humoralism which prevailed at that period did not allow of another explanation. For a graphic picture of a practice which was part of the ordinary routine until recent times, I quote the following from Bransby Cooper's *First Lines of Surgery*, 6th ed., p. 348: "*Mercury* acts upon some individuals like a poison [!] they are seized with palpitations of the heart, tremblings of the limbs, oppression of the breathing, and irregular pulse. When such indisposition takes place in a person employing *Mercury* we conclude that this mineral is actually producing a deleterious impression on the system [!]. It was noticed by the late Mr. Pearson that every year, when it was the custom to salivate freely, a certain number of individuals thus treated died suddenly in the Lock Hospital. They were first affected as I have described, and, on attempting to make the slightest effort they dropped down dead. Mr. Pearson learned from experience [!] that these deaths arose from the deleterious action of *Mercury* on the constitution, and the derangement of the system thus excited he proposed to call the *Mercurial erethismus*." Homśopathy has filled out this picture in full detail, and turned this deadly blundering to curative account. There was a fitness in naming this metal after the volatile deity. It provides us with weather-glasses and thermometers, and it turns those who are under its influence into weather-glasses and thermometers likewise. [An electrician, who at one time was required to work with his hands frequently in a trough filled with quicksilver, thereafter could not bear the slightest shock of electricity, though before he could stand very strong ones.] And herein lies one of the grand characteristics of the remedy: as the thermometer is sensitive to *changes* either to *hot or cold*, so is the *Merc*. patient. Other remedies are predominantly one or the other: Merc. is both— < by heat and < by cold. This is keynote No. 1. No. 2 is "< at night." This is a strong point of correspondence with syphilis. Especially is this noticeable in the bone pains. No. 3 is: Profuse sweat accompanying nearly all complaints and which *does not relieve*; it may even aggravate. Guided chiefly by these two indications: "Profuse sweat with no relief" and "< at night," I have cured many cases of rheumatic fever with *Merc. viv*. 12, without any other remedy. Keynote No. 4 is: The mercurial odour. The mercurial patient is offensive; breath excessively fetid; sweat offensive, mawkish, sweetish. Keynote No. 5 is *tremor*. This symptom is so pronounced and universal that it renders *Merc*. the best general remedy in paralysis agitans. There is tremor of head, of hands, of tongue. Tremors commencing in the fingers. It is the tremor of weakness and paralysis; and as described by B. Cooper it may attack the

heart and cause sudden death on the smallest effort. Short of this there is great tendency to fainting; extreme exhaustion after a stool. The tremors may become jerkings and even convulsions. Extreme restlessness. The mind is as weak and tremulous as the body; everything is done hastily. Hurried and rapid talking. On the other hand: slow in answering questions; loss of memory; of will power. Embarrassment. Absent-minded. Imbecility. Time seems to pass slowly. Desire to flee. Homesick. Suicidal. Murderous. *Merc*. is Hahnemann's typical antisyphilitic remedy, as *Sul*. is the typical antipsoric, and *Thuja* the typical antisycotic. In selecting *Merc*. as the remedy for syphilis the old practitioners were so far right, but they did not know how to give it. *Merc*. so far corresponds to syphilis that many undoubted cases of mercurial poisoning have been diagnosed by experts as syphilis. Bones, glands, and skin are affected. Inflammation leads to induration, induration to ulceration. *Merc*, corresponds accurately to the true Hunterian chancre. *Merc*. ulcers have a grey, lardy, ashy, or cheesy base. There are burning or stinging pains in them. Another great feature of *Merc*., almost constituting a keynote, is the tendency to the formation of pus. In the suppurative stage of small-pox it is specific. Flow of pus, and particularly bloody pus, from any orifice calls for *Merc*. Pus forms in cavities in abscesses, which burn and sting. Discharges are yellow-green in colour. Gonorrhśa. Fetid ear discharge. *Merc*. is a great solvent: it dissolves metals out of their ores and it dissolves living tissues, inducing excessive emaciation. Lowly organised tissues as indurations, exostoses, and some tumours are melted first. Śdema and dropsies are absorbed; rheumatic swellings. If the doses of *Merc*. are large and dropsies disappear rapidly under them, the tissues themselves may disappear also in offensive rapidly decomposing ulcers. The bones soften so that they will bend. Whilst *Merc*. intensifies the action of the absorbents, it may also paralyse them, hence enlargement of glands, with pricking pains, inflammation, suppuration. Next to syphilis, the liver has been the chief excuse for mercurialism, in the past, and *Merc*. certainly has a powerful liver action. The liver is congested, enlarged, inflamed, stitches in the liver, sensitiveness in the liver and *inability to lie on right side*. This "< lying on r. side" is a very characteristic condition of *Merc*., and when present *Merc*. should always be considered. Along with the liver the stomach is disordered. Sweets disagree; aversion to meat, wine, brandy, beer, coffee, greasy food, butter. There is the characteristic flabby, coated, teeth-indented tongue, foul breath, and intense thirst. Throat dry and forepart of tongue moist. *Merc*. is rarely indicated when the tongue is dry. Sliminess is a general characteristic. Slimy stools; stools acrid, knotty, containing pus, viscid. Just before stool a sick, painful, faint feeling comes on. During stool there is tenesmus, or tenesmus and no stool. Dysentery with much straining; never-get-done feeling when there is no more to come. Diarrhśa with slime. "*Merc*. is rarely indicated in these troubles where there is no slime" (Guernsey). *Merc*. affects profoundly the generative organs of both sexes. It has stinging, cutting pains in ovaries; cutting pains from l. to r. in lower abdomen. "Stinging" is very frequent in mercurial pains, and "stinging pain in ovaries is just as likely to need *Merc*. as *Apis*" (Kent). Almost all kinds of eruptions are produced by *Merc*. Scurfy,

syphilitic, pustular, moist, oozing, offensive eczema. Shingles. Small-pox. They are all < by warmth and at night and < by cold. In olden times it was recognised that a patient under a "course" of *Mercury* must be very careful not to catch cold. This gives one indication for *Merc*. in abnormal tendency to catch cold. But for this condition it must not be too frequently repeated, as it will aggravate it. The patient needing *Merc*. is sensitive to every draught and yet < by warmth the nasal secretion is acrid, and the nose red and excoriated; dirty-nosed children" (Guernsey). Old catarrhal smell in the nose inside nostrils smarting and burning. Aching, tearing, and out-pressing in the bones. "*Kali iod*. is better for the same bursting in the face, running coryza, and < from heat and warmth of the bed" (Kent). [I find that a much larger percentage of cases of acute cold come under the indications of *Cepa* and *Chlorum* than under those of *Merc*. or any other related remedy. In chronic colds I think first of *Psor*.] The eyes are very markedly influenced by *Merc*.; also the bones round the eye: "Whenever cold settles in the eye in gouty and rheumatic patients" (Kent). Every degree and kind of inflammation and ulceration is produced by *Merc*. and its salts. J. J. Hirsch, of Prague (*H. R*., vii. 220), relates some striking experiences with a preparation of *Merc. viv*. which he learned from an old allopath. Quicksilver is boiled in water for half an hour, two teaspoonfuls being given every two hours. Hirsch's cases were those of acute inflammation of the brain, in which *Bell*. was indicated, and in one of which *Merc*. (in the ordinary homśopathic preparation) had already been administered in vain. This is the case: A black-haired girl, 9, had malignant scarlatina, which commenced six days before Hirsch (who came as consultant) saw the case, signs of brain inflammation having set in on the third day. Hirsch found her unconscious, sharply defined redness of cheeks, pulse 120, hot skin. Piercing screams were emitted from time to time; boring head in pillows; chewing motion of jaws; gnashing teeth. Lips brown and dry; not much thirst; water not accepted readily; but milk seemed to be relished. Reddened patches here and there, especially along neck. Under the "decoction," which was given to the girl on Hirsch's suggestion, she slowly but steadily improved, and in a week was convalescent.─Among the *Sensations* of *Merc*. are: Vibration in forehead. Head as if in a vice; as if growing larger. As of sparks being emitted from eyes; as of a body underneath lids; as if feathers came from corners of eyes. As if a wedge driven in ear; as if ice in it; as if cold water running out of it. Cracklings in head as from metal plates. As if weight on forehead; as if weight hanging on to nose. As if teeth were loose; were fixed in a mass of pap. As if hot vapours rising into throat; of worm rising into throat, must swallow it down; of apple core sticking in throat. As if mammć would ulcerate. As if everything in chest was dry.─Stabbing pains and stitches, burning, boring, digging, stinging, and dragging pains. Soreness and sensitiveness. Itching; voluptuous itching. *Merc*. is more particularly *suited to:* Light-haired persons with lax skin and muscle; women and children. Scrofulous children. (*Merc*. has relation to psora and sycosis as well as syphilis.) The symptoms are < by touch or pressure. < At night; before falling asleep. < Blowing nose. < During a catarrh. < From cold air. < From taking cold. < From lamplight;

firelight. < During perspiration; on getting warm in bed. < Before stool. < During urination and after. < Lying on right side. < Motion; walking; slightest exertion. < Evening. Rest >. Coitus >. Weeping >. < Touching anything cold (= pain in abdomen). < Bending forward (digestion immediately disordered). < After eating (if he eats ever so little it causes a dragging down in stomach).

Relations.—*It antidotes:* Bad effects of sugar; stings of insects; ailments from Arsenic or Copper vapours, Aur., Ant. t, Lach., Bell., Op., Phyt., Val., Chi., Dulc., Mez., Thuj. *It is antidoted by:* Aur. (suicidal mania; caries of bones, especially of patella and nose); Hep. (mental symptoms-anxiety, distress, suicidal and even homicidal mood-bone pains, sore mouth, ulcers, and gastric symptoms); Nit. ac. (periostitis, bones and fibrous tissues; bone pains < at night; aching in shins in damp weather; ulcers in throat, especially of secondary syphilis); Chi. (chronic ptyalism); Dulc. (ptyalism < by every damp change); K. iod. (syphilis and mercurialism, combined, bones, periosteum, glands; ozćna; thin, watery discharge, upper lip sore and raw; repeated catarrhs after Mercury, every little exposure to damp or wet air = coryza; eyes hot, watery, swollen; neuralgic pains in one or both cheeks; nose stuffed and swollen and at same time profuse watery, scalding coryza; sore throat < every fresh exposure); Kali mur. (scorbutus, fetor); Asaf. (bone affections.—Asaf. is distinguished by extreme sensitiveness of diseased parts; extreme soreness of bones round eye); Staph. (depressed system; wasted, sallow, dark rings round eyes, spongy gums, ulcers on tongue); Iod. (glands); Mez. (nervous system; neuralgia in face, eyes, anywhere); Bell., Caps., Carb. v., Fer., Guaiac., Stilling., Sul., Thuj "all symptoms agreeing, Merc., *high*" (Guernsey). *Incompatible:* Sil. (Merc. and Sil. should never be given immediately before or after each other). *Compatible after:* Aco., Bell., Hep., Lach., Sul. *Before:* Ars., Asaf., Bell., Calc., Chi., Lyc., Nit. ac., Pho., Pul., Rhus, Sep., Sul. *Compare:* Bell. (very close analogue, often complementary; commencing abscess; difficult swallowing fluids; sharp pain through tonsils; pains come suddenly); Hep. (chilliness; something sticking in fauces); Meny. (coldness in ears); Puls. (thick yellow nasal discharge—but that of Puls. is always bland; otitis); Nux (coryza and sore throat—Nux has *scraped* feeling; Merc. is always smarting, raw, or sore.—Dysentery: with Nux tenesmus ceases after stool; with Merc. not, there is the never-get-done feeling); Aco. (dysentery of hot days and cold nights; often precedes Merc., and Sul. follows in like conditions); Lept. (bilious troubles, horribly offensive stools—the *griping* of Lept. continues after stool but not tenesmus); Dig. (gonorrhśa); Euphr. (eyes); Ars. (Merc. < by heat of, but > by rest in bed—Ars. > by heat of, but < by rest in bed); Sul. (itch, pustulous, eczematous eruptions); Spo. (orchitis); Pho. (profuse sweat without >); Ant. c. (dirty tongue; inflammation of eyes < glare of fire or sunshine); Arg. n. (eyes); Kali i. (stitching pains through lungs; Merc. right or left and shooting in different directions; Kal i., from sternum to back < from any motion); Borax (sore mouth); Coloc. (dysentery—Col. > after stool, Merc. <); Chel. (bilious pneumonia); Cham. (diarrhśa; dentition); Caust. (gonorrhśa); Mag. m. (liver pains < touch, < lying right

side); Plumb. and Chi. s. (testes); Syph. (syphilis; < heat of stove or bed; < night): Lyc. (hepatitis; tenderness; right to left, wash-leather tongue; sinking immediately after meals); Sul., Puls., and Cham. (< in bed at night); Nit. ac. (dark persons; Merc. fair); Crocus (nose-bleed in tough strings); Sang. (tongue as if burnt); Bry. (wash-leather tongue; < motion; stone in stomach); Apis (stinging pain; fetid breath; ovarian affections); Sabal. (stinging pains in ovaries); Dolichos (itching of gums; jaundice); Magnt. aust. (ulceration of nails); Psor. and Medorrh. (foul body smell); Arn. (foul breath); Mez. (decay of teeth—Merc. of crowns; Mez. of roots); Led. and Sars. (bloody seminal emissions); Sul. (pruritus vulvć < night, < from contact with urine, which must be washed off); Lac c. and Con. (breasts painful, as if would ulcerate at every menstrual period); Chel. and Kal. c. (affect lower lobe right lung; stitches through to back); Kal. c. (suppuration of lungs after pneumonic hćmorrhages); Pic. ac. (boils in auditory meatus); Teucr. and Thuj. (polypi); Can. i. (time passes slowly); Dulc. (sensitive to cold and damp; cold settles in the eyes; furfuraceous eruptions); Graph. (coryza during menses; Mag. c. coryza and sore throat before and at menses; Merc., dull pain on forehead, with coldness, especially in women, with coryza < before or at menses).

Causation.—Fright. Suppressed gonorrhśa. Suppressed foot-sweat.

SYMPTOMS.

1. Mind.—Great anguish, restlessness (is constantly changing from place to place), and agitation, with fear of losing the reason, or with excessive internal torment, principally in evening, or in bed at night, as if conscious of having committed some crime.—(Post-partum mania; wants to throw child on fire.).—Inclined to sopor, coma.—Moral dejection, with great listlessness, discouragement, dread of labour, and disgust to life.—Great indifference to everything.—Does not even care to eat.—Apprehensions.—Desire to flee with nightly anxiety and apprehensions.—Ill-humour, disposition to be angry, and to fly into a passion, great susceptibility, humour quarrelsome, mistrustful, and suspicious.—Moroseness and repugnance to conversation.—Groans.—Continuous moaning and groaning.—Excitement, and great moral irritability, with a tendency to be easily frightened.—Bad effects from fright, leaving one in a state of great anxiety and < at night.—Home-sickness with nightly anxiety and perspiration.—Distraction, inadvertence, difficulty of conception.—Entire-unfitness for meditation, and tendency to make mistakes while speaking.—Answers questions slowly.—Weakness of memory; and will-power lost.—Instability of ideas, which constantly drive away each other.—Raving.—Delirium; mental derangement of drunkards.—Intellect weak; imbecile.—Low muttering delirium.—Fits of mania or dementia, with disposition to shed tears.—Hurried and rapid speech.—Loss of consciousness and of speech.—Fury, with dread of liquids.

2. Head.—Cloudiness, intoxication, and dizziness, principally in morning, on waking, and on getting up.—Vertigo, principally on getting up, or on raising up

head, or when seated, or when lying on back (vertigo with headache); as well as during or after a walk in open air, or in evening, and often with nausea, cloudiness of the eyes (everything becomes black before eyes), distressing heat, and want to lie down.—Vertigo as if one were on a swing.—Dull and stupid feeling with dizziness.—Heaviness, fulness, and aching in head, as if forehead were squeezed by a bandage, or as though cranium were on the point of bursting (with fulness of brain).—(In the evening) painful sensibility of brain, with fatigue of head by noise, > by resting head upon the arm.—Compressive headache, the head feels as if it were in a vice, with nausea; < in open air, from sleeping, eating and drinking; > in room.—Violent headache, which forces compression of head between the hands.—From occiput a strong, tearing, continued pain which went into forehead and there pressed.—Heat and burning, or tearing and drawing pains, or shootings in head, often only semi-lateral, and extending to ears, teeth, and neck.—Burning in head, esp. in l. temple, < at night when lying in bed, > on sitting-up.—Inflammation of the brain with burning and pulsation in forehead, with sensation as if head were in a hoop; < at night, > after rising.—Weakness in head like a dulness, as if there was a vibration in forehead and turning about in a circle.—Constant rotary motion of head, even when lying.—Ebullition, boring, and digging shocks, and throbbings in head.—Pain, as from a bruise, in brain, while in bed, in morning.—Nocturnal cephalalgia.—Pains in bones of head, and exostosis in the cranium.—Sutures open; large head; precocious mental development.—Swelling of head; soreness of the scalp; sharp and burning pains in integuments of cranium.—Sensation of subcutaneous ulceration in whole head, < at night when becoming warm in bed; > after rising.—Tearing in one (l.) side of head and temple, extending from neck, with insupportable heat and perspiration, < at night and in heat of bed, > towards morning and while lying quiet.—Tension over forehead as from a tape or hoop, < at night in bed; > after rising and from laying hand on it.—Congestion of blood to head with heat in it.—Hydrocephalus.—Sensation of tension of scalp.—Scalp is painful to touch; < when scratching, which is followed by bleeding.—Tearing and stinging in bones of skull.—Itching on hairy scalp, and forehead and temples; < from scratching, when it bleeds and becomes erysipelatous.—Dry, stinging, burning, fetid eruption like yellow crusts, on forepart of head and temples, when scratching inflammation and erysipelas.—Exostoses, with sensation of subcutaneous ulceration on touching them, < at night in bed.—Open fontanelles with dirty colour of face, restless sleep, and sour-smelling night-sweat.—Falling off of hair; mostly on sides of head and temple; with humid eruptions on head or after clammy perspirations of head; with itching at night in bed; < from scratching; with burning, with great tendency to perspiration.—Great chilliness with contractive tearing pain of the scalp, extending from forehead to neck.—Fetid, sour-smelling, oily perspiration on head, and on icy-cold forehead, with burning in skin: < at night in bed, > after rising.—Dry eruption on head; small scabs in hair, sometimes with burning itching; moist scabs, with excoriation of scalp, and destruction of hair.—Sweat on head and forehead, sometimes cold and viscid.

3. Eyes.—Eyes confused, dull, and surrounded by a livid circle.—Pressure in eyes, as from sand, principally when fixing the attention on any object.—Shootings, itching, tickling and burning in eyes, principally in open air.—Eyes red, inflamed, with redness of conjunctiva or sclerotica, and injection of vessels of sclerotica, or of external canthi.—Profuse lachrymation, principally in evening.—Blear-eyedness.—Amaurotic dimness before l. eye.—Twitching of lids.—Excessive sensitiveness of eyes to light, and to brightness of the fire.—Firelight dazzles eyes greatly.—Eyes inflamed, with swollen inverted tarsi.—Pupils dilated.—Inability to open eyes well, as if agglutinated to balls.—Pustules in conjunctiva, and ulcers in cornea.—Eyelids red, inflamed, swollen, ulcerated on margins, and covered with scabs.—Sensation as if a cutting instrument were under eyelid.—Tumour in eyelid, like a stye.—Nocturnal agglutination of eyelids.—Spasmodic closing of eyelids, with difficulty in opening them.—Scabs round the eyes.—Amblyopia and confused sight, as in looking through a mist (periodical loss of sight); momentary loss of sight; black points, hovering flies, flames and sparks before eyes.—Apparent motion of letters, when reading.

4. Ears.—Tearing, shooting and drawing pains in ears, sometimes with a sensation of coldness, as if there were ice in ear, increased by heat of bed.—As if ice-cold water running out of ears; comes suddenly, lasts a few minutes and recurs; violent itching in ears in intervals.—Ear and auditory tube inflamed, with cramp-like and shooting pains.—Soreness of internal ear.—Meatus swollen with much earache when chewing.—Small ulcers in front of l. membrana tympanis.—Discharge of pus from ear, with ulceration of external ear.—Excoriation and ulceration of the concha auris.—Purulent otorrhśa and fungous excrescences in ear, with tearing in side of head affected, and in face.—Flow of blood from ears.—Discharge of cerumen.—Subcutaneous tumour, and furfuraceous and moist pimples on the lobe.—Hardness of hearing, sometimes with obstruction of ears, which ceases when swallowing or blowing nose (or the obstruction is caused by enlargement of tonsils), or with an extraordinary reverberation of all sorts of sounds in ears.—Tinkling, roaring, ringing, and buzzing in ears, principally in evening.—Obstinate tinnitus.—Painful sensitiveness, and inflammatory swelling of parotids.—Inflammatory swelling of the r. parotid gland with stinging.

5. Nose.—Swelling of the bones of the nose (external nose, as bridge of the nose, may swell up very large on both sides), with painful sensitiveness to touch.—Itching in nose.—Tension, pressure, and sensation of heaviness in nose.—Blackish colour of nose.—Inflammatory swelling and shining redness of nose, with itching.—Scabs in nostrils (bleeding when cleansed).—Discharge of a greenish fetid and corrosive pus from the nostrils.—"Dirty-nosed children.".—Frequent and profuse bleeding from nose, even during sleep, and sometimes when coughing.—Obstruction and dryness of nose.—Frequent sneezing.—Dry coryza, with obstruction in nose, or fluent coryza, with copious discharge of corrosive serum.—Putrid smell from nose.—Painful pustule in nose.

6. Face.—Face, pale or yellowish, or lead-coloured, or earthy (with dull eyes without lustre).—Features discomposed and drawn.—Circle of bluish red round the eyes.—Feverish heat and redness of cheeks.—Bloatedness and swelling of face, principally round eyes.—Swelling of one (r.) side of face with heat and toothache.—Swelling of cheek.—Tearing in bones and muscles (of one side) of face.—Aching and pricking in zygomatic process.—Sensation of tension of skin on face and head.—Sweat on face.—Red and tettery spots on face.—Yellowish scab on face, with discharge of a fetid humour, constant itching day and night, and bleeding of the part after having been scratched.—Crusta lactea.—Lips rough, dry and blackish, with burning when they are touched.—Salt taste on lips.—Swelling and ulceration of lips.—Yellowish scabs, purulent pustules, and small ulcers on the lips and round the chin.—Burning pimples with yellow crusts on lips.—Fissures, rhagades, and ulceration in (lips and) corners of mouth.—Distortion of mouth and convulsive movements of lips.—Masseter muscles contracted so that speech was difficult.—Atrophy and exfoliation of alveolar processes.—Clenching and immobility of jaws, with inflammatory swelling of lower jaw, and tension in muscles of neck.—Lockjaw with stinging pains and engorgement, and inflammatory swelling of submaxillary glands, with shooting or pulsative pains, or without pain.—Caries of jaw.—Facial paralysis from cold, r. or l. side: almost specific (R. T. C.).

7. Teeth.—Tearing, shooting, or pulsative pains in carious teeth, or in roots of teeth, often extending to ears, and over whole cheek of side affected, sometimes also with painful swelling of cheek or of submaxillary glands, salivation, and shivering.—The nightly pulsating toothache extends to ear.—Appearance or aggravation of toothache, principally in evening, or at night, in heat of the bed, where it is insupportable; renewed by fresh air, as well as by eating, and taking anything hot or cold into mouth.—The teeth are set on edge, grow black, loosen (they are painful when touched by tongue), denuded of gum, and fall out.—Itching, burning, and redness of gums.—Gums are fungous, and bleed easily.—Bleeding of gums when touching them ever so little.—Retraction and swelling of gums, principally at night, with burning pain and sensation of excoriation, on touching them, and when eating.—Gums livid, discoloured, and very sensitive.—Upper border of gums looks indented, the indentation being white and ulcerated.—The swollen gums have white, elevated, ulcerated, pointed edges.—Ulceration of gums.

8. Mouth.—[This remedy covers in general, affections of mouth and fauces; r. side of fauces; r. side of neck; nape of neck (*i.e.*, affections appearing in any of the mentioned places); rarely give *Merc.* if the tongue is dry.—Guernsey].—Putrid smell from the mouth.—Bluish colour, excoriation, and inflammatory swelling of inside of mouth.—Burning pain, vesicles, blisters, aphthć and ulcers in the mouth.—Stomacace.—Sensation of dryness in mouth and palate, or accumulation of tenacious mucus.—Ulceration of orifice of salivary duct, and profuse discharge of excessively fetid saliva, which is sometimes bloody (or tenacious).—Tongue moist, coated with white and thick, or dry, brown, or blackish mucus.—(Excoriated

patches like islands on tongue in children, with craving for fat, *v.*).—Hardness, inflammatory swelling (suppuration), and ulceration of tongue, with shooting pains.—Longitudinal furrow on tongue with pricking pains.—Needle pricks in tip of tongue.—Tongue swollen, soft flabby, the edges become indented by the impression of teeth.—Tongue red and swollen; ulcerated; black, with red edges; moist with intense thirst; grey patches on edges, dirty-yellow coat on upper surface.—Aphthć in the mouth; bluish and spongy; ulcers spread without penetrating the flesh.—Inflammation and superficial ulceration of the mucous membranes of mouth.—Salivary glands swollen and painful; saliva fśtid or tastes coppery.—Rigidity, insensibility, and immobility of tongue.—Sensation in tongue as if burnt.—Quivering of tongue.—Rapid and stammering speech; entire loss of speech.—Loss of speech and voice; she hears everything well, but can only reply by signs and grimaces; sunken features, weeping about her condition; cannot sleep, feels very exhausted; good appetite, thirst for beer; fćces and urine passed easily; lasted three days; (almost complete relief by *Hyo.*).—Ranula.—Ulceration and caries of palate.

9. Throat.—Continuous painful dryness of throat; the mouth being full of water.—Painful dryness of throat, which impedes speech.—Pain, as from excoriation and smarting in throat, or sensation of heat, which ascends into gullet.—Shooting pains in throat and in tonsils, principally when swallowing.—Elongation and swelling of uvula.—Suppuration of tonsils.—Pressure and pains as from excoriation and ulceration, in śsophagus.—Syphilitic ulcers in mouth and throat.—Inflammatory swelling and redness of back parts of mouth and throat.—Erysipelatous inflammation of all soft parts of mouth and throat.—Inflammation and redness of palate.—Angina esp. with stinging pains < by empty deglutition at night and in cold air.—Throat and fauces of a coppery red colour and swollen.—Accumulation of thick and tenacious mucus in throat.—Sensation as if there were a tumour, or some foreign body in throat, which it is necessary to swallow.—Constant want to swallow.—Sensation as if a worm rose up so that he must always swallow, whereby it goes off somewhat though he does not feel anything go down.—When swallowing shooting in tonsils, stitches into ears.—Painful, difficult, and sometimes spasmodic deglutition, with danger of suffocation.—Burning in throat as if from a hot vapour ascending from stomach, with dryness in throat when swallowing, and continuous desire to swallow, with accumulation of water in mouth.—Inability to swallow the least liquid, which escapes through nostrils.—The pains in throat commonly extend to ears, parotids, submaxillary, and cervical glands; they are < for the most part by empty deglutition, as well as at night, in fresh air, and when speaking, and they are often accompanied by salivation.

10. Appetite.—Putrid, salt, sweetish, or metallic taste.—Bitter taste, principally when fasting, in morning.—Rye-bread has a bitter or sweetish taste.—Acid and mucous taste during a meal, also at other times.—Saltish taste on lips.—Violent burning thirst, day and night, with desire for cold drinks, and principally for milk

and beer.—Desire for wine and spirits.—Insatiable appetite and craving (or complete loss of appetite), with apparent insipidity of food.—Appetite only for bread and butter; aversion to butter.—Bulimy, with great weakness.—Canine hunger, even after eating.—Want of appetite.—No wish for food, which, however, is agreeable to the taste when eaten.—Thirst more decided than appetite.—Speedy satiety when eating.—Stomach feels replete and constricted.—Dislike to all food, principally solid nutriment, meat, sweetmeats, cooked victuals and coffee.—Has no appetite for dry food, likes liquid food.—Great weakness of digestion, with continued hunger, and pressure in stomach, frequent risings, pyrosis and many other inconveniences after a meal.—Bread is heavy on stomach.

11. Stomach.—Excessive nausea and inclination to vomit, often with incisive and pressive pains in stomach, chest, and abdomen, anxiety and inquietude, headache, vertigo, cloudiness of eyes, and transient heat.—The nausea often increases after a meal, and is accompanied by a sensation in throat, as if things sweetened with sugar had been eaten.—Rising of air.—Risings, principally after eating, and often of a putrid or bitter or sour and rancid taste.—Violent empty risings.—Regurgitation (of ingesta) after eating and drinking.—Pyrosis, regurgitation of a rancid liquid, and hiccough during and after a meal.—Retching and vomiting of mucous or bitter matters, or of bile.—Violent vomiting with convulsive movements.—Burning, violent pain, and excessive sensibility (esp. to touch) in the stomach, and in the precordial region.—Tension, fulness, and pressure as from a stone in pit of stomach, principally during or after a meal, however little may have been eaten; stomach hangs down heavily.—Sharp constrictive pain in precordial region.—Cramp-like pains in stomach, even after a very light repast.

12. Abdomen.—Painful sensitiveness of hepatic region, with shooting, burning pains, < by every movement of body, or of the parts affected.—Region of liver swollen, painfully sensitive to contact; cannot lie on r. side.—Chronic atrophy of liver, with emaciation and dessication of the body.—Swelling and hardness of liver.—Complete icterus.—Abdomen hard and inflated, with soreness when touched, principally in umbilical region.—Colic which only passes off in a recumbent position.—Violent colic (with diarrhśa), with cuttings, lancinations as if by knives, painful contractions and pinchings in abdomen, principally at night or in cool of evening, esp. when he touches or takes hold of anything cold.—Tension, distension, and pressure, as by a stone, principally in umbilical region (and painfulness to contact).—Burning in abdomen, round the navel.—Excessive and insupportable pains in abdomen, which cease only on lying down.—Pain in abdomen, as if caused by a chill.—Sensation as if intestines were loose, and moving about in abdomen, when walking.—Intestines feel bruised if he lies on r. side.—The pains in abdomen are often accompanied by shivering, or by heat and redness of cheeks, as well as by great sensitiveness of abdomen, and of precordial region, to all contact, and to least pressure.—Sensation of emptiness in the abdomen.—Sufferings from flatulency, principally at night, with distension of abdomen, borborygmi, and rumbling.—Cutting stitch in lower abdomen r. to

l.; < walking.—Tension, aching, and lancinations in groins as by knives.—Inflammation of peritoneum and of intestines.—Boring pain in r. groin.—Obstruction and inflammatory swelling of inguinal glands, with redness and painful sensitiveness, when walking and standing.—Affections of inner region of liver; external belly, which may be hard and sensitive to touch; inguinal ring, either one (H. N. G.).—Painful hard, hot, sensitive swelling in ileo cćcal region.—Ulceration and suppuration of inguinal glands.—Buboes.—Abdomen externally cold to touch.

13. Stool and Anus.—Stool: acrid; bloody; knotty; containing pus; viscid.—Complaints before stool (a sick, painful, faint feeling comes on just before).—Complaints during stool; tenesmus; tenesmus without stool; diarrhśa with slime (*Merc*. is rarely indicated in these troubles where there is no slime.—H. N. G.).—Constipation, with hard, tenacious and knotty fćces, which cannot be expelled without straining.—Fćces of small shape; ribbon-like.—Ineffectual, but frequent want to evacuate, esp. at night, and sometimes with tenesmus, protrusion of hćmorrhoids, and nausea.—Loose and dysenteric evacuations, principally at night, with colic and violent cuttings, urgent want to evacuate, tenesmus and burning in anus, pyrosis, nausea and risings, anguish, heat or cold sweat on face, shivering and shuddering, exhaustion and trembling of all limbs.—Diarrhśa (preceded by colic), caused by the fresh air of evening.—Chilliness between the diarrhśic stools.—During a diarrhśic stool nausea and eructations.—Scanty evacuations of sanguineous mucus.—Evacuations which are mucous, or bilious, or putrid, or acid, or of a greenish or brownish colour, or reddish, or yellow, like sulphur; or a greyish-white.—Fćces of consistence of pap, or frothy, or like hash.—Evacuation of corrosive and burning fćcal matter.—Discharges of bloody mucus accompanied by colic and tenesmus; dysentery.—Discharge of blood, or of mucus, from rectum, even with evacuations that are not loose, and when not at stool, sometimes with tenesmus in anus.—Protrusion of hćmorrhoids.—Ejection of ascarides and lumbrici.—Itching, shootings, and excoriation in anus.—After stool prolapsus ani; or when pressing and straining to stool.—Prolapsus recti, which, when it protrudes, appears black and bloody.—Evacuation of substances undigested, or black, and like pitch; blood and mucus, undigested, smelling sour, excoriating anus.

14. Urinary Organs.—Urine acrid; turbid; too frequent; complaints while passing, and after.—Affections of urethra.—Continued want to urinate, day and night, sometimes with abortive efforts, or with scanty emission.—The stream of urine is excessively small.—Irresistible, sudden desire to urinate.—Frequent and copious emission of urine, as in diabetes, with great emaciation.—Involuntary emission of urine.—Urgent want to urinate, with incontinence of urine.—The quantity of urine emitted is greater than the quantity of fluid drunk.—Wetting the bed at night.—Emission of urine drop by drop.—Urine of a deep colour, or red, or brown, or white, as if mixed with flour or chalk, or of the colour of blood.—Offensive, turbid urine, which forms a sediment.—Sanguineous, pungent, or sour-smelling

urine.—Corrosive and burning urine.—Thick sediment from urine.—White and flock-like clouds in urine (or as if containing pus; scanty, fiery red).—Emission of hard mucus, or of flocks, and white threads during or after the emission of urine.—Discharge of blood from urethra.—Incisive and contractive pains in renal region, at night.—Pulsation, incisive pains, burning and shooting in urethra, even when not urinating.—Inflammation of orifice of urethra, and discharge of thick, yellowish, or serous, whitish matter.—Thick greenish (or yellow) discharge from urethra, more at night, (gonorrhśa) with phimosis; chancroids.

15. Male Sexual Organs.—Increase of sexual desire, and great lasciviousness, with frequent erections and pollutions.—[Erections: little boys may have this, lasting all night, causing emaciation; boys often pull and tear at the prepuce all the time, which may cause great emaciation, and result in death; adults often have this pulling, a kind of itching being the cause, and a feeling as if he "must do so"; collection of smegma behind glans.—H. N. G.].—Total loss of sexual power.—Painful nocturnal erections, and sometimes sanguineous pollutions.—The penis is small, cold, and flabby.—Glans cold and shrivelled.—Voluptuous itching, tingling, tearing, and shooting in glans and prepuce.—Puffing, or inflammatory swelling of prepuce, sometimes with burning pain, fissures, rhagades, and eruptions.—Burning in urethra during coitus.—Purulent secretion between prepuce and glans, sometimes with swelling, heat, and redness of front part of penis.—Swelling of the lymphatic vessels along the penis.—Vesicles and phagedćnic ulcers (chancres) with lard-like, or cheesy, bases, and raised margin, on glans and prepuce.—Sensation of coldness in testes.—Testes, hard and swollen, with shining redness of scrotum, and dragging pain in testes and spermatic cords.—Itching, tingling, and shooting in testes.—Profuse perspiration of parts when walking.—Excoriation between the parts and thighs.—Sloughing of scrotum.

16. Female Sexual Organs.—Suppression of catamenia.—Catamenia too copious, with uneasiness and colic.—Metrorrhagia.—Discharge of blood in an old woman, eleven years after menses had ceased.—Before catamenia: dry heat, with ebullition of blood, and congestion in head.—Congestion of blood to uterus.—Inflammation of ovaries and uterus.—During catamenia: redness of tongue, with deep-coloured and burning spots, salt taste in mouth, teeth set on edge, and gums blanched.—Leucorrhśa in general; complaints concomitant to leucorrhśa.—Leucorrhśa always < at night; greenish discharge; smarting, corroding, itching, burning after scratching.—Purulent, corrosive leucorrhśa, with itching in the parts, > by washing in cold water.—Hard tubercles on labia majora.—Itching pimples, and nodosities in labia.—Itching of genitals, < from contact of urine.—Inflammatory swelling in vagina, with a sensation as if it were raw and excoriated.—Swelling of labia, with heat, hardness, shining redness, great sensitiveness to touch, and burning, pulsative, and shooting pains.—Prolapsus uteri et vaginć; feels > after coitus.—Sterility with too profuse menstruation.—Easy coitus and certain conception.—Hard swelling in breasts, with pain as from ulceration (at every menstrual period), or with suppuration and actual ulceration;

ulcerated nipples.—Milk in breasts instead of menses; in breasts of boys or girls.—Excoriation of breasts.—The infant rejects the milk.

17. Respiratory Organs.—Catarrh, with febrile shivering, hypochondriacal humour, dislike to all food, and constipation.—Catarrh with cough, hoarseness, fluent coryza and sore throat.—Continual hoarseness and loss of voice.—Nasal voice.—Burning and tickling in the larynx with hoarseness.—Dry cough, sometimes fatiguing and shaking, principally in bed, in evening, or at night, also during sleep, and on waking in morning, excited by a tickling, or a sensation of dryness in chest, and < by speaking.—Cough, as if caused by irritation in stomach.—Convulsive cough, with retching.—Spasmodic cough (whooping-cough); two paroxysms follow one another rapidly, from tickling in larynx and upper part of chest, at night, without cough during day, with expectoration of acrid yellowish mucus, which is sometimes mixed with coagulated blood, tasting putrid or salty.—Cough < in night air, at night and when lying on l. side.—Dyspnśa (sensation of spasmodic contraction when coughing or sneezing).—Pains in head and chest when coughing, as if these parts were about to burst; or shootings in occiput; or pain as from excoriation in chest, and pain in loins.—Inclination to vomit and fits of choking, when coughing.—Cough with expectoration of pure blood.—Bloody sputa in tuberculosis.—Hoarse cough, with sensation of dryness and shootings in throat.

18. Chest.—Difficult respiration, as from want of breath, or short and loud respiration.—Breath having a bad smell.—Shortness of breath when going upstairs and when walking quickly.—Anxious oppression of chest, and difficulty of respiration, with want to take a deep inspiration, chiefly after a meal, or with attacks of suffocation at night, or in evening in bed, when lying down (on l. side).—Sensation of dryness in chest.—Want of breath, with squeezing and tension in chest, and sensation, on least movement, or attempt to speak, as if life were coming to an end.—Sharp pains, and sensation as if muscles of chest were bruised.—Aching in chest, sometimes penetrating to back, with inability to take a full inspiration.—Burning in chest, sometimes extending to throat.—Soreness and burning in chest.—Lancinations (as if caused by knives) in chest and sides, or as far as the back, principally when breathing, sneezing, and coughing.—Stitches in r. chest through from scapula; inflammation of lungs.—Sensation as of a contraction and of swelling, and pain as from excoriation and ulceration, in chest.—Suppuration of lungs after hćmorrhages, or after pneumonia.—Emphysema of lungs.

19. Heart.—Palpitation of heart; on slightest exertion.—Fainting.—Fatal syncope.

20. Neck and Back.—Burning and drawing pain in back and in nape of neck.—Indurated lymphatics.—Rigidity and rheumatic swelling of nape of neck, and of neck.—Shootings in muscles of neck.—Engorgement and inflammatory swelling of glands of neck, with shooting and pressive pains.—Shooting pains, instability, and weakness in loins.—Pain as from a bruise in sacrum, back, and

shoulder-blades.—Erysipelatous inflammation extending from back like a girdle around abdomen (zona).

22. Upper Limbs.—Sharp (rheumatic) pains in shoulders and arms, principally at night, and when moving them.—Jerking in arms and fingers.—Hot and red (arthritic) swelling of elbow, as far as hand.—Itching miliary eruption on arms.—Furfuraceous and burning tetters on forearms and on wrist.—Tremor of hands, with weakness; could neither feed nor dress himself.—Cracking, weakness, and sensation of paralysis in hand.—Sweat on palms.—Eruption like moist itch on hands, with violent nightly itching.—Cramp-like contraction of hands and fingers.—Swelling of joints of fingers.—Deep and bleeding fissures and rhagades in hands and fingers.—Cramp-like pains, and tendency to become stiff in hands when using them.—Swelling of wrist, with pain on touching or moving it.—Rigidity of wrists.—Painful stiffness of r. wrist-joint.—Ulceration at the nails.—Exfoliation of fingers (of finger-nails).—Deadness of fingers.

23. Lower Limbs.—Sharp and lancinating (rheumatic) pains in hip-joints, as well as thighs and knees, chiefly at night, and during movement, and often with a sensation of coldness in diseased parts.—Tearing in the hip-joint and knee, < at night, or with pulsating pain, suppuration commencing.—Burning in nates.—Soreness between thighs and genitals.—Burning in periosteum of tibić.—Drawing in tibia.—Great weakness, heaviness, and painful weariness in thighs and legs.—Weakness and giving way in knees, could scarcely stand.—Sensation of rigidity, of torpor and cramps in thighs.—Itching pimples on thighs.—Śdematous, transparent swelling, of thighs and legs.—Dropsical swelling of legs.—Tension in hams, as if tendons were too short.—Itching miliary eruption in legs.—Tetters on thighs and legs.—Contraction of legs, and cramps in calves of legs and toes.—Swelling of instep or heels, with sharp or shooting pains.—Wrenching pains in foot.—Coldness and sweat in feet.—Painful swelling of metatarsal bones.—Swelling of toes.—Ulceration at nails.

24. Generalities.—Śdema of face, hands, and feet with ańćmia.—Cellulitis with lumpiness in any region.—Periostitis then necrosis.—Tearing and drawing, or shooting pains in limbs, chiefly at night, in heat of bed, which renders the pain insupportable.—Red and shining inflammatory swellings.—Inflammations ending in exudations and suppurations.—Nocturnal pains in bones.—Softening of the bones, so they will bend (rickets); enlargement of; caries of; inflammation of; prickling of; tearing in.—Affections of shoulder-blades; shin-bones; bones of the leg.—Sufferings < at night, or in evening, also from fresh (evening) air.—Throbbings, sensation of dislocation, and arthritic pains in joints, with swelling.—Rheumatic and catarrhal inflammations.—Rheumatic pains, with profuse sweat, which affords no relief.—The patient feels much better in morning and during repose, and esp. when lying down than when seated or walking.—Whole body feels as if bruised, with soreness in all bones.—Great agitation in limbs, with pains in joints, principally in evening.—Great fatigue, weakness, and rapid loss of

strength, with great uneasiness of body and mind.—Ebullition of blood, and frequent trembling, even after least exertion.—Sanguineous congestions (to head, chest, and abdomen) and hćmorrhages.—Great tendency of limbs to become numb.—Contractions of some parts.—Cramps, convulsive movements, and nocturnal attacks of epilepsy, with cries, rigidity of body, distension of abdomen, itching in nose, and thirst.—Sensation of coldness in outer parts; burning pain of inner parts; cutting in inner parts; darting pains in outer parts; darting in bones.—Sallow-coloured face.—Eructations; vomiting of bile.—Blackness of outer parts; bleeding from inner parts; restlessness of body; inflammation of inner parts, also of mucous membranes; secretion of mucus increased from any of mucous membranes.—Scurvy, particularly where there is much salivation; wasting away of soft parts; strictures after inflammation; inflammatory swellings, parts which are usually white turn red; zona or shingles.—Tonic spasms and tetanus.—Cataleptic rigidity of body.—Fainting fits.—Paralysis of several of limbs.—Emaciation and atrophy of whole body.—Excitability and sensitiveness of all the organs.—Cannot lie on r. side.

25. Skin.—Yellow colour of the skin, with perspiration which imparts a yellow colour to linen.—Skin dirty yellow, rough and dry.—(Jaundice.).—Engorgement, inflammation, and ulceration of the glands, with pulsative and shooting pains, hard swelling, red and shining, or without any perceptible alteration in skin.—Miliary, urticarial, pimpled, or pustular and purulent eruptions.—Exanthema burning; pock-shaped (hence, think of this remedy in small-pox); of scarlet colour; with swelling; purulent exanthema, *i.e.*, ulcerating; ecchymoses appear, of black and blue spots, without receiving any external injury.—Erysipelas.—Spacelus; brown mortification.—Tetters in general; burning suppurating.—Ulcers in general; with burning on edges; hard on edges with bloody pus; with corroding pus; with ichorous pus; having too little pus; too thin pus; thin, tenacious, sticky pus; swollen, inflamed; looking like lard; prickling; pulsating; painful on the edges; swollen on edges.—Flat, painless ulcers, pate, covered with phlegm-like pus; on scalp, skin of penis, &c.—Primary and secondary syphilis; round coppery red spots shining through skin.—Itching pimples, which burn after being scratched.—Eruptions which resemble scabies, and which bleed readily.—Wounds ulcerate easily (and become gangrened).—Erysipelatous inflammations.—Spots red and raised, or maculć hepaticć, or which resemble scorbutic spots.—Small and very itchy pimples, which ulcerate, and become encrusted.—Tettery, excoriated, and oozing spots, or dry, itching, and mealy tetters.—Desquamation of skin.—Phagedenic ulcers, or bluish, fungous, and easily bleeding, or superficial, and appearing as if bitten by insects, or secreting an ichorous and corrosive pus.—Chancrous ulcers.—Violent and voluptuous itching over whole body, principally in evening, or at night, < by heat of bed, and sometimes attended by burning after scratching.—Thickening of periosteum; exostosis and caries; abscess in joints; great brittleness of bones.

26. Sleep.—Excessive sleepiness, day and night; deep and prolonged sleep.—Great sleepiness during day.—Inclination to sleep without the power to do so.—Sleep retarded in evening, and too early awakening in morning.—Failing asleep late; complaints preventing sleep (as toothache, or any severe pain or trouble, &c.); sleeplessness in general before midnight.—Very light and unquiet sleep, with frequent awaking, starts, and fright.—Sleeplessness from nervous excitability.—Frequent, anxious, horrible, fantastic, historical, vivid and voluptuous dreams; dreams of robbers, of dogs that bite, of rebellion, of floods, of discharges of firearms, &c.—At night, restlessness, anxiety, agitation and tossing, uneasiness, pains, heat or sweat, ebullition of blood, cries, tears, palpitation of the heart, vertigo, and many other affections.—On going to sleep: < of the pains, starts, and frightful spectres before the sight.—During sleep: talking, groans, sighs, short respiration, with mouth open and hands cold; on waking, sweat, cries, tears, and incoherent expressions.

27. Fever.—Chilliness early in morning, when rising, but more so in evening after lying down, as if cold water had been thrown over him, and not > by heat of stove.—Chilliness at night with frequent micturition.—Chilliness between the diarrhśic stools.—Internal chilliness with heat of face.—Heat while in bed; as soon as one rises chilliness.—Heat after midnight with violent thirst for cold drinks.—Heat with anxiety and constriction of chest alternating with chilliness.—Perspiration towards morning, with thirst and palpitation of heart; from least exertion even when eating.—Perspiration in evening before going to sleep.—Very debilitating night-sweats.—Perspiration gives no relief, and accompanies all ailments.—Intermittent fever.—Chilliness in evening in bed, afterwards heat with violent thirst.—Chilliness and heat without thirst, towards morning thirst; during perspiration, palpitation of heart and nausea, the perspiration smells sour or fetid.—Coldness, shivering, and shuddering over whole body, principally after having slept, either by day and night, or only at night, or in evening, and in morning in bed, and sometimes with bluish colour of skin, icy coldness in hands and feet, muscular palpitations, convulsive movements of head, arms, and legs, contusive pain in limbs, and inclination to lie down, trembling in limbs, sharp pains in head, want to urinate, somnolence, &c.—Ebullitions with trembling from slight exertion.—Heat in face and head, with redness and burning of cheeks, and coldness, or shivering, or shuddering over whole body; or heat, mingled with shiverings or sweats.—During the heat, insatiable thirst, great desire for milk, and < of pains when uncovered.—Febrile attacks at night, or in evening; fever, with inflammatory symptoms, or with putridity; slow and hectic fever.—Pulse, irregular, or quick, strong, and intermittent, or weak, slow and trembling (generally full and fast, with violent beating in arteries).—Copious, excessive, and colliquative sweats, both day and night, in morning, in evening after lying down, and when eating, and sometimes fetid, clammy, sour, or oily, giving linen a yellow colour, and burning the skin.—Sweat, with nausea and inclination to vomit, great fatigue, thirst, anxiety, obstructed respiration, stitches in side, &c.

Mercurius Præcipitatus Albus.

White Precipitate. Mercurammonium chloride. NH_2HgCl. Trituration.

Clinical.—Dwarfism. Eczema faciei.

Characteristics.—The symptoms of *Merc. præcip. alb*. are taken entirely from poisonings. The most peculiar symptoms are: Green tongue; bilious stools scalding anus; and the old-mannish appearance of a child poisoned with it. Mossa (*H. R*., ix. 28) relates (*1*) a case of chronic eczema of the face in an elderly man, a moistening eruption < in winter and from exposure to cold; vesicles on a reddened, swollen skin dry into scales which exfoliate; eyelids, especially lower, œdematous, corners reddened; lachrymation; ear involved; itching and burning on head preventing sleep. *Merc. præcip. alb*. 3 gr. i. every third day. First the burning itching ceased. Then formation of blisters abated. Exfoliation continued a long time, but the skin finally became normal. (*2*) Girl, 2, eruption on face and large part of scalp, covered with thick yellow crust, matter exuding from cracks. Offensive odour; swollen cervical glands. *Merc. præcip. alb*. 3 gr. i once in three days cured in four weeks.

Relations.—*Compare:* Dwarfish children, Bar. c., Syph. Eczema, Mez., Æthiops. ant.

SYMPTOMS.

6. Face.—Face: much flushed; greatly swollen.—In one night a child (poisoned with 20 gr.) had undergone a remarkable change; had become in appearance "quite an old man."

8. Mouth.—Gums much swollen.—Tongue: much coated; thick greenish fur.

11. Stomach.—Thirst urgent.—Nausea and vomiting.—Vomits deeply blood-stained fluid.—Much pain at stomach.

12. Abdomen.—After half an hour pain began in epigastrium, gradually spreading over whole abdomen.—Great pain in abdomen; continuing after taking any, even liquid, food, for more than a week.—Constant griping.—Whole abdomen painful to pressure.

13. Stool and Anus.—One copious stool with mucous shreds in some quantities, much dark blood.—Numerous scanty stools with much blood.—Almost pure bile causing great scalding of anus.

24. Generalities.—Slight subsultus.—Collapse.—During the night the child shrieked as from great pain, in the morning it had changed to the appearance of an old man.

26. Sleep.—Drowsy, semi-comatose.

27. Fever.—Cold, clammy skin, much congestion of cutaneous vessels.—General perspiration.

Mercurius Præcipitatus Ruber.

Red Precipitate. Red Oxide of Mercury. HgO. Trituration.

Clinical.—Anus, burning in. Chancroid. Gonorrhœa. Mucous patches. Pemphigus neonatorum.

Characteristics.—This intensely irritating mercurial was investigated by Hahnemann. All the usual mercurial symptoms were intensified. Hansen has used it in practice, and gives these as indications [which are not all found in the provings]: Gonorrhœa when the urethra is felt as a hard string. Phagedænic ulcer and bubo. Indurated ulcer, deep, with red, hard edges, and especially when spreading. Syphilitic iritis when the pains have ceased. Pemphigus neonatorum and intertrigo syphilitica. Mucous patches on scrotum and by anus, with or without fissures. Eczema, acute or chronic, much sero-purulent or purulent exudation, also externally (in ointment 1 to 40 of prepared lard). Tinea tonsurans, circinata and sycosis. Folliculitis barbæ (internally and externally).—These are Hansen's own observations. In the symptoms of the proving a sensation "as of a hot iron in anus moving up and down" looks like a possible keynote.

SYMPTOMS.

1. Mind.—Apprehension.

3. Eyes.—Fierce, intent look.—Chemosis.—Blepharitis (cured in a prover).

6. Face.—Remarkable redness of face and eyes.—Dropsical condition of face.—Cheeks and lips enormously swollen.

8. Mouth.—Inflamed gums.—Tongue enormously swollen and protruding.—Two holes in tongue.—Inside of mouth coated with a substance like decayed cheese.—Whole anterior portion of mucous membrane of cheeks, gums, and under surface of tongue sloughed away, and four teeth were lost in the process of syringing.—As the parts healed the jaws became completely closed by contracting cicatrices.—Tongue was reduced and firmly adherent to floor of mouth and cheeks.—Strong mercurial odour.—Burning in mouth and throat; pains prevent sleep.—Mouth very sore; flakes of epithelium separate.—Itching over whole mouth

without salivation.—Profuse salivation.—Blood and saliva of the most fetid odour flowed constantly from mouth.

9. Throat.—Throat inflamed.—Burning like hot ashes on swallowing the powder.

11. Stomach.—Unquenchable thirst.—Nausea; vomiting.—Vomit: with cutting in abdomen; blackish blood; bloody mucus; followed by diarrhœa.—Pains in stomach and whole abdomen.—Agonising pain in stomach with burning heat and nausea.

12. Abdomen.—Occasional pain in l. hypochondrium.—Abdomen distended and painful to contact.—Agonising colic.

13. Stool and Anus.—Constant urging; gradually became <, and spread over whole intestinal canal, with constant sensation in anus as of a glowing hot iron moving up and down.—Most excessive tenesmus, with scanty discharge of blood, with cutting, burning pains.—Diarrhœa: excessively violent; with violent cramps.—Stools: mainly blood; involuntary, greenish, and offensive.

17. Respiratory Organs.—Larynx inflamed and swollen, even outside.—(Paroxysms of suffocation at night on lying down and while falling asleep; obliged to jump up suddenly, when it disappeared.).—Oppression of chest.

19. Heart.—(Violent palpitation that seemed as if it would burst the chest.—Small, hard pulse.)

24. Generalities.—General trembling.—Convulsions.—Cramps of internal organs; and in legs.—Spasmodic contraction of extremities.

27. Fever.—Cold, perspiring skin.—Cold sweat.

Mercurius Protoiodatus.

Mercurius iodatus. Green Iodide of Mercury. Mercurious iodide. HgI. Trituration.

Clinical.—Blepharitis ciliaris. Breast, tumour of. Catarrh. Chancre. Crusta lactea. Diphtheria. Eyes, syphilitic affections of. Goître. Intra-ocular affections. Leucorrhœa; of children. Ozæna. Pregnancy, vomiting of. Scabies sicca. Syphilis. *Throat, sore*. Tonsillitis. Toothache. Writer's cramp.

Characteristics.—*Merc. iod*. has had a valuable proving, which has developed a distinct individuality based on the general *Merc*. characteristics. *Lyc*. (which is complementary to *Iod*.) is strongly recalled by some symptoms of *Merc. iod*.,

and *Lyc*. relieved some of the symptoms of the proving. The right-to-left direction was manifested in the throat and chest symptoms; but unlike those of *Lyc*., the throat symptoms were < by warm drinks. Cervical and parotid glands enormously swollen. Much accumulation of tenacious mucus in throat. *Merc. iod*. has a strong characteristic in the tongue—a thick yellow coat at the base; anterior part clean and red. There are many pains in the eyes and orbits. Farrington mentions "corneal ulcers looking as if they had been chipped out by finger-nail." *Merc. iod*. is a medicine of concomitants: There is a head pain following immediately a heart pain; pain in right forearm and left hip simultaneously; pain in heart with pain in abdomen. The teeth feel too long, < by closing the jaws. There is also irresistible desire to clench teeth, and the jaw is stiff and muscles tired from clenching teeth in sleep. Nausea at sight of food. Faint, sick feeling in hypogastrium. Black stools. A cough < by laughing. *Merc. iod*. is *suited to* scrofulous and syphilitic patients; to mucous surfaces covered with squamous epithelium; to effects of draughts whilst perspiring. Kent mentions the cure of "an ulcerated, indurated lump in breast, as large as a goose's egg, with knots in axilla, blueness of the part and no hope." *Merc. iod*. 100, given as often as the pains were severe, cured (*J. of Hcs*., iv. 319). Touch and pressure <. Symptoms are < night; before 1 a.m.; on waking. < Rest. < Lying on left side (many symptoms). > Lying on right side (tired feeling in all limbs). Headache > when mind and body actively engaged. Writing < (arm pain). < At church (faint feeling). < Warm room; warmth of bed. < In spring. Very sensitive to cold and damp weather.

Relations.—*Antidoted by:* Hep.; palpitation, Lyc. *Follows well:* Lach. (scarlatina). *Compare:* Right to left, Lyc. (Merc. bin. left to right). Nausea in hypogastrium, Puls. Black stools, Lept. Cough < laughing, Arg. n. Pains all round orbit, Cinnab. (Farrington says the characteristic of Cinnab. is that "the pain shoots across the eye from canthus to canthus and seems to go around the eye." Merc. iod. somewhat approaches this.) < Warm drinks and empty swallowing, Lach. Thick yellow coating at base of tongue, K. bi. (Nat. p. golden yellow; Nat. s. dirty or greenish grey). < Lying left side, Phos., Arn., Spig. (opp. Merc., which has < lying right side).

Causation.—Cold draught when perspiring. Cold, damp weather. Spring.

SYMPTOMS.

1. Mind.—When in bed, imagined a man was in his room intending to perforate his throat with a gimlet (the idea lasted twenty-four hours).—Lively, merry, talkative.—Destructiveness; moodiness; depression of spirits.

2. Head.—Dull frontal headache on waking; with dull soreness of bones of face.—Aching all over head with wave-like motion of blood.—Dizzy headache, like a rush of blood to head, followed by a violent pain above r. temple.—Dizziness when reading, and when rising from a chair.—Occasional shooting pains in

temples; sharp stitches.—Head feels dull and compressed, as if a heavy weight were pressing it down on pillow.—Head feels full and heavy.—Dull frontal headache, with pain in root of nose.—Throbbing pain in (fore) head.—Dull headache on awaking in morning.—Sharp pain on vertex.—Dull dizzy pains over vertex, with inclination to vomit, following immediately after a slight pain at heart.—Headache on vertex, or on r. side.—Severe shooting pain in forehead, superior arch of r. orbit, and root of nose.—Sensation as if skull were cracking.—Violent pain in r. side of head (over r. temple; extending to nape).—Numbness of occiput and nape of neck with stiffness of neck.—Sharp pain in occiput after rising.—Persistent itching of vertex; on l. side of vertex.—Itching of scalp.—Numbness and tingling of scalp.

3. Eyes.—Severe pain and soreness of r. orbit (on rising in morning); of superior arch; of inferior arch; of l. orbit (< by stooping).—Black clouds float before his eyes, when lying on his l. side.—Excessive photophobia.—(Corneal ulcers which look as if they had been chipped out by a finger-nail.

4. Ears.—Sharp, throbbing, boring pain, from within outward, deep in l. ear.—Sudden sharp pain in (r.) external meatus; in internal meatus; < by touch.

5. Nose.—Pain at root of nose (shooting pain).—A great deal of mucus in nose, must constantly clear it.—A great deal of mucus descends through posterior nares into throat.—The r. side of septum and r. nostril are very sore and much swollen.—Sharp pain in septum.—Painful spot on l. ala.

6. Face.—Dull bruised pain in r. malar bone, radiating into forehead and r. side of head, a small spot pulsates and burns like fire; < by touch.—Sharp stitches through head and face.—Soreness of all the face, esp. the bones, with dull frontal headache.—Stinging in l. cheek.—Sharp throbbing in r. cheek.

7. Teeth.—Teeth feel too long; cannot eat.—Sensation of dryness in teeth.—Pain in molars < bringing them together; with feeling as if too long.—Sensation: as if pressed tightly together; as if very tight in their sockets; fulness, grinding, and drawing in teeth with constant desire to press them together.—Grinding at roots of teeth with occasional pain in abdomen; with soreness deep behind umbilicus at 12 midnight.—Pressed teeth together so hard during sleep the muscles were lame and tired on waking.—Jaws stiff.—Toothache after filling.

8. Mouth.—Mouth, teeth, and lips dry and sticky, back part of tongue is covered with a thick, dirty yellow coat.—Fine, bright, and red eruption on roof of mouth.—Tongue coated: yellowish white; dirty yellow; light brown.—Small, red, raised elevations on tongue.—Coating always on back of tongue (thick, dirty yellow; esp. on rising in the morning).—Coating bright yellow, tip and edges red.

9. Throat.—Burning in throat; when swallowing saliva.—Dryness of mouth and throat; with frequent empty swallowing.—Pharynx, tonsils, and uvula red and

congested.—Fauces and pharynx red and inflamed; tonsils swollen; esp. r.; sensation of a lump as if swollen.—(Cheesy white lumps on r. tonsil, each pricking as if a bit of toothpick stuck in every time he swallowed.).—Throat dry and burning with pain when swallowing.—Excessive secretion of tenacious mucus in throat, difficult to dislodge; hawking causes gagging.—Posterior wall of pharynx dotted with patches of mucus and small spots, which look ulcerated.—The mucous patches on tonsils and walls of pharynx are easily detached.—Accumulation of mucus in throat in morning.

11. Stomach.—Thirst excessive; for acids or sour drinks.—Nausea, with suffocation about heart and dizziness.—Weak, empty feeling at stomach, with nausea.—Nausea, with sensation of disgust at sight of food.—Burning at stomach, with pain as from a blow.—Sudden, sharp, momentary pain at stomach as if a knife were driven in.

12. Abdomen.—Hardness of abdomen.—Heat at umbilicus, as from a hot coal, < when inspiring.—Aching in region of liver, pain going from r. to l. and causing giddiness.—Stitching pain in region of liver > by pressing hand upon it.—Pain in l. hypochondrium, with dizziness on awakening in morning.—Faint, sick feeling in hypogastrium before stool.—Indolent buboes.

13. Stool.—Pressure high up in rectum with sensation of nausea and fainting.—Small stool, of very tough fæces, almost of consistency of putty, requiring great straining for their evacuations.—Stools: thin, light yellowish brown, frothy; soft, copious, dark; black.—Nightly (10 p.m.) inclination to stool with small evacuation disappeared during the proving.

14. Urinary Organs.—Urine copious and of a dark red colour.

15. Male Sexual Organs.—Sharp shooting stitches in end of penis, through glans.—Copious seminal emissions, preceded by lewd dreams.—Dreams that he must urinate; this was followed by an emission.—Seminal emission, of which he knew nothing till morning.

16. Female Sexual Organs.—Menses slight at onset, with pain.—Copious muco-purulent discharge from vagina the entire month.—Yellow leucorrhœa, esp. of young girls and children.—Morning sickness of pregnancy; vomit, greenish yellow, bitter fluid, with burning and sinking at stomach.—Breast, tumour of.)

17. Respiratory Organs.—Slight hacking cough when inspiring.—Hoarseness and aphonia.—Goître with difficult breathing, suffocation at night; cough < night, and arises from tickling in larynx and from laughing.

18. Chest.—Sharp pain in chest, behind sternum.—Throbbing pain behind sternum.—Stitches through (r. side of) chest.—The pains in the chest appear l. side; those which appear r. side always proceed to l.—Sensation in l. breast above nipple

as if wind was in cellular tissue; frequent palpitation, a single kick and jump (> by *Lyc*).

19. Heart.—Stitching pain in heart.—Sudden but lasting pain about heart, taking away breath.—Sudden spasmodic action of heart, she thought it had jumped out of its place.—Pulse weak, irregular.

20. Neck and Back.—Neck stiff, soreness in occiput, < when lying; < when turning head.—Soreness and numbness between scapulæ.—Throbbing pain between shoulders.—Severe pain as if bruised over entire scapular region.—Throbbing pain in r. scapula.—Excruciating, sharp, sticking pain in back.

21. Limbs.—Bone pains.—Tired feeling in all limbs, < lying l. side, > lying r. side.—Pain in r. forearm and l. hip simultaneously.

22. Upper Limbs.—Numbness and wearied feeling in r. arm, < by writing.—Lameness and stiffness of r. shoulder.—Rheumatic, laming pain in r. arm, < by writing.—Soreness and lameness of l. shoulder and arm at night when lying on the l. side.—Soreness and pain of r. arm; < from pressure, rubbing and passive motion.—Sharp pain in r. shoulder, obliging him to cease writing.—Heavy feeling of r. arm.—Lame numbness of l. shoulder and l. arm.—Rheumatic pain in r. hand, at night, in bed.—In fingers: numbness; stiffness; pricking pains.

23. Lower Limbs.—Weariness in the legs, with dull pains and tingling.—Heavy laming pains in the calves of both legs, with pain in l. knee-joint.—Pain in sole of l. foot, with feeling of faintness through the whole body.—Sharp pain in r. big toe.

24. Generalities.—Sticking pains: both scapulæ, r. temple, r. side of chest, l. ear, along outer borders of both hands and both little fingers.—Heaviness of limbs, with laziness and drowsiness.—Languid and sleepy.—Faintness, wants to lie down.—Excessive tired feeling of all limbs, esp. when lying on l. side, > by lying on r. side.—Glands swollen and indurated.—Milk crust in children of a syphilitic taint.

25. Skin.—Troublesome itching over whole body, not > by scratching; < at night, esp. in bed.—Persistent itching spots over whole body, following each other in rapid succession.—Itching of scalp.

26. Sleep.—Sleeplessness without restlessness; before 1 a.m.—Frightful dreams; of coffins and drowning; nightmare.

27. Fever.—Pulse weak, irregular, and labouring.—Chills with trembling all over body.

Mercurius.

(*1*) MERCURIUS OXYDULATUS NIGER.

Mercurius solubilis Hahnemanni. Dimercuros ammonium nitrate. $_2(NH_2Hg_2)NO_3H_2O$. [A mercurial preparation devised by Hahnemann as a substitute for the corrosive mercurial salts in use at the time, and at once adopted in all countries on account of its much milder and more efficacious anti-syphilitic qualities. It was prepared by precipitating Mercury from its solution in nitric acid by means of caustic ammonia. This is the preparation Hahnemann used in his proving.] Trituration.

(*2*) MERCURIUS VIVUS.

Hydrargyrum. Argentum vivum. Chamćleon minerale, &c. Metallic Mercury. Quicksilver. Hg (A. W. 199.8). [Although Hahnemann proved Mercurius solubilis, he recommended the use of triturations of the pure metal in practice as being the simplest mercurial preparation, and more easily obtained and equally available with Merc. sol. for prescribing on the symptoms of the latter.] Trituration. [Decoction: water in which quicksilver has been boiled for half an hour.]

Clinical.—[The letters *s* and *v* indicate the preparation—Solubilis or Vivus—mentioned in the *Prescriber* in connection with the malady the name of which they follow; they are not intended to indicate a preference of one over the other.] *Abscess (s)*. Anćmia. Aphthć. Appendicitis. *Balanitis (s). Bone, disease of (s)*. Brain, inflammation of. *Breath, offensive (s). Bronchitis (s). Bubo (s)*. Cancrum oris. *Catarrh (s)*. Chancre. *Chicken-pox (s). Cold (s)*. Condylomata. *Cough (s). Dentition, abnormal (s). Diarrhśa (s)*. Dysentery. *Dyspepsia (s). Ecthyma (s)*. Eczema. Emaciation. *Excoriation (s). Eyes, affections of (s)*; gouty inflammation of. Fainting. Fevers. Fissures. *Glandular swellings (s). Gout (s). Gum-boil (s). Gums, unhealthy (s). Heart, affections of (s). Herpes (s)*. Hydrophobia. *Jaundice (s). Joints, affections of (s)*. Leucorrhśa; in little girls. *Liver, affections of (s). Lumbago (s)*. Mania. *Measles (s). Melancholia (s)*. Meningitis. Mollities ossium. Mucous patches. Mumps. *Noises in the head (s). Odour, of body, offensive (s)*. Ovaries, affections of. *Pancreatitis (s). Parametritis (s)*. Parotitis. Peritonitis. *Perspiration, abnormal (s). Phimosis (s). Pregnancy, affections of (s.). Prostate, disease of (s). Purpura (s) (v). Pyćmia (s). Ranula (s). Rheumatism (s) (v)*. Rickets. Rigg's disease. *Salivation (s). Scurvy (s). Small-pox (s)*. Stomatitis. *Suppuration (s)*. Surgical fever. *Syphilis (s). Taste, disordered (s). Teeth, affections of (v). Throat-deafness (s). Throat, soreness of (v). Tongue, affections of (s) (v)*; mapped (v). *Toothache (s). Tremors (s). Typhus fever (v). Ulcers (s). Vaccination (s)*. Vomiting (s).

Characteristics.—No pains have been taken to keep distinct *Merc. sol*. and *Merc. viv*., and I do not find it practicable to attempt to separate them. Though *Merc. sol*. was the preparation Hahnemann proved, he recommended *Merc. viv*. as a superior preparation for homśopathic prescribing in his preface to the proving. *Mercurius solubilis Hahnemanni* was invented by him in his pre-homśopathic days in response to a general desire for a mercurial preparation which should be at once soluble and non-corrosive, and it at once took its place in pharmacy, a place it has never lost. The method of developing the medicinal power of metallic mercury by graduated trituration was a later discovery, though there was a suggestion of it in the well-known *Hydrargyrum cum cretâ*. To the symptoms of Hahnemann's pathogenesis of *Merc. sol*. are added observed effects of *Mercury* in those engaged in working with the metal, in patients taking *Mercury*, and effects in those applying mercurial inunctions to patients—many having been severely affected by absorbing it through their hands. There is no difference between these effects and the symptoms of the proving so far as the general characteristics are concerned. In the finer characteristics there must be differences. The symptoms of the proving are in general more particularly characterised than the effects of *Merc. viv*. For instance, "At night severe toothache, and when that went off great chilliness through the whole body," belongs to the *Merc. sol*. proving; and so do these: "Vertigo: when sitting at his desk there was whirling in the head, as if he were drunk, he rises up and walks about the room staggering, then anxious heat breaks out over him, with nausea but not to the length of vomiting; at the same time some headache." "From occiput a strong, tearing, continued pain, which went into the forehead and there pressed." The symptoms of nose-bleed and the more finely characterised throat symptoms ("stitches on tonsils"; "stitches into ear on swallowing"; "something hot rises into throat.,"), were produced by *Merc. sol*., so were the majority of the symptoms in the male and female sexual organs. But this is not to say that *Merc. viv*. will not answer equally well, or even better, for curing them. The only bit of comparative experience I have in the action of the two is this: in a case of cold in which *Merc*. seemed indicated, *Merc. sol*. 30 was given and failed, and *Merc. viv*. 30 promptly cured.—We of the present generation can hardly form a conception of the havoc wrought by *Mercury* in the days when it was considered necessary to "touch the gums" in all cases for which *Mercury* was prescribed before any good could be hoped for. The motto, "Salivation is Salvation," tells its own tale. "It was quite an event," says Teste, "when in the sixteenth century the discovery was made that *Mercury* will cure syphilis without the patient being salivated. One error, however, being substituted in place of another, it was supposed that the sweat, the diuresis, or the diarrhśa which followed the exhibition of *Mercury*, replaced the absent salivation; the gross humoralism which prevailed at that period did not allow of another explanation. For a graphic picture of a practice which was part of the ordinary routine until recent times, I quote the following from Bransby Cooper's *First Lines of Surgery*, 6th ed., p. 348: "*Mercury* acts upon some individuals like a poison [!] they are seized with palpitations of the heart, tremblings of the limbs, oppression of the breathing, and irregular pulse. When

such indisposition takes place in a person employing *Mercury* we conclude that this mineral is actually producing a deleterious impression on the system [!]. It was noticed by the late Mr. Pearson that every year, when it was the custom to salivate freely, a certain number of individuals thus treated died suddenly in the Lock Hospital. They were first affected as I have described, and, on attempting to make the slightest effort they dropped down dead. Mr. Pearson learned from experience [!] that these deaths arose from the deleterious action of *Mercury* on the constitution, and the derangement of the system thus excited he proposed to call the *Mercurial erethismus*." Homśopathy has filled out this picture in full detail, and turned this deadly blundering to curative account. There was a fitness in naming this metal after the volatile deity. It provides us with weather-glasses and thermometers, and it turns those who are under its influence into weather-glasses and thermometers likewise. [An electrician, who at one time was required to work with his hands frequently in a trough filled with quicksilver, thereafter could not bear the slightest shock of electricity, though before he could stand very strong ones.] And herein lies one of the grand characteristics of the remedy: as the thermometer is sensitive to *changes* either to *hot or cold*, so is the *Merc*. patient. Other remedies are predominantly one or the other: Merc. is both─ < by heat and < by cold. This is keynote No. 1. No. 2 is "< at night." This is a strong point of correspondence with syphilis. Especially is this noticeable in the bone pains. No. 3 is: Profuse sweat accompanying nearly all complaints and which *does not relieve*; it may even aggravate. Guided chiefly by these two indications: "Profuse sweat with no relief" and "< at night," I have cured many cases of rheumatic fever with *Merc. viv*. 12, without any other remedy. Keynote No. 4 is: The mercurial odour. The mercurial patient is offensive; breath excessively fetid; sweat offensive, mawkish, sweetish. Keynote No. 5 is *tremor*. This symptom is so pronounced and universal that it renders *Merc*. the best general remedy in paralysis agitans. There is tremor of head, of hands, of tongue. Tremors commencing in the fingers. It is the tremor of weakness and paralysis; and as described by B. Cooper it may attack the heart and cause sudden death on the smallest effort. Short of this there is great tendency to fainting; extreme exhaustion after a stool. The tremors may become jerkings and even convulsions. Extreme restlessness. The mind is as weak and tremulous as the body; everything is done hastily. Hurried and rapid talking. On the other hand: slow in answering questions; loss of memory; of will power. Embarrassment. Absent-minded. Imbecility. Time seems to pass slowly. Desire to flee. Homesick. Suicidal. Murderous. *Merc*. is Hahnemann's typical antisyphilitic remedy, as *Sul*. is the typical antipsoric, and *Thuja* the typical antisycotic. In selecting *Merc*. as the remedy for syphilis the old practitioners were so far right, but they did not know how to give it. *Merc*. so far corresponds to syphilis that many undoubted cases of mercurial poisoning have been diagnosed by experts as syphilis. Bones, glands, and skin are affected. Inflammation leads to induration, induration to ulceration. *Merc*, corresponds accurately to the true Hunterian chancre. *Merc*. ulcers have a grey, lardy, ashy, or cheesy base. There are burning or stinging pains in them. Another great feature of *Merc*., almost constituting a

keynote, is the tendency to the formation of pus. In the suppurative stage of small-pox it is specific. Flow of pus, and particularly bloody pus, from any orifice calls for *Merc*. Pus forms in cavities in abscesses, which burn and sting. Discharges are yellow-green in colour. Gonorrhśa. Fetid ear discharge. *Merc*. is a great solvent: it dissolves metals out of their ores and it dissolves living tissues, inducing excessive emaciation. Lowly organised tissues as indurations, exostoses, and some tumours are melted first. Śdema and dropsies are absorbed; rheumatic swellings. If the doses of *Merc*. are large and dropsies disappear rapidly under them, the tissues themselves may disappear also in offensive rapidly decomposing ulcers. The bones soften so that they will bend. Whilst *Merc*. intensifies the action of the absorbents, it may also paralyse them, hence enlargement of glands, with pricking pains, inflammation, suppuration. Next to syphilis, the liver has been the chief excuse for mercurialism, in the past, and *Merc*. certainly has a powerful liver action. The liver is congested, enlarged, inflamed, stitches in the liver, sensitiveness in the liver and *inability to lie on right side*. This "< lying on r. side" is a very characteristic condition of *Merc*., and when present *Merc*. should always be considered. Along with the liver the stomach is disordered. Sweets disagree; aversion to meat, wine, brandy, beer, coffee, greasy food, butter. There is the characteristic flabby, coated, teeth-indented tongue, foul breath, and intense thirst. Throat dry and forepart of tongue moist. *Merc*. is rarely indicated when the tongue is dry. Sliminess is a general characteristic. Slimy stools; stools acrid, knotty, containing pus, viscid. Just before stool a sick, painful, faint feeling comes on. During stool there is tenesmus, or tenesmus and no stool. Dysentery with much straining; never-get-done feeling when there is no more to come. Diarrhśa with slime. "*Merc*. is rarely indicated in these troubles where there is no slime" (Guernsey). *Merc*. affects profoundly the generative organs of both sexes. It has stinging, cutting pains in ovaries; cutting pains from l. to r. in lower abdomen. "Stinging" is very frequent in mercurial pains, and "stinging pain in ovaries is just as likely to need *Merc*. as *Apis*" (Kent). Almost all kinds of eruptions are produced by *Merc*. Scurfy, syphilitic, pustular, moist, oozing, offensive eczema. Shingles. Small-pox. They are all < by warmth and at night and < by cold. In olden times it was recognised that a patient under a "course" of *Mercury* must be very careful not to catch cold. This gives one indication for *Merc*. in abnormal tendency to catch cold. But for this condition it must not be too frequently repeated, as it will aggravate it. The patient needing *Merc*. is sensitive to every draught and yet < by warmth the nasal secretion is acrid, and the nose red and excoriated; dirty-nosed children" (Guernsey). Old catarrhal smell in the nose inside nostrils smarting and burning. Aching, tearing, and out-pressing in the bones. "*Kali iod*. is better for the same bursting in the face, running coryza, and < from heat and warmth of the bed" (Kent). [I find that a much larger percentage of cases of acute cold come under the indications of *Cepa* and *Chlorum* than under those of *Merc*. or any other related remedy. In chronic colds I think first of *Psor*.] The eyes are very markedly influenced by *Merc*.; also the bones round the eye: "Whenever cold settles in the eye in gouty and rheumatic patients" (Kent). Every degree and kind of

inflammation and ulceration is produced by *Merc*. and its salts. J. J. Hirsch, of Prague (*H. R*., vii. 220), relates some striking experiences with a preparation of *Merc. viv*. which he learned from an old allopath. Quicksilver is boiled in water for half an hour, two teaspoonfuls being given every two hours. Hirsch's cases were those of acute inflammation of the brain, in which *Bell*. was indicated, and in one of which *Merc*. (in the ordinary homśopathic preparation) had already been administered in vain. This is the case: A black-haired girl, 9, had malignant scarlatina, which commenced six days before Hirsch (who came as consultant) saw the case, signs of brain inflammation having set in on the third day. Hirsch found her unconscious, sharply defined redness of cheeks, pulse 120, hot skin. Piercing screams were emitted from time to time; boring head in pillows; chewing motion of jaws; gnashing teeth. Lips brown and dry; not much thirst; water not accepted readily; but milk seemed to be relished. Reddened patches here and there, especially along neck. Under the "decoction," which was given to the girl on Hirsch's suggestion, she slowly but steadily improved, and in a week was convalescent.─Among the *Sensations* of *Merc*. are: Vibration in forehead. Head as if in a vice; as if growing larger. As of sparks being emitted from eyes; as of a body underneath lids; as if feathers came from corners of eyes. As if a wedge driven in ear; as if ice in it; as if cold water running out of it. Cracklings in head as from metal plates. As if weight on forehead; as if weight hanging on to nose. As if teeth were loose; were fixed in a mass of pap. As if hot vapours rising into throat; of worm rising into throat, must swallow it down; of apple core sticking in throat. As if mammć would ulcerate. As if everything in chest was dry.─Stabbing pains and stitches, burning, boring, digging, stinging, and dragging pains. Soreness and sensitiveness. Itching; voluptuous itching. *Merc*. is more particularly *suited to:* Light-haired persons with lax skin and muscle; women and children. Scrofulous children. (*Merc*. has relation to psora and sycosis as well as syphilis.) The symptoms are < by touch or pressure. < At night; before falling asleep. < Blowing nose. < During a catarrh. < From cold air. < From taking cold. < From lamplight; firelight. < During perspiration; on getting warm in bed. < Before stool. < During urination and after. < Lying on right side. < Motion; walking; slightest exertion. < Evening. Rest >. Coitus >. Weeping >. < Touching anything cold (= pain in abdomen). < Bending forward (digestion immediately disordered). < After eating (if he eats ever so little it causes a dragging down in stomach).

Relations.─*It antidotes:* Bad effects of sugar; stings of insects; ailments from Arsenic or Copper vapours, Aur., Ant. t, Lach., Bell., Op., Phyt., Val., Chi., Dulc., Mez., Thuj. *It is antidoted by:* Aur. (suicidal mania; caries of bones, especially of patella and nose); Hep. (mental symptoms-anxiety, distress, suicidal and even homicidal mood-bone pains, sore mouth, ulcers, and gastric symptoms); Nit. ac. (periostitis, bones and fibrous tissues; bone pains < at night; aching in shins in damp weather; ulcers in throat, especially of secondary syphilis); Chi. (chronic ptyalism); Dulc. (ptyalism < by every damp change); K. iod. (syphilis and mercurialism, combined, bones, periosteum, glands; ozćna; thin, watery discharge,

upper lip sore and raw; repeated catarrhs after Mercury, every little exposure to damp or wet air = coryza; eyes hot, watery, swollen; neuralgic pains in one or both cheeks; nose stuffed and swollen and at same time profuse watery, scalding coryza; sore throat < every fresh exposure); Kali mur. (scorbutus, fetor); Asaf. (bone affections.—Asaf. is distinguished by extreme sensitiveness of diseased parts; extreme soreness of bones round eye); Staph. (depressed system; wasted, sallow, dark rings round eyes, spongy gums, ulcers on tongue); Iod. (glands); Mez. (nervous system; neuralgia in face, eyes, anywhere); Bell., Caps., Carb. v., Fer., Guaiac., Stilling., Sul., Thuj "all symptoms agreeing, Merc., *high*" (Guernsey). *Incompatible:* Sil. (Merc. and Sil. should never be given immediately before or after each other). *Compatible after:* Aco., Bell., Hep., Lach., Sul. *Before:* Ars., Asaf., Bell., Calc., Chi., Lyc., Nit. ac., Pho., Pul., Rhus, Sep., Sul. *Compare:* Bell. (very close analogue, often complementary; commencing abscess; difficult swallowing fluids; sharp pain through tonsils; pains come suddenly); Hep. (chilliness; something sticking in fauces); Meny. (coldness in ears); Puls. (thick yellow nasal discharge—but that of Puls. is always bland; otitis); Nux (coryza and sore throat—Nux has *scraped* feeling; Merc. is always smarting, raw, or sore.—Dysentery: with Nux tenesmus ceases after stool; with Merc. not, there is the never-get-done feeling); Aco. (dysentery of hot days and cold nights; often precedes Merc., and Sul. follows in like conditions); Lept. (bilious troubles, horribly offensive stools—the *griping* of Lept. continues after stool but not tenesmus); Dig. (gonorrhśa); Euphr. (eyes); Ars. (Merc. < by heat of, but > by rest in bed—Ars. > by heat of, but < by rest in bed); Sul. (itch, pustulous, eczematous eruptions); Spo. (orchitis); Pho. (profuse sweat without >); Ant. c. (dirty tongue; inflammation of eyes < glare of fire or sunshine); Arg. n. (eyes); Kali i. (stitching pains through lungs; Merc. right or left and shooting in different directions; Kal i., from sternum to back < from any motion); Borax (sore mouth); Coloc. (dysentery—Col. > after stool, Merc. <); Chel. (bilious pneumonia); Cham. (diarrhśa; dentition); Caust. (gonorrhśa); Mag. m. (liver pains < touch, < lying right side); Plumb. and Chi. s. (testes); Syph. (syphilis; < heat of stove or bed; < night): Lyc. (hepatitis; tenderness; right to left, wash-leather tongue; sinking immediately after meals); Sul., Puls., and Cham. (< in bed at night); Nit. ac. (dark persons; Merc. fair); Crocus (nose-bleed in tough strings); Sang. (tongue as if burnt); Bry. (wash-leather tongue; < motion; stone in stomach); Apis (stinging pain; fetid breath; ovarian affections); Sabal. (stinging pains in ovaries); Dolichos (itching of gums; jaundice); Magnt. aust. (ulceration of nails); Psor. and Medorrh. (foul body smell); Arn. (foul breath); Mez. (decay of teeth—Merc. of crowns; Mez. of roots); Led. and Sars. (bloody seminal emissions); Sul. (pruritus vulvć < night, < from contact with urine, which must be washed off); Lac c. and Con. (breasts painful, as if would ulcerate at every menstrual period); Chel. and Kal. c. (affect lower lobe right lung; stitches through to back); Kal. c. (suppuration of lungs after pneumonic hćmorrhages); Pic. ac. (boils in auditory meatus); Teucr. and Thuj. (polypi); Can. i. (time passes slowly); Dulc. (sensitive to cold and damp; cold settles in the eyes; furfuraceous eruptions); Graph. (coryza during menses; Mag. c. coryza and sore

throat before and at menses; Merc., dull pain on forehead, with coldness, especially in women, with coryza < before or at menses).

Causation.—Fright. Suppressed gonorrhśa. Suppressed foot-sweat.

SYMPTOMS.

1. Mind.—Great anguish, restlessness (is constantly changing from place to place), and agitation, with fear of losing the reason, or with excessive internal torment, principally in evening, or in bed at night, as if conscious of having committed some crime.—(Post-partum mania; wants to throw child on fire.).—Inclined to sopor, coma.—Moral dejection, with great listlessness, discouragement, dread of labour, and disgust to life.—Great indifference to everything.—Does not even care to eat.—Apprehensions.—Desire to flee with nightly anxiety and apprehensions.—Ill-humour, disposition to be angry, and to fly into a passion, great susceptibility, humour quarrelsome, mistrustful, and suspicious.—Moroseness and repugnance to conversation.—Groans.—Continuous moaning and groaning.—Excitement, and great moral irritability, with a tendency to be easily frightened.—Bad effects from fright, leaving one in a state of great anxiety and < at night.—Home-sickness with nightly anxiety and perspiration.—Distraction, inadvertence, difficulty of conception.—Entire-unfitness for meditation, and tendency to make mistakes while speaking.—Answers questions slowly.—Weakness of memory; and will-power lost.—Instability of ideas, which constantly drive away each other.—Raving.—Delirium; mental derangement of drunkards.—Intellect weak; imbecile.—Low muttering delirium.—Fits of mania or dementia, with disposition to shed tears.—Hurried and rapid speech.—Loss of consciousness and of speech.—Fury, with dread of liquids.

2. Head.—Cloudiness, intoxication, and dizziness, principally in morning, on waking, and on getting up.—Vertigo, principally on getting up, or on raising up head, or when seated, or when lying on back (vertigo with headache); as well as during or after a walk in open air, or in evening, and often with nausea, cloudiness of the eyes (everything becomes black before eyes), distressing heat, and want to lie down.—Vertigo as if one were on a swing.—Dull and stupid feeling with dizziness.—Heaviness, fulness, and aching in head, as if forehead were squeezed by a bandage, or as though cranium were on the point of bursting (with fulness of brain).—(In the evening) painful sensibility of brain, with fatigue of head by noise, > by resting head upon the arm.—Compressive headache, the head feels as if it were in a vice, with nausea; < in open air, from sleeping, eating and drinking; > in room.—Violent headache, which forces compression of head between the hands.—From occiput a strong, tearing, continued pain which went into forehead and there pressed.—Heat and burning, or tearing and drawing pains, or shootings in head, often only semi-lateral, and extending to ears, teeth, and neck.—Burning in head, esp. in l. temple, < at night when lying in bed, > on sitting-up.—Inflammation of the brain with burning and pulsation in forehead, with

sensation as if head were in a hoop; < at night, > after rising.—Weakness in head like a dulness, as if there was a vibration in forehead and turning about in a circle.—Constant rotary motion of head, even when lying.—Ebullition, boring, and digging shocks, and throbbings in head.—Pain, as from a bruise, in brain, while in bed, in morning.—Nocturnal cephalalgia.—Pains in bones of head, and exostosis in the cranium.—Sutures open; large head; precocious mental development.—Swelling of head; soreness of the scalp; sharp and burning pains in integuments of cranium.—Sensation of subcutaneous ulceration in whole head, < at night when becoming warm in bed; > after rising.—Tearing in one (l.) side of head and temple, extending from neck, with insupportable heat and perspiration, < at night and in heat of bed, > towards morning and while lying quiet.—Tension over forehead as from a tape or hoop, < at night in bed; > after rising and from laying hand on it.—Congestion of blood to head with heat in it.—Hydrocephalus.—Sensation of tension of scalp.—Scalp is painful to touch; < when scratching, which is followed by bleeding.—Tearing and stinging in bones of skull.—Itching on hairy scalp, and forehead and temples; < from scratching, when it bleeds and becomes erysipelatous.—Dry, stinging, burning, fetid eruption like yellow crusts, on forepart of head and temples, when scratching inflammation and erysipelas.—Exostoses, with sensation of subcutaneous ulceration on touching them, < at night in bed.—Open fontanelles with dirty colour of face, restless sleep, and sour-smelling night-sweat.—Falling off of hair; mostly on sides of head and temple; with humid eruptions on head or after clammy perspirations of head; with itching at night in bed; < from scratching; with burning, with great tendency to perspiration.—Great chilliness with contractive tearing pain of the scalp, extending from forehead to neck.—Fetid, sour-smelling, oily perspiration on head, and on icy-cold forehead, with burning in skin: < at night in bed, > after rising.—Dry eruption on head; small scabs in hair, sometimes with burning itching; moist scabs, with excoriation of scalp, and destruction of hair.—Sweat on head and forehead, sometimes cold and viscid.

3. Eyes.—Eyes confused, dull, and surrounded by a livid circle.—Pressure in eyes, as from sand, principally when fixing the attention on any object.—Shootings, itching, tickling and burning in eyes, principally in open air.—Eyes red, inflamed, with redness of conjunctiva or sclerotica, and injection of vessels of sclerotica, or of external canthi.—Profuse lachrymation, principally in evening.—Blear-eyedness.—Amaurotic dimness before l. eye.—Twitching of lids.—Excessive sensitiveness of eyes to light, and to brightness of the fire.—Firelight dazzles eyes greatly.—Eyes inflamed, with swollen inverted tarsi.—Pupils dilated.—Inability to open eyes well, as if agglutinated to balls.—Pustules in conjunctiva, and ulcers in cornea.—Eyelids red, inflamed, swollen, ulcerated on margins, and covered with scabs.—Sensation as if a cutting instrument were under eyelid.—Tumour in eyelid, like a stye.—Nocturnal agglutination of eyelids.—Spasmodic closing of eyelids, with difficulty in opening them.—Scabs round the eyes.—Amblyopia and confused sight, as in looking through a mist (periodical loss of sight); momentary loss of

sight; black points, hovering flies, flames and sparks before eyes.—Apparent motion of letters, when reading.

4. Ears.—Tearing, shooting and drawing pains in ears, sometimes with a sensation of coldness, as if there were ice in ear, increased by heat of bed.—As if ice-cold water running out of ears; comes suddenly, lasts a few minutes and recurs; violent itching in ears in intervals.—Ear and auditory tube inflamed, with cramp-like and shooting pains.—Soreness of internal ear.—Meatus swollen with much earache when chewing.—Small ulcers in front of l. membrana tympanis.—Discharge of pus from ear, with ulceration of external ear.—Excoriation and ulceration of the concha auris.—Purulent otorrhśa and fungous excrescences in ear, with tearing in side of head affected, and in face.—Flow of blood from ears.—Discharge of cerumen.—Subcutaneous tumour, and furfuraceous and moist pimples on the lobe.—Hardness of hearing, sometimes with obstruction of ears, which ceases when swallowing or blowing nose (or the obstruction is caused by enlargement of tonsils), or with an extraordinary reverberation of all sorts of sounds in ears.—Tinkling, roaring, ringing, and buzzing in ears, principally in evening.—Obstinate tinnitus.—Painful sensitiveness, and inflammatory swelling of parotids.—Inflammatory swelling of the r. parotid gland with stinging.

5. Nose.—Swelling of the bones of the nose (external nose, as bridge of the nose, may swell up very large on both sides), with painful sensitiveness to touch.—Itching in nose.—Tension, pressure, and sensation of heaviness in nose.—Blackish colour of nose.—Inflammatory swelling and shining redness of nose, with itching.—Scabs in nostrils (bleeding when cleansed).—Discharge of a greenish fetid and corrosive pus from the nostrils.—"Dirty-nosed children.".—Frequent and profuse bleeding from nose, even during sleep, and sometimes when coughing.—Obstruction and dryness of nose.—Frequent sneezing.—Dry coryza, with obstruction in nose, or fluent coryza, with copious discharge of corrosive serum.—Putrid smell from nose.—Painful pustule in nose.

6. Face.—Face, pale or yellowish, or lead-coloured, or earthy (with dull eyes without lustre).—Features discomposed and drawn.—Circle of bluish red round the eyes.—Feverish heat and redness of cheeks.—Bloatedness and swelling of face, principally round eyes.—Swelling of one (r.) side of face with heat and toothache.—Swelling of cheek.—Tearing in bones and muscles (of one side) of face.—Aching and pricking in zygomatic process.—Sensation of tension of skin on face and head.—Sweat on face.—Red and tettery spots on face.—Yellowish scab on face, with discharge of a fetid humour, constant itching day and night, and bleeding of the part after having been scratched.—Crusta lactea.—Lips rough, dry and blackish, with burning when they are touched.—Salt taste on lips.—Swelling and ulceration of lips.—Yellowish scabs, purulent pustules, and small ulcers on the lips and round the chin.—Burning pimples with yellow crusts on lips.—Fissures, rhagades, and ulceration in (lips and) corners of mouth.—Distortion of mouth and convulsive movements of lips.—Masseter muscles contracted so that speech was

difficult.—Atrophy and exfoliation of alveolar processes.—Clenching and immobility of jaws, with inflammatory swelling of lower jaw, and tension in muscles of neck.—Lockjaw with stinging pains and engorgement, and inflammatory swelling of submaxillary glands, with shooting or pulsative pains, or without pain.—Caries of jaw.—Facial paralysis from cold, r. or l. side: almost specific (R. T. C.).

7. Teeth.—Tearing, shooting, or pulsative pains in carious teeth, or in roots of teeth, often extending to ears, and over whole cheek of side affected, sometimes also with painful swelling of cheek or of submaxillary glands, salivation, and shivering.—The nightly pulsating toothache extends to ear.—Appearance or aggravation of toothache, principally in evening, or at night, in heat of the bed, where it is insupportable; renewed by fresh air, as well as by eating, and taking anything hot or cold into mouth.—The teeth are set on edge, grow black, loosen (they are painful when touched by tongue), denuded of gum, and fall out.—Itching, burning, and redness of gums.—Gums are fungous, and bleed easily.—Bleeding of gums when touching them ever so little.—Retraction and swelling of gums, principally at night, with burning pain and sensation of excoriation, on touching them, and when eating.—Gums livid, discoloured, and very sensitive.—Upper border of gums looks indented, the indentation being white and ulcerated.—The swollen gums have white, elevated, ulcerated, pointed edges.—Ulceration of gums.

8. Mouth.—[This remedy covers in general, affections of mouth and fauces; r. side of fauces; r. side of neck; nape of neck (*i.e.*, affections appearing in any of the mentioned places); rarely give *Merc*. if the tongue is dry.—Guernsey].—Putrid smell from the mouth.—Bluish colour, excoriation, and inflammatory swelling of inside of mouth.—Burning pain, vesicles, blisters, aphthć and ulcers in the mouth.—Stomacace.—Sensation of dryness in mouth and palate, or accumulation of tenacious mucus.—Ulceration of orifice of salivary duct, and profuse discharge of excessively fetid saliva, which is sometimes bloody (or tenacious).—Tongue moist, coated with white and thick, or dry, brown, or blackish mucus.—(Excoriated patches like islands on tongue in children, with craving for fat, *v*.).—Hardness, inflammatory swelling (suppuration), and ulceration of tongue, with shooting pains.—Longitudinal furrow on tongue with pricking pains.—Needle pricks in tip of tongue.—Tongue swollen, soft flabby, the edges become indented by the impression of teeth.—Tongue red and swollen; ulcerated; black, with red edges; moist with intense thirst; grey patches on edges, dirty-yellow coat on upper surface.—Aphthć in the mouth; bluish and spongy; ulcers spread without penetrating the flesh.—Inflammation and superficial ulceration of the mucous membranes of mouth.—Salivary glands swollen and painful; saliva fśtid or tastes coppery.—Rigidity, insensibility, and immobility of tongue.—Sensation in tongue as if burnt.—Quivering of tongue.—Rapid and stammering speech; entire loss of speech.—Loss of speech and voice; she hears everything well, but can only reply by signs and grimaces; sunken features, weeping about her condition; cannot sleep, feels very exhausted; good appetite, thirst for beer; fćces and urine passed easily;

lasted three days; (almost complete relief by *Hyo*.).—Ranula.—Ulceration and caries of palate.

9. Throat.—Continuous painful dryness of throat; the mouth being full of water.—Painful dryness of throat, which impedes speech.—Pain, as from excoriation and smarting in throat, or sensation of heat, which ascends into gullet.—Shooting pains in throat and in tonsils, principally when swallowing.—Elongation and swelling of uvula.—Suppuration of tonsils.—Pressure and pains as from excoriation and ulceration, in śsophagus.—Syphilitic ulcers in mouth and throat.—Inflammatory swelling and redness of back parts of mouth and throat.—Erysipelatous inflammation of all soft parts of mouth and throat.—Inflammation and redness of palate.—Angina esp. with stinging pains < by empty deglutition at night and in cold air.—Throat and fauces of a coppery red colour and swollen.—Accumulation of thick and tenacious mucus in throat.—Sensation as if there were a tumour, or some foreign body in throat, which it is necessary to swallow.—Constant want to swallow.—Sensation as if a worm rose up so that he must always swallow, whereby it goes off somewhat though he does not feel anything go down.—When swallowing shooting in tonsils, stitches into ears.—Painful, difficult, and sometimes spasmodic deglutition, with danger of suffocation.—Burning in throat as if from a hot vapour ascending from stomach, with dryness in throat when swallowing, and continuous desire to swallow, with accumulation of water in mouth.—Inability to swallow the least liquid, which escapes through nostrils.—The pains in throat commonly extend to ears, parotids, submaxillary, and cervical glands; they are < for the most part by empty deglutition, as well as at night, in fresh air, and when speaking, and they are often accompanied by salivation.

10. Appetite.—Putrid, salt, sweetish, or metallic taste.—Bitter taste, principally when fasting, in morning.—Rye-bread has a bitter or sweetish taste.—Acid and mucous taste during a meal, also at other times.—Saltish taste on lips.—Violent burning thirst, day and night, with desire for cold drinks, and principally for milk and beer.—Desire for wine and spirits.—Insatiable appetite and craving (or complete loss of appetite), with apparent insipidity of food.—Appetite only for bread and butter; aversion to butter.—Bulimy, with great weakness.—Canine hunger, even after eating.—Want of appetite.—No wish for food, which, however, is agreeable to the taste when eaten.—Thirst more decided than appetite.—Speedy satiety when eating.—Stomach feels replete and constricted.—Dislike to all food, principally solid nutriment, meat, sweetmeats, cooked victuals and coffee.—Has no appetite for dry food, likes liquid food.—Great weakness of digestion, with continued hunger, and pressure in stomach, frequent risings, pyrosis and many other inconveniences after a meal.—Bread is heavy on stomach.

11. Stomach.—Excessive nausea and inclination to vomit, often with incisive and pressive pains in stomach, chest, and abdomen, anxiety and inquietude, headache, vertigo, cloudiness of eyes, and transient heat.—The nausea often increases after a

meal, and is accompanied by a sensation in throat, as if things sweetened with sugar had been eaten.—Rising of air.—Risings, principally after eating, and often of a putrid or bitter or sour and rancid taste.—Violent empty risings.—Regurgitation (of ingesta) after eating and drinking.—Pyrosis, regurgitation of a rancid liquid, and hiccough during and after a meal.—Retching and vomiting of mucous or bitter matters, or of bile.—Violent vomiting with convulsive movements.—Burning, violent pain, and excessive sensibility (esp. to touch) in the stomach, and in the precordial region.—Tension, fulness, and pressure as from a stone in pit of stomach, principally during or after a meal, however little may have been eaten; stomach hangs down heavily.—Sharp constrictive pain in precordial region.—Cramp-like pains in stomach, even after a very light repast.

12. Abdomen.—Painful sensitiveness of hepatic region, with shooting, burning pains, < by every movement of body, or of the parts affected.—Region of liver swollen, painfully sensitive to contact; cannot lie on r. side.—Chronic atrophy of liver, with emaciation and dessication of the body.—Swelling and hardness of liver.—Complete icterus.—Abdomen hard and inflated, with soreness when touched, principally in umbilical region.—Colic which only passes off in a recumbent position.—Violent colic (with diarrhśa), with cuttings, lancinations as if by knives, painful contractions and pinchings in abdomen, principally at night or in cool of evening, esp. when he touches or takes hold of anything cold.—Tension, distension, and pressure, as by a stone, principally in umbilical region (and painfulness to contact).—Burning in abdomen, round the navel.—Excessive and insupportable pains in abdomen, which cease only on lying down.—Pain in abdomen, as if caused by a chill.—Sensation as if intestines were loose, and moving about in abdomen, when walking.—Intestines feel bruised if he lies on r. side.—The pains in abdomen are often accompanied by shivering, or by heat and redness of cheeks, as well as by great sensitiveness of abdomen, and of precordial region, to all contact, and to least pressure.—Sensation of emptiness in the abdomen.—Sufferings from flatulency, principally at night, with distension of abdomen, borborygmi, and rumbling.—Cutting stitch in lower abdomen r. to l.; < walking.—Tension, aching, and lancinations in groins as by knives.—Inflammation of peritoneum and of intestines.—Boring pain in r. groin.—Obstruction and inflammatory swelling of inguinal glands, with redness and painful sensitiveness, when walking and standing.—Affections of inner region of liver; external belly, which may be hard and sensitive to touch; inguinal ring, either one (H. N. G.).—Painful hard, hot, sensitive swelling in ileo cćcal region.—Ulceration and suppuration of inguinal glands.—Buboes.—Abdomen externally cold to touch.

13. Stool and Anus.—Stool: acrid; bloody; knotty; containing pus; viscid.—Complaints before stool (a sick, painful, faint feeling comes on just before).—Complaints during stool; tenesmus; tenesmus without stool; diarrhśa with slime (*Merc*. is rarely indicated in these troubles where there is no slime.—H. N. G.).—Constipation, with hard, tenacious and knotty fćces, which cannot be

expelled without straining.—Fćces of small shape; ribbon-like.—Ineffectual, but frequent want to evacuate, esp. at night, and sometimes with tenesmus, protrusion of hćmorrhoids, and nausea.—Loose and dysenteric evacuations, principally at night, with colic and violent cuttings, urgent want to evacuate, tenesmus and burning in anus, pyrosis, nausea and risings, anguish, heat or cold sweat on face, shivering and shuddering, exhaustion and trembling of all limbs.—Diarrhśa (preceded by colic), caused by the fresh air of evening.—Chilliness between the diarrhśic stools.—During a diarrhśic stool nausea and eructations.—Scanty evacuations of sanguineous mucus.—Evacuations which are mucous, or bilious, or putrid, or acid, or of a greenish or brownish colour, or reddish, or yellow, like sulphur; or a greyish-white.—Fćces of consistence of pap, or frothy, or like hash.—Evacuation of corrosive and burning fćcal matter.—Discharges of bloody mucus accompanied by colic and tenesmus; dysentery.—Discharge of blood, or of mucus, from rectum, even with evacuations that are not loose, and when not at stool, sometimes with tenesmus in anus.—Protrusion of hćmorrhoids.—Ejection of ascarides and lumbrici.—Itching, shootings, and excoriation in anus.—After stool prolapsus ani; or when pressing and straining to stool.—Prolapsus recti, which, when it protrudes, appears black and bloody.—Evacuation of substances undigested, or black, and like pitch; blood and mucus, undigested, smelling sour, excoriating anus.

14. Urinary Organs.—Urine acrid; turbid; too frequent; complaints while passing, and after.—Affections of urethra.—Continued want to urinate, day and night, sometimes with abortive efforts, or with scanty emission.—The stream of urine is excessively small.—Irresistible, sudden desire to urinate.—Frequent and copious emission of urine, as in diabetes, with great emaciation.—Involuntary emission of urine.—Urgent want to urinate, with incontinence of urine.—The quantity of urine emitted is greater than the quantity of fluid drunk.—Wetting the bed at night.—Emission of urine drop by drop.—Urine of a deep colour, or red, or brown, or white, as if mixed with flour or chalk, or of the colour of blood.—Offensive, turbid urine, which forms a sediment.—Sanguineous, pungent, or sour-smelling urine.—Corrosive and burning urine.—Thick sediment from urine.—White and flock-like clouds in urine (or as if containing pus; scanty, fiery red).—Emission of hard mucus, or of flocks, and white threads during or after the emission of urine.—Discharge of blood from urethra.—Incisive and contractive pains in renal region, at night.—Pulsation, incisive pains, burning and shooting in urethra, even when not urinating.—Inflammation of orifice of urethra, and discharge of thick, yellowish, or serous, whitish matter.—Thick greenish (or yellow) discharge from urethra, more at night, (gonorrhśa) with phimosis; chancroids.

15. Male Sexual Organs.—Increase of sexual desire, and great lasciviousness, with frequent erections and pollutions.—[Erections: little boys may have this, lasting all night, causing emaciation; boys often pull and tear at the prepuce all the time, which may cause great emaciation, and result in death; adults often have this pulling, a kind of itching being the cause, and a feeling as if he "must do so";

collection of smegma behind glans.—H. N. G.].—Total loss of sexual power.—Painful nocturnal erections, and sometimes sanguineous pollutions.—The penis is small, cold, and flabby.—Glans cold and shrivelled.—Voluptuous itching, tingling, tearing, and shooting in glans and prepuce.—Puffing, or inflammatory swelling of prepuce, sometimes with burning pain, fissures, rhagades, and eruptions.—Burning in urethra during coitus.—Purulent secretion between prepuce and glans, sometimes with swelling, heat, and redness of front part of penis.—Swelling of the lymphatic vessels along the penis.—Vesicles and phagedćnic ulcers (chancres) with lard-like, or cheesy, bases, and raised margin, on glans and prepuce.—Sensation of coldness in testes.—Testes, hard and swollen, with shining redness of scrotum, and dragging pain in testes and spermatic cords.—Itching, tingling, and shooting in testes.—Profuse perspiration of parts when walking.—Excoriation between the parts and thighs.—Sloughing of scrotum.

16. Female Sexual Organs.—Suppression of catamenia.—Catamenia too copious, with uneasiness and colic.—Metrorrhagia.—Discharge of blood in an old woman, eleven years after menses had ceased.—Before catamenia: dry heat, with ebullition of blood, and congestion in head.—Congestion of blood to uterus.—Inflammation of ovaries and uterus.—During catamenia: redness of tongue, with deep-coloured and burning spots, salt taste in mouth, teeth set on edge, and gums blanched.—Leucorrhśa in general; complaints concomitant to leucorrhśa.—Leucorrhśa always < at night; greenish discharge; smarting, corroding, itching, burning after scratching.—Purulent, corrosive leucorrhśa, with itching in the parts, > by washing in cold water.—Hard tubercles on labia majora.—Itching pimples, and nodosities in labia.—Itching of genitals, < from contact of urine.—Inflammatory swelling in vagina, with a sensation as if it were raw and excoriated.—Swelling of labia, with heat, hardness, shining redness, great sensitiveness to touch, and burning, pulsative, and shooting pains.—Prolapsus uteri et vaginć; feels > after coitus.—Sterility with too profuse menstruation.—Easy coitus and certain conception.—Hard swelling in breasts, with pain as from ulceration (at every menstrual period), or with suppuration and actual ulceration; ulcerated nipples.—Milk in breasts instead of menses; in breasts of boys or girls.—Excoriation of breasts.—The infant rejects the milk.

17. Respiratory Organs.—Catarrh, with febrile shivering, hypochondriacal humour, dislike to all food, and constipation.—Catarrh with cough, hoarseness, fluent coryza and sore throat.—Continual hoarseness and loss of voice.—Nasal voice.—Burning and tickling in the larynx with hoarseness.—Dry cough, sometimes fatiguing and shaking, principally in bed, in evening, or at night, also during sleep, and on waking in morning, excited by a tickling, or a sensation of dryness in chest, and < by speaking.—Cough, as if caused by irritation in stomach.—Convulsive cough, with retching.—Spasmodic cough (whooping-cough); two paroxysms follow one another rapidly, from tickling in larynx and upper part of chest, at night, without cough during day, with expectoration of acrid yellowish mucus, which is sometimes mixed with coagulated blood, tasting putrid or salty.—Cough < in night

air, at night and when lying on l. side.—Dyspnśa (sensation of spasmodic contraction when coughing or sneezing).—Pains in head and chest when coughing, as if these parts were about to burst; or shootings in occiput; or pain as from excoriation in chest, and pain in loins.—Inclination to vomit and fits of choking, when coughing.—Cough with expectoration of pure blood.—Bloody sputa in tuberculosis.—Hoarse cough, with sensation of dryness and shootings in throat.

18. Chest.—Difficult respiration, as from want of breath, or short and loud respiration.—Breath having a bad smell.—Shortness of breath when going upstairs and when walking quickly.—Anxious oppression of chest, and difficulty of respiration, with want to take a deep inspiration, chiefly after a meal, or with attacks of suffocation at night, or in evening in bed, when lying down (on l. side).—Sensation of dryness in chest.—Want of breath, with squeezing and tension in chest, and sensation, on least movement, or attempt to speak, as if life were coming to an end.—Sharp pains, and sensation as if muscles of chest were bruised.—Aching in chest, sometimes penetrating to back, with inability to take a full inspiration.—Burning in chest, sometimes extending to throat.—Soreness and burning in chest.—Lancinations (as if caused by knives) in chest and sides, or as far as the back, principally when breathing, sneezing, and coughing.—Stitches in r. chest through from scapula; inflammation of lungs.—Sensation as of a contraction and of swelling, and pain as from excoriation and ulceration, in chest.—Suppuration of lungs after hćmorrhages, or after pneumonia.—Emphysema of lungs.

19. Heart.—Palpitation of heart; on slightest exertion.—Fainting.—Fatal syncope.

20. Neck and Back.—Burning and drawing pain in back and in nape of neck.—Indurated lymphatics.—Rigidity and rheumatic swelling of nape of neck, and of neck.—Shootings in muscles of neck.—Engorgement and inflammatory swelling of glands of neck, with shooting and pressive pains.—Shooting pains, instability, and weakness in loins.—Pain as from a bruise in sacrum, back, and shoulder-blades.—Erysipelatous inflammation extending from back like a girdle around abdomen (zona).

22. Upper Limbs.—Sharp (rheumatic) pains in shoulders and arms, principally at night, and when moving them.—Jerking in arms and fingers.—Hot and red (arthritic) swelling of elbow, as far as hand.—Itching miliary eruption on arms.—Furfuraceous and burning tetters on forearms and on wrist.—Tremor of hands, with weakness; could neither feed nor dress himself.—Cracking, weakness, and sensation of paralysis in hand.—Sweat on palms.—Eruption like moist itch on hands, with violent nightly itching.—Cramp-like contraction of hands and fingers.—Swelling of joints of fingers.—Deep and bleeding fissures and rhagades in hands and fingers.—Cramp-like pains, and tendency to become stiff in hands when using them.—Swelling of wrist, with pain on touching or moving it.—Rigidity of

wrists.—Painful stiffness of r. wrist-joint.—Ulceration at the nails.—Exfoliation of fingers (of finger-nails).—Deadness of fingers.

23. Lower Limbs.—Sharp and lancinating (rheumatic) pains in hip-joints, as well as thighs and knees, chiefly at night, and during movement, and often with a sensation of coldness in diseased parts.—Tearing in the hip-joint and knee, < at night, or with pulsating pain, suppuration commencing.—Burning in nates.—Soreness between thighs and genitals.—Burning in periosteum of tibić.—Drawing in tibia.—Great weakness, heaviness, and painful weariness in thighs and legs.—Weakness and giving way in knees, could scarcely stand.—Sensation of rigidity, of torpor and cramps in thighs.—Itching pimples on thighs.—Śdematous, transparent swelling, of thighs and legs.—Dropsical swelling of legs.—Tension in hams, as if tendons were too short.—Itching miliary eruption in legs.—Tetters on thighs and legs.—Contraction of legs, and cramps in calves of legs and toes.—Swelling of instep or heels, with sharp or shooting pains.—Wrenching pains in foot.—Coldness and sweat in feet.—Painful swelling of metatarsal bones.—Swelling of toes.—Ulceration at nails.

24. Generalities.—Śdema of face, hands, and feet with ańćmia.—Cellulitis with lumpiness in any region.—Periostitis then necrosis.—Tearing and drawing, or shooting pains in limbs, chiefly at night, in heat of bed, which renders the pain insupportable.—Red and shining inflammatory swellings.—Inflammations ending in exudations and suppurations.—Nocturnal pains in bones.—Softening of the bones, so they will bend (rickets); enlargement of; caries of; inflammation of; prickling of; tearing in.—Affections of shoulder-blades; shin-bones; bones of the leg.—Sufferings < at night, or in evening, also from fresh (evening) air.—Throbbings, sensation of dislocation, and arthritic pains in joints, with swelling.—Rheumatic and catarrhal inflammations.—Rheumatic pains, with profuse sweat, which affords no relief.—The patient feels much better in morning and during repose, and esp. when lying down than when seated or walking.—Whole body feels as if bruised, with soreness in all bones.—Great agitation in limbs, with pains in joints, principally in evening.—Great fatigue, weakness, and rapid loss of strength, with great uneasiness of body and mind.—Ebullition of blood, and frequent trembling, even after least exertion.—Sanguineous congestions (to head, chest, and abdomen) and hćmorrhages.—Great tendency of limbs to become numb.—Contractions of some parts.—Cramps, convulsive movements, and nocturnal attacks of epilepsy, with cries, rigidity of body, distension of abdomen, itching in nose, and thirst.—Sensation of coldness in outer parts; burning pain of inner parts; cutting in inner parts; darting pains in outer parts; darting in bones.—Sallow-coloured face.—Eructations; vomiting of bile.—Blackness of outer parts; bleeding from inner parts; restlessness of body; inflammation of inner parts, also of mucous membranes; secretion of mucus increased from any of mucous membranes.—Scurvy, particularly where there is much salivation; wasting away of soft parts; strictures after inflammation; inflammatory swellings, parts which are usually white turn red; zona or shingles.—Tonic spasms and tetanus.—Cataleptic

rigidity of body.—Fainting fits.—Paralysis of several of limbs.—Emaciation and atrophy of whole body.—Excitability and sensitiveness of all the organs.—Cannot lie on r. side.

25. Skin.—Yellow colour of the skin, with perspiration which imparts a yellow colour to linen.—Skin dirty yellow, rough and dry.—(Jaundice.).—Engorgement, inflammation, and ulceration of the glands, with pulsative and shooting pains, hard swelling, red and shining, or without any perceptible alteration in skin.—Miliary, urticarial, pimpled, or pustular and purulent eruptions.—Exanthema burning; pock-shaped (hence, think of this remedy in small-pox); of scarlet colour; with swelling; purulent exanthema, *i.e.*, ulcerating; ecchymoses appear, of black and blue spots, without receiving any external injury.—Erysipelas.—Spacelus; brown mortification.—Tetters in general; burning suppurating.—Ulcers in general; with burning on edges; hard on edges with bloody pus; with corroding pus; with ichorous pus; having too little pus; too thin pus; thin, tenacious, sticky pus; swollen, inflamed; looking like lard; prickling; pulsating; painful on the edges; swollen on edges.—Flat, painless ulcers, pate, covered with phlegm-like pus; on scalp, skin of penis, &c.—Primary and secondary syphilis; round coppery red spots shining through skin.—Itching pimples, which burn after being scratched.—Eruptions which resemble scabies, and which bleed readily.—Wounds ulcerate easily (and become gangrened).—Erysipelatous inflammations.—Spots red and raised, or maculć hepaticć, or which resemble scorbutic spots.—Small and very itchy pimples, which ulcerate, and become encrusted.—Tettery, excoriated, and oozing spots, or dry, itching, and mealy tetters.—Desquamation of skin.—Phagedenic ulcers, or bluish, fungous, and easily bleeding, or superficial, and appearing as if bitten by insects, or secreting an ichorous and corrosive pus.—Chancrous ulcers.—Violent and voluptuous itching over whole body, principally in evening, or at night, < by heat of bed, and sometimes attended by burning after scratching.—Thickening of periosteum; exostosis and caries; abscess in joints; great brittleness of bones.

26. Sleep.—Excessive sleepiness, day and night; deep and prolonged sleep.—Great sleepiness during day.—Inclination to sleep without the power to do so.—Sleep retarded in evening, and too early awakening in morning.—Failing asleep late; complaints preventing sleep (as toothache, or any severe pain or trouble, &c.); sleeplessness in general before midnight.—Very light and unquiet sleep, with frequent awaking, starts, and fright.—Sleeplessness from nervous excitability.—Frequent, anxious, horrible, fantastic, historical, vivid and voluptuous dreams; dreams of robbers, of dogs that bite, of rebellion, of floods, of discharges of firearms, &c.—At night, restlessness, anxiety, agitation and tossing, uneasiness, pains, heat or sweat, ebullition of blood, cries, tears, palpitation of the heart, vertigo, and many other affections.—On going to sleep: < of the pains, starts, and frightful spectres before the sight.—During sleep: talking, groans, sighs, short respiration, with mouth open and hands cold; on waking, sweat, cries, tears, and incoherent expressions.

27. Fever.—Chilliness early in morning, when rising, but more so in evening after lying down, as if cold water had been thrown over him, and not > by heat of stove.—Chilliness at night with frequent micturition.—Chilliness between the diarrhśic stools.—Internal chilliness with heat of face.—Heat while in bed; as soon as one rises chilliness.—Heat after midnight with violent thirst for cold drinks.—Heat with anxiety and constriction of chest alternating with chilliness.—Perspiration towards morning, with thirst and palpitation of heart; from least exertion even when eating.—Perspiration in evening before going to sleep.—Very debilitating night-sweats.—Perspiration gives no relief, and accompanies all ailments.—Intermittent fever.—Chilliness in evening in bed, afterwards heat with violent thirst.—Chilliness and heat without thirst, towards morning thirst; during perspiration, palpitation of heart and nausea, the perspiration smells sour or fetid.—Coldness, shivering, and shuddering over whole body, principally after having slept, either by day and night, or only at night, or in evening, and in morning in bed, and sometimes with bluish colour of skin, icy coldness in hands and feet, muscular palpitations, convulsive movements of head, arms, and legs, contusive pain in limbs, and inclination to lie down, trembling in limbs, sharp pains in head, want to urinate, somnolence, &c.—Ebullitions with trembling from slight exertion.—Heat in face and head, with redness and burning of cheeks, and coldness, or shivering, or shuddering over whole body; or heat, mingled with shiverings or sweats.—During the heat, insatiable thirst, great desire for milk, and < of pains when uncovered.—Febrile attacks at night, or in evening; fever, with inflammatory symptoms, or with putridity; slow and hectic fever.—Pulse, irregular, or quick, strong, and intermittent, or weak, slow and trembling (generally full and fast, with violent beating in arteries).—Copious, excessive, and colliquative sweats, both day and night, in morning, in evening after lying down, and when eating, and sometimes fetid, clammy, sour, or oily, giving linen a yellow colour, and burning the skin.—Sweat, with nausea and inclination to vomit, great fatigue, thirst, anxiety, obstructed respiration, stitches in side, &c.

Mercurius Sulphocyanatus.

Sulphocyanide of Mercury. (Pharaoh's Serpents.) $Hg(SCN)_2$.

Clinical.—Diphtheria. Œsophagus, stricture of.

Characteristics.—The well-known scientific toy called "Pharaoh's serpents" is composed of the sulphocyanide of mercury. A boy ate one "serpent," and a man took one in water. The symptoms were observed on these two.

SYMPTOMS.

1. Mind.—Excessive anxiety.

2. Head.—Vertigo on attempting to rise.

6. Face.—Pallor, great weakness, cold skin, and frequent shivering.

8. Mouth.—Constant salivation.—Disgusting metallic taste.

9. Throat.—Extreme redness of throat, with white membrane on tonsils.—Most violent burning in fauces.—Heat and constriction in œsophagus, with difficulty in swallowing and burning in epigastric region and nausea.

11. Stomach.—Vomiting.—Epigastrium painful to pressure.

13. Stool.—Bloody stools.

17. Respiratory Organs.—Voice rough and hoarse.—Tenacious expectoration.

19. Heart.—Pulse intermitting every three beats.

22. Upper Limbs.—Pain in shoulder-joint.

24. Generalities.—General prostration for some days.

Cinnabaris.

Mercuric Sulphide. Red Sulphide of Mercury. Hg S. Trituration.

Clinical.—Albuminuria. Bubo. Catarrh. Chancre. Cystitis. Dysentery. Eye, inflammation of. *Gleet*. Gonorrhœa. Gout. Nose, external, sensitive. Priapism. Rheumatism. Sciatica. Scrofula. *Sleep, abnormal*. Sycosis. Syphilis. Tapeworm. Warts.

Characteristics.—*Cinnabar*. corresponds to sycosis as well as to syphilis, and to combinations of the two. In warts on the prepuce it is more specific than *Thuja*; especially for fan-shaped warts. In the mental sphere there is indolence and indisposition to mental labour. Forgetful. Fretful, easily provoked. Headache with nosebleed. General sensitiveness to touch: bones of skull, scalp, roots of hair; bridge of nose; warts bleed when touched. Sensation on bridge of nose as if touched with metallic substance, uneasy creeping and pressing sensation about nasal bones as from wearing spectacles when not used to them. Jerkings and pullings are frequent. Berridge reports this symptom cured: "Left leg feels shorter than right whilst walking." jerking in penis; occurring during sleep. Tearing stitches in glans. Burning, stinging, itching of corona glandis. Leucorrhœa, the discharge of which causes a pressure in vagina. Hæmorrhages are frequent: nose-

bleed; bleeding piles. In addition to dysenteric symptoms there is obstinate constipation, stools hard and too large. Protrusion of anus during stool. Formication as from a large worm. Little pimples round anus with burning and itching. The skin is much affected. Redness predominates (colour of the drug). Red spots. Heat, redness, and swelling of face, especially about eyes. "We are led to use this for very red and very fiery-looking ulcers, which may occur in the throat or on any other part of the body, in the mouth, on the legs; particularly if there be nodes on the shin-bones. In very angry-looking chancres" (Guernsey). Eruption on posterior cervical region; on inner and lower part of thigh with itching. Warts; pimples; pustules; ulcers; violent itching and pricking, especially about joints. The back of the neck is much affected. Pain extending to occiput when head is thrown back. Pain r. side of neck on turning head. Muscles seem contracted. Glands enlarged. The symptoms are > in open air. Cold and chilly in warm room. < In summer. Most symptoms are < at night. Sweat < at noon. Generally rest >; walking <. Headache < after sleep. After dinner >. Symptoms intermit in severity.

Relations.—*Antidoted by:* Hepar, Nit. ac., Opium, and Sulphur. *Compare:* Camph. (red spots); Lach., Merc., Nit. ac., Thuja (Cinnab. is better than Thuja in warts on prepuce); compare also Sep. (warts on margin of prepuce); Ant. t. (warts at back of glans). Seneg. has > bending head backward, Clem. has headache < from same; Clem. also has vertigo on lifting head up or moving head; Cinnab. has pain in back of neck when head is thrown back.

SYMPTOMS.

1. Mind.—Indisposition for mental labour.—Sensation of fulness in the head from mental application.—Forgetfulness (forgets things he has to do).—Fretful, easily provoked.—Desire to be alone.

2. Head.—Violent and frightful attack of cephalalgia, in the sinciput and in the temples, mitigated by compression of the head.—Stupefying buzzing in the head, a little after dinner, and in the evening before lying down.—Giddiness in the morning after rising, when stooping, with nausea.—Congestion of blood to the head, particularly to the vertex; worse after eating.—Intense headache; he cannot raise his head from the pillow; relieved by external pressure.—Dull pain in the forehead, which is cold; relieved by heat.—In the morning, after waking, pain in the forehead and top of the head; < when lying on the l. side and back; > and going off, when turning on r. side, and after rising.—Shooting pain in the l. side of the head, with increase of saliva and great flow of urine.—Shooting in the teguments of the head.—Painful sensitiveness of the cranium and of the hair on being touched.

3. Eyes.—Inflammation of the eyes, with pressive shootings and constant lachrymation when fixing them on an object.—Shooting pains in inner canthus of r. eye, with burning and itching.—Inflammation of r. eye, with profuse discharge of

mucus from the nose.—Flow of tears.—Sticking pain about the punctum lachrymale of the upper eyelid.—Redness of the whole eye, with swelling of the face.

4. Ears.—Roaring in the ears with swelling of the face (after eating).—Scurfy eruption in r. external ear.—Itching in r. ear.

5. Nose.—Violent fluent coryza, with secretion of burning serum.—Sensation as if touched by a cold metallic body, on a small space over the root of the nose.—Itching of the nose, with bleeding (very dark blood) after blowing it.—Coryza, with lameness of the thighs and aching in the small of the back; lumps of dirty yellow mucus are discharged from the posterior nares.

6. Face.—Heat of the face, which is much swollen, mostly about the eyes.

8. Mouth.—Both corners of the mouth are chapped.—Tongue coated white in the morning.—A small ulcer on the roof of the mouth, on the r. side of the tip of the tongue; on the tip of the tongue.—Burning, constrictive sensation in the palate; taste bitter in the morning.—Salivation and increased flow of urine.—Putrid taste in the mouth.

9. Throat.—Dryness and irritation of the throat (posterior nares, tonsils, fauces) at night, with soreness during the day.—In the morning, secretion of tenacious mucus from posterior nares, in lumps.—Increased dryness of mouth and throat, being obliged to moisten and rinse the mouth every time he wakes.

10. Appetite.—Nocturnal dryness and heat in the mouth and in the throat, with much thirst.—Scanty, tenacious, frothy saliva in the mouth, without thirst; better after drinking.—Pressive contractions in the throat during deglutition.—After a meal, disagreeable sensation of swelling over the whole body, with tightness in the chest and in the stomach.—Appetite increased.

11. Stomach.—At night, heat, which extends upwards from the stomach towards the neck and the head, and disperses on rising up in bed.—Soreness in the stomach, with dizziness and lightness in the head and tightness in the temples.—Nausea, alleviated by eructations.—Nausea, with water-brash (in the evening).

12. Abdomen.—Flashes of heat confined to the abdomen, with great flatulence (worse in the forenoon).

13. Stool and Anus.—Evacuations, soft and frequent, preceded by pinchings in the abdomen; less afterwards.—Bloody dysentery.—Greenish mucous diarrhœa.—Sensation of formication in the anus, as if from a large worm.—Little pimples around the anus, with burning and itching; thin stools and tenesmus.

14. Urinary Organs.—Frequent and increasing emission of watery urine; also during the night.—Pain, as if from a sore in the urethra, when urinating; this pain wakes him up at night.

15. Male Sexual Organs.—Swelling of the penis.—Pseudo gonorrhœa, with redness and swelling of the prepuce.—Violent itching of the corona glandis, with profuse secretion of pus.—Small, shining red points on the glans penis.—Condyloma.—Blennorrhœa.—Sycotic excrescences.—Sexual desire strongly excited, and great inclination for coition, with great appetite for eating and drinking.—Strong erections in the evening in bed.—Fetid and corrosive sweats, between the scrotum and the thighs when walking.

16. Female Sexual Organs.—Leucorrhœa, causing, during its discharge, a; pressure in the vagina.

17. Respiratory Organs.—Hoarseness in the evening.—Dyspnœa, with heat.—Cough from tickling in the throat.—Dry cough, in single shocks, when lying down; > by sitting up.

18. Chest.—Chest oppressed, feels contracted; relieved by stretching himself.—Pain running over the ensiform cartilage, from the seventh rib on the r. side diagonally through the chest.—Pulsative and shooting pains in the chest, esp. when walking.

20. Neck and Back.—Pain in back part of neck when head is thrown back, extending to occiput.—Wrenching pains in the vertebræ of the neck.—The muscles of the back part of the neck seem as if contracted.—Tearing in the side of the back, even at night on moving in the bed, > by the heat of the fire.—Aching in the small of the back, as if bruised.—Pain all over the back down to the loins, aggravated on drawing a long breath.

22. Upper Limbs.—Pain in the l. shoulder, between the clavicle and scapula, interiorly.—Pain in the middle of the upper part of r. arm, as though it would break.—Periodical shooting pains in the arms.—Tearing in the arms when writing, > by the heat of the fire.—Sensation of lameness in r. arm.—Numbness of l. arm, from elbow to end of little finger, it feels as if the "crazy-bone" was struck.—The joints of the fingers and knuckles are red (and hot).

23. Lower Limbs.—Painful jerking in the leg, in the evening, after sleeping.—Shooting, drawing, and aching pains in the thighs, from the hip-joints nearly down to the condyles; < at night.—Violent itching on the inside of thighs, knees, and legs; worse in the knees, esp. at night.—Profuse perspiration between the thighs (when walking).—Rheumatic pain in r. knee-joint; < when walking (ascending), > at rest.—Pain in the tendo Achillis and os calcis after walking.—Coldness in the joints.—Coldness of the feet, day and night.

24. Generalities.—Sensation of lameness in all the limbs.—Pulling and shuddering in the arms and the legs.—Paralytic pains in the limbs, with indolence and drowsiness.—Weariness, languor, tired and prostrated; worse before eating, better when riding in the open air.—General nervous, uneasy sensation.

25. Skin.—Itching: of the nose (bleeding after blowing it); of eyelids; canthi (outer); ears; face (l. side) palms of hands (r.); thighs (inside); knees; legs; at the anus (at night), on the shoulders (evening).—Sensation as if pimples were coming out over the body.—Red papulous eruption, without itching, on both elbows.—Redness of the skin.—Red, fiery-looking ulcers, which may occur in the throat or in any other part of the body, in the mouth, on the legs; particularly if there be nodes on the shin-bones.—Very angry-looking chancres.

26. Sleep.—Sleepiness in the daytime and sleeplessness at night; unconquerable desire to sleep after dinner, early in the evening (during the day).—Restlessness and sleeplessness at night, from a constant flow of ideas changing from one thing to another.—Nightly sleeplessness, without causing fatigue.—Restless sleep, with vivid dreams and much talking.—Nightmare after midnight.

27. Fever.—Pulse slower in the forepart of the day, accelerated in the evening.—Coldness and chilliness in the warm room.—Internal and external heat of the body during the whole night.—Profuse perspiration between the thighs.—Perspiration most at noon.

Mercurius Sulphuricus.

Hydrargyrum oxydatum sub-sulphuricum. Yellow precipitate. Turpeth mineral. $HgSO_4 2HgO$. [There is not a little confusion about the identity of this drug in the books. *Turpeth* is correctly given by Allen as $HgSO_4 2HgO$. Hering, who proved and introduced it, *calls* it *Turpethum* and *Turpeth mineral*, but gives the formula $HgSO_4$. The *Pharmacopæia* of the American Institute of Homœopathy *describes* the *white* sulphate, $HgSO_4$, under the heading Mercurius sulphuricus, but says it is "mentioned in Allen's *Encyclopædia*," Vol. vi., p. 325; whereas it is *Turpeth*, the *yellow* precipitate, which is there spoken of.] Trituration.

Clinical.—Dropsy. Dysuria. Hydrothorax.

Characteristics.—Lippe is the chief clinical authority for this medicine. He considers it as important as *Ars*. in dropsies of the chest. The symptoms on which it has been prescribed are clinical, and have been well confirmed. Among them is this: "Pain in right chest extending to scapula; he can scarcely breathe; < 4 to 5 p.m." When *Merc. sul*. acts well, says Lippe, "it produces a profuse watery

diarrhœa with great relief to the patient." It is particularly suited to hydrothorax depending on liver or heart affections. Other confirmed symptoms are: Soreness of tip of tongue. Œdema of legs. Scanty and scalding urine, but clear. Among the *Conditions* of *Merc. sul*. the most peculiar is: < In afternoon; 4-5 p.m. > By profuse diarrhœa (dyspnœa). After diarrhœic stools there is numbness of legs.

Relations.—*Compare:* Cinnabar., Æthiops antimonialis, and other Mercuries. Also in hydrothorax, Ars. < Afternoon, Lyc. Dropsy, Dig.

SYMPTOMS.

1. Mind.—Low-spirited; with chilliness and yawning.—Ill-humour after eating.

2. Head.—Sensation of giddiness while standing, after headache.—Fulness in head with occasional stitches.—Soreness and heaviness through head (after breakfast and when walking about.).—Violent itching of hairy scalp throughout the proving.

3. Eyes.—Oppression over eyes.—Eyes < from sunlight.

4. Ears.—Burning in ears and in face, after a chill.

5. Nose.—Sneezing; in sunshine; with fluent coryza.—Swelling and soreness of tip of nose.—Itching of nose.

6. Face.—Pale, anxious countenance.—Swelling of parotid gland.

8. Mouth.—Gums and palate dark bluish (black), ulcerated margins.—Mouth clammy, and full of mucus in morning.—Burning, smarting, stinging pain on tip of tongue (l. side, in evening).—Tongue: Greenish yellow down middle; coated white heavily; yellowish at root; the enlarged papillæ stand up like red points, with flat taste in mouth and a reduced pulse.—Lips, gums, fauces, mouth, and tongue swollen; look dry and black.—Salivation.

9. Throat.—Heat and sensation of constriction in throat.—Dryness of tongue and throat.—Burning in mouth and throat.

11. Stomach.—Violent yellow vomiting.—Stomach so irritated nothing would stay on it an instant.—Pain; weight in stomach; tenderness.—Vomiting and diarrhœa.

12. Abdomen.—Coldness or burning in abdomen.—Woke 1 a.m. with severe pains along duodenum to umbilical region.—Soreness in inguinal glands.

13. Stool and Anus.—After drinking coffee, pain in abdomen as if diarrhœa would set in.—Stools soft and earlier in morning than usual.—Sudden and violent pressing to stool while walking compelling him to stand still, causing an anxious perspiration; later the stools are forcibly gushing out in a hot, burning stream of

yellow water; followed by great debility, hiccough and belching.—After the diarrhœic stools sensation of fulness as from congestion to legs, esp. feet, they feel numb when standing.—Violent purging; rice-water motions, some yellow.

14. Urinary Organs.—Diminished secretion of urine, does not micturate frequently, but has constant pressure; urine dark, becoming turbid with a scum on it.—Increased secretion of urine, without a sediment.—Urine scanty and scalding, but clear.

15. Male Sexual Organs.—Gonorrhœa and syphilitic diseases, with great congestions to the parts.—Swelling of testicles.—Involuntary emission and lascivious dreams.

17. Respiratory Organs.—Roughness in throat and hoarseness.—Sensation of heat in larynx.—Increased expectoration of mucus from larynx" and trachea.

18. Chest.—Burning in chest.—Pain in chest prevents him from breathing.—Pain in r, side of chest, extending to scapula, can scarcely breathe, < from 4 to 5 p.m.—Pressure on chest.—Dyspnœa; in children; hydrothorax.

22. Upper Limbs.—Numbness in l. forearm and hand, later numbness in r. hand.—Hands icy cold with blue nails.—Stiffness in arms.

23. Lower Limbs.—Pain in knees and lameness, esp. when walking.—Foot-sweat with soreness at ends of the nails.—Ulcers on ankles.

24. Generalities.—Most pains feel as if a dull stick pressed on the parts and were moving in diverse curved lines; feels as if this pain were in the bones.—Debility with sleepiness.—Rheumatic pains.

25. Skin.—Induration of the glands.—Psoriasis: lepra.

26. Sleep.—Frequent yawning and great sleepiness in afternoon.—Sleeplessness

after midnight.—Awakens with headache in morning.

27. Fever.—Chilliness running up back, with yawning and depression of spirits, followed by dull pain in forehead, burning in face and ears and slight fever.—Chilliness, restlessness, and heaviness in upper part of abdomen, frequent yawning and diminished secretion of urine (afternoon).

Methylene-blue.

Teleamethylthionine chloride. (A diphenyl amine compound, also classed as an "aniline colour"). $C_{16}H_{18}N_3SCl$. Trituration. Solution.

Clinical.—Albuminuria. Cancer. Cystitis. Epithelioma. Gonorrhœa. Hemicrania. Kidneys, affections of. Malarial fever. Neuralgia. Neurasthenia. Pleurisy. Rheumatism. Rheumatoid arthritis. Spasms. Spinal irritation. Suppuration.

Characteristics.—*Methylene-blue* consists of small, indigo-coloured scaly crystals with a bronze-like tinge and dark green in transverse fracture. Slightly soluble in water, forming a deep blue solution. It has been used in old-school practice in doses of about three grains in capsules or pills in rheumatism of joints and muscles; and in rheumatoid arthritis. The kidneys have a distinct attraction for *Meth.-b*., as it appears in the urine within half an hour of the dose; and if the kidneys have their normal permeability the whole is eliminated in thirty-six hours. If there is delay beyond this it indicates that the urea is not being perfectly eliminated and that a tendency to uræmia exists. The aniline products have been used as remedies for malignant growths. Mosetig, of Moorhof (*Med. Press*, Feb. 18, 1901), published a case-treated with *Trichlorate of Aniline*, "an aniline dye." (The terminology of the aniline products has not always been accurately observed, and 1 am not sure that this is not identical with *Methylene-blue*. At any rate, it was an "aniline blue" that Mosetig used.) A man, 50, suffered from cancer of the femur. Mosetig injected into the groin a 1 per cent. solution of "*Trichlorate of Aniline*," increasing the strength, till four grammes were used at one injection. Almost an hour after the first injection the patient became dark blue; the next morning the discoloration was gone. After the four-gramme doses poisoning symptoms appeared—unconsciousness; stertorous breathing; feeble pulse; the whole body becoming dark blue. Artificial breathing and stimulants brought the patient round in four hours. Smaller doses were used after that. In eight weeks he came home, cured, to follow his ordinary work. *Methyl-violet* 1 to 500 and 1 to 1,000 produced equally good results. E. Thomson (quoted *H. W*., xxxiii. 48), states that *Meth.-b*. in 1-5 gr. doses, "with equal parts powdered nutmeg to prevent irritation of the bladder" (a useful item in view of the homœopathic employment), is valuable in habitual headache and hemicrania. Cardamantes, of Athens, gives 10 to 12 grs. ten hours before an expected malarial attack. He says it is useful in combination with *Quinine* or when *Quinine* has failed. Immunity from malaria seems to follow its continued use. *It is apt to cause cystitis*. In this connection an experience related in *H. W*. (xxxiii. 566) is important: A gentleman who suffered excruciating pains from calculus in the kidney, giving rise to pyelitis and cystitis, derived no benefit from any treatment till his doctor gave him *Meth.-b*. with occasional doses of *Eucalyptus. L'Art Médical* (Feb., 1900) gives an account of the use of *Meth.-b*. injection in pleurisies with serous effusion. C. H. Lewis, of New York, first drew off by aspiration 100 cubic centimetres of the liquid, dissolved in this 1 grm.

of *Meth.-b*., and reinjected it into the pleural cavity. The patient soon began to pass greenish urine, and the exudation quickly disappeared, partly from the diuretic effect of *Meth.-b*., partly from its stimulating action on the pleura.
A *watery* solution is not borne, causing pain and irritation of the pleura. The most definite homœopathic experience is that of Halbert (*H. W*., xxxv. 541, quoting *Clinique*). Utilising the affinity of *Meth.-b*. for nerve tissues and nerve cells, Halbert has given it in 3x trituration with success in: Neuralgias of neurasthenia; tremor in neurasthenia; spasticity of hysterial contractions; trophic disturbances, the result of nerve-exhaustion; spinal irritation. He confirms its antimalarial powers, and commends it in typhoid as an intestinal antiseptic. An apparently hopeless case of typhoid was signally benefited by it, the tympanites disappearing as if by magic. Wherever there is pus infection it is indicated, and it has "made a record" with him in gonorrhœa and cystitis.

Relations.—*Compare:* Anilinum; Pyrogen.

SYMPTOMS.

1. Mind.—Unconsciousness.

2. Head.—(Hemicrania.—Habitual headache).

14. Urinary Organs.—Irritation of the bladder.—(Cystitis.—Gonorrhœa).—Urine greenish.

17. Respiratory Organs.—Stertorous breathing.

18. Chest.—Causes absorption of pleural effusion.

24. Generalities.—Turns the patient dark blue.—(Neurasthenia: tremors; spastic hysterial contractions.—Pus infection).

27. Fever.—(Typhoid.—Malarial fever.—Fever of pus absorption).

Mezereum.

Daphne mezereum. Chamælia germanica. Mezereon, Spurge Olive. (Hilly woods over nearly whole of Europe and Russian Asia.) N. O. Thymelaceæ. Tincture of fresh bark gathered just before the plant flowers in February and March.

Clinical.—*Bones, affections of*. Coccygodynia. Constipation. Contraction of tendons. Crusta lactea. *Ear, affections of*; sensitive to air. *Erythema*. Exostoses.

Eyes, affections of. Glands enlarged. Gleet. Gonorrhœa. Hæmaturia. Hernia. *Herpes zoster. Impetigo. Irritation*. Leucorrhœa. Mercury, effects of. *Neuralgia*. Osteoma. Pediculosis. *Pityriasis*. Prolapsus ani. Pruritus senilis. Rheumatism. Scrofula. *Syphilis. Teeth, affections of*. Tinea capitis. Tinea versicolor. *Tongue, affections of*; swelling of. *Ulcers*. Vaccination.

Characteristics.—An idea of the virulence of this poison may be gathered from a case reported in Allen's *Appendix*: A pale girl, 14, having been advised to use Mezereum leaves to make her fat and rosy, went into the woods and used them freely on her cheeks and surrounding parts. Burning soon set in, the whole face swelled enormously, especially nose, eyelids, and hairy scalp. Severe and painful sneezing set in, delirium, dull, unbearable, pressing pains in forehead, a nauseous dryness in throat and constant irritation to dry cough. The face soon showed the appearance of erysipelas bullosum; nostrils closed, she could only breathe through mouth; febrile pulse, burning urine. Oil and compresses were applied, and after the second day desquamation occurred in large pieces. But health did not return. Debility, loss of vitality, mental depression bordering on idiocy followed; then typhoid fever, lasting fully three months, to which she finally succumbed. Poisoning has also been observed from the effects of the berries: dryness and burning of throat and stomach; intense thirst; narcotism, coma, convulsions of eyes and upper limbs were observed. In a child of four, poisoned with the berries, these symptoms occurred: Swollen lips; tongue furred and swollen, protruding, swallowing difficult. The tongue remained quite raw when other symptoms had passed away (*H. W*., xxii. 466). Hahnemann records this: A robust man took Mezereum bark for some ailment, and continued it after the ailment disappeared. Soon, unbearable itching set in all over body, could not sleep a moment. Thirty-six hours after discontinuing it the itching was still increasing, then a few grains of *Camphor* removed it. *Mezereum* is the vegetable analogue of, and is one of the most important antidotes to, *Mercurius*. *Merc*. and *Mez*. antidote one another. Mind, skin, eyes, mucous membranes and bones are affected in much the same way by both; they have the same sensitiveness to damp, cold, and warmth, and the same nightly aggravations. Nash mentions an exception to the < by warmth. In a man whom he cured with *Mez*. of obstinate facial neuralgia, the pains were brought on or greatly < by *eating*, and the only relief the man could get was by holding the painful side close to a *hot stove*. Only *radiated* heat was of any use, hot cloths, wet or dry, gave no relief whatever. *Mez*. affects the long bones more markedly than others, and the least touch is intolerable; but it has, like *Merc*., a strong affinity for the facial bones and teeth. With *Mez*. the decay attacks the roots or sides rather than the crowns (which *Merc*. attacks). The toothache is < at night, < by touch, even with the tongue, and is > by holding the mouth open and drawing in air. Neuralgia about the eyes; the pains radiate and shoot downward, and if there is in addition a sensation in the eye itself as if a cold wind were blowing in it the indications will be very strong. *Mez*. is one of Hahnemann's anti-psorics, and it meets many psoric manifestations. Carroll Dunham has recorded (*Science of Therapeutics*, 462) a notable case of deafness, due to suppressed psora. A Youth,

17, deaf since four, and incapacitated thereby, secludes himself and broods over his trouble. Membranes thickened. At the age of three he had an eruption of thick, whitish scabs, hard, almost horny, covering the whole scalp. There were fissures through which exuded on pressure a thick, yellowish pus, often very offensive. Much itching and disposition to tear off the scabs with the finger-nails, < at night. The treatment (allopathic) was vigorous: A tar cap was placed on the head, and when firmly adherent to the scabs was violently tom off, scabs and all, leaving the whole scalp raw. This was painted with a saturated solution of *Arg. nit*. The eruption did not reappear, but from that time the child was deaf. The eruption was the very counterpart of an eruption observed in a proving by Wehle. *Mez*. 30, three globules in a powder of sugar of milk, was given on each of these dates─February 3, March 1, and September 28, 1857, and January 26, 1858. Improvement set in slowly after the first dose, which was only repeated when the effect of each preceding dose seemed to be exhausted. Finally the hearing was for all practical purposes completely restored. The action of *Mez*. in catarrhal cases is illustrated in another case (*Amer. Hom*., xxi. 417). Miss M. R., 39, brunette, had chronic catarrh. The left ear had long been deaf, and the right had begun to fail. There were noises in the ears. Drum membranes retracted and scarred. The symptoms were: Excessive sensitiveness to the air, even of a fan, and occasionally a sensation as if air went through to the throat. Mucous membrane of naso-pharynx granular and irritable. A dose of *Mez*. given before each meal entirely relieved the symptoms. The ulcers of *Mez*. have thick, yellowish, white scabs. Vesicles appear now and then, and itch and burn. Lint dressings stick to them, and when they are torn away bleeding occurs. Burning vesicles on the sides of the fingers; and ulcers on finger-joints. With eczema there is intolerable itching, < in bed and from touch. Vaccinal eczemas are frequently of the *Mez*. type. *Mez*. is often of great service in herpes zoster, both during the eruption and for the neuralgia remaining after, especially if the pains are burning. In a lecture on *Mez*. by T. S. Hoyne (*Med. Vis*., xiii. 65) are collected many cases illustrating the action of the remedy. Here is a mental case (in a woman) treated by W. E. Payne: No rest when alone; wants company. Ideas vanish while talking; cannot repeat what has been learned by heart. *Looks through the window for hours without being conscious of objects around*. Does not know what she is about; forgets what she is about to utter; looks ill-humoured, pale, wretched, fallen away. *Apprehensiveness at pit of stomach, as when expecting some very unpleasant intelligence*. All symptoms relieved in a single night by *Mez*. 20. (I give the italics as in the original.) Among neuralgic cases are the following: (*1*) Man, 28, violent neuralgia, boring pain in left lower jaw-bone, extending to temple and ear. < Night, > from pressure. *Mez*. 3 relieved in two hours (S. R. Geiser). (*2*) H. G., stout, healthy-looking negro, left supra-orbital neuralgia recurring daily at 9 a.m., increasing till noon, declining till 4 p.m., when it entirely departed leaving no soreness behind. Pain = flow of tears. *Mez*. 1 cured permanently after other remedies had failed Q. W. Vance). (*3*) Mrs. X. had pain in right eye-tooth, daily increasing. Felt too long. Pains much < by pressure on crown and outside root. *Mez*. 2 cured (Oehme). (*4*) Toothache in incisor tooth in lady.

Tooth feels elongated, loose, excessively sensitive, with sensation as if being raised out of its socket. Upper part of tooth excessively painful. *Mez*. 200 cured in a few hours (Hempel). (*5*) The fastenings of a hammock broke, and a lady on it fell, striking the sacrum and coccyx on the stump of a tree. She suffered excruciating pain. *Arn*. was applied locally. In a few weeks she came home, and the coccyx was still so tender she could not sit—only lie or stand. *Arn*. internally and externally for two weeks had no influence. *Mez*. 2 cured in five days (Oehme).—"Constipation after confinement" has proved a good indication for *Mez*.: "My stools are as hard as stone, and as large as my arm. I feel as if they would split me open. They come in sections like mouthfuls, and I become much exhausted and tremble with weakness. Every stool is immediately preceded by chills, and followed by long stitches up rectum." *Mez*. 12 produced a natural stool in twelve hours (H. Noah Martin). *Green discharges* according to Cooper strongly indicate *Mez*. It has cured a case of dry crust on scalp and falling out of hair, accompanied with short sight. *Daphne laureola*, the British representative of the genus, has cured scald-head when *Mez*. failed. The symptoms in this case were < by day, whereas *Mez*. has < at night. The pains of *D. laureola* come on in the morning and affect the entire head or whole left side: *Guaiac*. pains are also < by day and > by warmth (Cooper). Cooper gives me the following cases: (*1*) Woman, 48, had rheumatism which came on ten years before in hands from wearing wet gloves, and extended later to arms and knees; stiffness on walking with loss of muscular power, < in hot weather, "pins and needles" in fingers on elevating arms, cannot grasp things, sometimes one hand burns when other is cold, climacteric flushings. Great relief from *Mez*. Ø. (*2*) Girl, 18, getting thin, with headache across forehead, temples, and eyes, a throbbing with sickness of stomach and water-brash, always < by movement; bowels very confined; menses never appeared. *Mez*. cured; (*3*) Pimples on ankles and backs of feet, horrid taste and clamminess of mouth in morning, pimples > by hard scratching, sluggish bowels. *Mez*. cured. H. B. Esmond (*H. R*., vii. 41) cured with *Mez*. 3x a youth, 17, who had been afflicted with "salt rheum" as long as he could remember. It was absent in summer, but every autumn, as soon as cold weather came, face, neck, hands, and forearms would break out and continue sore till warm weather returned. Another indication for *Mez*. is hypersensitiveness of the ear to air. It has cured a case in which there was a feeling as if air went through the ear to the throat. The rectum and anus are the seat of many characteristic symptoms, stitches, burning itching. During stool the rectum prolapses and the sphincter closes upon the protruded part. This constricting tendency is noticed in the throat and stomach, and also in the tendons. The leg is shortened with pain in hip. Tension in muscles of chest. Pain and stiffness in muscles of neck. Cramp-like contraction over chest and back; and across front of chest. *Sensations* are: Head as if drunk; as if everything in the head would press asunder; as if skull would split; as if top of head gone; as if head bruised; as if head was in an ants' nest. Eyes as if too large; as if drawn back into head. Ears as if too open; as if air pouring into them; as if tympanum was exposed to cold air; as if air was distending right external meatus. Teeth feel too

long. Hard palate, feels as if made of wood. Throat as if narrowing. As if food remained a long time in stomach. Stools feel as if they would split anus. Chest feels too tight. Limbs feel shortened. As if fire darting through muscles. As if millions of insects were crawling on him. Sensation of lightness of body. Bones are very sore and feel distended. Diseased parts wither. *Mez*. is *suited to:* Light-haired persons; phlegmatic temperament; irresolute. The plant flowers in very early spring, even when snow is on the ground, and it is suited to complaints which come on in the earliest months of the year. < From cold; damp; cold winds; sudden changes of weather; heat; warm food. Head pains are > wrapping up head. Prosopalgia > by heat of stove (not by other heat). Drawing in air > toothache. < From touch or pressure. < From motion. Lying down < itching of scalp. Stooping > headache. < Evening and night. < During menses (burning itching inner side of throat). Affections go from above downward; from within outward; and from right to left.

Relations.—*Antidoted by:*—Aco., Bry., Calc. (headache), K. iod., Merc., Nux. *It antidotes:* Merc., Nit. ac., Phos., Alcohol. *Compatible:* Calc., Caust., Ign., Lyc., Merc., Nux, Pho., Puls. *Compare:* In ciliary neuralgia, Spi. (Mez. pains radiate and shoot down, cold feeling in eye; Spi., stabbing pains in or radiating from eye, eyeballs feel swollen), Thuj., Ced., Ars., Merc. Protruded and constricted rectum, Lach. Eczema, Rhus, Anac. Ulcers on finger-joints, Bor., Sep. Feeling of cold wind blowing in eye, Croc. (across eye), Med., Syph., Thuj. (out of eye). Blinking, Mercurialis. Nausea in throat, Cycl., Phos. ac., Stan., Val. (in rectum, Ruta; in hypogastrium, Puls.). Stitch in rectum, Ign., Pho. Long bones, Angust. Carious teeth, Kre. Vesicles appear round ulcers and itch, Hep. Pains in periosteum < at night, Phyt., Merc. Rheumatism and skin, Guaiac., Anac., Rhus.

Causation.—Anger. Mercury. Vaccination.

SYMPTOMS.

1. Mind.—Hypochondriacal humour, with sadness and tears.—(Fearful depression, miserable feeling).—Anguish and inquietude, esp. in solitude, with wish for society.—Indifference about everything and everybody around him.—Aversion to talk. it seems to him to be hard work to utter one word.—Disposed to reproach others or to quarrel.—Irresolute.—Everything seems dead and nothing makes a vivid impression.—Peevishness.—Passion.—Unfitness for labour.—Weak memory (mind is easily confused).—Mental torpor.—Slow conception.—Ideas are frequently lost.

2. Head.—Stupefying confusion in head, as from intoxication, or immoderate pollutions.—Vertigo, which causes falling on one side, with sparkling before eyes.—Headache, with shuddering and shivering, < in open air.—(Splitting headaches: head throbs on movement, begins in frontal sinuses, patient gets rapidly thin, and brings up water from stomach with straining; feels low and

weak.).—Pressive and stunning headache, on one side only of brain.—Headache in temples and sides of head after an exertion and from talking much.—Violent headache and great sensitiveness to least contact after a slight anger.—Compressive or cramp-like pain, as if head were being severed.—Violent, pulsative, and pressive pains in whole head, forehead, nose, and teeth, < by the slightest movement.—Thrilling headache, with vomiting of mucus.—Sensation of torpor, with drawing pains in one side of head.—Pains in bones of cranium, < by touch.—Painful sensitiveness of scalp and of hair to touch.—Gnawing itching in scalp.—Itching eruption on head, sometimes moist.—Head covered with a thick leather-like crust, under which thick and white pus collects here and there, and the hair is glued together.—On head great elevated white scabs, under which ichor collects in great quantity, and which begins to be offensive and breed vermin.—The scabs on head look chalky and extend to eyebrows and nape of neck.—Burning, biting itching on scalp, principally on vertex, when scratching the locality changes but the itching becomes <; this is followed by very sore boils and humid eruptions, < at night and when lying down.—(Hard scabs on head six months, no irritation, much oozing with weakness and trembling of ankles.).—Pains in bones of scalp (on both sides) with swelling and caries, great sensitiveness to contact, cold, motion, < in evening.—Numbness of scalp, with drawing pain in it, generally only on one side; < from cold contact and in evening.—> By heat.—Dandruff, white, dry.

3. Eyes.—Inclination to wink with eyes.—Dryness in eyes, with pressure in them.—Twitching of muscles around eyes.—Lachrymation, with smarting in eyes.—Staring at one spot.—Pain, as if balls of eyes were too large, with aching.—Sensation as if eyes drawn back into head.—Eyes feel strained.—Smarting in internal canthi.—Inflammation of eyes; conjunctiva injected, dirty red.—Three days after one dose *Mez*. Ø eyes became bloodshot, first one then the other, with cramp in both feet and l. upper limb, < night. (R. T. C.).—Myopia, or presbyopia.—Sparks before eyes.—Obstinate twitching of the muscles of the l. upper lid.—Pupils contracted.

4. Ears.—Otalgia, with drawing and acute pullings.—Itching and oozing eruption behind ears (scratching causes small elevations, they are scratched off and feel sore).—Hardness of hearing.—Sensation of stoppage of ears.—Ears feel as if they were too open, and as if air were pouring into them, or as if the tympanum were exposed to the cold air, with a desire to bore with fingers into ear.—Sensation as though air were distending the r. external meatus; afterward in l.; as if roaring would occur.—Tinkling in ears, sometimes with drowsiness.—[Cooper supplies the following additions]: Deafness with headache all over head, < on vertex, as if the bone were breaking, a splitting headache with tenderness of scalp, begins across root of nose and eyes and is < at night, also a sick feeling after food (cured).—Bursting sensation in r. ear with neuralgia of whole side of head (cured).—A rumbling in ears, with feeling of fulness and pressure and dimness of sight (produced).—Swelling of r. ear and itching as if a boil were forcing itself through concha (produced).—Adenoids, post nasal; deafness < when eating, slight

otorrhœa, stuffiness of l. nostril with ozæna.—Very deaf, both membranes highly vascular following cold and acute headache of r. side of head; deafness had lasted 2 1/2 months (cured).—Heavy dulness in l. ear with itching in both eyelids, could scratch them to pieces (cured).

5. Nose.—Twitching (visible) on root of nose.—Excoriation of interior of nose.—Diminution of smell, with sensation of dryness in nose, and sometimes ineffectual desire to sneeze.—Frequent sneezings, accompanied by pain of excoriation in chest.—Fluent coryza, with secretion of liquid and yellow (thin, at times bloody) mucus, excoriation and burning in nose, and eruption on lips, and burning of upper lip.—(Ozæna, 15 years, in woman, 35, < l. nostril: *Mez*. 3x irritated nostril, was then omitted and discharge ceased; this occurred several times, till quite cured.—After *Mez*. Ø, sneezes many times for twenty-four hours, then gets darting pains from head to foot and is hardly able to bear anything to touch her for three days.—R. T. C.)

6. Face.—Grey, earthy complexion.—Face and forehead hot and red, with great restlessness and peevishness.—Paleness of face.—Cramp-like and stunning pressure on cheek-bone, sometimes only on one side (r.), and extending to eye, temple, ear, teeth, neck, and into shoulder.—Drawings in jaw-bones.—Continued and painful twitching in cheeks and eyelids.—Frequent troublesome twitching of muscles in middle of r. cheek.—Furunculi on face.—Child scratches its face constantly; it becomes covered with blood.—In night child scratches its face so that the bed is covered with blood in morning; face is covered with a scab, which the child keeps constantly tearing off anew, and on the spots thus left raw large, fat pustules form.—The ichor from scratched face excoriates other parts.—A honey-like scab around mouth.—Skin of face is of a deep inflammatory redness, the eruption is humid and fat.—Excoriation and burning in lips and commissures.—Lips swollen and cracked, with exfoliation; swelling of lower lip with rhagades.—Upper lip ulcerated, with burning pain when touched.—Shootings in submaxillary glands.

7. Teeth.—Pains in carious teeth.—The hollow teeth decay suddenly.—Drawing, burning, or boring shootings in teeth, and into cheek-bones, and temples.—Jerking and tearing pains in teeth.—Sensation as if teeth were set on edge, and too long.—Toothache < by touch and by movement, as well as during the shiverings in evening.—Teeth pain when touched by the tongue.—Ebullition of blood to the head, shiverings and constipation, during toothache.—Teeth coated with fetid mucus.—Teeth speedily become carious.—Burning vesicles in gums.

8. Mouth.—Burning vesicles in mouth and on tongue.—Tongue swollen, protruding.—Tongue quite raw.—Constant burning in mouth.—Burning in the mouth and throat.—Impeded speech.

9. Throat.—Pressive pain in throat on swallowing.—Roughness, excoriation, smarting scraping, and lancinating in throat and palate.—Burning in throat

(pharynx) and in œsophagus.—Inflammation of throat.—Constriction and contraction of pharynx; the food presses on the part during deglutition.

10. Appetite.—Beer has a bitter taste, and is thrown up when taken.—Increased hunger at noon.—Great hunger or loss of appetite.—Violent hunger in afternoon and evening.—Unusual longing for ham fat.—Burning in the stomach, mouth, and throat, > by eating (swallowing the food).—Repugnance to food.

11. Stomach.—Frequent and empty risings, esp. after drinking.—Sensation of nausea in throat.—Sensation as if posterior part of throat were full of mucus, same after hawking.—Nausea, with accumulation of water in mouth, shuddering and trembling of whole body.—Violent vomitings of greenish and bitter mucus, accompanied by headache.—Vomiting of blood.—Aching in stomach.—Burning, and sensation of heat in stomach.—Inflammation of stomach.—Contraction of diaphragm.

12. Abdomen.—Abdomen hard and tense.—Chronic, cramp-like, acute, pulling, pressive, constrictive, and shooting pains in abdomen.—Stitches in l. hypochondrium.—Dull pain in region of spleen.—Heaviness in abdomen.—Sensation of heat, and burning in abdomen.—Inflammation of intestines.—Expansive pressure in inguinal ring.—Drawing in inguinal glands.—Flatulent colic, with rumbling and borborygmi in abdomen, difficult respiration, and shivering.—Many short, fetid, flatulent discharges, esp. before the stool.

13. Stool and Anus.—Difficult stools, of the consistence of thick pap, with urgent want to evacuate.—Constipation.—Constipation, stool dark brown, in knots, very hard balls, with great straining, but not painful.—Stools soft, brown, smelling sour.—Soft stool in evening, fermented stool, not fully digested, smelling very offensive or sour.—Excessive diarrhœa (small stools) with intolerable colic.—Brown fæces, containing some white, glistening bodies.—Scanty, soft, frequent evacuations.—Violent diarrhœa, with insupportable pains in abdomen.—[Passes large quantities of blood by bowel with diarrhœa and sickness; is bilious (cured).—*Mez*. often relieves constipation, esp. with hepatic and uterine inertia.—R. T. C.].—During (or after) stool, prolapse of rectum with constriction of anus, which makes it very difficult to replace; sore and painful to touch.—Before and after stool, creeping in rectum as from ascarides.—Stitch in rectum; upwards (in afternoon).—Biting, sore pain in anus on walking, and a burning in rectum.—Pain in anus and anterior part of penis.—Pinching in anus and near anus l. side.—Crawling in anus; much itching.—Tenesmus, tearing and drawing in anus and perinæum, and through whole urethra.—Coldness and shuddering, before, and after the evacuation.

14. Urinary Organs.—Diminished secretion of urine.—In morning and forenoon, frequent discharges of large quantities of pale urine.—Flock-like cloudiness, and

reddish sediment in urine.—Hæmaturia.—Sticking in kidney, and pain as if torn.—Pain, as from excoriation, in urethra.—Discharge of mucus from urethra.—Discharge of a few drops of blood after urinating.—Biting burning in forepart of urethra at close of micturition.—After micturition, itching at prepuce.

15. Male Sexual Organs.—Tearing, jerking, and lancination, in penis.—Tearing and burning lancinations in the end of the glans.—Heat and swelling of penis.—Violent erections and increased sexual desire.—Swelling of testicles.—Fine pricking stitches in penis and tip of glans.—Abundant secretion of smegma behind glans, like gonorrhœa balani.—Swelling (painless) of scrotum.

16. Female Sexual Organs.—Chronic leucorrhœa, like white of eggs (malignant, corroding), sometimes also serous.—Menses: too frequent and lasting too long; scanty with leucorrhœa and prosopalgia; suppressed.—During pregnancy, diarrhœa and prolapsus recti.—After confinement, constipation, burning and stitches in rectum.—(Climacteric flushings remain away for several months.)

17. Respiratory Organs.—Hoarseness, with burning and dryness in throat, irritation which excites coughing, rawness in chest, and difficult respiration.—Violent cough, when lying down.—Dry cough, with retching and vomiting, in evening, and at night.—Desire to draw a long breath.—Spasmodic, violent whooping-cough, caused by an irritation in larynx, extending to chest, expectoration in morning, of a yellow, albuminous, tough mucus, tasting salt.—The cough is < in evening till midnight; or day and night, with tension over thorax; when eating or drinking anything hot (has to cough till the food is vomited up); from drinking beer.—Violent inclination to cough low down in trachea; cannot loosen anything by the cough.

18. Chest.—Difficult respiration.—Pain in chest, during inspiration, as if there were adhesions in lungs, and the cavity of the chest were too narrow.—Aching in chest.—Painful tension of muscles of chest.—The chest feels too tight on stooping.—Pain, as from excoriation and burning in sternum.—Stitches in chest, < during inspiration; in (r.) side of chest, < from drawing a long breath.

19. Pulse.—Pulse intermittent; full, tense, hard.

20. Neck and Back.—Painful rigidity of nape of neck, and of neck and external muscles; in r. side of neck and throat, < on motion.—Tearing jerking in sides of neck.—Rheumatic pains in muscles of shoulder-blade; they feel tense and swollen, and prevent motion.—Shootings in back.—Contractive and tensive pain in back, extending to sacrum.—Sacral pains.—(Coccyx tender and sore, from a fall).

22. Upper Limbs.—Dislocating pain in shoulder-joint.—R. arm feels sprained on top of shoulder.—Pain, as from excoriation, in axillæ (r.).—R. hand cold (while writing), l. warm (in a warm room).—Cold hands.—Trembling in r. hand.—Tips of

fingers powerless, cannot hold anything.—The hands (and feet) go to sleep continually.—Drawing and rheumatic tension in arms, with paralytic weakness.—Paralysis of flexors.—Jerking pains in shoulders, arms, hands, and fingers.—Swelling and heat of arm and hand, with twitching and pricking in muscles.—Ulcers on finger-joints.

23. Lower Limbs.—Jerking in hip-joint, as far as knee.—Contraction of leg.—R. hip-joint feels sprained on walking.—Twitching of whole of r. leg.—Pain in hip, the leg is shortened.—Whole leg covered with elevated white scabs.—(Ulcer on leg with intense itching in surrounding skin and in scalp, much < in warmth; with slight diarrhœa.).—Cracking in r. knee when rising in morning.—Legs and feet go to sleep.—Stitches in toes of r. foot.—Pain in periosteum of the long bones, esp. the tibia, < at night in bed, and then the least touch is intolerable.—Pains in bones of thighs and legs.—Tearing, drawing, and tension in thighs, legs, feet, and toes.—Tension and stiffness in knees.—Jerking, and pressive pain in tibia.—Hard swelling of calves of legs.—Jerking pain in toes.—Violent pains in bones of feet; in bones of instep, < when walking.—Pain in ball of little toe.

24. Generalities.—[This remedy is often useful in cases of very violent neuralgic pains about the teeth or face, particularly if the pain be in the l. bone, running toward ear; also neuralgic pains at night in teeth.—Affections of any kind appearing on external head, principally r. side; teeth in l. side; forehead; shin-bone.—Collection of water in mouth, *i.e.*, "mouth waters.".—Urine with real flakes, which float about on the top.—Subsultus tendinum, as in typhoid fever, &c., when by putting the fingers on the wrist or on other parts of the body the tendons are felt to jump and jerk.—Burning, darting sensation in the muscles like fire darting through them.—H. N. G.].—Drawing, rheumatic tearing, and tension in the limbs, with paralytic weakness.—Thrilling pains, which leave a distressing sensation behind them, for a long time.—Drawing, pains in one side of body, with shivering.—Pains, accompanied by shivering and shuddering.—Gnawing pains, as from excoriation in mucous membranes.—Burning in the organs of digestion.—Burning of internal parts, with external chilliness.—Inflammation and swelling of bones; esp. shafts of cylindrical bones; caries, after abuse of Mercury.—Ulceration of bones.—Tension in muscles.—Hot, jerking stitches in various parts of body.—Jerking and quivering of muscles.—Drawings and sensation of weakness in joints; joints feel bruised and weary, as if they would give way.—Contusive pain, and heaviness in all limbs.—Heaviness and indolence of body.—Feeling of great lightness of body.—General sick feeling.—Bending of body in walking.—Emaciation or bloatedness of body and face, with enlargement of abdomen in children.—Pain in the glands.—Abscesses of fibrous parts or tendons.—Predominance of sufferings on one side of the body.—Symptoms < in the evening; < on touching part affected; and on movement.—Great susceptibility to cold air.—Sensitiveness to washing with cold water in morning.

25. Skin.—Sensitiveness to touch.—General desquamation of skin of body; usual liver spots on chest and arms become dark and desquamate.—Red rash, itching violently; < in bed, from touch; burning and change of place after scratching.—Cutaneous ulcers form over bony protuberances.—Ulcers with thick, whitish, yellow scabs, under which thick, yellow pus collects.—Skin covered with elevated white scabs.—Itching, esp. at night (when in bed), more violent and painful (and changed to burning) after scratching the parts, and sometimes with swelling of the part that has been scratched.—Gnawing itching as from vermin.—Miliary eruptions, sometimes chronic.—Furunculi.—Inflamed ulcers, with burning and shooting, or with gnawing pain of excoriation.—Inflammation and swelling of the bones, rachitis, caries.—Ulcers: with an areola, sensitive and easily bleeding when removing the linen, which sticks, painful at night, the pus tends to form an adherent scab, under which a quantity of pus collects, burning and stinging with inflammation.—Vesicles around the ulcers, itching violently and burning, like fire.—Suppuration after inflammation.

26. Sleep.—Great sleepiness by day, with agitated and unrefreshing sleep, at night.—Shocks in body during sleep.—Waking early (towards 2 or 3 a.m.) in consequence of nightmare.

27. Fever.—Pulse full and hard; in the evening accelerated; intermitting at times.—Chilliness, shiverings, and coldness of whole body, esp. in hands and feet, with violent thirst, and sometimes without a desire for warmth.—Chill predominates even in warm room.—Chill with thirst and desire for heat.—Chill from upper arms, extending to back and legs.—Heat in bed, mostly in the head.—Intermittent fever; chill over the whole body accompanied by asthmatic contraction and tightness of chest, in front and back.—During cold stage, a peculiar thirst; dryness in back of mouth, with accumulation of saliva in fore part without any desire to drink.—During cold stage, drowsiness in the warm room.—Sleep, with sweat, after the shiverings (without previous heat).—Fever, accompanied by headache, and paleness of face, the splenetic region painful, swollen, and hard, weakness and great susceptibility to cold air; tertian fever.—Violent inflammatory fever.

Millefolium.

Achillea millefolium. Yarrow. N. O. Compositć. Tincture of whole fresh plant.

Clinical.—Asthma. Cancer. Chlorosis. *Consumption*. Dentition. Diarrhśa. Dysmenorrhśa. Enuresis. Epilepsy. Fistula lachrymalis. Hćmatemesis. Hćmaturia. Hćmoptysis. Hćmorrhages. Hypochondriasis. Hysteria. Leucorrhśa of children. Lochia, too profuse; suppressed. Milk, absence of. Nipples, sore. *Nose, bleeding of*.

Puerperal convulsions. Puerperal fever. Rodent ulcer. Sterility. Sycosis Hahnemanni. Tetanus. Varices.

Characteristics.—Yarrow was named *Achillea* by Linnćus because the plant is mentioned in the Iliad as having been used by Achilles, on the instruction of Chiron, to heal the wounds of his soldiers. The knowledge of the vulnerary powers of *Mill*. is thus of great antiquity. It received its popular name, "Nose-bleed," because nose-bleed comes on if the leaves are inserted into the nostrils. There is another species of *Achillea*, besides *A. millefolium*, indigenous to Great Britain, *A. ptarmica*, called "sneeze-wort" from its sternutatory properties. *Millefol*. in its hćmorrhages and vulnerary action is closely allied to *Arn*., and it has another action common to many Compositć, that of a convulsant. But this action is again allied to its hćmorrhagic power, for it is chiefly (but not exclusively) in relation to suppressed hćmorrhages (menses) or other secretions as the lochia or milk that the convulsions occur. The hćmorrhages are chiefly florid. As well as hćmorrhages, there are copious mucous discharges, especially when these are due to atony. *Mill*. has a very pronounced relation to pregnancy and the puerperal state. Varicose veins in pregnant women have been cured with it. C. W. (*H. W*., xxvi. 108) relates an interesting experience. A man had severe diarrhśa, profuse dark chocolate-coloured stools, verging on black, and slightly tinged with blood. A club doctor had failed to relieve, but an old woman cured the man with "millefoil tea." C. W. had a collie dog which, when excited, would pull up grass or weeds and swallow them. When it happened to be millefoil this invariably caused: First, rattling of fluid in the bowels, then dark chocolate diarrhśa, changing to black, very offensive, finally blood-tinged. This lasted a day or two. It was at length found that *Ars. iod*. 3x in solution was a complete antidote. Given every ten minutes, as soon as rattling came on, it effectually stopped it. The dog also had fissured pads. *Ars. iod*. did nothing for these, but *Ars*. 30 cured. *Peculiar sensations* are: As if he had forgotten something. As if all blood ascended to head. Right side of head as if screwed together. As if too much blood in eyes. As if cold air passing out of ear. As of a liquid moving from stomach to intestines. Pain as from a blow or sprain in right tendo Achillis. *Mill*. is suited to all wounds which bleed profusely, sprains, and overlifting. The symptoms are < by stooping; < doubling the body (burning in stomach); < much exertion; < by lifting. Lying down > nausea; < hćmoptysis. Violent exercise > vertigo. Symptoms < by coffee, > by wine. *Mill*. is *suited to* the aged; atonic; women and children.

Relations.—Ant. t. relieves the vertigo of Mill., Ars. i. the diarrhśa. Mill. *Antidotes:* Arum mac. *Incompatible:* Coffee (= congestion to head). *Compare:* Erech. (epistaxis and hćmoptysis); Senec. aur. (hćmaturia). Ham. and Ipec. (hćmorrhages); Plat. (Mill. red, clotted; Plat. dark, clotted); Bry., Ustil., and Ham. (hćmatemesis) Aco. (hćmorrhages, profuse flow of bright red blood—Aco., anxiety; Mill., absence of anxiety). The Compositć generally, Arn., Bellis, Calend., &c.

Causation.—Falls (from height). Over-exertion. Lifting. Suppressed lochia. Suppressed menses. Suppressed milk.

SYMPTOMS.

1. Mind.—Violent, irritable.—Averse to work.—Seems to have forgotten something; does not know what he is doing or wants to do; head dull and confused, esp. evening; < after coffee.—Very excited, with pain in pit of stomach.—Sighing and groaning of children.

2. Head.—Vertigo, falls to r. side and backward, when moving slowly, walking, but not when taking violent exercise; with nausea when stooping, not when lying down (> by *Ant. t.*).—Dull pain in vertex.—Confused, dull headache.—Slight throbbing in arteries of head and face.—Violent movements and painful beatings in head.—Rush of blood to head.—Sensation, as if all the blood were carried towards head.—Acute drawing pains and shootings in r. side of head; sensation in r. side of head as if screwed together.—Violent headache, he strikes head against bed-post or wall, with twitching of eyelids and muscles of forehead.—Sensation of constriction in skin of forehead.—Hair becomes tangled.

3. Eyes.—Glistening, brilliant eyes.—Agglutination of eyes in morning.—Lachrymation and discharges from eyes (fistula lachrymalis).—Sensation of too much blood in eyes.—Inward piercing pressing in eyes, to root of nose and sides of forehead.—Clear, bright vision.—Fog, not near eyes, but at a distance.

4. Ears.—Sensation of stoppage in ears.

5. Nose.—Nose-bleed.—Nose-bleed with congestions to head and chest.—Stuffed nose.

6. Face.—Sensation of heat, as if blood was rising to head.—Redness of face without internal heat.—Tearing: in face to temples; r. lower jaw to ears; then teeth.

7. Teeth.—Toothache: from heating things; rheumatic, with diseased gums.—Gumboil.—Ulcers on gums.—Stomacace.

8. Mouth.—Tongue swollen and coated.—Thirst; mouth dry.

9. Throat.—Elongation of palate.—Uvula relaxed.—Ulceration of throat; pain in l. side when swallowing.

11. Stomach.—Painful gnawing and digging in stomach as from hunger.—Burning in stomach, extending to chest.—Violent pain in pit of stomach (during retrogressive small-pox).—Vomiting when coughing.—Nausea with vertigo.—Hćmatemesis.—Cramps in stomach, with a sensation of a liquid flowing

from stomach to anus.—Burning pain in stomach.—Sensation of fulness in stomach; as if stomach were contracted and filled with earth.—Eructations.

12. Abdomen.—Pain in region of liver.—Congestions to portal system.—Colic during menstruation.—Ascites.—Incarcerated hernia.—Pain as from incarcerated flatulence.—Frequent emission of fetid flatulence.—Violent colic, with bloody diarrhśa (during pregnancy).—Dysentery.—Abdomen distended.

13. Stool and Anus.—Bleeding hćmorrhoids; profuse flow of blood from bowels.—Diarrhśa, preceded by rattling of fluids in abdomen, profuse chocolate-coloured stools, changing to black, very offensive, becoming blood-streaked.—Mucous diarrhśa; bloody; dysentery.—Ascarides.

14. Urinary Organs.—Hćmaturia.—Involuntary micturition; of children.—Bloody urine.—Catarrh of bladder from atony.—Stone in bladder, with retention of urine.

15. Male Sexual Organs.—Swelling of penis or testicles.—The semen is not discharged during an embrace.—Spermatorrhśa.—Sycotic excrescences.—Gonorrhśa; gleet.

16. Female Sexual Organs.—Hćmorrhage from uterus from too violent exertions.—Metrorrhagia.—Menses too profuse.—Suppressed menstruation with epileptic attacks.—Barrenness with too profuse menstruation, or tendency to miscarry.—Suppressed lochia with violent fever, suppressed secretion of milk, or convulsions, convulsive motion of all limbs and violent pain.—Lochia too profuse.—Sore nipples.

17. Respiratory Organs.—Rough voice.—Hćmoptysis; florid; after failing from a height; in connection with hćmorrhoidal symptoms.—Very difficult breathing, with tetanic spasms.

18. Chest.—Oppression of chest, with bloody expectoration.

19. Heart and Pulse.—Excessive palpitation and bloody sputum.—Ebullitions from coughing blood.—Anxiousness with pain at heart.—Pulse accelerated and contracted.

22. Upper Limbs.—Pricking and numbness of l. arm.—Heat of hands.

23. Lower Limbs.—Acute drawing pain in knees and legs.—R. tendo-Achillis pains as from a blow or sprain.—Feet go to sleep; first l. foot, later r.; disappearing on walking.

24. Generalities.—Rheumatic and arthritic complaints.—Piercing, drawing, tearing pains in limbs.—Paralysis and contraction of limbs.—Tetanus.—Convulsions after parturition.—Convulsions and fainting attacks of infants.—Hysterical

spasms.—Epileptic spasms from suppressed menstruation.—Congestions.—Hćmorrhages from various organs.—Hćmorrhages from almost all the openings of body.—Mucous discharges from atony.—Wounds bleed profusely, esp. from a fall.—Effects of over-lifting or overexertion.—< In evening and night; > during day.

25. Skin.—Suppressed itch, and from it fever.—Painless varices of pregnant women.—Fistulous ulcers.—Ulceration of internal organs.—Cancerous ulcers.—Wounds; after operation for stone in the bladder.—Bruises, bleeding from wounds.—Bad effects from a fall (from a height) and sprains.

26. Sleep.—Violent yawning without being tired.—Goes to sleep late, and does not feel refreshed in morning.

27. Fever.—Pulse accelerated and contracted.—Chilliness with pain in (l.) kidney.—Fever heat with thirst.—Heat in hands and feet.—Colliquative perspirations.

Mimosa.

Mimosa humilis. Sensitive Plant. N. O. Leguminosæ. Tincture of leaves.

Clinical.—Ankles, swelling of. Conjunctivitis, rheumatic. Rheumatism.

Characteristics.—*Mimosa* is one of the remedies introduced and proved by Mure. The most notable symptoms were lancinations in the back and limbs, and "swelling and redness of left ankle with tension and lancination." This last symptom has been confirmed. The "sensitive plant" of our hothouses is *M. Pudica*, but the leaves of *M. humilis*, says Mure, "close at the least contact."

SYMPTOMS.

1. Mind.—Indolent indifference.

2. Head.—Sensation: of heat in head; as if enlarged.

3. Eyes.—Inflammation of eyes; of l. eye.—Itching.—Vision dim halo round candle.

4. Ears.—Whizzing in ears.

5. Nose.—Sneezing and coryza.

8. Mouth.—Bleeding of gums.—Salivation.

11, 12. Stomach and Abdomen.—Stomach-ache.—Borborygmi.—Flatulent colic.

13. Stool.—Diarrhœa.—Frequent stools with colic.

15. Male Sexual Organs.—Inflammatory swelling of scrotum.

17. Respiratory Organs.—Dry cough in morning.—Difficult breathing.

20. Back.—Violent lancinations in back.

21. Limbs.—Lancinations in legs and hands; now in arm, now in leg.

22. Upper Limbs.—Twitching of arm, extending to chest.—Numbness of arm and r. hand, ceasing on movement.—Inflammatory swelling of l. hand.—Numbness of hands.

23. Lower Limbs.—Trembling of legs.—Smarting pain in legs, with paralysis of knee.—Stiffness of bends of knees.—Swelling of l. ankle, with redness, tension, and lancination.

24. Generalities.—Prostration.—Pressure in nape and r. temple.

25. Skin.—Pimples and pimply excrescences about legs and arms.

26. Sleep.—Yawning.—Drowsy in evening, with frequent waking at night.

27. Fever.—Horripilation.

Mitchella.

Mitchella repens. Partridge-beans. N. O. Rubiaceæ. Tincture of whole plant.

Clinical.—Bladder, irritation of. Dysmenorrhœa. Dysuria. Kidneys, pain in. Metritis.

Characteristics.—Mitchella is a small trailing evergreen bearing a scarlet bean, and is common throughout the United States. It belongs to the same order as *China, Coffea*, and *Ipecac*., and shows its affinity with these in its power over hæmorrhages. Indian women drink a decoction of it before confinement to make labour safe and easy. Eclectics use a concentrated decoction as an application to sore nipples. T. C. Duncan, in his proving, induced pains and burning in the kidneys, and H. P. Hale, who observed the effect on a woman, has recorded some characteristic symptoms in the urinary and uterine sphere. A leading indication is congestion of the uterus with bladder irritation as a concomitant.

Relations.—*Compare:* In congested cervix associated with irritation of neck of bladder, Sep. (Mitch. has no *general* resemblance to Sep.), Eu. pu. (vesical irritation in women), Hydrocot. (Hdrct. has in addition heat and itching in vagina), Apis, Vespa (Vesp. has ulcer round os); Caul., Chim., Act. r., Helon., Puls., Senec., Uva ursi.

SYMPTOMS.

1. Mind.—Depression, followed by buoyant spirits.—Inability to concentrate mind.

2. Head.—Severe frontal headache on waking.—Burning in vertex.—Throbbing in occiput.—Scalp sensitive to touch.

3. Eyes.—Eyes dull and heavy.

4. Ears.—Burning in l. pinna.—Dull aching in r. ear.

8. Mouth.—Burning and prickling on tongue.

9. Throat.—Swallowing difficult; tonsils enlarged, esp. l., painless.—Fauces dry.—Pharynx feels constricted, impeding swallowing.—Some enlargement of l. submaxillary gland.

11. Stomach.—Appetite impaired.—Eructations; acid.—Burning in stomach extending whole length of œsophagus.

12. Abdomen.—Rumbling.—Whole alimentary tract feels cold; transverse colon tender to pressure.—Distension with flatus.—Griping.

13. Stool and Anus.—Urging; thin stools.—Costive, fæces small, difficult; tenesmus.

14. Urinary Organs.—Heat in kidneys; dull pain in.—Uneasiness in neck of bladder, urging to urinate; burning; 11 a.m.—Urethra (female) and neck of bladder swollen and irritated.—Increased quantity of urine, 1040, acid.—Urine high-coloured, white sediment.—Catarrh of bladder, esp. in women.—Dysuria accompanying uterine complaints.

15. Male Sexual Organs.—Pain, drawing in r. testicle, 1 p.m.

16. Female Sexual Organs.—Uterus irritated, severe pain in it, cervix engorged, dark red, swollen.—Engorged uterus; hæmorrhage, bright; with dysuria.—Amenorrhœa; dysmenorrhœa; menorrhagia; menses delayed.—Slow, feeble, ineffective labour pains.—False pains in last month of pregnancy.

17. Respiratory Organs.—Much mucus in bronchi.—Dry, hacking cough in morning.—Breathing difficult 11 a.m.

19. Heart.—At heart: burning pains; uneasy feeling as if its action was being interfered with.—Beats irregular.

20. Neck and Back.—Aching pains running down back.—Dull pain: between shoulders; in kidney region.

21. Limbs.—All muscles feel sore.—Lassitude.

22. Upper Limbs.—Aching and burning sensation in r. upper limbs.

23. Lower Limbs.—Walk unsteady, inclines to fall to r.—Aching in lower limbs; in knee-joints.

26. Sleep.—Yawning, drowsy.—Woke in a fright; frightful dreams.

27. Fever.—Chill over whole body with flushes of heat, very sensitive to cold air.

Momordica.

Momordica balsamina. Balsam Apple. N. O. Cucurbitaceæ. Tincture of fresh ripe fruit.

Clinical.—Colic. Dysmenorrhœa. Flatulence. Leucorrhœa. Menorrhagia.

Characteristics.—*Momordica* was introduced by Dr. Mercier, whose wife made the proving with twenty-four drops of the tincture, producing some very well characterised symptoms. Griping and colic declared its relationship to *Colocynth*. and *Elater*., as also severe pains in back and hypogastrium with painful and excessive menses. A peculiar sensation is: "As if the whole contents of the head had greatly diminished in weight." Farrington gives as a keynote (though it does not appear in the proving) "distension and rumbling in splenic flexure of colon," which he compares with the effects of *Lyc*.

SYMPTOMS.

2. Head.—Dizziness, lightness in head; sensation as if whole contents of head had greatly diminished in weight.—Slight headache.

3. Eyes.—Sensation of occasional mist or cloud passing before eyes.

6. Face.—Face at times red; but generally very pale.

11. Stomach.—Slight sickness at stomach.

12. Abdomen.—Griping, general colic pains, starting from back and spreading over whole abdomen; piercing, labour-like pains in hypogastrium.—(Accumulation of flatus in splenic flexure of colon; rumbling.)

13. Stools.—Two or three healthy stools [daily?] for several days.

16. Female Sexual Organs.—Painful and too profuse menses, but listing only usual time.—Labour pains during menses followed by gushes of blood.—White, light mucous discharge between periods.

19. Heart.—Pulse quick and weak.

20. Back.—Pain at small of back at time of menses, sometimes very acute, beginning at sacrum and coming towards front of pelvis.

24. Generalities.—Weak feeling, sometimes faintness.

Morbillinum.

Morbillin. The nosode of Measles.

Clinical.—Catarrh. Coryza. Cough. Ear, affections of. Eye, affections of. Measles. Skin, affections of.

Characteristics.—The well-known symptoms which characterise an attack of measles may all be taken as guides for its homśopathic use. Its chief use hitherto has been as a prophylactic against infection, and to clear up after effects of an attack. My own use of it has been confined to the 30th and higher, but there is no bar upon lower potencies, and those who prefer them may begin with the 6th. As a prophylactic given to those who are, or may be, exposed to infection, I prescribe a dose of the 30th twice or thrice daily. For an attack of the disease I find nothing better than *Morbil*. 30, eight or ten globules in six ounces of water, a dessertspoonful every two hours.—The effect of this is heightened by giving alternately *Bell*. 30 in the same way. These two medicines will be sufficient to carry through any uncomplicated case, and in my experience do even better than *Pulsatilla*. As the measles poison has a great affinity for the mucous passages, the eyes, the ears and the respiratory mucous membranes, *Morbil*. may be used in such cases like any other homśopathic remedy, when the symptoms correspond.

Relations.—*Complementary:* Bell. *Compare:* Puls., Hep., Merc., Sul.

Morphinum.

MORPHINUM. Morphia. An alkaloid of Opium. $C_{17}H_{19}HO_3$. Trituration. Solution.

MORPHINUM ACETICUM. Acetate of Morphia. $C_{17}H_{19}NO_3C_2H_4O_2$. Trituration. Solution.

MORPHINUM MURIATICUM. Hydrochlorate of Morphia. $C_{17}H_{19}NO_3HCL$. Trituration. Solution.

MORPHINUM SULPHURICUM. Sulphate of Morphia. $C_{17}H_{19}NO_3H_2SO_4$. Trituration. Solution.

Clinical.—Chorea. Constipation. Convulsions. *Eyes, affections of*. Headache. *Irritation*. Jaws, clenched. Lightning-stroke. Neuralgia. Palpitation. Sleep, disordered. Strabismus, divergent. Trismus. Tympany. Vertigo. Vision, illusions of.

Characteristics.—*Morphia* is the alkaloid of *Opium*, which contains the most characteristic properties of the drug. The alkaloid itself, the *Acetate*, the *Muriate*, and the *Sulphate* have all been used as pain-deadeners and sleep producers, but I do not find it practicable to attempt to distinguish between them, since the particular salt given has not always been mentioned. Alkaloids do not act in the same way as ordinary bases in their union with acids; the alkaloid does not displace any of the molecules of the acid; a molecule of acid is simply *added to* a molecule of alkaloid and not *integrated with* it. The distinction therefore between salts of alkaloids is less than between salts of metals, &c. I have included effects of all in the Schema; it is probable that the symptoms of any one of them will be sufficient to indicate any other. Rufus L. Thurston (*H. P.*, xv. 563) records a short but very important proving of *Morphinum* on a patient who took a grain for sleeplessness. Among the symptoms was this, which he italicised: "*Vertigo from the least movement of the head*." Not long after, Skinner (*H. P.*, xvi. 123) had a case of vertigo with tendency to fall forward and with this symptom: "Becomes unconscious and all becomes dark, < by movement of any kind, *especially of the head*, and by eating and drinking. *Morph. mur*. 500 (F. C.) cured the case. C. M. Boger (*H. P.*, xvi. 295) cured with *Morph. sulph*. c.m. this case: Miss M., 22, dark, spare. Headache with sensation of being wound up tight. Sleepiness and numbness of lower extremities. *Intense vertigo on least motion of head*. Thus both the *Muriate* and the *Sulphate* availed to cure a symptom produced by the plain alkaloid. In Thurston's case there was also the "wound-up" headache, which is confirmed by Boger's cure as another note of *Morph*. Another feature of Thurston's case was *sudden* faintness. The same symptom was produced, by one-eighth of a

grain of the *Sulphate*, in a case reported by E. V. Ross (*H. P.*, xvi. 524): "Spells of feeling faint come on suddenly, with great anxiety; thought she was going to die." In the same case this peculiar symptom appeared: "Delusion of vision on closing eyes, sees a man standing at foot of bed. The room seems full of white and coloured babies." In my experience the *Acetate* has produced much more violent gastric symptoms than the *Muriate*, but not different in kind. Green vomit is a constant effect. Restlessness and hyperæsthesia are prominent symptoms: restlessness of legs, wants them held; feels as if worms in them. Trembling, twitching, jerking, and convulsions; even tetanus. This is marked in the clenching of the jaws. *Morphia habitués* have extreme susceptibility to pain, and *Morph*. is indicated in neuralgia where the pains are so violent as to threaten convulsions; pain causing twitching or jerking of limbs. Violent and *sudden* neuralgic pains (as well as *sudden* fainting). *Morph*. is just as susceptible emotionally as to pain; "Cannot describe symptoms for tears and sobs." The head is very heavy and hot; drowsiness. The sleep symptoms of *Morph*. are not distinguishable from those of *Opium*. Intense drowsiness. Deep sleep. Half sleeping state: "He lay in a half-waking, half-stupid state, but with perfect ability to think of different things, though at the same time he was busy with confused phantasies; limbs stiff." On the other hand there is sleeplessness and restless sleep with starting up. Dreams may be pleasant or frightful. The symptoms are: < By eating. < By movement. < By (slightest) movement of head. < After sleep (head dull, vertigo as from disordered stomach, after a nap). < In morning (pain in head on waking > on moving about). < By vinegar. > By coffee. *Morph*. cured nervous spasms brought on by lightning-stroke, the spasms being < by any exposure to heat, > by cold; was compelled to go to a cool place *Peculiar sensations* are: Tensive sensations in head as if skull too small for the brain. As if brain wound up. Something shot to head like lightning the instant the injection took place. Sight as if obscured by a fog. Tickling of nose and tip of nose. Tongue as if thick. Teeth as if clenched. Indescribable sensation behind lower half of sternum. As if worms in legs.

Relations.—*Antidote to:* Electricity (Morph. acet., *see* ELECTRICITAS). *Antidoted by:* Avena, Atrop., Bell., Strong Coffee; Aco. and Ipec. especially useful for secondary effects. [Keaney (*H. P.*, xv. 195) cured with one dose of Sul. c.m. (Swan) a man who had taken two grains of morphine daily for fifteen years.] *Inimical:* Vinegar (it increases the painful symptoms, vertigo, &c.). *Compare:* Op., Codein., Apomorph. In excessive sensibility, Aco., Cham. Weeps in telling symptoms, Puls. Vertigo on least movement of head, Mosch. (Mosch. has also vertigo from movement of eyelids). < By movement, Bry. (cats and other felines, and fowls, are insensible to Morph. (*H. W.*, xxvi. 334; xxix. 532) as rabbits are to Bell.)

Causation.—Electric shock. Lightning-stroke. Thunderstorms.

SYMPTOMS.

1. Mind.—Excitement.—Could not describe her symptoms for tears and sobs.—Emotions very easily excited.—Sad; melancholy; mute despair.—Great anxiety; thought she was going to die.—Anxious, restless, ran about the room.—Delirium like delirium tremens.—Illusions with hypochondriacal mood; sees brilliantly coloured birds; hears voices; have a sensation of sitting in wet; perceive various odours; thinks he will die; thinks he sees his own burial; that persons about him are growing larger.—Terror, cried out in great alarm.—Ill-humour.—Irritable, wants to be alone.—Flow of ideas rapid and pleasant; but without control of the will; like the condition of dreaming.—Incapable of thinking or fixing mind.—Stupefaction; coma.

2. Head.—After a nap head dull and confused as from disordered stomach, < by vinegar, < after eating, compelled to lie down.—Giddiness and drowsiness; everything turns round.—Dull pain.—Something shot to the head like lightning the instant the injection took place.—Brain feels tense as though wound up tightly.—Vertigo from least motion of head (caused by *Morphinum*; verified by a cure with *Morph. mur*. 500).—Head dull; heavy as lead; hot.—Headache: sudden; intense; pressive; throbbing like a pulse, as if head would burst; in forehead; intolerable r. side; in occiput.—Headache with drowsiness.—Tensive sensation, as if skull too small for brain; reading, writing, thinking very difficult.—Head drawn backward.

3. Eyes.—Eyes: staring; glistening; sparkling; injected; fixed; sunken; lustreless; feel too small for sockets.—Look becomes unsteady.—Ptosis.—Paresis of internal recti; diverging strabismus.—Eyeballs protrude.—Nystagmus.—Pupils: dilated; contracted to a minimum; unequally contracted.—Sight: dim, blurred; obscured by fogs; double with disturbed accommodation and frequently lachrymation.—Delusion of vision on closing eyes, sees a man standing at foot of bed; the room seems full of white and coloured babies.

4. Ears.—Severe pain in l. ear with pain at side of l. eye all day.—Ringing; surring; roaring; tinnitus.

5. Nose.—Sneezing; in paroxysms; coryza.—Tickling in nose, œsophagus and larynx as before a sneeze.—Intense itching, tingling, numb feeling on end of nose, rubs it constantly.

6. Face.—Heavy; confused; wild; haggard expression.—Face: intensely flushed; puffed; livid; cyanotic.—Trismus, teeth clenched.

8. Mouth.—Tongue: dry, brown; red; tip, margins, palate scarlet, tongue violet in middle; at times trembles on putting it out.—Mouth: very dry; dry with thirst, nausea, vomiting, aversion to meat; pastry; bitter, sticky.—Discharge of watery

saliva from mouth.—Made a strange noise with his mouth.—Speech: hasty; stammering; embarrassed and feeble.

9. Throat.—Dryness and constriction in throat.—Burning back of fauces.—Paralysis of pharynx, swallowing almost impossible.—Jugular veins swollen, carotid arteries pulsating.

11. Stomach.—Loss of appetite.—Great thirst; burning.—Eructations: violent; with much acid mucus.—Nausea, faintness, constant retchings, with alternate flushes of heat and cold.—Nausea with drowsiness.—Vomiting: green matter; sour, bright green fluid; bitter, greenish water.—Pain in stomach < by eating.—Pain in stomach, umbilicus, and bladder.—Constriction; pressure; cramp: colic; crawling in stomach.

12. Abdomen.—Pain in umbilical region.—Distension.—Acute pain in abdomen, and along spinal column, on every inspiration.—Colic > turning on back in morning.

13. Stool and Anus.—Diarrhœa (the acetate generally produced diarrhœa); watery; with horrid tenesmus, straining and burning in rectum, almost causing frenzy.—Constipation for a long time.—Stool retained.—Indolent evacuation of a little fæces with painful urging.

14. Urinary Organs.—Paresis of bladder.—Suppression of stool and urine.—Ineffectual efforts.—Strangury.—Urine: turbid and slimy; diabetic.—Albuminuria.

15. Male Sexual Organs.—Impotency.—The sexual excitement, voluptuous sensations and erections are incomplete or do not occur.—Pain in genital and urinary organs, esp. r. spermatic cord.—Diminished desire.

16. Female Sexual Organs.—Amenorrhœa.—Menses too profuse; and too early.—Sterility.—Sexual desire at first increased, afterwards abrogated.

17. Respiratory Organs.—Hoarseness.—Breathing: stertorous; difficult; slow; thoracic breathing entirely suspended.—Struggling for breath.

18. Chest.—Chest tight, breathing difficult, asked to be raised, saying she felt as if she were dying.—Pain in middle of sternum.—Ill with an indescribable sensation, worse than any pain, behind lower half of sternum.

19. Heart.—Palpitation.—Violent throbbing in heart and carotids.—Congestions of head, palpitations of heart; starts in fright if approached; touch = cramp and twitchings.—Pulse small, weak; dicrotic.

20. Neck and Back.—Stiff-neck.—Great pain in back.—Pain extending along spine.—Pain and twitchings all down spine.—Weakness of the loins.

21. Limbs.—Tremors; twitchings; contractions; stiffness of limbs.—Violent pain in joints.

22. Upper Limbs.—Stiffness and pain in arms after sleep.—Twitchings, tremblings.—Fingers numb and both thumbs firmly drawn into palms.

23. Lower Limbs.—Gait insecure; tottering, staggering.—Legs swollen.—Cramps in several muscles.—Wandering, sharp pains in legs and feet; numbness of legs and feet with falling on attempting to stand.—Her legs were twitched up and she begged that they might be held, as she could not keep them quiet; it felt as if there were worms in them.—Icy coldness of l. sole as if standing on oil-cloth.

24. Generalities.—*Sudden* attacks of fainting.—Numb feeling all over.—Restlessness.—Convulsions.

25. Skin.—Skin deathly pale.—Purple spots on body.—Skin lost its elasticity.—Eruption like zoster, but without pain.—Itching: constant; violent; all over; nose, neck, loins, inside thighs.

26. Sleep.—Yawning.—Heaviness; drowsiness.—Prolonged deep sleep.—Half waking, half stupid condition, with perfect ability to think of different things though at the same time busy with confused fantasies; during this slumber limbs stiff and immovable, could only be moved by very great exertion of the will.—Heavy sleep with red cheeks.—Sleepless.—Restless sleep with frequent startings.—Sleep restless with headache, fever, and itching of skin.—Dreams: pleasant; frightful.

27. Fever.—Chills and rigors.—Icy coldness; general; of extremities; of l. sole.—Heat: burning; itching; cheeks hot and flushed.—Sweat: profuse; cold, clammy; viscid; colliquative.

Moschus.

Moschus moschiferus. Musk Deer. N. O. Mammalia. Trituration of inspissated secretion contained in preputial follicles.

Clinical.—Angina pectoris. *Catalepsy. Croup*. Diabetes. Dyspnśa. Epilepsy. *Fainting. Heart, failure of*. Herpes, mercurial and venereal. *Hiccough*. Hypochondriasis. *Hysteria. Hystero-epilepsy*. Impotence. Laryngismus. Lungs, paralysis of. Pregnancy, complaints of. Rage, fits of. *Stings*. Typhoid. Vertigo. Whooping-cough.

Characteristics.—The well-known power of Musk—the perfume—to produce fainting in some by the mere smelling of it, gives the chief keynote for its use in homśopathy: Faints easily; faints dead away from the least excitement; scolds and rages till she falls unconscious globus hystericus ending in unconsciousness; faints while eating during menses; faints from heart disease. All complaints which have easy fainting as a leading accompaniment may want *Mosch. Coldness* is another keynote. "In nervous or spasmodic complaints where the patient feels very cold: in epileptic fits where there is rigor or chilliness, or shuddering as though the patient was very cold" (H. N. G). The coldness may be general or it may affect single parts as one cheek or one foot. Pallor accompanies it. Sensation as if cool wind blowing on parts. Coldness in tibić. Allied to the chill is another feature in *Mosch.—tension*: tension in muscles, in skin, in mind. Tension in back or before menses; tension in limbs, they feel too short. Pressure outward, in heart. Spasms and twitches. Subsultus tendinum of fevers. Laryngeal spasm. Spasm of chest; of heart, general convulsions. Sexual desire is much excited in both sexes, even in the aged. Diabetes with impotence has been cured by *Mosch*., which has excessive thirst and other symptoms of diabetes. *Mosch*. is *suited to* spoiled, sensitive natures and hysterical women and men. Among the *peculiar sensations* are: As if falling from a height. As of being turned about so rapidly he perceived the current of air produced by the motion. As if cold, wet poultices on head. Headache as if from a heavy weight. As if a cord were frequently drawn and tightened so as to cut head in two. As if a nail pressed on occiput, the point piercing the brain. Rushing in ears as from strong wind or from the wing of a bird. As if facial muscles too short. Movement of lower jaw as if chewing. As if everything in abdomen constricted. Part lain on feels dislocated or sprained. As if larynx closed on breath. As if cold air blowing on him. There is < from pressure. Motion <; must lie down, and lie still. Vertigo < stooping; > on rising. Burning heat in bed. Getting warm > tension in head. Sitting in a room < tension in head; = headache and nausea; = pain in occiput. > In open air. Becoming cold < tension in back of head; = cramps; cramp-like and suffocating constriction of chest. Wants to uncover. < After coitus (vomiting). < After a meal; during a meal. < On side lain on.

Relations.—*Antidoted by:* Camph. (unconsciousness and coldness), Coff. *Antidote to:* Therid. (headaches). *Compare:* In neuralgic pains and functional diseases from taking cold, Amm., Ign., Mag. m., Valer. One hand cold, the other hot, Chi., Dig., Pul., Ip. Nausea at sight of food, Colch., Lyc., Phos. ac., Saba, Spi. (at *smell* of food, Colch., Eup. perfol.). < After coitus, K. ca. Pain before menses > by flow, Lach. (Mosch. has drawing pulling at beginning of menses ceasing with flow; Zinc. has burning in left ovary ceasing with flow.) Hysteria, Plat. Scolding, Pallad. (but Mosch. keeps it up till falls unconscious), Therid. Faints easily, Ign. Non-reaction from irritable weakness, Ambr., Agar., Asaf., Camph., Cast., Chi., Cocc., Coff., Cypr., Scutel., Tarent., Val., Zn. [Castor. has pains > by pressure, Nux m. error of perception, drowsy, faints, tympany. Val. nerves irritated, can't keep still, > moving, taste tallowy, slimy. Asaf. reversed peristalsis; rancid eructations.

Mag. m. faints at dinner, > eructations; headache > pressure and wrapping up; palpitation > moving; crumbling stools.]

Causation.—Chill.

SYMPTOMS.

1. Mind.—Excitement as from alcohol.—Great absence of mind, sometimes with confused speech.—Preoccupation, during which the patient talks to himself, and gesticulates, as if bereft of reason.—Bustling activity, with weakness, so that everything falls from hands.—Fretful mind.—Cries one moment, uncontrollable laughter the next.—Complaints and lamentations on account of excessive sufferings, with inability to indicate the part affected; when questioned, patient complains still more urgently, but without saying where he suffers.—Apprehension of death, and excessive timidity about dying.—Hypochondriacal anxiety, sometimes with palpitation of heart.—Exceedingly quarrelsome humour and great irascibility, with passion, proceeding even to fury.—Very violent anger, raves and scolds till mouth dry, lips blue, eyes staring, face deathly pale, and she falls unconscious.—Loss of memory.

2. Head.—Vertigo and wavering before eyes, on least movement of head or eyelids.—Vertigo < stooping, > rising.—Vertigo, even to loss of consciousness, or with fainting.—Vertigo, with sensation of falling.—Vertigo, with nausea and vomiting, want to lie down, and desire for coffee.—Dizziness, as from intoxication.—Headache, with nausea and vomiting, which compels lying down.—Heaviness in head.—Compressive and stunning headache, esp. just above root of nose; with nausea in evening, > moving head, and in room, > in open air.—Cramp-like and tensive drawing in head, and esp. in occiput, extending nearly to nape of neck; with nausea, < in evening, when sitting in room, and when becoming cold, > in open air, and when getting warm.—Congestion in head.—Congestion of blood to head, heaviness of head.—Aching and boring pain in occiput, as if a nail were driven into brain; < sitting in a room.

3. Eyes.—Eyes dull, with pressive pain in canthi.—Lachrymation.—Eyes fixed, sparkling, with a sort of dizziness and absence of mind.—Sudden obscuration of eyes.—Eyes turned upwards, fixed and glistening.—Pressing, itching and pimples on eyes.—Small red pimples on upper eyelids.—Itching in canthi.

4. Ears.—Eruptions on ears, with burning pain after being scratched.—Crepitation and cracking in ears.—Roaring before ears.—Detonation in (r.) ear like report of a cannon, accompanied with discharge of a few drops of blood.—Singing tinnitus.—(Noise in ears for four years, like a shrieking steam-engine, stops and changes its character; dates from parturition and occurs at menstrual period.—R. T. C.).—Hardness of hearing.—Discharge of cerumen from ears.

5. Nose.—Epistaxis.—Tingling in extremity of nose, as if from insects.

6. Face.—Heat in face, sometimes without redness, and with eyes dull.—Heat in one (l.) cheek, without redness, while the other (r.) is red without heat.—Pale face, with perspiration.—Movement of lower jaw, as if he were chewing.—Earthy pale complexion.—Tension in muscles of face, as if they were too short.

8. Mouth.—Desquamation of lips.—Great dryness in mouth.

11. Stomach.—Putrid taste of food.—Great desire for beer or brandy.—Thirst.—Aversion to food.—Faints while eating.—Spasmodic hiccough.—Violent eructations, sometimes with nausea.—Sudden attacks of nausea; at sight or thought of food.—Nausea, which mounts from epigastrium, with retraction of navel, and cramp-like pains.—Violent vomiting, esp. in morning, and often accompanied by pain in stomach and chest, and distension of epigastrium.—Aching in stomach.—Sensation of fulness and obstruction in region of stomach and epigastrium, sometimes with uneasiness, < after a moderate meal.—Smarting, burning sensation of excoriation, in region of stomach, after a meal.

12. Abdomen.—Hysterical abdominal spasms.—Attacks of painful contraction in umbilical region, with suspended respiration.—Sensation of tension in abdomen, as if clothes were too tight, accompanied by an anxiety which neither permits attention to any kind of labour, nor continuance in one place, but compels constant running from side to side.—Incarceration of flatus.

13. Stool and Anus.—Constipation, esp. after taking coffee.—Stools soft, smell sweetish.—Diarrhśa (involuntary), esp. at night, and sometimes during sleep.—Diarrhśa, with violent cuttings.—The loose evacuations are always mixed with fćcal matter.—Fćces of the colour of sepia.—Urgent and ineffectual want to evacuate.—Stitches in the anus, extending to the bladder.

14. Urinary Organs.—Copious watery urine.

15. Male Sexual Organs.—Great increase of sexual desire, sometimes with insupportable tickling in the parts, or tensive pains in penis.—A small retracted penis in an old man suddenly attains its former size; an impotent man became natural.—Impotence occasioned by a cold; preceding diabetes.—Painful involuntary pollutions without erection.—Erection, with burning pain in urethra.—Erections with desire to urinate.—Nausea and vomiting after coition.

16. Female Sexual Organs.—Violent sexual desire.—Menses: too early and too profuse, with drawing pain; with intolerable titillation in genitals; great disposition to faint.—Desire greatly excited (in an old woman).—Drawing, and sensation of bearing down towards hypogastrium and the genital organs during

menses.—Dysmenorrhśa with fainting.—Bearing down as if menses would appear.—During pregnancy she complains much, but of nothing in particular.

17, 18. Respiratory Organs and Chest.—A sudden sensation in upper part of larynx as if it closed upon the breath; as if caused by the vapour of sulphur.—Severe dry cough < morning, pain under l. breast on coughing.—Whooping-cough, last stage, with vertigo and constriction of chest and trachea.—Difficult respiration, and shortness of breath, with shootings in chest.—Cramp-like and suffocating constriction in chest, esp. after taking cold (or on going out into cold open air; or becoming cold).—Hysterical spasms of chest.—Cramps in chest, commencing sometimes with an inclination to cough, and afterwards aggravated so as to create despair.—Pressive pain in chest, to extent of obstructing respiration.—Gnawing in chest with sense of suffocation.—Paralysis of lungs, loud rattling of mucus; restlessness; syncope.—Shootings in chest and sides, sometimes with redness and bloatedness of face, dilated pupils, rough and dry tongue, and burning thirst.—The chest is acutely affected, and painful on all sides, with violent and dry cough.—Painful sensitiveness of chest under arms, esp. when pressed.—A pressive pain in l. breast as though the pain would force itself through the nipple.—Angina, tightness of chest, obliged to breathe forcibly.

19. Heart.—Anxious palpitation of heart.—Palpitation; dyspnśa; prostration; nervousness-says, "I shall die, I know I shall die.".—Sensation of trembling around heart, with constriction in whole chest.—Prostration followed by threatened collapse.

20. Neck and Back.—Violent drawings in nape; unable to turn head.—Pain in muscles of neck as if torn from upper and lower attachments.—Drawing pain from second cervical vertebra to r. shoulder.—Drawing pains in spine which extend into hip-joint, and there become so violent that he cries out.—Violent drawing pain in back, as if tissues drawn tense (as before menses).—Partly jerking, partly drawing pains in spine.—Acute pressure l. side of sacrum above coccyx, as if caused by a dull instrument.

22. Upper Limbs.—Drawing pains along the entire extent of the arm, and esp. in wrists, as from cramp.—Burning, with sensation of coldness, in last joints of fingers.—Swelling of hands, with shooting pains.—Convulsive movements of hands and fingers.

23. Lower Limbs.—Restlessness in legs, with paralytic weakness, which compels constant movement.—Trembling in legs, as after great fatigue, when seated.—Compressive pain in hollows of knees as though tendons too short.—Paralytic weakness in legs, on sitting down, after walking.—Sensation of coldness on tibia.—Burning pressure on tips of r. toes.—Jerking pains in nails of two first toes as if they would suppurate, could not bear anything to touch them, could only walk barefooted upon the heel.

24. Generalities.—Pricking in limbs, sometimes with pain in the part, affected.—Cramp-like pains in limbs.—Trembling and jerking, over whole body.—Weakness, which is felt more during repose than in movement.—Weakness to the extent of fainting, with nocturnal coldness of skin generally.—Fainting fits: esp. at night (in bed), in evening, or in open air, followed by headache; of hysterical persons.—Hypochondriacal complaints, originating in sexual system.—Wrenching and bruising pain, in side on which patient has been lying.—The sufferings are < when the body is chilled.—Great susceptibility to open air.—Pinching, shootings, and itching, which compels scratching, in different parts of body.—Tetanus.—Convulsions with cramps in chest.—Hysterical symptoms, even in men.—[We may think strongly of this remedy in nervous or spasmodic complaints where the patient feels very cold; in epileptic fits, for instance, where there is rigor or chilliness, or shuddering, as though the patient were very cold.—In complaints where the smell of musk affords great relief.—Where there is a sense of fulness in the inner parts.—Sensations: of coldness of the skin; great sensation of coldness in outer single parts; external chilliness with internal heat.—Pain where there is a sensation of oppression, or a very severe oppressive pain.—H. N. G.]

25. Skin.—Herpes with excessive burning.

26. Sleep.—Great drowsiness during day, with frequent and vehement yawning.—Coma.—At night, inability to lie long in same position; pain in part on which patient has lain, as of a dislocation, or a bruise.—Vivid dreams, in which the passions are strongly excited.—Dreams in which nothing succeeds.—Sleeplessness during whole night, from excitability of nervous system.—Sleeplessness of hysterical persons.

27. Fever.—Pulse full and accelerated, with ebullitions.—Weak pulse, faintings from anćmia.—Circulation of blood accelerated.—Frequent sensation as of cool air blowing on person, esp. on the parts which are uncovered.—External coldness with internal heat.—One cheek is pale and hot, the other is red and cold.—The one hand is burning hot and pale, the other is cold and red.—Sensation of coldness, mostly in spine, with drawing pains.—The air seems cold; patient seeks fireside.—Frequent slight shuddering, commencing at head and spreading over whole body.—Attacks of burning heat in evening; in bed frequently only on r. side, with restlessness and inclination to uncover.—Sweat every morning.—Clammy perspiration in morning, smelling of musk.

Dolichos.

Dolichos pruriens. Mucuna pruriens. Cowhage. Cow-itch. N. O. Leguminosæ. Trituration or tincture of whole pod.

Clinical.—Cough. Dentition. Gums, neuralgia of. Herpes zoster. Jaundice. *Jaundice, irritation of*. Jaw, pain in. Neuralgia. Pruritus. Sore throat.

Characteristics.—The most characteristic symptoms of *Dolichos* are—a general intense itching without eruption, < by scratching; and a pain in the throat on right side below angle of jaw as if a splinter were embedded vertically in it. It is mainly a right-side medicine, and hence its relation to the liver. It corresponds to exalted nervous sensibility, as in dentition. Gums intensely sensitive; seem to itch. Kraft has recorded (*N. A. J. H.*, 1890, p. 20) a striking cure with *Dolichos* 1,200 (Kent) of a woman who had symptoms of jaundice, white stools, and desperate itching, preventing sleep at night. There was, in addition, enormous distension of abdomen with continuous rattling of wind, intolerance of anything tight round neck or body; intense restlessness, unable to sit still a minute. The symptoms of *Dol*. are < at night. Warmth < itching at night. Cold water burns on the itching skin. Colic from getting feet wet.

Relations.—Aconite *antidotes* it, and in "cases of dentition with fever Aconite should be given before Dolichos to prevent convulsions" (Hering). Dolichos *follows* Rhus in herpes. *Compare:* Bell. (dentition); Arg. n., Hep., Nit. ac. (throat).

SYMPTOMS.

3. Eyes.—Eyes yellow.

8. Mouth.—Gums (upper) irritated, tumid, excessively painful; can scarcely take food or drink in the mouth.—Pain in the gums prevents sleep.—Soreness and tenderness of gums in teething children.—Gums swollen; neuralgic pains in them; < at night.

9. Throat.—Painful sensation of the throat below the angle of the lower jaw on r. side; it was as if a splinter three-quarters of an inch in length was imbedded vertically in that spot; pain < by swallowing.

12. Abdomen.—Bloated, swollen abdomen (with constipation).—Worms.—Swelling of the liver.

13. Stool.—Constipation during teething or pregnancy.—White stools.

17. Respiratory Organs.—Cough most troublesome about bed-time and for awhile after going to bed.—Cough, with wheezing and dyspnœa.

18. Chest.—Sharp pain through upper portion of both lungs.

24. Generalities.—Neuralgic pains following herpes zoster.—Twitching of the muscles.—Clonic spasms of the extremities, with loss of consciousness; eyes motionless; eyelids open.

25. Skin.—Intolerable itching all over the body; < at night, preventing sleep; scratching < the itching; there is nothing perceptible on the skin.—Jaundice, with itching of the skin.—Dry, tettery eruptions on arms and legs, resembling zona.—Pain under l. axilla for three days, when an herpetic eruption breaks out on axilla of affected side, spreading in rings forward to sternum and backward to spine with burning and smarting.

Mucuna Urens.

Mucuna urens. Horse-Eye. (Hot regions of Venezuela.) N. O. Leguminosć. The pulverised bean is macerated in five times its weight of alcohol.

Clinical.—Hćmorrhoidal discharges. Hćmorrhoids.

Characteristics.—*In New, Old, and Forgotten Remedies* (p. 220) is a letter by Delgado Palacios, of Venezuela, pointing out that the name *Dolichos*, given to Cowhage or Cow-itch in homśopathic literature (see Vol. I.), is not in accordance with latest botanical terminology. Cowhage is really a *Mucuna, Mucuna* and *Dolichos* being separate genera of the Leguminosć. They are so described in the *Treasury of Botany*. (Allen gives Linnćus as the authority for the name *Dolichos puriens*.) Palacios has used *M. urens*, with which, he says, modern botanists consider Cowhage identical; but he does not name his plant *M. Pruriens*, an alternative name of Cowhage, and as he says, further, that *M. urens* is a "special plant which grows in the calid regions of Venezuela," and that the beans are "very difficult to obtain," I think it best to give the plant a separate notice. This is the more desirable as Palacios uses an entirely different preparation. In *Dolichos* (I retain the name for the sake of distinction) the entire *pod* is used, the *stinging hairs* being the most important part of it. Palacios uses the pulverised *bean* for making his tincture. His chief use for it is in hćmorrhoids and complaints arising from the hćmorrhoidal diathesis. The keynote symptom is *burning*. There may or may not be bleeding. Affections of liver, uterus, bladder, testicles, when accompanied by hćmorrhoids, are likely to be cured by *M. urens*. He gives one drop daily of the Ř tincture, and sometimes makes an ointment of it as well. He

places more reliance in it than in *Hamamelis* and *Æscul. h*. There is no pathogenesis.

Murex.

Murex purpurea. Purple-fish. N. O. Gasteropoda. Trituration of desiccated juice. Trituration or tincture of fresh juice. (The fresh preparation is to be preferred, though the dried is the usual one.)

Clinical.—Abortion. Breasts, pains in. Cervix uteri, affections of. Climacteric sufferings. *Diabetes*. Dysmenorrhœa. Leucorrhœa. Menorrhagia. Metrorrhagia. Nymphomania. Pregnancy, affections of. *Uterus, prolapse of*.

Characteristics.—Petroz first proved the Purple-fish, *Murex*, which, like the Ink-fish, *Sepia*, produces the chief intensity of its action in the female generative sphere. They are chiefly distinguished in that *Murex* produces frantic sexual desire, and tends to have excessive hæmorrhage with large clots, *Sepia* having, in general, scanty flow. Another leading feature of *Murex* is: Consciousness of the womb; sore pain in uterus. In addition there are cutting pains confined to the cervix and os. The sinking, all-gone sensation is very well marked in both remedies, and also the feeling of bearing down and prolapse. *Murex* has a sensation of dryness and constriction in the womb. The pains are frequently diagonal and shoot from ovary to opposite breast. Another peculiar symptom of *Murex* is: A feeling as if something were pressing on a sore spot in the pelvis. This is analogous to a general sensitiveness to touch. The least contact with the parts causes violent sexual excitement. The cervix is sensitive to the examining finger. The slightest touch causes bleeding of excoriation on cervix. (May be thought of in cauliflower excrescences.) There is excessive secretion of urine, and frequent necessity to rise at night to urinate. This nightly polyuria, with the hungry craving of *Murex* and other symptoms, has led to its successful use in diabetes. *Murex is suited to:* the melancholic, or sanguine, lymphatic temperament; to climacteric sufferings. There is very great depression of spirits, a sort of deep hypochondriacal state. If there is leucorrhœa, the spirits are > when leucorrhœa is <, and *vice versâ*. Walking is difficult, all joints are weak, during pregnancy. > Putting head back. < By exertion. > Pressure and support. < Night. < After sleep. Must lie down from weakness, but lying down < all symptoms.

Relations.—*Compare:* Uterine congestion, cervix affected, Sep. (Sep. is passive; Murex feels disgust and despair at her sexual desires). Shooting pains in uterus, prolapse, melancholy, Aur. (Aur. has induration). Nocturnal polyuria, Kre. Sexual erethism, Lil. t., Plat., Orig. Dragging down, Bell. Prolapsus uteri, Æsc. h., Sec., Plat., Bell., Lil. t., Nux, Nux m., Pod., Pul., Sep. Consciousness of womb, Helon., Hdrfb. Climacteric, Lach., Sep., Sul. > Throwing head back, Seneg.

SYMPTOMS.

1. Mind.—Anxious, apprehensive, timorous; great sadness towards evening, with repugnance to conversation, and compression of ideas.—(She is happier when leucorrhœa is <, and *vice versâ*.).—Weakness of memory, with difficulty in finding words to express his thoughts.

2. Head.—Confusion in head, with unfitness for labour; sometimes with inclination to sleep, or dulness of head.—Heaviness in head, as in sultry weather; or else frequent, alternating from time to time with great clearness of thought.—Headache, in morning, on awakening, which disappears on rising.—Pain in occiput, sometimes very acute.—Pain in l. temple.—Aching pain in forehead, or in forehead and r. temple, cramp-like squeezing at back of head, requiring the hand to be placed upon it, or the head to be thrown back, which > the pain.

4. Ears.—Cramp-like squeezing behind ears.—Noise in ears, with aggravation of heaviness of head.

5. Nose.—Distressing coldness of nose all day.

6. Face.—Burning sensation of one cheek, r. in evening, l. in morning.

11. Stomach.—Hunger, sometimes in morning only, and unfelt during a meal.—Awful hunger and emptiness, even after a meal.—Tensive pain in r. hypochondrium.—Colic, sharp pain, as from a cutting blow in l. side of hypogastrium, which continues painful throughout evening.

13. Stool and Anus.—Difficult evacuations; constipation, during more than five days.—Pressure in anus, like painful lancinations.—Sensation of heavy weight pressing on rectum; swelling of hæmorrhoids.—During stool: bloody leucorrhœa; discharge of pure blood by vulva.

14. Urinary Organs.—Frequent want to urinate during day; at night, with emission of colourless urine.—Fetid urine, almost like valerian, with a white sediment, and discharge of a small quantity of mucus after urination.—Slight discharge of blood when making water.

16. Female Sexual Organs.—Extreme irritation of genital parts, with ardent sexual desire to a degree almost maniacal; slightest touch reawakens desire.—Sensation of dryness, and of constriction in uterus; pulsation; incisive pain, as if caused by cutting instruments.—Violent pains in r. side, crossing abdomen to l. breast.—Violent lancination in l. side, in evening.—Distinct feeling of womb.—Burning, shooting, and stitching pains in cervix.—Knife-thrusts in uterus as if os were cut.—Stitches on l. side of uterus from below upward.—Feeling as if something pressing on a sore spot in pelvis, r. side of uterus, going into abdomen

to thorax.—Violent bearing down with symptoms of prolapse, > by crossing legs.—Sensation of weight and of expansion in labia majora.—Sensation of weight in vagina during the abdominal pains.—Menstruation too profuse.—Hæmorrhages.—Expels large coagula.—During the profuse menstruation, sensation of constriction at uterus.—Leucorrhœa: serous; greenish; thick; becoming sanguineous; reappearance of sanguineous leucorrhœa while at stool.—Violent pains, acute lancinations in breasts.—During pregnancy: leucorrhœa; sensation of pelvic bones getting loose.

17. Respiratory Organs.—Voice changed, hoarse.—Cough: in morning while fasting; dry, hard, with oppression of chest.

18. Chest.—Wheezing in chest, when breathing, in evening.—Pain in chest, as if it had been bruised.—Lancinating and burning pains below false ribs on l. side, towards back.—Sensation as of a snake creeping over entire region of short ribs.

19. Heart and Pulse.—Palpitation of heart and throbbing of arteries.

20. Back.—Lumbago, sometimes burning, and with pain like excoriation.—On extending the body, esp. in bed, pain in hips and lumbar region.—Pains in pelvic region.—Sensation as if bones of pelvis getting loose.

22. Upper Limbs.—Pain in forearm, below elbow.—Heat in hands.

23. Lower Limbs.—Great weakness and fatigue in legs, which sometimes fail and compel patient to seat himself.—Intolerable creeping pain in r. hip.—In thighs: violent contusive pain; burning heat in forepart; acute pain, in forepart, on raising body, which renders contact with anything insupportable; sensation of throbbing in forepart of thighs.

24. Generalities.—Great fatigue; for several days symptoms more violent when seated than when walking; they cease while walking, and reappear on sitting down.

25. Skin.—Skin dry, as if about to crack.

26. Sleep.—Drowsiness, sometimes with sadness.—Urgent inclination to sleep, towards 9 p.m.—Sleep interrupted by pains, like those of catamenia.—Awakening with fright, with urgent want to make water, and abundant emission.—Distressing dreams, from which patient sometimes awakens with a start.

Muriaticum Acidum.

Hydrochloric acid. HCl. First dilutions with distilled water.

Clinical.—*Anus, prolapse of*. Chilblains. Chorea. Deafness (cerebral). *Diphtheria. Enteric fever*. Ephelis. *Feet, soles, pains in*. Gastric disorders. *Hæmorrhoids. Hemiopia*. Impotence. Measles. Mercurial ulceration. Mouth, aphthæ; psoriasis of tongue; ulcers. *Scarlatina*. Scurvy. Tendo Achillis, affections of. *Tongue, affections of*; psoriasis of. Typhus. Varices. Whooping-cough.

Characteristics.—The popular name of *Mur. ac*., "Spirit of Salt," describes at once its nature and origin. It is a colourless gas, with a pungent, suffocating odour, and acid taste, and it is manufactured from Salt (*Nat. m*.) by the action of sulphuric acid. It is freely soluble in water, and the saturated solution contains 43 per cent. of the gas. Teste, who did much to define the powers of *Mur. ac*., groups with it *Agn. cast*. and *Hyos*., and he considers its action corresponds perfectly to a typical case of typhus. Among the common features of the group he gives; Stupefying headache. Obscuration of sight and optical illusions. Whizzing noises in the ears and hardness of hearing. Nose-bleed and loss of smell. Rough, cracked lips, and foul breath. Scurvy of mouth. Paralysis of tongue. Loss of taste. Distended, sensitive abdomen, pricking, bruised pain in abdominal walls. Serous, fetid diarrhœa, not very painful. Involuntary stool. Throat pains. Paralysis of bladder. Excited sexual desire. Impotence. Hoarseness, spasmodic cough. Stitches about heart. Fever with stinging heat, frequent, small, intermittent pulse, earthy or livid skin. Like *Nit. ac., Mur. ac*. is a powerful antidote to *Merc*., and it meets conditions caused by *Mercury*, and also similar conditions otherwise arising. Like other disinfectants, it causes as well as remedies rapid decomposition of tissue, and dynamically cures low putrid conditions met with in disease. The distinctive features of *Mur. ac*. are: Muscular prostration from blood-poisoning going on to paralysis, finally of brain or heart. *Burning* is a great feature in its symptomatology, as its escharotic powers might suggest—ulcers (especially their margins), eruptions, piles, varices, stomach, and abdomen. It sours the excretions and makes them acrid. Offensive secretions, offensive breath and body-smell; and it is indicated in fevers of all kinds, exanthematous, typhoid, puerperal as well as diphtheria, when these symptoms with the mental and paretic state are present. The mucous membranes are dry, bleeding, cracked, and ulcerated. Sordes on teeth. Burning, and burning eruptions on lips. Piles like a bunch of grapes which look purple and *burn* when touched. Prolapse of rectum, whilst straining to pass water. Urination involuntary or difficult; there is straining and dribbling, and the straining causes the rectum to prolapse; it may also cause involuntary stool. This may be due to local conditions, or it may be a consequence of a low state of health. *Mur. ac*. not only corresponds to low febrile states it also meets many of their sequelæ. Deafness, otitis, and glandular swellings about the ears often require *Mur. ac*. Among the *peculiar sensations* of the remedy are: Hair, as if drawn upwards; as if

standing on end. Brain: as if loose; beaten or tom to pieces; brain clasped by a hand, and bruised and tom. Occiput as if filled with lead. Mouth as if glued up with insipid mucus. As if some obstruction must be pulled out of throat. Burning as if under skin of coccyx. As if place was jammed in in tendo-Achillis. Deadness and numbness in forehead, in fingers. The tongue is shrunken; and paralysed. The parched, shrunken tongue is an indication in typhoid or other fevers. [*Mur. ac*. has a marked action on the tongue. Cooper cured with it these cases: (*1*) Man, 52, whose sister had died of cancer, had a hard, deep, warty ulcer, size of a small bean on under surface of tongue, l. side, with much surrounding hardness and little discharge. (*2*) Tongue swollen, makes him talk thick, much ulcerated, especially r. side, is hard, with swelling followed by lupoid ulcer, on corresponding side of nose; had been going on ten months.] Tendency "to slide down to the foot of the bed" was noted by Hahnemann and has been amply confirmed. It indicates an extremely low vital condition. *Mur. ac*. is *suited* to persons of black hair and dark eyes. The skin is much affected, and is sensitive to the sun's rays─eczema solare and freckles. Black pocks. Blind boils frothy when touched. The symptoms are: < By touch. The itching of anus and scrotum is not > by scratching. Warmth >; cold washing, cold drinks <. Cold wind and open air > headache. > Uncovering (during fever). < Evening and night. Rest < most symptoms. Lying on r. side < vertigo. Motion < vertigo; > tearing pains. < After sleep. < After eating (diarrhœa). > After drinking.

Relations.─*Antidoted by:* Carbonates of alkalies and earths (poisoning cases); to small doses: Camph., Bry. (Teste says the surest antidote is Ipec.). *It antidotes:* Merc., Opium. It "cures the muscular weakness following the excessive use of Opium" (Hering). *It follows well:* Bry., Merc., Rhus. *Compare:* In typhoid states, Bry. (Bry. has < motion), Rhus (restlessness, > by motion; Rhus has less debility), Phos. ac. (Phos. ac. has less prostration, is apathetic, indifferent, Mur. ac. taciturn), Apis (Apis has blisters on tongue, and it catches teeth when attempt is made to protrude it), Ars. (Ars. has scanty evacuations), Bapt. (Bapt., has besotted look, tongue red on edges), Bell. (Bell. more active, hyperæmia), K. permang. (throat symptoms, œdematous uvula), Sul. ac. (Sul. ac. has not > uncovering), Gels. (with Gels. the muscular prostration is *expressed*, with Mur. ac. it is unconscious), Nit. ac. (thin, excoriating discharge from nose, intermittent pulse and loss of appetite), Arum tri. Piles during menses, Amm. c., Collins., Graph., Pho., Pul., Sul. Piles sensitive, Bell., Caust. Early morning hunger, Ant. c., Calc., Saba., Lyc. Cannot bear the thought or sight of meat, Nit. ac. Irritable, disposed to anger and chagrin, Nux. Cracked lips; sore mouth; < after sleep, Nat. m.; coryza, Chlorum. Tendo-Achillis, affection of, Val. Mur. ac. is a constituent of the gastric juice, and must therefore be considered as allied to the Sarcodes and proximate principle of the tissues, *e.g*., Cholesterin.

Causation.─Sun.

SYMPTOMS.

1. Mind.—Sadness.—Taciturnity and reserve, anxiety, apprehension and peevishness.—Indecision and inquietude.—Ideas respecting recent events crowd upon the mind during labour.—Disposition to be angry and to give way to passion.—Unconsciousness.

2. Head.—Turning vertigo; < moving eyes; with staggering gait.—Headache provoked by walking in open air, and esp. by a sharp wind.—Headache, < by rising up in bed, and by moving the eyes > by moving the body), disappearing on taking exercise.—Heaviness, esp. in occiput, with cloudiness of eyes, greatly < by looking intently at an object.—Jerking, beating, tearing from l. half of occiput to forehead; soon same on r.—(Pressure on vertex, dimness of sight, faint feeling coming irregularly; sickish after meals, bad taste and fatigue on waking; thinks some one is walking behind, and cannot stir out alone.).—Heavy feeling in occiput, with drawing stitches, < r. side close to nape, with swollen gland tender to touch; intoxicated feeling at same time.—Headache as if brain were bruised, torn, or demolished.—Feeling as if brain were loose.—Tearing and stitches in head, coming on in periodical shocks.—Feeling of failing asleep and deadness.—Tearing in r. parietal bone.—Shocks, tearings, or shootings in head.

3. Eyes.—Itching smarting in canthi.—Itching in eyes.—Stitches out of eyes.—Shootings across eyes.—Swelling and redness of eyelids.—Vertical hemiopia.—(Neuralgia over l. eye, hemiopia and double vision, which is always followed by headache, numbness down r. arm and aphasia.—R. T. C.)

4. Ears.—Otalgia (with pressive pain), like spasmodic and acute pullings.—Pulsation in ears.—Insensibility of auditory tube.—Scabious eruptions in ears.—Hardness of hearing and deafness.—Acuteness of hearing, with sensibility to noise.—Ticking of watch is heard better than the voice (cerebral deafness).—Tinkling, buzzing, and whistling before the ears.

5. Nose.—Ulceration of nostrils.—Sore nostrils with stinging pain.—Obstruction of nose.—Coryza, with thick yellow, or serous and corrosive mucus.—Continuous bleeding from nose.—Coryza, with itching, tickling, and sneezing.

6. Face.—Heat in face, with burning redness of cheeks, when walking in open air, without thirst.—Ephelis.—Eruption of scabious pimples on face, forehead, and temples; whole face red; every summer.—Furuncules on temple.—Burning in lips.—Puffiness of lower lip, it feels heavy and burns.—Eruptions on lips, sometimes covered with scabs.

7. Teeth.—Odontalgia, with pulsative pain, < by cold drinks, > by heat.—Toothache, with sensation of pressing asunder.—Tingling in teeth.—Scorbutic gums, swollen, easily bleeding and ulcerating.

8. Mouth.—Dryness of mouth, with paralysis of tongue.—Profuse accumulation of saliva.—Heaviness of tongue, when speaking, as if it were made of lead, which prevents him from talking.—Deep-seated ulcers (with black base), vesicles, or pustules on tongue.—Small tumours r. side of tongue.—The tongue becomes sore and bluish.—The tongue dwindles (atrophy of tongue).—(Psoriasis of tongue.).—Mucous lining of the lips, and mouth inflamed, red, raw, painful, dotted with whitish points; fetid breath; stomatitis.—Parched tongue.

9. Throat.—Sore throat, with pain as from excoriation, rawness, and smarting in throat and palate.—Dry throat with burning in chest.—Mucous lining of throat and fauces deep dark red, swollen and burning; covered with greyish-white diphtheritic-like deposits.—Swelling of uvula; of tonsils.—Much saliva that must be swallowed.—Attempting to swallow produces violent spasms and choking.

10. Appetite.—Taste of rancid grease in throat.—Acrid and putrid taste (like rotten eggs, with ptyalism) in throat.—All food has a sweetish taste, and esp. beer, which is disliked.—Bulimy and excessive thirst.—Dislike to meat.—Appetite lost.

11. Stomach.—Risings, putrid or bitter.—Hiccough (before and after dinner).—Vomiting of food.—Vomiting of bile, at night, with nausea and eructations.—Uneasiness in stomach, as indicating serious illness.—Sensation of emptiness in the stomach and œsophagus, not > by eating.—Contractive pain in stomach, with sensation as if it were retracted.—Pressive tension and cramp-like pain in hypochondria.

12. Abdomen.—Uneasiness in abdomen, as in serious illness.—Fulness and inflation of the abdomen; from small quantities of food.—Cramp-like pains in abdomen, with cuttings and pinchings, extending from umbilical region into sides, accompanied by borborygmi.—Sensation of emptiness in abdomen.—Lancination in groins.

13. Stool and Anus.—Difficult evacuations of fæces, as from inactivity of rectum.—Fæces of too small a size.—Diarrhœa, with smarting and burning in rectum and anus.—Stercoral diarrhœa.—Involuntary evacuation of liquid and serous fæces when urinating.—Discharge of blood during stools.—Prolapsus recti, when urinating.—Itching in anus.—Hæmorrhoids protruding like a bunch of grapes.—Swollen and bluish hæmorrhoidal excrescences, with burning pain as from excoriation; < by touch.—Bleeding hæmorrhoids.

14. Urinary Organs.—Tenesmus of bladder.—Frequent want to urinate, with abundant emission.—Immoderate emission of aqueous urine.—Slow emission of urine.—Weakness of bladder.—Involuntary discharge of urine.—Relaxation of bladder, and of neck of bladder.

15. Male Sexual Organs.—Excoriation of prepuce.—Soreness in the margin of prepuce.—Itching of scrotum not > by scratching.—Suppression of sexual desire.—Feeling of weakness in genital organs, penis relaxed.—Impotence.

16. Female Sexual Organs.—Sensation of a bearing down towards genital organs, as if preparatory to catamenia.—During menses sad and taciturn.—Ulcers in genitals, with putrid discharge, much sensitiveness and general weakness.—Cannot bear the least touch even of sheets on genitals.—Too early catamenia, and too profuse.

17. Respiratory Organs.—Hoarseness, with sore feeling in chest.—Chronic hoarseness.—Violent and sobbing cough, followed by a gurgling in bottom of chest.—Breathing deep and groaning; moaning.

18. Chest.—Deep respiration with groans.—Lancinating pains in chest, during a violent movement, and during inspiration.—Tensive pain in sternum.—Incisive shocks in chest, with dull pressure on posterior part of chest, and with oppression.—Oppression across chest (evening).

19. Heart and Pulse.—Stitches in chest, and on heart, when taking a long breath and on violent motion.—Pulse rapid and very feeble; and small.—Shootings in region of heart.—Shock in heart at night, so violent that it is felt in face.

20. Back.—Aching pain in back, as from having been bent double for a long time, or from a strain.—Shootings in shoulder-blades.—Furunculi in back.

22. Upper Limbs.—Paralytic weakness, and wrenching pain in shoulder.—Heaviness of arms, esp. the forearms.—Tearing, aching, and pulling in arms.—Drawing tension in elbow-joint.—Cramp-like drawings and heaviness in forearm.—Incisive tearing in forearm, hands, and fingers.—Voluptuous itching and tickling, and lancinating, in palms.—Scabby eruption on back of hand, and upper part of fingers.—Cramp-like pain in fleshy part of thumb when writing.—Swelling of extremity of fingers, with burning.—Nocturnal torpor and paleness of fingers, which are as if dead.

23. Lower Limbs.—Tearing and cramp-like pulling in thighs.—Wavering gait from weakness of the thighs.—Itching, tettery spots on thighs.—Swelling of knees.—Drawing tension in calf of leg, and in tendo-Achillis, when walking.—Lancinations in tendo-Achillis, day and night, which hinder walking and sleeping.—Putrid, painful ulcers in legs, with burning in their circumference.—Coldness of feet.—Swelling and redness of extremity of toes, with burning.

24. Generalities.—[This remedy is often called for in cases where the patient cannot urinate without having the bowels moved at the same time; in typhus or low

grades of fever where we find this symptom with great prostration; patient may think he is going to pass a little wind, when urine will come away also.—Hæmorrhoids very tender to the touch, so much so that he can scarcely bear to use paper after an evacuation; after confinement, hæmorrhoids protrude so that the pressure of a sheet can scarcely be borne.—In low types of fever the patient often slips down toward the foot of the bed, and must be lifted up every little while.—Cannot bear the sight or thought of meat, it is so distasteful.—Urine too copious, both night and day.—Affections in general, of any kind, appearing in the tendo-Achillis; the soles of the feet.—Scurvy, particularly if the parts affected are very sore and tender to the touch.—Itching of the skin > by scratching.—Putrid ulcers.—H. N. G.].—Tearing and incisive (rheumatic) pains in limbs, during repose, > during movement.—Restlessness; frequent changing of position.—Contusive pains in all joints.—Painful sensibility of periosteum of bones, as in intermittent fever.—Coldness of extremities.—Dropsical swellings.—Indolence and dread of movement, with inclination to remain seated.—Excessive depression; on sitting down, the eyelids close; the lower jaw hangs down, he slides down in bed.—Tottering gait, from weakness of thighs and knees.—Great sensitiveness to damp weather.—Paralysis of tongue and sphincter ani.

25. Skin.—Itching, voluptuous and lancinating tickling, with want to scratch.—Scabious eruptions, which itch in heat of bed.—Furunculi, with shooting pain when they are touched.—Putrid and painful ulcers, with burning at margins.—Fetid odour of ulcers; also they are covered with a scurf.—Black pustules.

26. Sleep.—Great drowsiness during day, which disappears on taking exercise.—Sleeplessness before midnight.—Before midnight, continued snoring, groaning, tossing, talking, and tendency to slide downwards in bed.—Frequent and early waking, caused by a coldness that is felt in bed.—Anxious dreams.

27. Fever.—Predominant sensation of cold.—Shivering, with yawning and stretching, without thirst, and not followed by heat.—Chill in the evening, with coldness in back, with external warmth and burning in face.—Shuddering over whole body, with hot cheeks and cold hands.—Burning heat, esp. in palms and soles.—Night and morning sweat.—In evening, the perspiration is first cold on the feet.—Typhus fever, lower jaw hangs down, atrophy of tongue, involuntary watery stools when passing urine, great debility, with sliding down in bed, loud moaning.—Heat without thirst, with agitation, and desire to throw off clothes at night.—Pulse weak and slow.—Intermittent pulse, every third beat.—Nocturnal sweat, on going to sleep in evening, or before midnight, esp. on head and back.

Musa.

Musa sapientum. Banana. N. O. Palmaceæ. Tincture of the flowers.

Clinical.—Constipation. Cystitis. Hæmorrhoids (bleeding).

Characteristics.—Jenner (*M. H. R.*, ix. 549) proved the tincture of Banana flowers and produced costiveness and sensation of fulness about anus, in a person of regular habits; and he cured with it a bad case of bleeding hæmorrhoids. It also produced pain in the bladder and passage of mucus with urine. Crichton Campbell commends bananas baked in their skins as an ideal food, or even a "cure," for brain workers, nervous persons, and anæmics (*H. W.*, xxxii. 478). A syrup made with the juice of bananas extracted by heat is commended as a remedy in chronic bronchitis with insufficient expectoration and marked dyspnœa.

SYMPTOMS.

2. Head.—Dull, heavy, frontal headache.

8, 9. Mouth and Throat.—Dry, rough, and extremely astringent taste and feeling in mouth, tongue, and fauces, but afterwards an increase of saliva.

11, 12. Stomach and Abdomen.—Rumbling in stomach and bowels with expulsion of flatus.

13. Stool and Anus.—Costiveness (in a person of very regular habits) with feeling of fulness about anus.—(Improvement and ultimate cure of profusely bleeding hæmorrhoids; in a case which had resisted every kind of treatment,)

14. Urinary Organs.—Discharge of large quantities of mucus with the urine, with dull, aching pain in bladder region.

Mygale.

Mygale Lasiodora Cubana. A large black Cuban Spider. N. O. Arachnida. Tincture of living spider.

Clinical.—Chordee. Chorea. Gonorrhœa.

Characteristics.—The pathogenetic data of *Mygale* consist of a proving by a young lady and the effect of a bite on a man. In the latter case, inflammation ensued which spread along the lymphatics, violet and afterwards green discoloration; chill followed by fever, dry mouth, and great thirst, trembling,

dyspnœa, despondency, and fear of death. The prover developed sadness; dry mouth; nausea with great palpitation, dim sight, and great general weakness; increased flow of urine, hot, scalding, with stinging in urethra. This last symptom has led to the successful use of *Myg*. in gonorrhœa, chordee, and syphilis. The "trembling" observed in the man suggests its use in nervous cases, but the sphere of *Myg*. in chorea has been developed from the clinical side. In the cases cured with it, twitching and contractions of facial muscles have been very prominent; convulsive movements of head to right side; twitching of one side of body, mostly right. The twitchings may be so violent as to prevent walking. Limbs are quiet during sleep, movements < in morning. Nausea with strong palpitation should be an indication. Symptoms < by eating. < Sitting (legs in constant motion).

Relations.—*Compare:* In chorea, Aga., Act. r., Ign., Stram., Ziz. Tarent., Ant. c.

SYMPTOMS.

1. Mind.—Delirious, talked about his business and was restless all night.—Sad; despondent with anxious expression.—Fear of death.

2. Head.—Frontal headache; dull.—Head often jerked to one side (r.).

3. Eyes.—Nausea with dimness of sight; weakness; palpitation.

4. Ears.—Acute aching in r. ear.

6. Face.—Constant twitching of muscles of face.—Face flushed.

8. Mouth.—Grating of teeth at night.—Tongue dry and parched; dry and brown-coated.

11. Stomach.—Aversion to food; no appetite whatever for dinner, took nothing till tea-time, then only a cup of tea and a small piece of bread; > after eating.—Excessive thirst.—Nausea with strong palpitation, dim sight.

14. Urinary Organs.—Urine: increased; stinging in urethra; burning hot, scalding.

15. Male Sexual Organs.—Chordee.—Protracted gonorrhœa.—Syphilis.

17. Respiratory Organs.—Difficult breathing.—Words jerked out when effort is made to talk.

19. Heart.—Strong palpitation, accompanying nausea and dimness of sight and general weakness.—Pulse 130.

20. Back.—Pain in back extending around to front.

21. Limbs.—Twitching and jerking of muscles of one arm and leg, usually r.—Convulsive, uncontrollable movements of arms and legs.

23. Lower Limbs.—Intense redness in streaks in course of lymphatics, from calf up to body, with great anxiety, twitching of limbs.—Local inflammation extensive, from foot to knee, leaving a large violet spot which changed in a few hours to green.

26. Sleep.—Restless all night with ridiculous dreams.

27. Fever.—Severe chill lasting thirty minutes; then fever with excessive thirst and trembling of limbs.

Myosotis.

Myosotis symphytifolia. "Black-root." (Marshy places in Indiana. N. O. Boraginaceæ. Tincture of fresh plant.

Clinical.—Bronchitis, chronic. Cough. Lungs, affections of.

Characteristics.—Hale has collected some clinical experiences with Myosotis (which differs from *M. Palustris* in having large Symphytum-like leaves), showing it to have a strong affinity for the respiratory organs. The left lower lung was most affected. Copious expectoration, emaciation, night-sweat. During the cough there was gagging or vomiting; cough < during or immediately after eating; pain in left side (lower lung) not < in any position, but < while coughing and sensitive to percussion. Profuse sweat day and night.

Relations.—*Compare:* Symphytum (botan.). Stann. (lung disease).

Myrica Cerifera.

Myrica cerifera. Wax Myrtle. Bayberry. Candleberry. N. O. Myricaceæ. Tincture of fresh bark of root.

Clinical.—Catarrh. Conjunctivitis. Heart, affections of. Jaundice. Leucorrhœa. Liver, affections of. Pharynx, affections of. Tendo-Achillis, pain in. Throat, sore. Urticaria.

Characteristics.—According to Hale, though *Myrica* was known to older botanic practitioners, it was Samuel Thomson, of *Lobelia* fame, who established its

reputation. Thomson had a crude pathology of his own which served him to some extent. One of his ideas was that the digestive tract was liable to become fouled with a copious mucous lining. This he called "canker"; and he stated of *Myrica* that it "has the power of disengaging the thick, viscid secretions of the mucous membrane of the stomach." *Myrica*, says Hale, formed the chief ingredient in Thomson's famous "Composition powder." The provings confirm Thomson's observation, in that *Myrica* produced abundant secretion of tenacious mucus in the throat, difficult to detach. This may be considered one of the keynotes of the remedy. Profuse catarrhal discharges of old standing, of all kinds may require *Myrica*, especially if offensive, tenacious, and difficult to detach. Leucorrhœa, bronchorrhœa, intestinal catarrh, pharyngeal catarrh, stomatitis. Hale says as a local application in diphtheria it rivals *Guaiacum*. Perhaps allied to the catarrhal state of the intestinal tract is the liver disorder setup by the drug. These are the distinctive features: Aching pain in liver, fulness, drowsiness, despondency, dull, heavy headache, < in morning, dirty, dingy, yellowish white of eyes, lids abnormally red, weakness, ash-coloured stools, slow pulse, pains under scapulæ (< left), dirty yellow tongue, muscular soreness, aching in limbs, jaundice of all degrees. There is also the nasal obstruction, post-nasal catarrh which often accompanies disordered liver. It is in cases attended with jaundice that *Myrica* has had the greatest success, cases of black jaundice having been cured with it, and it meets the itching of jaundice as well. Urticaria is not unfrequently found associated with liver affections, and Douglass cured with it this case (*Clinique*, xxi. 108, quoting *Hahn. Advocate*): Miss O., 18, complained of itching and stinging on face, neck, right forearm and leg. Sensation as if insects crawling on face, must brush them away. Skin yellowish. Tongue, thickly coated yellow. Felt sick all over and rather irritable. *Myrica* 6x every two hours improved at once and cured in ten days. Burnett has used *Myrica* with excellent effect in cancerous and other grave diseases of the liver, especially when attended with jaundice. He has given material doses. It has generally been given in the lower attenuations. *Myrica* has also an action on the heart, and is thus closely related to *Digitalis* in several points. There are sharp pains about the heart with increased, audible pulsations, but slow pulse. The heart pains are < lying on left side. Pains in left chest and under scapulæ (especially left), and pain in middle lobe of right lung. The symptoms are: < By warmth of bed; < after sleep; < in morning; by motion. > After breakfast; > in open air.

Relations.—*Compare:* In tenacious secretions, K. bi., Hydrast. Jaundice, light-coloured stools, slow pulse, Dig. (Dig. has pulse *irregular* as well as slow; the tongue of Dig. has not the thick, tenacious coat of Myrica). Liver, Berb., Chel., Chim., Pod., Hep., Merc., Cholest., Hydrast. Urticaria and liver disorder, Ast. fl. Sore all over, Bapt. Leucorrhœa, Hydrast. Pain through left chest to scapula, Therid., Illic., Pix.

SYMPTOMS.

1. Mind.—Great despondency; dejected; irritable.—Cannot concentrate mind on any subject.—Dull, drowsy state.—Exhilaration, then depression and pressure about head; exhilaration, then excitement preventing sleep, with restlessness.

2. Head.—Vertigo, with dulness and drowsiness, (during lectures) with rush of blood to head and face, on stooping; with nausea.—Awakens with pain in forehead, temples, and small of back, > in open air.—Dull, heavy feeling over and in eyes.—Throbbing: of arteries in the head; and in face with fulness; in superficial veins on waking.—Empty feeling in head.

3. Eyes.—Eyes congested and yellow.—Eyes feel dull and heavy; also on awaking.—Eyes burn and tire easily when reading; lids heavy.—Dirty, dingy, yellowish sclerotics; lids abnormally red.—Smarting in l. conjunctiva, then pain in r. ball.—Smarting in eyes, feeling of sand in them, difficulty in closing lids.—Quivering sensation in l. upper lid.—Pain in r. brow.

4. Ears.—Pain in back of l. ear.—Ringing in ears; in l.

5. Nose.—Pain in nose; in l. side of nose, shifting to l. axilla, where it was sharp and lancinating.—Coryza.—Post-nasal catarrh.

6. Face.—Yellow colour of face and neck; jaundice.—Fulness, with heat and throbbing, esp. after being out in open air.—Pressure in malar bones.—Sharp, darting pain in r. articulation of jaw.

8. Mouth.—Breath offensive.—Sweetish taste about palate.—Thick, yellowish, dark, dry, and crusty coating on tongue, rendering it almost immovable.—Tongue dirty yellow.—Foul, bad taste; cannot eat because of it; bitter, nauseous taste.—Adhesive coating over, buccal membrane; dry, scaly crusts on roof of mouth, that water scarcely moistens or dissolves.—Mouth dry; thirst; water relieves only partially for awhile.

9. Throat.—Semi-lancinating pain near r. tonsil in afternoon.—Excruciating feeling in posterior nares, as from a fresh cold.—Constriction; causing constant need to swallow.—Swollen feeling inside in morning.—Stringy mucus in throat; detached with difficulty.—Throat and nasal organs filled with an offensive, tenacious mucus, detached with difficulty.—Pharynx dry; sore, as if it would crack, impeding and finally obstructing, deglutition.—Slimy, glutinous frothy mucus in pharynx; even gargling scarcely detaches it; causes disgusting taste, prevents eating.

11. Stomach.—Hunger, yet full feeling, as after a hasty meal.—Unnatural hunger; then indigestion; then jaundice.—Loss of appetite; loathing of food, but desire for acids.—Fulness and pressure, or weak, sinking feeling in stomach.—Acidity at 8.30

a.m.—Burning with bitter, nauseous sensation in fauces, the burning changing into griping from l. epigastrium in a straight line to l. of navel.—Heartburn, with increase of saliva, which had to be expectorated frequently.

12. Abdomen.—Dull pain in region of liver; fulness; drowsiness; debility; mushy, clay-coloured stools; jaundice.—Griping pains; rumbling; urging to stool; passing only flatus.—Weak, faint feeling, as if diarrhœa would ensue.—Offensive flatus when walking.—Pain in umbilical region: after breakfast; in a spot in umbilical region an hour after dinner, with accumulation of flatus; heavy.—Rumbling above umbilicus.—Rumbling in umbilical region, with griping.

13. Stool.—Passing of much offensive flatus.—Loose stools, mushy, with tenesmus and cramp-like sensation in umbilical region.—Stools light yellow, mushy, clay-coloured; jaundice.—Constipation.

14. Urinary Organs.—Urine beer-coloured, with yellowish froth; pinkish-brown sediment, scanty.—Micturition difficult, bladder seemed to lack contractive, expelling power.—Urine increased; and limpid.

15. Male Sexual Organs.—Desire lost.—Chronic gonorrhœa.

16. Female Sexual Organs.—Leucorrhœa excoriating, fetid, thick, yellowish.

17. Respiratory Organs.—Smarting in larynx and trachea.—Tickling cough which had troubled him on lying down at night was > in morning.

18. Chest.—Pain: in l. chest; in middle lobe of r. lung; in l. lung at 8 p.m.—Constriction of chest at night when lying on l. side, with audible beating of heart.

19. Heart and Pulse.—Sharp pain in region of heart.—Stinging, cramp-like sensation to l. of præcordia and under ribs.—Heart's impulse increased, but pulse sixty.—Impulse increased, pulsation audible, with constriction in chest on lying on l. side.—Pulse feeble, irregular.

20. Neck and Back.—Dull aching in back and head, dragging; lassitude.—Pain in nape at 2 p.m.; in neck at 7 a.m., < nape, with stiffness.—Pain under scapulæ; under l. scapula at 11 p.m.; in l. scapula and arm, extending to end of little finger.—Sharp, plunging pain in region of l. kidney.—Pain in lumbar region with general chilliness on going outdoors; heavy; dragging. in morning on waking, also till afternoon.

22. Upper Limbs.—Sharp lancinations in l. axilla.—Tearing in l. arm, < upper arm, sometimes extending to forearm, with darting pain in middle and ring fingers.—Lame feeling in r. arm, < about wrist, with heaviness.—Pain in l. upper arm at 8.45 a.m.; in r. third and little fingers at 9 a.m.

23. Lower Limbs.—Pain at 7 a.m.; centring in muscular parts above knees, also soreness and occasional darting pains.—Sharp shooting in r. thigh, then in l. thigh, then pain in l. shoulder.—Drawing pain in muscles above knee at night.—Piercing pain in inner side of l. knee.—Pain from knee down at 12.50 p.m., with coldness of lower limbs; contractive, in middle of leg, a little outside of outer edge of tibia, < motion, occasionally changing to burning pain, with soreness to touch.—Pain in calves, with trembling, so that walking is unpleasant, pain < l.—Pain in l. tendo-Achillis, < touch and motion, with soreness; in hollow of r. foot.—Bruised pain in l. heel.

24. Generalities.—Pain in whole body as before ague, at 10 p.m.; shifting pain.—Languor: in morning on waking, with pain in back; with soreness of muscles of thighs, as if he had taken cold. < From warmth of bed at night, disturbing sleep; > after breakfast; > in open air.—Slight nervous excitement and restlessness; soon followed by a sick, debilitated sensation.—General muscular lameness and soreness; lassitude; depression of spirits.

25. Skin.—Yellow jaundiced appearance; itching as from flea-bites.—Pimples in different parts, a painful one on nose.—Itching: near insertion of deltoid in both arms; of face, then creeping sensation; and stinging-like flea-bites, on r. side of face, then on neck, shoulder, forearm, midway between r. knee and ankle.

26. Sleep.—Drowsiness; vertigo; semi-stupor.—Restless, or sleeps soundly until toward morning; awakens generally feeling worse.—Unrefreshing sleep, with frequent wakings and bad dreams.—Amorous dreams, with emission.—Ugly dreams, at one time that his head was attacked by enormous, bugs, which he felt obliged to kill with difficulty.

27. Fever.—Chilliness on going out of doors; slight aching in lumbar region.—Excited, feverish feeling, alternating with chilliness; warm sensation along spine, then chill and gentle sweat.—Face hot and flushed.

Myristica Sebifera.

Myristica sebifera. Ucuuba (Brazilian name). N. O. Myristicaceć. Trituration of red, acrid, very poisonous gum obtained by incising bark.

Clinical.—Elephantiasis Arabum. Joints, suppuration of. Suppuration. Ulceration. Whitlow.

Characteristics.—*Myristica sebifera* belongs to the same order as the nutmeg-tree, *Nux moschata*. Our preparation of the latter is made from the powdered nut. Mure proved and introduced *Myr. seb*., and in the proving occurs this symptom:

"Pain in the finger-nails with swelling of the phalanges." This, apparently, led to its use in whitlow, in which many successes have been reported by Chancerel *pčre* and others. Spanish homśopaths have used *Myr. seb*. extensively. Olivé, of Gros, has reported cures with it of: Scrofulous osteitis; callous ulcers-phlegmonous erysipelas. Cartier (*Rev. Hom. Fran*., quoted *Rev. Hom. Belge*, December, 1898, p. 261) gives two experiences of his own with the remedy. (*1*) A young girl had been three months with her leg in a splint for inflammation of the knee and doughy swelling of entire limb. Cartier came to the conclusion that there was pus in the joint. *Myr. seb*. 3, five drops three times a day, was given for three months. Five months later the swelling and inflammation were all gone; walking gave no pain; but the joint was anchylosed. (*2*) An old man, 87, was seized with sudden arthritis of the shoulder, with intense fever. Allopaths first diagnosed it as osteomyelitis, but later a surgeon was called in, who pronounced it an arthritis purulent from the onset. After he had passed through the hands of eminent old-school authorities in Paris, who said nothing could be done, Cartier was sent for, and found the shoulder quite full of pus, and a particularly painful spot on the scapula, at a point where the bone was said by one authority to be attacked. *Myr. seb*. 3, five drops three times a day, was given. In ten days there was no longer suppuration, the size of the joint had become normal, and the tender spot was gone. *Myr. seb*. has evidently great power over the suppurative process as affecting joints. Hansen says Kippax regards it as the principal remedy in elephantiasis Arabum.

Relations.—*Compare:* Nux mosch., Silic., Calc., Sul., Septic., Pyrogen.

SYMPTOMS.

1. Mind.—Indifferent and careless.—Cannot concentrate his thoughts.—Vexed by a song which keeps running in his head.

2. Head.—Vertigo, r. to l. on waking in morning.—Dizziness in morning.—Head heavy.—Pain (with pressure outwards) in frontal eminence; at noon; intermitting; > in open air.

6. Face.—Very red face.

8. Mouth.—Tongue white and cracked.—Whole mouth with tonsils and upper pharynx painful and sensitive to contact; every mouthful seems to wound the parts when chewed or swallowed.—Palate insensible with loss of taste.—Taste: bitter; of copper, which excites spitting of blood.

9. Throat.—Burning at bottom of throat.—Constriction at isthmus of pharynx; this pain increases progressively.—Difficulty in swallowing saliva.

10. Appetite.—Thirst.

12. Abdomen.—Sensation as if a foreign body, as large as a walnut, had lodged in l. inguinal region, all forenoon.

13. Stool.—Stools mixed with yellow mucus.

14. Urinary Organs.—Less frequent micturition; urine scanty although he drinks much; reddish yellow.

18. Chest.—Hard pressure during night on both sides of chest, not affecting breathing.

20. Neck.—Pinching, r. side of neck.

22. Upper Limbs.—Hands stiff as if from squeezing something for long time.—Pain in l. hand.—Pain in hands < when they touch each other.—Formication on l. thumb-joint.—Pain in finger-nails with swelling of phalanges.

23. Lower Limbs.—Pinching pain in r. calf.

25. Skin.—Two pimples on l. cheek, quickly disappearing.

26. Sleep.—Cannot get to sleep, evening, in bed.—Restless sleep with dreams about business; about disputes; unconnected, about houses being built commencing with top stories.—Violent starting in sleep.

Myrtus Communis.

Myrtle. (Closely allied to Granatum, the Pomegranate-tree.) N. O. Myrtaceæ. Tincture of fresh shoots and leaves. Tincture of fresh flowering shoots and leaves.

Clinical.—Catarrhal fevers. Chest, stitches in. Coryza. Cough. Tuberculosis.

Characteristics.—*Myrt. com*. is an unproved remedy, the symptoms of the Schema being entirely clinical. Hering gives an account of it. It has a very powerful action on the left lung, especially the upper part. It is to the upper left lung what *Oxal. ac*. is to the lower. This is the keynote: Pain in upper left lung going right through from the front to the left scapula. Cases of phthisis, hæmoptysis, hepatisation, lung syphilis having this symptom present have been cured with *Myrt*. The pain is mostly stitching, but may be throbbing, aching, or burning. It is < in morning, > evening, < by breathing, yawning, coughing. The cough is dry, hollow; excited by a tickling in upper anterior lobes. Hering has cured catarrhal fever with tickling cough < morning and > evening; with great lassitude in afternoon. This

last symptom is important. So is evening > of cough and of tickling in lungs. < From change of atmosphere. Every atmospheric change = cough, coryza, and catarrhal fever.

Relations.—*Compare:* Pains through left chest to scapula, Therid., Illic., Pix., Sul. (Pain through lower lobe of left lung, Oxal. ac.) *Compare also:* Phos., Bry.

SYMPTOMS.

5. Nose.—Coryza with cough.

9. Throat.—Dryness in throat; pains in throat and chest, with expectoration of blood.

17. Respiratory Organs.—Dry, hollow cough, from tickling in upper anterior lobes of lungs; < morning; > evening; great lassitude in afternoon.—Cough, coryza, and catarrhal fever setting in with every atmospheric change.

18. Chest.—Pain in chest; acute; pressing; cough with tightness.—Pain in upper part of l. chest through to shoulder, < taking a deep breath and making a strong motion.—Stitching in l. apex straight through to scapula, < breathing, yawning, coughing.—Burning in l. chest with throbbing, aching, tickling.—Hepatisation of l. lung.—Hæmoptysis.—Phthisis, esp. from maltreated syphilis.

27. Fever.—Catarrhal fevers with pain in elbow and knee-joints, with dry, hollow cough, caused by tickling in upper and front part of lungs, esp. in morning, > evening, accompanied by lassitude in afternoon.

Nabalus.

Nabalus serpentarius. Prenanthes serpentaria. White Lettuce. Rattlesnake-root. N. O. Compositæ (subord. Chicoraceæ). Tincture of whole fresh plant.

Clinical.—Constipation. Ophthalmia.

Characteristics.—*Nabalus* is a native American plant much used in domestic practice as a remedy for diarrhœa and dysentery. There is only one proving, with 1st and 3rd dilutions by a married woman, aged 19. The symptoms resemble somewhat those of its botanical relative, *Lactuca*, especially in constipation and somnolence. The most curious symptom was susceptibility to magnetism and to the personal aura of others. Irritability of temper and occipital pain was < evening.

SYMPTOMS.

1. Mind.—Depression followed by unusual buoyancy.—Continued melancholy.—Irritable.

2. Head.—Tipsy sensation.—Deep-seated frontal pains behind r. eyeball and over eye.—Headache with irritability and irritation of eyes, throat, and skin.—Occipital pains with stiffness in nucha, < evenings.

3. Eyes.—Great and lasting irritation of eyelids and margins; the margins sting and smart and are slightly swollen.—Sight weak.

5. Nose.—R. nostril sore.—Smell and taste slightly impaired.

9. Throat.—Throat sore; tickling and scraping (l.), < lying down and swallowing saliva; then both eyes (< l.) tingle and fill with tears.

11. Stomach.—Appetite and thirst diminished.—Desire for lemons.—Burning eructations.

13. Stool.—Constipation: only three stools in twelve days, hard, painful, followed by prostration.

14. Urinary Organs.—Sharp pain (transient) in r. kidney.—Urine diminished.

16. Female Sexual Organs.—Sharp throbbing in uterus.—White, jelly-like discharge from vagina; with weakness.—Menses delayed.

24. Generalities.—Dull pains in joints and numbness on waking.—Susceptibility to magnetic contact and to the personal aura of her friends.—Heaviness, as if blood-vessels filled with lead; body heavy, she leans about.

25. Skin.—Subcutaneous glands irritated and swollen, esp. behind r. ear and in neck.—Prickling as from suppressed perspiration; itching, general.

26. Sleep.—Somnolence.—Night sleep prolonged, afterwards lighter and more broken.

27. Fever.—Chilliness not > by heat of fire.—No febrile reaction except occasional flushes over head and face.

Naja.

Naja tripudians. Cobra di Capello. The hooded snake of Hindustan. N. O. Elapidæ. Tincture of the fresh virus. Trituration of sugar of milk saturated with fresh virus.

Clinical.—*Angina pectoris*. Asthma. Dysmenia. Hay-fever. *Headache. Heart, affections of. Œsophagus, spasmodic stricture of. Ovaries, affections of. Plague*. Spinal irritation (of nucha). *Throat, sore*.

Characteristics.—The poison of the deadly cobra has been used from ancient times, says P. C. Majumdar (*Ind. Hom. Rev*., vi. 6), by Indian practitioners in many nervous and blood diseases. It was introduced into homœopathy by Russell and Stokes, who made the first provings along with some forty other provers, including Gillow, Pope, and Drysdale. It is rather remarkable that with so many able provers *Naja* should not have attained anything approaching the place of importance occupied by *Lach*. Nash suggests this may be due to the fact that many of the provings of *Lach*. were made with the 30th potency, whilst those of *Naja* were with low potencies. Majumdar had no success with *Naja* until he obtained fresh virus from the snake charmers (the cobra is the snake they charm) and made attenuations of that. Previously the *Naja* used by Indian homœopaths had been re-imported into India from England in the form of attenuations. Deane in his experience in the plague epidemic of 1899-1900 found *Naja* prepared from the fresh virus more efficacious than *Lachesis*, and he found its action more prompt if injected under the skin than if given by the mouth. The affinity of *Naja* for the medulla oblongata and cerebellum is well shown in an experience of Frank Buckland (*Curiosities of Natural History*, 2nd edition, 225, quoted *C. D. P*.) after skinning a rat killed by a cobra bite: "I had not walked a hundred yards before all of a sudden I felt just as if somebody had come behind me and struck me a severe blow on the head and neck, and at the same time I experienced a most acute pain and sense of oppression at the chest, as though a hot iron had been run in and a hundredweight put on the top of it." His face turned green. He staggered into a chemist's shop and managed to get some ammonia, and was then able to walk to a friend's house, where he drank four large wineglasses of brandy without feeling

tipsy. He was then able to start for his own house, and for the first time felt a most acute pain under the nail of left thumb, the pain running up the arm. About an hour before he examined the rat he had cleaned his nail with a penknife, and had slightly separated the skin, and that was how the virus entered. These symptoms of Buckland's are highly characteristic and valuable. The "hot-iron" symptom and weight on the chest should be especially noted. Majumdar (I*nd. H. R*., vi. 8) relates this case: A young woman suffering from a heart affection had oppression of chest amounting almost to suffocation feeble, irregular, almost imperceptible pulse; anæmic appearance inability to speak. One dose of Naja was given, followed in four hours by a second. These sufficed for the cure. The next day, when the doctor called, his patient addressed him in a loud voice: "Doctor, you gave me a poison last night." When asked to explain, she said that after the first dose she "*felt awful heat in her system*." This must be put beside Buckland's *hot iron* as a *Naja* indication. Majumdar has saved a number of apparently hopeless cases of cholera with *Naja*, in the collapse stage, with pulselessness and difficulty of breathing. In addition to the above symptoms of heart failure and distress the following will be found to be leading symptoms in heart cases: "Depression and lowness about the heart." "Inability to speak, with choking, nervous, chronic palpitation." "Severe pains in left temple, cardiac and ovarian regions." "Sensation as if heart and ovary were drawn together." "Pains about heart extending to nape of neck, left shoulder and arm, with anxiety and fear of death." Pulse slow, irregular. Symptoms < at night; on walking; by lying on left side. Ina case cured by Russell there was "dragging and anxiety in the præcordia occurring in great grief." According to Hering, nervous phenomena predominate in *Naja* over other serpent poisons. It "acts primarily upon nervous system, especially on respiratory nerves, pneumo-gastric, and glosso-pharyngeal." The last gives the characteristic "choking" of *Naja* and other serpents. Andrew M. Neatby (*M. H. R*., December, 1899) relates a cure with *Naja* 6 which had nervous palpitations and faintness; frequent sensation of swelling or "choking" in the throat, with dyspnœa, and occasionally of anæsthesia down right side. Another characteristic is "grasping at throat" with the choking sensations. Œsophagismus. Diphtheria with impending paralysis of heart indicates *Naja*, but the characteristic left to right direction of *Lach*. does not appear in the *Naja* provings. *Naja* has, however, < at night; patient awakens gasping; surface blue. *Naja* has somewhat marked neuralgias and headaches: Neuralgic pain in head, preceded or followed by nausea or vomiting, severe, throbbing in left orbital region drawing from thence back to occiput; from over-eating; from mental or physical exertion. Headache after cessation of catamenia. Dull, heavy constriction in forehead on waking. Dull shoots up occiput. Among the *Sensations* of *Naja* are "screwing-up" sensations and crampy pains: as if head screwed together; as if heart and ovary were drawn up together; crampy pains in left ovary; pains in temple and ovarian regions. Pain from heart to scapula. Sensation as of a hair in larynx; pain as from needles in tonsil. The left side is predominantly affected. Mahlon Preston (*Med. Adv*., xviii. 532) cured himself with *Naja* 30 of asthma with difficult breathing, < lying down, > sitting up. He

cured many cases of hay-fever and autumnal catarrh, the symptoms being—(*1*) Flow of water from nose for a few minutes; then (*2*) intense sneezing, which > the breathing. After recurring for a few days there is dryness in the lungs with great difficulty of breathing, < on lying down, Kent cured with *Naja* 45m a case having these symptoms: "Almost constant heat of head and face. Pulse slow, sometimes as slow as 45. Cannot endure any mental exertion. Sweating of palms. Appetite voracious. Stitching pains in heart" (*Med. Adv.*, xxii. 164). "Sweating palms" was a symptom which had been present from childhood and was cured with the others. Flora A. Waddell (*H. R.*, viii. 445) relates a case in which heart pains were concomitant with left ovarian affection. The pains came on a week before menses, increased till the flow appeared, and then disappeared till next month. *Naja* entirely relieved. The following case was cured by Bunn (*H. W.*, xxxi. 501): Miss S., 22, dysmenia since the function was established. Dilatation, galvanism, &c., had been tried in vain. She had shooting frontal headache, pains in eyeballs necessitating rubbing. Cramp pain in region of left. ovary. Faintness. Hypogastrium extremely sensitive to touch at time of menses. Examination revealed nothing abnormal except sensitiveness of ovarian region. Extreme restlessness with the pain. During the menses the pains suddenly became very severe. The flow stopped when the pain was at its worst, and returned next day with relief from pain. *Naja* 30 was given, and the next period passed absolutely free from discomfort. The symptoms are: < By touch; riding in carriage; at 3 p.m. (headache); at night; after sleep; by eating by alcohol; by exertion; by motion; by walking; lying on side on left side. Great > of pain and breathing by lying on right side. Very sensitive to cold. > By walking in open air; by smoking.

Relations.—*Antidoted by:* Ammonia, Stimulants (effects of bite); Tabac. (to potencies). *Compare:* Depression and suicidal tendency, Aur. Ulcer on frænum linguæ, Nat. c., Agar. Headache from before backwards, Anac., Bry., Nux (from behind forwards, Gels., Lac can., Sang., Sil., Spi.). Diphtheria, Ar. t. Heart, Ars., Cact., Iberis, Lach., Spigel., Dig. Collapse, Carb. v., Camph., Tab. Mouth wide open, tongue cold, Camph. Loss of speech, Dulc., Gels., Caust., Hyo., Lauro. Dark red colour of fauces, Ail., Bapt., Phyt.

Causation.—Grief.

SYMPTOMS.

1. Mind.—Suicidal insanity.—Wandering of the mind.—Sad and serious; irresolute; melancholia; makes himself wretched brooding over imaginary wrongs and misfortunes.—Very forgetful; absent-minded.—Insensible; loss of consciousness.—Insanity, he suddenly split his own head in two with an axe.—Sadness: > evening; with irresolution, with distress about sexual organs; with headache and inability for exertion; as if everything were done wrong and could not be rectified, with increased perception of what I ought to do and uncontrollable inclination not to do it, causing restlessness.—Affected easily by wine or alcoholic

drinks.—Stupid and confused feeling.—Consciousness almost or quite lost.—Insensible; and speechless.—Comatose.

2. Head.—Vertigo, lasting a short time, followed by "stounding" pain in r. side of head.—Feeling of hollowness over entire head.—Confusion and dulness in head; in morning.—Dull frontal headache.—Very severe headache with intense depression.—Constriction across forehead.—Sensation as if brain of forehead was loose.—Severe throbbing and aching in temples.—Heat and congestion in head.—Headache supervening on cessation of menses.—Headache: all day; in morning on waking; in evening.—Very bad headache and stomach-ache at 9 p.m., caused by eating a pear.—Headache at night, slept much but conscious of headache in sleep.—Headache with intense depression, pain usually began in temples, < r., deep-seated, involving eyes, occasionally shooting, extending as a dull aching over forehead and vertex, < motion, slightly > open air, > smoking and alcoholic liquors.—Throbbing aching at 3 p.m.—Bad headache, just like a scald, < over l. eye, after breakfast; oppressive, at 8.30 a.m.—Neuralgic headache extending backwards from orbital region.—Heaviness.—Aching in temples; in morning on waking, with heaviness in eyes; about noon over r. temple and gradually extending to forehead, > afternoon; in evening.—Aching in vertex; with cold feet.—Shooting up occiput.—Feeling as of a blow from behind on head and nape.—Scurf on scalp.—Sensitiveness of scalp.—Hair falls off; esp. crown.

3. Eyes.—Eyes fixed and staring; wide open and insensible to light.—Heaviness in eyelids.—Loss of the sense of vision.—Eyes require constant cleansing with lids, frequent prickling, vision confused on looking at small print, have to rub eyes and look at it closely.—Pupils dilated.—Pain in balls requiring them to be rubbed frequently; with tired feeling on looking at a book.—Hot pain at back of balls.—Ptosis and paralysis of iris.—Eyes wide open and insensible to light.—Lids swollen in morning.

4. Ears.—Whizzing in l., ear with insipid, almost nauseous taste in mouth.—Noise as of a mill, waking him in morning.

5. Nose.—Severe coryza, thin, acrid secretion.—Nose sore, hot, and swollen; with thin discharge.—Stuffing of nose, beginning in morning, increasing later, < in open air, > by discharge of thin, watery mucus.—Soreness of l. wing, with irritation; soreness of r. nostril, with ulcerated feeling.—Wing of nose becomes sore, with heat and tenderness; worse next day with swelling and pain, secretion suffused; next day > by an eruption on its edge.

6. Face.—Pale, thin, haggard; greenish-yellow colour; livid.—Neuralgic pains in face, sometimes shooting to eye and temple.—Lips dry, parched, and cracked, hot and sore.—Jaws firmly clenched.—Face red on rising, > washing, and covered with knots like erysipelas.—Face red in evening and burning.—Cheeks red, esp. cheek-bones, patchy.—Gnawing in l. upper jaw, soon after midnight, sometimes shooting

to eye and temple.—Bruised pain in l. condyle of jaw, < moving it.—Drawing pain in r. jaw.—Sore on under lip opposite canine tooth, and gum swollen and inflamed.—Pimple on upper lip.—Purple sordes on lips, gum, and tongue.—Lips dry, black pores and cracks; dry, painful, excoriated.

7. Teeth.—Gnawing toothache; gums hot, swollen, and painful to touch.—Gnawing and aching in l. teeth and side of jaw.—Pain in stumps of decayed teeth towards evening, with feeling in face and limbs as after catching cold, pain in face < night, and gums hot, swollen, and painful to touch, third day the swelling of gums extended to the other side, afterwards gnawing in l. sound teeth, next day drawing aching in l. teeth, < when stomach is empty.

8. Mouth.—Mouth wide open, tongue cold.—Tongue coated thick yellow; white, dry, no thirst.—Ulcers on frænum.—Great dryness of the mouth.—Foaming at mouth.—Taste insipid, bitter, sour, metallic.—Loss of speech.

9. Throat.—Much mucus in throat.—Pressure and gagging in throat.—Roughness and scraping in throat.—Grasping at throat, with sense of choking.—Dryness and constriction of throat and fauces.—Soreness and pricking in l. side of throat.—Stricture of the œsophagus; deglutition difficult or impossible.—Dark red colour of the fauces.—Redness of l. side in morning, with pain on swallowing.—Inflammation of l. tonsil at 8 a.m., with pain.—Shooting in l. tonsil.—Spasm.—Starting about his throat (external).

10. Appetite.—Loss of appetite.—Craving for stimulants, which < the sufferings.—Thirst.

11. Stomach.—Eructations; heartburn.—Nausea, with faint feeling; vomiting.—Uneasy, disagreeable feeling in stomach, as from indigestion; pressure as from stones, after a meal.—Eructations tasting like barley-water; eructations of hot, foul air.—Acidity in stomach.

12. Abdomen.—Cutting, twisting, griping pains.—Much flatulence, with rumbling and colicky pains.—Swelling, with feeling of tightness and flatulence; swelling with tension and pain, the tightness spreading towards heart.—Rumbling in afternoon, with cutting; rumbling in evening after dinner, with aching as before diarrhœa, and often when sitting still a heavy pulsation appeared almost to lift up the bowels; rumbling after dinner with aching.—Flatulence; during day; at night, with pain.—Intermittent sticking backward in hypochondria during the day.—Anguish in l. hypochondrium and l. loin after dinner with flatulence.—Frequent griping in umbilical region.—Frequent cutting in umbilical region and small of back in afternoon, then profuse and sudden leucorrhœa.

13. Stool and Anus.—Sudden urging to stool.—Bilious diarrhœa.—Constipation.—Feeling of a large stool which when voided was

small.—Urging always sudden, whether followed by diarrhœa or not.—Sudden urging, then small bilious stool.—Heat in anal region, with itching smarting at anus.—Diarrhœa: with pain in abdomen; profuse; sudden; slimy, white or green (in an infant); bilious, always preceded by sudden urging and griping in abdomen; then stool omitted for two days, then stool partly costive, partly loose, with pain in abdomen.

14. Urinary Organs.—Uneasiness and pressure in bladder.—Urine deposits red sediment, mixed with mucus.—Urine of deep straw colour.—Urine loaded with lithates and mucus.

15. Male Sexual Organs.—Increased sexual desire.—Nocturnal emissions.—Peculiar distress, great desire, but no physical power, with depression of mind.—Stinging, somewhat burning pain along r. side of penis, immediately under skin, at night in bed and in morning after rising.—Instinct and power excited.—Desire on going to bed, with little physical power, with frequent waking, vivid imaginations, painful state of mind, involuntary emissions, then prostration and distress.

16. Female Sexual Organs.—Crampy pain in l. ovary.—Aching in l. ovary with pains in heart; come on a week before menses, grow worse till menses appear, then easier till next month.—Thin, whitish leucorrhœa in afternoon.—Milk decreased, next day returned freely; afterwards scanty.

17. Respiratory Organs.—Cough with tightness and fulness in larynx.—Irritation and tickling in larynx and trachea.—Hoarseness; short, hoarse cough.—Short, puffing cough, every minute, 4 p.m.—Dry, hacking cough; blood-spitting.—Expectoration of whitish viscid mucus in morning on waking.—Spitting of blood, which had no tendency to coagulate.—Respiration very slow; shallow, and scarcely perceptible; laboured and difficult; gasping for breath.

18. Chest.—Uneasiness and dull, heavy pain in chest.—Lancinating pains, < on deep inspiration.—Asthmatic constriction of chest; cannot expand lungs; followed by mucous expectoration.—Pain in l. pectoral muscles in forenoon.—Occasional pain top of both mammæ.—Most acute pain and oppression in chest as if a hot iron had been run in and a hundredweight put on top of it, instantly > by hartshorn and water.—Heavy pain over lower half of r. chest, with stabbing on deep inspiration; cannot cough for the stabbing; < lying l. side, > lying on affected side.—Dull pain to r. of sternum.—Tenderness over sternum and in throat.

19. Heart and Pulse.—Feeling of depression and uneasiness about heart.—Severe pain in region of heart.—Fluttering and palpitation of heart.—Audible beating of heart.—Pulse slow and irregular in rhythm and force; weak and thready, scarcely perceptible.—Action only recognised by pushing hand up behind sternum, then felt only a faint thrill resembling the cardiac thrill felt in the same way on a newborn

infant.—Pulse rapid; and full; 120, some beats tolerably full and strong, afterwards 32, irregular in rhythm and force, some of the beats full and bounding.

20. Neck and Back.—Cutting in nape.—Aching in nape.—Shooting from inner and upper angle of l. scapula to front of chest.—Tired feeling in dorsal vertebræ all day, with the peculiar burning often attendant on exhaustion.—Rheumatic pains in neck and back.—Pain between the shoulders as if in spine, afterwards involving scapulæ; in morning on waking; < moving arms.—Dragging sensation in spine between shoulders.—Aching in loins.—Acute pain in small of back; gnawing pain.

21. Limbs.—Sudden prostration of strength in limbs.—Rheumatic pains in limbs.—Drawing, lacerating in various parts of r limbs, < motion.—Aching: in ankles, lower part of thighs, wrists, and shoulder-joints; in all parts on waking; bruised, on waking.—In afternoon occasional rheumatic pains in thighs and arms, < shoulder-joints; shifting rheumatism (drawing aching), pain in arms, shoulders, and legs, < l.

22. Upper Limbs.—Rheumatic pains in shoulders; rheumatic drawing in l. shoulder in morning.—Burning pain in wrist, and he hung down his arm, from which a few drops of blood fell (from the bite).—Swelling: of hand and thumb; of hand and arm, with spots; of bitten hand, and of arm and breast of same side, with livid spots.—Numbness (crampy) and shifting rheumatic pains, < in shoulder-joints, and numbness of hands as if asleep.—Numb pain and feeling as if ether had been allowed to evaporate.—Aching in r. fourth and little fingers, then sensation of digging in middle of l. triceps, acute pain under l. thumb-nail (where virus had entered) running up arm.—(Sweating palms.)

23. Lower Limbs.—Sudden weakness when walking in evening.—Staggering when walking.—Dragging when walking, with weariness.—Pressive and drawing sensations on points in lower limbs and feet.—Pain anteriorly in r. thigh; posteriorly in thighs in afternoon.—Shooting down leg and tingling in feet.—Drawing pain in lower part of tendo Achillis, < motion, afterwards increased to lameness, > evening.—Pain in the bitten toe, ascending to top of thigh, then pain in belly, which was tense and swollen, then the pain descended in the same track in which it had risen.

24. Generalities.—Languor; fatigue; torpor.—Organs seem to be drawn together, esp. ovary and heart.—Depression of both mental and physical powers.—Symptoms < from stimulants; > when walking in open air.—Swelling of body.—Local inflammation.—Appearance as if intoxicated.—Convulsive movement of mouth and limbs.—Rolling about as if weak and faint.—Moaned, grasped his throat, tossed his head from side to side and moved his arms and legs uneasily.—Unnatural quiet, with groans and complaints of slight pains in the bitten arm.—Sensation of wasting away.—Restlessness in afternoon.—Inclination to lie in

bed in morning.—Inability to support himself in a sitting posture.—Swooning fits.—Loss of sense of feeling.

25. Skin.—Creeping, itching, and tingling sensation in skin.—Skin swelled, mottled, and of dark purple, livid colour.—Large pimples on inflamed base.—Small white blisters on inflamed base, with much itching.—Gangrene.—Boil-like swelling on back of middle phalanx of r. little finger.—Painful chilblains on feet.—Pimple: on upper lip; on l. ala nasi; on inflamed base, on tip of nose, nose sore in consequence; painful on brow.—White itching blisters on inflamed base, on neck and body in afternoon.

26. Sleep.—Yawning; great sleepiness.—Restless, disturbed sleep.—Vivid dreams.—Little inclination for sleep, brain irritable.—Sleepiness in evening, and weakness, went to bed at 9 p.m. and fell asleep immediately; < after tea, > hard walking and profuse sweat.—Dozing and moaning.—Long and vivid dreams, little recollection of the subjects.—A vivid dreamy night; affairs of the day recalled, with additions, and new plans for the morrow.—Dreams of murders, suicides, fires, &c.

27. Fever.—Body cold and collapsed.—Extremities very cold; icy coldness of feet.—Burning heat in face.—Feels very uncomfortable, hot, and feverish.—Free perspiration.—Heat, but he refused water; heat with prostration; with discomfort, dry lips, and tender, hot mouth.—Head hot; and full of blood.—Burning of ear.—Flushes of heat in face at different times of day; flushes in face, < l. side.—Hands hot, and much sweat in palms.—General sweat; cold, clammy.

Naphthalinum.

Naphthalene. $C_{10}H_8$. Trituration.

Clinical.—Albuminuria. Amblyopia. Asthma. Bronchitis. Cataract. Diarrhśa. Eczema. Flatulence. *Gleet. Gonorrhśa. Hay-asthma*. Phthisis. Psoriasis. Retina, detached. Typhoid fever. Whooping-cough. Worms.

Characteristics.—*Naphthalin* is a hydro-carbon obtained by distillation from coal-tar. It consists of colourless, transparent, lustrous scales, or, when crystallised, of rhombic tables or prisms. It is an unproved remedy, and has been used in old-school practice as an intestinal antiseptic and vermifuge, as an expectorant, as a remedy for eczema and psoriasis, as an antiseptic application to wounds. Some cases of poisoning have been reported. A boy, 12 (*Brit. Med. Journ*., August 5, 1899), came home one evening apparently drunk: semi-conscious, staggering, unable to answer questions. He had eaten two "bon-bons," which were really moth-destroyers, each tablet containing two grammes of pure *Naphthalin*. An emetic was promptly administered, and the next day the boy was still drowsy but quite

conscious. The drowsiness lasted four days. Four grammes were given to a cat. In an hour and a half the hind limbs became ataxic. Swaying movements of the entire body were noticed even when the animal was at rest. Attacks of sneezing from nasal irritation, the animal frequently attempting to remove the irritation by rubbing his nose. In two hours inco-ordination had increased. Twitching of facial muscles. Saliva flowed freely from the mouth. This experiment is important as bearing on the use made of the remedy in hay-fever. Other experiences are quoted from the *Brit. Med. Journ*. in *H. W*., xxxiv. 525. Evers records chronic illness, loss of appetite, headache, and eczema over both legs as due to *Naph*. which was used as a moth powder and sprinkled on bedding. In a case of typhoid the patient was given 6 grammes of *Naph*. during the first three days. After this the dose was increased to 7 grammes. On the evening of the sixth day the patient began to be restless, and the following evening was delirious. Next day: drowsy, respiration laboured, irregular. Lips and face cyanotic. Slight twitching in all muscles. Pulse regular, 92. Temperature had fallen to normal. Urine dark brown and after standing became black. When *Naph*. was discontinued the symptoms vanished in four days. In three cases in which *Naph*. had been applied to wounds there was sudden onset of fever, headache, loss of appetite; in one of them there was temporary mania with incontinence of urine and fćces; in two of them albuminuria. All symptoms rapidly disappeared when *Naph*. was discontinued. Other cases are collected in *C. D. P*., the symptoms of which will be found arranged in the Schema. Lippincott (*H. W*., xxi. 35) was the first to use *Naph*. in cases of hay-fever, having heard that hay-fever sufferers who went into factories where Naphtha was much used were always cured. His experience of its value was speedily confirmed by other observers. *Naph*. 1x and 2x were used in the first trials. W. Louis Hartmann, of Syracuse, N.Y., is the chief homśopathic authority for this remedy (*N. A. J. H*., xii. 630). His leading indications for it are: Acute coryza with fluent excoriating discharge and much sneezing. Paroxysms of coughing following each other in rapid succession so that the patient is unable to take his breath (as in asthma and whooping-cough). He has found it more often indicated than any other drug in whooping-cough. The spasmodic action and the cyanosis of the drug are good indications here, though it is not necessary to wait till the child is blue before prescribing *Naph*. If any remedy is needed after *Naph*., *Drosera* follows admirably. In a case of phthisis of left lung *Naph*. removed these symptoms: Unable to sleep for cough; if he dozed off it was sure to wake him. Exhausting night-sweats and during the day thin, offensive diarrhśa. Hartmann uses the ix trit., having been disappointed with higher attenuations. Another action of *Naph*. is on the eye, cases of opacity of the lens having been traced to its action. For the expulsion of threadworms after the bowels have been freely opened by a cathartic, *Naph*. is given in doses of gr. 1/4 to gr. 1/2 four times a day for two days. The dose should not be given after a meal, and all fats and oils should be abstained from during the treatment, which may be repeated once or twice after leaving a week's interval. (The nose irritation in the poisoned cat is significant of the vermicide action

of *Naph*.). J. Meredith (*H. W*., xxvii. 215) cured with the 6x incarcerated flatus in transverse colon causing cardiac distress.

Relations.—*Compare:* Salol., Carbol. ac., Anilin., Methyl.—b., and coal-tar products generally. In coughs, Dros. (which follows Naph. well), Coc. c., Arn., Bell., Coral., Ipec. In phthisis, Petrol., Bacil. In eye affections, Cholestr. In gonorrhśa, Thuja, Petrosel., Salol. In hay-fever, Pso., Sabad., Ars., Cepa, Kali i. In worms, Cina., Teucr.

SYMPTOMS.

1. Mind.—Mania.—Delirium.—Intoxication.—Loss of consciousness.

2. Head.—Headache with fever, drowsiness, and loss of appetite.

3. Eyes.—Coryza.—Eyes inflamed, painful, bloodshot (hay-fever).—Cataract.—Amblyopia.—[Detached retina.—Shiny bodies in vitreous.—White patches on retina, of oxalate, sulphate, and carbonate of calcium.—Fundus thickly studded with brilliant points; or, a large white patch usually at lower part of pupil, increasing in size and concealing vessels of choroid.—Crystalline lens dim (in rabbits poisoned with *Naph*.; they died of parenchymatous nephritis; similar chalk-white spots to those in fundus oculi were found in pleura, kidneys, liver, and convex surface of brain).]

5. Nose.—Coryza; irritation of nose; thin, excoriating discharge; much sneezing.—(Hay-fever.).—The animal constantly rubs his nose to remove the irritation (in poisoned cat).—Attacks of sneezing (cat).

6. Face.—Lips and face cyanotic.—Face pale yellow.—Twitching of facial muscles (cat).

8. Mouth.—Saliva flows from the mouth (cat).

11. Stomach.—Loss of appetite.

12. Abdomen.—Incarcerated flatus in transverse colon causing cardiac distress (removed with 6x).

13. Stool and Anus.—Incontinence of urine and fćces.—(Thin, offensive diarrhśa of phthisis.)

14. Urinary Organs.—Sudden, violent desire to urinate; meatus urinarius red and swollen, prepuce śdematous.—Gonorrhśa.—Gleet.—Incontinence of urine.—Urine: dark brown, becoming black after standing; albuminous.

15. Male Sexual Organs.—Śdema of prepuce.

17. Respiratory Organs.—Respiration: laboured and irregular; asthmatic.—Cough in incessant paroxysms almost arresting breath.—Night cough preventing sleep.—Cough with blue or purple face.—Expectoration: free, thick, tenacious; almost absent.—Cough in violent paroxysms compelling the patient to hold his head for the pain.

24. Generalities.—Chronic illness.—Sudden onset of symptoms.—General muscular twitchings.—Restlessness.—Staggering, drunken gait.—Ataxia.—Paralysis of lower limbs (animals).

25. Skin.—Eczema.—(Psoriasis.)

26. Sleep.—Very great drowsiness lasting some days.

27. Fever.—Sudden onset of fever, headache, and loss of appetite.—(Temperature reduced in typhoid.)

Narcissus.

Narcissus pseudonarcissus. Daffodil. N. O. Amaryllidaceć. Tincture of unexpanded blossom-buds, stem, leaf, and flower. Trituration of the alkaloid.

Clinical.—Bronchitis. Cough. Coryza. Diarrhśa.

Characteristics.—Ringer experimented with the alkaloid (sulphate and nitrate) obtained from flowers and bulbs of the daffodil, and produced the symptoms recorded in the Schema. A patient of mine once had a very severe cough set up by daffodils used in some profusion as a decoration of a dinner-table. In Ringer's experiments the bulb preparation produced the greater number of effects, including salivation, sinking, vomiting, and diarrhśa. The flower preparation acted on the head and eyes, and dried up a profuse perspiration of the hands. A fatal case of poisoning from eating the flowers is on record (*H. W.*, xxxvi. 244). A salad of onions in which were mixed some bulbs of *Narcissus poeticus* caused tormina, burning, copious stools with dreadful griping, obtuse senses, fainting, cold hands, cold sweat, symptoms not distinguishable from the usual effects of *Colchicum*, and similar to those of *Narc. Pseud*. The one homśopathic use of *Narc*. on record is that of J. Meredith (*H. W.*, xxxi. 123). He made a conserve of flowers, buds, and stems by mashing them with six to ten times their weight of sugar in a Wedgwood mortar with a wooden pestle. Counting this as 1x, he made sugar attenuations to 4x, and with these he cured a case of bronchitis with *continuous* cough which had resisted many of the standard remedies.

Relations.—*Compare:* Cepa, Colch., Lil. t.

SYMPTOMS.

2. Head.—Frontal headache.

3. Eyes.—Running at eyes.—Pupils unduly dilated.—Pupils contracted at first, dilated later.

5. Nose.—Severe coryza.

8. Mouth.—Increased flow of saliva.—Free salivation of very ropy saliva.

9. Throat.—Throat dry.

11. Stomach.—Hiccough; sinking, faint feeling.—Sinking, sick sensation.—Heartburn.—Vomiting.—Rumbling.

13. Stool.—Diarrhśa with severe aching below l. free ribs.—Stools: watery; relaxed; loose; some solid.

19. Heart.—Pulse increased.

24. Generalities.—Faintness and drowsiness.

27. Fever.—Hand which was quite wet with perspiration became dry in twelve minutes.

Narcotinum.

An alkaloid obtained from Opium. $C_{22}H_{23}NO_7$. Trituration.

Clinical.—Bladder, paralysis of.

Characteristics.—*Narcotinum* has been rather extensively proved, but very few distinctive symptoms were elicited. The most notable symptoms were dry, clammy mouth; thick, indistinct speech, and paralysis of bladder. The vertiginous symptoms were like those of *Morphin*., and the general symptoms those of *Opium* and its other alkaloids.

SYMPTOMS.

1. Mind.—Calm, placid, pleasurable sensation.—Difficulty in fixing attention.

2. Head.—Mazy, confused sensation.—Vertigo and nausea < on motion or exertion.—Headache and roaring in head.

3. Eyes.—Eyes congested.—Vision blurred.—Pupils contracted.

6. Face.—Expression dull.—Face red.

8. Mouth.—Mouth dry and clammy.—Speech thick and indistinct.

11. Stomach.—No appetite; no thirst.—Sudden nausea and vomiting on least exertion.—Paroxysms of easy vomiting.—Vomiting > all symptoms.

13. Stool.—Constipation; but less than *Morphine*.

14. Urinary Organs.—Slow evacuation of urine from deficient contractile power.—Torpor of bladder, quite unable to empty it.—Urine diminished.

17. Respiratory Organs.—Voice changed, hoarse.—(Chronic cough removed.).—Breathing short, hurried.

18. Chest.—Agreeable warmth in chest with deep breathing.

19. Heart.—Pulse accelerated; later retarded.

23. Lower Limbs.—Staggering gait.

24. Generalities.—Languor and lassitude.

25. Skin.—Peculiar disagreeable crawling in limbs.—Considerable itching of whole surface, esp. nose and inside of thighs.

26. Sleep.—Somnolence.—When dozing, all sorts of grotesque figures dance before the sight; or sensation of falling into an immense fire in company of same figures; with the falling sensation there was starting.

27. Fever.—Chilliness; chattering of teeth; coldness.—Universal sensation of warmth.—Heat and redness of face.—Much sweat, wetting all clothes next the skin.

Natrum Arsenicicum.

Sodium arsenate. Hydric, di-sodic arsenate. $Na_2HAsO_4 12H_2O$.

Solution. Trituration.

Clinical.—Coryza. Diphtheria. Eyes, inflammation of; granular lids. Hćmoptysis. Interscapular pain. Miner's asthma. Nose, affections of; root of, pain in. Śsophagus,

constriction of. *Pityriasis rubra*. Post-nasal catarrh. Testicles, neuralgia of. Tuberculosis.

Characteristics.—*Nat. ars*. has been very extensively proved, notably by Imbert Gourbeyre. The irritating arsenical effects preponderate. The principal clinical use of *Nat. ars*. has been in diphtheria (dark purple throat, great swelling, much prostration, *not much pain*) and in affections of the eyes and nose, and root of nose. Some of the *Peculiar Symptoms* are: Wavering, floating sensation on turning head. Eyeballs feel stiff feel too large for lids to close over. Scratching beneath lids on rolling eyeballs. Pain at root of nose. Feeling as if thyroid body were compressed by thumb and finger. Feeling of lump in throat; of blow on testicle; as if smoke inhaled into lungs. Emaciation. Śdema. Pain between scapulć > bending forward. There is the restlessness of *Arsen*.; and the thirst, and also the chilliness, with the hot head and headache < by heat. The symptoms are < on pressure. < By motion; jarring; least exertion. Interscapular pain > bending forward. < On moving is very prominent throughout the proving; also < during the day. Nasal, obstruction and chilliness < at night. There is the *Arsen*. chilliness and sensitiveness to cold air; but itching is < when heated by exercise; warm things = burning in stomach; and cold drinks < nausea. Wind = conjunctivitis. Right side of head; left testicle; and left leg most affected.

Relations.—*Compare:* Ars., K. ca. (śdema about eyes and face); Apis (diphtheria with sac-like swelling of uvula; but Apis has much pain, Nat. ars. has not); Ar. t. (diphtheria; Ar. t. has less swelling and more pain); Kali b. (tenacious mucus); Nat. m. (throat); Lyc. (stopped catarrh).

SYMPTOMS.

1. Mind.—Nervous restlessness.—Depressed, as if something impending.—Cannot concentrate mind; dull, listless; forgetful.

2. Head.—Vacant feeling in whole head.—Wavering, floating sensation on turning head quickly.—Confused feeling; head heavy, dull.—Feeling of heat and fulness in whole head.—Severe sharp headache in forehead, above eyes, < r. eye.—Numbness in forehead, evening.—Dull aching in frontal region and root of nose; on awaking in morning; severe during day; indisposed to study or speak.—Aching across brow over orbits and eyeballs.—Fulness in forehead with throbbing in top of head.—Every motion jars the head.—Headache < from heat, pressure, and tobacco-smoke.

3. Eyes.—Vision weakened; objects blur when he looks at them for a short time; eyes sensitive to light.—Eyes soon tire and pain when reading or writing.—Feels as though he must close lids to protect the weak eyes.—Lids disposed to close; cannot open them as wide as usual.—Stiffness of eyeballs.—Eyeballs feel too large when closing lids over them.—Blood-vessels of balls and lids much congested, whole

orbital region swollen; śdema of orbital region.—Congestion of conjunctiva from least exposure to cold or wind; conjunctiva dry and painful.—Eyes smart as from wood smoke; smarting and lachrymation on going into open air.—Inner surface of lower lids granulated.—Edges chronically inflamed; morning agglutination.—Aching through and over brows and orbits, and in temples on awaking.—Eye symptoms < in morning, > towards evening.

4. Ears.—Shooting pain over r. ear, after noon.—Hearing dull.—Rushing noise in r. ear synchronous with pulse.

5. Nose.—Smell defective or lost.—Patient feels stuffed up in nose and chest.—Nose constantly stuffed up, < at night and in morning; must breathe at night with mouth open.—Nasal discharge yellow, tough; hawked or drops from posterior nares.—Pieces of hardened bluish mucus flow from nose, after which mucous membrane feels raw.—Dry crust in nose; when removed blood follows.—Nasal mucous membrane thickened, can inhale air, but difficult to exhale.—Compressive pain at root of nose and in forehead; catarrh.

6. Face.—Face flushed and hot; feels puffed.—Malar bones feel large, as if swollen.—Face swollen, śdematous; more in orbital region; < mornings on awaking.—Corners of mouth fissured; also indurated.—Muscles of mastication stiff, painful o move jaw.

8. Mouth.—Teeth and gums tender.—Tongue furred; coated yellow; deep red, corrugated, anterior part fissured; large, moist, fissured, flabby.—Ulcer in mouth, very sore.—Mouth watery.—Taste: insipid; clammy; pasty; bitter; sour.

9. Throat.—Fauces dry on swallowing and on inspiration, < in morning and after a cold.—Fauces and pharynx red and glossy.—Tonsils, fauces, and pharynx purplish and śdematous; patched with yellow mucus; diphtheria.—Uvula, tonsils, and pharynx thickened; surface irregular, swollen, purplish-red, covered with yellowish-grey mucus, which is hawked out.—Hawks up greyish (or white) tenacious mucus.—Constricted choking feeling in throat; as if thyroid body compressed between thumb and finger.—Feeling as of a pin sticking in throat; or of a lump in throat; always < in morning.

11. Stomach.—Drinks often, but little at a time; very thirsty, < by drinking.—Belching and sour eructations.—Nausea, < from drink of cold water.—Vomits large quantities of sour water, < after eating.—Stomach feels sore; warm things cause a sensation of burning, and can be felt entering stomach.—Moderate dinner lies heavy; feeling of fulness.—Epigastrium tender.—Sinking sensation; with dull feeling over eyes.—Hćmatemesis.

12. Abdomen.—Pain from time to time shifting through bowels, > by passage of flatus or stool.—Gas forms rapidly, > when bowels move; colic from flatus and before stool.—Pain in groins; also in Poupart's ligaments.

13. Stool and Anus.—Alternate diarrhśa and constipation.—Stool thin, soft, dark, followed by burning at the anus.—Yellowish, watery, copious, painless, hurries out of bed in morning; preceded by colic, > after.

14. Urinary Organs.—Dull aching in kidneys, with profuse urine.—Sore feeling in region of bladder, < while urinating.—Urine copious, frequent, clear; heat precipitates phosphates; contains some epithelial scales, casts, and fat globules.

15. Male Sexual Organs.—Dull cutting in groins along Poupart's ligaments, followed by sickening sensation in l. testicle, as after a blow; testicle very sensitive while pain lasted.—Emission during sleep.

17. Respiratory Organs.—Dark slate-coloured, scanty mucus in larynx, detached with difficulty.—Oppressed or stuffed sensation all day from larynx to bottom of sternum.—Roughness and irritation in bronchi mornings, with slight cough.—Lungs feel dry, as though smoke had been inhaled.—Dry cough, with feeling of tightness and oppression in middle and upper third of chest.—Chest feels full and oppressed; < during exertion and on full inspiration.—Sharp, quick pain below seventh rib anteriorly.—Supra-clavicular regions sore on pressure.—Shooting pain under r. breast; sore on pressure.

19. Heart and Pulse.—Oppression about heart on least exertion.—Pulse irregular, variable in volume, slower than usual.

20. Neck and Back.—Neck stiff and sore.—Soreness at lower cervical vertebrć down to joints of and under both scapulć.—Pain and soreness in back.—Severe pain between scapulć; > moving forward; < from inspiration.—Pain in lumbar region.

21. Limbs.—Neuralgic pains occur frequently.—Joints feel stiff; pains erratic, < in joints and on l. side.—Lower limbs feel heavy; weary, bruised feelings.—Aching anteriorly down legs, until restless, uneasy feeling is produced.—Knee-joints crack.—Shaking in tibia when walking.—Corns appear on bottom of each little toe.

24. Generalities.—Restless, nervous, cannot sit still without great effort.—Feels tired all over; desire to remain quiet.—More susceptible to cold air, takes cold easily.—Pains show preference for l. leg.—Śdema.—Marked emaciation; after previous increase of flesh.

25. Skin.—Squamous eruption, scales thin, white, and when removed leave skin slightly reddened; if scales remain they cause itching, < when warm from exercise.

26. Sleep.—Drowsy, heavy, restless; wakes as if frightened.

27. Fever.—Chilly, disposed to wrap up or get near a fire.—Skin hot and dry.—Surface cool, covered with cold, clammy sweat.

Natrum Cacodylicum.

Cacodylate of Soda. $(CH_3)_2$,AsONa. Trituration. Solution.

Clinical.—Phthisis.

Characteristics.—*Cacodyl* (which signifies evil-smelling) is, like Cyanogen, a compound radicle, having the formula $As(CH_3)_2$. It was first obtained by Bunsen in 1837 as *dicacodyl*, $As_2(CH_3)_4$. It is a clear liquid refracting light strongly, heavier than water, of insupportably offensive smell, its vapour being highly poisonous. *Cacodylic acid*, $(CH_3)_2$ AsOOH, is a crystalline arsenic compound, soluble in water, odourless, and though containing 54.4 per cent. of metallic arsenic, not an active poison. This acid (and more particularly its sodium salt) has been used on the recommendation of Armand Gautier, Professor of Chemistry at the Faculty of Medicine of Paris, as a "cure" for consumption; the non-poisonous nature of this salt enables the patients to take it in large doses. But it is not always harmless. Murrell (*Med. Press*, December 19, 1900) gave it in pill of one grain three times a day to a young woman, 21. Poisoning symptoms set in suddenly after the eleventh dose: constant vomiting; tongue like a piece of raw beef; conjunctivæ inflamed; eyelids œdematous: breath of gangrenous odour; peripheral neuritis; wrist-drop; paralysis of left leg. The odour was noticed on second day; the other symptoms came suddenly. These are good indications for homœopaths.

Natrum Carbonicum.

Sodium carbonate. (The common "Soda" of the shops, purified; *not* the Bicarbonate of Soda, $NaHCO_3$). $Na_2CO_3 1OH_2O$. Trituration. Solution.

Clinical.—Albuminuria. *Anidrosis*. Ankles, weak. Burns. Cornea, ulcers on. Corns. Coryza. Deafness. Dysmenia. Dyspepsia. Goître. *Hands, chapped*. Headache. Heels, blisters on. Herpes: iris; circinatus. Hypochondriasis. Hysteria. *Ichthyosis*. Lisping. Moles. Nose, swollen; eruptions on; red. Ozćna. Post-nasal catarrh. Presbyopia. Priapism. Rheumatism. School-headache. Scrofula. Stammering. Sterility. Sunstroke, chronic effects of. *Throat, mucus in*. Toothache. Warts.

Characteristics.—*Nat. carb*. is the typical salt of the *Natrum* group. It was proved by Hahnemann, and is one of the antipsoric remedies of the *Chronic Diseases*. In old-school practice its chief uses are as an external application in solution to burns and eczema, as a douche in nasal or vaginal catarrh. *Nat. c*. forms the alkaline basis in most soaps, and most persons know by experience the effect of using soap with an excess of alkali. It almost burns off the superficial layers of the epidermis, and leaves the skin dry and cracked. The provings, whilst developing in *Nat. c*. a remedy of polychrest importance, confirms its irritating action, and show *Nat. c*. to be a true remedy for chapped hands and faces, rough, dry skins, eczema, herpes, warts and scrofulous conditions of skin. On the mucous membranes the effects are no less irritating. The whole alimentary tract from mouth to anus is irritated—vesicles, ulcers, catarrh. In the eyes the irritation goes on to keratitis and ulceration of cornea. The nose is swollen and ulcerated, with a thick yellow or green offensive discharge. Thick, yellow, putrid leucorrhśa. The predominant mental condition of *Nat. c*. is one of profound sadness, depression, and melancholy; constantly occupied with sad thoughts; though there is also the opposite, great gaiety and talkativeness. The hypochondriacal mood is often an accompaniment of the condition of the digestive mucous membrane. The depression and irritability is < after a meal, the aggravation diminishing as digestion advances, "as the food passes through the *duodenum*." Such patients, says Farrington, are decidedly averse to society, even that of their own family. The indigestion is < from vegetables and starchy foods. < From milk. The tongue has some characteristic symptoms, notably affection of the under surface and frćnum, and it is so heavy and unwieldy that the patient has difficulty in speaking. The common practice of taking Bicarbonate of Soda for indigestion and heartburn is founded on a true relationship (though *Nat. c*. is the *Carbonate* and not the *Bi*-carbonate), but the indiscriminate and excessive use of it only intensifies the trouble. The nearest analogue of *Nat. c*. in this and in the female sexual sphere is *Sepia*. The nervous system is strongly affected, and symptoms of hysteria appear. A leading note is < from exertion, mental or bodily. Great debility from any exertion; unsteady walk, any little obstruction on pavement = falling; or he falls without any apparent cause. There are contractions of muscles and tendons, and also relaxation of tissues. Ankle-joints are weak and burn. Twitching in muscles and limbs. I have cured with *Nat. c*. "jerking of hands on going to sleep." Among the *Peculiar Sensations* are: As if head too large. As if forehead would burst. As if head would be drawn back. As if ears were closed up. As of a bubble bursting in ear. As if tip of tongue were cracked. Dryness of mouth as if caused by heat of breath. As if veins of right leg were bruised. Motion as from a fśtus in uterus. Blisters on points of toes as if scalded. Emaciation, ancćmia, bloating are prominent effects of *Nat. c*.; as also is swelling and induration of glands. *Nat. c*. is *suited to:* Light-haired people; persons of leuco-phlegmatic constitution with aversion to open air, and to exercise, mental or physical. Stitches go from within out. Right upper and left lower are particularly affected. A peculiar symptom of *Nat. c*. is "discharge of mucus after an embrace" in the woman; and sterility as a

result. In *Med. Adv*., xviii. 248 and 370, are two cases in point, one cured by J. C. Guernsey and the other by W. Jefferson Guernsey. In both cases the woman complained that she "could not retain the semen" after the embrace. Some of the grand keynotes of the remedy are to be found in its modalities. Prominent among these are < from sun; heat; gaslight. < From mental exertion; from physical exertion or strain; from least effort. < From music. *Nat. c*. has great debility from heat of summer; from chronic effects of sunstroke, every spell of warm weather = headache. Headache from sun or working under gaslight. At the same time there is great aversion to cold air, < from draught of air, change of clothing, getting wet, drinking cold water, < damp weather, change of weather. < From storms. *Nat. c*. has extreme sensitiveness to electric changes. There is great thirst for cold water, but < on drinking it (stitches in spleen). < By rest; < lying on left side (palpitation; stitch in back to anus); < sitting. Moving >. Moving head = cracking in cervical vertebrć. Moving = profuse sweat. Most symptoms come on or are < in morning. "Sinking" 10 to 11 a.m. < On alternate days. < During full moon. Eating > sinking, < dyspepsia and hypochondriasis. < From milk; from vegetable diet; from cold drink when over-heated. > By pressure, rubbing, scratching, wiping with hand. > Boring into ears and nose with fingers.

Relations.—*Antidoted by:* Camph., Sp. nit. dul. *It antidotes:* Chi. *Complementary:* Sep., (Kali salts). *Compatible:* Calc., Nux, Pul., Sep., Sul. *Compare:* Nat. sul. (Nat. sul. is preferable for yeast-like vomiting, with pallid, dirty, livid tongue). Nat. m. (hypochondriasis—that of Nat. c. keeps pace with indigestion, that of Nat. m. with degree of constipation; head and face > uncovering; leucorrhśa). Sep. (indifferent to family; melancholy, apprehensive; < by music; backache < by sitting; bearing down; boring through from tip of left scapula;—Sep. has more empty feeling, and it does not "fill up" till after supper; Nat. c. sinking < 10 to 11 a.m., > eating, which = distension). Pic. ac. (priapism towards morning, emission and no desire). Nux (hypochondriasis; morning retching—Nux, of pregnancy or after debauch). Pho., Rho., Sil., Pet., < from thunderstorm. Sul. ac., Sul., Caust. (falls easily). Lyc. (> uncovering; ulcer on heel—Lyc. on instep; right upper, left lower). Am. c., Am. m., Cep. (sore heels). Bry. (cough in warm room). Sep. (eruption on back of hands; Sep. ulcers about joints of hands). Calc. (coldness in abdomen;—icy coldness in stomach, Calc., Colch., Ars., Ambr.;—burning heat in stomach, Ars., Apis). Sil. (intolerance of draught; cough from draught of air;—< open air, Calc.; < change of temperature, Lach.). Agar., Naj. (ulcer on frćnum linguć). Aco., Calc., Glo. (headache from sun's rays). Zn., Sul., Indm. (weakness and goneness at stomach 11 a.m.). Calc. (chapped hands). K. ca., chapped face. Debility from heat of summer, Ant. c. Headache from sun or gaslight, Glo., Lach. < From music, Sabi. Catarrh, profuse discharge by day, stopped at night, Nux. Bearing down as if everything would come out, Agar., Lil. t., Murex. Easily sprained ankles, Led. Foot bends under, Carb. an., Nat. m. Boring fingers into nose, &c., Cina (the boring of Nat. c. >; that of Cina does not).

Causation.—Cold drink when over-heated. Milk. Sun's rays (chronic effects). Gaslight. Heat. Change of temperature. Storms. Electric states. Over-study. Strains. Sweat, suppression of.

SYMPTOMS.

1. Mind.—Marked degree of gaiety.—Joyous talkativeness.—Inclination to sing.—Sadness and discouragement, with tears, and inquietude respecting the future.—Inquietude, with fits of anguish, esp. during a storm, and while engaged in intellectual labour.—Mind much agitated, every event (music) causes trembling.—Timidity.—Estrangement from individuals and from society.—Hypochondriacal humour and disgust of life.—Dejection.—Disposition to take alarm.—Irritable.—Spite and malevolence.—Disposition to be angry, and violent fits of passion.—Difficulty in conceiving and combining ideas when reading or listening.—Makes mistakes in writing.—Difficulty of comprehension, which is unnatural to him when in health; imbecility, or weakness of intellect.—Unfitness for intellectual labour and meditation, which fatigue the head.—Infirmity of purpose.

2. Head.—Dulness and confusion of the head.—Confusion of head, esp. in a room, and during repose.—Vertigo, esp. after drinking wine, and after intellectual labour.—Headache, in the sun, or on turning head quickly.—Sensation of pressive fulness in head, as if forehead were going to burst.—Pressive headache, with nausea, risings, and cloudiness of eyes.—Eructations and dimness of sight, in evening; < in room.—Cramp-like tearing in forehead, extending to eyes and point of nose.—Headache, with shootings, sometimes across eyes (and stitches out of eyes).—Shocks across head.—Pulsative headache in vertex, every morning.—Congestion and heat in head.—Tearing in exterior of sinciput, every day at a certain hour.—Drawing and tension in r. side of occiput as if head would be drawn back.—Profuse falling out of hair.—Boil on occiput.—Both occipital protuberances sore to touch.

3. Eyes.—Burning in eyes, esp. when reading and writing.—Stitches in eyes, from within outwards.—Lancinations across eyes.—Inflammation of eyes and lids, with photophobia.—Heaviness of upper lids.—Inflammatory swelling of r. upper lid.—Swelling of lids.—Dim eyes; has to wipe them constantly.—Ulcers on cornea.—Abscess in lachrymal gland.—Frequent closing of lids, and difficulty in opening them.—Confused sight, with black dancing specks, or bright sparkling before eyes.—Dazzling flashing before eyes on awaking.—Inability to read small print, as in presbyopia.—Down before eyes.—Pupils dilated.

4. Ears.—Shootings in ears.—Otalgia, with sharp, piercing stitches in ears.—Great sensibility to noise.—Sensation of deafness, as from stoppage of ears.—Hardness of hearing.—Tinkling, music, buzzing, bursting of a bubble, roaring, and throbbing in ears.—Dryness and heat.—[Old Otorrhśa and deafness that has come from typhoid

fever.—Deafness with ozćna, thick feeling in throat and amenorrhśa in light-haired girls.—Deafness with acne punctata.—Deafness with recurring earache—(cases cured by Cooper).]

5. Nose.—Red nose with white pimples on it.—Great sensitiveness of nose.—Desquamation of bridge and point of nose; painful when touched.—Ulceration in bottom of nostrils.—Obstruction of nose, sometimes with discharge of hard and fetid pieces of mucus.—Hard, fetid pieces from one nostril.—Coryza every second day.—Coryza, fluent; violent sneezing.—Intermittent coryza, with burning in eyes.—Much nasal mucus passes through mouth.—Continued coryza and cough, excited by a chill and the least current of air, disappearing only after perspiration.—Thick green, or yellow, mucus in nose.—Bleeding of nose.—Troubles of external nose, may attain a morbid size; puffiness of nose.

6. Face.—Heat of face.—Bloatedness of face.—Cheeks red and swollen.—Redness and burning heat, or great paleness in face, with livid circle under eyes, swollen eyelids.—Face alternately pale and red.—Ephelis in face.—Itching and humid eruption in nose and mouth.—Yellow spots on forehead and upper lip.—Yellowish colour of face.—Swelling of lips.—Swelling of upper lip.—Burning rhagades in lower lip.—Eruptions, tetters, and ulcers round mouth and lips.—Engorgement of submaxillary glands.

7. Teeth.—Toothache, with digging, boring pain, esp. after and during a meal, and particularly after eating things sweetened with sugar or fruits.—Pressive toothache at night, with swelling of lower lip and gums.—Excessive sensitiveness of lower teeth.

8. Mouth.—Constant dryness of mouth and lips.—Vesicles and smooth ulcers, with burning, in the mouth.—Burning about tip of tongue, as if it were cracked.—Pimples on tip of tongue.—Tensive blisters on r. margin of tongue.—Papular eruption beneath tongue, painful to touch.—Pustule near frćnum.—Ulcer on frćnum.—Tongue not facile, speech difficult.—Lisping.—Stammering, from (dry tongue and) heaviness of tongue.

9. Throat.—Roughness, scraping, and dryness of throat and palate.—Throat and śsophagus feel rough, scraped, and dry.—Spasmodic contraction of śsophagus and stomach.—Accumulation of mucus in throat.—Violent hawking up of thick mucus which constantly collects again.—Much nasal mucus passes through the posterior nares.—Swelling of submaxillary glands.

10. Appetite.—Bitter taste in mouth.—The food tastes bitter.—Acid taste in mouth, while tongue is loaded with a thick coating.—Incessant thirst; great desire for cold water a few hours after dinner.—Violent thirst, and uneasiness after drinking anything cold.—Extreme, voracious hunger, esp. in morning, arising out of a

sensation of faintness and emptiness.—Empty eructations (after eating).—Gluttony.—Repugnance to milk and diarrhśa after partaking of it.—Great weakness of digestion, with peevishness and hypochondriacal humour, after a meal, or the least departure from regimen.—Distension, heaviness, and aching in stomach and epigastrium after a meal.

11. Stomach.—Stomach weak, easily disordered.—Frequent risings during and after a meal.—Waterbrash.—Heartburn after fat food.—Violent retching in morning, without actual vomiting.—Painful eructations.—Sensation of qualmishness in stomach, and continued nausea.—Frequent hiccough, esp. after a meal.—Pyrosis and scraping in throat, esp. after partaking of fat food.—Pressure in stomach, esp. after a meal.—Painful sensibility of region of stomach and epigastrium, on being touched and while speaking.—Drawing, pressive, and incisive pains in stomach.—Contractive cramps in stomach.—Colic, with constriction around stomach.—Sensation of emptiness in stomach, with nausea.—Gnawing and pressure with gone feeling 10 or 11 a.m., > from eating.—Distension of stomach and epigastrium.

12. Abdomen.—Pains in hypochondria.—Very weak digestion; after eating, hypochondriacal humour.—Lancinations in the l. hypochondrium, sometimes after drinking anything cold.—Lancinations in hepatic region (chronic inflammation of liver).—Violent stitches in hepatic and splenic regions.—Pain in abdomen, after waking in morning.—Abdomen (hard) enlarged and distended.—Nocturnal pains in abdomen, with tension in upper part of abdomen, and diarrhśa.—Colic, with retraction of navel, and hardness of integuments of abdomen.—Swellings on abdomen, as if intestines distended by wind here and there.—Shootings and diggings in abdomen.—Shootings and drawings in sides of abdomen.—Accumulation, incarceration, and painful movements of flatus in abdomen.—Abundant expulsion of flatus of a sour or fetid smell.—Swelling of glands of groin and axilla; generally painful.

13. Stool and Anus.—Urgent want to evacuate, without result, or followed by a scanty and insufficient evacuation.—Hard and difficult evacuation.—Soft or liquid fćces, with strong and very urgent want to go to stool, and tenesmus ani.—Loose, yellow evacuations.—Diarrhśa which is marked by a sudden and obligatory call to stool, which escapes with great haste, noise, and rushing, often producing considerable commotion in abdomen; discharge almost involuntary; often a yellow substance like the pulp of an orange in the discharge, which may sometimes be observed in women at change of life.—Diarrhśa, with cuttings, after a chill, or after partaking of milk.—The stool is watery and is discharged in a gush.—Sanguineous evacuations.—Stool spotted with blood.—Stool like sheep's dung, with great straining; balls of mucus like peas.—Discharge of tćnia during evacuation.—Burning and incisive pains in anus and rectum during and after stool.—Itching and tingling in anus.—Lancinations in perinćum.

14. Urinary Organs.—Frequent and urgent want to urinate, day and night, with scanty, or excessive, discharge.—Involuntary micturition at night.—Wetting the bed.—Urine of a bright (or dark) yellow colour, of a sourish smell, or fetid and turbid, with mucous sediment.—Mucus in urine.—Urine smells like horse urine.—Burning in urethra during and after emission of urine.—Jerks, acute pullings, and smarting in urethra.—Deep-coloured urine.

15. Male Sexual Organs.—Pain, as from a bruise, in testes.—Heaviness and pressive drawings in testes.—Excoriation of scrotum.—Soreness between scrotum and thighs.—Secretion behind glans, as in gonorrhśa balani.—Inflammation, swelling, and tendency to excoriation, of glans and prepuce.—Increased sexual desire, almost like priapism, with continued and painful pollutions and erections.—Incomplete coition.—Emissions without erections.—Glans penis easily becomes sore.—Discharge of prostatic fluid when urinating, and during a difficult evacuation.—Great tendency to perspire after coition.

16. Female Sexual Organs.—Pressure in hypogastrium as if everything were bearing down towards genital parts, and were about to protrude (and menses would come on).—Catamenia too early, with headache, sacral and abdominal pains.—Deficient menstruation in adults.—Metrorrhagia.—Deformity of cervix uteri.—Excoriation at vulva, between thighs.—Discharge of mucus from vagina, after coition (causing sterility).—Profuse, thick, and yellowish, or fetid leucorrhśa, sometimes preceded by cuttings (ceasing after urination).—Motion as from fśtus in uterus.—(Conception appears to be promoted by the action of *Nat c.*).—Expels moles, prevents false conception.—Labour pains weak or accompanied by anguish and sweat, with desire to be rubbed.

17. Respiratory Organs.—Short cough, with rattling in chest.—Hoarseness and roughness in chest, with coryza, febrile shivering, and scraping and painful cough.—Continual catarrh, with coryza and cough, excited by least current of air or slightest chill, and disappearing only when perspiration supervenes.—Cough excited by tickling in throat.—Violent and dry cough on passing from cold to hot temperature.—Cough, with expectoration which has a salt taste, or which consists of greenish and fetid pus.—Expectoration of small substances, with rattling of mucus in chest.—Cough, with expectoration of blood.

18. Chest.—Shortness of breath, sometimes with difficult respiration.—Dyspnśa.—Dyspnśa and shortness of breathing, occasioned by tension of chest.—Tension in chest during inspiration.—Pressure on chest.—Shootings in chest and sides of chest.—Continual coldness in l. side.

19. Heart.—Violent and anxious palpitation of heart, esp. on going upstairs, or at night, when lying on the l. side.—Painful cracking in region of heart.

20. Neck and Back.—Rigidity of the nape.—Cracking of the cervical vertebrć when moving head.—Swelling in glands of neck.—Hard swelling of thyroid gland.—Goître; pain, pressing.—(Goître decreased in size.).—Boring pain in tip of l. scapula; extends to point of ensiform cartilage.—Pain, as from excoriation, in sacrum.—Lancinations in sacrum when seated.—Backache; violent pain in small of back after walking.—Drawings and cramp-like tension in back and nape of neck.—Tingling in back.

22. Upper Limbs.—Aching in shoulders.—Drawing and tearing (rheumatic) in shoulders, arms, and elbows, with lassitude in those parts.—Heaviness, rigidity, and pains in arms, which take away the power to lift them.—The r. arm and r. hand become numb and painful to move from pain in muscles.—Jerking and thrilling sensation in arms, hands, and fingers, esp. on grasping an object.—Drawing tension in forearms and hands.—Warts on arms.—Incisive pains in hands.—Tearing and boring in metacarpal bones, esp. in evening and morning in bed.—Burning in joints of hands in evening.—Swelling of hands (in afternoon).—Trembling of hands (morning).—(Hands become numb, painful, and prone to ulcerate—R. T. C.).—Skin of hands dry, rough, and cracked.—Warts (or herpes) on the back of hands.—Red spots and tetters on hands.—Jerking in joints of fingers.—Distortion (contraction) of fingers.—Burning, itching, and burning blisters on fingers, as if stung by nettles.

23. Lower Limbs.—Tension in bend of knee; the muscles are shortened.—Hollow of knees painful on motion.—Great heaviness in legs and feet, with stiffness when seated and when walking.—Jerking in thighs.—Tettery eruption on the buttocks.—Contraction of tendons of ham.—Tetters on ham.—Pressive and cramp-like drawing in legs.—Cramp and pulling in calves of legs, as if too short.—Legs swollen, red, inflamed, and covered with ulcers.—Blotches (as in lepra) on legs.—Incisive pains and cramps in feet.—Burning in joints of foot in evening.—Swelling of feet, or soles of the feet, with shootings, when planting foot on the ground.—Tendency to dislocate and sprain joint of foot.—The ankle is so weak that it gives way; the foot bends under when stepping on it.—Coldness of feet.—Chronic ulcers in heel, proceeding from gnawing vesicles.—Black, ulcerated pustule on heel.—Throbbing and crawling in both heels.—Cracks and excoriation between toes.—Swelling of (big) toes, with tearing, and pain as from excoriation, which banishes sleep.—Blisters on extremity of the toes, as from a burn.—Boring, drawing, and shooting in corns.

24. Generalities.—Mucus in urine.—Nocturnal erections; nocturnal pollutions.—Bad smell of the expectoration.—Troubles appearing in the back part of head; also heel.—Cutting pain in the outer parts.—Hysterics.—Old sprains; one who is easily sprained, *i.e.*, a disposition to be sprained by any exertion.—Exanthema purulent, or filled with pus.—Falling out of the hair.—Inclination to perspire, which may be caused by any exertion.—Cramp-like tearing, principally in arms and legs.—Paralytic drawings and tearings in joints, esp. in evening and at night.—Contractions of muscles (hands, bend of the knee,

neck).—Contraction of tendons.—Jerkings in limbs, joints, and muscles.—Tingling, stinging in muscles.—Strong tendency to dislocations, and to strain back.—Swelling and induration of glands.—Symptoms < during a storm.—Most symptoms manifest themselves when seated, and are > by movement, pressure, or rubbing.—Anguish, trembling, and sweat, during pains.—Great agitation of whole body in evening.—Excessive morbid sensibility; with trembling, also when playing the piano.—Relaxation and want of stability in whole body (in morning).—Unsteady gait.—Heaviness and indolence, esp. in morning, with fear of movement.—It hurts to lie on the l. side.—Paralytic, contusive pain in morning, and great lassitude in limbs.—Lassitude, so great as to cause sinking down, after a moderate walk.—Prolonged weakness.—Emaciation, with pale complexion, dilated pupils, and deep-coloured urine.—Repugnance to open air.—Great tendency to chill, followed by coryza, or colic with diarrhśa.

25. Skin.—Ulcers, with swelling and inflammatory redness of affected parts.—Skin dry, rough, and chapped.—Red, hard blotches.—Dryness of skin, with profuse sweat from least exercise or slightest labour.—Itching over whole body, as from fleas.—Tingling under the skin.—Scabies.—Tettery eruption.—Herpes: iris; circinatus.—The tetters spread and suppurate.—Yellow rings, like remains of tettery spots.—Leprous tubercles.—Warts; painful to touch.—Shootings, incisive pains, and burning in injured parts.—Itch-like eruption in lower part of abdomen.

26. Sleep.—Irresistible disposition to sleep, with much yawning, by day, with deferred sleep in evening, and difficulty to wake in morning.—Uneasy sleep, full of vivid dreams, sometimes confused and lascivious, with violent erections and pollutions.—Dreams; pleasant; amorous.—Anxious dreams, which, after waking, seem to be true.—Frightful dreams of deaths, floods, quarrels, robbers, devils, thieves, &c.—Dreams about travelling.—At night, great uneasiness in body, ebullition of blood, palpitation of heart, and nightmare, toothache, colic, and vertigo with anguish.—Jerking and shocks during sleep.—Waking too early.

27. Fever.—Pulse accelerated mostly at night, with ebullitions.—Febrile shuddering, with cold hands and hot cheeks, or *vice versâ*, but always without thirst.—(Shivering fits between 3 and 4 a.m. induced by overfatigue and anxiety—R. T. C.).—Coldness of hands and feet.—Coldness and chilliness the whole day, more so in forenoon, with cold hands and feet with hot head; or the reverse, hot hands and feet with cold cheeks.—Heat with great debility and sleep.—Heat with perspiration over whole body.—Burning hot perspiration on forehead when the hat presses him.—Perspiration while eating.—Burning in feet, esp. soles, on walking.—Sweats in morning.—Nocturnal sweat, often alternating with dryness of skin.—Cold and constant sweat, as from anguish, with trembling from the pains.—Profuse sweat from the least physical exertion.

Natrum Hypochlorosum.

Natrum chloratum. Liquor sodæ chloratæ. Labarraque's solution. Attenuations of the B. P. solution.

Clinical.—Albuminuria. Chlorosis. Globus. Gravel (white and red). Hæmaturia. Headache. Hysteria. Infra-mammary pain. Metrorrhagia. Nephritis. Ovaries, affections of. Priapism. Scurvy. Smarting eruptions. Subinvolution. Tongue, shrivelled; swollen. Toothache. Uterus, sodden; waterlogged. Vertigo caduca.

Characteristics.—*Nat. hyp*., the well-known disinfecting fluid, is one of Cooper's additions to the materia medica. His proving has brought out some very characteristic features, although there is a close general resemblance to *Nat. mur*. Cooper's grand characteristic indication is: Water-logged uterus. The womb is sodden, heavy, low down in pelvis; bearing down in pelvis, with tendency to prolapse. The state of subinvolution after confinement corresponds very closely to this, and I have frequently seen *Nat. hyp*. do good work in such cases. The drug affects profoundly the entire organism, and causes rapid emaciation, fainting, weakness, with a flabbiness most pronounced along the mucous tracts, with a diffused hydrogenoid condition and a tendency to leucocytosis. Among the notable symptoms are: Vertigo causing falling. Paralysed feeling in brain. Sensation as if top of skull were about to float off; as though cranial bones were being crossed over each other. Swelling, neuralgic pains, and suppuration about jaws. Tongue swollen; or shrivelled at sides. Swelling of both hands in morning on waking. Gatherings on fingers. Pain in hip-joint reflected from ovary. Drowsiness, cannot sit down without falling asleep. Swelling low down in abdomen, going up to chest and causing dyspnœa (a suggestion of hysterical globus). A weight seems to fall from pit of chest to pit of abdomen, with aching, dull sensation on vertex. The symptoms are < by eating or drinking; < lying on either side (thumping noise in ears); < by warmth. < By drinking least drop of cold water (smarting of pimples; also < by washing, and by warm drinks). < Before each menstrual period. < Before stool, > after.

Relations.—*Antidoted by:* Puls. (rheumatic and myalgic symptoms); Guaiac.; (also, probably, the antidotes to Nat. m.). *Complementary:* Sep. *Compare:* Nat. c., Nat. m., K. chl., Chlor. In uterine bearing down, Heliot., Sep. Womb feels as if it opened and shut (Sep. "clutching and relaxing"). Feels as if womb were pushed up when she sits down, Fe. i. Easily overpowered with heat, Sep., Nat. m., Nat. c. Bloated feeling after meals; < by warm drinks, Lyc. Uterine engorgement, Aur. n. m.

SYMPTOMS.

1. Mind.—Much distressed, laughs, cries, talks in sleep; keeps her husband awake.—Very low-spirited and depressed, could cry all day.

2. Head.—Vertigo caduca; constant and characteristic; with aching across forehead.—Swimming feeling as though top of cranium about to float off, < looking up.—Paralysed feeling in brain, in all limbs, numb finger-tips, recurrent fainting.—Feeling as though cranial bones were being crossed over one another; as if she must fall forward; silly feeling.—Pain across forehead, extending down nose and up over entire head, great tenderness of scalp; thumping in ears < lying either side; puts back of head against pillow to gain sleep.—Pain darting from temple to temple, coming and going suddenly.—Throbbing headache in l. temple, immediately after midday meal, > after tea.—Pain r. side of head, from behind mastoid process to upper part of orbit "across the eye," causes eye to feel stiff and weak, < after sleep, but continuing day and night.

4. Ears.—Pain under r. ear when swallowing, with much pain, tenderness, and swelling up side of head, followed by a most painful gathering which broke and discharged strongly.

5. Nose.—Influenza, much nasal discharge, sore places on inside of cheeks, beginning on l.—Epistaxis, dark-coloured blood comes away in clots by day and night (produced in a pregnant woman).

6. Face.—Pain l. side of face, shooting up from decayed tooth; < first thing in morning and last thing at night; gumboils form one after another.—Neuralgia l. side of face, from lower jaw up, and across eyes and nose to forehead.—Tugging l. side of face, < by warmth; coming every half-hour.—Swelling affecting l. upper and lower jaw, a swelling inside between gum and tongue; throbbing and shooting in the part extending up to temple and down l. side of neck; > cold applications, < by worry.

8. Mouth.—Teeth become loose, r. lower jaw swollen, sore, tongue swollen; cannot chew; pain < night (in a phthisical patient, suppuration took place in two weeks).—Teeth become brittle.—Tongue white; shrivelled at sides; taste as after sucking alum; appetite for meat fell off.—Tongue furred in morning; putrid taste throughout day.—Aphthæ.—Sore pimples inside lips.

9. Throat.—Throat red and sore.—Sore irritable spot in throat and along both sides of tongue.—Sore throat with difficult swallowing; flat ulcer on tongue far back towards root.

11. Stomach.—Nausea; sick feeling when lying down.—A weight seems to fall from pit of chest to pit of abdomen, with aching, dull sensation on vertex (after each dose).

12. Abdomen.—Swelling low, in abdomen going up to chest and causing dyspnœa, < after eating, with much flatus.—Bloated, tight feeling across upper abdomen, after eating and drinking, not > by loosening clothes; with sick

feeling.—Aching l. side of waist preventing sitting upright.—Fearful pain in lower abdomen which settled in r. hip-joint and spread over whole abdomen (lasted a week and left her cured of the following: Tenderness of abdomen; a pain in r. hip-joint with inability to flex hip or abdomen for the pain; voiding "white gravel" with great pain. These she had had twelve months, and they followed on the cessation of a menorrhagia, the primary cause being probably ovarian).

13. Stool and Anus.—Cutting pain like knives in anus, comes between 6 and 7 p.m., and goes away during the night.—Constipation for three days, then a large, hard, offensive motion is passed.—Great exhaustion as if about to die before bowels act; sudden and forcible expulsion, with consequent complete relief.

14. Urinary Organs.—Within twenty-four hours, diffuse nephritis; urine scanty, smoke-coloured, then black, containing blood, much albumen, and casts.—Vomiting, diarrhœa, headaches; coma (died on fourth day; man, drank ten drachms).—Scalding when urinating, with itching and smarting of vagina.—Excessive action of kidneys after each dose.—Red sand in urine.—White gravel (cured).

15. Male Sexual Organs.—Almost unconquerable desire after each dose, with priapism.

16. Female Sexual Organs.—Opening and shutting sensation in womb.—Uterine bearing down; severe backache and headache; lightheaded, sickish, < night.—Bearing down, uterus congested, enlarged, sensitive; constant oozing of blood, < any exertion.—Violent metrorrhagia.—Menses come on at once, a week before time.—Menses clotted, black.—Period a week over time; during first day more than usual aching in back.—(Ovarian affection with pain in r. hip supervening on suppressed metrorrhagia.).—Leucorrhœa.—Water-logged uterus.—Subinvolution.—(Seemed to cause prolapsed uterus to rise out of its place.).—Feels as if womb were pushed up when she sits down (Farrington).—Swelling in l. ovarian region at time of menses.—Pruritus.—L. inframammary pain.

17. Respiratory Organs.—Cough, distressing, with little phlegm, constant during day.

18. Chest.—Tightness with dyspnœa; weight in front of chest.—(Feeling as if something gnawing in front of chest.).—Pain across upper chest off and on, with pain across hypochondria and pains extending down both sides of waist to womb causing phlegmy discharge.—Pain under l. axilla and l. breast, < lying down, with sickish, giddy feeling; obliged to keep sitting down when walking about.—L. inframammary pain, affects l. side chest, shoulders, and vertex.

19. Heart.—Pain under heart with catching inspiration.

20. Back.—Much pain across small of back, < morning on rising; with want of appetite for breakfast, has fair appetite for supper.

21. Limbs.—Aching in all limbs, feels bereft of all power, as though would faint on slightest movement.

22. Upper Limbs.—Both hands swollen every morning (in three cases).—L. hand swollen one morning, next morning only r.—Small gatherings on fingers of both hands.

23. Lower Limbs.—Pain in both hip-joints and calves of legs with tingling extending to toes.—Extreme weakness in ankles and knees.

24. Generalities.—Rapid emaciation.—Seems quite overpowered.—Very weak, shooting pains all over body and in limbs, esp. between scapulæ and at their inferior angles; < morning before rising; shooting pains worse in anus and very bad in bed; < by day.—Drowsy and lazy.—Strange lifeless feeling, with apprehension of fainting.—Exhaustion before bowels act, > after.—Symptoms < before menstrual period.—The nervous symptoms come on very irregularly.

25. Skin.—Pimples come out on skin, smart when washed, on going into open air, on drinking least drop of cold water.—Pimply irritating rash on face, < night.—Red, smarting rash on face and neck; < after meals, after warm drinks; uniformly red with tendency to blister.—Sores angry-looking, moist, break out about mouth.—Small gatherings on fingers of both hands.

26. Sleep.—Drowsiness after meals.—Drowsy by day, wakeful by night.—Cannot sit down without falling asleep.—Disinclined to rise in morning.—Child looks ghastly, as if dead, when asleep; his sleep is quiet.

Natrum Iodatum.

Iodide of Sodium. NaI. Solution.

Clinical.—Coryza. Hay-fever. Heart, affections of. Laryngitis. Pharyngitis.

Characteristics.—This unproved sodium salt has been used largely in cardiac cases by French practitioners, and in rheumatism, pneumonia, asthma, chronic bronchitis, scrofula, tertiary syphilis. It forms an important part of certain sprays for hay-asthma. Hansen mentions it as indicated in cases of chronic pharyngitis; and coryza and chronic laryngitis.

Natrum Lacticum.

Sodium lactate. $Na.C_3H_5O_3$, Solution.

Clinical.—Gout. Gouty concretions. Rheumatism.

Characteristics.—Allen has collected a few observations on the effects of large doses, which I have schematised below. Skinner has removed with it, in potencies, gouty or rheumatic concretions ("chalk stones") in fingers.

Relations.—*Compare:* The Lacs, Lact. ac. In "chalk stones," Lyc., Calc.

SYMPTOMS.

11. Stomach.—Unusual hunger and thirst.—Vomiting (from very large doses).

23. Lower Limbs.—Great weakness of lower limbs, analogous to anxietas tibiarum after great physical exertion.

24. Generalities.—Rheumatoid pains.—Abnormal sense of fatigue, yawning and sleepiness.

26. Sleep.—Sleep more prolonged and sounder.—Yawning and sleepiness.

Natrum Muriaticum.

Sodium chloride. Common Salt. NaCl. Trituration. Solution.

Clinical.—*Addison's disease. Anæmia. Aphthæ. Atrophy*. Brain-fag. *Catarrh*. Chorea. *Constipation. Cough. Cracks in the skin. Debility. Depression*. Diabetes. Disparunia. Dropsy. *Dyspepsia*. Epilepsy. *Erysipelas. Eyes, affections of*. Eye-strain. *Face, complexion unhealthy*. Gleet. Glossopharyngeal paralysis. *Goître*. Gonorrhœa. *Gout. Headache. Heart, affections of*. Hemiopia. Hernia. Herpes. Herpes circinatis. *Hiccough. Hodgkin's disease*.
Hydroa. *Hypochondriasis*. *Intermittent fever. Leucocythæmia. Leucorrhœa. Lips, eruption on*. Lungs, œdema of. *Menstruation, disorders of. Mouth, inflammation of. Nettlerash. Pediculosis*. Ranula. *Seborrhœa. Self-abuse*. Somnambulism. Speech, embarrassed. *Spermatorrhœa*. Spinal irritation. *Spleen, enlarged. Sterility*. Stomatitis. Sunstroke. *Taste, lost; disordered. Tongue, blistered; white coated; heavy*. Trifacial-nerve paralysis. Ulcers. Varices. Vaginismus. *Vertigo. Warts*. Whooping-cough. Worms. *Yawning*.

Characteristics.—If *Nat. carb*. is the typical salt of the Natrum group (as *Kali carb*. is of the Kalis), *Nat. m*. is the most important. In power and range it stands in the first rank of homœopathic remedies, but it has an additional significance, in that it exemplifies the power of attenuation in a remarkable way. The problems involved in *Nat. m*. may be regarded in a sense as the *pons asinorum* of homœopathy. Those who are able to grasp in a practical way the homœopathic uses of this remedy are not likely to meet with any insuperable difficulties elsewhere. Those who can see nothing but "common salt" in *Nat. m*. may conclude that they have not "the root of the matter" in them. It may be inconceivable to some that the attenuations of *Nat. m*. should act independently, as curative or pathogenetic, at the same time that crude salt is being ingested in quantities; and it may seem that an infinitesimal amount of a substance which is a necessary constituent of our tissues cannot possibly have any action at all; but this problem is constantly before the homœopathist, and if he cannot master it in respect to *Nat. m*. he need not trouble his brains to try elsewhere. *Nat. m*. has been extensively proved, both in the lower triturations and in the 30th and higher attenuations, and the latter produced the most marked effects. I have mentioned in the Preface an experience of my own, which I will give here in more detail. For a common cold which had proved troublesome I took eight globules of *Nat. m*. 200. The next day the cold was not better, but I felt ill, and presently a copious, gushing, watery, light-coloured diarrhœa set in, and persisted for some days, draining all my tissues and reducing my weight by half a stone before I could think of the cause. Then the dose of *Nat. m*. flashed on my mind, and I at once began to smell at a bottle of Sweet Nitre, the antidote. The diarrhœa and all other symptoms vanished in a way I have never forgotten; and the lesson was well worth all the suffering I had undergone. My weight came back as rapidly as it had disappeared. In *Nat. m*. is illustrated the antidotal action of a substance of high attenuation over the effect of a lower. A large number of people are steadily poisoning themselves by taking excessive quantities of salt with their food; and it is generally useful to ask patients if they are fond of salt. Without restricting the amount of salt taken, *Nat. m*. 30 will antidote most of the effects of the crude, and enable the patient to cut down the quantity taken afterwards. But the effect of a high potency can also be antidoted by a higher. A patient to whom I gave *Nat. m*. 1m developed this new symptom: Aching pain deep in left shoulder and down the arm; < lying on right side; no tenderness. A single dose of *Nat. m*. c.m. quickly removed it. *Nat. m*. is one of the remedies adopted by Schüssler from homœopathy. Though arrived at by a different route, his indications are for the most part identical with Hahnemann's, and a recital of them will serve to emphasise some points; and there is no need to accept Schüssler's semi-material theories as an all-sufficient explanation of the remedy's action, for they do not anything like cover the field. Says Schüssler: "The water which is introduced into the digestive canal in drinking or with the food enters into the blood through the epithelial cells of the mucous membrane by means of the common salt contained in these cells and in the blood, for salt has the well-known property of attracting water. Water is intended to moisten all the tissues, *i.e*., cells.

Every cell contains soda. The nascent chlorine which is split off from the *Nat. m*. of the intercellular fluid combines with this soda. The *Nat. m*. arising by this combination attracts water. By this means the cell is enlarged and divides up. Only in this way can cells divide so as to form additional cells. If there is no common salt formed in the cells, then the water intended to moisten them remains in the intercellular fluids, and hydræmia results. Such patients have a watery, bloated face; they are tired and sleepy and inclined to weep. They are chilly, suffer from cold extremities, and have a sensation of cold along the spine. At the same time they have a strong desire for common salt. (The cells deficient in salt cry for salt.) The common salt, of which they consume comparatively large quantities, does not heal their disease, because the cells can only receive the common salt in very attenuated solutions. The redundant common salt present in the intercellular fluid may in such cases cause the patients to have a salty taste in their mouth, and the pathological secretions of the mucous membranes, as also of excoriations of the skin, may be corrosive (salt-rheum)." Disturbances in the distribution of salt in the cells cause: Lachrymation; salivation; toothache with salivation; watery diarrhœa; mucous diarrhœa; lack of mucus; catarrh of stomach with vomiting of mucus; water-brash; vesicles clear as water on skin or conjunctiva; constipation.—Thus far Schüssler. But whilst using his theory as a useful means of stringing many characteristics of *Nat. m*. together, it is necessary to free oneself from them entirely in order to see the remedy in all its range of action. A complete view of the symptom picture can alone give that. In old-school practice *Nat. m*. is used chiefly in solution as a douche or spray in nasal and other catarrhs, and in the mixture of "Brandy and Salt," in which large quantities of salt are given for pulmonary hæmorrhages. The relation to catarrh, which Schüssler brings out, is specific. Excessively fluent coryza, with much sneezing; sore nose, especially the left wing; cold sores on lips and nose; loss of smell and taste, are indications which I have verified repeatedly in acute colds and the tendency to them. With the coryza there is copious lachrymation; and whether or not Schüssler is right on the chemistry of the process, *Nat. m*. is indicated by *tears*. ("Flow of tears with cough" is Burnett's keynote of *Nat. m*. in whooping-cough, *H. W*., xviii. 179.) The characteristic of the tearful *Nat. m*. patient is that she (or he) wants to be alone; any attempt to console irritates beyond endurance. "Wants to be alone to cry." "Very much inclined to weep and be excited." There are even tears with laughter. For in addition to the sadness there is hysterical laughter; laughs till she weeps at things not at all ludicrous. The excitement of *Nat. m*. is always followed by melancholy. The hypochondriasis and hysteria of *Nat. m*. generally go *pari passu* in the degree of constipation; and *Nat. m*. is one of the most commonly needed remedies in that complaint. The most characteristic symptom in this connection is a sensation of "contraction of the rectum during stool; hard fæces at first evacuated with the greatest exertion, which causes tearing in anus, bleeding and soreness; afterwards thin stools also passed; constipated every other day." There is also retention of stool; and a feeling after stool as if there were more to pass. *Nat. m*. answers equally well to constipation and diarrhœa when the collateral symptoms

correspond. The constipation is often found associated with anæmia; with chilliness, cold feet and chills down the back; with indigestion such as is met with in victims of masturbation: *Nat. m*. is one of the most helpful of remedies in such cases. The unclean complexion of earthy line, "dirty face" in spite of any amount of washing, is a still further indication. The skin is greasy from excess of sebaceous secretion. *Nat. m*. corresponds to affections due to loss of fluids. This recalls *China*, with which it has a very important antidotal relation. Both correspond to the effects of masturbation, hæmorrhages, and loss of fluids; both are remedies for intermittent fever, and *Nat. m*. is the chief antidote to the effects of over-dosing with *China* and *Quinine*. Another important antidotal relation of *Nat. m*. is to *Arg. n*. And here another interesting fact appears-namely, the parallel between chemical and the dynamic action. Salt is the best antidote to poisoning with nitrate of silver, as it changes the soluble nitrate of silver into the insoluble harmless chloride. *Nat. m*. in the attenuations is also the best remedy for the ill effects of *Arg. n*. whether used as a cautery or administered as a medicine. Whenever there is a history of cauterisation and *Arg. n*. has been used, *Nat. m*. will do great good. Scrofulous ophthalmia which has been treated locally in vain with *Arg. n*.; sore throats that have been cauterised; the effects local and remote of uterine injections of *Arg. n*., or cauterisings of the os uteri. W. J. Guernsey (*H. P*., vii. 127) relates a striking instance of the last. Mrs. P., 32, complained of "lump" in the throat which could not be swallowed, and yet required constant efforts to do so. < On empty swallowing; yet on swallowing food it seemed to *pass over a sore spot. Bar. c., Lach., Bell*. were given in succession in vain. Remembering the injunction of the *Organon*, § 207, to inquire as to what allopathic treatment a patient has been subjected to in order to discover if there is anything to correct, Guernsey discovered that the patient had had a severe ulceration of the womb which had been "burnt out" several times and was "now well." She had had a very profuse discharge, but that had stopped, and on the same day she had commenced to "choke" with the throat trouble. *Nat. m*. 295m (F.) was given. In a few days the throat was better and the discharge had returned, much to the patient's horror. Without further treatment throat and vaginal discharge were both cured. Lambert has recorded (*L. H. H. Rep*., vii. 144) several cases of headache associated with errors of refraction and consequent eye-strain cured with *Nat. m*. 30. The headaches were noticed on waking. In one case it was like a cloud over brain with intense depression and had lasted ten years. It disappeared before the vision was corrected. The effect of living too exclusively on salt food in producing scurvy gives a key to the use of *Nat. m*. in many conditions of blood degeneration, hæmorrhage, and skin disorder and ulceration. In aphthous and ulcerative conditions of the mouth it is a leading remedy. The characteristic tongue of *Nat. m*. is either a mapped tongue, with red islands; or a clean shining tongue with froth along each side. There are many characteristic symptoms in connection with the tongue: hair sensation; numbness and stiffness of one side; heavy, embarrassing speech. *Nat. m*. corresponds to children who are late in talking. The tongue is blistered; sticks to roof of mouth. Dryness of mouth and throat. Unquenchable

thirst. Nausea. Vomiting. The drying-up property of *Nat. m*. is general. One very characteristic effect is dryness of vagina, with painful coitus; aversion to coitus (in the female); aversion to men. Menses may be early and profuse; or scanty and delayed. *Nat. m*. corresponds to many cases of anæmia, and especially to delay in the first appearance of the menses. Much bearing down and much leucorrhœa. Backache generally accompanies these, and the backache has this peculiarity, that it is > by pressure; by lying down with the back on something hard. There is also sensitiveness of the back and spinal irritation. With the menses there is generally headache, both before, during, or after. The headaches of *Nat. m*. are intermitting. They come on in the morning on first waking up and last throughout the day; or else they come on at 10 or 11 a.m. They are < from mental exertion. *Nat. m*. is one of the first remedies for headaches of schoolgirls. Headache with partial blindness. Headache much < by coughing. Throbbing; beating as with little hammers; pain as if the head would burst. The throbbing headache has its analogue in palpitation of the heart. *Nat. m*. is a great heart remedy. Fluttering palpitation with faint feeling, < lying down. In one case of huge hypertrophy with degeneration of most of the valves, the patient told me nothing gave her so much relief as *Nat. m*. (which I had given for some incidental condition). Very characteristic is sense of coldness at heart or precordia with trembling of heart. Constrictive sensations run throughout this remedy: in heart; chest scalp; throat; rectum; of anus (sensation as if anus were closed) cramps in uterus; vaginismus; contraction of hamstrings. Paralytic symptoms with numbness are the counterpart of these. *Nat. m*. has the sinking sensation of the antipsorics. Great hunger, with no appetite. Eats heartily but emaciates. Heartburn after eating. Emaciates whilst living well. Ravenous appetite but grows thin, especially about neck. There are some very characteristic desires and aversions: *Desires*: bitter things; beer; farinaceous foot; sour things; salt; oysters; fish; milk. *Aversion to:* bread; meat; coffee; tobacco. While eating, sweat on face. Is > when stomach is empty. After eating: empty eructations; nausea; acidity; sleepiness; heartburn; palpitation; epigastric pressure and heat radiating up to chest. Violent hiccough. The nausea and vomiting of *Nat. m*. have been turned to account in the morning sickness of pregnancy. One patient, who said she could "eat the brine out of a mackerel kit," was cured with a single dose of *Nat. m*. (*Amer. Hom*., xxiii. 385). *Nat. m*. is a great periodic remedy. It not only antidotes *Quinine*, but it causes intermittents on its own account. Chilliness predominates. Chill 10 to 11 a.m. with thirst, drinks after a meal; fever blisters round mouth. Fever with violent headache; great thirst; nausea; vomiting; blueness; faint; averse to uncover. Fever may come on without chill 10 to 11 a.m. Sweat > headache and other symptoms though it weakens; averse to uncover. There are many eruptions, herpes, hydroa, eczema. Eczema on hair margins, especially at back of head. Warts on palms of hands. Corns. Painful scars. *Nat. m*. is *suited to:* Cachectic persons; old people; teething children; anæmic, chlorotic people with catarrhal troubles; tuberculous; scrofulous; dropsical; emaciated persons. Among *Peculiar Sensations* are: As if head too heavy and would fall forward; as if some displacement in head had taken place; as if cold wind blowing

through head; as though forehead would burst on coughing; as if head in a vice; pain like a rope round head drawing tighter and tighter; as if nail driven in left side of head. As if eyeballs too large; as if foreign body in eyes; as if eye being torn open. As if a small worm squirming in nose. Of hair on tongue. Splinter in throat. Plug in throat. As if one had to swallow over a lump. Difficulty of talking, as if organs of speech weak. As if foreign body sticking in cardiac orifice behind sternum. When walking, as if abdominal viscera loose, dragging. As if rough, hard, foreign substance in rectum. As if there was a string between uterus and sacrum in hind part of fornix. Back as if beaten; broken. *Nat. m*. corresponds to effects of going to seaside; and if patients say they are always < at seaside or cannot stay by the sea, *Nat. m*. will probably be the remedy. Constipation at seaside. But > at seaside may also indicate it. There is great desire for open air and washing in cold water. < Heat of stove; of room; of sun. < In summer. Warm food < toothache. Drawing in air < toothache; cold drink < toothache. Likes to be covered but it does not >. Lying down > vertigo, headache, constriction of scalp; < cough; fluttering of heart. Lying on left side <. Moving, least exertion <. Exercising arms > breathing. Walking <. In back troubles, can stoop readily but it hurts to straighten. < Mental exertion; talking; writing; reading. < After sleep. Coitus <. Most symptoms are < in morning; < after sleep. < 10 to 11 a.m. < During full moon. < By eating. < From bread, acid food, fat, wine. < After breakfast. > Going without regular meals. < Touch and pressure. Full sensation is > by tight clothes. Back > lying on something hard. > Rubbing.

Relations.—*Antidoted by:* Smelling Nit sp. dulc.; Phos. (especially abuse of salt in food); Ars, (bad effects of sea-bathing). Nux will relieve headache if persistent, or prostration if prolonged after Nat. m. *Antidote to:* Arg. n. (abuse of, as cautery); Quinine (when diseases continue intermittent and patients suffer from headache, constipation, disturbed sleep); Apis (bee-stings). Nat. m. should not be given *during* the paroxysm of fever. *Complementary:* Apis, Sep., Caps. Nat. m. is the *Chronic* of: Ign. (its vegetable analogue); also of Apis and Caps. *Compatible:* Before—Sep., Thuja; after—Kali m., Kali p., Kali s., Nat. sul., Calc. ph., Fer. p. *Compare:* Borax, Nat. c., Nat. hyp., K. chl. In mapped tongue, Ars., Rhus, K. bi., Tarax., Ran. s. (acidity). Hypochondriasis with indigestion, Nat. s. (Nat. m. melancholy keeps step with the constipation; Nat. s. melancholy with degree of indigestion). Lachrymose, Puls. (> consolation), Sep., Ign. Schoolgirls' headache, Calc., Calc. p. Headache coming and going with sun, Spi., Gels., Glo., Sang. Headache with partial blindness, K. bi., Ir. v. Half sight, Aur., Lith. c., Lyc., Titan. Headache with cough, Caps., Bry., Sul. (Sul. occiput, Nat. m. forehead). Spurting of urine with cough, Fer., Scill., Caust., Pul. Ravenous yet wastes, Iod. (Nat. m., especially neck). Distended stomach > tight clothing, Fl. ac. (opp. Lach., Hep.). Hydroa labialis, Hep., Rhus, Ars., Camph. Herpes circinatus, Sep., Bar. c., Tell. Chill 10 a.m., Stn. (Stn. hectic, Nat. m. intermittent). Paralysed by emotion, Gels., Staph. Amenorrhœa, K. ca. (acts when Nat. m. fails). Backache, spinal irritation, K. ca. Cold feeling about heart, Petrol. Spinal irritation, Act. r. (Nat. m. > lying flat, Act. r. < from touch). Oily sweat on face, Bry. Intermittents, chill

beginning in small of back, Eup. pf.; Rhus (chill begins in one leg, or thigh, or between shoulders), Gels. (runs up spine). Prolapsus uteri, Sep., Lil. t. Sensation of foreign body in anus, Sep. (ball). Constriction in anus, Lach., Bell., Caust., Nit. ac., Ign., Op., Pho. Sadness during menses, Lyc., Nit. ac., Sep. (Nat. m. < or > 10 a.m.). Stitches in heart, Spi., Ars., K. ca., Carb. v. < After sleep, Lach., Sul. Ripping-up sensation of anus after stool, Sep. Stomatitis, Caps., Sul. ac. Dreams persist after waking, Chi. Chilblains on feet only, Lyc. Sinking 11 a.m., Sul. Breasts painful before menses, Calc., Con. Umbilical hernia with absence of urging, Bry., Ver. (with urging, Nux, Cocc.). Laughs at serious things, Anac., Pho., Lyc., Plat. Weeps if looked at, Kissingen. Hair sensation on tongue, Sil. Head and face > uncovering, Nat. c., Lyc. Headache from eye-strain, Onos. (Teste includes Nat. m. in his Lycopod. group, with Viol. t. and Ant. c.)

Causation.—Disappointment. Fright. Fit of passion. Loss of fluids. Masturbation. Injury to head. Quinine. Lunar caustic. Bread. Fat. Wine. Acid food. Salt.

SYMPTOMS.

1. Mind.—Melancholy sadness, which induces a constant recurrence to unpleasant recollections, and much weeping; all attempts at consolation <.—Obliged to weep.—Hypochondriacal, tired of life.—Joyless, taciturn.—Great tendency to start.—Hurriedness, with anxiety and fluttering of heart.—Prefers to be alone.—Anthropophobia.—Anxiety respecting the future.—Anguish, sometimes during a storm, but esp. at night.—Indifference, laconic speech, moroseness, and unfitness for labour.—Impatient precipitation and irritability.—Timidity.—Hatred to persons who have formerly given offence.—Irascibility and rage, easily provoked.—Inclination to laugh.—Laughs so immoderately at something not ludicrous that tears come into her eyes and she looks as if she had been weeping.—Alternate gaiety and ill-humour.—Laughs immoderately and cannot be quieted.—Difficulty of thinking; absence of mind.—Weakness of memory and excessive forgetfulness.—Heedlessness and distraction.—Tendency to make mistakes in speaking and writing.—Brain-fag, with sleeplessness, gloomy forebodings.—Exhaustion after talking, embarrassment of brain.—Incapacity for reflection, and fatigue from intellectual labour.—Distraction; does not know what he ought to say.—Awkwardness.

2. Head.—Painful confusion in head.—Emptiness of head with anguish.—Weariness in head.—Vertigo, during which everything seems to turn round before eyes, with tendency to fall forwards, esp. on walking and getting out of bed.—Vertigo: in forenoon; pressing head down when sitting; on rising from bed and on waking; on stooping; on turning round (on turning in bed from r. side to l.); everything seems to turn in circle; with flickering before eyes and dulness of head; and nausea woke her 5 a.m., > lying with head high; on crossing a stone bridge the stones seemed to sink under feet; > lying down; keeping quiet; by cold applications.—Intermittent reeling like vertigo; < moving head, like a thrust from vertex to forehead, for the

moment depriving him of his senses.—Burning on the vertex.—Vertigo, with shocks in head and dizziness.—Violent headache, as if the head would burst.—Sensation of congestion of blood to head; head feels heavy.—Stitches through head, extending to neck and chest.—Heat in head, with redness of face, nausea and vomiting.—Periodical headaches during, after, or before menses.—Headache in morning, on waking; on turning, and while moving body or head; when running; or in cold air; or after being thwarted.—Heaviness of head, every day, esp. in occiput, forcing eyes to close; < in the morning; from warmth and motion; > when sitting, lying, or perspiring.—Headache, as if head were about to split; or as if it were tight and compressed, esp. when writing.—Fits of headache, with nausea and vomiting (eructations, colic, and trembling of limbs).—Aching and compression in head, esp. in temples and above eyes, < by frowning.—Acute pullings and shootings in head, esp. above eyes, with want to lie down, and clouded sight.—Lancinating shocks across head.—Throbbing, pulsation, and hammering in head, esp. during movement, > when lying with head high; > by perspiration.—Rheumatic (tearing) pain in head, from root of nose extending to forehead, with nausea, vomiting, vanishing of sight; < in morning when waking from sleep, from mental exertion and motion; > sitting still or lying down.—Throbbing and drawing pains in forehead.—Sensation on moving head as if brain wavered.—Painful sensitiveness of scalp, as if excoriated.—Contraction and mobility of scalp.—Tendency of head to become easily chilled.—Sweat on head, esp. in morning and at night.—Scurf on scalp.—Great sensitiveness of scalp; with greasy, shining face; sensitiveness of forehead and the borders of hair; < in warm room, > in open air.—Itching eruption of margins of hair at nape of neck.—Abundant falling off of hair (as soon as it is touched, more on forepart of head and temple), even of whiskers; and on the genitals, esp. during child-bed.

3. Eyes.—Itching in eyes.—Shootings, smarting, and burning in eyes.—Inflammation of eyes.—Corrosive lachrymation (morning).—Frequent lachrymation.—Secretion of humour in external canthi.—Nocturnal agglutination of eyes.—Eyelids continually red and ulcerated.—Inflammation of eyes with ulcerated lids and glutinous mucus in (external) canthi.—Spasmodic closing of lids, esp. in morning, in the evening (during twilight) and at night.—Eyes give out on using them.—(Headache associated with eye-strain; esp. headache on waking.).—Feeling as if balls were too large and compressed.—Pressure in eyes on looking intently at anything.—Sensation of sand in eyes, mornings.—Cloudiness of sight when stooping and walking, as well as on reading and writing.—Sight confused, as from down before eyes, or looking through a veil.—Letters appear confused, when reading.—Diplopia.—Hemiopia (perpendicular).—Presbyopia.—Weakness of sight, as from incipient amaurosis.—Black specks, luminous marks, and sparks before eyes.—Fiery, zigzag appearance around all things.—Affections of r. eye; angles of eyes; momentary loss of sight.—Myopia.

4. Ears.—Shootings in ears.—Pulsations and beatings in ears.—Swelling and heat of ears.—Discharge (of pus) from ears.—Hardness of hearing.—Tinkling, ringing,

rumbling, and humming in ears.—Painful cracking in ear when masticating.—Itching behind ears.

5. Nose.—Numbness and insensibility of one side of nose.—Inflammation and swelling of nose, on one side (l.) only, with pain when touched.—Boring in bones of nose. Excoriation of interior of nose, with swelling of interior wings.—Scabs and scurf in nose.—Scurf on the nose.—Loss of smell and taste.—Abortive sneezing.—Obstruction and dryness of nose.—Dry coryza, sometimes in morning only.—Violent coryza, fluent or dry, with loss of smell and taste, and sneezing.—Bleeding of nose (when coughing at night) when stooping.—Blood clotted.—Painful burning pustules below septum of nose, afterwards confluent and covered with a scab.

6. Face.—Face yellowish, pale, livid, earthy.—Face shining, as if greasy.—Swelling of face.—Itching and eruption of pimples on face and forehead.—Heat in face.—Pains in zygomatic process, during mastication, like those of ulceration.—Lips dry, chapped, cracked, or excoriated and ulcerated, with scabs, and burning and smarting eruption.—Fever blisters on the lips.—Ulcer on (l.) cheek.—Tingling and numbness of lips.—Tettery eruption round mouth.—Swelling of lips.—Sanguineous vesicles in internal surface of upper lip, with burning pain when touched.—Granulated and ulcerated eruption on chin.—Frequent swelling of submaxillary glands.

7. Teeth.—Teeth very sensitive to air and touch.—Drawing, like extraction, in teeth, extending into ear and throat, after a meal, and at night, with swelling of cheek.—Lancinations, boring, and pulsation in carious teeth.—Looseness and caries of teeth.—Fistula in gums.—Gums swollen, easily bleeding, and very sensitive to cold or hot things.—Putrid inflammation of gums.—Ulcers in gums.

8. Mouth.—Ulcers and vesicles on tongue and in mouth, with burning smarting, and pain from contact with food and drink.—Blisters like pearls about the mouth; esp. in intermittent fever.—Hæmoptysis.—Speech embarrassed in consequence of heaviness of tongue.—One half of tongue numb and stiff.—Tongue stiff and, with hard palate, unusually dry.—Prolonged sensation, as of a hair on tongue.—Dryness of mouth, lips, and esp. of tongue.—Burning at tip of tongue.—Mapped tongue; red insular patches; ringworm on r. side.—Tongue: clean, shiny, bubbles of frothy saliva along sides; clean in front, dirty at back; broad, pallid, puffy, with pasty coat.—Swelling under tongue, with stinging pain; ranula.—Numbness on lips and one side of tongue (trifacial and glosso-pharyngeal paralysis.).—Copious salivation; saliva salty.

9. Throat.—A sensation during deglutition as of a plug in throat.—Spasms in the throat.—Swelling; sensation of constriction and stitches in throat.—Long-continued sore throat, with sensation as if she had to swallow over a lump.—Inflammation of throat, with shooting pain and ulceration.—Expectoration of mucus, on hawking,

esp. in morning.—Frequent hawking of salty-tasting mucus.—Swelling of cervical glands.

10. Appetite.—Loss of taste (and smell).—Bitter taste in mouth.—Putrid or acid taste, as when fasting.—Putrid taste of water.—After-taste of food, esp. of acids.—Continual thirst, often with nausea, distension of abdomen, and other unpleasant symptoms after drinking.—Loss of appetite, esp. for bread, and repugnance to tobacco smoke.—(Vomiting of pregnancy with aversion to bread.).—Dislike to food, esp. when fat.—Sufferings from acid food, from bread, fat, and wine.—Immoderate appetite in afternoon and evening.—Bulimy, without appetite, with fulness and satiety, however little may have been eaten.—Desire for acids.—Longing for bitter food and drink.—Sweat on face during a meal.—After a meal, empty risings, nausea, fulness and inflation of the abdomen and stomach, somnolence, head confused, acidity in the mouth, and pyrosis, palpitation, and intermittent or accelerated pulse.—Disagreeable risings after fat food or milk.

11. Stomach.—Risings, with taste of food.—Violent hiccough.—Sensation as if a foreign body were sticking in the cardiac orifice and behind sternum.—Acid and acrid risings, sometimes with taste of food.—Pyrosis, which ascends from stomach.—Nausea, esp. in morning.—Waterbrash, with revolving sensation in stomach, sometimes followed by a sour vomiting of food.—Vomiting of food and bile.—Aching of stomach in morning, or during the day, with nausea, and sudden sinking.—Pressure at epigastrium, as if there were a hard body in stomach.—Epigastrium swollen and painful, when touched and pressed, as if it were ulcerated.—Contractive cramps in stomach, sometimes with nausea.—Shocks and clawing in pit of stomach.—Pulsation in epigastrium.—Red spots on pit of stomach.

12. Abdomen.—Drawing, tension, pressure, pinching, and shootings in hepatic region (chronic inflammation of liver).—Pain, shootings, and pressure in splenic region.—(Reduces size of enlarged spleen.).—Cramp in diaphragm on stooping.—Inflammation of abdomen.—Swelling of abdomen.—Tensive, pressive, and hypochondriacal uneasiness in abdomen.—Pressive pain in abdomen.—Drawing and contractive pains in abdomen, like labour pains.—Daily cuttings and pinchings in abdomen, sometimes in morning, and at night.—Rigidity in l. side of abdomen.—Incarceration of flatus, sometimes at night.—Colic with nausea > by discharge of flatulence.—Loud grumbling and borborygmi in abdomen.—Burning in intestines.—Pain in ring when coughing, extending into testicles, as if spermatic cords would be torn to pieces.—Protrusion of hernia.

13. Stool and Anus.—Constipation, sometimes prolonged, or every second day.—Frequent, urging, and ineffectual effort to evacuate, or scanty evacuation.—Stools difficult to discharge, hard, dry, crumbling, like sheep's dung.—Hard and broken evacuations.—Difficult evacuation of fæces, often with tearing and shooting in rectum and anus.—Evacuations too frequent.—Prolonged

relaxation of abdomen.—Diarrhœa like water, with colic.—Alternate constipation and diarrhœa, irregular unsatisfactory stools.—Diarrhœa, with colic, and evacuation of mucous matter.—Painless watery diarrhœa.—Involuntary evacuations.—Discharge of blood during evacuations.—Burning in anus and rectum, during and after stools.—Shootings, excoriation, and pulsation in rectum.—Cramp-like constriction, and feeling of contraction in rectum.—Prolapsus recti, and burning pain in anus, with oozing of sanguineous and sanious matter.—Painful and shooting hæmorrhoidal tumours in anus.—Excoriation in anus, and between the buttocks, esp. when walking.—Tetters in anus.—Lumbrici.

14. Urinary Organs.—Frequent and urgent want to urinate, day and night, sometimes every hour, with copious emission.—Involuntary emission of urine, sometimes on coughing, walking, laughing, or sneezing.—Nocturnal emission of urine.—Clear urine, with red sediment, resembling brick-dust.—Discharge of mucus from urethra, after the emission of urine.—Discharge of mucus from urethra during and after urination, causing itching and biting.—Discharge of mucus from urethra, which is sometimes yellowish, as in gonorrhœa.—After micturition spasmodic contraction in abdomen; burning, drawing, and cutting in urethra.—During micturition stitches in bladder, smarting, burning in urethra; smarting and soreness in vulva.—Urine dark, like coffee, or black.

15. Male Sexual Organs.—Itching, tetters, and excoriation between scrotum and thighs.—Itching and stinging on glans and scrotum.—Secretion behind glans, like gonorrhœa balani.—Phimosis.—Excessive excitement of genital organs, and of the amative feelings; or dulness of sexual desire.—Want of energy during coition.—Impotence.—Pollutions after coition.—Strong fetid odour from genital organs.—Hydrocele.—Loss of hair from pubes.

16. Female Sexual Organs.—Pressure and general bearing down towards genital organs every morning; has to sit down to prevent prolapsus.—Prolapsus uteri with aching in loins, > lying on back; cutting in urethra after micturition.—Catamenia premature and profuse; or retarded and scanty.—Sterility, with too early and too profuse menstruation.—Prolonged catamenia.—Suppression of catamenia.—Difficulty in appearance of first menses.—Headache before, during, and after catamenia.—Before catamenia, moroseness and irritability.—At commencement of catamenia, sadness.—During catamenia, cramps in abdomen.—Spitting blood at menstrual nisus; bloody saliva.—Itching in genital organs.—Repugnance to coition.—Coition: painful from dryness of vagina; burning smarting during; in anæmic women with dry mouth and dry skin.—Leucorrhœa, with headache, disposition to diarrhœa, colic, and mucous evacuations.—Acrid (greenish) leucorrhœa (increased discharge when walking), with yellow colour of face.—Abundant discharge of transparent, whitish, and thick mucus from vagina.—Vulvitis with falling off of hair.—Itching of external parts with falling off of hair.—Pimples on mons veneris.—Nausea and vomiting during pregnancy; morning sickness with vomiting of frothy, watery phlegm.—During pregnancy:

dysuria; albuminuria; craves salt; congestion to chest; palpitation; hæmorrhoids; cough; escape of urine.—Labour slow, pains feeble, apparently from sad feelings and forebodings.—Loss of hair in children or during lactation.—Child refuses breast; nursing sore mouth.—Lancinating pains in breasts.—Stitches beneath nipples.—Dull stitch beneath r. nipple, also in abdomen.—Breasts sensitive to slightest touch.

17. Respiratory Organs.—Hoarseness, and sensation of dryness in larynx.—Dry cough with rattling in chest.—Accumulation of mucus in larynx in morning.—Chest embarrassed with catarrh and cough.—Cough excited by a tickling in throat, or in epigastrium, day and night, esp. on walking or taking a deep inspiration.—Cough in morning.—Choking, spasmodic cough in bed, in evening.—Short, chronic cough, with expectoration of mucus and swelling in chest.—Cough, with expectoration of bloody mucus.—Cough, with sanguineous expectoration, retching and vomiting.—Pains in head, on coughing, as if forehead were about to burst.—Whooping-cough caused by tickling in throat or pit of stomach, with expectoration (only in morning) of yellow or blood-streaked mucus, with violent pain in head, or with shocks; beating and hammering in head; involuntary micturition; stitches in liver.—Tears stream down his face whenever he coughs (whooping-cough). Breath: hot; offensive.—Shortness of breath, esp. when walking quickly.—Obstructed respiration, esp. during manual labour, > when exercising arms and in the open air.—Wheezing respiration in bed, in evening.

18. Chest.—Pains in chest (dyspnœa on ascending stairs and shortness of breathing), as if caused by internal tension.—Stitches in the chest and sides with shortness of breathing, esp. when taking a long inspiration.—Breath short and chest tight, and as if a dry stick of wood were down the throat, with cough.—Lancinating pains in chest and sides of chest, with impeded respiration, sometimes when taking a full inspiration, and when coughing.

19. Heart.—Anxious and violent palpitation of heart at every movement of body, but principally when lying on l. side.—After eating, breath impeded, with violent palpitation.—Jerking and shooting pain in region of heart.—Fluttering motion of heart.—Irregular and intermittent palpitation of heart.—Jerking movement of heart.—Enlargement of heart.

20. Neck and Back.—Aching, rigidity, and tension in nape.—Stitches in neck and back of head.—Painful stiffness of the neck.—Throat and neck emaciate rapidly, esp. during summer complaint.—Goître of a large size.—Scurf under axillæ.—Scabs in axilla; painful soreness of cervical glands when coughing.—Engorgement of axillary glands.—Contusive pain and feeling of paralysis in sacrum, esp. in morning.—Paralytic weakness nearly all day, > from lying, < from eating.—Shootings, incisive pains, and violent pulsation in sacral region.—Tearing across loins and hips.—Nocturnal pains in back.—Over-sensitiveness of

spine.—Pain in back > by lying on something hard.—Lassitude, pressive tension, and pulling in back.

22. Upper Limbs.—Wrenching pains in joints of shoulders and fingers.—Lassitude and paralytic heaviness of arms.—Contusive pain in arms and hands, but esp. in shoulder-joints (sensation of lameness and of a sprain), which prevents arms from being elevated or moved.—Digging in arms.—Shocks in elbow.—Lancinations in muscles and joints of hands and fingers.—Brownish spots on back of hand.—Warts on palms.—Skin of hands dry and cracked, esp. round the nails.—Coldness of hands.—Cramp in arms, hands, finger and thumb.—Sweat on hands.—Difficulty in bending the joints of the fingers.—Numbness and tingling in the fingers.—Tingling in the hands (and feet), esp. on joints and tips of fingers and toes.—Trembling of hands when writing.—Swelling of r. hand.—Numerous flaws in the nails.—Hang-nails.—Whitish hives on arms and hands.—Panaritium.

23. Lower Limbs.—Wrenching pain in hips, with shootings.—Drawing pains in thighs, knees, and legs.—Restlessness and jerking in limbs (in legs, compelling one to move them constantly).—Paralytic weakness of legs, and esp. of joint of foot.—Pain as if knees and ankles were sprained.—Weakness and trembling of lower extremities, on rising from a seat, > from continued walking.—Jerking of muscles of thighs.—Tension in bends of limbs and sensation as if the tendons were shortened; painful contraction of tendons of ham.—Wrenching pain in joints of knee and foot.—Lassitude in knees and calves.—Cramps in lower legs and calves.—Tetters in hams.—Tension in legs and calves.—Great heaviness in legs and feet.—Burning in feet.—Swelling of feet.—Coldness of feet.—Pain as from ulceration in malleoli, when putting down foot, and on touching the parts.—Sensation as if limb had gone to sleep (feet, fingers).—Suppression of perspiration of feet.—Redness of great toe, with acute pullings and shootings, when walking, and after standing a long time.—Tetters on malleoli.—Corns on feet, with shooting and boring pains.

24. Generalities.—Pressive drawing in limbs.—Rigidity of all joints, which crack when moved.—Contraction of tendons (muscles shortened).—Jerking in the muscles and limbs.—Jerking of r. side and head.—Tendency to dislocation, and to strain back.—Old sprains.—Paralysis.—Swelling of glands.—Fungus hæmatodes; polypus; hang-nails.—Fits of uneasiness, esp. in morning or evening, with nausea, weakness, deadly paleness in face, headache, numbness of limbs, want to lie down, &c.—Bad effects of a disappointment.—After fright, chorea.—After fit of passion, paralysis. The symptoms manifest themselves, are renewed, or <, generally when lying down, and esp. at night, or in morning; and are > by rising up in bed.—The nocturnal pains suspend respiration, and occasion a sort of semi-lateral paralysis.—General ebullition of blood, with pulsation over whole body, on slightest movement.—Trembling of whole body, caused by tobacco smoking.—Congestion in head, chest, and stomach, with coldness of legs.—Obstruction from inactivity of the bowels.—Affections of the pit of the

stomach; rectum; external belly.—Reddish urine; complaints after making water.—Uneasiness and inconvenience after prolonged speaking.—Great relaxation of all physical and moral powers, after fatigue.—Heaviness and indolence, esp. after having risen in morning, with repugnance to movement and walking.—Excessive soreness and lassitude in limbs, esp. in morning, and when seated.—Hysterical debility; in morning in bed.—Great weakness.—Alternate weakness and agility in limbs.—Great emaciation (more of body than face).—Tendency to take cold.—Inquietude in body, with shivering.

25. Skin.—Miliary eruption, with shooting pain.—Itching and pricking in skin.—Rash over whole body, with stinging sensation in skin.—Red tetter in hollow of knees.—Pain and redness of an old cicatrix.—Skin of hands, esp. about nails, dry, cracked; hang-nails.—Whitish hives on arms and hands.—Itching tubercles.—Nettle-rash after violent exercise (itching).—Tetters.—Furunculi.—Exanthema on mouth; lips; in intermittent fever where there are large exanthematous spots looking like large peas, on lips (cold sores); lips look puffy.—Warts; on palms of hands.—Panaritium.—Varices.—Corns.

26. Sleep.—Great drowsiness during day, with frequent yawning.—Retarded sleep, and sleeplessness at night, with ineffectual efforts to go to sleep.—Difficulty in falling asleep again, at night, after awaking.—Difficulty in waking, and excessively drowsy lassitude early in morning.—Agitated sleep, full of vivid and lascivious dreams, with prolonged erections and pollutions.—Anxious, distressing dreams, with tears and talking during sleep.—Frightful dreams of quarrels, murders, fire, thieves, &c.—Dreams of thieves in the house, making so strong an impression that patient wakes up and cannot go to sleep again until the house has been searched; fantastic dreams.—Dreams of burning thirst; starts and talks in sleep and tosses about.—Dreams which still keep possession of the mind after waking, and which are believed to be realities.—Ebullition of blood at night, with anxious heat (perspiration, violent throbbing of the arteries) and palpitation of heart.—Nightmare.—Somnambulism.—At night, pains in back, quivering, apparently of the nerves, frequent emission of urine, headache, colic, asthmatic sufferings, and great anguish of body.

27. Fever.—Frequent, internal, shudderings.—Continued shivering and want of vital heat.—Chill predominates; chilliness internally, as from want of vital heat, with icy coldness of hands and feet (evening).—Continued chilliness from morning till noon.—Shivering, with and without thirst.—Shivering and shuddering, with drowsiness, followed by slight perspiration.—Flushes of heat and shivering alternately, with headache; chilliness over back and perspiration in axilla and on soles of feet.—Continuous heat in afternoon, with violent headache and unconsciousness; they are gradually > during the perspiration which follows.—Violent perspiration > the painful symptoms present during fever.—Debilitating, somewhat sour-smelling perspiration.—Chilliness with increasing headache in forehead every day at 9 a.m. until noon; afterwards heat

with gradually increasing perspiration and thirst, the headache decreasing afterwards gradually.—Heat with burning thirst.—Dejection before fever.—Before shivering, headache; during shivering, short breathing, yawning, and desire to sleep.—During heat, violent headache, dizziness, cloudiness of eyes, vertigo, and redness of face.—Fever, with pains in bones, pains in back, yellowish complexion, headache, weakness, bitter taste in mouth, ulceration at commissures of lips, want of appetite, pressure at pit of stomach, with great sensitiveness of that part to touch; quotidian or tertian fever, generally commencing in morning by shiverings, followed by heat and thirst.—In forenoon chilliness for three hours, with blue nails and chattering of teeth; this is followed by heat, lasting as long, accompanied by obscuration of sight, stitches in head much thirst, pains in back, followed by perspiration.—[Ague, fever at noon, generally 9 to 11 hard chill, great thirst for large quantities of water, longing for salt food, headache during the heat, profuse sweat and complete apyrexia leaving languor and debility.—Spleen and liver enlargement and obstinate constipation.—Pernicious fever and fever with anæmia often benefited by *Nat. m*. (Majumdar)].—Typhus fever, with debility, dryness of tongue, and violent thirst.—Pulse irregular and often intermittent (esp. when lying on l. side).—Pulse at one time rapid and weak, at another full and slow.—The pulsations shake whole body.—Intermittent fever: chilliness with great thirst; afterwards great heat with violent thirst and excessive headache; at last profuse perspiration.—Intermittent fevers after the abuse of *Chininum sulph*. (< during hot stage).—During apyrexia: stitches about the liver; languor; emaciation; fever blisters on lips.—Sweat in morning.—Profuse sweat, too easily excited by movement.—After the fever passes off the patient wishes to retain a recumbent position, does not "feel able" to get up or go about anything.

Natrum Nitricum.

Nitrate of Sodium. Cubic Nitre. Chili Saltpetre. Sodic Nitrate. $NaNO_3$, Trituration. Solution.

Clinical.—Anæmia. Constipation. Debility. Distension. Flatulence. Otalgia. Otitis.

Characteristics.—*Na. n*. has had a considerable proving, and among the peculiar symptoms were: Heat in left ear; coldness in right. Heat spreading left to right. Coldness streaming through upper part of body. Coldness of left foot. Pressing-inward pains: in temple and forehead; in malar bones. Flatulent troubles with weight in lower abdomen. Painful retraction of abdominal muscles. Painful constipation. Anæmia and excessive exhaustion. The symptoms were < by exertion; ascending stairs; sitting bent over; deep inspiration. *Na. n*. was Rademacher's *Aconite*. He used it in inflammations of all kinds, especially laryngo-tracheitis and croup, acute pneumonia, acute rheumatism and heart affections, purpura, hæmorrhages, inflammations of the eye, exophthalmic goître (Hansen).

Relations.—*Compare:* K. nit. Abdomen mostly contracted, constipation, Plumb. (Na. n. should be a good antidote to lead poisoning).

SYMPTOMS.

1. Mind.—Great ill-humour (mental indolence).

2. Head.—Head dull; as from too much study.—Pressing inward pain l. temple and forehead, with heat.

4. Ears.—Pain in r. ear, as if in drum; with sensation of binding up in ears.—Otalgia: in evening; with warmth in ear, coldness of r. concha, burning heat of l., which extends beyond the temple.

6. Face.—Face pale, thin.—Inward pressing in malar bones.

8. Mouth.—Tongue whitish.—Distressing burning dryness in mouth and throat.

9. Throat.—Some dull stitches back of throat on drawing air through nose (evening, in bed).

10. Appetite.—Coppery taste on lips and tongue.—Acid taste.—Appetite diminished.—Repugnance to coffee.

11. Stomach.—Sour risings.—Sufferings from flatulency, with pressive pains, esp. in epigastrium and chest, < by movement, and > by risings or expulsion of flatus.—Flatulence with pressure in pit of stomach and under sternum.

12. Abdomen.—Distended abdomen, with a feeling of heaviness in it, followed by emission of a quantity of wind and eructations.—Painful retraction of abdominal muscles towards spinal column.

13. Stool and Anus.—Constipation: fæces of a large size; the stool is discharged with difficulty, slow, and with the sensation after the stool as if the fæces were still remaining.—Stool always consisted of isolated fæcal masses, evacuated with great exertion; during last days of proving constant desire to go to stool.—Stool indolent, only after effort, leaving sensation as if more to follow.—Stool retarded one day.

14. Urinary Organs.—Frequent distressing desire, increased mucous secretion of passages.—Profuse emission (in spite of summer heat and profuse perspiration).—Urine very light colour and high specific gravity.

18. Chest.—Pressive pains below outer part r. pectoral muscle, as if between and on ribs, on deep breathing, whilst sitting bent over.

19. Heart.—Pulse become slower; smaller, softer.

21. Limbs.—Aching, contusive pain in the joints; and in adductors of thighs.

22. Upper Limbs.—Pressing-asunder pain in first joint of r. index and middle fingers.

24. Generalities.—The blood became colour of cherry juice; white corpuscles increased, red diminished; watery constituents increased.—Weakness, disinclined for exertion.—Exhaustion, esp. in knees, during a walk (after a slight venesection).—Exhaustion < every motion, esp. going up stairs.

26. Sleep.—Overpowering inclination to sleep, which, however, did not refresh.

27. Fever.—A fine cold sensation streams through body, esp. upper part and arms, followed by increased warmth after a quarter of an hour in bed.—General shivering chill at times.—Feet cold (and feel cold) up to calves.—Icy coldness of l. foot extending half up leg (both in warm room and when walking).—Whole l. concha becomes burning hot, r. remaining cold; heat soon extended over l. temple, then changed to pressing-inward pain; later heat spread to r. side of head, esp. concha, thence over face with pressive pain in l. frontal sinuses, in afternoon.

Natrum Nitrosum.

Nitrite of Sodium. $NaNO_2$. Trituration. Solution.

Clinical.—Angina pectoris. Apoplexy. Cyanosis. Fainting. Gastro-enteritis.

Characteristics.—Ringer and Murrell (*Lancet*, November 3, 1883—*C. D. P.*) administered ten grains of *Na. ntrs.*, dissolved in an ounce of water, to fourteen men and four women. To twelve men and four women it was given in five-gr. doses. In almost all it produced alarming symptoms of the apoplectic order. A cat had 4 c.c. of a 10 per cent. aqueous solution injected under the skin, and died of the effects. Collischorm (quoted *H. P.*, x. 469) relates two cases of accidental poisoning with *Nat. nitros*. (*1*) The first patient was affected with: Diarrhœa and fainting, bitter eructations, heavily coated tongue, and on the chest an eruption like syphilitic roseola. Traces of albumen in urine. During the night, copious alvine discharges with faintishness. The following day, intense cyanosis. Urine dark yellow, containing copious urates. Next day he took 2.5 grin.; cyanosis diminished and the measly eruption spread all over the body except the face. (*2*) The second patient had the cyanosis, diarrhœa, and faintings in an aggravated form so that collapse threatened. Strong Coffee and omission of the drug removed the symptoms. < Motion. > Lying down. The concomitance of fainting with other affections may prove a keynote: "Copious liquid stools at night with faintness."

Relations.—*Antidoted by:* Coffee. *Compare:* Amyl. nit. Glon. < By motion, Bry.

SYMPTOMS.

1. Mind.—Thought she would have died.—So much upset she feared she would never get over it.

2. Head.—Giddy, as if he would become insensible; lips, face, hands became blue, had to lie down half an hour before he dared move.—Face and head seemed swollen throbbed violently till she thought they would burst.—Head felt as if it would split in two.—Terrible headache, < on motion, esp. going up stairs.

3. Eyes.—Staring eyes and livid lips.—Pupils widely dilated (cat).

6. Face.—Face lips, hands turned blue.—Lips turned black and throbbed for hours.—Deadly pale.

8. Mouth.—Tongue protruded, dark colour (cat).—Heavily coated tongue.

11. Stomach.—Bitter eructations.—Feels very sick, but did not actually vomit.—Nausea and eructations.—Vomiting (two cases from 5-gr. doses).—The medicine kept rising, so he could not keep it down.—Stomach firmly contracted (cat).

12. Abdomen.—Intestines firmly contracted (cat).—Liver of dark colour (cat).

13. Stool.—Diarrhœa; copious stools with fainting; in the night.

14. Urinary Organs.—Bladder firmly contracted (cat).—Urine: dark yellow; copious urates; trace of albumen; methæmoglobin.

19. Heart.—Heart came on beating very fast; he throbbed all over.—L. ventrical contracted, r. dilated (cat).—Blood very dark, almost like treacle (cat).

24. Generalities.—Took all his strength away.—Trembling sensation all over and suddenly fell on the floor.—The women were more severely affected than the men.—Ten minutes after the dose felt a trembling sensation all over and suddenly fell on the floor; whilst lying there she perspired freely; face and head felt swollen, throbbed violently; felt sick.—Faintness, nervousness.—Went off in hysterics, could not hold a limb still.

25. Skin.—Rash like roseola syphilitica on chest, measly, spreading to abdomen and thighs, covered gradually all the body except the face.

27. Fever.—Violent perspiration.

Natrum Phosphoricum.

Phosphate of Soda. Hydric Disodic Phosphate. Na_2HPO_4, $12H_2O$. Trituration. Solution.

Clinical.—Acidity (infants). Conjunctivitis. Diabetes. Dyspepsia. Enteralgia. Erysipelas. Gastralgia. Glands, scrofulous swelling of. Goître. Gout. Intertrigo. Leucocytosis. Leucorrhœa. Morphinomania. Phthisis. Post-nasal catarrh. Rheumatism. Scrofula. *Sighing*. Sterility. *Threadworms*. Urticaria. *Worms*.

Characteristics.—As *Nat. phos*. is one of Schüssler's introductions I will first quote what he has to say about it: "*Nat. phos*. is contained in the blood-corpuscles, in the cells of the muscles, of the nerves and of the brain, as well as in the intercellular fluids. Through the presence of *Nat. p*. lactic acid is decomposed into carbonic acid and water. *Nat. p*. is able to bind to itself carbonic acid, receiving into itself two parts of carbonic acid for every volume of phosphoric acid. When it has thus bound the carbonic acid it conveys it to the lungs. The oxygen flowing into the lungs liberates the carbonic acid, which is only loosely attached to the *Nat. p*.; the carbonic acid is then exhaled and exchanged for oxygen, which is absorbed by the iron of the blood-corpuscles. *Nat. p*. is the remedy for those diseases which are caused by an excess of lactic acid. It therefore answers to the diseases of infants, who, having been fed to excess with milk and sugar, suffer from redundant acids. The symptoms in such cases are: Sour eructations, vomiting of sour, cheesy masses; yellowish-green, so-called hacked diarrhœas; colic, spasms with acidity. Uric acid is dissolved in the blood by two factors, the warmth of the blood and *Nat. p*. If uric acid is deposited from its solution in the joints or near them, owing to a deficiency of *Nat. p*., or when it combines with the base of *Carbonate of soda* into urate of soda, which is insoluble, then there arises podagra or acute arthritic rheumatism. During an acute attack of podagra the secretion of uric acid in the urine is diminished by just so much as is retained of it in the diseased parts. *Nat. p*. also serves to saponify the fatty acids; it therefore cures those dyspeptic ailments which arise from eating fat food, or which are aggravated thereby."—*Nat. p*. has been proved, chiefly in the attenuations, under Farrington's direction. Schüssler's indications do not all appear in the provings, but I insert them in the Schema and distinguish them by (S). The correspondence is tolerably close. In the proving the nose-irritation and itching anus of the worm-condition was developed. Atony of bladder. Hair sensation on tongue. Tightness of muscles and tendons. Seminal emissions. Charles Mohr, who was one of the provers, relates in *Amer. Med. Monthly* (Oct., 1897) the effect it had on him and the use he made of it. After being under the influence of the drug some time (without knowing what it was) he had much itching at the ankle-joints, with an eczematous eruption. Fear, especially at night, that something would happen. Headache; some nausea; defect of vision, one pupil dilated. The symptoms had to be antidoted with *Sepia*. Two years after, Mohr had a patient with visional disturbance and headache, and when these were at their

worst he had a sense of fear, < at night, and an eruption about the ankles which began with itching. *Nat. p*. 6x cured promptly. M. J. Luys (*H. W*., xxxiv. 477) has successfully overcome the morphia habit by subcutaneous injections of *Nat. ph*. with glycerine and water.—The symptoms are < walking, especially up stairs. Warmth of bed = itching at anus from worms. Thunderstorm < pains; = trembling and palpitation. When big toe pains heart pains are >. There is periodicity in the action. < From coitus.

Relations.—*Antidoted by:* Sep. (especially eruption and swelling about joints); Apis (urticaria). *Compare:* Acidity and scrofula, Calc., Rheum. Gout, Benz. ac., Guaiac., Lyc., Urt. ur., Sul. Gastric catarrh, Calc., Carb. v., Kali c., Nux, Robin., Carbol. ac. Speech impeded, Nat. m. Hair sensation, Nat. m., K. bi., Sil. < From coitus, K. ca., Caust. Worms, Abrot., Cina, Teucr. Drinking water = cough, Sil.; (Caust. > cough). Emissions causing weak back and knees, Nat. m.

Causation.—Sugar. Milk. Fat food. Bitter foods. Thunderstorms.

SYMPTOMS.

1. Mind.—Melancholy, esp. after emissions.—Despondent; could not study; imagined he was going to have typhoid fever.—Fears bad news.—Nervous fears on waking.—Easily startled.—Irritable.—Memory lost.

2. Head.—Dizzy, as if he would fall; objects turn round on rising or moving.—Dulness in head and at root of nose.—Fulness in head; flushes of heat, afterwards sweat.—Fulness in forehead, over eyes; in morning; while studying; With cutting in r. temple.—Sharp cutting r. side of head with, at times, dull aching over eyes.

3. Eyes.—Eyes weak; < from gas-light 8 p.m.—Slight burning, lachrymation, must rub eyes.—Cutting in r. eye.—Eyes feel as if sand in them.—Pain over eyes.—Pressure on r. eye during menses.—Pressure over r. eye with sighing.—Pain in l. orbit, with pain in bowels, extending up into chest; flatulence.—R. supraorbital neuralgia.—Lids heavy, itch along margins.—Dryness of l. eyeball with bruised pain.—Vision: dim; flickering; halo round gas-light.—(Squinting, with worms.).—Disturbed vision, one pupil dilated.

4. Ears.—Lobe of r. ear burning and itching so intolerably has to scratch it till it bleeds.—Sensation in ears as of water dropping from a height into a long round vessel.—Fulness in ears, aching in r. meatus.—Itching and tickling in (r.) Eustachian tube from middle ear.—Imagines he hears footsteps in next room.

5. Nose.—Fulness at root of nose; skin feels drawn tight over it.—Nose as if full of mucus, but discharge slight.—L. nostril sore, painful; picks it constantly; scales

form.—Pricking in l. (and r.) nostril, brings tears to eyes.—Offensive odour before nose.

6. Face.—Shooting pain in r. cheek.—Peculiar stitching pain along cheek into ears.—Great soreness r. lower jaw at angle; occasional slight darting through jaw.—Intense itching of face esp. nose.

8. Mouth.—Teeth in morning and mouth all day covered with a brownish mucus.—Gumboils on molars.—Tongue coated dirty white, brown centre.—Moist, golden-yellow, or creamy coating back part of roof of mouth (S).—Sensation of hairs on tip of tongue, followed by prickling numbness of whole mouth.—Stinging on tip of tongue.—Bad taste (coppery) on waking.—Tries to say a word, but it will not come out; feels as if something closed in throat preventing speech.

9. Throat.—Mucus in throat.—Tough clear white phlegm in posterior nares.—Thick yellow mucus drops from posterior nares; < night; wakens him; must sit up to clear throat.—Sensation of lump in throat.—R. side of throat sore; sensation as of a pin pricking it; < swallowing liquids, > swallowing solids; throbbing in region of l. tonsils.

11. Stomach.—Acidity in children fed with excess of milk and sugar (S).—Dyspepsia from f at food, or < by fat food (S).—Canine hunger with gone feeling in stomach.—Desires: strong-tasting things; eggs; fried fish; beer, which >.—Aversion to: bread-and-butter.—Sour eructations (S).—Eructations after eating.—Goneness; in stomach and abdomen, even in chest; < after eating.—Heaviness and pressure in epigastrium.—Vomiting of sour cheesy masses (S).

12. Abdomen.—Sharp cutting in hypochondria and l. iliac region.—Flatulence, < after eating; rumbling.—Whilst at stool, sensation as if a marble dropped down descending colon.—Colic, and pressure, with acidity (S).—Colic, as from wind pressing on bladder, causing frequent inclination and urging to stool.—Colicky pains while walking.—Colic in hypogastrium; soreness.

13. Stool and Anus.—Burning contracting pain in anus and lower rectum (on waking from troubled dream).—Sticking as from splinter in anus on walking.—Sore, raw feeling.—Itching soreness; must scratch.—Must bring will to bear to prevent escape of fæces.—Diarrhœa with colic; fears to pass flatus for fear fæces should escape.—After coitus (man) urging to stool and urination: stools small, loose.—Yellowish green, so-called "hacked diarrhœa" (S).—Stool: yellowish brown.; profuse, thin, yellowish brown.—*Before stool*: Weak feeling in rectum and sphincter.—Small stool before breakfast, soft yet with effort; sudden urging while eating; afterwards, watery yellowish brown, painless stool.—Large, soft stool, easily expelled, with feeling afterwards as if much remained behind.—Costive.—One day costive, next diarrhœa.—Intestinal, long or round

worms, with acidity, picking nose, occasional squinting, pain in bowels, restless sleep (S).

14. Urinary Organs.—Burning during micturation.—After coitus burning and itching at meatus.—Frequent micturition.—Obliged to vomit from pressure of wind on bladder, pressure not > thereby.—Passed a large quantity of urine on arising in morning.—Bladder semi-paralysed: flow soon stops, and requires straining.—Urine: increased, pale; scanty, dark.—(Diabetes, hepatic form).

15. Male Sexual Organs.—Erections almost nightly, preceded by slight pains in testicles (< l.).—Drawing in testes and cords.—Emissions: at night with vivid dreams; after coitus; without dreams.—Semen, thin, watery, smells like stale urine.—Emissions followed by weak back and trembling of knees.—Great itching of scrotum; prepuce; anus.

16. Female Sexual Organs.—Menses five days early.—*During menses*: feet icy cold by day, burn at night in bed; pressure in r. eye; flow at first paler than usual.—*After menses*: symptoms <; trembling at heart, headache; paralytic aching in r. wrist; knees feel as if tendons shortened.—Leucorrhœa: creamy or honey-coloured; sour-smelling, acrid, and watery (S).—Prolapsus uteri with weak sinking sensation after defecation.

17. Respiratory Organs.—Hoarseness.—Cough from drinking water.—Cough from tickling in throat.—Constant cough and hawking; pain in chest in mammary region.

18. Chest.—Empty feeling in chest,< after a meal.—Pain through chest (< Q after dinner.—Pain from r. clavicle diagonally to stomach, intense, caused starting, followed by hoarseness.—Burning deep in chest, < r. side.—Sudden feeling of fulness.—Contracted feeling; muscles as if drawn; aching pains.—Weight above ensiform cartilage, with empty feeling.—Lower third of sternum, pain as if torn in two.—(Phthisis florida in young subjects).

19. Heart.—Trembling about heart < going up stairs.—Feeling as if a lump or bubble started from heart and were forced through arteries.—Heart feels uneasy, esp. about base, when pains in limbs and great toe are better.—Pulses felt all over body.—Pulse, quick, jerking.

20. Neck and Back.—Crick in both sides of neck.—Scrofulous swelling of lymphatic glands (S).—Goître.—Weakness in back towards evening.—Slight pain in l. scapula.—Sharp pain in r. sacro-iliac joint.

21. Limbs.—R. wrist and l. ankle weak, ache as if paralysed (after menses).—Drawing in hands, feet, wrist-joints, and l. shoulder.

22. Upper Limbs.—Synovial crepitation.—Arm (l.) feels gone, tired.—Arms weak, must let them drop.—Heaviness of r. arm.—Contraction of extensors in back of arm, often, when writing.—Rheumatic pain in r. shoulder; feels nervous.—Shooting pains from neck over r. shoulder.—Deep-seated pain in r. wrist going into palm.—Drawing cramping; paralytic aching (during menses) in r. wrist.—Numbness in r. hand and arm.—Crampy pain in l. hand, esp. index finger.—Numbness in r. fingers, occasional darting, < ring fingers.—Severe shooting pains in l. middle and index fingers.

23. Lower Limbs.—Synovial crepitation.—Sudden giving way of legs while walking, as though they would be paralysed.—Hamstrings stiff.—Sharp, shooting front of l. thigh.—Knees feel as if tendons shortened; (also at menses).—Stitching in l. knee.—When walking: calves feel pulled tight, as if needles piercing calf.—Pain in ball of foot; in (r.) big toe.—Gout (S).—Rheumatism (S).—Much itching at ankle-joints; even eczematous eruption.

24. Generalities.—Lassitude: in morning; in hot weather.—Nervous.—Sore.—Wakes at midnight; soon a sensation like electric shock through body; trembling and palpitation as from fright.—Deposits in joints (S).

25. Skin.—Itching; < after going to bed; hives (*Apis* >).—Itching papules on r. ear; about joints.—Itching of scrotum, prepuce, and anus.—Chafing of skin.—Eczema, with acidity, honey-coloured secretion.—Crusta lactea.—Golden-yellow scabs.

26. Sleep.—Drowsy all day, most forenoon; falls asleep sitting.—Unusual excitement, could not sleep till 1, awoke again at 5, unrested.—Sleepless 12 to 3 a.m.—Dreams: sexual; vexing; of the dead.

27. Fever.—Chilly: during menses; most on chest; followed by hot flushes round body.—Feet icy cold by day, burn at night (during menses).—Cannot get to sleep feels so hot; thoughts crowd on his mind.—Flashes of heat and sweat.—Face burns.—Exceedingly sour-smelling sweats (S).—Intermittent fever with vomiting of sour masses (S).

Natrum Salicylicum.

Salicylate of Sodium. $(NaC_7H_5O_3)_2H_2O$. Trituration. Solution.

Clinical.—Abscess. Boils. Debility. Depression. *Ears, noises in*. Fever. *Méničre's disease. Noises in the head*. Śdema. Periostitis. Rheumatism. Stammering. Strabismus divergens.

Characteristics.—The introduction of Salicylic acid and *Nat. sal*. into general practice as remedies in rheumatism led to much overdosing, the records of which are found in *Allen* and *C. D. P*., and I have arranged them below in the Schema. The most marked and persistent of the symptoms produced by *Nat. sal*. is giddiness, < on rising from lying, and intense tinnitus aurium with deafness. This combination of symptoms has led to the successful homśopathic use of *Nat. sal*. in Ménière's disease and similar conditions. In some of the overdosings high fever with delirium was produced. *Nat. sal*. has been used freely in the manufacture of beer to prevent fermentation, and this has caused poisoning symptoms, notably sweating and tenderness of the feet with dark coloured and enlarged veins (*H. W*., xxv. 500, 566). *Nat. sal*. has evidently an affinity for the joints, since it causes many of its poisoning symptoms simultaneously with the removal of the joint pains of gout and rheumatism. It has been used with success in homśopathic practice in the treatment of periosteal rheumatism. Divergent strabismus and stammering were marked pathogenetic effects in one case, and should lead to homśopathic uses. It has caused irritation of inguinal glands, and has cured abscess in axilla. Having given *Nat. sal*. 3 to a patient recovering from influenza who had symptoms of vertigo with noises in the head, the patient was so much relieved by the medicine of her weakness and depression that she named the remedy her "tonic." W. R. Rice published a case in the *Brit. Med. Jour*., November 30, 1897, in which he gave a lady 10-gr. doses of *Nat. sal*. every four hours. After the third dose "most alarming prostration, mental and bodily," set in. Pulse became weak and compressible, fell to 35 per minute, and the temperature became subnormal. On stopping *Nat. sal*. the symptoms rapidly passed off. Ebstein has claimed for *Nat. sal*. in ordinary dosage a controlling power over glycosuria, and R. T. Williamson (*B. M. J*., March 30, 1901) has confirmed this in some cases.

Relations.—*Compare:* Gaulth., Salix mol., Salix nig., Sal. ac., Salol. In Ménière's disease, Chi., Kali i., Carb. sul.

SYMPTOMS.

1. Mind.—Vomiting, unconsciousness, at times wild delirium, from which she recovered with loud cries.—Weariness and depression.—Highly nervous dread.—Sometimes has hallucinations; sometimes half-asleep; sometimes rational.—Apathetic.

2. Head.—Giddiness, deafness, noises in ears.—Giddiness, > lying down, < raising head or sitting up; objects all seem to move to r.—Burning pains on skin of forehead.—Severe headache as though head would burst.

3. Eyes.—Amblyopia.—Pupils dilated, very slightly sensitive to light; marked divergent strabismus.—Eyes have a peculiar sparkle.—Does not see distant objects; mydriasis.

4. Ears.—Constant noises in ears, deafness; direct and perosseous.

6. Face.—L. face red; both eyelids, upper lip śdematous.—Anxious expression, red face.

8. Mouth.—Speech hoarse, indistinct, stammering, some words she cannot pronounce.—Dryness in mouth and throat with great thirst.

11. Stomach.—Great thirst.—Appetite lost.—Vomiting; unconsciousness.

12. Abdomen.—Inguinal glands swollen, sensitive.

13. Stool and Anus.—Diarrhśa; great thirst.

15. Male Sexual Organs.—Absolute but temporary impotence.

17. Respiratory Organs.—Dyspnśa; with great heat.—Breathing so noisy it was heard in street; > when supported in half-sitting posture; gasps for air; respiration exceedingly forcible.—Breathing shallow.—Respiration 60, not superficial.—Panting respiration like that of a hunting-dog.

19. Heart.—Pulse stronger, arterial pressure increased.—Pulse irregular, sometimes very quick, sometimes nearly normal velocity, small, weak.—Pulse weak, compressible, falls to 35 beats a minute.

22. Upper Limbs.—(Axillary abscess.).—Strong itching on back of r. hand.

23. Lower Limbs.—Feet swollen, soles tender, veins of dorsa much congested (from drinking ale containing *Nat. sal.*).

24. Generalities.—Alarming prostration, mental and bodily.—L. side of face, lower limbs, r. chest diffusely reddened, both eyelids, upper lip, great part of legs slightly śdematous.—Eyelids, hands, face, and legs swollen.—Dull and heavy.—Tingling over whole body.—Very restless; condition constantly changing.

25. Skin.—Soon after first dose, intense tingling and itching of skin; diffuse redness; śdema.—Urticaria over greater part of body, esp. legs and abdomen, with śdema of arms.—Intense erythematous rash.—Pemphigoid eruption on, hands and other parts of body.—On forehead, face, and legs skin very red in circumscribed patches, redness disappearing on pressure.

27. Fever.—Wild delirium, great heat, dyspnśa.—Temperature 107°, with intense thirst.—Fever and rash come only with disappearance of rheumatic pains.—Temperature became subnormal, pulse 35.

Natrum Selenicum.

Selenate of Sodium. $NaSeO_4$. Trituration.

Clinical.—Laryngeal phthisis. *Laryngitis, chronic*.

Characteristics.—This is an unproved remedy, but it has a decided affinity for the larynx. According to Hansen its use in homœopathy was first suggested by Meyhoffer, who gave the indication in laryngeal phthisis as: "Expectoration of small lumps of bloody mucus with slight hoarseness." It is best suited to the early stage of the disease.

Natrum Silicofluoricum.

Salufer. Na_2SiF_6. Solution.

Clinical.—Bones, affections of. Caries. Ethmoiditis. Tumours.

Characteristics.—Cooper is the chief authority for this remedy. It must be used carefully, as it has an extraordinary penetrating power. Cooper calls it the medicinal "bone scraper" in cases of caries. With a lotion of three grains to a tumbler of water he healed up quickly a case of lupus. He has seen ethmoiditis set up by it. Burnett has cured tumours with it given internally.

Natrum Sulphuricum.

Sodium Sulphate. Sal Mirabile. Soda vitriolata. Glauber's Salt. Na_2SO_4. Trituration. Solution.

Clinical.—*Asthma. Biliousness*. Brain, injuries of. Condylomata. Debility; of drunkards. *Diabetes*. Dyspepsia; of drunkards. Enuresis. Epilepsy; traumatic. Epistaxis (menstrual). Fistulous abscesses. *Gonorrhśa*. Headache. Hydrćmia. Influenza. Leucćmia. Liver, enlarged. Malaria. Migraine. Nephritic scarlatina. Ophthalmia. Panaritium. Phlegmasia alba dolens. Photophobia. Phthisis. *Sciatica*. Scrofulous ophthalmia. Spleen, affections of. Sycosis. Warts.

Characteristics.—*Natrum sulph*. is a much honoured drug. It was discovered by Glauber in 1658 and named by him *Sal Mirabile*. It has been named *after* him *Sal Glauberi*. It is the chief ingredient in many mineral Spas, notably those of Carlsbad. It was proved by Schreter, Hartlaub, Trinks, and others. It was studied by Grauvogl, who found in it the typical remedy for his "hydrogenoid constitution"; and it forms one of the tissue remedies of Schüssler. From whichever side it has been studied the indications arrived at are practically agreed upon by all, though

the homśopathist has the widest field. Grauvogl described as the hydrogenoid constitution the state in which there is extreme sensitiveness to damp, wetting, bathing, watery foods, and residence near fresh water, especially standing water. Periodicity is also another feature of this state. This constitution he considered as providing the soil for gonorrhśal infection. It corresponds to Hahnemann's sycosis. *Nat. sul*. was Grauvogl's leading anti-hydrogenoid. It will be seen by the following quotation that Schüssler by another route reaches the same conclusion: "The action of the *Sodium sulphate* is contrary to that of the *Sodium chloride*. Both, indeed, have the faculty of attracting water, but the end is a contrary one; *Nat. mur*. attracts the water destined to be put to use in the organism, but *Nat. sul*. attracts the water formed during the retrogressive metamorphosis of the cells, and secures its elimination from the organism. *Nat. mur*. causes the splitting up of the cells necessary for their multiplication; *Nat. sul*. withdraws water from the superannuated leucocytes, and thus causes their destruction. The latter salt is, therefore, a remedy for leucćmia. *Nat. sul*. is a stimulant of the epithelial cells and of the nerves, as will appear in what follows. In consequence of the activity excited by *Nat. sul*. in the epithelial cells in the urinary canals, superfluous water with the products of the tissue changes, dissolved or suspended therein, flows into the kidneys, in order to leave the organism in the form of urine through the ureters and the bladder. While *Nat. sul*. stimulates the epithelial cells of the biliary ducts, the pancreatic ducts and of the intestines, it causes the secretion of the excretions of these organs. *Nat. sul*. is also intended to stimulate the functions of the nerves of the biliary apparatus, of the pancreas, and of the intestines. If the *sensory* nerves of the bladder are not stimulated by *Nat. sul*., the impulse to void urine does not come to man's consciousness; thence there follows involuntary micturition (wetting the bed). If the motory nerves of the detrusor are not stimulated, there results retention of urine. In consequence of an irregular action of *Nat. sul*. on the epithelial cells and the nerves of the biliary apparatus, there arises either a diminution or an increase of the secretion and excretion of the bile. If the motory nerves of the colon are not sufficiently influenced through *Nat. sul*. there arise constipation and flatulent colic. If in consequence of a disturbance in the motion of the molecules of *Nat. sul*. the elimination of the superfluous water from the intercellular spaces takes place too slowly, there arises hydrćmia, and functional disturbances in the apparatus for the secretion of bile cause the following diseases: Chills and fever, bilious fever, influenza, diabetes, bilious vomiting, bilious diarrhśa, śdema, śdematous erysipelas; on the skip, vesicles containing yellowish water, moist herpes, herpes circinatus, sycotic excrescences, catarrhs with yellowish green or green secretions. The state of health of persons suffering from hydrćmia is always < in humid weather, near the water, and in damp, moist underground dwellings; it is improved by contrary conditions." *Nat. sul*. is Schüssler's specific for epidemic influenza. Homśopathy welcomes the keynotes provided by these two great observers, and incorporates them with the data furnished by her own provings and clinical observations, with which they entirely agree. Grauvogl and Schüssler used *Nat. sul*. in the lower triturations, but homśopaths need not confine

themselves to any. When the correspondence is exact the highest attenuations will act better than the lower; when the likeness is more general the lower will give the best results. The provings bring out the cardinal symptoms of the sycotic constitution: Early morning aggravation (the syphilitic is < from sunset to sunrise); the periodicity and intermittent character of the symptoms, the predominant chilliness and sensitiveness to damp, clearly relates *Nat. sul*. to *Thuja*, the vaccinal nosodes and other sycotic remedies. But these uses of *Nat. sul*., whilst guiding the homśopath (and if he is ignorant of them he will miss making many cures), do not limit or hamper him. *Nat. sul*. has a clear individuality independent of these relations. *Nat. sul*. has many strongly-marked symptoms of the mind and head. It has headache with drowsiness; basal headache, as if the bones at the base of the brain were crushed; pressure on both sides or on r. side of occiput. Mental troubles arising from injury to the head. Like other Natrums, it has mental symptoms < from music. Low spirits even to suicidal impulse. Irritability < morning. Such conditions arise in conditions of nervous exhaustion brought on by debilitating diseases. There is also "Cheerfulness; after loose stools." *Nat. sul*. has nose-bleed before and during menses (not vicarious like *Bry*). Toothache is < by warm things, intolerable by hot things, and > by holding cold water in the mouth. In scrofulous ophthalmia, granular lids, &c., *Nat. sul*. has a great curative sphere. H. C. Allen says that with the possible exception of *Graph*., no remedy has "such terrible sensitiveness to light." *Nat. sul*. has a decided relation to fingers and toes. A case of panaritium is reported (*N. A. J. H*., xiii. 265) in a young woman, 21. Sticking ulcerative pain under nail of right index finger, and in phalanges of various fingers. Pulsation in tip of little finger. > Out of doors. *Nat. sul*. 30 in water, a teaspoonful every two hours. Pain ceased rapidly; well in two days. (Six months before patient had one on another finger which gave great pain, and went on to suppuration). S. M. Pease (*Med. Adv*., xxv. 28) cured a very chronic case of intermittent fever with *Nat. sul*., to which he was led by this symptom: "When he took off his boots at night the ball of the right great toe invariably itched." Its counterpart may be found in the Schema. Asthma is very frequently a sycotic manifestation, and *Nat. sul*. corresponds to the breathing and skin symptoms often met with in asthma. Asthma of malarial districts. Humid asthma of children; with every fresh cold an attack of asthma. Attacks of asthma frequently occur in the early morning hours. Leonard (*H. W*., xxxiii. 465) has cured with *Nat. sul*. 200x a very violent asthma which was always induced by any unusual exertion. Bellairs (*H. W*., xxx. 407) cured with *Nat. sul*. 3x a chronic case in a man, 35, who had "looseness of the bowels at each attack." There were no evidences of the sycotic constitution in this case. W. J. Guernsey (*H. P*., vii. 129) has recorded a similar case: Mrs. S., 36. Violent attacked asthma; greenish, purulent sputa; *a loose evacuation immediately after rising the last two days*. *Nat. sul*. 500 was given in water, every two hours. Was enabled to lie down the same night, and all symptoms rapidly cleared up. Another case by the same observer is this: Mrs. C., 42. Subject to attacks for years. Expectoration greenish and remarkably copious. *Nat. sul*. in water every three hours. Improvement began after a few doses, expectoration

became paler and less abundant. Felt better than for years previously. A case of megrim cured by Baltzer with *Nat. sul*. 30 is reported in *Archiv. f. Hom*., ii. 317 (*H. W*., xxix. 408). One peculiar feature of it was that there was *salivation with the headache*. Miss P., 19, had had headache every fortnight for years. Shooting pain in right temple begins in morning after rising, increases till evening, and only ceases about 1 a.m., when she gets to sleep. > By cold compresses; in open air; in dark room; by vomiting. < By noise; light; eating (does not eat anything on the days when the pain is on, or it would be <); stooping; during menstruation. During headache mouth always full of water, causing her to spit constantly. *Puls*. and *Phos*. relieved temporarily, but the megrim returned with vomiting and flushes of heat. After headache much thirst and craving for acids. Before headache, irritability. *Nat. sul*. cured. Traumatic epilepsy resulting from injury to the head has been cured with *Nat. sul*. (*H. W*., xxxv. 258). The dreams of *Nat. sul*. are remarkable. Heermann of Paris cured a young lady, a patient of mine, whose sleep was disturbed by dreams of *fighting*.—Mahlon Preston (*Med. Adv*., xviii. 533) has cured many cases of threatened consumption having "pains flying from the chest beginning with a dry cough." Gregg (to whom Preston refers) gives the symptoms: "All-gone, empty feeling in chest, a sense of weakness in chest, must hold chest with both hands when coughing for support to relieve the weakness" (*Repertory*, p. 322). Gregg refers "must hold chest because of pain and soreness, feels as if it would fly to pieces," to *Bry*. and *Phos. Nat. sul*. has both. *Peculiar sensations* of *Nat. Sul*. are: As if forehead would burst. As if a screw being driven in. As if top of head would split. As if brain was loose and fell to left temple. As if brain crushed in a vice, or something gnawing there. As if bells ringing in ears. As if tympanum was pressed out. As if something forcing its way out of ears. Weight on chest. Lump or ball in throat. Burning: on top of head; right. eye; edges of lids; gums palate; anus; abdomen; soles to knees. Creeping in scalp to vertex. Crawling in eyes. Symptoms are < by touch (liver abdomen; scalp; pimples). < Pressure of tight clothing. Pressure (of hand) > pressure in head; and soreness of chest. Scratching = burning. Rest < most ailments (can hardly find a position where pain in hip is tolerable, and the > by changing does not last long). Turning or twisting body very painful. Obliged to lie on back. Lying down > pressure in head. Lying on side > violent colic. Lying on left side < (engorged liver). Motion, exercise, walking >. Fatiguing arm = pain in head. Exertion = asthma. Whilst walking, menses flow freely. Swallowing, talking, rising from seat <. Many symptoms < in morning, > after breakfast, and in open air. Colic 2 a.m. or 2 to 5 a.m. Asthma 4 to 5 a.m. After midnight: twitching of hands and feet during sleep. Ailments which arise or are < from damp weather, or dwelling in damp houses, damp soil, weather changing to damp, getting wet. Every Spring, eruption on chest. Open air < liver; left hypochondrium; piercing pain in groins with urging to urinate. Open air > pain; panaritium. < Warm room. > Cold air and cold water (toothache). Cold food or drink < diarrhśa. During storm, flatulent colic <. > Dry weather; sitting up (cough); changing position. Retaining urine = pain in back.

Relations.—*Compatible:* Fer. p. (polyuria); Na. m. (skin disease); Thuj. (sycosis and hydrogenoid constitution); Bell. *Compare:* Carlsb., Nat. m., and Sul. In sycosis, Malan., Vacc., Variol., Thuj., Nit. ac., Sabi., Sil., Merc., Nux. Condylomata, Thuj., Merc. In hydrogenoid state, Aran. d. Eye symptoms, Graph., Hep., Sul. Cough and diarrhśa, Bry. Cough and urine, Lyc. Toothache > by cold, Coff., Puls. Chest pain > holding with both hands, Nicc. (right lung, Bry). Hip disease, Stilling. Pains in limbs > motion; < damp, Rhs. Granular lids like small blisters, Thuj. Inability to think, Na. c. Greenish-yellow coatings and discharge (golden yellow, Nat. p.). Tendo Achillis, Val. Pressure of clothes <, Lach., Lyc. (>, Nat. m.). Must change position, but it is painful and gives little >, Caust. (Caust. has > in Wet weather). Jaundice from anger; toothache > cold, Cham.

Causation.—Anger. Injury to head (fall). Suppressed gonorrhśa.

SYMPTOMS.

1. Mind.—Sadness; inclined to weep.—Melancholy with periodical attacks of mania.—Timidity; weak; enfeebled.—Satiety of life, suicidal; has to use all self-control to prevent shooting himself.—Mental results of injury to head.—Jaundice after anger.—Melancholy and lachrymation, esp. after hearing (lively) music.—Cheerfulness, happy mood; after loose stools.—Ill-humour, with dislike to conversation, and laconic mode of speaking.—Quarrelsome humour, with gloomy aspect; < mornings.

2. Head.—Vertigo in evening (at 6 p.m.), with vomiting of sour mucus.—Turning vertigo after dinner, with buzzing in head.—Vertigo after a meal; the heat extends from abdomen to the head; > after forehead becomes moist.—Headache on reading, with heat and perspiration.—Aching and compression in the occiput, and sides of head, even at night.—Pain in vertex, as if head were about to split.—Hot feeling on vertex.—Heaviness in head, with bleeding of nose.—Tearing pains and clawing in forehead, sometimes immediately after dinner, with great drowsiness.—Periodical attacks in r. side of forehead.—Pain as if forehead would burst, after a meal.—Boring pains in head.—Painful shocks in head, as from electric sparks.—Jerks in head, tossing it to right side (forenoon).—Feeling of looseness of brain, as if it were falling to l. temple (in forenoon on stooping).—Irritation of brain after lesions of head.—Shootings in sides of head, on fatiguing arms.—Violent and throbbing headache, esp. in temples.—Headache in base of brain, gnawing; as if in a vice; as if bones being crushed.—Tearing pressure in occiput, both sides; r. side.—Painful sensibility of scalp, when combed.—Tearing at exterior of vertex, at night, with shivering and shaking, and chattering of teeth.

3. Eyes.—Heaviness of eyelids, as if weights were on them.—Itching on edges of lids mornings.—Aching in eyes, esp. in evening, when reading by candle-light.—Tearing pain round eye.—Burning in eyes, sometimes morning and evening, with great dryness, or profuse lachrymation (with discharge of burning water, with

dimness of sight).—Dimness of sight, from weakness of eyes.—Burning in r. eye, < near fire; burning of edges of eyelids.—Nocturnal agglutination of lids.—Confused sight.—Sparks before eyes, after blowing nose.—Photophobia, esp. on waking in morning.

4. Ears.—Otalgia, as if tympanum were propelled outwards.—Lancinations in ears.—Piercing pain in r. ear inward; lightning-like stitches in ear; < going from cold air into warm room; < in damp weather, living on wet ground, &c.—Ringing in ears, as of bells.—Tinkling in ears.

5. Nose.—Coryza, with obstruction of nose, which scarcely permits respiration.—Nose-bleed: before menses; during menses (in afternoon); stops and returns often.—Sneezing, with fluent coryza.

6. Face.—Face pale and sickly, as after a nocturnal debauch, with gloomy aspect.—Tearing in face, and esp. in cheek-bones.—Itching of face.—Vesicles on lower lip.—Pimples on chin, they burn when touching them.—Dryness of lips, with burning and desquamation.—Inflamed and burning blisters on upper lip.—Painful rigidity in maxillary joint, which prevents the mouth being opened.

7. Teeth.—Drawing pains in teeth, with looseness, and a sensation as if elongated, > by cold air, and by smoking tobacco.—Pulsative, throbbing toothache at night, with great agitation, < from warm drinks.—Toothache, > from holding cold water in mouth.—Tearing in carious teeth, on getting out of bed, at night.—Burning in gums.—Shifting and painless swelling in gums.—Purulent vesicles on gums.

8. Mouth.—Dryness with redness of gums and thirst.—Dryness of mouth, with thirst, esp. in morning.—Burning in mouth, tongue, and palate (as from pepper, or highly-seasoned food).—Tongue, dirty greenish grey or greenish brown coat at root; greenish coat with malarial symptoms.—Tongue covered with mucus; slimy taste in mouth.—Burning blisters on tip of tongue.—Burning of palate as if sore and raw (during menses).—Blisters on palate, with great sensitiveness; > by cold; can hardly eat; > from cold things.—Burning vesicles on tongue.—Accumulation of an acid water in mouth.—Much saliva after meals.—(Salivation during headache.)

9. Throat.—Sore throat, with painful and obstructed deglutition (urging to swallow saliva) and inflammatory swelling of uvula and amygdalć.—Frequent constriction of throat when walking.—Constriction and dryness in throat, extending to śsophagus.—Accumulation of mucus in throat, < at night; with hawking up of salt mucus in morning.—Ulcers on tonsils.

10. Appetite.—Mucous taste.—Burning thirst for very cold drinks, esp. in the evening; < after violent exercise.—Want of appetite, and repugnance to food.—Head confused, and eyes clouded, during a meal.—After a meal, sweat on

face, oppression of chest, and accumulation of water in mouth, with inclination to vomit.

11. Stomach.—Sour regurgitation.—Frequent hiccough; in evening; after eating bread-and-butter.—Nausea, with lancination in eyes.—Qualmishness before eating.—Water-brash, in evening.—Vomiting of salt or acidulated water, or of acid mucus (preceded by giddiness), followed by great dejection, and burning pains in head.—Fulness in stomach, descending to chest, with obstructed respiration, in bed, in evening.—Boring pains in stomach, as if it would be perforated, or burning and pinching in morning after rising; > after breakfast.—Beating in stomach, with nausea.

12. Abdomen.—Painful sensitiveness of the hepatic region to the touch, during a walk, or to a sudden jar.—Stitches in the region of the liver while walking in the open air.—Throbbing, tension, and lancinations in hepatic region.—Shootings in l. hypochondrium (while walking in the open air).—Pains as from a bruise in abdomen, at night, with pains in loins; the patient is awakened by pains, which are insupportable, except when lying on side.—Transient burning, passing over different parts of abdomen, in evening.—Painful digging in abdomen during menses, in evening, followed by thirst.—Contractive pain in abdomen, extending to chest, with tightness of breath, and subsequent diarrhśa.—Distension, burning, and shootings in groins.—Stitch from the left groin to the axilla.—Inflammation of r. groin; typhlitis.—Painful accumulation of flatus.—Pinching in abdomen with sensation as if bowels were distended.—Pinching in whole abdomen, with rumbling, shifting and subsequent diarrhśa.—Flatulent colic, with pinching in abdomen; < before breakfast; > in afternoon by emission of flatulence.—Flatulent colic; accumulation and difficult emission of flatulence.—Incarceration of flatulence.—Rumbling borborygmi, and movements in abdomen.—Frequent expulsion of offensive flatus (in the morning, after meals, and with the loose stools).—Piercing pain in r. flank.

13. Stool and Anus.—Hard and knotty fćces (with pressure), often mixed with blood and mucus.—Frequent soft and loose evacuations.—Half-liquid stools, with tenesmus.—Diarrhśa, preceded by pain in the groins and hypogastrium.—Yellow liquid stools after rising from bed in the morning.—During stool profuse emission of flatulence.—Constant uneasiness in the bowels and urging to stool (chronic diarrhśa; tuberculosis abdominalis).—After stool, burning at the anus.—Itching of the anus.—Diarrhśa; < in wet weather; in morning; after vegetables and farinaceous food; also in cold evening air.—Knotty, wart-like eruptions on the anus and between the thighs; sycosis.

14. Urinary Organs.—Frequent emission of urine, with sediment of a yellow colour, or like brick-dust.—Piercing in both groins, with urging to urinate, afternoon while walking outdoors.—Burning in urethra, after and during emission

of urine, or with pain in the small of back on retaining urine.—Urine scanty; dark and passed more frequently, had to get up several times at night.

15. Male Sexual Organs.—Violent itching in genital organs (glans or penis, obliging one to rub).—Gonorrhśa: thick, yellowish-green discharge; painless; chronic; suppressed.—Itching of scrotum, with burning after scratching.—Itching of perinćum and mons veneris.—Excited sexual desire (evening); erections (morning).—Sweat on scrotum, in evening.—Increased sexual desire.

16. Female Sexual Organs.—Catamenia scanty, retarded, with colic, and suppressed stools, or hard fćces.—Headache, and epistaxis, during catamenia.—The blood of the catamenia is acrid and corrosive, or coagulated, and flows only in morning.—Leucorrhśa: acrid, corrosive; parts inflamed, swollen, covered with vesicles, size of lentils, filled with pus (after parturition).

17. Respiratory Organs.—Short breath when walking; gradually > by rest.—If he coughs while standing he feels a sharp stitch in l. side of chest, with shortness of breath.—Dry cough, excited by a tickling, with roughness of trachea, and sensation of excoriation in chest, < at night, and > by rising up in bed and holding chest with both hands.—Loose cough, with expectoration, shortness of breath, and shooting in l. side of chest, when sitting, when yawning, during an inspiration.

18. Chest.—Asthma: humid asthma of children; with every fresh cold an attack of asthma; attacks < early morning hours; asthma with early morning diarrhśa.—Shortness of breath, esp. when walking.—Oppression in chest.—Pressure on chest as of a heavy load.—Empty, all-gone, weak feeling in chest, must support it with both hands when coughing.—Pressure in l. side of chest, near lumbar region; < from motion and pressure.—Stitches in l. side of chest.—Shootings in chest and sides of chest, which are painful, esp. when coughing.

20. Neck and Back.—Stitches in nape of neck at night.—Jerking tearings and tension in muscles, on l. side of neck.—Soreness up and down spine and neck.—Contusive pains in sacrum, or pain as from ulceration, esp. at night.—Lancinations in loins, when seated.—Tearing and gnawing pains along spine.—Incisive shootings between the shoulder-blades.—Lancinations in axillć.

21. Limbs.—Painful sensibility of limbs, which feel as if bruised, or fatigued.—Prostration; tired, weary, esp. knees.—Attacks come on suddenly.

22. Upper Limbs.—Tearing in bones and muscles of arms, and forearms.—Heaviness of arms.—Sensation of fulness and rigidity in hands.—Tearing and shootings in hands and fingers.—Trembling and weakness of hands, which prevents the holding of anything heavy.—Loss of strength of l. hand, is unable to hold anything heavy.—Burning and redness in back of hand, as from

the stinging of nettles.—Shooting pain of ulceration under nails.—Panaritium.—Tingling in the tips of the fingers.

23. Lower Limbs.—Sharp pains in the hips (in morning on rising, and all day, particularly on making certain motions), on stooping, esp. when rising from a seat, and, at night, in bed.—Stabbing pain in l. hip (after a fall).—The pain in hip is > in certain positions, but compels one to move again after a short time, causing intense suffering.—Heat and burning in legs, morning and evening.—Tearing and drawing in legs, and esp. in tendo-Achillis and calf.—Legs and thighs feel weary and exhausted.—In heels lancinating pain, tearing and ulcerating pain.—Great lassitude and uneasiness in feet.—Shooting tearing, and pain as from ulceration in feet.—Violent itching of toes, and between toes, esp. on taking off shoes and stockings at night.

24. Generalities.—Tearing and shooting, or jerking, or jerking tearings in limbs, and other parts, esp. during evening and night.—Sore across abdomen sides and back.—Trembling in body, with spasmodic movements of muscles, and accompanied by anxious apprehension.—Symptoms manifest themselves during repose, and are > by movement.—The patient feels > in open air.

25. Skin.—Itching, and itching pimples, which burn after being scratched.—Eczema, moist and oozing profusely.—Itching while undressing.—Wart-like, raised, red lumps all over body.

26. Sleep.—Great sleepiness during day, esp. in forenoon; failing asleep while reading or writing.—Sleeplessness caused by great agitation.—Uneasy sleep, with anxious and disagreeable dreams.—Jerking of limbs during sleep.—Starting as if in a fright, soon after falling asleep.—Dreams in which patient imagines himself to be flying.—Dreams of an expanse of water, of one drowning in it; of things floating on a river.—Anxious, frightful dreams disturb the sleep.—Dreams of being insulted and fighting; of being involved in a mob-fight.—Twitching of hands (and feet) during sleep (more so after midnight).—Trembling of hands on waking, and also when writing.

27. Fever.—Waking at night with chilliness, shaking and chattering of teeth, with anguish and thirst.—Shiverings with coldness, esp. in evening, or at night, sometimes with anguish, quaking, and chattering of teeth, generally without thirst.—Coldness and shuddering with thirst.—Internal coldness, with stretching and yawning.—In morning, after a walk, shivering and shaking, and coldness, with heat in head, and yellowness of face.—Perspiration in morning.—During shivering fit, heat in forehead and hands.—Dry, general heat, in the afternoon.—Sudden flashes of heat towards evening.—Profuse sweat, at night.

Natrum Sulphurosum.

Sulphite of Sodium. Sodic Sulphite. $Na_2SO_37H_2O$. Trituration. Solution.

Clinical.—Diarrhœa.

Characteristics.—Clarence Bartlett (*H. W.*, xxi. 251) relates a case of chronic diarrhœa in which "the stools were watery and looked very much like yeast" cured with *Nat. sulphuros*. 3x given, after the failure of many other remedies, at the suggestion of Farrington on the indication "*yeasty stools*." The patient had pain in right scapula as if bathed in hot water; was much debilitated; taking food provoked a stool. The face was whitish waxy, except the cheeks, which were a "light freckle colour."

Nectrianinum.

Nosode of cancer of trees (Nectria ditissima). Dilution. Trituration of the parasite.

Clinical.—Carcinoma. Epithelioma.

Characteristics.—*Nectrianinum* is a clear liquid of a yellowish-brown hue which was prepared by Bra and Chaussé (*Med. Rev. of Rev.*, April, 1900, quoted *H. M.*, xxxv. 533) as follows: Cultures (of Nectria) of two months of age, on grape broth, are evaporated on a water bath until reduced to one-third of their original volume. They are filtered through paper and again through porcelain. The liquid is then taken to the autoclave at a temperature of 120° C. This assures that all spores are killed. Injected into healthy animals in 5 c.c. doses several times a week no result is observed. In cancerous men and animals, on the contrary, the injections cause a rise of temperature in from two to four hours of 1° to 3°. If the dose is increased the hyperthermia is accompanied by chills, sensation of cold, accelerated pulse, palpitation, headache, thirst. The crisis terminates after some hours in polyuria and profound sleep. In very advanced cancer reaction may not occur. In a summary of the results the observers say that *Nectrianinum* has caused: "Arrest or diminution of hæmorrhages; suppression of fetid discharges; a tendency at times to epidermisation of the neoplasm with a corresponding well-defined arrest in its evolution." The patients were < when treatment was discontinued and > when it was resumed. A maximum of 4 c.c. per day was never exceeded.

Relations.—*Compare:* Scirrh., Epitheliomin.

Niccolum.

Niccolum metallicum. Metallic Nickel. Ni. (A.W. 58.6). Trituration. Niccolum carbonicum. Carbonate of Nickel. $NiCO_3$. Trituration.

Clinical.—Asthenopia. Clavus. Cough. Dysmenia. Face, chapped. Headache; nervous; periodic. Hiccough. Migraine. Nasal catarrh. Neck, cracking in. Ophthalmia. Speech, impeded. Throat, sore. Tongue, stiff. Toothache. Vision, impaired. Whooping-cough.

Characteristics.—Nickel is found associated with Cobalt. It is said to have received its name (Nickel, the devil) from the miners, who considered it "false ore" as they were mining for copper. The word Cobalt (Kobold) has possibly a similar derivation. Nickel forms the chief ingredient in the alloy known as "German silver." It was proved by Nenning, and the pathogenesis contains some striking symptoms, many of which have been confirmed. Sir James Y. Simpson used the Sulphate of Nickel ($NiSO_4$) in "periodic headaches of a very severe character," and the provings show that the metal and the carbonate are equally appropriate in this connection. H. Moser (*Am. H.*, xxiii. 61) has cured cases when the pain is: < 10 to 11 a.m., and may be so intense as to cause the patient to cry out; appears first left side, may jump to right; disappears in evening. It has also cured dysmenia; hoarseness, and cough; and cracking in cervical vertebræ on moving the head. Hering says it is *suited to:* "Literary men and others who suffer from periodical nervous headaches; weak, asthenopic, weak digestion, constipation; < morning on awaking." It has some characteristic coughs: "Must sit up and hold head with both hands with the cough." The child must be held up when coughing or it will go into convulsions; Mahony (*Med. Adv*. xxvi. 112) cured with *Nicc*. 200 a middle-aged lady who had "loose hacking cough day and evening, and at 9 a.m.; *has to put arms on thighs when coughing*." *Peculiar sensations are:* As if sweat would break out. As if brain were cut to pieces. As if she had not slept enough. As if a nail was sticking in head. As if neck sprained. Abdominal pains go from left to right. W. A. Clausen (*Med. Ad*., xxiv. 369) has supplied a keynote for the sore throat of *Nicc*.: Right side, *with exquisite tenderness, soreness to touch externally* on affected side.—The symptoms are generally < from motion. Talking and yawning < sore throat. Coughing > roughness of throat. Heaviness of hands and feet are > by motion. < After midnight and on pressure. > In open air. Cold > pain in face. Washing > burning of eyes. Cold water = redness of eyes. Most symptoms are > after eating. Must sit up and hold the head with both hands when coughing: or has to put arms on thighs when coughing.

Relations.—*Compare:* Cobalt., Plat. In "objects appear large," Hyo., Nat. m., Pho. (objects appear small, Hyo., Plat., Stram.). Objects appear blue, Lyc., Stram., Zn. Diplopia; rainbow colours round light, Pho., Gels. Coryza, Nux, Sul. Red face, Fer. Chapped face, Na. c. Toothache with tearing in ear, Mang. Periodical headache, Gels. Sil., Sul. Emptiness in stomach, Carb. an., Ign., Sep. (Nicc. has it *without*

desire for food). Cracking in neck and stiff jaw, Petrol. Headache, menses, chilliness, Puls. Feels refreshed in morning without having slept, Fl. ac., Cob. Annual hoarseness, Ars. Literary men, Nux. Sore throat, Lyc.

SYMPTOMS.

1. Mind.—Low-spirited; fears something evil will happen.—Vexed and very angry from least contradiction.—Anxious moroseness and inquietude.—Trembling and fright with desire for solitude.—Dislike to conversation.—Anxiety on moving as if sweat would break out.

2. Head.—Dulness, does not comprehend the conversation, and is unable to relate properly in conversation.—Vertigo: in the morning; when rising after stooping, in evening; when awaking, with nausea and desire to vomit.—Vertigo, with dizziness and staggering, as from weakness, < on getting up in the morning.—Heaviness and painful fulness in head, principally in forehead (compelling to rub forehead with hand), with vertigo; in morning, as if she had not slept sufficiently.—Heat and heaviness in forehead (afternoon).—Headache all day, in forenoon with vomiting of bile.—Heat in head, compelling him to seek open air, with thirst (afternoon).—Headache, in a room, and after a walk in open air.—Pressure on vertex as from a hand.—As if a nail sticking in vertex.—Pain in both sides of head, as if it were breaking.—Stitches in head (when stooping).—Tearing and shootings in head (and l. eye in paroxysms).—Periodical (every fortnight) headache.

3. Eyes.—Heat and redness of eyes, with pressing in them.—The eyes are swollen and cannot he opened in morning.—Agglutination of eyes in morning.—Eyelids are red and swollen, with lachrymation and swelling of meibomian glands.—Cold water causes redness of eyes with tension.—Dryness and heat of eyes (in evening).—Frequent burning, and pressing in eyes (in evening).—Violent twitching in eye, with lachrymation and difficulty of vision.—Painful jerking in balls of eyes, with a sensation as if they were about to be violently convulsed.—Vision very much impaired, esp. in evening.—Distant objects appear too large; the light appears double; is surrounded by the colours of the rainbow.—Objects look blue (before r. eye).—Cloud before eyes (morning).—Stitches in edges of eyelids like electric sparks, < on touching them.

4. Ears.—Stinging in ears.—Shootings in ears.—Sudden deafness, with roaring and humming in ears; evening.

5. Nose.—Dryness of nose.—Frequent sneezing.—Obstruction of nose; nose stopped up (r. side) at night.—Coryza, fluent during day, and dry during night.—Stinging, tearing, and soreness at root of nose.—Redness and swelling at tip of nose, with burning and tearing in nostrils.—Eruption on nose.

6. Face.—R. side of face red and hot.—Redness of face with burning and itching like erysipelas.—Sensation of heaviness in face, as if swollen.—Swelling of r. side of face, with sore throat.—The pain in the swollen face wakes him at night, is > by cold.—Painful sensitiveness and cramp in maxillary joint, which hinders mouth from being easily opened.—Skin of face chapped.—Itching tetters on cheeks.—Eruption on lips.—Twitching of upper lip at intervals.

7. Teeth.—Swelling of gums.—Gnawing odontalgia, in evening.—Toothache, with tearing in ears; toothache, with tearing in r. ear.—All teeth feel loose and elongated.—When molar teeth (decayed) are sucked a sour, fetid water is drawn from them.

8. Mouth.—Abundant accumulation of sweetish saliva in mouth.—Breath is offensive, of which he himself is not aware.—Bitter taste in mouth in morning.—Stiffness of the tongue, it is difficult to talk.

9. Throat.—Pain in the (sore) throat, < when speaking or yawning, in evening.—Whole throat feels sore as if ulcerated on swallowing, < in morning; r. side of neck very sensitive, painful to pressure.—Inflammation in throat, with swelling of tonsils on r. side, as well as of face and neck, which are painful when touched.—Spasmodic contractions, and sensation of strangulation in throat.—Accumulation of thick mucus in throat, with stinging pain.—Stitches in throat (uvula) on swallowing.

10. Appetite.—Farinaceous taste in mouth on rising in morning.—Aversion to meat.—Risings, with taste of roasted meat.—Want of appetite.—Thirst in evening.—Violent thirst day and night.

11. Stomach.—Violent hiccough, esp. in evening.—Hiccough (at night).—Sensation of emptiness in stomach, without hunger.—Sensation of great fulness in stomach after eating.—Bitter and sour eructations.—Nausea (morning).—Pressure in stomach, > by eructations.—Painful sensation of constriction of stomach.—Cuttings (violent pain, like stabs with a knife) in epigastrium and hypochondria.—Stitches in stomach extending to back.—Burning in stomach.

12. Abdomen.—Violent stitches, as with knives, in hypochondria.—Cuttings with diarrhœa.—Pinching around navel.—Painless rumbling in abdomen.—Tension of abdomen, and discharge of flatulence (during the menses).

13. Stool and Anus.—Constipation: ineffectual urging to go to stool, stool very hard (tenacious) and only discharged with great effort, has to press hard to discharge the stool.—Diarrhœa: with yellow mucus; expulsion with great force and much flatulence; diarrhœa after drinking milk, and tenesmus; preceded by cuttings or burning in anus.—During stool, burning and stitches in rectum and anus.—After stool, itching, burning, and stitches at anus.

14. Urinary Organs.—Increased secretion of urine, also at right.—Burning urine.—Burning at orifice of urethra during micturition.—After micturition, discharge of thin leucorrhœa.

15. Male Sexual Organs.—Erections (after dinner).—Itching on a small spot of scrotum, scratching does not > it.

16. Female Sexual Organs.—Catamenia, premature, scanty, and of too short duration.—During menses, bloated abdomen, colic, pain in small of back, great debility, burning of eyes.—Leucorrhœa; watery, esp. after micturition.

17. Respiratory Organs.—Roughness in throat > by coughing.—Hoarseness, day and night; every year at same time.—Cough from tickling in trachea; in evening, after lying down.—Dry hacking cough, like the tick of a clock in its regularity.—Dry, scraping cough, from tickling in trachea, with sleeplessness from midnight till 4 a.m.—At night violent cough, compelling one to sit up and to hold head.—Loose, hacking cough, day and evening and at 9 a.m.; has to put arms on thighs when coughing.—Expectoration of white mucus.

18. Chest.—When coughing, dyspnœa and pressure on chest.—Stitches in chest (l. side) when breathing.—Shootings in chest, esp. when laughing.—Pressure and heaviness on chest.—Pain, as from excoriation, in chest.

20. Neck and Back.—Cracking and wrenching pain in neck (nape) when moving head (forward or backward); on rising again after stooping.—Cracking in cervical vertebræ on moving head.—Pain in neck, as from a sprain.—Stitches in small of back (afternoon).—Pain in the small of back during a soft stool.

21. Limbs.—Heaviness in the hands and feet > by motion.

22. Upper Limbs.—Pain in shoulders as if sprained.—Rheumatic pains in elbows, extending to hands; in fingers.—Hands feel heavy, tremble, feel bruised.

23. Lower Limbs.—Stitches in r. patella.—Rheumatic pains from knees downward.—Feet feel heavy, tremble, and are weak.—Stitches in l. heel.—Itching in l. heel.

24. Generalities.—Tearing and shooting in the limbs and other parts.—Symptoms < in evening, and at right; > in open air.—Great restlessness < at night, from agitation; is compelled to change position continually; with vomiting and colic after suppressed menstruation.—Great debility, esp. in evening.

25. Skin.—Itching over the whole body, but mostly on the neck, as from fleas; not > by scratching, but followed by small vesicles.—Itching and pimples in small

of back.—Itching on shoulders; scratching does not >.—Itching tetters.—Itching herpes on hips.—Itching on l. heel.

26. Sleep.—Wakefulness.—Sleeplessness from midnight till 4 a.m., and dry, scraping cough, from tickling in trachea.—Frequent awakening, at night, from agitation.—Vertigo when awaking with nausea and desire to vomit.—In morning heaviness in forehead, as if she had not slept sufficiently.—Pain in swollen face wakens, him at night, it is > by cold.—Feels refreshed in morning without having slept.—At 3 a.m. restlessness and heat; everything feels sore, compelling one to rise and walk about to obtain relief from it.—Awakens after midnight with colic.

27. Fever.—Predominance of coldness.—Chill is preceded or begins with yawning and sleepiness.—Chill, with chattering and shaking, followed by profuse general perspiration (evening in bed).—Heat with burning thirst, esp. in evening and at night.—Heat in evening, followed by chill.—Continuous chill, with moist palms of hands.—Heat, restlessness, and vomiting at night (must rise).—Anxious heat with violent thirst.—Dry heat with thirst, every afternoon at 3 o'clock.—Heat with perspiration and thirst, followed by chill.—Morning sweat.

Niccolum Sulphuricum.

Sulphate of Nickel. $NiSO_4$. Trituration.

Clinical.—Headache. Neuralgia, periodic.

Characteristics.—J. Y. Simpson cured with *Ni. s*. periodical headaches of very severe character. Hale used with success the 2x trit. in periodic neuralgias of malarial origin.

Nicotinum.

Nicotine. An alkaloid from Nicotiana tabacum. $C_{10}H_{14}N_2$. Solutions in distilled water or alcohol.

Clinical.—Aura of epilepsy. Brain-fag. Collapse. Epilepsy. Seasickness. Spasms. Tetanus. Tobacco, effects of.

Characteristics.—*Nicotin*. has had a very heroic proving by Falk, Wochenfeld, Wertheim, Schroff, and Reil. Very violent tonic and clonic spasms were produced; indistinctness of senses; loss of consciousness. *Peculiar symptoms* and *sensations* were: Great sensitiveness of eye to light, along with

indistinct vision. Aura in upper jaw. As though a sharp brush had been drawn through œsophagus to stomach. Disagreeable sensation extending upwards and downwards from stomach. Emptiness and faintness in stomach. Coldness extends *from* tips of fingers and toes over trunk; and warmth streams into them from the stomach. Jerking respiration.

Relations.—*Antidotes:* See under Tabac. *Compare:* Tabac., Digit., Lobel., Œnanth., Absinth.

SYMPTOMS.

1. Mind.—Delirium with frightful visions.—Inability to think or fix attention on any subject.

2. Head.—Vertigo and headache.—Dulness of head, heaviness, dizziness, stupefaction.—Head drawn back with rigidity of muscles of neck and back.

3. Eyes.—Eyelids feel too heavy.—Lachrymation.—Pupils dilated.—Indistinct vision with sensitiveness of eye to light.

4. Ears.—Indistinct hearing; sensation as if ears filled with cotton.

5. Nose.—Expired air had odour of alcohol (to provers and others).

6. Face.—Face pale, features drawn.—Sensation of an aura in upper jaw.

8. Mouth.—Sharp burning sensation in tongue.—Increased saliva.—Scraping, burning taste, esp. low down in throat, causing hiccough and hawking.

9. Throat.—Dryness; and scraping in throat.—Sensation as though a sharp brush drawn through œsophagus to stomach.—Sensation of dysphagia.

11. Stomach.—Loss of appetite.—Great aversion to tobacco and tobacco-smoking (one prover, a smoker, was unable to smoke more than a few whiffs; the other, a non-smoker, could not approach any one who was smoking).—Eructation with some vomiting which >.—Hiccough.—Disagreeable sensation extending from stomach upwards and downwards.—Persistent sensation of emptiness and faintness in stomach and intestines.

12. Abdomen.—Abdomen distended.—Disagreeable sensation through whole intestinal canal.

13. Stool and Anus.—Excessive desire for stool, > by emission of flatus and urine.—Stool retarded.

14. Urinary Organs.—Urgent desire; urine copious; increased.

17. Respiratory Organs.—Respiration very rapid; difficult.

18. Chest.—Oppression: compelling deep breathing; sensation of foreign body behind sternum.

19. Heart.—Pulse increased in frequency in direct proportion to dose.—Pulse and respiration very irregular, sometimes becoming very rapid, sometimes sinking.—Constant sinking of pulse.

22. Upper Limbs.—Formication, beginning in tips of fingers, extending to wrists and afterwards to elbows.

23. Lower Limbs.—Weakness of lower limbs, esp. going up stairs.

24. Generalities.—Peculiar clonic spasms that gradually increased for forty minutes; extremities began to tremble; the trembling extended at last over whole body, which became violently shaken; respiratory muscles most affected, breathing difficult and impeded, every respiratory effort consisting of a series of short jerks in quick succession; expiration accomplished in same manner as inspiration.—Excitement.—Uneasiness.—So weak could scarcely hold up head.—Paroxysms of faintness beginning with a vanishing of senses and ending with loss of consciousness.

25. Skin.—Skin dry.

26. Sleep.—Sleepy.—Restless night; sleepless, hot and excited.

27. Fever.—Extremities icy cold.—Coldness beginning in tips of fingers and toes and extending to trunk.—Shaking chill.—Sensation of warmth commencing in stomach, rapidly extending over chest and to head, and like a streaming into tips of fingers and toes; not followed by sweat.—Cold sweat.

Nitri Spiritus Dulcis.

Spiritus ætheris nitrosi. Nitrous Ether. Sweet Spirit of Nitre. [A mixture of alcohol, water, and ethyl nitrite ($C_2H_5NO_2$): it contains no "nitre" (Kali nit.)]. Dilution.

Clinical.—Diarrhœa. Gall-stones. Mouth, sore. Prosopalgia. Tibiæ, pains in. Typhoid. Warts.

Characteristics.—*Nit. spi. dulc*. has been proved by Lembke. It has been found to be an antidote to several medicines (an instance is given *under Nat. m.). It* was

recommended by Hahnemann for hospital typhoid with apathy, and has been used with success in typhoid fevers with symptoms of cerebral paralysis; in diarrhœa and sore mouth of salt caters. Poisonings with *N. s. d.* give a perfect picture of the typhoid state. It has been used as a remedy for incarcerated gall-stones, given beaten up with yolk of egg, and applied outwardly in the same form. The symptoms of *N. s. d.* go from below upward. They are much < on passive motion, riding in carriage. Catching cold in stormy weather = prosopalgia. Cold <. Walking < breathing and heart. < Afternoon. Among the effects of salt cured by *N. s. d.* are: Sore mouth; scurvy; bloody diarrhœa; hands covered with warts. < From cheese. In fevers Hahnemann advised that *N. s. d.* should be given thus: a few drops dissolved in an ounce of water, a teaspoonful every three hours.

Relations.—*Antidote to:* Nat. m. (crude or in potencies); Nat. c.; Phyt. *Antidoted by:* Calc., Carb. v., Caust., Con., Kali c., Nat. c., Nat. m., K. nit., Op., Sep. *Incompatible:* Dig., Ran. b. *Compare:* Lyc. (< afternoon; fulness after meals). Coloc. (< from cheese). Hell., Phos. ac. (typhoid, sensorial apathy, stupor—Phos. ac. has apathy more pronounced than N. s. d., Hell. most of all).

Causation.—Cheese. Salt. Stormy weather.

SYMPTOMS.

1. Mind.—Complete apathy, without desire for anything.—Delirious and incoherent in manner; dizzy as if intoxicated; when roused could answer questions, complained of headache, and said he found it difficult to walk straight of late.—Excessive ill-humour, irascibility, passion, and quarrelsome disposition, with tendency to weep, dislike to labour and conversation.

3. Eyes.—Black spots and rings float before eyes; pupils contracted.—Stitches in eyes and lids; burning on margins.—Pupils somewhat dilated, acting feebly.

6. Face.—Sensation as of a cloud over upper part of face.—Haggard look.—Paleness of face, with eyes sunken, and surrounded by livid circles.—Chronic soreness at corners of mouth (in salt eaters).—Boring and pressure in bones of face.

8. Mouth.—Tongue dry.—Heat in mouth; sour taste.—Cankers after eating cheese.—Accumulation of water in mouth.

9. Throat.—Sensation of contraction in throat, with pain, as of a plug, in gullet.

10. Appetite.—Want of appetite.

11. Stomach.—Continued nausea and loathing.—After a meal, vomiting of sour matter and mucus, followed by headache.—Vomiting and

purging.—Pyrosis.—Contractive pain and aching in stomach, with sensation of fulness, immediately after a meal.

12. Abdomen.—Shootings, cuttings, and burning pains in abdomen.—Gall-stones.

13. Stool.—Epidemic dysentery with lethargy.—Bloody diarrhœa after purging (from salt).—Constipation marked.

14. Urinary Organs.—Urine very scanty.

15. Male Sexual Organs.—Stitches in glans.

16. Female Sexual Organs.—Catamenia scanty and irregular.

17. Respiratory Organs.—Inhalations intermit.—Stertorous breathing.—Breathing slow, regular; on walking a short distance it becomes very hurried; if persisted in, quick, difficult, painful, and a most distressing sense of painful constriction is felt under sternum.—Short, dry cough.

18. Chest.—Cramp rising up in œsophagus, extending to upper chest wall.—Pressure in and under sternum.

19. Heart.—Pulse 60, small, hard.—Violent, tumultuous beating, < walking; frequently in evening on lying down.

20. Neck and Back.—Violent pressure in nape and cervical vertebræ.—Sensation as of hot water creeping through back from below upward.

22. Upper Limbs.—Weakness, heaviness, stitches through shoulders, arms, hands, and fingers.—Nails blue.

23. Lower Limbs.—Boring, pressing pains in lower limbs.—Boring in tibiæ.—Stitches in toes.—Nails blue.

24. Generalities.—Great fatigue; a recumbent position can alone mitigate and tranquillise it.—Excessive emaciation.—Swelling of veins.—< Afternoon.—Very sensitive to cold.

25. Skin.—Shiverings and acute drawing pains in the bones.—Skin and tongue dry.

27. Fever.—Chilliness: internal with cold hands; frequent; creeping, under skin, from small of back to lower limbs.—Heat: in head and face; nape and occiput; with swollen veins; from cervical spine into occiput; in head and face with chilliness in back and cold hands; in back; with inclination to perspire.—Typhoid with sensorial apathy and semi-paralysis of brain; wild, staring eyes.—Adynamic fevers, with nervous symptoms such as shootings, jerkings, &c.

Nitricum Acidum.

Nitric acid. Aqua fortis. HNO_3. Solution.

Clinical.—*Actinomycosis. Anus, fissure of. Axilla, offensive perspiration of. Bladder, chronic catarrh of. Breath, offensive*. Bright's disease. *Bronchitis. Bubo. Chancre. Cheloid*. Chilblains. Choking, easy. Climacteric. Cold, easily taken. *Condylomata. Constipation. Corns. Cough. Dysentery. Dyspepsia. Ear, affections of*. Epilepsy. *Eyes, affections of. Feet, perspiring*. Fistula; lachrymal. *Freckles*. Frost-bites. *Glandular swellings*. Gleet. *Gums, sore*. Hćmaturia. Hćmorrhages. *Herpes*. Herpes preputialis. Ingrowing toe-nail. *Iritis, syphilitic. Irritation*. Jaw-joint, cracking in. *Menstruation*, excessive. Metrorrhagia. *Mouth, sore. Mucous patches. Muscć volitantes*. Myopia. *Nails, affections of. Ozćna*. Paralysis (l. side). *Perspiration, abnormal*. Phimosis. *Polypus. Proctitis. Prostate, suppuration of*. Ranula. *Rectum, affections of*. Rickets. *Salivation*. Spine, injury to. *Syphilis. Taste, disordered. Tongue, ulceration of. Ulcers. Warts*. Wens. *Whooping-cough*.

Characteristics.—When strong *Nitric acid* comes in contact with the skin it destroys the upper layers and turns them yellow, but as it coagulates their albumen it to a certain extent forms a barrier against its own further action, its action therein differing from that of *Sulphuric acid*. When swallowed it acts as an irritant poison; when its fumes are inhaled it may destroy life by suffocative spasm of the glottis or by intense bronchitis. It is used in old-school practice as an escharotic for warts and warty tumours; for phagedćnic ulcers, chancres, poisoned bites. The dilute acid is used internally in fevers to quench thirst; in bronchitis and phthisis to diminish the excessive secretions; in some cases of syphilis; in phosphaturia. It has even been injected into the bladder in a dilute form to dissolve calculi (Brunton). In the light of provings and poisonings all these uses are seen to have more or less specific relationship. "Phthisis," "syphilis," and "warty growths" represent Hahnemann's three miasms, Psora, Syphilis, and Sycosis; and *Nit. ac*. belongs almost equally to all three. But in addition to its miasm relationship, *Nit. ac*. has drug relationships of great importance. It is one of the chief antidotes of *Merc*., and it is in cases of syphilis that have been overdosed with *Merc*. that its action is most brilliant. I have known it do equally well when used after over-dosing with *Kali iod*., whether in syphilitic or non-syphilitic cases. In phthisical cases it follows the action of *Kali c*. in homśopathic practice. In sycotic cases *Thuj*. follows it well. The localities in which the action of *Nit. ac*. is very strongly marked are—(*1*) the muco-cutaneous orifices and adjoining parts. Burnett made a brilliant cure of actinomycosis with *Nit. ac*. 3x in a patient who had been the round of the London consultants, and had doubtless taken much *Kali iod*. The localities in which the disease manifested itself, the region of the mouth and anus, gave Burnett his indication. The mouth (especially its angles) and anus are prominent seats of syphilitic action, and also of the action of the other miasms, the condylomata and

fissures of sycosis; the fissures, fistulć, hćmorrhoids, and sore mouth of psora. The right eye, the male genitals, and the bones are other localities for which *Nit. ac*. has a very strong affinity. In his directions about this remedy Hahnemann makes the remark that it is rarely required by patients who suffer from constipation. In my experience this is absolutely wrong. Constipation, as the symptoms of the Schema would indicate, is a prominent indication for *Nit. ac*., and I have cured almost as many cases with this as with any other single remedy. I have generally found, when I have had an opportunity of testing them, that Hahnemann's *positive* directions are thoroughly trustworthy; but his *negative* directions are quite as likely to be wrong as right. The characteristic discharges of *Nit. ac*. are offensive, thin, excoriating; if purulent they are a dirty yellowish green, not laudable pus. Ulcers have profuse exuberant granulations, and bleed easily. The dressing causes bleeding, and every touch causes "sticking pain as if from splinters." This is a grand keynote of *Nit. ac*., and will serve to indicate it wherever it is found. It requires a touch or movement to elicit it. When it occurs in the throat it requires the act of swallowing to set it up; in the anus, the passage of the stool; in ulcers, the touch of a dressing. It may occur from touch in any part of the body; in abdomen; in Ingrowing toe-nails. In the phthisical cases calling for *Nit. ac*. the chest walls are extremely sore to touch; there is sudden rush of blood to chest; hectic; frequent hćmorrhages, bright red, profuse; sharp stitches through right chest to scapula. Great dyspnśa, cannot talk for getting out of breath; morning hoarseness; cough tickling, seems to annoy all night; at times loose and rattling; loud râles through chest; sputa offensive, bloody, purulent, dirty green; exhausting diarrhśa; exhausting sweats towards morning, chilly; heat in flashes or only on hands and feet. The suffocating effect of *Nit. ac*. fumes is an indication of its affinity for the respiratory organs. Here is an example (*H. W*., xxiv. 537): A two-gallon bottle of *Nitric acid* in the store of Mr. Harold Woolley, of Manchester, had become fractured. Water was thrown upon the bottle, and whiting placed about it to neutralise the fumes which issued from the fracture. Mr. Woolley superintended the process, and was in contact with the fumes for two hours. This happened in the afternoon. Next day Mr. Woolley complained of being unwell, and although medical aid was promptly summoned he died at five o'clock in the afternoon, death being attributed to "rapid congestion and inflammation of the lungs, in consequence of inhaling the fumes."—*Nit. ac*. is indicated in typhus when pneumonia supervenes; and when hćmorrhage from the bowels occurs. The stools are green, slimy, offensive, may be purulent; the hćmorrhages are profuse and bright red. With diarrhśa there is rawness and soreness of anus; the stool is putrid; in children may contain lumps of casein. Slimy stools, from excess of mucus passed with much straining. Or they may be (especially in scrofulous children) pale, pasty, sour, offensive. A keynote of *Nit. ac*. stools, whether loose or constipated, is pain *after stool*. There is pain during stool as if anus and rectum were torn and pierced, and violent pains after stool, lasting for hours. All the other orifices of the body are affected by *Nit. ac*.: Chancres and herpes about penis and prepuce; growths about vagina and cervix; leucorrhśa, immediately after menses;

flesh-coloured, stringy, offensive. The nose, ears, and eyes are also influenced, and *Nit. ac*. is one of the first remedies in syphilitic eye affections, as iritis. Among the hćmorrhages of *Nit. ac*. is hćmaturia. Goullon published a case in *Archiv*., ii. 36. (New Series), translated by Mossa, *Rev. H. Française*, ix. 136. A painter's apprentice, 15, after gilding an object, was seized with vertigo, with coldness, and soon with violent pain in bladder region. Next day he passed pure blood, bright red, with frequent strangury; the urine separated itself distinctly from the blood. During short intervals the blood did not flow. Tongue white, swollen. *Nit. ac*. 3 one drop was given, and in twenty-four hours the boy was cured. The urine of *Nit. ac*. affords one of the most important of all its keynotes: Urine of a *strong odour, like horses'*; or extremely offensive. Whenever this occurs as a concomitant in any case it is likely that other symptoms will point to *Nit. ac*. Fetid sweats on feet, hands, or in axilla no less point to *Nit. ac*. Among the hćmorrhages of *Nit. ac*. are those occurring in cachectic women after confinement or abortion. H. N. Coons (*Amer. Hom*.) records the case of an anćmic woman, four weeks after miscarriage, had constant pelvic hćmorrhage, at times coming with a gush; constant heavy feeling, much < standing or walking. *Nit. ac*. 2x, 20 drops in three ounces of water, a teaspoonful every two hours, quickly arrested bleeding and cured. As showing the value of peculiar symptoms, D. C. Perkins relates (*Amer. Hom*., xxii. 12) the case of a woman who said she was very ill, but could only describe her illness by saying that she" felt like a pulp-mill." *Nit. ac*. has "borborygmus as if a boiler was working in the bowels," and *Nit. ac*. proved to be the remedy. The *sensitiveness* to touch runs through the entire symptomatology, including the symptoms of the mind. The mind is weak, no ideas; if she exerts her mind thoughts vanish. Mind easily affected, inclined to weep. Hopeless despair. On the other hand, there is nervous excitability (especially after *Merc*.—it is the *excitable* form of mercurialism that *Nit. ac*. best meets); peevishness; irritable, quarrelsome; fits of rage and cursing; inveterate ill-will unmoved by apologies. The head is *sensitive* to the slightest jar; to the rattle of waggons in the street, or even to the step of one walking across the floor. The head is very sensitive, even to pressure of hat; sensitive to combing, and on part lain on. Eruptions and ulcers bleed easily when touched. Eyes are sensitive to light. The ears present an exception, for deafness is > riding in a train or carriage. Sensitiveness of the head while out driving and stopping suddenly. The tongue is sensitive even to soft food. *Nit. ac*. is *suited to:* Persons of dark, swarthy complexion, with black hair and eyes; lean persons of rigid fibre; brunette rather than blonde nervous temperament. Persons suffering from chronic diseases who take cold easily and are disposed to diarrhśa. Old people with great weakness. Hydrogenoid constitutions. *Peculiar sensations are:* As if head in a vice from ear to ear over vertex. As if some one were forcibly pressing head; head tightly bound; constricted by tape; contused. As of a gathering in left temple. Pain as from splinters in eruption. As if warm water were flowing from and over eyes (first right, then left). As if teeth soft and spongy. As if abdomen would burst. As if a boiler working in bowels. As if a band round bones. As if dogs were gnawing flesh and bones, and as if sinews were being pulled up.

As if ball of great toe had been frozen. As if splinters in great toe; in carbuncles, &c. Cramp-like pains, stinging, shooting, burning, pressure, and soreness. Excessive physical irritability, hysteria. Pains, even slight ones, affect him violently. Prostration, sick feeling, faints from least motion. Epilepsy > riding in carriage. Left-sided paralysis. Twitchings in various parts; frequent starts in upper part of body. Easily takes cold. Emaciated. Tedious suppuration. A characteristic *accompaniment* of *Nit. ac*. is "Profuse sweat breaks out on hands and feet." When this occurs in spinal injuries *Nit. ac*. is the remedy (B. Simmons, *H. P*., ix. 327). W. M. James (*Med. Cent*., vi. 325) cured this remarkable case: A girl had frequent attacks of *petit mal*, sometimes as many as fifty a day between the periods. At the beginning of the menses she had spasms so violent that they dislocated both humeri. *Nit. ac*. 200 given persistently put an end to the attacks, gradually. The first few times after commencing *Nit. ac*. there were spasms but no dislocation. Mohr (*H. R*., xiii. 210) gave *Nit. ac*. 3x to a man who suffered from cancer of the liver with bloody diarrhśa, followed by constipation; violent pains in stomach and liver; unable to sleep; or unable to take any food without much pain, mostly vomiting. *Nit. ac*. removed the pain and relieved the constipation entirely, and the patient died without an hour's suffering from the time he received *Nit. ac*. J. H. Fulton cured with one dose of *Nit. ac*. 200 R. M., 28, who had had bleeding piles for eighteen months. He had frequent bloody and slimy stools; but *always* bright red blood *after stools*, from a dessertspoonful to half a teacupful. When the stools were hard there was much pain in passing them. Burning in anus after stools (*Med. Adv*., xxxiii. 268). The symptoms are < by touch; pressure (of hat); > riding in carriage. < Eating (during and after eating, sweat). < Milk and fat food. < Exercise, exertion, effort, raising. arm, walking, standing. < Exerting mind. Lying down > headache. Night-sweat on parts lain on. Many symptoms come on towards morning. Cannot sleep after 2 a.m. Cough < on rising, during day, and at bedtime. Many symptoms, including bone-pains, come on in night. Warmth and cold both <. Warm weather < hćmorrhoids; covering up = night-sweats. Least exposure = chills. Cold or warm things = tearing and shooting in teeth. Washing = warts to bleed. Cold weather < chilblains. Cold water > warm water feeling in eyes. Winter < chronic cough; hiccough; chilblains.

Pains affect violently, Aco., Cham., Hep. Sensitiveness, Hep. Choking easily, K. ca. < Warmth or cold, Merc. Dyspepsia from effects of salt, Nit. s. d. Shooting from below upward in vagina, Sul., Sep., Pul., Pho., Alum. Piles < walking, Csc. h. Phimosis, Can. s., Merc., Sul., Thuj. Strong odour of urine, Benz. ac. Brownish scattered spots in dark-haired people, Petr. Splinter pains, Arg. n., Hep., Sul. Ulcers, Merc. (Merc. more superficial, Nit. ac. deeper, granulating, bleeding easily). Sore, excoriated anus, Merc., Sul., Cham., Ars., Pul., Syph., Chi. Straining at stool, Merc., Nux (with Merc. there is straining before, during, and after stool; with Nux there is complete > after stool; with Nit. ac. there is excoriating, cutting pain going on for hours after stool). Ulcers threatening to perforate cornea, Sil., Calc. (Nit. ac. follows Calc.). Condylomata, enlarged tonsils (syphilitic or sycotic), fissures, balanorrhśa, greenish leucorrhśa, Thuj. (Nit. ac. has more aching in bones, especially bones without muscular coverings, as shin bones). Disposition to swear, Anac. Diphtheria, sore mouth, scarlatina, Ar. t. Constriction at anus, Lach.

SYMPTOMS.

1. Mind.—Sadness, despondency.—Excessive melancholy and fits of anguish, esp. in evening, or at night.—Uneasiness respecting health, with fear of death.—Excessive nervousness, great excitability, esp. after the abuse of Mercury.—Easily startled and frightened.—Unfitness for labour.—Concentration in self.—Taciturn, disinclined to communicate anything.—Vexed at trifles.—Attacks of rage, despair, with cursing and maledictions.—Irritability and obstinacy.—Passion.—Prolonged rancour.—Fits of rage and despair, with oaths and imprecations.—Inclination to weep.—Nostalgia.—Timid and apprehensive disposition.—Weakness of intellectual faculties, with unfitness for intellectual labour.—Excessive weakness of memory.—Comes over with feeling as if would go out of her mind, with burning feeling on vertex (Agg. from 3x, R. T. C.).—Woman, 20, intemperate, syphilitic, poor physical condition, restless, destructive of clothing, talking incoherently and continuously sleepless, excited at any one's approach, using profane and vulgar language (cured with 2x. G. S. Adams, *Westb. As. Rep*., 1889).

2. Head.—Vertigo when walking and when seated.—Vertigo, which compels lying down, esp. in morning and evening.—Vertigo, with weakness, nausea, or headache.—Pressing headache from without to within, with nausea; < by noise; > on lying down or when riding in a carriage.—Headache, on waking in morning.—Great sensitiveness of head to noise of carriages, or to a heavy tread.—Attacks of headache, with nausea and vomiting.—Sensation of fulness and heaviness in head, with tension and pressure extending into eyes.—Tearing in forehead, vertex, and occiput.—Lancinations in almost all parts of head, which sometimes compel patient to lie down, and disturb sleep at night.—Pulsative headache.—Congestion of blood to head, with internal heat.—Flushing and great heat of head, with tendency to perspiration of head and general wave of heat (produced in man, 60, when taking 30th—R. T. C.).—Drawing and pressive pains in

bones of head, with sensation as if they were constricted by a tape, < in evening and at night; > from cold air and while riding in a carriage.—Painful sensitiveness of scalp; a head-dress is oppressive.—Tension in scalp.—Itching of scalp.—Humid eruption on head.—Humid, stinging-itching eruption on vertex and on temples, extending down to whiskers, bleeding very easily on scratching it, and feeling very sore when lying on it.—Inflammatory swellings on the scalp, suppurating or becoming carious; most painful from external pressure or when lying on them.—Wens.—Falling off of hair, with humid eruptions, paining as if splinters were thrust in, or when touched; also on the genitals, after abuse of Mercury; with nervous headaches, great debility and emaciation.—Ulcerated, running, and burning places on head.

3. Eyes.—Eyes dull and sunken.—Aching and shootings in eyes.—Pressure and stinging in eyes.—Inflammation of eyes, esp. after suppressed syphilis or after the abuse of Mercury.—Ulceration of eyes.—Fistula lachrymalis.—Specks on cornea.—Swelling of lids.—Frequent lachrymation, esp. when reading, with painful sensitiveness of eyes.—Difficulty to open eyes in morning (they are surrounded by a yellow circle).—Paralysis of upper lids.—The pupils contract with difficulty.—Myopia.—Diplopia.—Mist, spots, nets, sparks, and black spots dancing before eyes.—Sight confused, eyes clouded.—Eyes dazzled by daylight.—Double vision of horizontal objects.—Obscuration of sight while reading; short-sighted.—Iritis, which continually relapses; also old cases spoiled by Mercury.—(Smarting of eyes after iritis.—Constantly recurring pustular ophthalmia.—Proliferation of cornea, result of scrofulous inflammation).

4. Ears.—Shootings in ears.—Stitches in the (r.) ear.—Dryness in interior of ear.—Ulceration of mastoid apophysis.—Discharge from ears.—Excoriation behind ears, with itching and suppuration.—Obstruction of ears.—Hardness of hearing, esp. when relieved by riding in a carriage or in the cars, *i.e.*, hears better (like *Graphit.*).—Hardness of hearing, principally from elongation, induration and swelling of tonsils (after the abuse of Mercury).—Clapping, throbbing, and rumbling in ears.—Beating and humming in ears.—Echo in ears of one's own speech.—Cracking in ears during mastication.—Swelling of parotids.—Swelling of glands beneath and behind l. ear with stitches and tearing extending through the ear.—Wen on the lobe of the ear.—[*Nit. ac.* has a special but very ill-defined power in deafness and tinnitus.—Woman, 55, deaf fifteen years with tinnitus in both ears, constant in l., intermittent in r., not > in noise; *Nit ac.* 200 caused great < of noises for two days, then gradual cessation with complete relief of tinnitus in three days.—In another lady *Nit ac.* 6 always = noises.—In young man *Nit ac.* always = heavy, dull deafness with fulness of head as from a cold, a regular eustachian blockage.—Deafness after measles, hiccough and clear expectoration (cured).—R. T. C.]

5. Nose.—Redness of point of nose, which is covered with scabby vesicles.—Itching tetters on alć nasi.—Shooting prickings in nose (as from splinters)

when touched.—Pain, as of excoriation, and burning, with scabs in nose.—Bleeding of nose, excited by weeping, or in morning; the blood that is emitted is black.—A fetid odour is perceived when breathing through nose.—Fetid odour from nose.—Condylomatous excrescence, like a sycosis in nose.—Abortive sneezing.—Dryness and obstruction of nose.—Violent fluent coryza, with headache, cough, swelling and ulceration of nose (the mucus is only discharged through the posterior nares).—Dry coryza, with dryness of throat and nose.—Coryza, with dry cough, headache, hoarseness, and stitches in throat.—Wings of nose inflamed and swollen.—Discharge of thick and corrosive mucus from nose.—Fetid and yellowish mucus in nose.—Large soft protuberances on alć covered with crusts; syphilis.—(Ozćna with clear discharge.)

6. Face.—Paleness of face, with eyes deep-sunk.—Yellow colour of face, and esp. round eyes, with redness of cheeks.—Dark yellow, almost brown complexion.—Dark freckles on face.—Cramp-like pain and tearing in cheeks and zygomatic process.—Swelling of cheeks.—Bloatedness around eyes on waking early.—Eruption of pimples on face, forehead, and temples.—Scurfy pustules on face, with margins, large, red, and covered with scabs; syphilis.—Erysipelatous swelling of cheek, with shooting pain, nausea, and fever.—Furfuraceous skin over whole face.—Itching eruption and tetters in whiskers.—Black pores in face.—Swelling (and itching) of lips.—Lips cracked.—Ulceration of lips, commissures.—Ulcers on red of lips.—Furunculi on chin.—Painful swelling of the submaxillary glands.—Cracking of jaws when chewing and eating.

7. Teeth.—Odontalgia, with jerking, shooting, drawing, or pulsative pain, principally at night, or in bed, in evening.—Pain in carious teeth.—The teeth feel elongated.—Pain on chewing.—Stitching or boring pains in teeth when touched by anything cold or warm.—Teeth become yellow and loose.—Gums bleed, and are white and swollen.—Stomacace.

8. Mouth.—Offensive and putrid (cadaverous) smell from mouth.—Excoriation of tongue, palate, and internal surface of gums, with acute shooting pains.—Ulcers (mercurial and syphilitic) in mouth and fauces, with pricking pains.—Ulcerated spots on inner surface of cheeks, with sticking pains as from a splinter.—Corners of mouth ulcerated; with stitches.—Tongue is very sensitive; even mild food causes a smarting sensation.—White, dry tongue, in morning.—Tongue: coated green (with ptyalism); coated yellow, sometimes white in mornings.—Blisters and ulcers on tongue; and margins, with burning pain when touched.—Bites tongue when chewing; and cheeks.—Tongue sensitive, even to soft food, which causes smarting.—Profuse flow of saliva.—Saliva bloody in morning.—Saliva has foul odour.—Sour taste in mouth.—Mucous membrane of mouth swollen and ulcerated; with pricking pains; after abuse of Mercury.—Ranula.—Salivation (also with ulcers on the fauces), sometimes from febrile attacks.—Great dryness of the mouth, with burning thirst.

9. Throat.—Ulcer, with shooting pain in the mouth and throat.—Inflammation of the throat; with shooting pains; also after the abuse of Mercury, or with burning and soreness, esp. on swallowing liquids.—Tonsils (uvula and fauces) red and swollen.—Great dryness and heat in the throat.—Much mucus in the throat posteriorly.—Sore throat on swallowing, as if swollen; raw and ulcerated.—Burning sensation, and pain as of excoriation, in throat.—Swallowing very difficult, as from constriction of the pharynx.—Diphtheritic patches on tonsils and fauces, extending to mouth, lips, nose.

10. Appetite.—Loss of appetite.—Milk is not digested.—Bitter taste in mouth, esp. after eating.—Complaints < while eating; from abuse of Mercury.—Sour taste., with burning in throat.—Sweetish taste in mouth.—Violent thirst even in morning, on rising.—Dislike to meat, and things sweetened with sugar.—Repugnance to bread, which leaves a sour taste, and causes vomiting.—Craving for earth, chalk, lime, or fat food, and herring.—Sharp hunger, with disgust to life.—Difficulty in digesting milk.—Nausea from fat food.—Sweat, during and after a meal.—After drinking, during a meal, pain, as from excoriation in throat, śsophagus, and stomach, or else colic.

11. Stomach.—After a meal, fulness in stomach, lassitude with heat, sweat, and palpitation of heart from least movement, or nausea, risings, flatulency, headache with vomiting, sleep, anguish, &c.—Nausea after eating with heaviness and dulness of head.—Sour risings.—Inclination to vomit.—Pyrosis.—Water-brash, after drinking quickly.—Hiccough.—Frequent nausea, and inclination to vomit, often attended by anguish, trembling, and shivering.—Bitter and sour vomitings, with frequent risings (after a meal).—Stomach and abdomen tense after a moderate meal, clothes seem too tight.—Aching of stomach.—Burning, or sensation of coldness in stomach.—Pain in cardia, on passing of food into stomach.—Cramp in stomach.—Lancinations in epigastrium.

12. Abdomen.—Stitches in hepatic region, < from motion.—Tensive pressure and shootings in the l. hypochondrium.—Pains in the abdomen, like those which follow a chill.—Excessive inflation of abdomen, also in morning.—Frequent pinchings and incisive pains in abdomen (esp. in morning in bed).—Pain, as from ulceration, in the lower part of the abdomen.—Shootings in abdomen, esp. when touched.—Inguinal hernia, even in children.—Swelling and suppuration of inguinal glands.—Tendency to suffer from a chill in abdomen (colic from cold).—Accumulation of flatus in abdomen.—Borborygmus as if a boiler was working in abdomen.—(Sensation in abdomen like machinery working.).—Rumbling and borborygmi in abdomen.—Incarceration of flatus (in upper abdomen), esp. morning and evening.

13. Stool and Anus.—Difficult and irregular evacuations.—Before stool: colic; cutting constant pressing in rectum; constant but fruitless desire.—During stool nausea; tenesmus; spasm of anus; cutting in anus and rectum; acute pain in

abdomen; sensation as if fćces remained and could not be expelled; splinter-like pains in rectum (with ineffectual urging); burning; tearing; palpitation of heart.—After stool-continued urging; exhaustion; irritation, anxiety, general uneasiness; anus sore, raw; cutting, straining, shooting in rectum, continuing for hours; prolapse with sensation of constriction in anus; stitching pains; hćmorrhage; discharge of prostatic fluid.—Constipation.—Inability to evacuate fćces.—Constant ineffectual desire, not > by stool.—Fćces hard and dry.—Constipation with fissure symptoms: bleeding, pain, distending stool.—Evacuations too frequent.—Urgent desire to evacuate.—Loose evacuations, sometimes mucous, or of a putrid smell.—Offensive and undigested evacuations.—Much discharge of blood after stool.—Sanguineous, dysenteric evacuations, with tenesmus.—Black, offensive blood; mucous pseudo-membranes, with straining and burning in rectum.—Colic, before stools.—After stools, excitability and dejection.—Burning pain, and itching in anus and rectum; with prolapse.—Sticking in rectum, and spasmodic contraction in anus during stool; fissures.—Oozing excoriation at anus.—Hćmorrhoids, protruding, painless or burning.—Pain as if rectum would be torn asunder during a stool.—Swelling of hćmorrhoidal tumours in anus, which bleed at every evacuation.—Moisture on anus.

14. Urinary Organs.—Frequent want to urinate, with scanty emission of a fetid urine, deep-coloured or brownish.—Incontinence of urine.—Painful emission of urine.—Micturition in a thin stream, as from a stricture.—Urine cold when it passes.—Fetid urine, having an intolerably offensive, strong smell, or smells like horse's urine.—Urine reddish; usually offensive.—Red sediment and sand in urine.—Smarting and burning in urethra when urinating.—Discharge of mucus, which is sometimes sanguineous, or of pus from urethra.—Swelling (dark red) of orifice of urethra.—Needle-like stitches in orifice of urethra.—Ulcers in urethra.—Discharge of prostatic fluid after a difficult stool.

15. Male Sexual Organs.—Affections of male genital organs in general; glans penis; erections.—Violent itching in genital organs.—Falling off of hair from parts.—Excoriation between scrotum and thighs.—Red spots covered with scabs on prepuce.—Small, itching vesicles on prepuce, bursting soon and forming a scurf.—Secretion behind glans, as in gonorrhśa balani.—Swelling, inflammation of prepuce, and phimosis.—Paraphimosis.—Ulcers, like chancres (after Mercury; esp. with exuberant granulations), on prepuce and glans (with pricking, stinging pains).—Deep, fistulous, irregular, ragged ulcers on the glans, with elevated, lead-coloured, extremely sensitive edges.—Syphilis; secondary syphilis.—Excrescences, like sycosis, on prepuce and glans, with smarting pain and bleeding when touched, with oozing of a fetid and sweetish pus.—Red, scurfy spots on the corona glandis.—Relaxation of testes.—Inflammatory swelling of testes, with painful drawing of the spermatic cord, as far as side of abdomen.—Absence of sexual desire and of erections.—Great lasciviousness, with copious discharge of prostatic fluid.—Painful, and almost spasmodic, nocturnal erections.—Frequent pollutions.

16. Female Sexual Organs.—Itching, burning pain, and sensation of dryness in vulva.—Great failing off of hair of genitals.—Stitches up vagina, or from without inward, when walking in open air.—Violent stitches in vagina.—Excoriations in vulva between thighs.—Ulcer, with burning itching in vagina.—Excrescences on vaginal portion of uterus as large as lentils; great voluptuousness of mucous membrane in genitals after coitus.—Uterine hćmorrhages from overexertion of body.—Metrorrhagia, a principal remedy (R. T. C.).—Coffee-ground, offensive discharge from uterus at climaxis, or after labour.—Before menses: throbbing in nape of neck and small of back.—Menses: too early and too profuse, blood very dark and thick; irregular, scanty, and like muddy water.—During menses: eructations, cramp-like pail, in abdomen as if it would burst; very offensive urine; bruised pain in limbs; down thighs; labour-like pains in abdomen and back; palpitation of heart, anxiety, trembling; heaviness; burning in eyes; toothache and swelling of gums.—After menses: violent pains through abdomen and a sudden gush of "muddy water"; brown or thick leucorrhśa, finally a thin, watery, flesh-coloured, offensive discharge, sometimes acrid; greenish, mucous leucorrhśa.—White glairy leucorrhśa, followed by backache (cured, R. T. C.).—Menses reappear: a few days after cessation, and are pale red; fourteen days after cessation, not profusely.—Stringy mucous leucorrhśa, flesh-coloured.—(Leucorrhśa staining, yellow.—Leucorrhśa leaving spots with black borders on linen.).—Catamenia too early; or suppressed.—Cramps in the hypogastrium, and bearing down towards the genital organs, during catamenia.—Fetid, mucous, corrosive leucorrhśa.—Fetid discharge of a reddish brown colour (like brown water) from vagina.—Hard nodosities on breast.—Atrophy of breasts.

17. Respiratory Organs.—Hoarseness, with coryza, cough, and shooting pains in throat.—Roughness in bronchia.—Bronchitis.—Scratching and stinging in larynx, with hoarseness; esp. when talking for a long time.—Whistling inspiration with râles.—Scraping and shootings in the trachea, esp. after reading aloud, or after a long conversation.—Cough, with shootings and pain in throat and chest, as if parts excoriated.—Cough only in day.—Dry, barking cough, esp. in evening, on lying down.—Violent, shaking, barking cough, caused by tickling in larynx and pit of stomach, with expectoration during day of blood, mixed with clots, or of yellow, acrid pus, tasting bitter, sour, or salt, and of offensive smell.—Cough, with vomiting.—Cough causing anxiety and vomiting of mucus and food.—Rough, dry cough before midnight.—Shaking cough at night, with obstructed respiration, almost as in whooping-cough.—When coughing, lancinations in loins, or pain in head, stomach, and hypochondria, or pain, as from excoriation, and shootings in chest.—Empyema with considerable muco-purulent sputum.—Purulent, yellowish expectoration with cough.—Short cough, with expectoration of black, coagulated blood.—Phthisis pulmonalis (after *Kali carb*.).

18. Chest.—Wheezing respiration, esp. during manual labour.—Obstructed respiration.—Shortness of breath.—[Panting breathing, esp. when reading or

stooping over a desk, in schoolboys (cured).—Dyspnśa and vertigo in children (cured). R. T. C.].—Loss of breath and palpitation of heart on walking and going up stairs.—Contractive cramps in chest.—Shooting and stitches in chest and sides (r. side and scapula).—Pain, as from excoriation, in chest, on breathing and coughing.—Rapid congestion and inflammation of the lungs.

19. Heart.—Dyspnśa, palpitation of the heart and anguish when going up stairs.—Congestion in chest, with anguish, heat, and palpitation of heart.—Nervous palpitation caused by slightest mental excitement.—Pulse very irregular; one normal beat is often followed by two small rapid beats—the fourth entirely intermits; alternate hard, rapid, and small beats.

20. Neck and Back.—Neck stiff and sore from least cold.—Rigidity of the nape of the neck.—Swelling of the glands of the neck and axillć.—Offensive sweat in axillć.—Suppuration of the axillary glands.—Pain in the back and loins after a chill.—Drawing in lumbar region, as if stiff.—Pain between the scapulć.—Neuralgic pains up back, esp. l. side.—Pain in back and down thighs.—Itching on back.—Stitches in sacral region.—Shootings in and between shoulder-blades, with stiffness of the neck.

21. Limbs.—Tearing or pulling in limbs, esp. after a chill.—Cracking joints.—Frozen limbs.—Epileptic fits, preceded by pulling in limbs, and followed by rigidity of body and stertorous breathing.

22. Upper Limbs.—Pressive pain in shoulder-joint.—Drawing in arms.—Jerking in muscles of arms.—Contusive pain in arms, which hinders them from being lifted up.—Drawing (rheumatic) and tearing in forearms and hands.—Weakness and trembling of the forearms and hands.—Warts on arms.—Cracks and rhagades in hands.—Coppery spots on hands.—Coldness of hands.—Roughness of skin of hands.—Tensive pain in joints of fingers.—Swelling of fingers, esp. at joints, with shooting pain.—Falling asleep of hands.—Fingers dead and benumbed in cold air.—Chilblains on fingers and hands.—Tetters between fingers.—White spots on nails.

23. Lower Limbs.—Wrenching pain in hip, which causes lameness.—Tensive pain in r. hip-joint.—Digging, gnawing pains in flesh and bones.—Bruised pain as from excessive fatigue.—Lassitude, heaviness, and coldness in legs and feet.—Constant coldness of feet.—Drawing tearings (rheumatic) in legs and feet.—Restlessness in legs in evening.—Itching in thighs.—Pains in thighs, on rising from a seat.—Pain in ham, which prevents resting on foot.—Rigidity and shooting in knee.—Failing of joints of knee and foot.—Pain in patella, impeding walking.—Weakness of knee.—Legs (< l.) very sore in front along shin from ankle to knee; bound flannel on them to see if it would >.—Violent cramp in calf of leg, esp. at night and towards morning, as well as on walking, after having been seated.—Jerking in calves of legs.—Shootings in heel, when resting on it.—Sweat on feet, sometimes

fetid, with excoriation between toes.—Chilblains on toes.—Ingrowing of toe-nails; where nail seems to have grown into flesh, but in reality has not—very sore, with more or less ulceration, and a feeling as if a sharp splinter were being stuck into affected part on any contact.

24. Generalities.—Shooting pains, as if caused by splinters stuck into affected part on slightest contact with anything; same in throat on swallowing.—Sensation as if a band were around affected part or parts; as though a band around bones; jerking pain in inner parts.—Rickets.—Inflammation, swelling, and suppuration of glands.—Pains on change of weather.—Pains which are perceptible during sleep.—Aggravation of the symptoms in the evening and at night.—Riding in a carriage > most symptoms.—Great weakness and general lassitude, with trembling, heaviness of legs, and desire to remain lying down, esp. in evening or morning.—Hysteria.—Epileptic attacks.—Syphilis (secondary).—Sycotic condylomata; and sycosis.—Jaundice, with constipation.—Pains in bones.—Frequent drawing pains in almost all parts of body, suddenly appearing and disappearing.—Epileptic attacks after midnight, beginning like a mouse moving up and down l. side, then loss of consciousness.—Excessive emaciation.—Tendency to take cold.—Affections in general, of any kind, appearing in r. eye (*e.g.*, as if a grain of sand was there); r. side of neck; nape of neck; l. hypochondriac region; l. chest; inguinal glands; l. lower extremity; bones of head.

25. Skin.—Dryness of the skin.—Itching nettle-rash, also on face, and esp. in open air.—Blackness of pores.—Brown sphacelus.—Reddish-brown spots (scattered over body, esp. if in dark-haired people) and deep-coloured ephelis on skin.—Copper or violet-coloured spots.—Itching tetters.—Pimples, or exanthema in general; stinging exanthema.—Pain from chilblains and corns on feet.—In a moderately cold temperature limbs become as if frozen, inflamed, and itching, and skin cracks.—Large furunculi.—Mercurial ulcers.—Carious ulcers.—Complaints < from punctured wounds.—Wounds and ulcers, with lancinations as by splinters, or with burning pains (esp. when they are touched), and which bleed easily.—Inflammation and painful sensitiveness of the bones.—Caries.—Inflammation, swelling, and suppuration of the glands.—Ulceration of the bones.—Rachitis.—Ulcers with sanious, sanguineous, and corrosive suppuration.—Pains in old scars on a change of weather.—Condylomata moist, like cauliflower, hard, rhagadic, or in thin pedicles.—Tightness of skin.—Swelling of glands.—Warts.—Wens.

26. Sleep.—Inclination to sleep during day, from weakness, with vertigo.—Sleep retarded in evening, and early, difficult (or too late) awakening in morning.—Sleeplessness, as from over-excitement.—Complaints concomitant to waking; too much perspiration, which smells badly.—Complaints < in evening; in night; on awakening.—Incomplete and agitated sleep, and frequent awaking with pain and a start.—Sleep unrefreshing.—At night, bleeding at nose, headache, toothache, thirst, gastralgia, colic, pains in limbs, nightmare, anguish, palpitation of heart, nausea, vomiting, and many other sufferings.—Anxious sleep, with

throbbing.—Many fantastical, voluptuous, anxious, frightful dreams, often with cries, plaintive groans, talking, and starts with fright.—Dreams of death, of spectres, of business of day, of crimes, of festivities, &c.—Shocks in body and jerks in limbs during sleep.

27. Fever.—Chilliness mostly in the afternoon and evening, and after lying down.—Chilliness, with internal heat at same time.—Chilliness in morning in bed, after previous heat.—Heat esp. on hands and face.—Flushes of heat with perspiration on hands.—General coldness of skin.—Continued (chilliness or) coldness.—Fever in afternoon; shivering and heat.—Internal heat, without thirst, continued, or by fits.—At night internal, dry heat, with inclination to uncover oneself.—Heat with perspiration and debility after eating.—Perspiration every night, or on alternate nights; the most profuse on the side on which one lies.—Dry heat at night, with violent thirst.—Nocturnal sweat, fetid or acid.—Acid sweat, like horse's urine, by day.—Intermittent fever.—Chilliness in afternoon (an hour and a half, while in open air), followed by dry heat when in bed, accompanied by all sorts of fancies while in a state of half-waking, without sleep; sleep and perspiration only come on towards morning.—Chilliness in the afternoon, for an hour; afterwards profuse perspiration for two hours over whole body; there is no thirst either in the cold or hot stage.

Nitrogenum Oxygenatum.

Nitrous Oxide Gas. Laughing Gas. NO. Solution.

Clinical.—Enuresis. Epilepsy. Hysteria. Lungs, congestion of.

Characteristics.—This well-known anæsthetic, introduced by Sir Humphrey Davy, has given rise to some pathological symptoms which I have collected in the Schema. Some of them were observed by myself on a girl of twelve who had congestion of the right lung setting in within a few hours of the anæsthesia (*H. W.*, xxv. 64); and on a man, 30, who had blisters round his mouth, inside, on two occasions after being under gas; was troubled with drowsiness for weeks after, and had acneous spots on his face. Others are from the observations of Mr. Silk (*H. W.*, xxv. 462); and the rest are from provings recorded by Allen. Silk observed that females were very much more liable to ill effects than males. One of his patients, an epileptic girl, otherwise healthy, when he removed the face-piece, struggled to get her hands up, and afterwards described her feelings as "pain in the forehead where the aura commenced." In one epileptic patient (not Mr. Silk's) a fit actually did occur. Rhythmic movement of the arms or legs is a common occurrence. One prover had his piles cured as an incidental result of his experiments.

Relations.—*Antidoted by:* Bell. (?). *Compare:* Nit. ac. In congestion, Ver. v.

SYMPTOMS.

1. Mind.—Unusual exaltation of mind; most agreeable sensations and fancies; involuntary desire to laugh.—No command over himself.—Mental torture beyond endurance.—Mind extremely susceptible to suggestion.—After the giddiness, rapid rush of thoughts; afterwards unconsciousness.

2. Head.—On going into open air, vertigo and staggering to l.—Giddiness after palpitation.—A kind of waving of the head.—Numb feeling on head, spreading thence over body, before the paroxysms.—Aching in head and along spine as if they were asleep.—Headache after return of consciousness.

3. Eyes.—Widely dilated pupils.—Pupils first dilated, later contracted.—Protruding eyeballs.

4. Ears.—On waking from unconsciousness, voices of others seemed to come from a great distance; or to be in a whisper.

6. Face.—Face livid with unconsciousness.—Face swollen.—Blue lips, ears, face; afterwards face dusky.—Acne.—Jaws firmly clenched.

8. Mouth.—Mouth and head feel numb, as though asleep.—Eruption of blisters round mouth inside.—Point of tongue thrust between teeth.

9. Throat.—Weakness and feeling of constriction in throat; dysphagia.

11. Stomach.—Pressure in epigastrium.—Nausea and vomiting on return of consciousness; next day a bilious attack.

13. Anus.—(Hæmorrhoidal pains from which he suffered entirely disappeared.)

14. Urinary Organs.—Involuntary micturition.

16. Female Sexual Organs.—Erotic movements and sexual illusions.—Anæsthesia in a nursing woman brought on a bilious attack next day, and the infant was made ill.

17. Respiratory Organs.—Breathing: quick; thick and stertorous.—Suffocative feeling.—Cough with hæmoptysis.—Cough early morning.

18. Chest.—Great pain at chest; cough with hæmoptysis; > hot applications to chest; it seemed as if something which was obstructing the chest dropped down into stomach.—Sharp pain in front of chest, < lying on r. side.—R. chest congested and dull on percussion.

19. Heart.—Great lividity and tendency to faint (in a cardiac case).—Palpitation of heart, afterwards felt and heard in head.

20. Neck and Back.—Tension in sides of neck in region of carotids.—Drawing in neck, as though skin were contracted or cords shortened.—Sensation of drawing in muscles, esp. lumbar muscles.

24. Generalities.—In a patient suffering from valvular disease heart there was a more than usual degree of lividity during anæsthesia, and a tendency to syncope afterwards.—Rhythmic movement of arms or legs.—Opisthotonos, most common in females; much struggling.—Epileptic convulsion (in an epileptic) during the anæsthesia.—Pain in forehead where the aura commenced (in an epileptic under the gas).—Increased muscular rigor. Muscular weakness.—Muscular pains in joints revived.

26. Sleep.—Sleepy.—Drowsiness continued for weeks after the gas.—Screamed whenever she fell asleep.

27. Fever.—Coldness of feet and legs to knees between the paroxysms of consciousness.—Fever every afternoon from 3 to 6.—Delirium in evening.—Face covered with perspiration after return of consciousness.

Nitroso-muriaticum Acidum.

Nitro-muriatic Acid. Aqua Regia. (A mixture of Chloronitric Acid, Chloronitrous Acid, Chlorine and water:

$N_2O_2Cl_4 + H_2O + Cl_2 + NOCl$ in watery solution.

Prepared by mixing 18 parts of Nitric Acid with 82 parts of Muriatic Acid.) Dilution.

Clinical.—Anus, constricted. Constipation. Digestion, slow. *Gravel*. Mouth, sore. *Oxaluria*. Salivation, intermittent. Scurvy.

Characteristics.—*Nit. mur. ac*. has been proved in the lower dilutions and in the 30th; and some experiments have been made by Dr. Scott (quoted *C. D. P.*), who acidulated his bath with the acid, and sponged his body with acidulated water. Sponging and bathing had the same effect, and I have marked his symptoms with (*b*) in the Schema. Scott noticed that the symptoms were more marked as the proportion of *Muriatic acid* was increased. Salivation and sore mouth and throat with dysphagia were produced in Scott and the provers. Scott noticed that the salivation was intermittent. Weakness was felt by all. Headache with drowsiness.

Slow digestion. Pricking pains. Symptoms were < after eating and by exercise. *Nat. mur. ac*. has a clinical reputation in oxaluria and gravel.

SYMPTOMS.

1. Mind.—Nervous irritation and restlessness (b).—Lowness, depression.

2. Head.—Headache and great sleepiness, < 1-3 p.m.—Frontal headache with dizziness.—Sensation in temples as if brain distended.—While leaning to l. side, sudden sticking ache in l. temple, preceded by twitching of anterior fibres of temporal muscle.—Sensation on rising from bed as if brain was all in occiput, making it feel heavy.

8. Mouth.—Odd sensation about gums, jaws, and teeth (b) gums somewhat reddened (b).—Pain in some parts of palate or mouth small superficial ulceration over inside of mouth and tongue; excoriation with salivation and depression (b).—Salivation intermittent, no fœtor (b).—Large blister inside lower lip; cannot help biting it.—Immediately a sense of pressure or fulness in parotid, submaxillary and sublingual glands (in the order named), with some increase of saliva, < l. side.—Extreme salivation, could not spit it out fast enough (soon after fluttering of heart).—Metallic, coppery taste (b).

9. Throat.—While writing at a very low table spasmodic, tremulous contractions in pharynx near levator palati muscles.—Pain on swallowing all down œsophagus, with burning there and in roof of mouth (b).

11. Stomach.—Evacuation of flatus and eructations.—Food took longer to digest than usual.

12. Abdomen.—On rising, sensation from l. hypochondrium to rectum as of desire for stool.—Slight colic in lower abdomen.

13. Stool and Anus.—Sudden increase of secretion of bile.—Free, loose, yellowish, pappy stool, after breakfast.—Constipation; 7 p.m. desire for stool, unable to pass anything owing to constriction of sphincter ani; by pressing with finger at end of coccyx and pressing with abdominal muscles, a small amount of fæces evacuated.

14. Urinary Organs.—Urging in penis and bladder; aching in hips, thighs, and small of back; after a short delay some pale urine passed.

17. Respiratory Organs.—The fumes caught her breath and produced inflammation of larynx and bronchi (nearly proved fatal).—Breathing easier than usual.

19. Heart.—Palpitation.—Fluttering at heart; while eating; while moving.

20. Neck and Back.—Whilst taking a cold bath catching pain in back muscles (r.).—Heavy pain in loins.

21. Limbs.—Sticking in various parts of limbs successively; whilst walking.

23. Lower Limbs.—Languid aching through hips and thighs (front) and small of back.

24. Generalities.—Weak, physically and mentally depressed.

26. Sleep.—Slept unusually well and felt better for it.—Sleepy with headache.

27. Fever.—Chill passing upward; while sitting near stove.—Slight feverishness.—Perspiration increased, often to a great extent.

Nitrum.Kali Nitricum.

Nitrum. Nitre. Saltpetre. Nitrate of Potassium. Potassic Nitrate. KNO_3. Trituration. Solution.

Clinical.—Asthma. *Chest, pain in*. Colic. Diabetes insipidus. Dysentery. Dysmenorrhœa. Enuresis. Gastritis. Headache. Heart, affections of. Herpes preputialis. Menière's disease. Menorrhagia. Nose, bleeding of. Peritonitis. Phthisis. Pleurisy. Pneumonia. Polypus. Rheumatism. Vertigo.

Characteristics.—*K. n*. is known in old-school practice principally as a "refrigerant diuretic," and as the active agent in the well-known "nitre papers," which are burnt for producing fumes to allay attacks of asthma. It has also been used in rheumatism, and for incontinence of urine in children. It has been extensively proved by homœopaths, and symptoms have been added from cases of poisoning, so that its characteristics are well defined. It is almost equal to *K. ca*. in producing stitching pains; and it is like it in having a cough at 3 a.m. The pains produced by *K. n*. are very severe—stitching, cutting, lancinating, tearing, and pressing. And there is, as with many other *Kalis*, much external sensitiveness—of scalp; of abdomen; of testes. That its anti-asthmatic properties are homœopathic is abundantly shown in the respiratory symptoms it produces. Its "diuretic" properties are utilised homœopathically in diabetes insipidus, and its use in enuresis must come in the same category. *K. n*. acts with great intensity on the abdominal and pelvic organs, producing most painful colics, diarrhœa, and dysentery; in the male sexual sphere, excitement and pain in testes and cords; in the female, menorrhagia with flow of *ink-like* blackness. This is very characteristic. Another characteristic of *K. n*. is < from eating veal, or effects of eating it—headache, diarrhœa, &c. The mental state of *K. n*. is chiefly one of peevishness, fretfulness, and *ennui*. There are

many curious symptoms in the nose: "The pain-like contraction in the eyes, forehead, and face concentrates in the tip of the nose"; "Swollen feeling in right nostril, which is painful on pressure" sore pain in upper part of right nostril with external sensitiveness these two last symptoms led to the cure of a large nasal polypus in a girl. In a poisoning case there was in the period of recovery intense vertigo with tinnitus, which should indicate *K. n*. in some cases of Menière's disease. Easy intoxication by wine or beer was noted by several provers. A peculiar symptom is a sour taste *in the throat*. Another peculiar symptom is in connection with the asthmatic state. The breathlessness is so great that the patient though thirsty can only drink a sip at a time between the breaths. Allen thus defines the asthma of *K. n*.: Asthma with excessive dyspnœa, faintness and nausea, with dull stitches or with burning pain in chest, rather free expectoration. A solution of saltpetre as an application was an old remedy for inveterate mange in cats. Nitre with Sulphur and Charcoal forms gunpowder. A teaspoonful of this in hot water was a favourite remedy for gonorrhœa among soldiers in the days when black powder was used. In the lower triturations gunpowder has cured ascarides in adults. In some experiments made by myself with gunpowder 2x, severe herpes facialis involving right eyebrow and right side of nose was developed. The most characteristic < is from veal; < from wine or beer, < from a slight draught of air (headache). < After washing in cold water (eye). < 3 a.m. (cough). < Lying with head low (dyspnœa), < in morning; afternoon; evening; after midnight. Walking < many symptoms. < Breathing; < by coffee. > Lying down; lying right side; uncovering head (pain in parietal region). *Suited to:* asthmatic constitutions and chest complaints.

Relations.—*Antidoted by:* Smelling Nit. sp. dul. Ipec. relieved the cough. Smelling Camph. intensified the sufferings. *Follows well:* Aco. in dysentery, and is *followed well by* Nux in the same. Also *follow well:* Bell., Calc., Puls., Rhus, Sep. K. n. *antidotes* the renal symptoms of Caust. *Compare:* Arn., Dros., Nat. m., Nit ac.

Causation.—Eating veal.

SYMPTOMS.

1. Mind.—Excitement after a glass of wine as if he had taken too much.—Anxiety and agitation.—Despondency, out of humour, uneasy.—Ennui; lachrymose mood, sad expression.—Fretful; peevish.—Disinclined to think or work.—Half stupor.—Discouragement and fear of death.

2. Head.—Confusion almost like intoxication.—Vertigo; on sleeping; tends to fall forwards; to r. and backwards after drinking beer.—Fainting fits with vertigo in morning on standing, > on sitting down; afterwards obscuration of sight with great weakness and drowsiness; pain in small of back And constriction in abdomen; staggering gait with vertigo.—Vertigo and tinnitus.—Headache in vertex on rising.—Headache, after eating veal.—Headache, with contraction of eyelids, from

one evening to another, insupportable on stooping head.—Headache, alternately with cramp-like tearing in joints of fingers.—Stunning (stupefying) heaviness of the head, in morning, as after intoxication.—Pressive pains in head, < by coffee, and > by motion of a carriage.—Headache with heat; < towards evening.—Pains in r. frontal sinus with stopped catarrh.—Pressive headache: in forehead towards root of nose; on either side, in vertex as if a stone were lying on it.—Headache on vertex as if the hair were being pulled.—Violent pain r. side of head from a slight draught of air.—Coldness in occiput with pains in head.—Compression in occiput, producing rigidity in surrounding parts.—A feeling of contraction in head, which seems to extend to nose.—Cramp-like drawing in occiput and nape, which = head to be thrown back.—Stinging pain in head.—Lancinating headache.—Pains in occiput are > by unbinding hair.—Painful sensitiveness of scalp.—Scurfy spots on head.—Profuse falling out of hair.

3. Eyes.—Burning in eyes, with lachrymation and photophobia, < in morning, after washing with cold water.—Transient blindness.—Cloudiness of sight.—Coloured circles before eyes.—In evening, candles appear surrounded by a rainbow-like halo.—Everything appears black before eyes (after smelling Camphor).

4. Ears.—Shooting in ears, in evening, < by lying down on ear.—Tension, shootings and tearing behind ears; behind r. ear.—Inflammation and swelling of lobe of r. ear, with burning, and jerkings pain.—Tingling in ears.—Tinkling and ringing in ears.—Chronic deafness, from paralysis of auditory nerve.—Vertigo and tinnitus.

5. Nose.—Burning, in nose, with digging, and clawing pain, < by touch.—The nasal bones are painful, esp. to the touch.—Inflammation of extremity of nose, with shooting pain.—Swelling of interior of nose.—Swollen feeling in r. nostril.—Ulcers in the nostrils covered by a scurf.—Epistaxis, with acrid blood (sharp, like vinegar).—Violent coryza, with obstruction of nose, and loss of smell.

6. Face.—Pale and sickly complexion.—Face sunken, cold nose.—Muscles of face convulsed, jerking.—Heat on face without rapid pulse.—Redness and tension in cheeks, with < of the headache.—Tearing in bones of face.—The pain-like contraction in eyes, forehead and face concentrates in tip of nose.

7. Teeth.—Toothache, with lancinating drawing, or tearing pains in teeth and head.—Shooting in carious teeth, when touched.—Pulsative toothache, at night, < by cold things.—Swelling of gums, of an inflammatory or scorbutic character; they bleed readily.

8. Mouth.—Fetid breath.—Burning blister at tip of tongue.—Crawling on tongue.—Tongue loaded with a white coating.—Taste: disagreeable; nauseous; disgusting; sourish, in throat in morning on rising.

9. Throat.—Sore throat, with shooting pain and inflammation of velum palati, and uvula (during deglutition).—Impeded deglutition from tension and cutting in the larynx.—Loss of speech.—Nocturnal pain in throat, as if it were contracting with obstructed respiration.

10. Appetite.—Want of appetite, with burning and continued thirst.—Appetite, principally in evening.—Ravenous hunger returned between 10 and 11 a.m., and alternated with cutting pain in region of r. umbilicus.—Ravenous hunger without real appetite.—Cannot drink for want of breath, drinks in sips.—Painful sensation in upper orifice of stomach.

11. Stomach.—Nausea, as if about to vomit, esp. at night.—Heaving, ineffectual retching after each dose of 30th, mouth gets sore, feels altogether poorly (Cooper).—Retching, and vomiting of mucus, mixed with blood.—Pains in stomach, with a sensation as if something were turning about in it.—Gnawing, spasmodic weakness, and pressure on epigastrium.—Faint-like weakness at stomach pit.—Violent cramps in stomach, with contractive pain (esp. after eating veal).—Shootings in stomach and epigastrium.—Sensation of coldness, or of burning in stomach.—(Inflammation of stomach.).—Severe gastric pain recurs after every meal for years after a single large dose (Fraser).

12. Abdomen.—Exceedingly violent pain in abdomen after eating veal, esp. at r. side.—Excessive distension of abdomen.—Griping about umbilicus; and beneath short ribs l. side; > by emission of (fetid) flatus.—Griping and cutting in abdomen before normal stool.—Stitching and sticking pains; abdomen swollen and very tender to touch; coldness of lower extremities; stiff feeling in affected parts as if made of wood (peritonitis).—Cutting pains, which disappear towards evening.—Shooting pains in abdomen.—Incarceration of flatus, esp. in afternoon and evening.—Very loud rumbling in abdomen.

13. Stool and Anus.—Fæces hard, difficult, and retarded, evacuated with much effort (by violent pressing).—Urgent want to evacuate, with tenesmus.—Soft fæces, with cutting pains.—Diarrhœa after eating veal.—Stools: watery; thin fæcal; bloody; soft and diarrhœa-like; sluggish; hard like sheep's dung.—Before stool: violent colic; urging.—During stool: cutting colic in whole intestinal canal; tenesmus.—After stool: cutting colic; tenesmus; burning and stinging in anus.—Diarrhœa, sometimes without pain, or colliquative.—Frequent pressing in rectum.—Dysentery with much cutting pain, great thirst and icy coldness of feet.

14. Urinary Organs.—Frequent want to urinate, and profuse emission of a clear urine, with a reddish cloud.—Burning in urethra while urinating and greatly diminished urine.

15. Male Sexual Organs.—Erections, increased sexual desire and pleasure.—Prickling sticking in glans.—Smarting in orifice of prepuce.—Frequent

itching of glans.—Swelling in l. epididymis.—After unsatisfied desire, violent drawing tension and pressure in both testes, extending along cords into abdomen, lasting some hours, testicles very painful.—Sensitiveness of both testes which are drawn up with a pressive sensation in them.

16. Female Sexual Organs.—Catamenia too early, and too profuse, with discharge of blood black as ink.—Menses retarded; suppressed.—Abortion at second month.—Before and during catamenia, violent pains in abdomen and sacrum.—White serous leucorrhœa, which stiffens linen, and is discharged during the sacral pains.—Frequent sticking beneath l. female breast.

17. Respiratory Organs.—Hoarseness, with roughness and scraping in throat.—Tension, and incisive pains in larynx, with obstructed deglutition.—Irritation to cough caused by tickling in larynx.—Sudden violent irritation to cough in r. side near pit of throat, as if in r. bronchus, neither painful nor, itching; it could be suppressed by a slow, deep breath and by an effort of will.—Cough with expectoration and pressive pain beneath sternum.—Cutting under sternum when coughing.—Pressing pain under sternum when coughing with a feeling of warmth in same locality.—Cough, which awakens patient about 3 a.m., with violent headache.—Cough in open air, or when going up stairs, also whenever the breath is held in.—Dry cough, esp. in morning.—When coughing, incisive pains in chest, until the mucus is detached.—Cough, with shootings in chest, and expectoration of pure blood.—Cough, with purulent expectoration, and colliquative sweats.

18. Chest.—Cannot drink for want of breath; must take it in little sips; children take cup in both hands and drink greedily one sip after another.—Obstructed respiration, which does not permit lying down with the head low.—Oppression on chest, when ascending.—Pain in chest with pressive tension, accompanied by a sensation of roughness under sternum, which excites violent coughing.—Contractive pain in chest, commencing from the back, with sensation of constriction in lungs.—Lancinations in chest, esp. when taking a full inspiration, when lying down, and when coughing, accompanied by excessive anguish and oppression.—(Inflammation of lungs.).—Sticking in l. side near sternum.—Sticking in l. side of chest, cutting and tearing in lungs.

19. Heart and Pulse.—Violent palpitation of heart, esp. when lying in bed, at night, waking him.—Stitches in heart.—Full pulse.

20. Neck and Back.—Pain in nape of neck, extending into shoulders, as if hair were violently pulled.—Shooting pains in sacral region.—Violent pains in loins, night and morning, on waking.—Pains in back on stooping.—Full, tense feeling in back as if kidneys engorged (removed at once by 1x dil.—Cooper).—Aching in lumbar region, during repose, < esp. by coughing.—Shootings in and between

scapulæ, often accompanied by oppressed respiration, < at night, when lying on back, > by lying on r. side.

21. Limbs.—Drawing in limbs with paralytic weakness.—Tearing in limbs, day and night, >, but for a short time only, by friction.—Rheumatic pains and stitches in limbs and joints.

22. Upper Limbs.—Rheumatic tearing in shoulders, at night.—Tearing and shooting in joints of arms, elbow, hands and fingers, principally at night, with heaviness, a sensation as if the hand were too large, and swelling of fingers.—Numbness and tingling in arms and hands.—Drawing and tearing in arms, from shoulder to fingers.—Wrenching pain in joints of fingers.—Paralysis of the arms after each dose of *K. n.*, crude, taken for headache several times repeated.—Weakness in arms, hands, and fingers, which prevents the holding of anything firmly.—Cramp-like tearing in joints of fingers, alternating with headache.—Cramps and rigidity in joints of fingers.

23. Lower Limbs.—Rheumatic pains in the legs.—Tearing in legs.—Great lassitude and paralytic weakness in legs, after short walk.—Jerking tearing in soles.—Numbness and tingling in feet.—Contraction of toes.

24. Generalities.—Affected parts feel numb, as if made of wood.—Tearing, shooting, and drawing pains.—Most symptoms occur in evening, after midnight, and in afternoon.—The symptoms which have manifested themselves during the day disappear on lying down in evening.—Rapid swelling of whole body.—Great dejection in morning, with sensation of heat in face, and burning in forehead.—Inflammation of internal organs.—Lassitude, which is greater when seated than during movement.

25. Skin.—Lancinations in skin, pricking like needles, followed by burning, principally in face.—Tubercles, size of a pea, also on face.—Burning vesicles, filled with yellowish serum, which break when scratched, and then cease to burn.—Sudden dropsical swelling.

26. Sleep.—Drowsiness during day.—Disturbed sleep at night; constant dreaming, with frequent awakening.—Coma somnolentum.—Anxious and uneasy dreams about dangerous situations.—Nightmare.

27. Fever.—Pulse full, hard, and rapid.—Pulse slow in morning, rapid in afternoon and evening.—Extraordinary shiverings not > by hot drinks or coverings.—Shivering in evening, with pain.—Coldness in afternoon, with thirst; or coldness, preceded by headache, with adipsia, and followed by nocturnal heat, without thirst or sweat.—Quotidian fever, with drawing pains in limbs.—Profuse and colliquative sweat.—Sweat in morning, esp. on chest.

Nuphar Luteum.

Small Yellow Pond Lily. N. O. Nymphæaceæ. Tincture of fresh root.

Clinical.—Cholerine. Diarrhœa. Dyspepsia. Headache. Impotence. Psoriasis. Rhus poisoning. Seminal emissions. Typhoid-fever.

Characteristics.—*Nuphar l.*, the Yellow Pond Lily, was proved by Pitet, and many of his symptoms have been clinically confirmed. Most marked was a *yellow* diarrhœa coming on in the early hours of the morning. With the diarrhœa is great exhaustion. *Nuph.* has cured many cases of diarrhœa so characterised, and even cases of typhoid fever. Another marked feature of the proving was the excessive depression of the male generative system; and *Nuph.* has done good work in analogous conditions, and headaches associated therewith. The diarrhœa was < 4 to 6 a.m.; < after the least excess of any kind. Weakness and itching were < evening. Walking = painful shocks in hams; and pain in flank, which was > by pressure. < Day after coitus.

Relations.—*Compare:* Early morning diarrhœa, Sul., Nat. sul., Rumex, Pod. Sexual debility, Gels., Con., Dig., Nat. m., Chi.

SYMPTOMS.

1. Mind.—Impatient of slightest contradiction.—Excessive moral sensibility, acute pain on witnessing sufferings of animals.

2. Head.—Heaviness of head.—Bruised shaking in brain.—Dull pains in front part of base of brain on level of orbits.—Bruised, painful shocks, r. anterior side of brain on walking.—Lancination in r. and l. anterior lobes of brain.—Headaches attending depressed states of generative organs.—(Pityriasis capitis very much aggravated, with much itching and falling out of the hair).

3. Eyes.—When standing in sun brilliant sparks filled field of vision, converging from circumference to centre (an old symptom revived, and subsequently reproduced frequently, esp. after hard coughing).

8. Mouth.—Sweetish taste.—Tongue white; mouth pasty.

11. Stomach.—Painful sensation of weariness in stomach; digestion slow; wind colic, < early morning, with liquid, sour-smelling stools; with sexual weakness and pollutions; < after coitus.—Exhaustion in epigastrium.

12. Abdomen.—Colicky pains all round waist; < 5 to 7 a.m.

13. Stool and Anus.—Smarting and burning at anus after every stool.—Stitches as from needles in rectum, above anus.—Soft stools preceded by some colic for several days; or painless diarrhœa.—Yellow diarrhœa, esp. very early in morning (4 to 6 a.m.).—Stools: liquid, yellow, fetid.—Much exhaustion with stools; sense of exhaustion in epigastric region.

14. Urinary Organs.—Urine deposits copious reddish sand, which is hard and adheres to the vessel.

15. Male Sexual Organs.—Entire absence of erections and desire; voluptuous ideas which fill imagination do not cause erections.—Penis retracted, scrotum relaxed.—Diminution of lascivious thoughts and desires for some days; opposite effect during succeeding days.—Weakening nocturnal emissions while convalescing from typhoid.—Involuntary losses during sleep, at stool, and when urinating, with complete absence of erections; inability to effect coitus; weakness; impaired digestion; pale, languid.—Lancinations in r. testicle; in l. testicle; with pains at extremity of penis.

18. Chest.—Pain behind sternum, when running, as though subjacent organs violently shaken.

20. Back.—Dull pain in l. lower lumbar region.—When walking painful stitch to flank, > by pressure.—Sensitive on renal region.

21. Limbs.—Weakness and loss of power in limbs, < evening.

22. Upper Limbs.—Lupus on arms.

23. Lower Limbs.—Prickings back of l. thigh.—Constant restlessness and fatigue of legs.—Lancinations in plantar surface of r. great toe.

25. Skin.—Violent itching.—On different parts of body red blotches, tolerably regular in outline, ovoid or circular, prominent and covered with little silvery white scales; violent itching, < evening; as eruption disappeared, scales ceased to be reproduced, and skin at place of each blotch became pale red or yellowish.—(*Rhus tox* poisoning; relieved pain and swelling and hastened recovery. .).—Psoriasis; pityriasis capitis.

Nux juglans. Juglans Regia.

Nux juglans. Walnut. Juglandaceæ. Tincture of leaves and of rind of green fruit.

Clinical.—Acne. Anus, burning in. Axillary glands, suppuration of. Chancre. Ecthyma. Eyes, pain over. Favus. Flatulence. Headache. Herpes. Herpes preputialis. Levitation, sensation of. Menorrhagia. Purpura. Ringworm. Scurvy. Spleen, pain in. Syphilis.

Characteristics.—"It was said that in the golden age, when men lived upon acorns, the gods lived upon Walnuts, and hence the name of juglans, *Jovis glans*, or Jupiter's nuts" (*Treasury of Botany*). From many points of view the walnut-tree is of very great importance, and well deserves its lofty name. Besides providing food, at any rate fit for the gods, and wood at once light and strong, a sap that yields sugar, a fruit that yields a dye and an oil, and serves for pickles, the Royal Nut has a place in medicine which deserves to be better known. The *Treasury of Botany* gives a hint to homœopaths in this remark: "Its plantation should not be too near dwellings, as some persons are affected by the powerful aroma of its foliage." The remarkably brain-like appearance of the nut has given rise to the notion that it is a "brain-food." I cannot say that there is any other ground for it; but in Clotar Müller, who was the first to prove *Jug. r.*, it produced this curious symptom: "Excited, as if intoxicated, in the evening in bed, and a feeling as if the head were floating in the air"; showing a decided brain action, such as we generally associate with the "wine" rather than the "walnuts" of dessert. Peevishness and mental indolence were other mental symptoms noted. The head symptoms are as marked as those of *Jug. c.*, but the lancinating pains were not noted in the occiput as with that remedy, but in the forehead. There are few remedies which cause flatulence and bloating of the abdomen more markedly than *Jug. r.* It appears to affect the spleen more than the liver (opposite of *Jug. c.*). There is diarrhœa, and many rectal and anal symptoms; but the diarrhœa is not so distinctly bilious as that of *Jug. c.* Like *Carya alba* and *Jug. c.*, *Jug. r.* is hæmorrhagic, the blood being black and clotted (uterine). Remarkable symptoms of inflammation and ulceration appeared in the male sexual organs. This to a large extent belongs to the general integumatary action of the remedy. It was Clotar Müller who made the observation that "In the digestive organs it causes derangement and irritation, which simultaneously call forth abnormal symptoms in other organs, especially in the head. After this action, which is *brief*, appear various exanthematous symptoms, which appear late and run a chronic course." The skin symptoms of the *Regia* are more pronounced and varied than those of *Cinerea*. This has led to its more frequent use in scrofula, as skin and gland affections go much together. Farrington says *Jug. r.* is one of the best remedies in "tinea favosa, especially in the scalp behind the ear, itching is intense at night so that the patient has difficulty in sleeping." Scabs appear on arms and in axillæ. In the proving of *Jug. r.* the

symptoms went from the right axilla to left. In a patient of mine, a nurse who had poisoned her left arm some years before from a septic and possibly syphilitic case, inflammation of the axillary glands ensued, first of left then of right, leaving an eczematous itching condition. The glands of the groin also became affected. *Elaps*. 200 had relieved the bulk of the conditions, but there was still a little irritation occasionally in the axillæ, and I thought I might expedite matters by giving *Jug. r*. 12 three times a day. This is what happened: Five days after beginning the *Jug. r*. an eruption of minute vesicles appeared on her back, itching much. It extended all up the centre of the back from sacrum to mid-dorsal region, spreading out below, tapering above. She had scratched holes in two places. The rash was < after washing. But *all soreness and irritation had gone from the arms and axillæ*. I antidoted with *Rhus* 12. Four years later she had had no more trouble with the glands. Cl. Müller, who experienced the axillary skin symptoms in his own person, had never suffered from a skin affection before. One of the provers was cured of an itching eruption of the legs from which he had suffered in winter for four years, the itching commencing as soon as he began to undress. Many of the symptoms closely resembled syphilis, and the affection of the cheek in one of the provers was actually diagnosed as syphilitic by a medical man who saw him in Cl. Müller's absence. The left side of head, face, and abdomen mostly affected. Axillary symptoms proceed from right to left. The symptoms generally are < by motion; migraine < by speaking; pain in abdomen < by laughing. There is < after fat food. < Evening at 9 p.m., and after 9. The itching is < at night. Warmth of bed < toothache. It removed a winter rash < by undressing. Rash caused in my case was < by washing.

Relations.—*Antidoted by:* Rhus. *Compare:* jug. c., Carya alb. (botan); Rhus (skin); Graph. (tinea favosa behind ears); Rumex (rash < undressing); Mezer., Merc.; Cean. (spleen); Lyc. (flatulence). *Follows well:* Elaps. (axillary affections; black hæmorrhages); Sulph. (head, hot, cold extremities); Grind. (pain over l. eye).

SYMPTOMS.

1. Mind.—Excited in evening in bed as if intoxicated, and feeling as if the head were floating in the air.—Peevish and discontented in evening.—Disinclined to talk or argue, as was customary with him; mental indolence.—Inattention when reading and disinclination to work.

2. Head.—Vertigo.—Headache after dinner and in evening; with flushed face.—Feeling in head and nose as in beginning of coryza.—Confusion in head.—Burning heat in head in the evening with icy-cold extremities.—Heaviness in head.—Lancinations in forehead.—Pain in l. side of forehead.—Pain above l. eye., with pain in eyes.—Pain above eyes, < motion; < shaking head or moving eyes; with yawning and sleepiness.—Pain above eyes, as if dizzy.—Throbbing in temples, > going into, open air, returning on entering warm room, with sharp pain

in front part of head.—Migraine in a spot In region of l. parietal bone preventing speaking.

3. Eyes.—Burning in eyes.—Pressive pain above eye (l.) < by motion.—Feeling of coryza.

4. Ears.—Aching and fulness in r., then l. ear, then discharge of pus from both ears, external ear inflamed and two painful sores on it.—Burning in l. ear, then redness and swelling, then pimple on inside, then discharge of pus from both ears, < l., with burning and redness of l. external ear, and feeling as if something dropped inside of ear at every step, and soreness preventing lying on l. side of head.

6. Face.—Swelling of l. cheek and upper lip, with swelling of gum over l. upper incisors, without previous toothache, then a hard, reddish painful swelling in l. cheek, in the middle of which was a sharply-defined, depressed dark red, yielding circle, pus could be seen through the thin skin, the apparently sound tooth was drawn, and ichorous pus (from an abscess) was discharged through the opening, then the swelling disappeared.

8. Mouth.—Tearing in hollow teeth, < warmth of bed.—Tongue coated white; in morning, with bitter, slimy taste.—Tongue covered with white mucus.—Salivation.—Inclination to keep mouth dry after dinner, could not make up his mind to drink wine or water as usual.—Taste bitter.—Taste slimy in morning on waking.

9. Throat.—Hawking of much mucus.

10. Appetite.—Appetite increased.—Unusually great appetite without increase of thirst.—Appetite lost.—Thirstlessness while eating, and aversion to wine.—Aversion to tobacco-smoking in evening.—Thirst increased.

11. Stomach.—Eructations: violent; frequent; loud; tasting as after eating fat.—Fulness and bloatedness of the stomach, which prevent one from eating while one has a good appetite, > from eructations.—Hiccough more violent after eating.—Nausea at 6 a.m.; and after supper.—Vomiting; woke suddenly, vomited food eaten four hours before, then slept without further trouble.—Burning in stomach.—Pain in epigastric region, with distension of abdomen.

12. Abdomen.—Fulness, bloatedness, tension, and heaviness in the abdomen, with frequent desire to go to stool, > by eructations and discharge of flatulence.—Distension: after eating; after dinner, with emission of flatus; with sudden desire for stool; so that he must loosen his clothes, with pressure in stomach; so that he could eat but little in spite of good appetite; tympanitic hardness of the abdomen.—Rumbling; with griping; with pressive pain in epigastric region.—Emission of flatus; especially when lying down.—Pain in

abdomen > eructations.—Wandering pains.—Pressive and drawing pain, < motion, > appearance of menses (fifteen days too soon), then for eight days (instead of three as usual), copious discharge of blackish blood, often in large clots, with exhaustion and loss of appetite.—Drawing, with pressure in region of spleen.—Sticking beneath l. lowest ribs.—Pressure in region of spleen, with eructations.—Pain beneath the l. false ribs, < deep breathing, laughing or stooping.—Pain in l. side on rapid walking.—Pain over l. side with wandering gripings in intestines.—Pain above umbilicus.—Pain in hypogastrium, with nausea.—Sticking in hypogastrium on moving or stooping.—Cutting in r. hypogastric region.

13. Stool and Anus.—Stool: liquid twice a day; preceded or accompanied by pain in abdomen; thin; soft, large, at last almost thin.—Stool hard; difficult; scanty.—Stool delayed.—Constipation.—Bowels confined in morning, natural in afternoon.—Large stool, then burning pain and pressure in anus.—Stool scanty and frequent; difficult; omitted.—Itching at the anus in the evening in bed, with stitches, compelling one to walk about.

14. Urinary Organs.—Frequent desire to pass water from loss of tone of sphincter.—Constant urging and involuntary dribbling.—Continuous desire to urinate, and frequent micturition day and night, with very profuse discharge.—Obliged to urinate at night.—Obliged to urinate often; and much at a time.—Copious urine; but no thirst.—Urine scanty and clear.—Urine dark red.

15. Male Sexual Organs.—Frequent erections day and night.—Burning in penis after coition with his wife, with abrasion where prepuce joins penis, afterwards a suppurating streak half-way around between glans and prepuce, then the ulcer became larger, margins hard, base lardaceous, bleeding on slight pressure, often there was a small scab, from beneath which pus oozed and which often came off and left a suppurating ulcer, afterwards a healthy scab formed in the middle and fell off, leaving healthy skin, so that instead of one long narrow there were two small round ulcers; these healed and left no scar.

16. Female Sexual Organs.—Menstruation too early and too profuse; discharge of a large quantity of black clots; preceded by pressive drawing pains in abdomen, < by motion; accompanied with general exhaustion and loss of appetite.

17. Respiratory Organs.—Aphonia or great hoarseness.

18. Chest.—Itching on the sternum.—Sticking in lungs not dependent on motion or respiration.—Oppression.

19. Pulse.—Pulse rapid and full.

20. Back.—Stitches in sacral region.—Violent stitches in the small of the back, causing one to tremble.

21. Limbs.—Drawing pain as if sprained, in first phalanx and joint of l. thumb, < motion, and while in bed the same pain in r. great toe.—Sticking and itching in r. leg and r. fingers.—Drawing and paralysed feeling in legs and knees, with weakness and with giving way of knees when walking, and a similar sensation in r. hand.

22. Upper Limbs.—Itching of skin of axilla (r.); tetters formed; afterwards (l.).—Electric starts in forearms and hands wake him as he falls asleep.—Weak feeling in r. hand.—Intermittent pain in r. index.

23. Lower Limbs.—Pain in the hips or knees, impeding walking.—Sticking in inner condyle of knee and feeling of impediment when walking.—Rheumatic pain in knee impeding walking.—Pain in r. instep when walking, and sensation of impediment.—A burning itching eruption of lower extremities occurring in winter, itching commencing as soon as he undressed, was cured by the proving.

24. Generalities.—Muscles relaxed.—Exhaustion and disinclination for the usual business.—Intoxicated sensation; as if flying.

25. Skin.—Eruption behind ears of children.—Itching eruption over the whole body.—Pimples on face; red pimples on face, neck, shoulders, and back, some containing thickish fluid; pimples on nape, discharging moisture when scratched (like acne).—Itching: here and there; on sternum; on hands; r. hand; dorsum of r. hand, then on feet, forehead, scalp and abdomen; r. fingers in afternoon; legs, arms and abdomen at night, with tossing about and inability to sleep; here and there causing restless sleep, with dreams and erections; on flexor surface of r. forearm, near elbow, with burning and red spot, in the middle of which was a pimple, the redness disappeared, but the pimple was painful and pus formed.—Painful, large blood-boils on the shoulder and in the region of the liver.—Glandular swellings (scrofulous swellings).—Pustules as in eczema, with burning-itching, red, cracked skin, discharging a greenish fluid stiffening the linen.—Syphilitic, scrofulous and mercurial ulcers and herpes.—Itching in r. axilla, with burning, skin sore and cracked then red and scaly, it became moist, on margin of tetter burning vesicles, the tetter < after perspiring much, the perspiration, with the secretion from the eruption, stiffened the linen and stained it greenish-yellow, the pain sometimes so great that violent motion of the arms was impossible, there were always new vesicles and larger extent of redness after increased burning and itching, the same trouble in l. axilla, then a furuncle on shoulder, on coracoid process, then a painful furuncle over biceps, with circumscribed redness and induration, discharging bloody matter, then two red itching spots on r. elbow, upon which a yellow pustule formed, a furuncle, with induration and pain, between 9th and 10th ribs, with thick, bloody discharge, leaving an induration, about this time a red spot near seat of

second furuncle, becoming like an indurated gland, at this time on l. instep, then on r. redness, with itching and vesicles, leaving hard scurf, whereby the whole place became elevated and painful, the scabs were pressed in by the boots and rubbed off so that the part was raw, after healing the spot was bluish red and swollen.

26. Sleep.—Yawning; in afternoon, with stretching.—Sleepiness.—Inability to sleep after dinner though inclined to do so earlier than usual.—Restless sleep, with frightful dreams.—Restless dreams.

27. Fever.—Pulse full and frequent in the evening.—Cold limbs; after 9 p.m., with hot head.—Alternations of cold and heat in short attacks during the day.—Alternations of coldness and heat over whole body, with heaviness of head, which after eating increased to pain, > after 3 p.m.—Heat over whole body in evening.—Frequent and sudden attacks of flushes of heat.—Heat in flushes, with confusion of head.—Burning hot face in the evening, with cold extremities.—Hot head in evening.—Hot hands at 9 p.m., with rapid pulse, then general sweat.—Sweat staining greenish yellow and stiffening linen.

Nux Moschata.

Myristica fragrans. M. officinalis. M. moschata. Nutmeg. N. O. Myristicaceæ. Tincture of powdered seeds deprived of the Mace. [This is the official direction. But it would be well to make a tincture of the nut with the Mace, as some symptoms of Mace are included. Also a fresh nut and fresh plant tincture should be prepared and tested.]

Clinical.—Abortion. Apoplexy. Asthma, hysteric. Brain, softening of; infantile affections of. Catalepsy. Chilblains. Cholerine. Clairaudience. Clairvoyance. Convulsions. Cough. *Debility*. Deltoid rheumatism. Dysmenia. Dyspepsia. *Eructations. Eyes, sight weak*. Fainting. *Flatulence*. Freckles. Frost-bite. Gastralgia. Hæmorrhage. Headache. Head, convulsive movement of. Hiccough. Hoarseness. Hysteria. Intermittent fever. Locomotor ataxy. Lumbago. Marasmus. Menopause. Menorrhagia. Menses, suppressed. Metrorrhagia. Mind, affections of. Pelvis, congestion of. *Perspiration, bloody; hysterical*. Pregnancy, complaints of. Ptosis. Puerperal convulsions. Renal colic. Rheumatism. *Sleep, overpowering*. Speech, defective. Stammering. Strangury. Toothache. Turpentine, effects of. Typhoid, hæmorrhage in. Uterus, prolapse of. Worms.

Characteristics.—*Nux mosch*. is one of the many examples of powerfully poisonous and medicinal substances used as common articles of food. The Nutmeg has a popular repute for putting off the menstrual period or else for bringing it on; as a remedy for diarrhœa, and also for boils. It is the use of ground Nutmeg for these purposes that has led to many cases of poisoning, and has supplied a large

number of the symptoms of the Schema. *Nux m*. is one of the most profoundly active of psychical remedies in the Materia Medica, producing states of exaltation resembling hysteria, and the mesmeric state with exalted senses and consciousness of double personality. A case reported by Stonham (*M. H. R*., xl. 494) brings this out. A dark-haired young man ate two nutmegs one morning. In afternoon was exhilarated, able to do more than usual, to argue on any subject. At dinner mouth dry, great thirst, felt he could not drink enough to quench it. After dinner, head felt strange as if in a dream; but he joined a small musical party, as he had intended. *He seemed to be two persons, and his real, conscious self seemed to be watching his other self playing*. He could not play well; and had to desist. He seemed lost, and when spoken to would come to himself with a start. Hearing for distant sounds much more acute than usual. A woman who ate several nutmegs with the idea of bringing on abortion had the hallucination that she had *two heads*. A. P. Williamson records (*N. Y. Med. Times*, October, 1882) one case of a woman who took grated nutmeg for diarrhœa. After second dose of half nutmeg head felt queer and dizzy, then head felt large, could not reply to questions, though eyes were open and seemed to understand. Pupils dilated, eyes staring, face pale, respiration laboured. Semi-conscious and had to be shouted at, but relapsed into semi-consciousness. Pulse at first small or rapid, but during unconscious period, irregular, fuller, and weak. When consciousness first returned kept hands to her head "to prevent it falling off"; was obliged to move her head with her hands, "it being too large and heavy for her body." Her chest felt as if in a vice. For some days was unable to use words properly, frequently obliged to stop in middle of a sentence and change it entirely from not being able to use appropriate words. Exaltation of the senses and sensibilities runs through the remedy. One hypersensitive patient to whom I gave a single dose of *Nux m*. 30, said it seemed to put a coat of cotton wool over her. The senses of sight and touch are exalted in the same way as hearing. The mental disturbance may take all the protean forms of hysteria and even mania. Vanishing of thought. One man had complete loss of memory of his past life, and did not recover it for a week. The sensorium is disturbed as much as the mind, and a state of staggering, helpless drunkenness is induced. Connected with this are the sleep symptoms of *Nux m*., which give the leading keynote of the remedy—*Drowsiness. Nux m*. is needed for drowsiness more frequently than *Opium* itself. When any complaint causes drowsiness or is accompanied by drowsiness, *Nux m*. must be considered; and if in addition there is chilliness and thirstlessness, *Nux m*. must be given. For *Nux m*. is a chilly medicine, < by cold and damp, > by warmth (with one or two exceptions). *Chilliness* may be considered the second keynote. But quite as important is the third—*Dryness*. The dryness may be only sensation, or it may be actual as well. Dryness of the mouth and tongue (usually, but not always, *without thirst*); tongue so dry it adheres to the roof of the mouth. Neurotic patients who always awaken with a very dry mouth and tongue. "The *saliva seems thick, like cotton*." (I cured with *Nux m*. 30 a very bad case of indigestion with acne in a youth who had this symptom). Eyes dry; too dry to close the lids. The skin is dry;

and *Nux m*. is suited to people who readily perspire. Another keynote is *tendency to fainting*. This is allied to the drowsiness, sudden loss of memory, and vanishing of ideas. Persons who easily faint away from sight of blood; from standing (as to have a dress tried on) and those who have faintness or fainting during or associated with evacuations; these are likely to want *Nux m*. One or more of the above conditions will be present in the majority of cases needing *Nux m*.; but there are few remedies which have more of the *striking and peculiar* symptoms, the value of which Hahnemann was the first to perceive, than this remedy, and when these are present (or the well-marked conditions of < and >) they will be sufficient indication independently of those mentioned. Here are some *Sensations:* As if drunk. Limbs as if floating in the air. Forehead as if as large again. Forehead as if pushed out. As if brain struck against side of head. Brain as if loose. Objects appear much too large. Pain as of a rough body in Eustachian tube. Pricking as of electric sparks on cheek. As if wind incarcerated in stomach. As if a piece of bacon were in throat. As if food had formed itself into lumps in stomach. As if a piece of wood stretched across small of back were pressing from within out. As if heart would be squeezed off. As if something grasped heart. As if heart were beating in a vacuum. As if it were difficult to move tongue. As if blood were rushing to heart, and then all over body As if left shoulder contained lead. As if a string were tied round arms. As of a grasping hand in upper arm. Pains as if bruised, sprained, wrenched; as if bones smashed. As if electrified. Pressure, throbbing, drawing, burning, are all common sensations. The *sensitiveness* of *Nux m*. comes out in the soreness of parts lain on. The use of Nutmeg as a condiment has doubtless its origin in the fact that *Nux m*. is specifically related to weak digestion. It is indicated in conditions of excessive flatulence, and when the smallest excess in eating or drinking sets up indigestion. The domestic use in menstrual irregularities has also a specific foundation. "Irregularity" is the chief note of the remedy here. Much bearing-down pain; blood dark. Uterine prolapse and displacements have been remedied by it, and threatened abortion warded off. In pregnancy, labour, the puerperal state (convulsions, head jerked forward), it has a large sphere. There is a cough occurring only when warm in bed, or < then. In constipation with drowsiness, *Nux m*. is as often indicated as *Opium*. Faintness during or after stool is a great indication. *Nux m*. is also hæmorrhoidal and hæmorrhagic. Protruding piles. Hæmorrhage of typhus; fetid flatus. Incontinence of urine. The hæmorrhages of *Nux m*. are dark. All kinds of spasms and convulsions are developed in the provings. Catalepsy. Clairvoyant state: answers questions accurately quite out of her sphere, and on returning to consciousness knows nothing about it. Jactitation of muscles, chorea, jerks in inner parts in muscles; recovers with a start. Paralysis; with spasms and trembling; of tongue; eyelids; œsophagus. Locomotor ataxy excited by cold and wet. Puffiness, swellings, dropsy of outer parts. Buzzing sensation with numbness of hands and feet. The symptoms are < by touch. Pressure > some symptoms and < others. Lying on parts = soreness. Riding in carriage = headache; water-brash; backache. Rest > headache; < bellyache; backache; rheumatism. Raising head from pillow = deathly sickness. Lying

down < head. < On side lain on. Stitches in spleen = bending double. Motion <. Shaking head <. Walking <; (> palpitation). Many symptoms appear in the morning. Drowsy by day. Dry mouth < evening and night. Diarrhœa < night. Heat >; hot summer < (summer complaint of children); hot weather = loose feeling in brain. Heat of bed < or = cough. Warmth of room = hands to feel as if frozen. Warmth > other symptoms. Open air <. Walking against wind = hoarseness. < Damp, wet weather; cold weather; getting wet; before a shower; washing. A bath = check of menstrual flow. < After eating and drinking; after cold drink. Drinking = dry cough; colic. Drinking beer = strangury. Brandy = electrifying effect. Milk = diarrhœa. Alcohol <. Eating a little too much = headache. *Nux m*. is *suited to:* Children. Women. Pregnant women. Persons with cool, dry skin, who do no t easily perspire. Weakness of old age. Dyspepsia of old people. Constitutions with stiff, straight hair rather than crisp and curly. Delicate constitutions. Hydrogenoid constitution. P. P. Wells (*Med. Adv*., xxi. 84) says that "in brain affections of infantile life—in the stupor, insensibility, and unconquerable desire to sleep—whether in idiopathic affections of the brain or in those occuring during cholera infantum—*Nux m*. is one of the most precious remedies in the materia medica." J. C. White (*H. P*., xvii. 326) gives a striking instance of *Nux m*. headache > by *hard pressure* in a man convalescing from a severe gunshot-wound of the head. He wanted the nurse to "bear her whole weight on it." With the headache was rapid, anxious breathing, as if he could not get air enough and the "wind would be shut off." *Nux m*. always relieved it. The 3x was first given, then a higher potency.

Relations.—*Antidoted by:* Camph., Lauro., Gels., Nux, Op., Zn., Val. *It antidotes:* Ars., Lauro., Rhodo., Lead colic, Turpentine, Alcohol, bad yeasty beer. *Compatible:* Lyc., Nux, Puls., Rhus, Stram., Ant. t. *Compare:* Myristica sebifera (boils and suppuration). Hysterical temperament, Ign. (Nux m. has excessive dryness of mouth). Rheumatism of left deltoid, Mg. c., Ferr. (right deltoid, Sang.). Prolapsus uteri, Æsc. h., Sep., Plat., Lil., Murex, Nux, Pod., Pul., Sep. All ailments accompanied by sleepiness, Ant. t., Op. Loss of memory, Anac., Lac c., Lyc. Does not recognise well-known streets, Can. i., Lach., Camph. bro. Dry mouth, Agar., Lach. Dry throat without thirst, Puls. Soreness of parts lain on, Bapt., Pyr. Distress in stomach while eating or immediately after, K. bi. Epidemic in autumn, white, fetid stools, Colch. Leucorrhœa in place of menses, Cocculus. Physometra, Bro., Lyc., Lac c. Sudden hoarseness from walking against wind, Euphras., Hep. Cough during pregnancy, Con. (of menstrual period, Lach.). Effects of getting wet; damp weather; lying in damp places, Nat. s., Rhod., Rhus; of cold, moist winds, Ars., Calc., Dulc. (cold, dry winds, Aco., Bry.). Effect of riding in carriage, Coccul. < Lying on painful side (Puls. < on painless). Pressure and pushing towards genitals, Nat. m., Bell., Sep., Sul. Head tends to fall to left (Lac d. to right). Faintness during or associated with evacuations, Apis, Pul., Spi., Ver. (faintness with scanty stools, Crot. t., Dulc., Ox. ac., Pet., Sars., Sul. Drowsiness with headache, Bruc., Gins., Gels. (difficult to keep eyes open), Heracl., Sul. Sinking immediately after meals, Ars., Cin., Lyc. Bar sensation, Hæmatox. (across

chest. Nux m. has removed "Sensation of bar across abdomen, with ends projecting out at back like a bar." Arsen. has also acted curatively in a similar sensation). Bloody sweat, Nux, Lyc., Calc., Lach., Arn. Cannot sweat, Staph. Nipples retracted, Sars. < Working in water, Calc. Drink = cough (Caust., drink > cough). Nausea on raising head from pillow, Bry. Throat dry without thirst (Merc. mouth moist with thirst). Fainting, Mosch. Grasped heart, Cact., Lil. t.

Causation.—Fright. Mental exertion. Suppressed eruption. Bath (suppressed menses). Over-eating. Milk. Bad beer. Alcohol.

SYMPTOMS.

1. Mind.—Weeping mood with burning in eyes and lachrymation.—Fickleness, with desire sometimes for one thing, at others for something else.—Great inclination to laugh, to make a jest of everything, esp. when in open air, sometimes with a stupid look, as if imbecile.—Incessant flow of facetious ideas.—Everything about him seemed ludicrous.—Humour grave and gay alternately.—Mentally excited and exhilarated.—Facility of arguing.—After dining, head felt strange as if in a dream.—Seemed to be two persons, his real conscious self seemed to be watching his other self playing (piano).—Could not play well, struck false notes, and was obliged to give it up.—Seemed lost when spoken to, and would come to himself with a start.—Transient loss of memory, but a perfect consciousness of all that I said or did.—Surroundings seem changed; fanciful, dreamy images; does not recognise well-known streets.—Weakness of memory; loss of memory.—Entirely lost memory of his past life.—Hallucination that she has two heads.—Sense of impending dissolution; besought me piteously not to let her die.—Slowness of apprehension, dizziness, difficult conception.—Want of ideas, as from absence of mind; vanishing of thoughts in reading, disposition to go to sleep.—Dulness of senses, thoughtlessness, with slowly returning consciousness.—Dementia and mental alienation (idiocy).—Mania, with odd speeches and ridiculous gestures.—Delirium with violent vertigo, improper talk, loud tone and voice and total sleeplessness.—The least exertion or mental excitement = somnolence.—Unable to use words properly; frequently obliged to stop in middle of a sentence and change it entirely from not being able to use appropriate words.

2. Head.—Confusion and pressive heaviness in head, and esp. in forehead.—Reeling (while walking in open air).—Head seemed whirling round; eyes starting from head.—Staggering, with anguish, rigidity of body and giddiness (and insensibility).—Vertigo, as from drunkenness, with delirium and mumbling, giddiness or insensibility.—Emptiness and faint feeling at 5.30 p.m.—Head drops forward while sitting.—Headache, as from indigestion, esp. after breakfast.—Pressive headache, with heaviness and confusion of head.—Affections of the temples, headaches with very dry mouth and no desire for water.—Pain in head, esp. in temples, with internal heat, and a sensation of wavering in brain on

moving head.—Sounds as if chains were in her head.—Pains mostly in occiput; if touched there says it touches her brain.—Says, "Oh, don't you hear my brains crack?" jumps with an outcry of pain and says, "Oh, don't you hear them?" (the brains).—Sensation as if brain were striking against skull, with sleepiness after a meal; < from cold, > from warmth and heat.—Sensitiveness of head as from soreness, esp. sensitive to slightest touch in a draught of air (wind); < in cold and from lying down, > from hard pressure and from external heat.—Violent, constricting, burning, stinging pains over r. eye, with red face, compression of lips and jaws; when attacks are most intense, unconsciousness, immobility of l. leg; face swelled; speech lost; continually moving his hand to painful place; head convulsively drawn from one side to the other, distorts his face.—Headache and drowsiness with great debility and pain in pericardium; salt taste and indigestion (A. E. Small).—Head feels full, expanded; as if it would burst.—Headache from inward heat, with burning.—Head seemed bulky and rolled around uncontrollably had to support (or move) it with both hands.—Head tends to fall to l. moves convulsively from side to side; from before backward.—Complaints < by shaking head; by raising head from pillow.—Painful sensitiveness of temple to touch.—Pressive and pulsative headache, esp. above l. eye.—Painless pulsation in head with fear to go to sleep.—Sensation as if all vessels pulsating, esp. on head, a throbbing, pressing pain confined to small spots, chiefly to l. supraorbital ridge.—Severe tearing in (l.) occiput towards nape of neck.—The headache is generally felt after a meal, and more particularly after breakfast or after overloading the stomach (in the slightest degree).

3. Eyes.—Dryness of eyes, and sensation of dryness, which impedes movements of lids.—In evening it is difficult to read by artificial light.—Blindness then fainting.—Profuse lachrymation and burning pains in eyes.—Tension round eyes and in lids.—Sensation of fulness in eyes, with contraction of pupils.—Pulsating, pressing pain on a small spot over l. eye.—Illusions of vision: objects appear too distant, too large, or too small.—Sees two objects instead of one.—Weakness of sight.—Blue rings around eyes.

4. Ears.—Otalgia, with shooting pains (stinging pain, r. ear).—Pain in Eustachian tube, as if caused by a rough body, on a change of weather, and esp. on approach of rain or wind.—Hearing for distant sounds increased; heard people talking in a low voice in a passage outside his room, which would have been quite inaudible ordinarily.—Struck false notes on playing piano.—Over-sensitiveness of hearing.—Buzzing in ears; as if stopped.—(Tinnitus preventing sleep.—R. T. C.)

5. Nose.—Sneezing; early in morning.—Over-sensitiveness to smell; loss of smell.—Catarrh < in cold, damp weather.—Nose-bleed, blood usually dark, black.—Obstruction of nose, sometimes semi-lateral (esp. l.).

6. Face.—Paleness of face, and blue circle round eyes.—Heat in face with slight redness of cheeks.—Expression: agonised; hippocratic; singular; silly, and

occasionally would give a diabolic grin.—Lips: swollen and sticking together; burning.—Drawing mouth awry.—Pustules with hard red borders on chin.—Compression of jaws.—Cannot close jaws; as if paralysed.—Sensation of swelling throughout the l. side of the face, with burning pricking, as from electric fluid.—Freckles in face.

7. Teeth.—Painfulness of teeth while eating (dry bread).—Shooting and tearing pains in teeth, extending as far as ears and temples, with lancinations in teeth, on sucking them, and < of pains from cold air and contact.—Nightly tearing in teeth, with inability to close jaws, which are as if paralysed.—Shooting pains in teeth, < by external heat.—Toothache produced by damp evening air, with compressive pains (as if grasped by forceps) in teeth, and pains in nape of neck; teeth feel as, if loose; warm water > the pains.—Toothache of pregnant women > by warmth.—Toothache, after labour with the hands in water, or in consequence of a chill.—Shocks in molar teeth after drinking cold water.—Toothache from washing, from cold, from damp, cold air.—Teeth blunted (dull), as if covered with lime.—Bleeding of gums readily.

8. Mouth.—Dryness, and sensation of dryness in mouth (of the tongue and lips, extending to the throat), without thirst.—Very dry mouth, so dry that the tongue may adhere to roof of mouth, but no desire for water, rather an aversion to it (opp. *Merc*., which has tongue very moist, perhaps dripping with saliva, yet there is great thirst.).—Sensation as if soft palate was rolling or curling up on itself from tip to base.—Fetid breath.—Saliva seems like cotton.—Abundant accumulation of thick mucus and of saliva in mouth.—Paralysis of the tongue, speech difficult; indistinct.—Sensation of torpor in tongue, on being touched, as if made of leather.—Dryness and sensation of dryness in tongue.—Tongue coated white (with mucus).—Aphthæ.—Swelling of mucous follicles under tongue.

9. Throat.—Great dryness and sensation of dryness in throat (without thirst), with scraping.—Difficulty of deglutition as from paralysis of throat.

10. Appetite.—Taste in mouth, as after eating much salt.—Clammy (pappy) taste, or taste of chalk in mouth.—Hunger and immoderate appetite (thirst diminished), esp. towards noon.—Thirst, excessive, cannot drink enough.—Diminution of appetite and prompt satiety.—Absence of thirst.—Dejection and uneasiness after a meal.—Weak digestion and stomach (esp. in the aged).—< After eating and drinking.

11. Stomach.—Acrid risings (debility; scraping eructations) shortly after a meal.—Nausea from motion of a carriage; from irritation of pessaries.—Nausea and vomiting during pregnancy.—Deathly nausea if her head were raised from pillow.—Nausea and vomiting with inclination to sleep.—Irritation of stomach from over-taxed mental powers.—Sufferings, esp. pains in head, < after a meal (esp. breakfast).—Fulness of stomach, with impeded respiration.—Sensation of heat, and

of burning pain in stomach.—Inflation of stomach.—Crawling from pit of stomach to throat.—Cramps in stomach, with very weak digestion.—Pressure in stomach, as from incarceration of flatus.

12. Abdomen.—Pressure in liver, as if caused by hard and pointed bodies.—Swelling of liver; heaviness in the region of liver; swelling of spleen.—Sensation of weight in hypochondria and upper abdomen.—Rumbling in abdomen.—Colic with tearing pains.—Colic pain in abdomen immediately after eating and < after drinking, only during day, with dry mouth and thirstlessness.—Inflation of abdomen, with nausea, and digging in umbilical region.—Abdomen enormously distended; after meals.—Sore pain and distension round abdomen, with aching and numbness round anus, and burning pain just above anus, < at night, with piles that discharge mucus only, a bearing-down of both anus and womb with vaginal cuttings; much numbness of lower back and palpitation of heart (cured, R. T. C.).—Cutting pains (in abdomen and screwing pain around the navel), as from worms, with drowsiness.—Nocturnal sufferings from flatulence, which disturb or prevent sleep.—Lump in hypogastrium (with uterine complaints).

13. Stool and Anus.—Soft, sluggish fæces, difficult to evacuate.—Rectum inactive.—Diarrhœa from weakness, or in consequence of a chill.—Bloody, putrid diarrhœa (in typhus fever).—Diarrhœa, like fried eggs, with complete absence of appetite (in children).—Diarrhœa of undigested substances (with fainting).—Violent diarrhœa with cramps all over abdomen and great faintness (agg., R. T. C.).—Summer complaint—summer diarrhœa.—Diarrhœa, with want of appetite and drowsiness (in summer) in children.—Mucous diarrhœa, as from worms.

14. Urinary Organs.—Burning and incisive pains when urinating.—Renal colic and discharge of calculi.—Painful strangury.—Urine with a violet-like smell.—Renal colic.

15. Male Sexual Organs.—Absence of sexual desire.—Weakness of genital functions.—Absence of erections, even while indulging in voluptuous thoughts.—Desire with relaxed organs.—Inclined to coitus but erections weak and of short duration.—Flow of prostatic fluid.

16. Female Sexual Organs.—Catamenia irregular (sometimes too early, then again too late).—Before catamenia: sacral pains and lassitude, with pressure in the stomach, water-brash, and hepatic pains.—During catamenia: sensation of a general bearing down towards the hypogastrium, and drawing in limbs.—During a hæmorrhage from uterus or menstruation, pressure in abdomen, drawing down into the legs from navel.—Spasmodic, false labour pains.—Threatening miscarriage.—Pain of uterus from pessary.—Flatulent distension of uterus.—Leucorrhœa in place of menses.—Flatus from vagina.—Metrorrhagia; menorrhagia; blood thick and dark.—Menses preceded by pain in small of back as

if a piece of wood, stretched across there, were pressing from within out.—Suppressed catamenia.—Breasts too small, and without milk.—Nipples retracted.

17. Respiratory Organs.—Voice tremulous.—Altered voice; hoarseness.—Hoarseness and catarrh.—Sudden hoarseness, when walking against the wind.—Cough, with pain in chest, as if raw.—Cough with great soreness in the larynx or the chest.—Dry cough, with suspended respiration after a chill in the water.—Cough with or without expectoration when becoming warm in bed in evening, or when becoming warm from working.—Cough <, or only, when becoming warm in bed.—Hæmoptysis.—Cough during pregnancy.—Cough with expectoration of blood.—Dyspnœa.—Shortness of breath, esp. after a meal.—Obstructed respiration.—Difficult inhalation; hysteric asthma.

18. Chest.—Contraction of throat like strangulation.—Oppression of chest, generally coming from epigastrium.—Fulness and distressing sensation of a load on chest.—Burning in chest; peculiar dead feeling and swelling.—Stitches in chest; tightness, spitting of blood.

19. Heart and Pulse.—Palpitation of heart, sometimes with attacks of fainting (followed by sleep).—Quivering of heart.—Trembling, fluttering of heart, as from fright, fear, or sadness.—Paroxysms of palpitation after midnight as if heart were stopping and then beating violently, with loud belching, > drinking hot water and keeping warm; must walk about.—Oppression of heart extends to throat.—Feeling of rush of blood to heart, and thence to head and all over body.—Hysteria cordis.—Heart felt as if beating in a vacuum.—Feels as if her head would burst and her heart would be squeezed off.—Sensation as if something grasped heart.—Pulse small, slow, and weak.—Pulse accelerated.

20. Neck and Back.—Drawing in muscles of nape, caused by damp air.—Neck so weak, head drops forward on chest.—Contusive pain in loins or back (as if broken or bruised).—Pain in small of back when riding in a carriage.—Bruised pain at side of lumbar vertebræ.—Great pressure in back, from within out, during menses.—Lassitude in loins and knees.—Tabes dorsalis.

21. Limbs.—Drawing in limbs, esp. during repose, as after a chill.—Numbness in all limbs.—Sensation as if limbs floating in the air.—Pains in limbs and joints, and other symptoms in cold (damp) weather.—The symptoms are < by cold air and > by external heat.

22. Upper Limbs.—Bad smell under arms and between breasts of women.—Rheumatism of l. shoulder.—In arms, creeping from below.—Steady drawing from fingers to shoulders.—As if a string tied round arms.—Cold hands as if frozen, with buzzing in hands on entering a room.

23. Lower Limbs.—Great lassitude, esp. in loins and knees, as after a long journey, with inclination to sleep.—Pain in r. knee, as if sprained, esp. when moving and going up stairs.—Terrible pain in both legs as if bones smashed to pieces.—Dull pain in periosteum of r. tibia.—Feeling in calves as from a blow.—Cramp: in calves before going to sleep; in feet with inward burning.—Feet cold with appearance of menses.—Soles always wet.—Buzzing sensation in all toes as if frost-bitten, esp. metatarso-phalangeal joints, it spreads over soles to heels, with pain as if bruised from jumping.

24. Generalities.—Digging and pressive pains, which pass from place to place, occupy only a small space, continue but a few moments, and soon return.—Rheumatic pains (from cold, damp air).—The pains come in points all over body, and are < on l. side (obs., R. T. C.).—Loss of sensation in different parts.—Apprehensive of paralysis (cured).—Creeping sensations down the limbs.—Fainting fits.—Hysterical paroxysms.—Convulsions (of children).—Convulsions: epileptic, with consciousness; children, with diarrhœa; catalepsy.—Anæmia.—Marasmus of children.—Sensation of dryness in inner parts; buzzing, humming, or "funny feeling" in body; dryness of skin.—< In the open air; in cold air, in cold and wet weather; when the weather changes, whether from dry and pleasant to wet, or *vice versâ*, until it becomes settled; in wet weather; in windy weather; lying on painful side.—> In the room; air being warm; in dry weather.—Coldness and fainting with pains; esp. headache.—Faints easily, from sight of blood, from standing (trying on dress).—Excessively painful sensitiveness of whole body; even on lying on a soft couch, every part which is undermost soon becomes painful.—Great agitation of muscular system.—Lassitude and necessity to lie down after the slightest fatigue.—Apoplexy.—Great lassitude, esp. in loins and knees, as after a long journey, with inclination to sleep.

25. Skin.—Cold and dry skin, with but slight tendency to perspire.—Cold skin over whole body; skin very sensitive to cold, moist air.—Chilblains.—Old patch of psoriasis on metacarpal aspect of thumb goes away (R. T. C.).—Bluish spots on the skin.—Acne.—Freckles.

26. Sleep.—Affections accompanied by a desire to sleep and a tendency to faint away.—Great sleepiness with all complaints, particularly with pains.—Starting in sleep, but does not always awake.—Starting in sleep like electric shocks with nightmare.—Dreams: of falling from high places; of being pursued.—Great drowsiness.—Coma somnolentum and heaviness.—Complaints causing sleepiness.

27. Fever.—Pulse accelerated.—Great sensibility to cold air, which soon occasions shivering, with paleness of face.—Frequent shivering.—State of chilliness, as when suddenly cooled after perspiring, with pain in nape of neck and in all the bones.—Chilliness without thirst.—Chilliness whenever uncovering oneself, and chilliness in open, esp. wet, air; at once > in warm room.—Chilliness in evening with great drowsiness.—Chilliness and drowsiness predominate.—Heat without

thirst; want of perspiration; no thirst.—Heat in face and hands in morning, with hypochondriac mood and thirstlessness and dryness of mouth and throat.—Intermittent fever with sleepiness and dryness of mouth and throat with thirstlessness.—Double tertian fever, with inclination to sleep, tongue white, rattling in throat, sanguineous expectoration, and moderate thirst, during heat.—Malignant fever, with putrid or colliquative diarrhœa.—Perspiration scanty, but at times red like blood.—Bloody sweat; hysterical.

Nux Vomica.

Strychnos nux vomica. Poison nut. N. O. Loganiaceć. Tincture and Trituration of imported seeds.

Clinical.—*Acne rosacea. Alcoholism. Amaurosis. Amblyopia. Anger, effects of. Apoplexy. Asthma. Bilious attack. Biliousness. Bladder, affections of. Bone, nodes on. Bra in, affections of. Breath, sour*. Carriage-sickness. Catarrh. *Clavus. Cold. Colic. Constipation. Convulsions. Cough. Cramp. Delirium. Diarrhśa. Dysentery. Dyspepsia. Emissions*. Epilepsy. *Erotomania. Eyes, affections of; gouty inflammation of*. Gall-stones. *Gastrodynia. Gout. Hćmorrhoids. Headache. Heart, affections of. Hernia*. Hydrocele. *Hypochondriasis. Impotence. Intermittent fever*. Lisping. *Liver disorders. Locomotor ataxy. Lumbago*. Masturbation. *Muscć volitantes. Myelitis*. Night-blindness. *Nightmare. Nose, affections of*. Nymphomania. *Paralysis; spastic*. Paraphimosis. *Pregnancy, affections of*; spurious. *Pylorus, disease of*. Renal calculi. Sea-sickness. Sexual perversion. *Sleep, abnormal. Speech, disordered. Spermatorrhśa*. Strabismus. *Taste, disordered. Tea, effects of. Tenesmus. Tobacco habit. Tongue, affections of. Trachea, affections of. Urethra, spasm of. Urine, frequent passing of*. Uterus, prolapse of. Vagina, prolapse of. *Vertigo. Waterbrash*. Worms. *Yawning*.

Characteristics.—*Strychnos nux vomica* is a moderate-sized tree native of the Coromandel Coast and Cochin China. The fruit is very like an orange in appearance and contains numerous seeds of flattened circular outline, about the size of a halfpenny, ash-grey in colour, covered with fine silky hairs. The seeds are intensely bitter, owing to the presence of *Strychnia* and *Brucia* which exist in the seeds together with certain peculiar acids; but the pulp is innocuous and is said to be eaten by birds. If nitric acid be added to the seeds a deep orange-yellow colour is produced. The wood of the tree is very bitter. It is used in India in cases of intermittent fever and snake-bites. A decoction of the leaves is used externally in rheumatism (abridged from *Treas*. of *Bot*.). Under *Brucea antidysenterica* I have told how the bark of the tree was imported into Europe in mistake for *Angustura*. The tree from which the *Ignatia*" beans" are obtained is unknown, but it is not doubted to be a *Strychnos*; the seeds actually contain a larger proportion of *Strychnia* than those of *Nux vomica*. The difference in the character of the two

remedies proves the wisdom of Hahnemann's method of studying medicines. If there was nothing more than the chemistry of the drugs to go by *Ignatia* and *Nux vomica* might be used indifferently; with the knowledge Hahnemann has given us of their characteristic features they are seldom even thought of in connection with the same case.─In the cases of poisoning with *Nux*, the most marked feature is the spasms and convulsions which cause death by arresting respiratory movements. "Convulsions with consciousness." "Spasms with tetanic rigidity of nearly all the muscles of the body, with interruption of a few minutes, during which the muscles were relaxed; the pulse became soft and the patient recovered consciousness and speech; the spasm was *renewed by the slightest touch*, though at times it would immediately *cease* when the patient was *tightly grasped*, or the elbow was straightened up." "During the spasms evident relief was afforded by forcible extension of the body." In the case of two persons, a man and wife, who both took the poison, the reporter says: "As the convulsions came on the heads were drawn back, there was spasmodic clenching of teeth, heels fixed to the ground, eyes as if protruding from their sockets, and both, curiously enough, kept exclaiming, 'Hold me! Hold me!' although there was a person on either side of each." One of the patients afterwards said that if a fire had been lit under him he could not have moved, although at the same time he kept crying, "Hold me!" "Convulsions came on beginning with slight twitchings in muscles of lower extremities." "Convulsions with red face and closed eyes." The general effect of the spasms was to cause opisthotonos and throwing back of the head, though in some the body was spasmodically drawn sideways. The tetanus of *Nux* differs from traumatic or idiopathic tetanus in that the spasms of the former are less continuous, do not invariably begin with the muscles of the jaws, but preferably in the lower extremities, and are not accompanied by rise of temperature. "*Spasm*" is the first keynote of *Nux* and the second is "*exaggerated sensitiveness*." Both are brought to the front in the poisoning cases, and the provings bring out their developments in almost all regions of the body. The spasms affect all the voluntary muscles of the body and the involuntary muscles as well─śsophagus, stomach, intestines, uterus, bladder, rectum, and the spasms and irritability go through the pathogenesis. There is irritability of bladder and rectum at the same time; constant urging and desire and very little passed; prolapse of rectum with constipation; or there may be incontinence of both urine and fćces. Uterine bearing down and prolapse; cramps at menstrual periods and pressure on bladder and rectum.

The *irritability* and *excessive sensitiveness* of *Nux* depicted in the tetanic seizures and drawn facial expression applies to mind as well as body. *Nux* is especially *suited to:* (*1*) Very particular, zealous persons, inclined to get angry and excited, or of a spiteful, malicious disposition. (*2*) Ardent persons; or, disposed to anger, spite, or deception; always irritable or impatient. (*3*) Nervous, melancholic people, troubled with indigestion; venous constitution with tendency to hćmorrhoids. (*4*) Thin, irritable, choleric persons with dark hair, who make great mental exertion or lead a sedentary life. (*5*) Vigorous persons of dry habit, tense fibre, ardent and irascible temperament and tenacious disposition. (*6*) Bilious

temperament. (*7*) Persons addicted to wine, coffee, or pepper and condiments, who live a sedentary life with much mental exertion. (*8*) Debauchees, thin, irritable, venous. (*9*) Drugged subjects. Throughout all these classes moral, mental, nervous, and muscular tension or spasms may be traced (but *ennui*, loss of energy may also be indications for *Nux*: they are alternating states). There are few drugs which produce a greater degree of irritability than *Nux*, running, as it does, to the verge of homicidal and suicidal impulse. Intestinal spasm is exemplified in the spasms which follow eating unripe fruit and other digestive irregularities; and sometimes they take the form of incipient hernia. Hernia, inguinal and umbilical, has been cured with *Nux*, and I have seen a case of strangulated hernia resolved by *Nux* whilst preparations for operation were in progress.—Although there are many pains in connection with the rectum, *constipation* or spasm is the leading feature: "Constrictive sensation at times as if he would be obliged to go to stool." "After a stool it seemed as if some remained behind and could not be evacuated, with a sensation of constriction in rectum, not in anus." "Discharge of bright blood with the fćces, with sensation of constriction and contraction in rectum during stool." "Stool daily though always with a colicky sensation in abdomen, and with the stool, it always seems as if it was not enough." "Frequent, ineffectual desire for stool; after the usual evacuation." *Nux* is very far from being a panacea for constipation and hćmorrhoids, but its indications are perfectly clear and when they are present it will not disappoint the prescriber. The diarrhśa of *Nux* is sudden and drives patient out of bed; or is involuntary; or comes on after a meal. Alternate constipation and diarrhśa. In the dysentery of *Nux* the straining ceases as soon as the motion passes. This distinguishes *Nux* from some other remedies. There is tendency to faint after diarrhrśic stools; and also after vomiting. This tendency to fainting is another example of the *Nux* sensitiveness. It occurs from odours; in a warm room; after eating; after every labour pain. *Nux* has proved curative in epilepsy when the fit occurred during stool. *Nux* is hćmorrhagic. There is metrorrhagia (in high livers), and also menorrhagia. Menses too early and profuse, flow dark; faints easily; irregular, cease flowing at night-time. The pains are cramping and cause nausea and fainting; twisting, moving about in abdomen; soreness across pubes; cramps in bladder. During pregnancy: hiccough; morning sickness; varicose veins; hćmorrhoids; false pains. Labour pains are violent and = fainting. Lochia scanty, offensive; nipples sore, white spot in centre; tensive pains when nursing. Desire is excited in both sexes, and here again the sensitiveness of *Nux* is observed—the slightest provocation suffices to excite the sexual passion. Spasm is the chief note of *Nux* in the respiratory sphere, where it produces a variety of asthmatic states, a dry, persistent fatiguing cough which = headache as if the skull would split. The general conditions of *Nux* are the best guides in such cases. But it must not be supposed that *Nux* cannot cure cases which are not purely spasmodic. I have cured with *Nux* many cases of bronchitis with copious moist râles and expectoration. In addition to spasms, *Nux* causes languor; great nervous debility (as from sexual or other excesses); trembling; excitement with trembling; paralysis. Paralysis after apoplexy, parts cold, numb,

emaciated. Hemiplegia. Locomotor ataxy has been relieved by it. *Nux* is a drowsy medicine and it also produces sleeplessness. Wakes 3 a.m. and lies awake for hours, falls asleep when it is time to rise and feels heavy and unrefreshed. It is curative in cases where sleep is unattainable except from a stimulant. The symptoms of *Nux* are > after undisturbed sleep; < when sleep is disturbed. The third keynote of *Nux* is *Chilliness*. *Nux* is one of Grauvogl's chief hydrogenoids, and, like so many other "bitters," it is a great remedy in intermittents─intermittent fevers, periodic neuralgias. Chilliness: Cannot get warm in bed at night. Coldness of whole body with blue hands; with blue skin. Cold, moist hands with cold tip of nose. Repugnance to cold or cold air; chilly on least movement; from being uncovered; must be covered in every stage of fever, chill, heat, or sweat. In the fever there is great heat, whole body burning hot, face red and hot, yet patient cannot move or uncover without being chilly (H. C. Allen). But *Nux* may have "Intolerance of covering during sweat with heat." *Nux* has hunger with aversion to food; loss of appetite; and sudden satiety. A patient to whom I gave *Nux* 30 said that immediately after each dose she felt as if she had had nothing to eat for a week. Another patient from the same medicine developed: "Hot feeling up in throat. Biliousness. General heat and scarlet redness of face. Headache." The red face of *Nux* is a characteristic feature. Nash gives a characteristic of the menses of *Nux*: "Catamenia a few days before the time, and rather too copious, or keeping on several days longer, with complaints at the onset which remain until it is over." Nash remarks that *Calc*. has the same, but the temperaments differ, and he adds this useful note: He found that patients that required *Nux* for this condition could hardly ever take *Puls*. for anything. For instance, if they had a green, bland, thick discharge, and *Puls*. were given, it would often bring on too early and profuse menstruation. *Sep*., on the other hand, would cure the catarrh and not interfere with the menses. Nash deservedly italicises Bśninghausen's keynote: "Feels < in morning, soon after waking; also after mental exertion; after eating and in cold air." *Sour breath* I have noticed to be a very leading indication for *Nux*. Hering gives the gastric disorder of *Nux* thus: "After eating; sour taste, pressure in stomach an hour or two afterwards, with hypochondriacal mood, tightness about waist; must loosen clothing, confused, cannot use mind two or three hours after a meal, epigastrium bloated, with pressure as from a stone in stomach." The pressure *two or three hours after* eating distinguishes *Nux* from *Nux m*. and *K. bi*., which have it *immediately* after.─*Nux* has many eye-symptoms. Sircar cured cases of night-blindness with *Nux* 6. He connected the disorder with the liver (*Calcutta J. of Med*., xiv. 454). F. A. Griffith (*H. P*., ix. 211) gives an interesting example of the use of *Nux* in cases which have been much drugged. Living in a part where there are no other homśopaths he had mostly heavily-drugged patients to deal with. His plan was to give *Nux* 30 four times daily for four days and then see the patient again and take a new picture. A man, 45, had had sciatica for six months and had taken a great deal of strong medicine internally. After four days of *Nux* 30 Griffith was surprised to find his patient almost well; the trouble having "got well from above downward"; at last localising in the heel. One dose of *Sep*. c.m. completed

the cure.—O. W. Smith (*H. P.*, ix. 210) reports this symptom as having been caused by *Nux*: "Sensation under middle of sternum like a lump of hot lead as large as two fists." Among the *peculiar sensations* are: As if something heavy fell into head. As if his head were immensely larger than his body. As if pressing a nail into brain; into vertex. As if brain beaten or cleft with an axe. As if skull pressed asunder. As if hot water in eye. As if eyes would be pressed out. As if he had received a bruise over eye. As if a hot plate of iron were nearly in contact with face. Face feels as if he were sitting before a hot fire. As if a ball or plug in throat. As if skin scratched off throat with a sharp instrument. As if throat too narrow. As if a stone in abdomen. As if abdomen raw and sore. As if bowels, bladder, and rectum were pressed with a sharp instrument. As if hernia would occur. As if everything in region of umbilicus were being shattered and torn. Navel as if drawn in. Chest as if drawn together. As if room had been exhausted of air. As if something torn loose in chest. As if blood would be jerked out of veins. As of a band above knees; round body. Stiffness. Numbness. Burning. Stitches. Symptoms are < in morning; in open air; by motion; by mental exertion. Each of these is a characteristic; a combination of two or three of them may be considered a keynote. < In morning is the greatly predominating feature of *Nux*. [The best time to give *Nux* is in the evening at bedtime, that is, well away from the time of its chief aggravations.] Cough and some other symptoms are < in night; < after midnight; < 3 or 4 a.m. During day, drowsiness. Menses return at full moon. Although *Nux* is sensitive to chill, draught, and air, most symptoms being < by cold, cold water, and by getting wet; still the symptoms generally are < in dry weather, > in wet weather. But wet weather < facial neuralgia; and wet, warm weather = gastric and bilious fever. Warm room and warm covering > headache. But warm room = fainting. Summer heat is insupportable; sunshine < headache. Open air > flatulence and asthma and < all other symptoms. < In wind. Rest >. > Lying down; on side. Motion <. Exertion, physical or mental, <. < From shaking head. Eating <. Milk sours on stomach. When eating: heat in head. < From coffee; cold food; cold water; wine. Alcoholic drinks both < and >. Touch <. Pressure >; but cannot bear tight clothing. Rubbing >. Riding in carriage = sickness. Coughing <; shocks are felt in pit of stomach with every cough. < From pollutions. < From stomach derangement. < After stool; before urinating; when yawning; < during and after menses (old symptoms are renewed and new ones occur). < On waking at night. When it "all medicines disagree" *Nux* will often cure the morbid sensitiveness and other troubles with it. < From music. There is very great > for a short time after a stool.

Relations.—*Antidoted by:* Wine, Coffee, Aco., Bell., Camph., Cham., Coccul., Op., Pal., Plat., Stram., Thuj. (ineffectual desire to pass water).—*It antidotes:* Narcotic, drastic, and vegetable remedies. Bad effects of anomalies in foods, *e.g.*, Ginger, Nutmeg, Pepper, and so-called "hot" medicines; Mag. cit., Alcohol, Merc. (tremors), Mez. (neuralgia), Ether, Thuj. (urination). *Compatible after:* Ars., Ipec., Mg. mur., Pho., Sep., Sul. *Compatible before:* Bry., Pul., Sul. *Complementary:* Sul. (Calc.). *Incompatible:* Zinc. [Nux and Puls. have many symptoms in common, but

are opposite in temperament and conditions. For all that they may be required by the same patient when temperaments and conditions are mixed. In clearly Nux cases Sep. follows better than Puls.] *Compare:* In tetanus, Picrotox, Veratrin., Thebain. Cic., Hcy. ac., Bell., Aco., Physo., Phyto., Cura., Camph. Cerebro-spinal affections, Pic. ac. Fainting in nervous women, Ign., Nx. m., Mosch. Gastric troubles, Bism., Ars., Kre., Lyc., Pul., Carb. v. (Carb. v. often follows Nux well in ill effects of debauchery). Asthma, Zingib., Carb. v., Lyc., Nat. s. Paralysis of sphincters, Sep., Bell., Sul. (Nux at any time; Sep. in first sleep; Sul. and Bell. in deep sleep). Bad temper before and during menses, Cham. (Cham. does not know it, Nux does), Mag. m. (Lyc., before menses). Wakes 3 a.m. and cannot get to sleep, K. ca., Ars., Calc., Sep. Night-watching effects, sensitiveness, effects of noise, travelling by land or sea, umbilical hernia, Coccul. Fear of losing senses, Calc., Lyc., Sul. Desire to kill those there is most reason to love, Hep., Ars. Fainting or faints after every evacuation, Dig., Nx. m. Piles, Ćsc. Leucorrhśa staining yellow, Agn. c., Carb. an., Chel., Kre. (Nit. ac.), Sep., Pru. sp., Thuj. Bloody sweat, Nx. m., Lyc., Calc. Impotence from abuse, Calc., Sul. Stricture of rectum, Nat. m., Op. > In wet weather, Alm. Renal colic, Ocim., Tabac. Bad effects of masturbation, Chi., Nat. m., Calc., Sul., Con., Lyc., Cobalt. Sensitiveness, Amb., Asar., Castor., Nux m. Scraped feeling in throat, Apis. "Stopped-up" nose., Cham. (Cham. feels stopped, but discharges hot water; Nux no secretion whatever). Pain with stool, > after Coloc. (Merc. pain and tenesmus continue after stool).

Causation.—Anger. Coffee. Alcohol. Debauchery. Masturbation. Sexual excess. Injury.

SYMPTOMS.

1. Mind.—Hypochondriacal, peevish, morose (stubborn), thoughtful and sorrowful humour, sometimes with inclination to weep, without being able to do so.—Hypochondriac humour of persons of sedentary habits, and of those who dissipate at night, with abdominal sufferings.—Inclined to find fault and scold; morose; stubborn; an insane desire when alone with her husband, whom she adores, to kill him.—Melancholy, with great uneasiness respecting the health, eagerness to speak of the disease, despair of a cure, and fear of approaching death.—Desire for solitude, repose, and tranquillity, with repugnance to conversation.—Anguish, anxiety, and excessive uneasiness, often with agitation which allows no rest whatever, as from consciousness of having committed a crime, and which urges even to suicide; but is afraid to die.—The fits of anguish take place mostly on lying down in evening, or after midnight, towards morning, and are sometimes accompanied by palpitation of heart, heat and sweat, nausea, and vomiting, dilation of pupils, and oppression of heart.—After anger, chilliness alternating with heat, vomiting of bile and thirst.—Moral exaltation and excitability, with extreme susceptibility of all organs, great sensitiveness to least pain, to least smell, noise or movement, extraordinary readiness to take fright, and

sensibility so great that music even causes tears to flow.—Light and music unbearable.—Anxiety and restlessness in the evening.—Does not wish to be touched; wants to be alone.—Dizziness of the mind, *i.e.*, an unsteady, wavering condition.—Incontrollable irritability, and lamentations, complaints and cries (during the sufferings), sometimes with heat, and redness of cheeks.—Timidity, mistrust, and suspicion, with wavering and indecision.—Frightfully apprehensive about getting married, girl lies on a sofa and throws her arms and legs about and refuses to see a doctor (cured with high potency, Skinner).—Inclination to weep, with great susceptibility and irritability, disposition to be angry (habitual), to yield readily to passion, to criticise, and to utter reproaches.—Spiteful, malicious.—Delirium tremens, with over-sensitiveness, nervous excitability, and malicious vehemence.—Every harmless word offends; every little noise frightens; cannot bear the least, even suitable medicine.—Humour peevish and malevolent; quarrels, insults, and invectives, with immodest expressions and excessive jealousy, mingled with tears and cries.—Fiery, excited temperament.—Ill-humour, vexation, and anger, breaking out in acts of violence.—Awkwardness and drowsiness.—The time passes too slowly.—*Ennui* (great laziness), with dislike to and unfitness for bodily and mental labour.—Incapacity for meditation; tendency to misapply words when speaking; difficulty in finding suitable expressions; mistaking weights and measures; frequent confusion when writing, with omission of syllables, or entire words.—Extravagant and frantic actions, frightful visions, loss of consciousness and delirium, sometimes with murmuring.

2. Head.—Head bewildered, and confused, with cloudiness, as after a debauch, principally in open air, and in sun.—Intoxication, stupor, and dizziness.—Intoxication from the drunkenness of the previous day, with vanishing of sight and hearing; < after dinner and in sun.—Vertigo with sensation of revolving and of wavering of the brain, principally during or after a meal, as well as when walking and exercising in open air (> when wrapping head up in warm room and when at rest), on sneezing, on coughing, on stooping or on rising up again, in morning or in evening in bed, when lying on back, and often with cloudiness of eyes, danger of falling, staggering, fainting, buzzing in ears, and loss of consciousness.—Heaviness and pressure in head after dinner, esp. on moving eyes.—Congestion of blood to head (with burning in it and with heat and redness of the bloated face; < in morning, on moving head and when walking in open air), with humming in ears.—Loss of consciousness, with coma somnolentum, and paralysis of lower jaw, of organs of deglutition, and extremities.—Pressing headache in forehead, with sour vomiting; < in morning in bed, > when leaning head against something or when lying on back.—Pressing in head as if something heavy were sinking down in forehead or head.—Tension in forehead as if it were pressed in at night and in morning, < on exposing head to cold air.—Periodical headache in forehead, sore as from ulceration, with constipation.—Stunning headache in the morning, after eating, and in sunshine.—Pressing headache as if skull pressed asunder.—Heaviness, pressure, and sensation of expansion in head, as if forehead were bursting, principally above eyes.—Burning in forehead in morning

on waking and after eating; < from mental exertion and when exercising in open air; > when at rest and in the warm room.—Bruised sensation of brain; generally one- (r.) sided, > when lying on painless side.—Sensation as from a bruise in the back part of the head.—Tearing, drawing or jerking pains in head, or shootings, or blows or pulsative pains, or digging, and sensation as if a nail were driven into brain, or tension and squeezing, or pain as of ulceration.—Violent jerking or dull stitches in l. side of brain, from orbit to parietal bone or occiput.—Pain in occiput and cervical spine with pressure as of a stone in stomach, with vomiting of food and sour mucus, followed by languor and weariness (cured with 30th, R. T. C.).—Pressing in vertex.—Shocks and sounds in brain at every step.—Semi-lateral headaches from excessive use of coffee.—The headaches are often deeply seated in brain, or in occiput, or on one side only, or in forehead, as far as eyes, and at root of nose; they appear principally in morning after waking, or rising, or after a meal, or in open air, or recurring at same hour every day, and they are <, or renewed, by intellectual labour and meditation, by wine, coffee, rough and hot weather, by walking, stooping, or moving head.—Rheumatic headache with nausea and acid vomiting.—Headache with unfitness for meditation, or with loss of consciousness and delirium, or with nausea, eructations, and vomiting, or with heat and redness of the cheeks, and shiverings in rest of body, or with fatigue, lassitude, and great need to lie down.—Head is turned backwards, during convulsions.—Small, painful swelling (nodes) on forehead.—Soreness of scalp, and roots of hair, with great sensitiveness to touch.—Pain, like excoriation, in scalp, from a rough wind (> warmly covering head).—Liability to take cold on head mostly from dry wind, draught of air.—Small painful tumours on forehead.—Clammy sweat on forehead, when walking in open air.—Semi-lateral, fetid sweat on head during the semi-lateral pains (head cold to touch; the pain with anxiety and dread < from uncovering).

3. Eyes.—Eyes surrounded by a livid circle, and full of tears.—Pressive and tensive pains in eyes, < on opening them, and looking into the air.—Tearing pains in eyes by night, or burning pain, smarting, sensation of dryness, itching and tickling, as from salt, < in canthi (itching > from rubbing).—Smarting, dry sensation in inner canthi, in morning in bed.—Bruise-like pain in eye.—Eyes inflamed, with redness and swelling of sclerotica, or of conjunctiva.—Inflammation of sclerotica, with stitches and aversion to light of sun.—Yellow colour of sclerotica, principally in lower part of eyeballs.—Ecchymosis of the sclerotica, and sanguineous discharge from eyes.—Painless, circumscribed red spots, like extravasation of blood, in white of eye.—Canthi red, and full of humour, with nocturnal agglutination.—Pupils dilated, or contracted.—Burning itching, or sharp drawing pains, or sensation of excoriation in lids and in margins, < in morning on being touched.—Twitching of lids.—Swelling and redness of the lids.—Movement of lids difficult on account of stiffness of muscles.—Contraction of lids as from heaviness.—Eyes fixed and brilliant.—Anxious staring look.—Excessive sensitiveness of the eyes to light of day, < in morning.—Sparks, or black and greyish spots before eyes.—Presbyopia.—Amaurotic cloudiness of eyes.—Sensation, as if all objects

were brighter than they really are.—Sparks (or streaks), like lightning before eyes.—(Night-blindness.)

4. Ears.—Otalgia with tearing-stinging pains.—Tension in the ears when he raises his face.—Squeezing in ear, < when chewing, and clenching teeth.—Tingling and itching in ears, esp. at night.—Itching in the ear and through the Eustachian tube, which compels frequent swallowing.—Deafness from blockage of r. Eustachian tube with hard mucus.—The pains in the ear are < after entering the room and in bed.—Acute and painful blows (tearing) and shootings in ears, which extort cries, < in bed, in morning.—Stitches in ear when swallowing.—Pain in ear on swallowing, as if it were pressed from outside.—(Pain shoots from one ear to the other when swallowing).—Ringing, roaring and hissing in ears.—Humming in ears.—Sighing, whistling, buzzing, and tinkling in ears, or cracking when masticating.—Words sound loudly in the ears of the speaker.—Swelling of parotids.

5. Nose.—Insupportable itching in nose.—Sensitiveness and inflammatory redness of the internal nose.—Pain, as of excoriation, or ulceration, in nostrils also margins.—Obstruction of nose, sometimes on one side only, and often with itching in nostrils, and discharge of mucus.—Troublesome, dry catarrh of nose, which usually comes on very early in morning.—(Dry sneezings, chronic coryza; much mucus after getting up as if cold air caught her nose, and which lasted an hour, R. T. C.).—Obstruction in head, < in morning, or at night, and dry coryza with heat and heaviness in forehead, and stoppage of nostrils (in infants).—Fluent coryza by day, or in morning, with dryness and nocturnal stoppage of nose.—Tip of nose cold.—Scraping (crawling) in nose and throat, heat in nostrils (with headache, heat in face, chilliness) and frequent sneezing during coryza (which is fluent during day, < in warm room, > in the cold air; dry coryza during evening and night).—Acrid discharge from the obstructed nose.—Sanguineous mucus in nose.—Bleeding in nose, and discharge of clots of (dark) blood from nostrils.—Fetid exhalation from nose.—Great acuteness of smell.—Odour before nose, like burning sulphur, decayed cheese, or snuff of a candle.

6. Face.—Sickly aspect, with livid circles round eyes, and sharpened nose.—Face pale, yellowish (esp. round nose and mouth) and earthy.—Yellowness around mouth and nose, or around eyes.—Reddish-yellow face.—Heat (swelling) and redness of face or (of one) of the cheeks, sometimes alternating with paleness.—Patient feels as though sitting before a hot fire.—Cold sweat on face.—Muscular palpitations in bed, in evening, or tingling itching in face.—Drawing in masseter muscles, with stiffness.—Tearing and drawing pains in face, sometimes only on one side, extending into ear, with swelling of cheek (and pain in cheek-bone).—Tension round mouth, nose, and eyes, with swelling of the parts.—Swelling of face, sometimes only on one side, swelling of a pale colour.—Pimples in face from the excessive use of spirituous liquors.—Intermittent neuralgia; < in infra-orbital branch of trifacial; always < in morning; > sometimes when lying in bed, esp. after abuse of coffee or liquors.—Small, purulent pimples

on cheeks and head.—Painful dryness, fissure and desquamation of lips.—Scabs and (corroding) ulceration on the red part of lips, and corners of the mouth.—Small, purulent pimples round lips and chin.—Sensation of excoriation, and small ulcers, on internal surface of lips (painful to touch).—Tettery eruption on chin.—Distortion of mouth.—Side-to-side movement of jaws.—Spasmodic clenching of jaws.—Periodical prosopalgia nervosa, < at night.—Shooting (swelling) in sub-maxillary glands, when swallowing.

7. Teeth.—Pains, as of excoriation, or ulceration, or drawing, jerking pains, with shootings, or searching and boring in teeth, and jaws, or only in carious teeth, < at night, or in morning on Waking, or after dinner, or when walking in open air, or when breathing fresh air, or in evening, or from meditation and any intellectual effort; often extending into head, ears, and zygomatic process, or with painful engorgement of sub-maxillary glands, swelling and soreness of gums, red and hot spots on cheek and neck, plaintive disposition, and dejection.—Tearing in the teeth extending to head through bones of face, renewed from cold drink, > by warmth.—Stinging in decayed teeth; burning-stinging in one whole row of teeth.—Toothache often semilateral; sometimes < by heat of room, and > in open air.—Toothache from taking cold; caused or < by mental exertion; > heat.—Drinks and hot soups, as well as cold water, wine, and coffee, equally renew or < the toothache.—Loosening and loss of teeth.—Grinding teeth.—Stomacace.—Putrid and painful (white) swelling of gums, sometimes with pulsation, as in an abscess, burning, pulling, and ready bleeding.—Ulcer in gums.

8. Mouth.—Aphthć (of children).—Small aphthous ulcers in mouth and throat, with putrid smell; bloody saliva runs out at night; gums scorbutic; spits coagulated blood.—Fetid, putrid, and cadaverous smell from mouth: principally after a meal, and when fasting in morning.—Great dryness, principally of fore part of mouth and tongue, esp. after midnight.—Pain in mouth, tongue, and palate as if the whole were raw and excoriated.—Accumulation of yellowish white mucus in mouth.—Ulcers of a fetid smell, pimples and painful blisters in mouth, tongue, palate, and throat.—Inflammatory swelling of palate, throat, and gums, with difficult deglutition.—Inflammatory swelling and stitches in palate.—Accumulation of water in mouth; nocturnal salivation; bloody saliva; hćmoptysis.—Tongue covered with a (heavy) white, thick, or yellowish coating; or tongue dry, cracked (on edges), brownish or blackish, with bright red margins.—Great heaviness of tongue, with difficulty of speech, and sensation when speaking, as if tongue had become thicker.—Stuttering.—Lisping.—Sour taste in mouth, sour odour of breath.

9. Throat.—Scraping (as after heartburn) and pain as from excoriation, in throat, < when swallowing, and when breathing fresh (cold) air.—Sensation of swelling in palate, and pain during empty deglutition, as if there were a tumour, or a plug in throat, or as if pharynx were contracted.—Lancinations in throat, < when swallowing, and sometimes extending as far as ears.—Swelling of uvula, and tonsils, with pressive and shooting pains.—Relaxed uvula with its attendant cough

(many cases cured, R. T. C.).—Choking, or spasmodic contraction in throat.—Pain from pharynx to pit of stomach in morning.—Tickling sensation in throat, with a desire to scratch.—Burning in throat, < at night, and sometimes extending to mouth and śsophagus.

10. Appetite.—Salt, sulphurous, sweetish, metallic, herbaceous, or mucous taste in mouth.—Acid taste in mouth, < in morning, or after eating (and drinking).—Acid taste of food, esp. of bread (of rye or of wheat) and of milk.—Putrid taste, < in the morning.—Bitter taste in mouth, of sputa, of food, and esp. of bread.—Insipidity of food (hunger with aversion to food), esp. of milk, bread, meat, coffee, and tobacco.—Want of appetite, and dislike to food, esp. rye-bread, tobacco, and coffee, and sometimes with constant thirst.—No hunger.—Thirst, sometimes with dislike to all drinks, principally water, milk, and beer, or with desire for beer or milk.—Ravenous hunger after drinking beer.—Craving for brandy or for chalk.—Hunger, sometimes with dislike to food, or prompt satiety.—Tastelessness for all food.—Periodical bulimy in afternoon.—During a meal, heat in head, sweat on forehead, nausea, and fainting.—After a meal, risings and regurgitations, nausea, inclination to vomit, and vomiting of food, pressure and cramp-like pains in stomach, pressive inflation in epigastrium, colic, pyrosis, head bewildered and painful, uneasiness and hypochondriacal humour, anxiety, vertigo, and syncope, coldness and shivering, with heat in head and face, redness of cheeks, fatigue, and drowsiness.—Drinks oppress the stomach, and often cause nausea, with inclination to vomit.—Rye-bread and acids equally occasion sufferings, but fattest food is sometimes taken with impunity.—Animal food <.

11. Stomach.—Abortive risings, with painful feeling of spasmodic contraction in śsophagus.—Frequent, and often bitter and acid risings and regurgitations.—Frequent and violent hiccough.—They want to belch, but a kind of śsophageal constriction seems to prevent it.—Belching of wind, which is difficult.—Pyrosis, < after taking acids, or fat food.—Continual nausea, and inclination to vomit, < in morning, or during a meal, or after eating or drinking.—Constant sick feelings affecting body here and there.—Heartburn.—Scraped sensation in pit of stomach.—Nausea, particularly where patient feels very sick at the stomach, feels "If I only could vomit, I would be so much better.".—Waterbrash.—Empty vomiturition; straining to vomit (in drunkards).—Periodical attacks of vomiting; of food, of sour-smelling mucus, of dark, clotted blood; and during pregnancy.—Retching, and violent vomiting of mucus and sour matter, or of food, or insipid matter, or bile, < after having drunk or eaten, or in morning, or else at night, and often with headache, cramps in legs and feet, anxiety, and trembling of limbs.—Regurgitation and vomiting of blood, mixed with clots and black substances, with cuttings, ebullition in the chest, and flow of black blood, with hard fćces.—After dinner (some hours after), pressure in stomach, dulness of head and hypochondriacal mood.—Colic and pressure in stomach extending to shoulders in morning, fasting, and after eating.—Pressure and tension in pit of stomach, with tension opposite, between shoulder-

blades.—Constrictive colic generally, with waterbrash.—Colic of coffee and brandy drinkers.—Pressure on stomach and epigastrium, as by a stone, or cramp-like, contractive, and gnawing pains; < after drinking or eating, or in morning, or when walking in open air, or after partaking of coffee, or at night, and often with tension and inflation of the epigastrium, oppression and constriction of chest, eructations, retching, and vomiting.—Sinking in pit of chest with craving appetite follows an overdose.—Disordered stomach from over-eating; from debauchery; from high living; from drugs; from sedentary habits.—Pain, as from a bruise, pulsation, burning pain, sensation of excoriation and distressing pains in stomach.—Painful sensitiveness in pit of stomach to least pressure; tight clothes are insupportable.—Great uneasiness in prćcordial region, as if heart would burst.—Sensation in cardia as if the food were stopped there and returned into śsophagus.

12. Abdomen.—Sensation as if everything in abdomen would fall down, obliging him to walk carefully.—Affections in the inner belly generally; also upper belly, inner part; sense of stricture or tightness around hypochondriac region.—Contractive pain in the hypochondria.—Cannot bear his clothes tight around hypochondria.—Stitches in region of liver; < from contact or motion.—Throbbing pain as from hepatic abscesses.—Jaundice; gall-stones.—Painful sensitiveness of hepatic region to the slightest touch, and to every movement, with pulsative, shooting, pressive, and tensive pains.—Pressure and stinging in region of liver.—Swelling (inflammation) and induration of the hepatic region.—Aching, tension, fulness, and distension of abdomen, and esp. of epigastrium, < after a meal.—Periodical (colic) pains in abdomen, esp. after eating and drinking.—Colic, with cramp-like, contractive, and compressive pains, or cuttings and shootings, or sharp and drawing pains in the umbilical region, in sides, and in hypogastrium, < after a meal, or after having partaken of coffee, in morning, and often with inclination to vomit, eructations, heat of face, lassitude, and drowsiness.—Pain in abdomen in open air, as from a chill, with sensation as of an approaching attack of diarrhśa.—Sensation of heaviness, and swelling in abdomen.—Heat and burning, or sensation of excoriation, as if parts were raw, or pain, as from a bruise in abdomen.—Congestion of blood and ebullition in abdomen.—Movements in abdomen as from something alive, and commotion of intestines when walking.—Labour-like spasms in abdomen and uterus, extending into legs.—Flatulent colic, sometimes in morning, but principally after eating or drinking, and often with pressive pains, as if caused by stones: great flatulency, which is incarcerated in hypochondria, or mounts towards chest, frequent borborygmi, and grumbling in abdomen, pressure on anus, perinćum, and urinary organs (towards the genitals), sacral pains, distension of abdomen, anxiety, fatigue, and necessity to lie down.—Pain, as from a bruise in integuments of abdomen, < when moving, pressing on them, coughing, laughing, &c., with painful sensitiveness to touch.—Jerking and twitching in abdominal muscles.—Palpitation of abdominal muscles, with sensation as if something were running about in them.—Sensation of weakness in inguinal ring, as if a hernia were about to

protrude.—Hernia; incarcerated hernia.—Swelling of inguinal glands.—Excoriation in angle of groin.

13. Stool and Anus.—Frequent but ineffectual and anxious effort to evacuate (in infants) or sensation as if anus were contracted or closed.—A constipated feeling, whatever the state of the bowels.—Constant urging sensation in rectum for a stool which never comes, or a small portion of fćcal matter may be passed with this urging, leaving the sensation as though a little lump were left behind the rectum which was yet to come away.—Obstinate constipation, often as from inactivity or obstruction of intestines, with hard and difficult fćces (often streaked with blood) of too large a size.—Stools like pitch, with blood.—Incomplete evacuations, with colic, and sensation of constriction in rectum.—Constipation and loose evacuations, alternately.—Fćces, partly soft or liquid, partly hard, with much flatus.—Small, loose, aqueous evacuations, or mucous and sanguineous, with colic and cuttings, pains in loins and tenesmus, pain as from excoriation in rectum, and burning pain in anus.—Whitish or greenish, deep-coloured mucous evacuations.—Dysenteric stools, with cutting at navel, pressing and straining on rectum, and discharge of bloody mucus with fćces.—Discharge of slimy matter and of bloody mucus, or of pure blood, also with loose evacuations.—Contractive pain in rectum during evacuations, and at other times.—Discharge of bright-red blood with fćces with constriction and spasmodic contraction of rectum.—Painful, spasmodically closed anus.—Swelling and closing of anus.—Painful blind hćmorrhoidal tumours.—Blind hćmorrhoids; with sticking beating or pressive pain in rectum and anus; after a stool and after a meal.—Hćmorrhoids, with pain as from excoriation, shooting, burning pain, and pressure in anus and rectum, < during meditation and intellectual labour.—Bloodless piles in hysterical women (R. T. C.).—Discharge of blood from anus.—Jerking in anus when not at stool.—Itching, tickling, and tingling in anus and rectum, as from ascarides.—Discharge of ascarides.—Aching and itching in perinćum.

14. Urinary Organs.—Strangury; complaints before making water.—Abortive inclination to urinate, with pressure on urinary organs, troublesome pains in neck of bladder, and painful emission of urine, drop by drop.—Spasmodic contraction of urethra.—Painful emission of thick urine.—Frequent emission of watery and pate urine, sometimes with discharge of thick mucus or purulent matter from urethra (during and after micturition).—Tenacious mucus passes with urine, without pain.—Urine: reddish with sediment of the colour of brick-dust; turbid, with dirty yellow sediment in morning and when thinking.—Urine sometimes scanty, sometimes copious, flatus passes with urination (cured, R. T. C.).—Pressure to urinate at night, with discharge of a few drops of red, bloody, burning urine.—Hćmaturia.—Pains in renal region, as if a foreign body were there, with inability to lie on side affected, scanty emission of some drops of a saturated urine, and discharge of blood from urethra.—Burning pain in neck of bladder and in anterior part of urethra when making water.—Constriction in fore part of urethra

extending backward.—Itching, and pains as of excoriation, in urethra, before, during, and after emission of urine.

15. Male Sexual Organs.—Tickling and itching in glans, and biting itching in inner surface of prepuce.—Excoriation and retraction of prepuce.—Prepuce sore on margin.—Copious (increased) secretion of smegma behind glans.—Itching, shootings, and constrictive pain in testes.—Easily excited, strong sexual desire, with painful erections (esp. in the morning; after mid-day nap).—Increased sexual desire, with frequent erections and pollutions, < in morning.—Hydrocele.—Itching of scrotum.—Pollutions, with flaccidity of penis, sometimes followed by coldness and weakness in lower extremities.—Complaints from involuntary seminal emissions.—Masturbation and its consequences.—Sexual perversion.—Nightly emissions, with lascivious dreams; from high living, &c.; bad effects of sexual excesses.—Dry heat of body and dryness of mouth after coition.—Inflammatory swelling of testes, with painful sensitiveness to touch, hardness and retraction of testes (with stinging and spasmodic contraction extending to spermatic cords).—Cramp-like pain and sensation of contraction in spermatic cord.—Flaccidity of penis during coition.

16. Female Sexual Organs.—Swelling of uterus, with great sensitiveness to touch.—Prolapsus vaginć, or prolapsus uteri.—Cramp-like and contractive pains in uterus and hypogastrium, extending to thighs, with painful pressure towards the parts (and discharge of mucus).—Congestion to and bearing down of uterus.—Bearing-down with dysuria, cannot sit down without pain.—Inflammation of the uterus and external parts.—Burning in pudenda.—Burning heat in the parts, with sexual desire.—Extasis erotica on slightest excitation, < in bed in morning.—Catamenia: premature and too scanty; too early and too profuse, with dark, black blood.—Metrorrhagia.—Return of catamenia at the period of full moon.—Menses excessive, with much vaginal irritation (agg., R. T. C.).—During the catamenia, spasmodic colic, nausea and vomiting in morning, great fatigue (attacks of faintness), cephalalgia, with shiverings and rheumatic pains in limbs.—During and after menstruation, appearance of new and < of old ailments.—False and inefficient labour pains, with frequent pressure to urinate and to pass stool.—After-pains too violent and of too long duration.—Fainting away after every labour pain; in labour where, with every pain there is a sensation as though the bowels ought to be moved; in threatened abortion, or retained placenta, after abortion or parturition, with a constant feeling of uneasiness in rectum, as though bowels ought to be moved; hćmorrhage from uterus with the same symptom.—Discharge of a yellowish and fetid mucus from vagina.—Internal swelling of the vagina, with burning pain, < on touch.—Pains as from excoriation in mammć.

17. Respiratory Organs.—Catarrhal hoarseness and painful roughness of larynx and chest, < in morning or in bed, in evening, with scraping in throat, accumulation of tenacious mucus, which it is impossible to detach, headache, heat and redness of

face, shiverings and constipation.—Sensation of contraction in gullet, with danger of suffocation.—Inability to speak in a loud voice.—Dry, and sometimes continued, fatiguing, and also spasmodic cough, excited most frequently by a sensation of tickling and itching, or of roughness and scraping, in throat, appearing principally in morning or in bed in evening or at night, esp. after midnight or after dinner, or periodically every second day, < from exertion, from cold air, from eating and drinking, from smoking tobacco, from becoming cold, from acids.—Dry cough, with pain, in the head, as if it would burst, or with great soreness in the upper part of the abdomen.—The cough is dry in the evening and at night; expectoration during the day.—Whooping-cough caused by a tickling in the throat and larynx, with expectoration during the day of yellow, grey, cold mucus, mostly tasting sour or sweet, and last of bright red blood.—Renewal or provocation of the cough by movement, meditation, or reading, and lying on back.—Suffocative attacks after midnight from spasmodic contraction of the larynx.—When coughing, shooting and pains as of excoriation in larynx; headache, as if the cranium were about to burst, and pain as from a bruise in epigastrium, and sometimes also vomiting, danger of suffocation, and bleeding from nose and mouth.—Itching in larynx.—Acute bronchitis.—The dry cough becomes moist, and expectoration is established, when walking in open air.—Expectoration of coagulated blood with cough.—Tight, dry, hacking cough; with bloody expectoration; blood dark; sour taste of expectoration.

18. Chest.—Difficult respiration, shortness of breath, asthmatic constriction and oppression of chest, < at night or in morning, or in bed in evening, when lying down as well as when going up an ascent, or when walking or after dinner, and often with choking, anxiety, pressure in epigastrium, humming in ears, quick pulse and sweat.—(The wind catches her on going out into open air and takes away her breath.—Hay asthma. R. T. C.).—During the attacks of asthma all tight clothing round the hypochondria is insupportable.—Slow and wheezing respiration, sometimes alternately with quick breathing.—Breath fetid or of an acid smell.—Want to take a full inspiration.—Pain as from constriction, and cramp-like contraction in chest.—Heavy, pressing pain in chest, as from a heavy load.—Tensive pressure in chest, as from a weight, < at night and in open, air, and often with difficult respiration.—Dyspnśa; asthma from spasmodic constriction of lower thorax.—Shootings in chest and in sides, < by breathing and by movement in thorax.—Sensation as if something were torn loose in chest.—Heat and burning in chest (with congestion to it), sometimes, at night, with agitation, anxiety, and sleeplessness.—Pain, as of a bruise, in chest, often with shortness of breath, and principally in the sternum and sides.—Intercostal neuralgia, > when lying on well side.—Pulsation in chest and sides.

19. Heart.—Shootings, blows in region of heart.—Anxious palpitation of the heart.—Palpitation < eating; from coffee; from protracted study; when lying down or in morning, sometimes with nausea, inclination to vomit, and sensation of heaviness in chest.

20. Neck and Back.—Pulling pain as from a bruise, rigidity, and sensation of heaviness in nape of neck.—Swelling of muscles of neck, with pain as if they were too short.—Cervico-brachial neuralgia, neck stiff, < in the morning or after eating, and from touch.—Pains, like those of a bruise, in back and loins, with sensation of weakness in those parts, as after childbirth (also after difficult parturition).—Pain as if bruised in the small of the back and back so violent that he cannot move.—(Lumbago, esp. with constipation and vesical weakness, stiffness across loins.—Cannot turn in bed, R. T. C.).—Dreads to stoop for fear of back catching her.—Sacral pains at night, which do not permit turning in bed.—Wrenching pain (or tension between the shoulder-blades), or pain like that caused by a strain, in back and shoulder-blades.—Back spasmodically curved like an arch.—Jerks like electric shocks up spinal column, which raised up body; respiration checked.—Rheumatic, drawing, and burning pains in back, sometimes in evening.—Convulsions in back, with throwing back of head.—Burning, pressing, and stitches between the shoulder-blades.—Shootings and constrictive, pains between shoulder-blades.

21. Limbs.—Bruised pain in limbs and joints, < in morning in bed; > on rising.—Spasmodic pain in joints after yawning and stretching, with chilliness and internal beating.—Trembling of limbs and jerking of heart.—Great weariness and relaxation in all limbs after taking open air.—Chilliness of back and limbs in morning, with pain of skin as from freezing cold, and falling asleep of limbs.—Sensation of sudden loss of power in extremities in morning.—Falling asleep of arms, hands, and soles of feet.

22. Upper Limbs.—Rheumatic pains, with sensation of weakness in shoulders and arms.—Soreness in shoulder-joint.—Drawing in the arms, extending from the shoulder to the fingers, with sensation as if the arm were asleep; loss of motion of the arm, esp. at night.—Sluggishness, heaviness, weariness, and feebleness of arms.—Paralysis of arm, with insensibility, and sensation as of ebullition of blood (as if the blood would start out of the veins).—Pulling in arms, with sensation of torpor and immobility, < at night.—Itching miliary eruption on arms.—Swelling of muscles of forearms, with pain as if they had been burned.—Numbness and torpor of forearms in morning.—Wrenching pain in wrists.—Paralytic weakness of hand.—Tendency of hands and fingers to be benumbed.—Cold, sweaty hands, with cold nose.—Hands cold and chilly.—Profuse, and sometimes cold, sweat on palms.—Heat in palms.—Swelling of veins in arms and hands.—Pale swelling of hands and fingers.—Cramp-like contraction of hands and fingers, with pain, as if tendons were too short, principally during the shiverings, or after midnight.—Hot and painful swelling of thumb, which becomes an abscess at the joint.—Redness and burning itching in fingers, as with chilblains.

23. Lower Limbs.—Pimples, with gnawing itching on buttocks.—Shootings, wrenching pain, and jerking in coxo-femoral joint.—Sharp and shooting pains in thighs, with torpor and paralytic weakness, < by movement and touch.—Pain in

thighs as if broken.—Miliaria, with burning itching, and furunculi on thighs and knees.—Coldness or sweating of thighs at night.—Great heaviness, tottering, weakness, and tottering of legs, with yielding of knees, and inability to walk or stand alone.—A child falls easily when walking.—Rigidity and tension in hams, as if tendons too short, principally on rising from a seat.—Sensation of dryness in knee-joint, with cracking on moving it.—Painful swelling of knee, with gouty nodosities.—Tendency of (lower) legs to become numb and dead.—Paralysis, coldness, and insensibility of legs.—Tensive pain and cramps in calves, < at night, or in evening, or after midnight, or in morning in bed.—Sensation of paralysis of legs, with sensation of a painful stripe down on inside of thigh.—Cramps in feet and toes.—Red swelling of leg, with black, painful spots.—Facility of dislocation of instep.—Swelling in back of feet.—Feet readily become numb (dead).—When he walks he drags the feet; he cannot lift them up.—Contraction of toes.—Burning itching in toes, as from chilblains.

24. Generalities.—Shooting, shaking pains, or jerking, tearing, and drawing pains, with sensation of torpor and of paralytic weakness in parts affected.—Complaints in back small of back; lumbago, rheumatism, &c., where patient cannot turn over something seeming to be in the back which prevents turning over; strong aversion to open air, can't turn over if air is let in under bedclothes, also makes him chilly.—Pains which are felt to be so insupportable that patient would prefer death to the suffering.—Affections in general of knee-joint.—Pains in limbs and joints as if they had been bruised, chiefly while in bed in morning, and during or after movement.—Tension and rigidity, numbness and torpor, heaviness, lassitude, and paralysis of limbs.—Trembling of the limbs.—Palpitation of muscles, or sensation as if something were moving in them.—Immobility of joints.—Cramp-like contractions of several parts.—Spasms which the patient compares to electric shocks.—Feeling of electric shocks after each dose.—Affections in general of anus and rectum.—Attacks of convulsions, cramps, tetanus, and other spasms, sometimes with cries, throwing back of head, trembling of limbs, involuntary evacuation of fćces and emission of urine, vomiting, profuse sweat, thirst, and rattling respiration.—Affections of bladder in general.—Every distressing emotion brings a recurrence of the epileptic fits.—The attacks of chorea are followed by sensation of torpor and numbness in parts affected.—Attacks of uneasiness, principally after dinner, in evening, or at night, and sometimes with nausea, which ascends from pit of stomach, anxiety, weakness, and trembling of limbs, transient heat and paleness of face, tinkling in ears, pains in pit of stomach, tingling in feet and hands, and necessity to lie down.—Affections in general of r. hypochondrium; r. abdominal ring; r. side of sexual organs; r. side generally, *left* side of chest.—R. abdominal ring where there is a protruding hernia.—Fainting fits after least exertion, principally after walking in open air, and sometimes with vertigo, stunning, sparkling, blackness before eyes and ebullition of blood.—Bleeding in inner parts, esp. if the blood be dark.—Great lassitude and fatigue, even in morning on waking, or after getting up, and great exhaustion after shortest walk in open air.—Rapid and general prostration of strength, and great weakness of muscles,

with staggering gait and prostration.—Excitability of whole nervous system, with too great sensitiveness of all the organs, principally those of sight and hearing.—Affections in general of larynx, trachea, gums, inner mouth, palate, gullet, r. side of face, forehead.—Excessive sensitiveness and repugnance to the open air, and to a current of air, with great tendency to take cold.—Heaviness of body, indolence and dread of every movement, with great desire to remain lying down or sitting, positions in which almost all the pains are >.—The sufferings which have appeared during repose in a room are > by walking in the open air, and *vice versâ*.—Coffee, wine, tobacco-smoke, meditation and watching, as well as windy weather, also provoke or < many of the sufferings.—Patient generally feels < on rising in morning or towards 8 or 9 p.m., as well as after dinner, and many sufferings recur regularly at one or other of these periods.—Fainting fits; may faint after every labour pain; or patient may have vomiting spells, and faint away after each attack; in diarrhśa may faint after every stool.—Emaciation of body.—<: Waking at 4 a.m.; after midnight; from mental affections; from anger; anger with anxiety; with vehemence; in open air; before breakfast; suppressed catarrh; in cold air; dry weather; while coughing (sometimes shocks are felt in pit of the stomach with every cough); from drinking; in drunkards; after eating (too much); from exertion of mind; from shaking head; also from uncovering it; after intoxication; lying on back; after menstruation; from narcotic medicine; from noise; brandy; coffee; cold food; cold water; wine; involuntary pollutions; pressure of clothes, derangement of the stomach, after stool; before urinating; while walking in open air; in clear, fine weather; in wind; when yawning.—On waking in night.—>: Head symptoms better from having head wrapped up or covered; lying down; lying on side; from loosening garments; in room; from warmth in general or hot things; on getting warm, and on getting warm in bed; in damp and wet weather; after discharging wind; while lying in bed.

25. Skin.—Pale or yellowish colour of skin.—Yellowness, with dislike to food, and syncope.—Jaundice; inflammation of mucous membranes; increased secretions of mucus; scurvy.—Cold and bluish skin during shiverings.—Pricking and burning itching, in morning or evening, when undressing, and also at night.—Sensitiveness and pain as of excoriation over the whole skin, with sensation of numbness in any place that is touched.—Eruptions with burning itching.—Chilblains, with burning itching, bleeding fissures, and swelling of a pale redness.—Furunculi.—Bluish spots, like bruises.—Ulcers with elevated margins of a pale red colour.—Miliary and pimpled eruptions, with burning itching.

26. Sleep.—Goes to sleep late from crowding of thoughts on him.—Goes to sleep late; wakens at 3 a.m. and lies awake till break of day, when he falls into a dull sleep full of dreams, from which it is hard to rouse, and wakens late, feeling tired.—Great disposition to sleep, principally when rising in morning, or after dinner, or early in evening, and often with sleeplessness at night.—Gentle and prolonged sleep in morning, with difficult waking.—Sleep too short, with difficulty in going to sleep again before midnight, and inability to remain in bed after three

o'clock in morning (feels pretty well at that time, lies awake two or three hours, feels miserably, bad taste in the mouth, &c.—Great flow of ideas in bed in evening, which often drive away sleep till morning.—The morning sleep < all complaints.—Much yawning and sleepiness during day.—Yawning in general; yawning with stretching of limbs.—Sleeps mostly lying on the back.—Loud snoring respiration during sleep.—Comatose state, with heavy and profound sleep during day.—Light nocturnal sleep, with frequent waking, or like a kind of coma vigil, with reveries full of troubles and agitation, and a sort of weariness as if the night were too long.—Sleeplessness from flatus.—During sleep: frequent starts with fright, groans, lamentations, much talking, weeping; delirium, with an impulsive desire to run away from the bed, stertorous or whistling respiration, the patient lying on his back, with the arms raised over the head.—Continual, fantastic, terrible, and anxious or voluptuous dreams, full of cruelties and horror, or of meditation and cares; dreams of vermin, mutilated bodies, teeth falling out, of the occupations of the day, and of urgent business.—Uneasiness in thighs, anxiety and restlessness, heat and ebullition of blood at night.—On waking in morning pain in limbs, as if they were bruised, great lassitude, with necessity to remain lying down, fits of stretching and of convulsive yawning.—Nightmare.

27. Fever.—Shivering, shuddering, and coldness, principally at night, or in evening after lying down, or in morning, or in open air, or on least movement, even during hot weather, also after drinking, after being angry, and on throwing off bedclothes.—Chilliness and coldness, which cannot be relieved by external heat.—After chill sleeps till hot stage sets in.—General internal heat.—Heat precedes chill.—Heat of single parts while others are chilly.—Heat ascending from throat.—Intermittent fever.—Chill in evening; then one hour's sleep, which is followed by heat, with headache, tingling in ears and nausea.—Coldness, shiverings, and partial shudderings, principally in the back and extremities.—Congestive intermittent fevers, with vertigo, anguish, chills, delirium, accompanied by vivid visions and distension of stomach; with stitches in sides and abdomen.—Intermittent fever characterised by a sense of paralysis at beginning of fever.—During shiverings, skin, hands and feet, face and nails, are cold and bluish; or pain, congestion of blood, and heat in head, with redness and heat of face, or (of one) of the cheeks; thirst for beer; cramp-like contraction of feet and toes; or shootings in side and abdomen, pains in back and loins, pulling in limbs, stretchings, spasmodic yawning, and want to lie down.—Anticipating morning fever; first moderate chilliness, with blue nails without thirst, then thirst and long-lasting violent fever and heat, with stitches in temples followed by light perspiration.—Heat, principally at night or towards morning, or when walking in open air, and sometimes only in head or face, with redness of cheeks, or in feet and hands, with partial coldness or shudderings and shiverings in rest of body.—Heat with aversion to be uncovered, and from it at owe chilliness.—Heat which is < from the least exertion or motion, even in open", air.—During heat, vertigo, headache, shivering on making least movement or becoming in slightest degree uncovered, thirst or repugnance to drink, with dryness of mouth, nausea, vomiting, buzzing in

ears, redness of urine, and pains in chest.—Heat during night, without thirst.—Febrile attacks, esp. morning or evening, or at night, and composed for the most part of shivering, with partial heat (followed by sweat), or of heat, preceded or followed by or mixed with shivering, or heat alternately with shivering, with continued thirst for beer sometimes, however, before the shivering, and after the heat; type, quotidian or tertian.—Compound fevers in general.—Febrile attacks, with congestion and pains in head and gastrico-mucous or bilious sufferings (or with constipation), or with loss of consciousness, great weakness and prostration, even at very commencement of attack.—Pulse full, hard, and frequent, or small, quick, feeble, or intermittent (every fourth or fifth beat intermits).—Profuse sweat, sometimes fetid or acid, or of a mouldy smell; cold and clammy sweat; partial or semi-lateral sweat, principally in head and upper parts of body; nocturnal sweat, principally after midnight or towards the morning; sweat during movement in open air; sweat alternately with shivering or followed by heat and thirst for beer.—Perspiration only on one (r.) side of body, or only on upper part of body.—Cold, clammy perspiration in face.—During the sweats there is sometimes a remission of the pains or soreness of the parts which press the bed in lying down, shuddering or colic when in the least uncovered, inclination to vomit, heat in face and hands, dryness of lips and anterior portion of mouth.

Nyctanthes.

Nyctanthes Arbor-tristis. Sephalika (Sanskrit). Harsinghar (Hindi). (Forests of Central India.) Night-jasmine of India. N. O. Jasminaceæ. Tincture of fresh leaves, collected March to April.

Clinical.—Fevers, bilious; remittent. Rheumatism. Sciatica.

Characteristics.—*Nyctanthes* is a small tree of the jasmine family, having brilliant, highly fragrant flowers, white and yellow, which do not expand till evening and which fall off about sunrise. Thus during the day the tree loses all its brightness, and hence is called "The Sad Tree" (*Arbor tristis*). "Nyctanthes" means "Night-flowering." S. C. Ghose has given an account of the medicinal properties of this plant (*H. W.*, xxxvi. 24). He has used it extensively in cases of bilious and remittent fevers, rheumatism and sciatica, and the constipation of children. It is "bitter, tonic, and expectorant, and a mild purgative." In the fever there is thirst before and during chills, and bitter vomiting at close of chill. Not much sweat. Ghose compares it with *Eupat. perf.* He has made a short proving of it.

SYMPTOMS.

1. Mind.—Anxious and restless.

2. Head.—Headache.

8. Mouth.—Tongue enveloped with a thick, whitish or yellowish pus.

11. Stomach.—Severe burning in stomach, > from cold applications.—Bilious vomiting occurs every time he takes a drink.

12. Abdomen.—Liver tender.—Stitches in liver region, which is very sensitive to touch.

13. Stool.—Profuse bilious stools with nausea; or there may be constipation.

14. Urinary Organs.—Urine high-coloured.

27. Fever.—Insatiable thirst before and during chill and fever.—Bitter vomiting at close of chill.—Constant nausea may or may not be present.—Drinking = vomiting; patient very restless.—Constipation or bilious stools.—Sweat not generally marked.

Nymphća Odorata.

Sweet Water Lily. N. O. Nymphćaceć. Tincture of the root.

Clinical.—Back, pain in. Coryza. Diarrhśa. Throat, sore.

Characteristics.—Hale mentions this emblem of purity and its traditional reputation as a dissipator of venereal desires. There has been only one proving (by Dr. Cowles), and no definite clinical experience. Like *Nuphar*, it has early morning looseness of bowels.

SYMPTOMS.

2. Head.—Head feels very heavy.

5. Nose.—Severe coryza.

9. Throat.—Throat sore as from a cold, frequent desire to swallow with painful deglutition.—Tingling; roughness in throat.

12. Abdomen.—Pain in hypogastrium and back, and a stool 7 a.m.

13. Stool and Anus.—Stools in early morning, 7 a.m.; also 11 a.m.—Thin stool with a little pain and smarting at anus, 1.30 p.m.—Pain in bowels for a few moments at a time, sharp, and passage of foul flatus.—Looseness of bowels with pain.

14. Urinary Organs.—Increased flow of urine.—Some urine passed involuntarily.—Sensation as if urine was not all passed, with feeling of weakness in lumbar region.

15. Male Sexual Organs.—Slight increase of sexual feeling.—Slight excitement.

16. Female Sexual Organs.—(Used as an injection to stop leucorrhśa.)

17. Respiratory Organs.—Some cough in morning.

20. Back.—Pain in back.—Feeling of weakness in lumbar region; with sensation as if urine was not all passed.

23. Lower Limbs.—Weakness and pain in bones and lower limbs.

24. Generalities.—Dull, weak, and unfit for work.

26. Sleep.—Lascivious dreams.

27. Fever.—Chilly feeling.

Ocimum Canum.

Ocimum canum. O. incanescens (Mart.). O. fluminense (Wells) Alfavaca (Portuguese). N. O. Labiatæ. Tincture of fresh leaves.

Clinical.—Albuminuria. Breasts, painful. Bubo. *Calculus, renal, passage of*. Diarrhœa. Gravel. Kidneys, diseases of. Renal colic. Urine, abnormal. Vagina, prolapse of.

Characteristics.—*Ocim. can*. is one of the remedies we owe to Mure, who tells us that it is used in Brazil "as a specific for diseases of the kidneys, bladder, and urethra." He gives a short list of nineteen symptoms (apparently partly clinical and partly pathogenetic) which stamp him as a true observer. His indications have been confirmed many times. "Renal colic, with violent vomiting every fifteen minutes; one wrings one's hands and moans and cries all the time. Red urine with brick-dust sediment after the attack." The urine may be "saffron colour" or "thick, purulent, with an intolerable smell of musk." In two cases published by myself (*J. B. H. S*., January, 1896; *H. W*., xxxi. 178) the following symptoms were removed: (*1*) Man, 27, every three or four weeks, seized with violent pains of a dull leaden character in right side of abdomen; commencing in morning, lasting twelve to fifteen hours. For four hours from commencement of attack the pain steadily increased, culminating in vomiting, first of sour fluid, then slime, lastly of a fluid like coffee. After the vomiting some relief of pain. Urine contained no sediment. The attacks had lasted seven years. At first they began in the evening. There was a history of epilepsy in the family, and as a child the patient had had three fits. *Ocim. can*. 200, one dose, was given, and there were no more attacks for about two years. On their recurrence *Ocim. can*. failed to control them; but *Diosc*. Ø (given by a doctor in U.S.A.) succeeded. (*2*) Lady, 24, severe pain right flank shooting round to back. Frequent micturition; urine sometimes depositing clots. *Tereb*. 3 gave some relief, but it was not permanent. *Ocim. can*. 200, a few globules in water, a teaspoonful every two days, rapidly relieved the symptoms and cleared up that part of the case, and there has been no return to the present date. P. C. Majumdar (*Ind. H. R*., vi. 11) relates (*1*) the case of a medical man, 45. Majumdar was sent for at 4 a.m. one morning, and found the patient in great agony; pain in upper part of region of right kidney, extending downwards and forwards to pubes. Constant vomiting, bilious, acid, tossing about without any relief. After *Calc. c*. 30, *Lyc., Sep., Sarsa*., and *Berb*. had been given in vain, *Ocim. can*. 3x gave immediate relief, and no other remedy was required. (*2*) Man, 50, excruciating pain in left kidney, for which he had received *Opium* under allopathic treatment without relief. Majumdar saw the patient on the sixth day of the attack The suffering was extreme, vomiting of bile, constant nausea, bowels constipated. *Ocim. can*. 3x, one drop every three

hours, speedily gave relief, and two days later two small uric acid calculi were passed. No recurrence (*Ibid*., ix. 126). Majumdar adds that *Ocim. can*. is the sacred *Toolsi* of India, and that the Kabirajes use it in diseases of the liver and bilious remittent fevers. All the members of the *Ocimum* genus are aromatic. The Sweet or Common Basil. *O. basilicum*, is one of the best known. The vaginal prolapse, excessive sensitiveness of the breasts and pain on nursing, are important symptoms. *Concomitant symptoms* are: Vomiting; cries; tossing about and wringing hands.

Relations.—*Followed well by:* Diosc. *Compare:* Labiatæ. In renal colic, Dios., Calc., Berb., Lyc., Coloc. In painful breasts, Borax (empty feeling; Ocim. can. compressive), Crotal., Phelland. Prolapsed vagina, Staph.

SYMPTOMS.

12. Abdomen.—Swelling of the inguinal glands.

13. Stool.—Diarrhœa, several attacks a day.

14. Urinary Organs.—Turbid urine, depositing a white and albuminous sediment.—Urine of a saffron colour.—Red (bloody) urine with brickdust sediment after the attack.—Thick, purulent urine, with an intolerable smell of musk.—Burning during micturition.—Crampy pain in the kidneys.—Renal colic (r. and also l.) with violent vomiting every fifteen minutes; she twists about, wrings her hands, screams and groans.

15. Male Sexual Organs.—Heat, swelling, and excessive sensibility of the l. testicle.

16. Female Sexual Organs.—Lancinations in the labia majora.—Swelling of the whole vulva.—Falling of the vagina, so as to issue even from the vulva.—Itching at the breasts.—Engorgement of the mammary glands.—The tips of the breasts are very painful; the least contact extorts a cry.—Compressive pain in the breast, as is the case with wet-nurses.

23. Lower Limbs.—Numbness of r. thigh for two days.

24. Generalities.—It is employed in bath for rheumatism.

25. Skin.—Acts as an irritant.

26. Sleep.—Dreams about being poisoned.—Dreams about her parents, friends, children.

27. Fever.—Is sudorific.—Used in bilious remittent fevers.

Śnanthe Crocata.

Śnanthe crocata. Hemlock Drop-wort. (Marshy places.) N. O. Umbelliferć. Tincture of fresh root, at time of flowering.

Clinical.—Albuminuria. Apoplexy. Breast, pain in. Convulsions. Cough. Diaphragm, spasm of. *Epilepsy*. Hystero-epilepsy. Śsophagus, inflammation of; stricture, of. Priapism. Puerperal convulsions. Sciatica. Speech, lost. Status epilepticus. Stomatitis. *Tetanus*. Tongue, swollen; ulcerated.

Characteristics.—*Śnanthe crocata* is one of the most poisonous of the Umbelliferć, and many accidents have happened from the use of the root in mistake for parsnips, and of the leaves in salads and soups. These have furnished the symptoms of the pathogenesis. Some of them are given in *C. D. P.* A man, 40, when fasting, ate the root. He soon complained of great heat in throat; half an hour after became speechless, fell down unconscious, and was seized with terrible convulsions, which lasted three-quarters of an hour and ended in death. It was impossible to give medicine on account of the jaws being closed by trismus the whole time. Post-mortem examination of those who have died of this poisoning reveal—(*1*) Extreme postmortem rigidity. (*2*) Hands strongly clenched with thumb applied forcibly to palm. (*3*) Purple surface; nails blue. (*4*) Black fluid blood effused under scalp; veins of pia mater distended; brain substance strongly injected; sinuses distended; escape of blood beneath pia mater covering both hemispheres. (*5*) Sheath of spinal cord strongly congested. (*6*) Respiratory mucous membranes deep red, covered with frothy mucus; lungs dull, blackish with extravasations. (*7*) Heart contained black fluid blood. (*8*) Alimentary mucous membrane injected, with points of extravasation. Two striking cases are reported in *Brit. Med. Jour*., March 3, 1900 (*H. W*., xxxv. 277), which illustrate the epileptic suddenness of the drug's action: (*1*) J. M., without any previous warning, fell down in a fit in the dining-hall as he was finishing dinner. The fit was regarded as epileptic. He regained consciousness soon after. Whilst being removed from the dining-hall to the ward he had a second severe fit with vomiting; face livid, pupils dilated and fixed; conjunctivć insensible; bloody foam about mouth and nostrils; breathing stertorous; complete insensibility. Six severe fits followed with an interval of a few seconds between. The convulsion was clonic and general, but attained its greatest intensity in lower limbs first; next upper limbs; lastly in face. Death took place from asphyxia, the heart continuing to beat a few seconds after respiration ceased. (*2*) T. F. was seized with a severe fit when going out to resume work on the farm after dinner. He vomited a quantity of food, and emesis was kept up by giving *Ipecacuanha wine*, followed by copious draughts of tepid water. There was no unconsciousness, but a marked mental change *after the convulsions*;

the patient was delirious and talked incessantly to himself; drowsy and averse to be questioned. Face pale, pupils dilated, pulse weak and slow. Two hours later he recovered, and told how J. M. had given him a piece of "carrot" of which J. M. had himself eaten. T. F. took two bites of it and threw the rest away. The sudden falling and the subsequent *status epilepticus* are well depicted in these two cases. In homśopathic practice it has been given with much success in cases of epilepsy. With the 3x I once gave great temporary relief in a case of idiopathic tetanus, which, however, terminated fatally. The cases of epilepsy in which it is particularly indicated are those in which there is during the fit: vomiting; tympanitis; or semi-priapism. Epilepsy arising from disorders of the sexual sphere. Dr. McLellan, of New jersey, tells me of a case of his in which a young woman, 19, of a very healthy family, who had never menstruated, had become almost idiotic in consequence, and at the periods when the menses should have come on there were epileptiform seizures of minor intensity. The state of mind was such that, after taking the best advice in Paris and the States without avail, the patient was about to be put away. *Śn. c*. was given, and the next period passed without any epileptic symptoms. But there was no sign of the flow. *Bell*. was now given, and at the next period the flow came on, and the patient's mind was entirely restored. J. S. Garrison (*S. J. of H*., xiv. 135) reports a case of hystero-epilepsy. Mrs. T., 32, commenced to menstruate at sixteen. At first there was no pain, but later there was. Married at twenty-three, she had two children, one eighteen months after marriage, and the other seventeen months after the first. About the fourth month of the first pregnancy she began to be troubled with weight and pressure in pelvis and groins so that she could hardly walk. This lasted till the confinement. At the sixth month she had the first convulsion, and she had two others between that and the confinement. During the afternoon of the last three days before confinement she had a sensation as if she had been struck on the side of the head, and she fell, but without loss of consciousness. Severe headache followed. She had no more convulsions till after the baby died at five months, when she had one. But three months later she became pregnant again and convulsions recommenced, continuing at irregular intervals till confinement, when they ceased till she began to move about. They then recurred at intervals, varying from six weeks to six months, and when they did come there were always three or four very close-together. The mental condition grew worse all the time. The fits came suddenly without premonition; except that at first she had a slight feeling of dread, and occasionally could see herself as dead. The attacks varied from momentary unconsciousness to epileptiform seizures with dulness and sleepiness for varying times. At first they came in the night; later in the day, sometimes two in one day. They usually began with the menses. The uterus was much enlarged and the parts greatly relaxed. The urine had a very low specific gravity. *Śn. c*. 2x was given, five drops four times a day, on November 16, 1894. On December 12th there was a severe attack, apparently induced by errors of diet, a week after appearance of menses. The medicine was continued for ten months with constant improvement in health, and with no further convulsions. J. S. Cooper (*H. R*., xi. 354) relates the case of a

clergyman in attendance on one of the Federal generals at Gettysburg, who was wounded in the forehead by a fragment of shell, taken prisoner, and kept in prison twenty months. On his release he was quite a wreck, and soon began to have light epileptic seizures, which gradually got worse, and when seen by J. S. Cooper, twenty-five years later, he was having four or five fits a day, could not write his name, and at times would take to his heels and run four or five miles into the country before he could be caught. *Śn. c*. 4, five drops every four hours, was prescribed. After the first dose he had a very bad fit. The dose was diminished. He began to improve, and in less than a year was in perfect health. *Śn. c*. was not taken continuously, but when he "felt nervous" he would take a few doses. F. H. Fish (*H. R*., vii. 80) cured a girl, 16, sanguine, well grown, who at eight began to have fits of absent-mindedness at irregular intervals. At twelve menstruation commenced; at fourteen epileptic seizures, having no relation to the menstrual periods. The fits were so severe that sixty to one hundred grains of *Potassium bromide* was required to keep them under control. *Śn. c*. Ř, five drops in six ounces of water: a teaspoonful every three hours, and later less often. She had not another spasm, and lost her absent-mindedness and became cheerful and active. W. K. Fowler (*Amer. Hom*., quoted *H. W.,* xxxv. 212) reports this case: A teamster, 60, nineteen years before got into a fight, had three ribs broken, and was struck in stomach with butt of gun. Two weeks later had pneumonia on the injured side, and after that epileptic seizures. Before the attacks: pain in stomach going through to spine; pain in second cervical vertebra. Attacks induced by worry and by becoming very tired. Severe attacks after day's work was finished. *Śn. c*. on discs, four discs every three hours for a month. After this there was only one slight attack after a hard day's work during the four months he was under observation. W. B. Carpenter relates (*Med. Cent*., quoted *H. W*., xxxv. 369) the case of F. M., 29, of good family history, who had meningitis at age of three, and had some unusual trouble after vaccination. In 1894 (aged 23) had a severe accidental blow with a sledge hammer on frontal bone immediately over nose. In 1896 had his first convulsive attack, coming on during sleep, and only noticed by his wife; a shuddering and stiffening of the body, turning of the head, grinding teeth and groaning. In the morning patient noticed a dull, heavy feeling of the head, and sensation as if whole body weighted down. For two years the attacks occurred only at night, and were known to the patient by these feelings next day. The attacks increased in severity, and now began to come in the day, and were preceded by an aura like the sound of distant bells, then a buzzing as of bees, increasing in intensity till he fell unconscious, this condition lasting from ten to sixty minutes. For months the patient had this strange symptom: On looking upward a filmy shower of black rods and rings seemed to come from above and disappear on reaching the level of his eyes. Fits recurred at intervals of one to four weeks. Bromides were then given, and there were no fits for seven months, when they no longer controlled, and he consulted Carpenter, who noted these additional symptoms: Twitching of individual muscles during attack, with frothy mucus before mouth; dulness in head, haziness before eyes: burning dryness in throat; obstinate constipation; chilly feelings over body; languor and heaviness

of mind and body. *Śn. c*. 4x and 6x made a complete change in a few months, brightening the mind, energising the body, and stopping the seizures for several months. Among *peculiar symptoms* are: Cold as if dead during convulsions; noise in throat as if being choked. Burning. Burning heat. Numbness. Legs stretched straight out. Swallowing = soreness of throat. Pressure < pain in throat; > deep pain in thorax. All symptoms < from water (in three women poisoned by it).

Relations.—*Compare:* Phelland., Cicut. v., Con. In epilepsy, Bufo. In priapism, Pic. ac.

Causation.—Injuries.

SYMPTOMS.

1. Mind.—Furious delirium, as if drunk; insanity; hallucinations.—Sudden and complete loss of consciousness.—Delirium like delirium tremens; constantly moved from place to place, talked without cessation and without knowing what they said; grasped at imaginary objects.—Epileptic insanity; sudden furious attack.—(Epileptic condition at periods when menses are due in amenorrhśa.).—Averse to be questioned.—Coma after convulsions.

2. Head.—Vertigo: with falling; with nausea, vomiting, syncope, and convulsions.—Suddenly falls down backward.—Headache and giddiness.—Apoplectic conditions; speechless; insensible; face puffed and livid; pupils dilated; respiration laborious; limbs contracted; trismus.—Pain all over, but esp. in head.—Momentary sensation of pungent heat determining to head.—Hyperćmia of brain; extravasation and serous exudation.—Violent pain in head.—Hair fell off.

3. Eyes.—Eyes: much sunk; full and projecting; inflamed.—Pupils first contracted, then dilated.—Eyes turned upward and inward; and firmly fixed.—Eyes red.—Saw nothing on awaking.—Vision disturbed; obscured.

5. Nose.—Bleeding from the nose.

6. Face.—Rapid, convulsive twitching of muscles of the face.—Face: livid and turgid, pale and cold; ghastly; anxious.—Risus sardonicus.—Lips blue.—Bloody froth issuing from mouth and nostrils.—Trismus; jaws rigidly closed.—Rose-coloured spots on face.

8. Mouth.—Convulsive movement of teeth.—Tongue half bitten through.—Tongue: sore and swollen; and protruded; slightly furred; raw at tip; ulcerated at edges; clean, moist, trembling.—Foaming at mouth; bloody mucus.—Excoriation; inflammation; blisters.—Mouth dry and parched.—Loss of speech.

9. Throat.—Pressure on throat gives pain; it is sore when he swallows.—Violent constriction and burning in the throat.—Pharyngitis.—Śsophagitis.—Power of swallowing lost.

10. Appetite.—Total loss of appetite, with debility.—Thirst; craves cold drinks, evening.—Cannot bear to drink anything hot.

11. Stomach.—Constant and continued eructations, strongly flavoured by the plant.—Distressing hiccough.—Cardialgia.—Nausea and vomiting.—Nausea, > if vomiting occurs.—Vomited in their fits.—Vomiting and diarrhśa.—Vomit: clear watery liquid; blood.—Obstinate vomiting, continued for days, not > by anything.—Heat; biting heat; burning in stomach and epigastrium.—Tenderness at stomach.—Burning heat at throat and stomach with disturbed intellect.

12. Abdomen.—Much distended, with colic pains.—Griping and tormina.—Gastro-enteritis with violent pain and vomiting.—Tympanites with the convulsions.—Great tenderness; slightest touch on any part of abdomen = great pain.

13. Stool.—Stool: involuntary; diarrhśa.

14. Urinary Organs.—Micturition painful.—Urine copious; dark; turbid; reddish.—Sediment: copious; white; thick yellow.

15. Male Sexual Organs.—Semi-priapism.

17. Respiratory Organs.—Convulsive respiration; breathing laboured, hurried, stertorous, short; interrupted by constant sighing and convulsive cough; hardly perceptible.—Spasm of diaphragm.—Burning and constriction in larynx.—Cough for four or five days, < at night, excited by tickling at top of throat; during cough rattling in lower chest; sputa thick, heavy, white and yellow, adheres to vessel, a little frothy, copious; aching pain in l. side of thorax, < from deep inspiration, > from deep pressure.—Expectoration: reddish; bloody; white; frothy.

18. Chest.—Lungs hyperćmic; hepatised in spots.—Pleuritic exudation.—Chest firmly fixed.—Pain in r. side under the ribs.—Pain in breast.

19. Heart and Pulse.—Pain in region of heart.—Pulse: small, feeble, irregular, scarcely perceptible; accelerated before the fit.

20. Neck and Back.—Pain along spinal column.—Intense action of dorsal and lumbar muscles; opisthotonos.

21. Limbs.—Numbness and feebleness of limbs.—Loss of nails and hair.

22. Upper Limbs.—Arms flexed at elbow in a right angle.—Rapid convulsive twitchings of muscles of hands.—Hands clenched during tetanus.—Irritation of arms and hands with sharp lancinating pains.—Neck bluish.

23. Lower Limbs.—Pain along tract of sciatic and crural nerves, commencing in spinal column.—Cramps in calves.—Legs stretched straight out.

24. Generalities.—Epileptiform convulsions.—Terrible convulsions, followed by coma or deep sleep.—Convulsions, with vertigo, madness, nausea, vomiting, unconsciousness, risus sardonicus, eyeballs turned up, pupils dilated.—Sudden convulsions, trismus, biting of tongue; followed by total unconsciousness.—Convulsions with swollen, livid face; bloody froth from mouth and nostrils; convulsive respirations; insensibility; feeble pulse; prostration.—All symptoms < from water.

25. Skin.—Rose-coloured rash on face, chest, arms, and abdomen.

26. Sleep.—Drowsy.—Roused with difficulty.—In a deep sleep, snoring loudly and moaning.

27. Fever.—Deadly cold and pale.—Face and extremities cold and blue.—Extreme coldness; loss of animal heat.—Burning heat that mounted to head.—Slight fever with pain at pit of stomach.—Profuse sweat; offensive; accompanied all symptoms.

Śnothera.

Śnothera biennis. Large Evening Primrose. Tree Primrose. (North America.)
N. O. Onagraceć. Tincture of fresh plant.

Clinical.—Cholera infantum. Diarrhśa. Hydrocephaloid.

Characteristics.—There is a proving recorded by T. Riker Nute on a woman who took on two occasions—(*1*) a teaspoonful, (*2*) 30 drops of the liquid extract for the relief of a wearisome feeling of mental and physical oppression, and on each occasion, notably the first, distinct poisoning symptoms were developed. A kind of general paralysis of mental and bodily forces was induced, and at the same time copious and easy evacuations of bowels and bladder, followed by relief of the general symptoms. It is in *effortless diarrhśa* that *Śnoth*. has been most successfully used in homśopathic practice. Farrington gives the indications: Exhausting, watery diarrhśa without effort; with nervous exhaustion; even incipient hydrocephaloid. Hurd (*H. R*., x. 419) cured a man, 65, who had "severe pains in his stomach after meals for over two years" with 25-drop doses of the

tincture. General numbness; general warm sweat with urgent desire to micturate; > after evacuation of bowels and bladder, are noteworthy symptoms.

Relations.—*Compare:* In diarrhśa, Ipec., Gnaphal, Nuphar. In > from copious urination, Ign., Gels. In > after stool, Bry., Colch., Colo., Crot., Oxyt., Rhus, Spi., Sul. Paralytic symptoms, Gels.

SYMPTOMS.

1. Mind.—Half-unconscious; unable to think, raise head, move or speak.

2. Head.—Light-headed.—Violent vertigo with swimming sensation.—Dizziness with weakness of limbs and fluttering about heart, > by free action of bowels and copious discharge of urine.

3. Eyes.—Unable to raise eyelids.

12. Abdomen.—Cramps in muscles of extremities and abdomen, with a wringing, twisting pain beneath umbilicus.

13. Stool and Anus.—Pressing desire to evacuate bowels, and a copious, consistent, and apparently natural stool promptly evacuated, without least pain or muscular effort; three hours later another, and still another about midnight.

14. Urinary Organs.—With the appearance of a warm perspiration over entire surface came an urgent desire to micturate; passed without effort a large quantity of light-coloured, bland, unirritating urine; an hour later again passed water freely; and again 9 p.m., and after midnight.

21. Limbs.—Cramps in muscles of extremities.—Weakness of extremities.

24. Generalities.—Violent vertigo preventing movement; numbness and prickling of entire surface, nearly driving her mad; severe rigors and cramps; desire to be covered, rubbed, and have a warm drink.—Dizziness with weakness in limbs, fluttering about heart, with numbness and prickling on skin, griping under umbilicus, all passes off with free action of bowels and copious discharge of urine.

25. Skin.—Numbness and prickling of entire surface.

27. Fever.—Rigors.—Warm sweat on entire surface with urgent desire to micturate.

Oleander.

Nerium Oleander. Rose Laurel. (South Europe, North Africa, West Asia. Thrives best in moist ground.) N. O. Apocynaceæ. Tincture of the leaves.

Clinical.—Brain, affections of. *Eczema*. Fainting. Headache. Hyperæsthesia. *Lienteria*. Memory, weakened. Numbness. Nursing women, affections of. Palpitation. Paralysis. *Perichondritis*. Rheumatism. *Scalp, eruption on*. Spasms. Spine, affections of. Strabismus. Tongue, coated; parched. Vertigo.

Characteristics.—*Oleander*, which is one of the remedies proved by Hahnemann, has been recognised as a powerful poison from antiquity. In the Cape de Verde Islands the petals of *Olean*. blossoms are used with dried orange-peel in all kinds of fevers to promote perspiration and drive out the rash. In animals poisoned by it, the heart becomes paralysed, first the auricles, then the entire heart. Goullon (*H. R*., xii. 402) refers to poisoning cases in which "anguish, inflammation of the stomach, diarrhœa, swoons," and even death had occurred. "Palpitation of the heart, anxiety, insomnia, and unconsciousness," were observed by Petrus de Alvano, and Morgagni noted "vomiting, thirst, slumbering, speechlessness, and death." Goullon also quotes instances of suffering from exhalations of the flowers, and even from the plants when not in flower. A young man, 18, fell sick, had attacks of vertigo, suffered from great weakness of the muscles, headache > in evening, < every morning after waking, which was a difficult process. In addition: pale face; white-coated tongue; slow pulse. On leaving for change of air he soon got quite well; but ill again as soon as he returned. Some oleanders in his bedroom were then suspected by his doctor, and on their removal all the trouble vanished. The doctor then recalled that when a student he had some oleanders before his windows, and in autumn, when the nights were cold, be took them into his bedroom, with this result: On waking in the morning heavy head and sensation of weariness, could only leave his bed by great exertion. As soon as he put his foot to the ground was seized with vertigo and reeled. Having traced this to the oleanders, he purposely repeated the experiment, and always with the same result. Hahnemann says of *Olean*.: "It will be found to be, if not a complete remedy, yet an indispensable intermediate remedy in some kinds of mental derangements, *e.g*., absence of mind, and in certain kinds of painless paralysis, in eruptions on the head, and in some external head affections." Experience has confirmed the truth of these remarks, and more especially of the latter part of them. *Olean*. is in the front rank of remedies affecting the scalp, more particularly the back part of the scalp or commencing there. "Desquamation of the epidermis of the scalp;" "violent gnawing itching on the scalp, as from lice; after scratching, a smarting as if scratched raw" are symptoms which have been repeatedly verified by cures, and I have confirmed Cooper's experience in one very bad case, in a schoolboy, that a single dose of the Ø may give the best possible result in such cases. The condition was: Head very sore and irritable; covered with crusts; sore to touch. Glands in neck swollen and

sore to touch. *Olean*. Ø two drops in a powder at bedtime on November 14th. On November 27th an aggravation was reported, and the eruption had spread from the head to the back. From this time rapid improvement set in.—The skin generally of *Olean*. is very sensitive and easily chafed and chapped, and this occurring concomitantly with other *Olean*. conditions (for example, gastro-enteritis), forms a strong indication. The paralytic symptoms of *Olean*. are in constant evidence. Involuntary evacuation of fæces and urine. The digestion is paralysed, and the food passes completely undigested. Infants soil their diapers every time they pass flatus. Momentary loss of sight. *Peculiar sensations*, suggestive of paralysis, are: Buzzing and humming sensations in the body. Numb or painless paralysed feeling as if inner parts were distended. Pulsations in outer parts. Gnawing itching; biting or pungent pain after scratching. Numbness of skin, or itching numbness. *Olean*. corresponds to "trembling after nursing" in nursing women; to weak memory and slow perception; to functional paralysis. The headaches are mostly pressive and stupefying. Pressure as if a hundredweight were pressing brain forward, and as if everything would come out at forehead. A curious feature in connection with some of the headaches is that they are > by looking cross-eyed; or by looking sideways. This is a clinical observation well verified. There is also cloudiness of vision, < by looking sideways. Eyes distorted. *Olean*. should cure some cases of strabismus. The left side is most affected; violent contraction of muscles, < left side. Numbness of upper and lower extremities has been frequently confirmed. A case of poisoning is recorded (*H. W*., xxxiii. 9, from *Amer. Hom*.) in which a boy of four put a broken *Oleander* leaf into his mouth, but quickly spat it out. In a few minutes the tongue became red and raw where the leaf had touched it. The patch, one inch by one half inch, involving the side and part of dorsum of tongue, appeared denuded, and this appearance remained a year later. Ten months after the occurrence, general roughness of the skin had developed, with a papulo-pustular eruption on ankles and calves. The symptoms are < (after first >) by scratching; by rubbing. < In open air; by draught of air. Getting out of bed > toothache. There is thirst for cold water. Motion > stiffness of thighs. Mastication < toothache and headache. Looking down < (vertigo, &c.). Looking sideways < dim vision; > headache. Squinting > headache. Rising up < headache; vertigo. Stooping pain over heart.

Relations.—*Antidoted by:* Camph. (acute effects); Sul. (chronic effects). *Compatible:* Con., Lyc., Nat. m., Pul., Rhus, Sep., Spi. *Compare:* In irritability, Staph., Hyo., Nux. In fits of passion followed by quick repentance, Croc. Affections of nursing women, Carb. an. In lienteria, Fer. (Fer. has no pain, stool apt to occur *during* a meal), Ars. (Ars. has diarrhœa from chilling stomach; indigestion of cold things; stool yellow, with stool great pain, burning, < after midnight, great thirst), Arg. n. (bowels act as soon as patient drinks), Chi. (watery stool containing undigested food; very debilitating; stools may escape involuntarily after a meal; caused or < by eating fruits), Apis, Pho., and Pho. ac. (wide-open anus). In crusta lactea, Mez., Sul., Viol. t., Vinca min., Melitag. Gone feeling, Sep. (Olean. has with it sense of distension in abdomen, chest feels empty and cold).

SYMPTOMS.

1. Mind.—Sadness, and want of self-confidence.—Repugnance to labour and great indolence.—Irascibility, moroseness, and ill-humour.—Temper which can bear no contradiction.—Fits of passion, followed by speedy repentance.—Weakness of memory.—Slowness of perception.—Great abstraction and inattention.—Confusion when reading; difficulty of grasping the connection when reading a long sentence.—Loss of memory.—Giddiness.—Dulness of intellect, with difficult conception.—Poetical reveries concerning the future.—Immediately walked five yards and fell senseless (after an ounce of expressed juice).

2. Head.—Turning vertigo, with tottering of limbs.—Vertigo on rising after lying down, or on looking downwards, when rising.—Vertigo when rising from bed, or if looking fixedly at any object, or when looking down while standing.—When standing erect, dizzy with double vision on looking down, not on looking straight before him.—Vertigo with turning, darkness, and scintillations before eyes.—Vertigo when in bed if he turns to either side.—Headache with stupefaction, as if brain were tightened; as if a dull nail forced into head over mastoid process.—Painful heaviness in head, > by lying down.—Headache < reading and holding up head, > lying down, < again with nausea on rising.—Violent pressive pains in temples, at one time higher up, at another lower down, while chewing.—Dull pressure in head (from within out), as if forehead were about to split.—Painful and pulsative beating in head.—Headache > by looking cross-eyed; by looking sideways.—Boring in brain.—Aching of exterior of head.—Gnawing itching in scalp, with soreness after scratching.—Biting itching on scalp, as from vermin, principally on back of head and behind ears; > when first scratching it, which is followed by burning and soreness, which gives place to burning-itching; < in evening when undressing.—Furfuraceous or humid scabs on head (< on back of head), with itching, esp. at night, and burning after scratching.—Desquamation of scalp.

3. Eyes.—Eyes: sunk in sockets; distorted; turned up; fixed; stony; lustreless.—Lids involuntarily drawn together, as if sleepy.—Pain in eyes, as if fatigued from too much reading.—Aching in eyes.—Burning pains and tension in eyelids, esp. when reading.—Lachrymation.—Double vision.—Cloudiness of eyes when looking sideways.—Momentary loss of sight; blue colour about the eyes.

4. Ears.—Acute aching in ears.—Cramp-like drawing in ear.—Singing, tinkling, and rumbling in ears.—Red and rough tettery spots in fore part of ear, with fetid running (ulcers) behind (and around) ears.

5. Nose.—Stupefying and dull pressure in nose.—Itching round nose.

6. Face.—Face pale and wan (sunken in the morning), with blue circles round the eyes.—Dull and stupefying pressure in the bones of the face, and esp. in the

zygomatic process, extending deeply into the head.—Heat of cheeks without redness, and *vice versâ*.—Paleness, alternately with deep redness, of face.—Red swelling of face, round eyes.—Tuberculous eruption on face and forehead.—Lips brownish and dry.—Sensation of numbness and swelling in upper lip.—Swelling round commissures of lips.—Lower jaw trembles with yawning.—Stiffness of muscles of jaws.

7. Teeth.—Toothache (only) during mastication, with incisive pressure.—Tearing and drawing in teeth (molar; l. upper second bicuspid), sometimes at night, but only in bed (with anxiety, nausea, and frequent micturition), and which disappear on getting up.—Sensation of looseness in teeth, with gums of a bluish white.

8. Mouth.—Dryness of mouth, and tongue loaded with a white coating.—Rough, foul, white tongue, with raised papillæ.—Tongue red and raw where touched with *Oleander* leaf; the patch involved the side and part of upper surface, and was still present a year after.—Loss of speech.

9. Throat.—Burning pain in throat.—Numb sensation ascending from throat externally to head.—Sensation as if a cool wind were blowing on l. side of throat.—Sharp pressive pain on l. side of throat, near Adam's apple.—Irritation of pharynx.—Pain as of a dull point pressing on œsophagus (r. side); cervical muscles also painful to external pressure.

10. Appetite.—All food has a mawkish (flat) and insipid taste (in evening).—Clammy taste in mouth.—Bulimy, with tremor of hands, from eager craving for food, often with absence of appetite.—Violent empty eructations, while eating.—Thirst, esp. for cold water.—Dizziness while eating greedily at noon.—Empty goneness after eating, > by brandy.

11. Stomach.—Risings of a putrid smell.—Violent, empty risings, sometimes after a meal.—Nausea, with inclination to vomit, accumulation of saliva in mouth, followed by violent hunger.—Sickness and prostration follow the dose; feels queer all next day (cure followed.—R. T. C.).—Vomiting of food, or of bitter serum, of a yellowish-green colour.—After vomiting ravenous hunger and thirst, with great weakness over whole body.—Sensation of emptiness in stomach, with fulness of abdomen.—Beatings and pulsations in epigastrium, as from being over-heated.—Beating and pulsation in pit of stomach as if the beats of the heart were felt through whole thorax.

12. Abdomen.—Pinchings in the abdomen, as if caused by diarrhœa.—Shootings and gnawings in the abdomen.—Stitches and gnawing about the navel.—Sensation of emptiness and weakness in the intestines.—Gurgling and borborygmi in the abdomen, with excessive emission of flatus of a putrid smell.

13. Stool and Anus.—Ineffectual want to evacuate.—Liquid, soft, yellow fæces.—First diarrhœa, then hard, difficult stools; during pregnancy.—Evacuation of the food which he had taken on the previous day.—Evacuation, almost involuntary, of undigested matter; imagines he is only emitting flatulence.—Chronic diarrhœa; undigested food, < in morning.—Burning pain in anus before and after evacuation, and at other times.—Involuntary stools; in children when passing flatus (every time they pass wind they soil the diaper).

14. Urinary Organs.—Increased secretion of urine.—Brownish, burning urine, with whitish sediment.—Frequent emission of urine, esp. after partaking of coffee.—Nausea and frequent micturition at night when lying down, with anxiety and drawing in molar teeth.

16. Female Sexual Organs.—After nursing, tremors; so weak she can scarcely walk across the room.

17. Respiratory Organs.—Short, shaking cough, provoked by a tickling in pharynx.—Violent shaking cough from tickling in larynx.—Accumulation of viscid mucus in trachea.

18. Chest.—Oppression of chest when lying down, with deep and slow respiration.—Weak respiration.—Oppressive and compressive pain, or sensation of emptiness in chest.—Dull or tensive lancinations in chest, in sternum, and sides (l.), esp. on taking a full inspiration (and expiration).—Sensation of coldness in chest.—Stitches in diaphragm.

19. Heart and Pulse.—Drawings about heart, < by stooping, and lasting during expiration.—Violent and sometimes anxious palpitation of heart, with a sensation as if chest were dilating.—Pulse very changeable and irregular; weak and slow in morning, full and rapid in evening.—(A principal heart remedy.—R. T. C.).

20. Neck and Back.—Violent pulsation of the carotids.—Tearing in nape in bed in evening.—Pain in back as from a strain.—Tensive, burning, and acute lancinations in back.

21. Limbs.—Severe cramps in limbs.—Numbness of upper and lower limbs.

22. Upper Limbs.—Wrenching pain in arms on lifting them.—Jerking in muscles of arms.—Cramp-like drawings and tearing in arms and fingers.—Dull aching in forearms, hands, and fingers, as if caused by a blow or a bruise.—Veins of hands swollen.—Swelling and rigidity of fingers, with burning pain.—Fingers rigid and thumbs turned into palms.

23. Lower Limbs.—Contusive pain in buttocks.—Sensation of weakness in thighs, legs, feet, and soles, as if those parts were benumbed.—Great weakness of

knees.—Dull aching, and sometimes shooting in thighs, feet, and toes.—Paralysis of legs and feet; painless.—L. knee that had stiffened becomes supple (in a case of general paralysis of insane.—R. T. C.).—Sensation of vibration and resonance in legs and feet, esp. in soles.—Cramp-like drawing in legs and feet.—Cramps in calves when seated.—Constant coldness of feet.

24. Generalities.—Cramp-like tension, as if the bones were broken, in limbs and other parts of the body.—Cramping of entire body gradually creeping on (cured.—R. T. C.).—Convulsive spasms with clammy and cold skin; pulse scarcely perceptible.—Great weakness, which scarcely permits walking.—Sensation as if inner parts were distended; pulsations in outer parts.—Fainting as from weakness, > by perspiration.—Buzzing or humming in body.—Sensation of vibration and resonance in whole body.—Tension in whole body.—Paralytic rigidity of limbs and painless paralysis.—(One of the best remedies for paralysis.—H. N. G.).—Want of animal heat in limbs.—Syncope, as from weakness, sometimes with loss of consciousness, which disappears after perspiring.—Weakness and general lassitude, with trembling of knees when lying down, and of hands when writing.—Languor, as if life were about to terminate.—Inclination to stretch the limbs.—Torpor and insensibility of whole body.—Symptoms generally on l. side; l. ear; affections of scalp.

25. Skin.—Violent itching of various parts of body; eruption, bleeding, oozing out of fluid, forming scabs.—Dropsy of outer parts.—Chapping of skin; want of perspiration.—Numbness of skin, or itching numbness.—Gnawing itching, which compels scratching, sometimes when undressing.—Skin very sensitive, with redness and excoriation, even when gently scratched.

26. Sleep.—Frequent yawning, with shuddering and jerking of muscles.—Want to lie down, with a sort of coma.—Very difficult waking in the morning; can only leave his bed by great exertion.—Sleeplessness and agitation at night.—Agitated and lascivious dreams, and frequent waking.—Voluptuous dreams with seminal emissions.

27. Fever.—Frequent fits of quick shuddering.—Sensation of heat, with general shivering.—Transient heat, esp. during intellectual labour.—Flushes of heat periodically, esp. from bodily or mental exertion.—Pulse frequent and full, or irregular and variable.—Chilliness and chills over the whole body periodically, with heat of face and coldness of hands.—External chilliness with internal heat without thirst.—Want of vital heat.—Febrile chilliness over whole body, without thirst or subsequent heat.—Cold, clammy sweat.

Oleum Animale.

Oleum animale æthereum. Oleum cornu cervi. Dippel's Oil. Bone-naphtha. Dilutions in alcohol.

Clinical.—Asthma. Breasts, affections of. *Cancer*. Constipation. Coryza. Facial paralysis. Gonorrhœa. Migraine. Polyuria. Prostate, affections of. Spermatic cord, neuralgia of. Testes, neuralgia in; retraction of.

Characteristics.—*Ol. an*. is an empyreumatic oil obtained in the preparation of bone-black, and further distilled and rectified for medicinal use. It was discovered in 1711 by Johann Conrad Dippel, the alchemist, and discoverer of Prussian-blue. Dippel obtained it in the first instance by distillation of stags' horns: hence the name *Oleum cornu cervi*, with which *the Ol. an*. as at present prepared is considered identical; the deciduous horns of the stag partaking more of the nature of bone than the permanent horns of cattle. As rectified it is "a colourless or slightly yellow, thin, oily liquid, with a penetrating but not disagreeable odour and an acrid, burning taste, which changes to a cool and bitter one. It darkens and thickens on exposure to air and light, and is extremely volatile. A drop on paper evaporates without leaving a greasy stain." Its composition is extremely complex, but it may be regarded as belonging to the group of volatile carbons. Sircar (*Calc. J. of Med*., xvi. 249) gives an interesting account of *Ol. an*., and quotes from *Hahn. Adv*. of April, 1897, a valuable paper on the remedy by C. L. Olds with a discussion thereon. Though it is not the panacea which Dippel imagined it to be when he discovered it, *Ol. an*. is a very powerful medicinal substance, and since it has been well proved by Nenning, Schreter, and Trinks, it has a definite place in the homœopathic materia medica. As is usually the case with combustive products, *Ol. an*. has burning pains and burning sensations in almost all parts, and like the carbons and *K. carb*. it has also stitches and sometimes combinations of the two, "stitches as with red-hot needles." Stitches and pressure may be in all directions, but from behind forward is particularly characteristic. "Stitches from behind forward in breasts; pressure from both sides of the back extends forward." Guided by the former I gave great relief in a case of scirrhus of right breast in which pains darting forward out of the nipple were complained of. "Pulled upward" is another characteristic sensation. It occurs in the malar bones: "Sensation in both malar bones as if pulled forcibly upward." And it also occurs in the testicles. "Both testicles are drawn up and very painful." This led to the cure of a "long-standing neuralgia of spermatic cord; excruciating attacks three or four times every year; pains as if testicles were seized by a hand and pulled very severely." *Ol. an*. 18 gave almost instant and permanent relief (Blakely Raue's *Rec*., 1870, p. 241). The cure of a case of migraine is quoted in *H. M*., July, 1895. Zwingenberg, after failing with *Sang*., gave *Ol. an*. 2x, five drops in warm water, morning and evening, to a lady who always suffered from migraine the day after a fashionable party, at which she usually wore a heavy diadem on her head.

Polyuria of perfectly clear urine accompanied the migraine and suggested the remedy. This accompaniment may indicate *Ol. an*. in any nervous disorder. Zwingenberg also cured a case of nervous asthma following repelled foot-sweat. In the discussion on Olds' paper some cures were mentioned. Dever cured toothache in an extremely irritable patient, pain > by *pressing the teeth together*. The provings have "stitches in right upper molar *removed by pressure*, after dinner." Dr. Leggett related one case: A very stout Dutch lady, 56 (who had been under constitutional treatment for uterine tumour, engorged liver and cerebral congestion), presented the following symptoms: Sensation as if water rushing back and forth in stomach; fancied the tumour had increased to size it was years ago. She had been walking, standing, and shopping, and had eaten many sweets. Of the remedies having "stomach as if full of water," *Ol. an*. was chosen as more similar to the case than *Mill*. or *Phell*., and was given in 1m attenuation, a single dose. A month later she was better in every way, and a second dose brought still further improvement. This case in connection with my case of breast tumour still further shows the relationship of *Ol. an*. to new growths. Olds in his paper brings out the *striking and peculiar* symptoms of the remedy very clearly. Olds speaks of a proving by himself, but he gives no details of it. Some symptoms mentioned by him I cannot find in Allen or Hering. These I have entered in the Schema and give his authority for each. The Conditions of *Ol. an*. give the most characteristic general features: > from rubbing; < from eating. < In warm room. > In open air. These are general, but there are exceptions. Among the *Peculiar Symptoms* mentioned by Olds are: Twitching of lips and swelling beneath right lower jaw. Malar bone feels as if pulled forcibly upward. Greasy feeling in mouth and accumulation of quantities of saliva white as snow. Relaxation of buccal mucous membrane, patient cannot avoid biting cheek when he eats. Soreness of tongue as if scalded. Sensation as of white of egg dried on lips. Sensation as if cold air penetrated throat although the air is warm; > eating and drinking, < empty swallowing. Desire for soft-boiled eggs or for bread only with aversion to meat. Sensation as if water were in stomach; as if a lump of ice there. Eructations taste like urine, and burn. Sensation as if testicles were seized and pulled forcibly upward. Menses too early and too scanty. Cracking in vertebræ of neck on raising head. Sensation in scalp as if skin had been cut and reunited. Other sensations are: As if blood were rushing to head; to occiput on entering a warm room. As if red-hot needles in chest. As if thumb (and toe) would ulcerate. Cramp-like pains in different parts. Indolence and inclined to sit; taciturn; ill-tempered. Winans (*Med. Adv*., xix. 503) gave *Ol. an*. with success in a case of bilious fever, the patient being a rather fleshy old lady. The indicating symptoms were: Slow pulse (55). Desire for soft-boiled eggs. Itching of left lower eyelid. Sad mood; morose; nothing delights her. Absorbed in self, sad, speaks little. *Sepia* was required to complete the case, one of the new symptoms being yellowness of palms of hands. The left side is predominantly affected; when direction is noted it is from before backward and from behind upward. > By rubbing is very characteristic. > By stretching. > By pressure. *Ol. an*. is a chilly medicine, but the chilliness (and also

coryza) are < in a warm room and > in open air. Tearing in all fingers is > by washing in cold water. Drinking cold water = pressure in stomach. < From hot drinks. Motion > some rheumatic pains. Raising head = cracking of vertebræ. < Eating (sweat; lachrymation; headache). Especially < after dinner. > Swallowing food or drink, < empty swallowing (throat). < By motion; by mental exertion. > Changing position. Sneezing = bursting pain in chest. The majority of symptoms are < in afternoon; also 2 p.m. < Before, during and commencement of menses. < By noise (noises in the head).

Relations.—*Antidoted by:* Camph., Nux, Op. *Follows well:* Bry. *Is followed well by:* Sep. *Compare:* In headache with concomitant polyuria, Ign., Gels. Twitching eyelids, Agar. Gastric symptoms after drinking cold water, Ars., Pho., Carb. v. Pains in testicles, Puls. < By noise (Graph. > by noise). > By rubbing, Pho., Nat. c., Carb. ac., Canth. Coryza < in open air, Cepa. Numb head, Graph. Cracking in nape on moving head, Nicc. Dried white of egg sensation, Alum., Bar. c., Mg. c., Ph. ac., Sul. ac. > Eating and drinking, < empty swallowing, Lach. Eructations taste like urine (Ag. cast., smell like old urine). Sad, despondent, Puls. (unlike Puls., bad tempered). Slow pulse, Apocy. Headache from behind forward; scalding sensation on tongue, Sang. Chilly, Nux, Cyc., K. ca. (but these are < in open air). Burning during micturition, Caust., Naph. Coryza, Naph. Stitches, K. ca., Carb. an. Gnawing in occiput, Glo., Na. sul. Desires bread (Nat. m., aversion to bread). Movements in abdomen, Crocus. Suppressed foot-sweat, Sil., Sul. < From hot drinks (Lyc. >). Cracking in joints, Benz. ac.

Causation.—Suppressed foot-sweat.

SYMPTOMS.

1. Mind.—Sadness, concentration in self.—Taciturn and thoughtful.—Distraction, and frequent absence of mind.—Loss of ideas (frequent vanishing of thought).

2. Head.—Head confused, with cloudiness, as if stunned.—Pressure on vertex, shifting to occiput.—Dizziness and vertigo, when stooping.—Painful dizziness, early in morning in bed.—Painful sensation of reeling and giddiness, in open air, when stooping.—Numb and paralytic sensation in (l.) side of head.—Aching in head, principally in forehead, sometimes from least intellectual exertion.—Drawing and tearing in head, as after a chill.—Violent boring, and shootings in head, esp. just above eyes (in l. frontal protuberance).—Congestion, with heat and beating in head.—Pressure extending from occiput forward, an hour after dinner.—Semilateral headache, and beating at base of brain and extending to eye on corresponding side; < by motion; by exertion; after eating; > by rubbing (Olds).—Pain in l. occiput, obliging him to hold his head forward.—Dull pressure in small spot on occiput (l.).—Gnawing pain in occipital region (less on l. side).—Boring in small spot l. occiput.—Stitching in occiput.—Tension on scalp with soreness as if skin had been cut and reunited.—Sensation as if blood were rushing to occiput, on entering a

room.—Tearing in outside of head, with tension and sensation of excoriation.—Itching, and burning shooting pain in scalp.

3. Eyes.—Pain in eyes as if a grain of sand had been introduced into them.—Pressure and drawing in balls of eyes.—Itching, smarting and shooting in eyes, which disappear on rubbing them.—Burning pain in eyes, esp. (in the open air or on waking or) by candlelight in evening.—Lachrymation, and nocturnal agglutination.—Lachrymation when she eats (Olds).—Quivering and starting in eyelids, and eyebrows.—Frequent twitching in l. upper lid.—Confused sight (esp. in the afternoon when writing).—Myopia.—Dark clouds before eyes.—Sensation as if a skin were hanging down over eyes (Olds).—Sight and hearing vanish for a moment.

4. Ears.—Shooting in ears.—Sticking in ears.—Boring and tearing in ears (with dryness of throat).—Singing, tinkling, and buzzing in ears, < by noise.

5. Nose.—Itching burning at tip of nose.—Tickling and tingling itching in nose.—Excoriation of interior of nose.—Burning and running pimples on septum of nose.—Drawing pressing pain at root of nose when in house, nose and head feel stopped; out of doors constant dripping with > to head (Olds).—Sneezing, with painful sensation of bursting, and of excoriation in chest.—Dryness of nose.—Coryza, with thick mucus in nose, which occasions painful tension.—Violent dry coryza.—It seemed as though he had an offensive breath.

6. Face.—Pale, earthy complexion.—Tingling in face.—Burning pains in cheeks, and zygomatic process.—Redness of the cheeks, even when the skin is cold.—Itching pimples and vesicles on the cheeks.—Tension, and cramp-like, and paralytic drawing in face, sometimes semi-lateral (l.).—Paralysed sensation in r. half of face.—The malar bones feel as if pulled forcibly upward.—Itching of the lips.—Sensation as of dried white of egg on lips (Olds).—Lips cracked.—Jerking of lips, in morning, when sleeping.—Cramp in jaw, which scarcely permits mouth to be opened.—Violent cracking in l. articulation of jaw always on opening mouth.—Swelling beneath lower jaw.

7. Teeth.—Odontalgia, with drawing and tearing pain, often commencing from ear.—Jerking tearing, and pulsation, in root of a carious tooth, with sensation of coldness coming out of tips of teeth.—Stitches in r. upper molar, removed by pressure, after dinner.

8. Mouth.—Dryness with sour taste in mouth.—Dryness of mouth (and throat) on waking in morning.—Greasy feeling in mouth and on palate.—Abundant accumulation of snow-white saliva in mouth.—Relaxation of buccal mucous membrane; almost impossible for patient to prevent biting cheeks when eating (Olds).—Tongue sore as if scalded.—Burning on tongue posteriorly as from tobacco.—Smarting, and burning sensation in tongue.

9. Throat.—Pain in throat, as if a hard body were introduced into it, esp. during deglutition.—Choking and constriction of throat, particularly in morning and evening.—Dryness of throat, esp. perceptible during empty deglutition.—Retching, constriction, dryness and scraping in throat.—Throat dry with sour taste in mouth.—Throat very dry in morning with sensation as if cold air penetrated, which she was constantly obliged to swallow; swallowing difficult, though food and drink passed easily through pharynx and œsophagus.—Burning pain in throat.—Accumulation of viscid mucus in throat.—Hawking of tenacious mucus after a meal.

10. Appetite.—Fat and clammy taste.—Sourness in mouth.—Want of appetite.—Aversion to meat, and to all food, except bread.—Desire for soft-boiled eggs.

11. Stomach.—Risings, with taste of the food, or of urine.—Empty and burning risings.—Frequent empty eructations, > the nausea and the urging to vomit.—Disgust and nausea, with inclination to vomit, esp. during and after a meal, or with pressure on chest.—Sudden inclination to vomit; stomach seems to turn over; after eructating twice, it disappears.—Stomach very sensitive to external pressure.—Sensation as if stomach were fun of water.—Aching in stomach and præcordial region, sometimes after drinking cold water.—Stinging in the stomach.—Constriction of the stomach.—Sensation, as if something were turning in stomach; as if stomach turned quite over.—Contusive pain in region of stomach.—Sensation of icy coldness, or of burning heat, in stomach.—Burning and heat from stomach to chest.

12. Abdomen.—Dull shootings, and pressure in hepatic region, and spleen (with every breath).—Fulness and distension of abdomen, with painful sensitiveness to least movement of body.—Cramp-like pain in abdomen, in circumscribed places.—Pinchings in abdomen, and esp. after eating or drinking anything hot.—Incisive pains in abdomen, esp. in umbilical region, sometimes With diarrhœa.—Contractive pains in abdomen, extending as far as stomach, with nausea.—Digging and cuttings throughout abdomen.—Drawing in region of the groins, extending into testes.—Accumulation of flatus, with gurgling and movement in abdomen.—Shifting of flatulence in abdomen with rumbling.—Frequent expulsion of fetid flatus.

13. Stool and Anus.—Constipation.—Hard, scanty, difficult stools, which are not passed without straining.—Difficult stool even when natural.—Soft, frequent evacuations.—Diarrhœa, with cuttings, before, during, and after an evacuation.—Burning and stinging in anus and rectum.—After a stool, pain, as from a bruise in abdomen, or burning pain and aching in anus.

14. Urinary Organs.—Frequent and urgent want to urinate, with tenesmus and scanty emission.—Pressure on bladder.—Small stream of urine.—Pale, and more

abundant, urine, which speedily deposits a cloudy sediment.—Greenish urine.—Turbid urine, with clay-like sediment.—Burning pain when making water.—Itching in urethra.

15. Male Sexual Organs.—Drawing shootings and incisive pains in penis.—Burning stinging about root of penis (afternoon).—Drawing pains in testes.—Swelling and retraction of testes, with painful sensitiveness to the touch.—Pressing in prostate gland.—Nocturnal erections and pollutions.

16. Female Sexual Organs.—Catamenia premature, with scanty discharge of black blood, (preceded and) accompanied by incisive pains in abdomen and loins, lancinating pains in head, and lassitude in hands and feet.—Leucorrhœa, with serous and clear mucus.

17. Respiratory Organs.—Hoarseness and roughness in throat.—Hoarseness with inability to talk loud.—Roughness in throat, inducing dry, hacking cough.—Cramp-like contraction in trachea, esp. at night.—Small dry cough, generally in single shocks, with tickling in throat.

18. Chest.—Obstructed respiration, when lying on back, as if pharynx were compressed; disappearing on a change of position.—Oppression of the chest, when going up stairs, or a hill, from distension of the abdomen.—Contusive pain in the chest.—Aching and shootings in the chest.—Incisive pains in chest.—Rushes of blood to chest with dry heat of face.—Anxious ebullition with sensation of heat, and burning in chest, accompanied by a sensation of heat which seems to rise from abdomen.—Violent stitch in upper part of chest, near sternum, as with a red-hot needle; the breast continued to burn for a long time; at 2 p.m.—Violent, sharp stitch in chest by r. axilla.—Stitches in clavicles.—A very long stitch beneath l. mamma.—A sharp stitch in mamma, extending forward, while standing.—Some dull stitches beneath l. mamma, that disappear on rubbing, but return; stitches on r. ring and middle finger at same time.—A pain almost like a shaking beneath and behind l. mamma, disappearing, after rubbing, followed by warmth over whole body.—Tearing in r. mamma.

19. Heart.—Aching, and pain as of a bruise in heart.—Pressure and crushing sensation about heart.

20. Neck and Back.—Painful sensitiveness, rigidity and tension in the nape of the neck and back.—Cracking in joints of nape on raising head.—Tearing in muscles of r. side of neck whence it extends into r. malar bone, together with tearing in two r. upper molars.—Sensation as if a warm breath extended up the nape with an agreeable feeling.—Drawing and stiffness in r. cervical muscles, not < by motion but < by touch.—Pressure extending forward from both sides of the back.—Fine sticking in back behind l. mamma.—Sudden sticking in region of r. false ribs near spine; spot sensitive to touch.—Burning tearing and stitches above l.

scapula.—Throbbing and pressure at times very violent in sacrum.—Wrenching pain in loins, esp. when stooping and when seated.

21. Limbs.—Lameness of the l. lower limb and l. arm.

22. Upper Limbs.—Drawing and tearing in the arms, hands, and fingers.—Drawing and digging in r. thumb as if it would ulcerate.—Shootings in arms and hands.—Tingling in fingers.—Numbness of fingers.

23. Lower Limbs.—Cramp-like drawing and tension in thighs and hams, as if the tendons were too short.—Drawing and tearing in thighs, legs, feet and toes.—Shootings in the knees and feet.—Tingling in the limbs.—Great weakness of the legs.—Stiffness of the legs when walking.—Sticking in the sole.—Tingling at one spot in middle of sole, in evening.—Cramp in toes.—Tearing in big toe, which is painful as if ulcerated, particularly near nail.

24. Generalities.—Cramp-like drawings in different parts.—Drawing and tearing in limbs.—Tingling in different parts.—Tension in some of the limbs, as if tendons too short.—Rigidity, and paralytic weakness in limbs, with dejection and trembling.—Languor with indolence; inclination to sit.—Fainting.—Unsteady gait.

25. Skin.—Violent general itching, and sometimes smarting or burning in different parts of skin.—Vesicles, resembling scabious pimples.—Excoriation in bends of joints.

26. Sleep.—Urgent inclination to sleep during day, with yawning and frequent stretching, esp. after dinner.—Prolonged sleep in morning.—Retarded sleep in evening.—Frequent or premature waking in morning, without power to go to sleep again.—Very light sleep, disturbed by least noise.

27. Fever.—Shivering, shuddering, and coldness, frequently accompanied by heat in other parts, or alternating with heat.—Coldness after a walk in open air.—Coldness of whole l. lower limb.—Shuddering from vertex to chest.—Shuddering: in the house; after entering the house; by a stove; entering a warm room from the open air.—Icy coldness creeps up back.—Increase of natural heat, esp. after walking in open air.—Dry heat, in evening.—Dry, pricking heat, particularly in face.—Transient heat, often with sweat in head, chest, and hands.—Transient fits of sweating, esp. during repose.—Perspiration during a meal.

Oleum Jecoris Aselli.

Oleum jecoris Morrhuæ. Cod-liver oil. Oil obtained from the livers of Gadus morrhua and some other allied fishes. N. O. Gadidæ. Tincture. Trituration.

Clinical.—Addison's disease. Alopecia. Amenorrhœa. Anæmia. Asthma. Bones, affections of. Bright's disease. Cold abscess. Constipation. Coryza. Cough. Diarrhœa. Dwarfishness. Emaciation. Fever. Fistula. Goître. Hair, abnormal growth of. Headache. Heart, palpitation of. Intermittent fever. Joints, stiffness of; fistulæ and abscess around. Liver, diseases of. Lumbago. Phthisis. Pneumonia. Rheumatism. Ringworm. Sacralgia. Sciatica. Scrofulous ophthalmia. Sleeplessness. Spinal irritation. Vision, affections of.

Characteristics.—The number of people who "cannot take cod-liver oil" is very great; which means that *Ol. j. a*. is a pathogenetic as well as a curative agent. Neidhard proved it and elicited some very definite symptoms, and to these have been added effects, curative and pathogenetic, observed on patients. The oil contains a large number of proximate principles of great complexity, to which its specific medicinal properties are due. Recent developments of sarcopathy mark out *Ol. j. a*. as a liver remedy, an ally of *Cholesterine*, and this the provings confirm. Very decided pains in the liver and liver region with great soreness were noted in Neidhard's provings, and these symptoms give one of the keynotes of the remedy—*Soreness*. Not only the liver, but the throat, chest, abdomen, kidneys, ovaries, joints, and back are all sore; the spine is sore as in spinal irritation. Another keynote is the occurrence of palpitation of the heart as a concomitant of other symptoms; with cough; with short breath. Allied to this is a "sense of fluttering, like the movements of a watch, commencing in region of sacrum, gradually rising to occiput, and in its ascent affecting abdomen and chest, so that the patient is transfixed, unable to move hand or foot;" also "creeping sensation all over with a rush of blood to heart." The reputation of *Ol. j. a*. as a remedy for phthisis and scrofulous affections is shown by the provings to be specific, whatever food-value the oil may possess in addition. "Dry, hacking cough night-cough; cough with tough expectoration, yellow or white soreness of chest, especially on coughing; sharp stitches here and there, through chest; burning through to back; burning in spots," are among the symptoms experienced. The fever symptoms are strongly marked, both hectic and intermittent. One very characteristic feature is: "Fever < towards evening *with burning in palms*." Chills running down the back. Feet constantly cold. *Ol. j. a*. is a chilly medicine: sensitive to draughts; feels as if continually taking cold. The cough is < from exposure to cold; < in damp weather. The sensitiveness to chill and damp is part of the intermittent fever action of the remedy, and along with it is affection of the spleen, which is the seat of several symptoms. During the chill and before it there is thirst. When the fever came on the cough was >. The *yellowness* of *Ol. j. a*. appears not only in the expectoration, but in the coating of the tongue, yellow mucus from sore throat, and a yellow Leucorrhœa. On the female sexual organs *Ol. j. a*. has a powerful action, increasing the menstrual flow and restoring it when in abeyance. Burnett has shown that ringworm generally has its constitutional basis in a consumptive habit, and *Bacil*. has again and again proved the remedy. This is paralleled in a local use of the anti-phthisic *Ol. j. a*. which was taught me by De Noë Walker. In recent ringworm the application of the plain oil at bedtime is at once the most innocent

and most effectual of local measures that I know. Before the application the part should be washed well with soft soap. Another use of the remedy taught me by the same authority is as a general application in the case of emaciated, dwarfish, chilly babies and children. A nightly rubbing with the oil soon revolutionises their condition. The nutrition of the skin is improved and the medicinal properties of the oil are absorbed without any tax being put on the organs of digestion. Burnett says olive oil acts as well. That may be, but it does not act better. I have no comparative figures to refer to. When the symptoms indicate *Ol. j. a*. it should certainly have the preference. Defective nutrition; anæmia; weakness and emaciation; deficiency of animal heat. Children who cannot take milk. The headaches are usually frontal; over right eye; bursting after coughing. Other symptoms are: Red face (also in hectic). Voracious appetite. Foul breath. Symptoms go in all directions—from above down; from below up; from front to back; and from back to front. One curious symptom was abnormal growth of hair on the face of a woman. Another was passage of mucus from urethra, with burning, during stool. Symptoms are < by touch; by riding; by a fall. < By motion; raising arm; stooping; bending side inwards; walking. Laughing < cough. Lying down = oppressed feeling; and < cough. Coughing = soreness of chest; headache. Fever > cough. < From draught of air; exposure to cold; living in cold, damp localities.

Relations.—*Antidoted by:* Iris v. (chill with sick stomach and diarrhœa). *Compare:* Cholest., Fel., and sarcodes generally. In phthisis, ringworm; emaciation, Bac., Pho. Emaciation and ravenous appetite, Iod. Intolerance of milk, Æthus., Calc., Lac v., Mag. c. Pains in head with cough, Caps., Bry., Nat. m. Chilly; effects of damp localities, Nat. sul., Aran. Heavy eyelids, Gels., Op.

SYMPTOMS.

1. Mind.—Feels miserable all over, with great nervous irritation.—Sensation as if out of her mind.

2. Head.—Giddiness in head.—Dull aching pain in forehead.—Steady aching sensation from l. to r. temple.—Aching about inner part of r. eyebrow as if in periosteum.—Bursting headache after coughing as if head would split.—Pain from occiput to forehead with nausea.

3. Eyes.—Eyes swelled.—Heaviness over eyes with dry and parched hands.—Aching pain in r. eye when using it.—Lachrymation when walking in open air (< l.).—Lids so heavy, can hardly raise them.—During chill, blindness.—Everything turns black.

4. Ears.—Deafness in l. ear, abscess in r.—Fetid discharge from ears.

5. Nose.—Dry coryza, cough and sneezing.—Fluent coryza, hoarseness and rawness of chest.—Chronic catarrh and ozæna.—Nose-bleed when sleeping, with amenorrhœa.

6. Face.—Face red.—A growth of short, thick hair on chin and upper lip (in a woman).

8. Mouth.—(Putrid smell from decayed tooth ceased whilst taking the oil.).—Tongue: loaded; coated yellow.—Parched feeling in mouth.—(Fetid breath cured.)

9. Throat.—Soreness in throat after hawking up phlegm.—Chronic sore throat, with expectoration of yellow mucus.—Tickling in throat; weakness in breath.—Thyroid gland swollen.

11. Stomach.—Voracious appetite diminished (in rickety children).—Appetite lost; could not take milk.—Thirst: great; constant; before and during chill.—Nausea.—Vomiting; of bile and mucus with bitter and acid taste at expiration of chill.—Acid vomiting with the chill.—Burning in stomach.—Weight in stomach.

12. Abdomen.—Soreness and heaviness in region of liver < by exercise; sore like a boil on pressure.—Heavy pain in r. side with numbness of r. arm as if dead.—Beating pain in spleen.—Aching in spleen region on breathing and coughing, with pain at apex of scapula (at end of chill).—Jerking, drawing pains in region of spleen.—Flatulence relieved.—(Atrophia mesenterica).

13. Stool and Anus.—Diarrhœa: at night and early morning; with the chill.—Constipation.

14. Urinary Organs.—Soreness in kidneys, following soreness in liver.—Discharge of mucus from urethra with burning, every morning during stool.—Acceleration of urinary secretion.—Urine with bricky sediment.—(Incontinence cured).

16. Female Sexual Organs.—Acts as emmenagogue.—Menses reestablished (cure).—Increase of menstrual flow so strong as to render a suspension of the oil necessary.—Soreness of both ovaries; dysmenorrhœa.—Leucorrhœa: yellow; with weak back.

17. Respiratory Organs.—Cough: all night; hard spells in morning; hacking; tickling in middle of upper chest with palpitation; violent with retching, night and day; with stitches, on raising arm; < from draughts of air; < lying down at night, prevents sleeping; loose all day; from exposure to cold, damp weather; with emaciation and weakness; > when fever comes on.—Expectoration: yellow or

yellowish-green, saltish, tough; tough white; white; bloody mucus.—Breath short, with palpitation of heart; asthmatic.

18. Chest.—Oppression, with heat.—Weakness in chest and back (< l.).—Soreness: all over chest or in centre with hacking cough and aching between shoulders, < r. side; in chest and stomach with cough; < by motion.—Burning pains in spots in some one portion of chest.—Burning and heat in l. chest; through to back, with cough.—Pains in upper chest on coughing.—Pneumonia of both upper lobes of lungs.—Pain through lower chest to back.—Pain r. side above and below scapula; breathing there is arrested by soreness; sharp stitch l. side.—Sensation of excoriation in l. chest; < upper and lower part of l. chest, extending to back.—Weakness in breast; tickling in the throat.—(Phthisis.)

19. Heart.—Palpitation of heart; with cough; with short breath.—Rush of blood to heart, with a creeping sensation all over body.—Sudden stitch in heart.—Pulse accelerated, soft, and small.

20. Neck and Back.—Soreness from back to neck.—Pain through back.—Sharp, heavy aching pain in lower spine.—Spinal irritation, sore to touch.—Fluttering from sacrum to occiput.—Weakness and dull aching in sacral region, > by pressure.—Often placed hand on sacrum to support it; often complained of pain in region of sacro-iliac joint; walking increasingly difficult.

21. Limbs.—Continual aching and sore pain in elbow and knee-joints.—Movements in joints were limited; esp. elbows and knees; flexion and extension caused excruciating suffering.

22. Upper Limbs.—Rheumatic pains in shoulders.—Hands dry and parched with pain in spleen.—Pain in bones of l. arm.

23. Lower Limbs.—Abscess appeared on l. gluteus maximus near anus, and discharged three times; afterwards another boil r. side of chest.—Hip-joint disease; esp. when originating in bone (rather than in synovial membrane).—Sciatica with atrophy of affected limb.—White swelling of knee.—Rheumatic pain in l. foot.—Fistulæ and abscesses round joints.—Soreness of both feet.—Feet constantly cold.

24. Generalities.—Atrophy.—(Emaciated person gains weight.).—Creeping sensation all over body with rush of blood to heart.—Soreness all round body to back.—Fluttering (like a watch) rising from sacrum to occiput, affecting abdomen and chest in such a way that she becomes transfixed, unable to move hand or foot, and arresting movement if in motion at time of seizure.—Stitches and bearing down in one or other sides; < bending side inward.—Contraction of muscles: musculo-fibrous rheumatism.

25. Skin.—Skin red all over, at night in bed, with irritability, > in morning.—An eruption of small red spots, like psora, appeared, and from that time she made rapid progress.—Eruptions: papular; vesicular; herpetic.—(Scrofulous ulcers discharging a large quantity of pus; cold abscesses.—Lupus.—Ichthyosis.)

26. Sleep.—Less sleepy than usual.—Sleepless after 3 a.m.—Dreams of seeing objects in the room during sleep.

27. Fever.—Constantly chilly; feels as if constantly taking cold.—Chills from occiput down back and round abdomen.—Chill: 3 a.m.; in evening; with some vomiting and purging for six hours; with spasmodic pain in region of navel (returned every evening for four days, relieved by Iris v.).—Chilly on going to bed; afterwards heat, < in hot room; burning face.—Flushes of heat; face red, stomach hot, heat to tips of toes.—Heat in palms; every night.—Fever and excitement every night producing wakefulness.—Tertian intermittent.—Fever followed by violent sweat, esp. of head, neck, and arms.—Sweat: every night; with smell of the oil; only on lower limbs.—Cold perspiration all day.

Ricinus.

Ricinus communis. Palma Christi. N. O. Euphorbiaceæ. Tincture (made with *hot* alcohol and water) or trituration of fresh seeds. Tincture of fresh plant.

Clinical.—Albuminuria. Aphthæ. Cholera. Cholera infantum. Diarrhœa. Duodenum, catarrh of. Dysentery. Eruptions. Gangrene. Gastro-enteritis. Jaundice. Lactation. Peritonitis.

Characteristics.—The castor-oil plant is a native of India. In the tropics it is a small tree growing to the height of eight or ten feet. Under the name of Palma Christi it is cultivated as an annual in this country, its stems reaching from three to five feet. The oil of medicine is obtained from the seeds. The blandest which is in common use is "cold drawn," *i.e.*, expressed without the aid of heat, and contains the smallest amount of the acrid principle. A decoction of the seeds, which is used in the East and West Indies, contains a much larger proportion. The homœopathic preparation should be made in such a way as to secure the full properties. The leaves have an especially powerful action on the breasts and female generative organs. Hale made the first collection of the pathogenetic effects of *Ric.*, and pointed out its analogy to cholera, which Salzer (*On Cholera*) confirmed. Cases of poisoning, some of them fatal, have been recorded from the ordinary oil, but the greater number of the pathogenetic effects have resulted from eating the seeds. Fatal effects have followed eating three seeds, and one seed has caused violent effects. After twenty seeds gastro-enteritis and death preceded by general

convulsions and collapse occurred. The most detailed case is that of a sergeant who ate seventeen seeds (two years old) as a purgative. Four hours later he had several loose stools, pyrosis, cramps in the stomach, nausea and vomiting, the vomit containing fragments of seeds and drops of oil. The stools became more-numerous and more copious of serous liquid mixed with mucus, and were passed without tenesmus or colic. Later the diarrhœa was accompanied with cramps and chilliness. Other symptoms were: Pale face; forehead covered with cold sweat, features drawn, eyes convulsed and turned up, conjunctiva injected, copious lachrymation. Intelligence quite clear. Headache, vertigo, buzzing in ears, and *sensation as if a bar were laid over his stomach, with profound anguish*. Burning thirst; pyrosis, vomiting fluid lightly coloured with bile, and containing some glairy filaments. Epigastrium very sensitive, pains *radiate* therefrom to navel and hypochondria, not < or > by light or strong pressure. At the same time he felt a sensation of violent constriction in intestines. Diarrhœa became colliquative, stools like cholera-stools. Complete anuria. Voice veiled. Profound adynamia. Next day severe fever followed. A small quantity of dark, thick urine was passed, and was found to be highly albuminous. On the fourth day *pronounced jaundice* appeared. On the sixth day the urine had ceased to be albuminous, and the patient was discharged. Salzer gives to *Ric*. the same importance in cholera *with diarrhœa* that *Camph*. occupies in relation to *spasmodic* cholera. The stools of *Ric*. correspond exactly to the rice-water stools in cholera, whilst those of *Ver. a*. do not. *Ric*. also has *painless evacuations* which are met with in many cases of cholera. *Ric*. therefore corresponds to the diarrhœic stage of cholera, and also to the collapse stage if vomiting and purging still continue. Salzer quotes B. L. Bhaduri as having observed "rice-water stools, cramps, and suppression of urine brought on by eating the seeds." Hale says that before he had learned to use *Ric*. as a homœopathic remedy he had often been discomfited by seeing aphthous diarrhœa cured with small (half-teaspoonful) doses of castor oil, repeated three or four times a day, by old nurses or impatient mothers. Such-diarrhœa often arises in improperly-fed children. It begins with sickness, frequent and griping evacuations, greenish yellow to dark green, becoming more liquid and more or less mixed with slimy or gelatinous mucus or blood. Each stool is accompanied with pain and tenesmus, mouth dry and aphthous, anus inflamed, belly tumid and painful, child becoming more and more feverish and somnolent. Hale later gave a 1x trituration of the oil with sugar. In acute and chronic dysentery, and in those cases in which there is impaction of fæces, Hale has seen the oil promptly curative. Post-mortem examination in the fatal poisoning cases has shown the gastro-intestinal mucous membrane abraded and inflamed. In one case the whole intestinal membrane was coated with blackish blood and that of the stomach reddened and softened. Hering remarked that puerperal fever had become much less common in Philadelphia (where it used to be very common) since homœopaths interdicted the use of castor oil in confinements. *Ric*. has great power over lactation. O. McWilliams (quoted by Hale) observed in the Cape Verde Islands that the leaves of the plant were applied to the breasts to increase the flow of milk if it were delayed, and even to produce it

in women who had never borne children or who had not suckled for years. In increasing the flow of milk in nursing women the breasts were fomented with a decoction of the leaves of the plant, the boiled leaves being afterwards thinly spread on the breasts. For producing milk in others more vigorous measures were resorted to. The women had to sit over a boiling decoction of the leaves, care being taken to prevent the escape of steam. When the decoction was sufficiently coot the parts were bathed with it, and also the breasts, to which the leaves were applied as in the other case. Women with well-developed breasts are more easily influenced. When the breasts are small and shrivelled this treatment acts more on the uterine system, bringing on the menses long before their time or causing immediate flow if the time is near. Tyler Smith experimented with the leaves. In his cases the application produced: Swelling of the breasts, throbbing and other pains in them; swelling of the axillary glands, with pains running down the arms. *Pains in the back like after-pains were caused in every case*. Leucorrhœa was increased. Soon discharges from the breasts became milky, and menses came on too soon. The radiating pains; bar sensation; constricting and cramping pains are the most peculiar.

Relations.—*Compare:* Croton., Jatr., and Euphorbiaceæ. In cholera, rice-water stools, Agar. ph., Jatr. Bar sensation, Hæmatox. Galactogogues, Agn. c., Asaf., Puls. Duodenal catarrh, Berb., Chi., Hydrs., Lyc., Merc., Pod.

SYMPTOMS.

2. Head.—Vertigo.—He cannot go into open air after a dose of *Castor Oil* as the brain seems exhausted and easily overpowered (R. T. C.).—Headache; severe.—Acts on base of brain (R. T. C.).—Sudden pain as if seized by something in occiput extending round to backs of ears, eyes, and forehead with rush of blood to head and shocks which come and go as from electricity, thirty times in five days (*agg*.—R. T. C.).

3. Eyes.—Eyes convulsed and turned up; conjunctivæ injected, copious lachrymation; pupils only moderately dilated.

4. Ears.—Buzzing and humming in ears.

6. Face.—Features drawn.—Face slightly congested.—Face pale; features strongly contracted.—Twitchings of mouth.

8. Mouth.—Tongue: coated white; and dry; furred.—Salivation.

9. Throat.—Burning pain in gullet accompanied the vomiting.

11. Stomach.—Anorexia.—Thirst, great; burning.—Pyrosis.—Nausea and vomiting persistent; vomited mattery liquid, slightly coloured by a little bile; contains only a

few mucous threads in suspension.—Vomiting profuse; with burning in gullet and all the symptoms of Asiatic cholera.—Vomiting and purging.—Painless vomiting.—Vomits pultaceous substances.—A kind of bar across stomach, which caused profound anguish.—Pit of stomach very sensitive; pains radiate from this centre, shooting to umbilicus and hypochondria.—Cramps; burning, in stomach.

12. Abdomen.—The different segments of the recti muscles can be seen successively and individually contracting under the skin.—Rumbling.—Feels as if all the intestines violently drawn together.—Violent colic; and yellowish-green vomiting.—Cramps with the diarrhœa.—Pain over abdomen < by pressure.

13. Stool and Anus.—Violent purging with the diarrhœa.—Bloody diarrhœa.—Diarrhœa without pain.—Diarrhœa almost incessant, colliquative, like cholera.—Rice-water stools.—Stools serous liquid mixed with mucus.—Diarrhœa incessant, with cramps and chilliness.—Complete confinement of bowels for five days; this made him uncomfortable, and caused headache.

14. Urinary Organs.—Complete anuria.—Passes a little dark, thick, highly albuminous urine (lasted four days).

16. Female Sexual Organs.—Menses too early; excessive.—Leucorrhœa.—Breasts thick, swell, with swelling of axillary glands and pains running down arms.—Thin discharge from breasts becomes milky.—Brings milk in breasts of virgins and women who have not suckled for years.

17. Respiratory Organs.—Voice altered; veiled.

19. Heart.—Pulse: extremely small, scarcely perceptible, though normal in frequency; very frequent.

20. Back.—Pains in back like after-pains.

21. Limbs.—Prurigo on wrists and bends of knees.

23. Lower Limbs.—Gangrene of one foot necessitates amputation.

24. Generalities.—Pale and listless.—Anæmia.—Profound adynamia.—Collapse.—Convulsions.—Muscular contractions.—Very painful cramps in trunk and limbs.

25. Skin.—Pronounced jaundice; skin saffron yellow.—Pruriginous eruptions, or redness and itching, at wrists and bends of knees.

26. Sleep.—Great desire for sleep.

27. Fever.—Chilliness with the diarrhœa.—Perspiring freely.—Skin moist and cool, esp. lower limbs.—Forehead covered with cold sweat.

Oniscus.

Oniscus asellus. O. armadillo. Armadillo officinalis. Sow-bug. Sow-louse. Cellar-worm. N. O. Isopoda (Class Crustacea of the Articulatæ). Tincture of living animals.

Clinical.—Colic. (Epilepsy.) Hæmoptysis. Strangury. Toothache.

Characteristics.—In Germany *Onis*. has a popular reputation as a remedy for epilepsy. Hering proved a tincture, and Wolff recorded the effect of swallowing three "cellar-worms" in a glass of brandy before an attack of fever. This experience has provided the most characteristic symptoms of the remedy, showing it to be related to *Cantharis, Apis*, and their cognates. These symptoms were noted: Pale face, wild expression, constant vomiting. Very severe colic with meteorism and tension of abdomen. Tenesmus of bladder and rectum. Cutting burning in urethra. The symptoms of Hering's proving showed pains in the head, over the eyes, and down the nose. Constriction of gullet and stomach. Burning in anus. Many erections with disinclination to work. Hawking up of blood-streaked mucus. The last two symptoms again recall *Canth*. Frequent yawning and desire to stretch.

SYMPTOMS.

2. Head.—Dull heaviness of the head.—Boring pain from behind r. ear on mastoid process, with violent pulsation in the arteries.—Painful pressure above eyebrows and on margin of nose, first l. side, afterwards r.—Painful pressure above the root of the nose.

4. Ears.—Boring behind the r. ear, with increased arterial action.

6. Face.—Pale face; wild expression.

8. Mouth.—Toothache, which had disappeared, returned.—Pressure on soft palate, posteriorly as if it would close.

9. Throat.—Cramps in the gullet, as if it were about to close.—Hawking up of mucus streaked with blood.

11. Stomach.—Nausea, with continued pressure at the orifice of the stomach.—Continual vomiting.

12. Abdomen.—Very severe colic, with meteorism and tension of abdomen.

13. Stool and Anus.—Urgent and sudden want to evacuate, with prompt and liquid evacuation.—Burning pain in anus.

14. Urinary Organs.—Tenesmus of bladder and rectum, with absence of stool and urine.—Cutting boring in urethra with excessive bodily restlessness.

15. Male Sexual Organs.—Frequent erections, with aversion to labour.

24. Generalities.—In. young patients hæmoptysis is induced by the salt with which these insects abound.—Inclination to stretch.

26. Sleep.—Frequent yawning.

Ononis.

Ononis arvensis. Rest-harrow. Cammock, N. O. Leguminosæ. Tincture of fresh plant.

Clinical.—Epilepsy. Epistaxis. Headache.

Characteristics.—*Ononis arv*. is indigenous to Britain, growing on barren pastures and on the borders of ill-cultivated fields. It owes its name, "Rest-harrow," to its tough underground roots, which cause stoppages to harrow and plough. In some parts it is called "Cammock," and the country people, having the idea that it communicates its nauseous, goatlike odour to cheese made from the milk of cows who have eaten it, call the cheese so tainted "cammocky" (*Treas. of Bot*.). Cooper records (*H. W*., xxxv. 538) the case of a brickfield labourer, 45, who at 13 was prostrated for a week, apparently with sunstroke; "something seemed to catch the back of his head." At 25, had attacks similar to present. In March, 1900, began to have daily attacks. An aura seems to spread over the head from the occiput; he makes frightful grimaces, but does not scream out; becomes unconscious, turns deathlike and blue in face, and falls down. After the attacks has violent headache, giddiness, and wakeful nights. *Onon*. Ø in single doses at rare intervals produced improvement at once and cured in nine months. A symptom apparently induced by *Onon*. was this: Nose-bleed three or four times in one day, < when washing his face." After that he was better. Hansen gives "chronic nephritis" as having been cured by *Ononis spinosa*.

Onosmodium.

Onosmodium virginianum. False Gromwell (or Gromell). N. O. Boraginaceæ. Tincture of entire fresh plant, including root.

Clinical.—Amblyopia. Bladder, irritation of. Breasts, affections of; atrophy of. Colour-blindness. Debility. Diarrhœa. Diplopia. Eyes, affections of. Headache. Locomotor ataxy. Ménière's disease. Neurasthenia. Nose, dryness of. Paralysis. Pregnancy, sickness of. Presbyopia. Seminal emissions. Sexual atony, desire lost. Spine, congestion of. Throat, sore; dry. Urethra, irritation of. Uterus; cramps in; prolapse of.

Characteristics.—*Onosmodium v.*, a member of an American branch of the Borage family closely resembling the British *Onosma*, was proved in material doses by W. E. Green, of Arkansas (*H. M.*, June 1885). Its common name is "False Gromwell"; the real "Gromwell" being another Borage, *Lithospermum*. The most remarkable feature of Green's striking proving is the want of power of concentration or co-ordination produced by the drug. This appears in inability to concentrate thought; to focus eyes; to co-ordinate muscles; to judge the height of impedimenta on stepping. It also appears in vertigo and sensations of numbness and general muscular prostration. Next to the paretic symptoms come neuralgic pains. These are mostly of a dull, heavy aching character, and affect cervical and spinal nerves and pelvic organs—eyes; occiput; eyes to occiput; sacrum—these are the chief centres of pain; throat, bowels, breasts, heart, and limbs being also affected, the left side of the body more than the right. "Feeling of tension in the eyes, as from straining them to read small print," and "desires to have things far off to look at them," show the paralysing effect on the internal eye muscles, and give one of the keynotes of the drug's action. *Onos*. has probably cured more cases of headache associated with eye-strain than any other remedy since it was proved. E. S. Norton published several illustrative cases (*N. A. J. H.*, i. 792): (*1*) Miss C., 23, suffering three years from headache. Pain especially in occiput, which feels "sore and stiff," often extending down spine, which was somewhat sensitive to touch. Dull, aching pain left side of head, occasionally with darting pain through eyes. Aching in eyes, stiff, strained feeling in them if she read more than a little, left worst. Headache < in morning, with some dizziness. The patient had some astigmatism which was corrected with glasses, and *Onos*. 1x at once relieved all the symptoms. (*2*) Mrs. D. had excessive myopia and severe headache: constant dull, stupid ache in right occiput and right eye; < when tired; from coughing; from any sudden motion. A little vertigo and strained feeling in right eye. *Onos*. 3x cured. Norton suggests that neurasthenia and neurasthenic headache may be met with *Onos*. when connected with strains of other kinds besides eye strains. He gives a case of *ear* headache: (*3*) Mrs. B., deaf nine years, four years constant roaring, hissing noise in both ears, with constant dull, pressing pain in occiput, < evening; some pain in ear, and sharp shooting pain in front of auricle; slight vertigo. Chronic

catarrh of both middle ears, membranes thickened; hearing not improved by Politzerisation. *Onos* 1x immediately relieved all the pains, though it did not alter the hearing or noises. Green himself has published some very striking cases (*H. M.*, vii. 530), with some pathogenetic symptoms as well as cures, and also gives an interesting comparative experience with attenuations. *Onos*. was brought to Green's notice by Dr. Durgan, presumably an eclectic or old-school practitioner; for he recommended 20-drop doses, which Green gave in the following cases: (*1*) Mrs. B., 50, had for three weeks vesical irritation, with tormenting tenesmus, a trouble she had had before. *Onos*. Ø was given, 20 drops every three hours. Within a short time Green was sent for, as the remedy produced a *severe soreness and dryness of the throat*. The dose was reduced to five drops, and then to three, and the trouble was entirely relieved in three days. (*2*) Mr. D., after operation for urethral stricture, had severe inflammation of urethra with vesical tenesmus. *Onos*. Ø, five drops every three hours, was prescribed, and there was decided amelioration of the symptoms in twenty-four hours. But there were these new symptoms, which promptly disappeared when the drug was suspended: "I feel as if I had been on a drunk for a week; my head aches and feels full; my mind is confused; I cannot think, remember, or keep my thoughts on my business; my legs are tired and numb, and I cannot walk well." The next case confirms these symptoms. (*3*) Mr. E. had the following symptoms of hyperæmia of the spinal cord: Severe pain in lower dorsal or lumbar regions coming on in night, when lying down, < towards morning, > when up and around. Constant sexual irritation, accompanied by severe erections that were also < by lying on the back. Slightly disturbed muscular co-ordination, with numbness and tingling in feet and legs. Onos. Ø, five drops four times a day, cured in a week. (*4*) Mrs. P. had numbness and aching of lower limbs, oppression about heart, and general muscular prostration. Heart dilated with aortic and mitral murmurs. *Onos*. 1x, five drops every three hours, was given. Next day there was a great improvement, but the patient was obliged to discontinue the medicine because it had developed *urethral irritation*. (*5*) Mrs. H. had severe backache in sacro-lumbar region; dull, aching soreness in uterus and ovaries; vesical tenesmus; colicky pains in bowels; slight nausea; clammy taste and white-coated tongue. *Onos*. 2x, five drops every four hours, was given, and rapid improvement followed. (*6*) Mrs. J., 45, had dull, frontal headache, extending through both temples; dizziness; pain over præcordia and crest of left ilium. Urinary discharge irritating, frequent, profuse, light-coloured, and of low specific gravity (1,010). Muscular prostration confined her to bed. *Onos*. 6 relieved all symptoms in twenty-four hours. (*7*) Mrs. M., 30, blonde. During a thunderstorm she slept in a draught, and on awaking had severe and constant roaring in both ears, with marked deafness. On attempting to get up she staggered and fell. Five days later Green saw her and found: Inability to walk, or even stand without help; constant tinnitus; loss of memory: would repeat orders she had given to servant a short time before. Vision blurred; and on looking closely at anything saw double. Pain in lower part of back and lower limbs. Felt as if treading on cotton; imagined the floor too close to her; would step too high, and by so doing jar her body. Fear

of falling on going up or down stairs. *Onos*. 1x, one drop every two hours. Next day she was worse. The remedy was omitted for twenty-four hours, and then given in 6x, with relief from the first dose, and steady recovery. The female prover had very distressing cramps in uterus and pain in ovaries, and breast and menstrual disturbances.—J. W. Covert (*Hom. News*, xxvi. 256) gave *Onos*. Ø, 5-drop doses every hour till relieved, to a woman who had fibroids and suffered from severe uterine cramps. The attack for which be gave it was the worst the patient had ever had, and the first dose relieved so perfectly that no second was required.—W. A. Yingling (*H. P*., xiii. 385) found out that the depressing action of *Onos*. extends, to the generative sphere, desire being abolished in both male and female. He quotes S. A. Jones as suggesting that this is the primary action of the drug, thereby distinguishing it from *Pic. ac*., in which excitement precedes debility. Jones quotes Hahnemann's canon, that "only the primary symptoms of a drug afford the indications for its therapeutical application" (a canon which Jones endorses as far as the infinitesimal dose is concerned), and he concludes that *Onos*. will correspond to the developed consequences of sexual abuse and *Pic. ac*. to the initial step of sexual debility manifested in erethism. (Jones is a very acute observer, and his comparison has a practical basis; but I do not endorse Hahnemann's dictum, even to the limited extent Jones does.) Yingling many times verified "complete loss of desire" as a leading indication. W. J. Guernsey (*H. P*., viii. 595) greatly relieved with *Onos*. a man, 38, suffering from seminal emissions, the result of masturbation. The uterine pains are all > by undressing and lying on the back. A leading symptom of *Onos*. is dryness: of nose; of mouth; of throat. With this there is a great thirst for cold water, which >. Yingling had an interesting experience in the case of a woman to whom he gave *Onos*. for dryness of the nose and throat. Not only did it cure this, but it also restored the breasts, which were diminutive and almost absent, to their normal size. Yingling's results were obtained mostly from the c.m. attenuation; he had no results from the Ø, and not marked from 30. "Soreness and stiffness" are the frequent symptoms of *Onos*. In the occiput there is pressure upward; and the pains may go from the eye backward. With a laryngeal cough there is gluey expectoration. H. F. Ivens cured a case of headache of ten years' duration, which illustrates the modality < in the dark. The pain was in left temple and over left eye; was not < by noises, light, or use of eyes, but was < in the dark and on lying down. Pellets of *Onos*. Ø were given every twelve hours. The Conditions of *Onos*. are very distinctive, especially the ameliorations. > From cold drinks; from eating; from undressing and lying on back. The headache is an exception to this last, for it is < lying down; and is also < in the dark. < From tight clothing; from motion; from jarring. > From sleep, but only temporarily (headache).

Relations.—*Compare:* Myosotis: Heliot., Symph. (botan.). In uterine misplacement, Heliot., Helonias, Lil. t., Sep., Nat. m., &c. Disorder of vision, Lil. t. (astigmatism), Pic. ac. (myopia), Nat. sul. (myopia). Ocular headache, Gels. (Gels. more right; Onos. more left), Lil. t., Spig., Rut., Bapt.

Causation.—Eye-strain. Sexual excess.

SYMPTOMS.

1. Mind.—Talkative, but in a disconnected way.—Irritable.—Irresolute.—Minutes seem like hours.—Feeling as if something terrible was going to happen and that she was powerless to help it.—Fear: To look down lest she might fall down stairs; that he might fall into a fire when walking by it, and in spite of all his will-power he did stagger into the fire.—Wants to think and not move, and thinks until she forgets everything and where she is.—Writes very fast, but cannot keep pace with thoughts, omits words and letters, cannot concentrate his thoughts on the subject.—Listless and apathetic.—Forgetful; that he is reading, and he drops the book in vague and listless thought.

2. Head.—Fulness, > eating and sleep.—Heaviness.—Lightness.—Frontal pain: over eyes; < over l. eye; over bridge of nose; in l. eminence; in r. eminence, changing to l., where it remained; running back into neck; heavy, and the same pain in temples and mastoid region.—Pain in l. temple; sharp, darting, in l. temple; darting, throbbing in l. temple.—Dull headache over l. eye and in l. temple; at times so sharp as to be unendurable, < in dark and on lying down.—Pain in mastoid.—Dull, heavy pains in l. side and over l. eye, extending around to back of head and neck, < movement and jar, forcing her to go to bed, when they were > by sleep, but returned soon after waking.—Occipito-frontal pain in morning on waking.—Dull, heavy pain pressing upward in occiput, with dizziness.

3. Eyes.—Pain in and over l. eye.—Feeling in eyes as if she had lost much sleep.—Feeling of tension, as when straining eyes to read small print.—Desire to keep eyes wide open.—Feeling as if eyes were very wide open, and feels as if he wanted to look at objects far away; distant objects look large; it is disagreeable to look at near objects, tense, drawing and tired feeling in ocular muscles.—Optic disc hyperæmic.—Retinal vessels engorged, < l.—Aching in upper part of balls.—Dull, heavy pains in balls, with soreness.—Lids heavy.—Pain in upper part of l. orbit, with feeling of expansion.—Vision impaired; blurred.—(Amblyopia of alcoholism, or from overdosing with *Bromide of Potassium*; hallucinations: sees beautifully dressed people in the streets and in a room.—Colour-blindness for red and green.)

4. Ears.—Fulness in ears.—Hearing impaired.—Singing as from Quinine.

5. Nose.—Dryness of nose; with feeling as from taking cold.—Pain in nasal bones.—Sneezing much in morning; and l. side of nose and l. eye seem affected; on first getting up.

6. Face.—Face flushed least motion or excitement; with > of headache; with full feeling.—Pain in right malar bone, with numbness.

8. Mouth.—Dryness of mouth; and of lips, without thirst; > cold water, with scanty saliva.—Clammy, sticky, feeling in mouth.—Bitter, clammy taste.

9. Throat.—Whitish, sticky discharge from posterior nares, causing constant hawking.—Raw scraping in throat.—Soreness: lasting longer on l. side; it hurts to swallow or speak; momentarily > drinking, with scraping.—Constriction of pharynx when swallowing.—Stuffed feeling in posterior nares.—Dryness: in pharynx and posterior nares; in pharynx, with soreness.—Throat perfectly dry and stiff.—All symptoms > by cold drinks and eating.

10. Appetite.—Appetite increased.—Hunger after siesta; nervous, all day.—Appetite and thirst diminished.—Thirst for cold drinks, of ten.—Distaste for water.

11. Stomach.—Eructations: after eating; nauseous.—Nausea: with bitter, clammy taste; in morning, as in pregnancy.

12. Abdomen.—Distended feeling; > removing clothing; with griping and grumbling.—Colic: > bending backward; below navel; in lower part, > undressing or lying on back; in lower part, as from ice-water.—Uneasy in hypogastrium, as if diarrhœa would come on.—Soreness in hypogastrium.

13. Stool.—Stool: shining, bloody, and stringy, with tenesmus; yellow, mushy; hurrying him out of bed in morning.

14. Urinary Organs.—Burning in male urethra, with itching.—Pain in prostatic urethra before and after micturition.—Seldom any desire to urinate.—Micturition frequent, scanty.—Urine: scanty, high-coloured, very acid, sp. gr. high, also of balsamic odour and heavily loaded with urea.

15. Male Sexual Organs.—Cold feeling in glans.—Desire diminished.

16. Female Sexual Organs.—Desire destroyed.—Itching of vulva, < scratching and contact of leucorrhœa.—Constant feeling as if menses would appear.—Pain in ovaries; < pressure; cutting and throbbing.—Heavy aching, and slowly pulsating pains beginning in one ovary and passing over to the other, leaving a soreness that lasts until the pains return.—Uterine and ovarian pains that had not been felt for years were re-excited.—Uterine cramps as from taking cold during menstruation.—Uterine pains; > undressing and lying on back; bearing down.—Soreness in uterine region, < clothing and pressure.—Leucorrhœa light yellowish, offensive, excoriating and profuse, running down the legs.—Menstruation too early and too prolonged, the two next periods anticipating and profuse.

17. Respiratory Organs.—Voice husky. Hacking cough, with tough sticky, white expectoration.—Laryngeal cough, > drinking cold water, with expectoration of whitish, sticky phlegm.

18. Chest.—Soreness of chest.—Aching in breasts, < l.; from l. nipple through breast; sharp, under l. breast.—Bruised feeling in l. breast, with pain on pressure.—Breasts feel swollen and engorged; feel swollen and sore, with itching about nipples.

19. Heart and Pulse.—Pain in heart, causing apprehension of death.—Pain in region of apex.—Oppression of heart.—Depressed feeling in heart as if it would stop beating.—Action rapid, pulse full and strong.—Pulse: rapid; irregular and weak; and slow.—With every third or fourth beat the diastole is prolonged almost to intermittence.

20. Neck and Back.—Pain: in neck; in a (linear) spot in l. scapular region; in lumbar region; over crest of l. ilium; in lumbar region in morning on waking, > about noon; low down when walking; across lumbar region, with stiffness; bearing down in lumbar region.—Sore, lame feeling in lumbar region.—Tired feeling in lower part of back.

21. Limbs.—Weariness: of legs, knees, and hands, with numbness; of arms and hands.

22. Upper Limbs.—Trembling of arms and hands.—Aching in biceps, elbows, and wrists.—Numbness of l. forearm.—She cannot write nor use the hands well in eating, because she cannot properly co-ordinate the movements.—Shooting in joints of l. fingers.—Pains in joints of fingers.

23. Lower Limbs.—Staggering.—Disturbance of gait, with sensation of insecurity in the step.—The sidewalk seems too high, which causes him to step very high, this jars him and < headache.—Numbness mostly below knees.—Pain: in l. hip; in knees; in knees and tendons about them.—Weariness and numb feeling in knees and legs; in popliteal spaces, < l.—Tremulousness of legs.—Tingling in calves and feet, < l.—Weariness of legs; in evening when walking, with unsteadiness.—Œdematous swelling of ankles.—Heavy pain in l. instep.—Numb tingling pain in outer side of both little toes.

24. Generalities.—Tremulousness from least exertion.—Nervous, trembling feeling, as from hunger.—Nervous and shaky feeling that physically and mentally unfits her for any duty.—Muscles feel unsteady and treacherous.—Inability to lie on l. side.—General distress and full feeling.—Light feeling, somewhat like that caused by chloroform.—Weakness: in morning, with stiffness; with aching, stretching, gaping, and disagreeable feeling.

25. Skin.—Formication in calves.

26. Sleep.—Sleeplessness.—Sleep: uneasy and interrupted; restless and waking early.—Dreams many, varied.

27. Fever.—Every day about twelve or one o'clock feeling as if I would have a chill.—Flushed feeling over whole body.—No perspiration in very warm weather.

Oophorinum.

Ovarian Extract. A Sarcode. Trituration of expressed juice of ovary of sheep or cow.

Clinical.—Acne rosacea. Climacteric, sufferings of. Flushings. Nervousness, climacteric. Ovaries, tumours of; disease of. Prurigo.

Characteristics.—On the analogy of the action of *Thyroidin* in myxœdema, *Ooph*. has been used with much success in cases of suffering following excision of the ovaries, and for the climacteric sufferings of women. I have had good results with it in such cases in the lower triturations. It has been suggested as a remedy in ovarian cysts. E. Saalfeld (quoted *H. W*., xxxii. 296), in view of Landau's observations on the effect of *Ooph*. on the nervous sufferings of women at the climacteric, gave *Ooph*. to women suffering from acne rosacea and other skin disorders of the climacteric. A woman, 20, after double oophorectomy had lichen-like eczema. This was greatly relieved by *Ooph*. as well as the accompanying nervous symptoms and adiposity. He obtained good results also in some non-climacteric cases as: (*1*) Acne and seborrhœa in chlorotic women. (*2*) A case of prurigo which had lasted from childhood in a woman of 26. In this case the itching was > for a short time after the period. This > *during menses* may prove a keynote, and relates the remedy to *Zinc*.

Opium.

Papaver somniferum. Poppy. N. O. Papaveraceć. (Opium is the gummy exudation of the unripe capsule of the poppy.) Tincture.

Clinical.—After-pains. *Apoplexy. Bladder, paralysis of. Brain, affections of. Cancer. Catalepsy*. Chilblains. *Colic. Constipation. Diabetes mellitus. Dreams*. Dysmenia. *Epilepsy. Fear, effects of*. Fśtus, movements of, excessive. Hernia, incarcerated. Hystero-epilepsy. Ileus. Intestines, obstruction of. Labour pains, abnormal. *Lead colic*. Marasmus. *Measles. Melancholia*. Meningitis. *Paralysis*.

Puerperal convulsions. *Sighing. Sleep, abnormal*. Snoring. *Starting*. Sunstroke. Tympanitis. *Urćmia. Urine, suppression of; retention of*. Uterus, inertia of. Veins, fulness of. *Whooping-cough*.

Characteristics.—*Opium* is one of the most complicated substances in the materia medica. Besides mucilage, albumen, fat, sugar, and salts of *Ammonia, Calcium*, and *Magnesia*, it contains "seventeen or eighteen alkaloids, and two neutral substances, as well as a peculiar acid—meconic acid" (Brunton). Among the alkaloids of *Opium, Apomorphinum, Codeinum, Morphinum* have their several places in the homśopathic materia medica. As the prince of pain-killing palliatives *Opium* has played a very prominent part in old-school therapeutics, and by its seductive properties has reduced many who have sought its help to become its slaves. The effects observed in persons brought under its influence in this way, in opium-smokers and in persons poisoned with massive doses, have produced a large part of the pathogenesis; provings and clinical observations have added the rest. The effects of a poisonous dose of *Opium* are scarcely to be distinguished from a fully developed attack of apoplexy—absolute unconsciousness; complete muscular relaxation; pupils contracted to a pin-point aperture; turgid, bloated, very red, or bluish face; stertorous breathing; pulse slow and full. Death takes place by asphyxia, the heart continuing to beat after breathing has ceased. Minor degrees of the *Opium* influence give: Deep sleep; pleasant, fantastic, or frightful dreams; delirium like delirium tremens. On waking from this stage there is severe headache, nausea, furred tongue, loss of appetite. In still smaller doses (or in the large doses of *Opium habituées*) there is: (*1*) Excitement of circulation, pulse fuller and quicker, surface warm and flushed; increased power of directing energies. If he wishes to sleep, "an agreeable languor followed by sleep comes on. He can be easily aroused from this sleep; and after a few hours the effect passes off, leaving, however, slight headache and languor, with dryness of mouth and slight nausea. If, on the other hand, he wishes to work, he can do this with increased energy; or if he desires to exert the mind, he will find his imagination more vivid, his thoughts more brilliant, and his power of expression, greater" (Christison, quoted by Brunton). In my student days I had the good fortune to be in the skilful hands of Dr. Angus Macdonald through a severe attack of peritonitis (apparently induced by a chill one very severe winter). The treatment was: *Opium*, in pills, two or three times a day; the object being to keep the intestines inactive till such time as the inflammation should subside, and at the same time to relieve me of the pains. The treatment was on perfectly rational grounds, and was completely successful. The inconveniences of it were persistent vomiting, distressing dreams, a state of irritability almost of the *Chamomilla* type, and constipation. This last was the feature which gave me more anxiety than anything else, and, in spite of my doctor's assurances, I could not help fearing that obstruction had taken place. It lasted long after the *Opium* was discontinued, and at last, without any medicinal help, ended, to my great astonishment, in diarrhśa. There had been neither stool nor flatulence pass for many days. Flatus began to pass before the diarrhśa set in. Hahnemann (*M. M. P.*) sums up the action of *Opium* thus: "In the primary action of

small and moderate doses, in which the organism passively, as it were, lets itself be affected by the medicine, it appears to exalt the irritability and activity of the voluntary muscles for a short time, but to diminish those of the involuntary muscles for a longer period; and while it exalts the fancy and courage in its primary action, it appears at the same time to dull and stupefy the external senses, general sensibility and consciousness. Therefore the living organism in its active counteraction produces the opposite of this in the secondary action: Diminished irritability and inactivity of the voluntary and morbidly exalted excitability of the involuntary muscles, and loss of ideas and obtuseness of the fancy, with faintheartedness along with over-sensitiveness of the general sensibility." It is right to say that Hahnemann prefaces the above with the remark that, "It is more difficult to estimate the action of *Opium* than of almost any other drug." This is quite true if we conceive it necessary to divide the effects of the drug into primary and secondary. For my part I have never yet been able to turn to practical account this division into primary and secondary in respect of any drug; and, except for the occasional purpose of arranging the actions of a drug in rememberable form I do not attempt it. I find that whether an Action is "primary" or "secondary" depends on the prover or the patient. I know some people who are made absolutely sleepless by *Opium* in all sorts of doses; and *Op*. 30 has helped me in case of sleeplessness as often as *Coffea*. My experience goes to show that whether the drug-effect is primary or secondary, it is a drug-effect and is good for prescribing on. Hahnemann describes as a rare and transient effect of *Opium* in excitable subjects, occurring primarily but really a sort of reflexion of the secondary state: "Deathly paleness, coldness of the limbs and whole body, cold perspiration, timorous anxiety, trembling and despair, mucous stools, transient vomiting and short cough, and very rarely certain kinds of pain." The last remark is to be taken in connection with a previous one to the effect that *Opium* "does not cause in its primary action one single pain." Here again Hahnemann's negative must be taken with caution. No doubt abnormal *painlessness* is a grand keynote for *Opium*; but in the pathogenesis many acute pains will be found, and among them this recorded by Hahnemann himself: "Horrible labour-like pains in uterus, which compelled her to bend the abdomen double, with anxious, almost ineffectual urging to stool." Whether this be "primary" or "secondary" I know not; but in one of the worst cases of painful menstruation I have ever had to treat *Op*. 30 gave greater and more lasting relief than any other remedy. In one patient to whom I gave *Op*. 30 for constipation, it caused with the onset of the next period "sharp pain which caused vomiting and a desire to sit doubled up and keep warm." J. P. Willard (*H. W*., xxxii. 168) has repeatedly given permanent relief in cases of suffering with *Op*. 2x without producing any narcotic effect. *Opium* can cause cramps and even tetanus as well as the opposite state, the tetanic properties chiefly existing in the alkaloid *Thebain*. *Opium* causes tetanus in frogs but has no effect whatever on birds. The grand characteristic of *Opium* is the drowsiness, inertia, torpor, absence of sensation, absence of reaction, which appears is its general effects. In all complaints with great sopor; painlessness; complaining of nothing and wanting

nothing, *Opium* may be required. I remember reading of the cure of an ulcer of the leg. There were *no sensations* on which a remedy could be diagnosed, but the *absence of sensations* indicated *Opium*, and *Opium* cured. "Want of susceptibility, trembling," is another feature of the same state; lack of vital reaction. Inertia of the intestines results in constipation; of the bladder, in retention; of the uterus, in suspension of the menses. Generally speaking, all secretions are checked except that of the skin, which is excited. This arrest of action seems to explain the sensation of obstruction which occurs in inner parts; and in intestinal obstruction *Opium* has won many triumphs. It was part of Owen Thomas's treatment of intestinal obstruction to give drop doses of *Op*. Ř, and feed the patient on meat soups only—no milk, farinaceous foods, or solids. His idea was to keep the intestines quiet, but the action was clearly homśopathic. In ileus and strangulated hernia it has been given with success and reversed peristalsis and fćcal vomiting are leading indications here. It is equally indicated in the involuntary and unconscious passage of urine and fćces from paralysis of sphincters. Also in uterine inertia during labour *Opium* is often needed. On the other hand, *Opium*, which is a very dangerous remedy to give to children, has this effect on the fśtus in utero, that instead of making it quieter it makes it more lively; hence *Opium* is one of the chief remedies for fśtal movements when they become excessive. *Opium* also follows *Acon*. as a remedy in the asphyxia of the new-born, and in puerperal convulsions. In the cerebral complaints calling for *Opium* there is generally the deep red face, the stertor, and stupor to guide. These are found in apoplexy; in insensibility, and partial or complete paralysis resulting from fright, the fear still remaining; from charcoal vapour; from inhaling gas; from alcohol. The apoplexy of drunkards is accurately pictured in *Opium* poisoning. The spasms of children occur at the approach of strangers, from nursing after the mother has had a fright; from crying; eyes half open and upturned. Screaming before and during a spasm. Epileptic attacks occurring during sleep. Sleep follows the convulsions. Loud snoring. The delirium of *Opium* is marked by: Great loquacity; visions of animals starting out of various parts of the room. Delirium tremens of old sinners; very little drink is sufficient to bring on an attack. The face has a constant expression of fright. If he sleeps the sleep is stertorous. On the other side of the sleep picture, partly mixed up with sleep phenomena, is the exalted sensitiveness and timidity; sensitiveness to fright and other emotions. Sleepy but cannot sleep, sleepless with acuteness of hearing disturbed by sounds ordinarily not heard at all. Twitching trembling of head, hands, and arms. In tetanus *Opium* is called for when the spasms are ushered in with a loud shriek. Nervous and irritable, tendency to start. *Opium* is a great fever remedy. The Opium habit is very common among inhabitants *of the fen districts of Lincolnshire, possibly* contracted to palliate the debility and depression left by ague. Sweat as a concomitant is a characteristic of *Opium*—complaints appearing with perspiration. The skin is hot and damp. An opium-eater's face glistens with fine perspiration. "Very hot, sweltering perspiration." Another condition is described by Guernsey thus: "Patient may not feel cold all day, but may have only a little chill, and at night, when in

bed, complain that *the sheets feel so very hot*." T. F. Allen (*H. R*., xiv. 481) remarks that *Opium* fever may be closely allied to that of *Aco*. (The Ranunculaceć are not far removed from the Papaveraceć.) The *Opium* fever may have high temperature without distinct inflammatory process. It is characterised by intense thirst and great sleepiness, and is without the anguish, fear, and restlessness of the *Aco*. fever. The *Opium* fever may be periodic─intermittent or remittent. Gels. fever is like *Opium* fever but *without thirst*. In regard to the almost universal use of *Opium* or its alkaloids in cases of cancer in old-school practice, Snow contends that it has a certain degree of power over the cancer process. From what we know of its botanical relatives, *Sang*. and *Chel*., this may be true.─Villers cured with *Op*. 200 a case of hystero-epilepsy having these characters: Attack preceded by sensation of swelling of body. Veins protrude; face bluish red. Complete unconsciousness. C. N. Payne (*Med. Adv*., xxv. 198) relates the case of a little girl, aged two, who had never slept properly since birth. She went to sleep at usual time and slept till 10 p.m., when she waked moaning, crying, and tossing about; seems frightened; almost falls asleep again but wakens with a start, screaming and keeping in motion one arm and one leg after waking. Seems sleepy but cannot sleep. Usual naps during day. *Nux, Bell., Cham*. were given in succession in vain. It then transpired that before the baby was twelve hours old it had had four different medicines put into its stomach, one of them being *Paregoric*, which had also been given since, as well as "quieting medicine." During the early months it had colic, with constipation, stools in dark, hard, round balls. Clearly, it was a proving of *Opium*. *Op*. 200 was given. The first night she slept much better, and rapid improvement and cure followed. Seward (*Med. Adv*., xxviii. 367) relates the case of a man who had been given an allopathic dose of *Opium* for diarrhśa, with the result that it made him "raving, fighting crazy, with red face, glistening eyes." He struck out to hit the men who, he said, were after him to kill him, one of them being a butcher with a cleaver. It took two men to hold him on the bed. He did not recognise those about him. *Camph*. was given in repeated doses, and he soon became quieter and would talk and laugh in a very lively manner. He said, "Didn't I give it to them?" He soon after fell asleep, and slept all night, remembering nothing of what had happened when he awoke next morning. Among the *Camph*. symptoms indicating it in the case are: "Great excitement almost amounting to frenzy"; "most furious delirium, being with difficulty restrained in bed by two men." *Peculiar sensations* are: As if from smoke on the brain. As if flying or hovering in air. As if drunk. As if eyes too large for orbits. As if sand or dust in eyes. As if eyelids paralysed. As of a band round chest. As if intestines would be cut to pieces. As of a stone in abdomen. As if something was forced through a narrow space in abdomen. Rolling as of a hard body in right hypochondrium. As though anus closed. As if lower limbs severed from body. *Opium* is specially *suited to*: persons of light hair, lax muscles and want of bodily irritability; persons insensitive to well-chosen remedies. Childhood and old persons (first and second childhood). Drinkers. J. B. S. King (*Med. Adv*., xxvii. 112) noticed that in seven *Opium*-eaters (all that had come under his observation), there was marked

arching of the back, especially of the upper part of the back. In as many *Morphia* takers he had not met with a single case of arched back. The symptoms are: < During and after sleep. < While perspiring. < From stimulants. < From anxiety and fear; reproaches. < During respiration. < On moving. < During pregnancy. Touch < (bed feels hard); abdomen sensitive. There is great susceptibility to cold air, but > uncovering head. Laboured breathing > by cold air. Bed feels hot, > by cold, < from heat. Symptoms reappear or are < on becoming heated. Drinking water > dryness and cough. Getting cold = bronchitis. > Constant walking.

Relations.—*Antidoted by:* Strong Coffee; Kali permang. solution (about 1 gr. to the pint of water; the patient is made to swallow half a pint every five minutes, and then caused to vomit; later, a somewhat stronger solution may be given and retained); Oxygen inhalations, Camph.; (patient must be kept walking about; if allowed to sleep it may be impossible to wake him again); Bell., Ip., Nux, Vinum., Vanil. Nervous irritability, Cham.; marasmus, Sul., Arg. n., Sars., Camph. *Antidote to:* Bell., Dig., Lach., Merc., Nux, Strych., Plb., Stram., Ant. t. *Followed well by:* Aco., Bell., Bry., Hyo., Nux, Nx. m., Ant. t. *Compare:* The alkaloids, Apomorph., Cod., Morph.; Chel., Sang. (botan.). In first and second childhood, Bar. c., Mill. Apoplexy of drunkards, Bar. c. Lack of vital reaction, Pso. (despair of recovery), Ambra, Chi., Lauro. (chest), Val., Sul., Carb. v. (Op. is sluggish or drowsy). Spasms in infancy after fright of mother (Hyo.—from anger, Cham., Nux). Effects of fright, the fear still remaining, Aco., Hyo. Diarrhśa from fright, Gels., Pul., Ver. (chronic effects of fright, Phos. ac., Nat. m., Sil.). Effects of sudden joy, Coff. Loss of breath on falling asleep, Grind. Sleepy but cannot sleep, Bell., Cham. Bed feels so hot she cannot lie on it, Arn., Bry. Constipation of corpulent, good-natured women, Graph. Stool in round (black) balls like marbles, Chel., Plb., Thuj. Retrocession of exanthem to brain, Zn. < During and after sleep, Lach., Ap. Violent movements of Fśtus, Sil., Thuj., Sul., Croc. (Croc. also has: Sensation as if a living fśtus were moving in abdomen when there is not). Uterine inertia, Morph., Chloral., Secal. Heat in heart, Croc., Lachn., Rho. Loquacity, Cup., Hyo., Lach., Stram., Ver. (gossiping, babbling, Ver., Hyo.; religious subjects, Ver.). Congestion, Ver. v. Apoplexy with convulsions, Bell., Hyo., Lach.; followed by paralysis, Arn. (left side), Bell., Lach., Nux, Rhs. Delirium tremens (Op. old sinners, easily set off; terror; animals start from corners; if sleep, stertorous), Lach. (sees snakes, sensation in throat as of choking; springing out of sleep suddenly as if from a dream), Stram. (symptoms violent, starts from sleep in perfect horror; visions of animals coming from every corner of room; tries to escape; face bright red), Can. i. (errors of perception as to space and time), Ars. (fear of death, won't be left alone); Calc. (the moment he closes his eyes he gets visions which compel him to open them again). Drowsiness with cough, Ant. t. (cough with drowsiness and gaping). Constipation of inertia (little, hard, dry, black balls), Alm. (inertia even with soft stools), Pb. (hard, black balls with spasmodic constriction of anus), Bry. (large stools). Tympanites, Lyc., Carb. v., Colch., Raph. (passes flatus neither up nor down for days). Charcoal vapour, effects of, Bov., Arn. Spasm of lungs,

Mosch., Ip., Dros. *Sudden* effects of emotions, Ign. (Ign., deathly pale or at times flushed; Op., dark red face, bloated; Op., loud screams, more fright. Both correspond to *sudden* effects of emotions only; after punishment, body stiffens out, muscles of face twitch). Cerebral congestion, Hell. (Op., breathing loud, stertorous, pulse full, slow; Hell., pulse weak, almost imperceptible). Constriction of anus, Lach., Pb., Nat. m.

Causation.—Fear. Fright. Anger. Shame. Sudden joy. Charcoal fumes. Alcohol. Lead. Sun.

SYMPTOMS.

1. Mind.—Carelessness, or great anxiety and uneasiness.—Inconstancy and fickleness.—Strong tendency to take alarm, and timorous character.—Rash and inconsiderate boldness.—Tranquillity of mind, with agreeable reveries, and forgetfulness of sufferings.—Stupidity and imbecility.—Loss of consciousness.—Great flow of ideas, with gaiety and a disposition to indulge in sublime and profound reflections.—Vivid imagination, exaltation of the mind, increased courage, with stupefaction and dulness.—Very easy comprehension.—Illusions of the imagination.—Mania, with fantastical or fixed ideas; patient believes, contrary to fact, that he is not at home.—Delirium with frightful visions, of mice, scorpions, &c., and with desire to run away.—Mendacity.—Rambling speech.—Loquacious delirium, with open eyes and red face; furious delirium.—Fright with fear; is followed by heat in the head and convulsions.—Grief over insults is followed by convulsions.—Drunkenness with stupor as from smoke on the brain; eyes burning, hot and dry.

2. Head.—Confusion in head, with sensation of heat in eyes, and necessity to shut them.—Great confusion, dulness and heaviness of head making thought and writing difficult.—Head bewildered, as after intoxication.—Dizziness as during intoxication.—Vertigo, on sitting up in bed, which compels the patient to lie down again.—Vertigo, after a fright.—Attacks resembling apoplectic fits, with vertigo, buzzing in ears, loss of consciousness, face red, hot, puffed, eyes red and half shut, pupils dilated and insensible, foam at mouth, convulsive movements of limbs, slow, stertorous respiration; before the fits, sleeplessness or sleep, with anxious dreams; ebullition of blood and general heat; after the fit, nervous excitability, laughter, and trembling speech.—Felt as if he had bees in a great hollow in his head.—Aching above r. frontal eminence when reading, with heat, then pinching in r. temple.—Pressing pains in temples.—Cold sweat on forehead.—Headache, < by moving eyes.—Headache, with pressive tension throughout head.—Sensation as if brain were being torn.—Great heaviness of head.—Congestion to head, with strong pulsation.

3. Eyes.—Eyelids hanging, as if paralysed.—Sensation as if eyeballs were too large.—Eyes red, inflamed.—Quivering of eyes and lids.—Eyes half open and are

turned upwards.—Staring look.—Swelling of lower lids.—Eyes fixed, half closed, convulsed, prominent, glassy.—Pupils dilated (insensible to light), and immovable.—Pupils contracted.—Cloudiness of sight.—Sensation of dust in eyes.—Scintillations before eyes.

4. Ears.—Buzzing in ears.—Tinkling in ears.—(Tinnitus like sea roaring, continual, coming at uncertain times for three or four days, in man, 48, who suffers from drowsiness, and was subject to epistaxis.—R. T. C.)

6. Face.—Face pale, earthy, wan, with hollow eyes, and red spots on cheeks.—Face deep red, sometimes brownish, hot and bloated.—Bluish (purple) face.—The face of a suckling was like that of an old man.—Alternate paleness and redness of face.—Swelling of veins in face and head.—Relaxation of all the muscles of the face, the lower lip and jaw hang down.—Trembling, shocks, and convulsive movements of the muscles of the face.—Lips swollen.—Twitching in corners of mouth.—Disfigurement of mouth.—Cramps in jaw.—Lockjaw.—Features distorted.

7. Teeth.—Looseness of teeth.

8. Mouth.—Dryness of mouth, with violent thirst.—Copious salivation.—Hćmoptysis.—Ulcers in mouth, and on tongue.—Tongue purple; white.—Black tongue.—Paralysis of tongue (and difficult articulation).—Voice weak, low, with inability to speak loud without great exertion.

9. Throat.—Dryness of throat.—Swelling and movements in throat, with fits of obstructed deglutition and strangulation, which recur daily.—Inability to swallow.

10. Appetite.—Loss of appetite.—Bitter or sour taste in throat.—Violent thirst.—Burning thirst, esp. for beer.—Attacks of bulimy, with want of appetite and repugnance to all food.—Slowness and weakness of digestion.

11. Stomach.—Nausea, with inclination to vomit, and retching.—Vomiting, with violent pains in stomach, and convulsions.—Vomiting of blood, or of greenish matter.—Vomiting of fćcal matter, and of urine.—Painful sensitiveness, and inflation of stomach and epigastrium.—Constrictive pressure at stomach, with excessive anguish.—Heaviness and pressure in stomach.—Compression of diaphragm.

12. Abdomen.—Abdomen hard, and distended, as in tympanites.—Tympanites.—Lead-colic.—Incarcerated inguinal hernia.—Inactivity of digestive organs.—Intestines sluggish, strongest purgatives, lose their power.—Distension, but no power to expel contents.—Accumulation of much flatus, with rumbling in abdomen.—Weight in abdomen, as of a load.—Tension in hypogastrium, with pain on touch.—Pressive pains in the abdomen, as if the

intestines would be cut to pieces.—Pulsation, pressure, heaviness, and pullings in abdomen.

13. Stool and Anus.—Constipation from inactivity of the intestines.—Spasmodic retention of the fćces, esp. in the small intestines.—Constipation, sometimes of long standing.—Constipation: of children; of good-natured women; of lead-poisoning; fćces protrude and recede.—(Confined bowels with bleeding, furred tongue and drowsiness.).—Offensive black fćces.—Frothy (whitish pasty) and liquid diarrhśa, with burning pain in anus, and violent tenesmus.—Involuntary evacuations (of offensive Stool).—Involuntary stools after fright.—Anus spasmodically closed during the colic, with difficult emission of flatus.—Stool composed of hard, round, black balls; grey; crumbling.—Cholera infantum, with stupor, snoring, convulsions.—Evacuation obstructed from indurated fćces.

14. Urinary Organs.—Retention of urine, as from inactivity of the bladder.—Retention of urine: from paralysis of fundus of bladder; from spasm of sphincter; from nursing after passion of nurse.—Acute, spasmodic constriction of urethra, with passage of bloody urine.—Scanty, deep-coloured (dark-brown) urine, with sediment like brick-dust.—Emission of blood in urinating.

15. Male Sexual Organs.—Increased sexual desire, with frequent erections and pollutions.—Amorous ecstasy.—Diminished sexual desire, and impotence.

16. Female Sexual Organs.—Great excitement of sexual organs, with sexual desire and orgasm.—Perfect loss of sexual desire from lack of nutrition.—Softness of uterus with fetid discharge.—Prolapsus uteri from fright.—Severe labour-like pains in uterus; with urging to stool; > bending double (and by warmth).—(Bearing down with r. groin pain, bloated abdomen, apathetic and drowsy, confined bowels, menses too soon, aching all over. R. T. C.).—Menses: irregular; profuse; violent colic forcing her to bend over; urging to stool; suppressed.—Mucous discharge.—Fetid leucorrhśa.—Suppressed, false, or spasmodic labour-pains.—Puerperal spasm, during and after parturition with loss of consciousness and drowsiness or coma between the paroxysms.—Violent movements of the fśtus.

17. Respiratory Organs.—Troublesome hoarseness, as if caused by an accumulation of mucus in trachea, with great dryness in mouth, and white tongue.—Rattling breathing.—Respiration deep; unequal.—Deep snoring breathing, with open mouth.—Dry cough, with tickling and scraping in larynx; > from drink of water, with gaping, drowsiness, yet cannot sleep.—Laryngismus stridulus.—Cough with profuse sweat on whole body.—Weak and low voice.—Violent, dry, hollow cough, < after repose.—Cough during deglutition, or when taking an inspiration, with suspended respiration and blue colour of the face.—Cough, with expectoration of blood, or of thick, frothy, mucus.—Noisy, stertorous, and rattling inspiration.—[Where there is continued and steady stertorous breathing (there may be occasional stertorous breathing, as, for instance,

coming on and lasting a little while after a convulsion-but wait and see whether that does not presently die away; if there is continued stertorous breathing, give *Opium*).—H. N. G.].—Difficult, slow, and intermittent respiration, as from paralysis of the lungs: pneumonia notha.—Obstructed respiration and stifling, with great anguish.—Spasmodic asthma.—Fits of suffocation on making an effort to cough.

18. Chest.—Aching in chest, with shootings in sides during inspiration.—Tension and constriction in chest.—Heat and burning pain in chest, esp. in region of heart.—Suffocative attacks during sleep like nightmare.

19. Heart.—Burning about heart.—Pulsating arteries and swollen veins on neck.—Palpitation after alarming events, fright, grief, sorrow, &c.—Pain in cardiac region with great anxiety, trembling, sleeplessness, talkative delirium.—Pulse: full, slow, quick, hard; irregular; imperceptible.

20. Neck and Back.—Swelling of veins, and beating in arteries of neck.—Bending backwards (spasmodically) of the back.

21. Limbs.—Trembling of all the limbs, esp. arms and hands after fright.—Spasmodic jerkings and numbness of limbs.—Coldness of the extremities.

22. Upper Limbs.—Jerks and convulsive movements in arms.—Paralysis of arms.—Trembling of arms and hands.—Distended veins on the hands.—Chilblains on fingers.—Swelling of veins of hands.

23. Lower Limbs.—Jerks and convulsive movements of legs.—Weakness, torpor, and paralysis of legs.—Heaviness and swelling of feet.—Chilblains on toes.

24. Generalities.—General insensibility of whole nervous system.—Want of sensitiveness against the effects of medicines, with want of vital reaction.—Great uneasiness in limbs.—Trembling of limbs after fright.—Trembling in whole body, with shocks, jerks in limbs, and general coldness; > by motion of body and uncovering of head.—Convulsive fits, esp. in evening towards midnight, with sleep, involuntary movements of head and arms, with fists closed.—Pupils dilated (*e. g.*, after cholera infantum where the brain is threatened); hardness of hearing; hunger without desire to eat; discharge of urine too scanty; labour pains ceasing; labour too weak.—Apoplexy with stertorous breathing; blackness of outer parts; blueness of the whole skin or cyanosis.—Feeling of numbness in the outer parts; of some kind of obstruction of inner parts; pains like labour pains.—Clonic spasms, esp. when the stertorous breathing lasts all the time between the spells; black-blue swelling here and there over body.—Epileptic convulsions at night, or in morning, with fits of suffocation, loss of consciousness and of sensibility, and violent movements of limbs.—Sleep, after every convulsive attack.—Relaxation of all muscles.—Convulsions, with sudden loud cries.—Convulsions and spasmodic

motions, with foam at the mouth.—Sensation of buzzing and vibration in whole body.—Absence of pain during attacks.—Excessive irritability of voluntary muscles, and diminished irritability of all the others.—Persons, who take *Opium* in excess, become prematurely old.—Tetanus.—Bending backwards of (head or) body.—(Tetanic spasms and opisthotonos begin with loud screams.).—Rigidity of whole body.—Paralysis.—Lead colic.—Paralysis without pain.—Sensation of strength and vigour; or fainting and great weakness.—General emaciation.—Dropsical swelling of whole body.—Intercurrent remedy in chlorosis (R. T. C.).—Aggravation and renewal of sufferings, when over-heated.—Face dark red and hot.—Bed feels so hot she cannot lie on it.

25. Skin.—Skin bluish, with blue spots.—Redness and continued itching of skin, with small, round, and colourless elevations.—Erythema; scarlatina-like eruptions; furfuraceous desquamation, or else in large plaques.—Desquamation of epidermis.—Chilblains.—Dropsical swelling of whole body.

26. Sleep.—Lethargy, with snoring and mouth open, eyes open and convulsed, face red, and puffed, jaw hanging, loss of consciousness, difficult, slow, or intermittent respiration, pulse slow, or even suppressed, and convulsive movement of muscles of face, corners of mouth, and limbs.—Urgent inclination to sleep, with absolute inability to go to sleep.—Incomplete sleep, without power to wake.—Uneasy sleep, with anxious dreams.—Sleeplessness with acuteness of hearing; clocks striking and cocks crowing at a distance keep her awake.—Sleeplessness, with anxious tossing, restlessness, and delirium.—Stupefying, unrefreshing sleep.—During sleep, picking of bedclothes; groaning.—Moaning (whining) during sleep.—Terrific shocks in limbs, during sleep.—Nightmare.—Lascivious, frightful, and anxious dreams.—Dreams and cannot be roused.—Coma vigil.—Pleasant, fantastic dreams.

27. Fever.—General coldness of skin, esp. of limbs.—Coldness and rigidity of whole body.—Chill and diminished animal heat, with stupor, and weak, scarcely perceptible pulse.—Coldness only of limbs.—Burning heat in body, with great redness of face, anxiety, delirium, and agitation.—Pulse, generally full, slow and intermittent, or quick and hard.—Absence of perspiration; heat without perspiration; very hot sweltering perspiration; complaints concomitant to perspiration: *i.e.*, those that may appear with perspiration.—Intermittent fever where the chilliness is followed by heat, with perspiration which may be hot and sweltering; where there is no chill, but the fever is accompanied by this perspiration; patient may not feel cold all day, or may have only a little chill, and at night when in bed complain that "the sheets feel so very hot" (H. N. G.).—Fever, with lethargic sleep, snoring, convulsive movements of limbs, suppressed excretions, and hot perspiration (with quick and anxious breathing).—Heat with damp skin predominates, extending itself from head or stomach over the whole body.—Heat with inclination to be uncovered.—Perspiration of upper part of body, with dry heat of lower part.—Cold perspiration on forehead.—Intermittent fever; first shaking chill, afterwards heat with sleep, during which he perspires

much.—Falling asleep during cold stage and no thirst; during the hot stage thirst and general copious perspiration.—Whole body burning, even when bathed in sweat.—Fever, sometimes with loss of consciousness, or delirium.

Opuntia.

1. OPUNTIA VULGARIS. CACTUS OPUNTIA. (Prickly Pear.)

2. OPUNTIA ALBA SPINA. (Prickly Pear.) N. O. Cactaceæ. Tincture of flowers of O. vulg. Tincture of stems of O. s. a.

Clinical.—Diarrhœa, Nausea. Priapism. Spleen, pains in.

Characteristics.—Two kinds of "Prickly pear" have been proved—*Opun. vulg.* and *Opun. alba spina*. Burdick took one or two deep inhalations of the tincture of the flowers of the former. J. H. Fitch (who proved many of the Cactaceæ) took ten drops of the tincture of the second. The bulk of the symptoms of the proving are Fitch's; but the most peculiar symptom (which has also been verified) is Burdick's: "Nausea extending from stomach down into bowels, with sensation as if diarrhœa would set in." Also "feeling as if bowels had settled down into lower abdomen." Fitch had actual diarrhœa. All the urinary and genital symptoms were his except "Bloody urine," which is an effect of *O. vulg.*, but not Burdick's. Coldness was observed by both provers. The peculiar mental symptoms recalling the swearing tendency of *Anac.*, are Fitch's. Sticking and pricking pains predominate, also numbness and tension.

Relations.—*Compare:* Cact., Cer. b., Anhal. In nausea and sinking-down sensation in stomach and abdomen, Ipec. Blasphemy, Anac.

SYMPTOMS.

1. Mind.—Aberrations of mind; not entirely conscious of it.—Blasphemous mood.—Alternately busy and wanting to pray.—Alternately praying and swearing; fit of rage on thwarting of plans.—Petulant; irritable; vindictive.—Omits and transposes letters in writing.

2. Head.—Tensive feeling in brain.—Sensation as if head transfixed with a lance.

3. Eyes.—Pain in globe of r. eye.—Burning smarting in margin of lids, with feeling of contractions in line of lashes.

5. Nose.—L. nostril bleeds on picking; a little blood and watery mucus.

6. Face.—Pale face.

8. Mouth.—Bites inside of (r.) cheek on chewing.—Teeth sensitive.—Tea tasting insipid.—Saliva in mouth.

9. Throat.—Much mucus rises from throat.—Throat feels sore, afternoon; choked or pinching feeling round top of larynx.—Shuddering on swallowing.

11. Stomach.—Poor appetite for breakfast.—Went without dinner.—Nausea extending from stomach down into bowels, with sensation as if diarrhœa would set in.—Nausea with dull, heavy pain in stomach, with feeling as if cramps would set in.—Alternate nausea of stomach and bowels.

12. Abdomen.—Bloated abdomen.—Pain through spleen and heart.—Sensation as if contents of bowels in lower abdomen were very acrid; < in median line.—Excoriating, sick feeling in lower third of abdomen, with sensation as if bowels had all settled down into lower abdomen.

13. Stool and Anus.—Urgent desire; stools rather loose.—Stool: loose 4 p.m.; evening stool easy at first, afterwards hard; soft, but difficult, with urging in morning; smelling like strong drugs.—In straining at stool varicose veins on l. side enlarged very greatly.

14. Urinary Organs.—Not able to wait.—Urine: increased frequency and quantity; increased quantity, but not frequency; bloody.

15. Male Sexual Organs.—Pain in r. testicle; priapism, with lascivious desire; drawing pains in r. testicle.—Emissions.—Atrophied appearance of genitals.

17. Respiratory Organs.—Heaving respiration, which does not > oppression at chest.—Oppression of chest > by a single heaving respiration.—Cold shudders right through chest.

19. Heart.—Sticking pains through heart.

20. Neck.—Pain in muscles of neck, l. side anteriorly, 12.25 p.m., later of r. side anteriorly below ear; pain and ache in both sides below ears, coming and going.

22. Upper Limbs.—Pain in proximal ends of first and second metacarpal bones of l. hand.—Pain in l. arm, just below elbow, palmar aspect.

23. Lower Limbs.—After kneeling or resting on lower limbs they become numb, with tingling and pricking.—Pain: in muscles of inner side of l. leg; head of fibula; r. little toe.

24. Generalities.—Prostration.

25. Skin.—Eruption of pimples on neck and behind l. ear, bleeding easily.

26. Sleep.—At night dream of women.

27. Fever.—Cold, chilly.—Cold feet; very chilly in the cold room; coldness of body.

Orchitinum.

Testicular Extract. Spermin. A Sarcode. Trituration.

Clinical.—Climacteric, sufferings of. Debility. Sexual weakness. Senility.

Characteristics.—The use of a testicular extract in cases of senile decay and nervous breakdown was first proposed by Brown-Sequard, and formed one of the examples by which he illustrated his doctrine of "inner secretions." He maintained that the various glands of the organism had, in addition to their obvious secretion or excretion, an additional secretion which was not obvious, but which materially contributed to the welfare of the organism. The doctrine is now generally accepted, and the use of the Sarcodes in general medicine is based upon it. Homœopathy can use these remedies in both ways. *Orch*. has been used with success, in the triturations, in climacteric sufferings; and in old-school practice in the sequelæ of ovariotomy, in cases of debility, sexual weakness, and premature senile decay.

Relations.—*Compare:* Oophorin.

Oreodaphne.

Oreodaphne Californica. Mountain Laurel. Spice-Bush. Balm of Heaven. N. O. Lauraceæ. Tincture of the leaves.

Clinical.—Headache, fronto-occipital; occipital.

Characteristics.—*Oreodaphne Cal*. is a tree which grows to a hundred feet in height. When bruised it emits a strong spicy odour which may cause sneezing. J. Murray Moore proved on himself and friends a tincture of the leaves and produced well-marked fronto-occipital headache < by movement, > by rest. The symptoms were more violent when the tincture was olfacted than when taken internally. The *Med. Cent*. (quoted *H. W*., xx. 84) gives the characteristics of one of its headaches thus: "Dull ache in occipital and cervical regions, extending down to scapulæ; great heaviness of the head, with a constant desire to move the head, which, however, gives no relief."

SYMPTOMS.

2. Head.—Confusion of head.—Dizziness < on stooping and moving about; followed by dull, pressive fronto-occipital headache; > after night's rest.—Internal aching with pressure at inner angle of orbit, r. or l. (esp. l.), never in both simultaneously, extends through brain and across scalp to base of occiput; lasted fro", 30 minutes to 7 hours; < by light; noise; motion; > closing eyes, and perfect quiet.

Origanum.

Origanum marjorana. Sweet Marjoram. N. O. Labiatæ. Tincture of whole fresh plant.

Clinical.—Breasts, affections of. *Erotomania*. Hysteria. Leucorrhœa. Nipples, irritation of. Nymphomania. Seminal emissions. Sexual irritation.

Characteristics.—The "Wild Marjoram" of this country is *Origanum vulgare*, grows on limestone or chalky soil, and yields an oil called Oil of Thyme. *Orig. marjorana*, the "Sweet Marjoram" (which is used for seasoning in cookery), was proved by Dr. Cessoles on himself and two young women; and the symptoms of the proving showed a distinct relation to the sexual organs, which clinical experience has verified and expanded. All kinds of sexual excitement, in females especially, have been remedied by *Orig*. The sexual symptoms were developed chiefly in the female provers, and were these: Sadness followed by joyfulness and thoughts of marriage. Lascivious dreams. Increased desire for coitus. Swelling and itching of nipples and pains in breasts. The additional symptoms in the Schema are cured symptoms collected by Hering. I have frequently verified the power of *Orig*. in morbid sexual excitement in both sexes. Other curious symptoms were: "Impulse to run." "Heat of head; as the heat increased the head was involuntarily turned from side to side." Symptoms were < evening on lying down (vertigo); and < at night (excessive thirst).

Relations.—*Compare:* In masturbation in girls, Grat. In masturbation; desire to run; heat to head and movements of head; affections of breasts, Bufo. In impulse to run, Iod. *Compare also:* Canth., Can. ind., Collin., Hedeoma, Helon., Plat., Val.

SYMPTOMS.

1. Mind.—Impossible to remain tranquil.—Disposition much changed (after four or five days): she became earnest, fearful, silent, sad, discontented, despairing, and weary of life; (after ten or twelve days) irritable, restless, with great anxiety and full of ideas, with need of active exercise, of running in open air (from one to five

drops of tincture).—Sadness the whole day, followed by lively mood and excessive joyfulness, with thoughts of marriage, distraction of mind, and desire for active exercise, *impelling her to run* (in another young woman from 30th).—Lascivious ideas with sexual irritation.

2. Head.—Vertigo on lying down in evening.—Headache in temples.—Heat of head; as heat increased, head was involuntarily turned from side to side.

5. Nose.—Nose-bleed.—Tickling and sensation of constriction in tip of nose.

11. Stomach.—Loss of appetite.—Excessive thirst at night.—Hiccough.

12. Abdomen.—Violent pain in abdomen wakes her from sleep at night.

14. Urinary Organs.—Frequent desire to micturate, waking him from sleep as many as four times in one night.

15. Male Sexual Organs.—Nocturnal emissions.

16. Female Sexual Organs.—Increased desire for coitus.—Erotomania with inclination to suicide in a young girl; great sexual irritation; deep moroseness, believes herself lost or despised.—Great sexual excitement driving her to onanism; scarcely a day passes without indulgence; whenever she meets a man whose appearance is pleasing she is driven to commit self-abuse.—Nearly idiotic from masturbation.—Sexual irritation with leucorrhœa and irritation of pudenda, in an unmarried woman of forty.—Leucorrhœa, sterility, flatulence of uterus."

18. Chest.—Swelling and itching of nipples with pain in breasts, frequently recurring.

20. Back.—Pains beneath the scapulæ.

21. Limbs.—Cramp in sole of r. foot, in l. leg, in fingers and shoulders.

22. Upper Limbs.—Pains in r. hand.

23. Lower Limbs.—Rheumatic pains in r. foot frequently recurring and disappearing.—Pains in the toes.

24. Generalities.—Great physical prostration.—Uneasiness.—Pains in legs and side became so violent that *Camph*. was taken after five days.—Hysteria from excessive irritation of genitals.

25. Skin.—Pale red spots on legs, thighs, and abdomen.—Painful red pimples on outer portion of both legs.

26. Sleep.—Frequent waking from sleep in fright; with trembling.—Dreams: vivid, anxious; lascivious; exciting.

27. Fever.—Heat of head; as the heat increased the head was involuntarily turned from side to side.

Ornithogalum.

Ornithogalum umbellatum. Star of Bethlehem. [A plant of which there are many varieties; nearly allied to Garlic (Allium Sativum)]. N. O. Liliaceæ. Tincture of fresh plant.

Clinical.—Cancer. Flatulence. Gastric ulcer. Stomach, ulceration, of.

Characteristics.—In his *Cancer and Cancer Symptoms* Cooper has published the case of George M., 40, who was suffering from cancer of the stomach, and was operated on in the Cancer Hospital. The operation was abandoned on account of the numerous adhesions, and because it was impossible to remove all the diseased tissue. Cooper saw him first on July 22, 1898, and found him writhing in agony on his bed, unable to keep anything long on his stomach; > by warm foods, < by cold drinks. Pains < at night. They began in stomach, spreading to hands and between shoulders, as if an iron brick were being forced through stomach and chest. There was a visible bulging beneath attachment of diaphragm extending to scrobiculus cordis. Tongue red, coated towards back; bowels confined, sometimes diarrhœa. Patient's father died of gastric ulcer, aged 73. On Saturday, July 23, at 6 p.m., Cooper gave *Ornith*. Ø one dose. This was followed by great pains; he felt almost frantic at 3 a.m. and again at 1 p.m., when the bowels acted. At 3 a.m. he began taking *Carb. v*. 3x every three hours. This was discontinued on July 26th as patient thought it increased the pains, which now extended over the whole body. On the 27th a frothy substance began to come up, giving great relief. Cooper considered this as evidence that the *Ornith*. had touched the disease, but had been restricted in its action by the *Carb. v*. A second dose of *Ornith*. Ø was therefore sent and taken on the evening of July 28th. Almost immediately after the patient began bringing up a black jelly-like substance with great relief to pain and general improvement. From this time the progress was steady. On August 29th the patient in his report said he was keeping fairly well, though at times having great pain in lower part of stomach. And he noted this important additional symptom: "Great difficulty in going to sleep owing to a creepy sensation in limbs. Also on sitting, legs and feet go all of a heap, cannot keep still, cannot read without walking about. Feet also ache and swell." Dose repeated September 9th. On the 18th he reports: Sleep much better. Pain in left leg and foot, but not nearly so bad. Slight pains at bottom of stomach and a little more swelling. Cooper saw him on September 30th, and learned that after the last dose feet and ankles began to swell more, but gradually

got better. On September 23rd right leg felt as if bruised, and is now painful and angry-looking, swollen, and leaves spots on pressure. When eating feels as if food chokes in the stomach; some flatus, bowels regular. Another dose was given, and the effect confirmed Cooper's view that the swelling resulted from "the high pressure put upon the emunctories owing to the setting free of poison in the system." "In a few days," says Cooper, "he came to me in a great fright, and, pulling up his trousers, showed me the terrible condition, as he thought, of his legs. They were swollen, and great red streaks and patches could be seen coursing down the limbs. Believing that these were due to the rapid elimination of the cancer poison, I rather astonished him by insisting on his walking away without any medicine whatever." This patient soon became perfectly well. I saw him myself soon after and examined him thoroughly, and could find no indication of any disease whatever except the scar of the operation. He was alive and well in July, 1901. In the same volume Cooper reproduces from *H. W*. (April, 1898) cases of ulceration of the stomach in elderly women cured with the same remedy. (*1*) Miss J., 50, a thin, drawn-featured woman. Her sister died of cancer of stomach. Fifteen years previously vomited blood, and had been subject to gastric pains ever since. Symptoms: Pains in stomach with sickness; vomiting two or three times a day; feels a pressure in every nerve of body, sometimes in one part, sometimes in another, with pain across the chest sometimes after food, sometimes at night, and sometimes on an empty stomach; *a great deal of wind and sometimes a swollen feeling across the lower chest*; occasional heartburn with rising of food; nasty canker taste in the morning; sleep nut good from the pains; wandering dreams; bowels are confined. *Ornith*. Ø, one dose, November 6th. On 13th was seen again. Symptoms had moderated, vomiting ceased. A new symptom had made its appearance: "Wakes in perspiration at night." That had diminished by the 27th. Pains better; "gets cold before the pains." No heartburn; nasty taste still and confined bowels. Repeated dose. The day after this dose looseness of bowels set in with general relief, which went on increasing under more doses of the remedy till the patient regained almost perfect health and was quite changed in appearance. (*2*) Mrs. K., 62, eighteen months before seized with profuse vomiting of blood. Since then lived on slops and Quaker oats. Lately has spat up clots. Whenever she turns in bed "*feels as if a bag of water turns also*." Feet and legs swollen, unable to walk with ease. A brother is said to have died of cancer. January 12, 1898, *Ornith*. Ø, one dose. January 23rd, so much better she can hardly believe it the effect of the powder. Oppression at stomach gone. The "fluid sack" that rolled about in her inside had seemed to go down, and she felt nothing of it. Feels cheery and light. On February 10th there was a threatened return of the symptoms, but another dose permanently removed them. Cooper adds to the above this account of how he was led to think of *Ornith*. in cancer. "My acquaintance with it in cancer cases was due to the very distinctive disturbance it produced in a woman very sensitive to all alliaceous flavouring substances in food. The dose was taken at midday, and the same evening distension of the stomach and duodenum came on, with *frequent belching of mouthfuls of offensive flatus obliging her to loosen her clothes*, and this

was accompanied by the most hateful depression of spirits and desire for suicide, a feeling of complete prostration and painful sinking across the pit of the chest, and a feeling of sickness that kept her awake the greater part of the night, and that did not pass off for several days. The subject of this disturbance was about fifty-four years of age, of quite a sanguine temperament, inclined to enfeebled digestion, and with a history of pleuritic seizures, and a possible phthisical tendency, but otherwise not subject to any settled form of disease. Since the medicinal thrill above recorded, her general strength, digestion, and capacity for the enjoyment of life have manifestly improved. The *Ornith. umb*. in those sensitive to it goes at once to the pylorus, causes painful spasmodic contraction of it, and distends the duodenum with flatus, its pains being invariably increased when the food attempts to pass the pyloric outlet of the stomach." I have had several opportunities of confirming Cooper's observations on the action of *Ornith*. on the stomach. Mr. W., 44, came to me in August, 1899, with this history: Both parents died of cancer. He had had a weak stomach for two or three years and was wasting. Has to get up in the night to vomit. Brings up green and yellow liquid. Much flatus, "swells up in balls of wind." Abdomen large and hard; spleen rather large. Venous zigzag. Stools loose, watery, slate-coloured. Urine scanty, dark. Vaccinated three or four times. Under *Thuj*. 30 once a week he made good progress, the vomiting ceased, and he began to put on flesh. He developed an offensive body odour, which disappeared under *Sul*. 30; but on October 13th symptoms were rather worse. Some distension; wind does not pass freely. Rumbling before stool. Balls of wind roll about, but not as badly as at first. Frothy, acid vomiting which relieves. I now gave *Ornith*. Ø, one dose, repeated three weeks later, with manifest improvement in the symptoms. Body much less hard and distended; sleep good; appetite good; cessation of vomiting and gain of three pounds in weight. When he returned the symptoms were different and another remedy was required, and then he considered himself cured. I have put into Schema form the main symptoms cured and caused by *Ornith*. Cooper particularly insists on his method being followed: a dose of a single drop being allowed to act till all trace of its action has disappeared.

Relations.—*Compare:* All. sat. In flatulence, indigestion, &c., All. sat.; Abies n., Cham., Chi., Carb. v., Lyc.

SYMPTOMS.

1. Mind.—Hateful depression of spirits and desire for suicide.

8. Mouth.—Tongue red, coated towards back.—Nasty canker taste in morning.

11. Stomach.—Distension of stomach and abdomen, with frequent belching of mouthfuls of offensive flatus, obliging her to loosen her clothes, with hateful depression and tendency to suicide; complete prostration and painful sinking across pit of chest; and a feeling of sickness that kept her awake the greater part of the night; (this was followed by great improvement in strength, digestion, and

enjoyment of life.).—Writhing in agony, unable to keep anything long on stomach; > by warm food, < by cold drinks.—Pains < at night, begin in stomach, spread to heart and shoulders, as if an iron brick being forced through stomach and chest.—Bulging beneath attachment of diaphragm extending to scrobiculus cordis.—When eating feels as if choked in stomach.—Pains in stomach with sickness; vomiting two or three times a day.—Great deal of wind and sometimes swollen feeling across lower chest.—Heartburn and rising of food.—Feels as if a bag of water turns when she turns over in bed.

12. Abdomen.—Hardness and distension of abdomen.—Wind in balls rolling from side to side.

13. Stool.—Bowels confined.—Diarrhœa >.

23. Lower Limbs.—Legs and feet go to sleep on sitting.—Creepy feeling in legs keeps him awake at night.—Right leg felt bruised and sore; later, angry and red.—Legs swollen, great red streaks and patches coursing along them.—Legs and feet swollen, preventing walking.

24. Generalities.—Gets cold before the pains.—Feels a pressure in every nerve of the body, sometimes in one part, sometimes in another, with pain across chest, sometimes after food, sometimes at night, and sometimes on an empty stomach.—Restlessness on account of creepy feeling in feet; cannot sit still; cannot read without walking about.

26. Sleep.—Great difficulty in going to sleep owing to creepy feeling in limbs.—Sleep disturbed by pains.—Wandering dreams.—Waking in perspiration at night.

Osmium.

OSMIUM. The Element. Os. (A. W. 190.3). Trituration of the precipitated metal.

OSMICUM ACIDUM. Osmium tetroxide. OsO_4. Dilutions with absolutely pure water.

Clinical.—Asthma. Bronchitis. Cold, liability to. Coryza. *Cough, spasmodic*. Eczema. Erections. Glaucoma. Headache. Hernia. Herpes iris. Larynx, pain in. Penis, sores on. Pollutions. Post-nasal bleeding. Post-nasal growths. Spermatic cords, pains in. Sternum, pain in. Syphilis. Syphilitic eruptions. Testicles, pains in. Tongue, sore. *Trachea, pain in*.

Characteristics.—*Osmium* is a metal of the *Platinum* group, in association with which it is always found. It is the heaviest of them all and the most refractory,

having never been fused. It derives its name (όσμή odour) from the pungent odour of the fumes of *Osmic acid*, which are evolved in the process of separating *Platinum* from its ore, and the effects of which have supplied a number of valuable symptoms in cases recorded by J. G. Blackley (*C. D. P.*). In the arts it is used in the alloy with iridium (*Iridosmium* or *Osmiridium*) for making the tips of gold pens. Triturations of the pure metal have been proved. The symptoms of the metal and of the acid are taken together. The odour of *Osm*. closely resembles that of *Chlorine*, as also do its irritating effect on the respiratory mucous membrane. The odour imparted to the secretions is various it makes the urine smell like violets; the eructations like radishes the axillary sweat like garlic. The respiratory tract is irritated from beginning to end, and not only irritated but pained. The nostrils and larynx are sensitive to cold air. There is pain in larynx, trachea, and in and under sternum on coughing. Even talking causes pain in larynx. Cough convulsive in paroxysms; hollow sounding as if one coughed into an empty tube; caused by irritation in larynx or low down in chest. As with so many remedies causing cough and asthmatic symptoms, *Osm*. is no less irritating to the skin, producing all degrees of irritating eruptions, eczematous and herpetic. In one of Blackley's cases a child born during the time that his father was under the influence of *Osm. ac*. developed eczema, though none of the previously born children were eczematous. In one of the provers the eruption proceeded from above downwards, the eruption disappearing from the upper part of the body and becoming worse on the lower. The downward direction of the symptoms also appeared in the male generative sphere, which was profoundly influenced: "Weakness in both groins towards cords." C. M. Boger (*Med. Couns*., xvi. 264) cured a case in which there was pain in both directions: "Stitching pain upward in left spermatic cord. Creeping sensation downwards in left spermatic cord. Weakness in calves; they give out while walking." [Shootings in the sternum are "up and down."] In another case (man, 44, syphilitic) he cured: "Dull, steady pain in hypogastrium, sore to pressure. Steady aching in glans penis." In the provings the erections were severe almost to priapism, and the ejaculations were longer-lasting and more copious than normal. The kidneys were affected in one of Blackley's cases, incipient nephritis being set up. The headaches of the provings were of a violent description, many of them affecting the base of the brain. A woman, 62, to whom I once gave *Osm*. 2x for a spasmodic cough with pain in the head had a severe aggravation, the headache taking this form: "Sharp pain in centre of forehead going through to back; > by hard pressure on forehead." She discontinued *Osm*. and in two or three days that pain went away, leaving only an ordinary headache. The cough was not relieved. G. S. Norton (*H. W*., xviii. 263) suggests that *Osm*. may be a remedy in many cases of glaucoma. Among the *peculiar sensations* are: As of a band round head. As if he had swallowed broken stones. Cough as if caused by resonance of contiguous parts. As if insects crawling on back and shoulders. Legs and feet as if too full. The symptoms are < by touch (tongue, sternum). < Riding (hoarseness). < Coughing; talking (pain in larynx). Most symptoms are < evening (cough, skin, restlessness). Cough < till midnight. Open air < (coryza, cough).

(One prover was less liable to taking cold in November than usual.) Open air > (smarting in eyes).

Relations.—*Antidoted by:* Sulphuretted hydrogen, Phos. ac.; Sil. (swollen gums); Hep. and Spo. (pain in larynx); Bell. and Merc. (laryngeal catarrh). *Compare:* Iridium, Selen., Tellur., Thall., Plat., Pallad. In eyes and lungs, Chlor., Bro. Skin of nails, Flu. ac. Itch, Sul. Coryza, cough with pain in larynx, Cep. (but Cep. has > in open air). Eruptions, Ars., Rhus.

SYMPTOMS.

1. Mind.—Morose, irritable, impatient.—Weeping mood, screaming with cough.—Weak, gives up.—Consciousness of mental weakness; misplaces words.—Thoughts of accidents having happened to others, these thoughts grow upon him as if he were to do the same injuries to others.—Disinclination for work.

2. Head.—Dull, heavy headache.—Violent headache above and under the eyes, one-sided, extending to the ears; < below the eyebrows; the eye waters.—Headache in r. upper forehead, a tearing to and fro deep in; at same time similar pains in bones of limbs, deep in, evening.—Sharp bewildering pain centre of forehead going through to back, > by pressing on it.—Aching: in base of brain and jaws at night; extending from base of brain into jaws; < temples, with pain in larynx and hoarseness; nearly preventing sleep; like a band around head above ears.—Pain in vertex and occiput all the afternoon, < throwing head backward, with fulness.—Falling off of the hair.

3. Eyes.—Sharp pain in orbit (as if in bones); lids spasmodically closed.—Burning pain in eyes, with profuse lachrymation.—Weakness of sight (< r. eye).—Dimness of sight; letters run together as from a fog.—Smarting, > open air, but leaving eyes weak, so as to prevent reading, all objects surrounded by a coloured halo, eyes red and swollen.—Flame of candle surrounded by a bluish-green or yellow circle; or a rainbow ring; the flame looks larger or less distinct; at a distance it seems enveloped by dust or smoke.—Veins at fundus large and tortuous.—(Glaucoma.)

4. Ears.—Ringing in r. ear.—Tingling and pain in r. ear.—Earache evenings; first r. then l. ear.—Severe pains in l. petrosum.—[Perforations with irritation of meatus (both sides), sneezing, catarrh, sore throat, pasty posterior nares.—Itching in the ears; profuse nasal catarrh.—Meatus and membrane look red, and latter is perforated; thin but stringy discharge from nose.—Deafness; ears pain when nose is blown; mouth open; sleep noisy.—Girl of 14 with post-nasal growths improved rapidly under Osmic acid, 3x, but was seized with exhaustion; then under *Hydroc. ac.*; got quite well.—(Cures by Cooper)].

5. Nose.—Sensation as if blood rushed into nose from head.—Coryza with sneezing.—Sneezing and fluent coryza, with tickling in larynx, with difficult

respiration.—Discharge from posterior nares of loose mucus.—Burning irritation in nose.—Nostrils sensitive to cold air.—Sense of smell diminished.—(Post-nasal growths: adenoids.—R. T. C.)

7. Teeth.—Jerking pain in a r. upper hollow molar, often preventing, speech, afterwards the pain returned but was drawing, > sucking it with tongue.—Sudden swelling of gum above root of an upper l. incisor after eating pears, with pain and numbness; > by *Silic*.

8. Mouth.—Aching in jaws; pain in muscles of mastication.—Tongue: coated; and bad taste to coffee; fissured and one spot denuded; edges rough (and covered with pimples); red stripe in middle (paining as if sore).—Tongue sensitive to touch when eating and drinking.—Mouth sticky and pasty.—Copious salivation.—Taste of blood; metallic; unusual to tobacco, it causes scraping in throat, cigars cannot be smoked because they provoke cough and < the rawness in larynx; taste blunted.

11. Stomach.—Aversion to cocoa.—Eructations; nausea; vomiting.—Qualmishness and extreme discomfort, with dull pain and heaviness in pit of stomach.—Aversion to coffee and tobacco, disgust at their odour.—Eructations of odour of radishes.—Nausea: in morning, with discomfort in pit of stomach; on coughing; after eating, with pain and heaviness in pit of stomach when riding in open air; > empty eructations.—Vomiting of watery mucus of the odour and taste of the acid, with blackish-grey flakes of mucus.—Paroxysmal vomiting of water, afterwards of yellowish and tenacious substances.—Distension of stomach and abdomen in evening, with difficult passage of flatus.—Constriction in forenoon; in epigastrium before dinner (which I take at 12.30), with weight and often a feeling in stomach as if I had swallowed stones.—Chronic vomiting, with pressure in stomach.

12. Abdomen.—Abdomen distended and sensitive; much rumbling.—Pain in groins, that on coughing extended into testicles.—Pressure on inguinal rings.—Weakness in groins towards spermatic cords.

13. Stool and Anus.—Diarrhœa: nine or ten times daily, preceded or followed by colic, nearly always with black blood (no hæmorrhoids); (diarrhœa after coffee).—Stools mushy, frequent.—Bilious stools, partly fluid, delayed, hasty, with burning at anus.—Constipated stools; small, delayed.—Stool: hard, then soft, orange-coloured; dry, full of air, delayed, next day scanty and small; only a small lump like a marble, difficult.—Tendency to piles.—Urging but passage of only flatus; urging, then stool, first part hard, then soft, with burning in anus preventing sleep, urging with desire for stool, but evacuation of only a little mucus.—Constipation.—Burning in anus during and after stool.

14. Urinary Organs.—Diminution or suppression of the urinary secretions.—Urine albuminous; strong-scented (high-coloured, smelling of violets, apparently full of

bile); dark brown (porter-coloured) and scanty; deposits bright-red sediment.—Bright's disease.

15. Male Sexual Organs.—Violent pain on the point of penis and prepuce.—Glans red on l. side, during coition a long-lasting emission of semen.—Throbbing, stinging, pinching in l. side of glans.—Hard erections; often after midnight, always on waking in morning, later they last longer, even after rising, desire moderate.—Erections every morning, earlier and harder.—Pain: in r. testicle; in testicles, preventing sleep all night; in spermatic cords, < l.; in spermatic cords extending into testicles, with inflammatory swelling of r. inguinal glands.—Appetite suppressed, the conjugal act done by volition, and the usual thrill in ejaculation absent.

17. Respiratory Organs.—Larynx, tickling; sore pain; burning.—Mucous secretion increased; profuse secretion of mucus in air passages; it hangs in larynx like a string, causing hawking and coughing with straining to vomit; has to swallow it; when sneezing the mucus becomes loose easily.—Dryness of the throat when coughing.—Hoarseness and pain in larynx; with cough and coryza.—Hoarseness, < from singing, and < on entering the house.—Burning irritation in trachea.—Spasmodic coughs in attacks (with twitching of fingers, dryness of throat and crying).—Cough sounds as if one coughed into an empty tube; or as if caused by resonance of contiguous parts.—Cough with sneezing.—Cough: only in morning; from scraping in larynx; with pain in larynx; with constriction of trachea; convulsive; in short bursts on rising, without expectoration, in short bursts (after coryza), returned during day, disturbing sleep till midnight, from tickling in larynx, after sneezing a lump is loosened, which he must swallow; dry, spasmodic; dry, rattling, difficult to loosen; short, dry, paroxysmal, as if mucous membrane would be torn off, with and followed by raw, sore pain in larynx and trachea, extending to middle of sternum.—Hacking cough; > deep inspiration; < motion in open air, with irritation in larynx.—Cough, with secretion of colourless mucus.—Bronchitis.—Chronic dyspnœa.—(Heaves in horses.)

18. Chest.—Moist râles on breathing and in larynx.—Wandering pneumonia.—Sticking near l. lower rib.—Pain beneath sternum on coughing, extending to sides of chest, with burning soreness, after coughing long lumps of yellow, tenacious mucus were loosened.—Sternum sore, painful to touch, independent of cough.—Shooting up and down in sternum.—Oppression; > deep inspiration, with difficult respiration as if lungs were collapsed and could not get air enough.—Tightness, dread of breathing, sore pain when air enters lungs.—Dryness in chest.

19. Heart.—Anxious palpitation.—Pulse rapid.

20. Back.—Pressive pain in back and loins.—Pain: in sacral region.—Peculiar pain extending from scapula to sacral region, < motion and cough.

21. Limbs.—Heaviness and weariness of limbs, < knees.

22. Upper Limbs.—Perspiration in axillæ smelling like garlic.—Pulsating stinging on inner side of r. shoulder-joint.—Pinching above l. elbow, inwardly and on inner posterior side.—Pain: in middle of l. humerus, then in l. fingers; in bone of l. elbow.—Paralytic pain deep in radius.—Pinching in bones of r. forearm.—Pain in bones of l. wrist in morning after stool.—Pain in r. index, esp. in phalanx, stinging and twitching towards tip, in forenoon.—Stabbing: in tips of l. fingers and thumb; in attacks, in finger tips, < l.—Burning pain in l. ring finger.—Fold remains attached to growing nail, < r. side and mostly middle finger.

23. Lower Limbs.—Rash on thighs and on ankle.—Fulness and restlessness in legs and feet, quite unbearable; has to lie down at 9 p.m.—Legs almost insensible.—Sudden pain in hip-joint as if it would be dislocated, preventing walking.—Ulcerative pain in l. leg and gluteal muscles.—Pain in r. ankle.—Flying cutting in bones and joints of r. foot.—Pinching in bones of l. heel, then r.

24. Generalities.—Great weakness and prostration (all day, with muddled head and aching limbs and body; on rising; on rising after a restless night).—Cutting and pinching pains in limbs.—Tearing to and fro deep in r. upper side of forehead and in bones of limbs in evening.—General sick feeling.—Restless.

25. Skin.—Red spots on dorsum of hands.—Copious exanthema on forearms, hands, and cheecks.—Red-brown papules, with desquamation, on forearm and hand.—Small, itching, pointed vesicles, surrounded by red areola on back of l. hand, between thumb and index (where six years before scabies had broken out), and on ulnar margin of l. hand, from metacarpal joint to phalanges of little finger, and on outer surface of wrist, on r. hand itching, but no vesicles.—Itching as from crawling of insects.—Face red, tender, covered with pimples with watery heads, then pimples on knuckles, gradually spreading over hands and arms, later hands and forearms covered with red, slightly raised circular or elliptical patches, covered with concentric scabs, resembling later stages of herpes iris, most of patches deeply fissured, patches irritable, < morning on rising and at night on undressing, papules on neck.—Redness of hands and arms, with swelling and itching pimples, gradually becoming vesicular; on face, neck, and forearms patches of vesicles on an elevated base, the latter hard, brawny, and pitting on pressure, towards the edges the patches consist of one or two vesicles on the summit of a large pimple, contents of vesicles watery, occasional cracking of affected skin and constant oozing, the itching makes him irritable.—Eruption on forearms, head, and side of face.—Eczematous rash on face and upper limbs.—Prickly heat disappears on upper half of body and increases on lower, first on thigh, then on leg, then on ankle.—Burning stitches in many places, < r. upper lid and at inner border of nail of

l. fourth finger.—Itching: on legs and ankles, in spots near l. hip, 3 to 4 a.m., when erections return; above crest of l. ilium, with redness and pointed spots as if tetter would appear; as from crawling insects, on shoulders and back in evening on going to bed, it scarcely permits sleep.

26. Sleep.—Sleepiness; overpowering.—Sleepless.—Restless sleep; with painful dreams.—Sleep heavy, interrupted by nightmare.—Dreams: of fire, confused, but not frightful; unremembered of activity and of serious and important events.

27. Fever.—Shivering, < back.—Fever, with difficult respiration; fever, with hot and dry skin.—Sweat in axilla, smelling of garlic, < evening and night.

Ostrya.

Ostrya virginica. Hop-hornbeam. Iron-wood. Lever-wood. N. O. Cupuliferæ. (Corylaceæ.) Tincture of heart wood.

Clinical.—Headache, dull. Head, numb. Intermittent fever. Liver, affections of. Lumbago. Malaria. Malarial anæmia.

Characteristics.—The Hop-hornbeam, *Ostrya virginica*, is sometimes regarded as a variety of the common Hornbeam naturalised in America, though native to Southern Europe. The chief difference between them is that *Ost. vulg*. has pendulous and *Ost. virg*. upright catkins. The wood, from preparations of which the provings by Burt and others were made, is exceedingly hard and heavy. The symptoms show a marked action on the liver, with the usual dull headache and pain in back and shoulders; cutting, sinking pains in abdomen. Allen put in italics the following: "Tongue coated yellow at root." "Loss of appetite for breakfast and dinner." "Frequent nausea with the dull frontal headache." On the other hand there is increased appetite; hunger wakes the patient at 4 a.m.; and sinking at epigastrium. *Sickening* pains were much complained of. Some of the stools were very black. The symptoms were < moving; stooping; walking. < 6 a.m.; 4 a.m.; 3 p.m.

Relations.—*Antidoted by:* Macro., Bry., Nux (lumbago). *Compare:* Waking in night hungry, Ign., Lyc. Black stools, Lept.

SYMPTOMS.

1. Mind.—Very nervous, with dull headache.

2. Head.—Light feeling in head (with stomach symptoms); < walking.—Dull headache with numb, prickly feeling in head, face, and hands; < head.—Sharp pain from within out back of mastoid process.—Severe throbbing frontal

headache, < stooping.—Dull frontal headache with nausea.—Severe pressing pain r. temple; and r. molars.—R.—side headache, morning.

4. Ear.—Drawing pain deep in l. ear.

6. Face.—Moist freckles in face, head, and hands.

8. Mouth.—Boring and sharp pain in r. lower molars.—Tongue coated yellow at root.—Taste: coppery, slimy; sweet, shiny; bitter; rough.

11. Stomach.—Appetite greatly increased.—Woke with hunger 4 a.m.—Loss of appetite.—Frequent nausea with the dull frontal headache.—Sour stomach.—Burning distress in epigastrium.—Sensation as if indigestible substance in stomach; > by eating.—Nausea and distress after riding in cold air.—Hard sickening pains in epigastric and umbilical region; awaking him at night.—Sinking in epigastrium.

12. Abdomen.—Dull pain in r. hypochondrium, < by walking; with nervousness and dull headache.—Dull pains in r. lobe of liver with sour eructations.—Retraction of umbilicus.—In umbilical region: frequent, hard sickening, cutting pains; extending into hypogastrium; with desire for stool; with borborygmi and tenesmus; neuralgic pain; constant distress.—Rumbling; flatus; pain waking him in night.—Bowels felt as if bound by lead poisoning.

13. Stool and Anus.—Rectum feels sore; protruded feeling after stool.—Stool: loose; bilious with tenesmus and straining; loose without tenesmus; tenesmus followed by diarrhœic stool; mushy with burning at anus and tenesmus; small, natural; dark-coloured, natural; black, dry lumps 6 p.m.; very black.

20. Back.—Back so painful, can hardly turn in bed; cannot sit up (> by *Macro., Bry., Nux*).—Dull pain in whole dorsal region; extending into l. hypochondrium.—Constant lumbar and sacral pain, < stooping or walking.

21. Limbs.—Arms and legs: aching; dull pains.

22. Upper Limbs.—Fine drawing rheumatic pains in l. fingers, morning.

23. Lower Limbs.—Awoke several times with cramp-like pain in lower limbs, < walking.—Drawing pains in r. ankle.

24. Generalities.—Nervous, languid, weak, uneasy.

26. Sleep.—Constant desire to yawn.—Sleep restless, as after strong tea.

27. Fever.—Cold, chilly about shoulders.—Gentle sweat over entire surface, with feeling of weakness.

Ovi Gallinæ Pellicula.

Membrane of the Shell of a Hen's Egg. The fresh membrane is triturated in 0.95 alcohol, allowed to digest several days, and then potentised (Swan).

Clinical.—Amenorrhœa. Catarrh. Coryza. Heart, oppression of. Hip, left, pain in. Leucorrhœa. Menstruation, irregular. Ovaries, pains in. Post-nasal catarrh. Pruritus vulvæ. Throat, sore. Uterus, misplacements of; prolapse of; retroverted (?). Vertebræ, pain in. Vulva, soreness of.

Characteristics.—This preparation was made by Swan, and proved by a young lady, a patient of J. C. Boardman. Swan's paper was read before the Denver Homœopathic Club, and published in a number of *Med. Visitor*, the date of which I have lost, with additions from *H. P.*, xiii. 323. Under *Calc. ov. test*. I have given an account of the action of Egg-shells in leucorrhœa, and Swan adds that it has an ancient reputation for "immoderate flux of the courses" (like our *Calc. c.*), and for nocturnal enuresis. The Egg-shells were anciently used powdered fresh or roasted, and as such were and are much used in the treatment of oxyuris vermicularis. Swan prepared the membrane. As an ovarian product it might be expected that all parts of the egg should have an action on ovaries. It is recognised that as an article of diet in some forms eggs have a stimulating effect on the sexual functions. The provings of *Ovi g. p.* bear out this relation. The first prover was a young lady who was known to be unable to bear any extra exertion, but the details of this were not known until after she had taken the first dose of the c.m. sent by Swan. This had the effect of removing suddenly the whole of the trouble which prevented her from exerting herself—a left ovarian pain extending down the left limb, brought on some years before, when she felt something "give way" in the groin whilst shovelling snow. The sensitiveness to exertion never returned, though the dose created much disturbance of the generative functions before it had finished its action. The symptoms of the second prover, a married woman who took the 30th, confirmed the symptoms, both cured and pathogenetic, experienced by the first. This prover had also hæmorrhage from the rectum; incontinence of urine whilst sneezing or coughing; post-nasal catarrh. Yingling contributed this case to *Hahn. Adv.* (quoted *Amer. Hom.*, xxii. 412): H. E., 42, blonde, had these symptoms: A dull, hard, heavy aching in region of heart; generally about apex; extending at times to left ovarian region. Occasionally a cutting which extends to base of heart and prevents breathing; after the cutting a sensation as if something went "thud," after which pain seems to recommence at apex. At times heavy aching in base of heart, which makes breathing very difficult. Only bending backward > respiration. *Ovi g. p.* (a preparation of Fincke's) one dose, dry on the tongue. In a very few minutes the pain was all gone. "Feels splendidly since taking the remedy." Without knowing what it was, said she had "a taste of fresh eggs in the mouth since taking the powder." Among the noteworthy features of the provings are: *Suddenness* of onset and ceasing; both provers manifested these. Jerkings on going to sleep and in

sleep; heat in sacrum, the rest of the body being cool. The bearing-down sensations in the uterus were very marked. Pushing and rushing feeling in womb, as if blood might rush out in torrents (which sometimes happened and sometimes did not). Sensation as if something turned over inside. The symptoms were < by movement; reaching lifting arms; over-exerting. < At menses: before, during, and after though some symptoms were > when flow appeared. > Bending backward (dyspnœa in cured case). > jarring or beating breast (dyspnœa). < Pressure and touch (abdomen, breasts, ovaries); intolerance of pressure of clothing. < Descending stairs. < At full moon.

Relations.—*Compare:* Calc. ov. test. (leucorrhœa, &c.). In pains in heart and left ovary, Naja. Clinkers in catarrh, K. bi. Sensitiveness to touch and pressure, Lact., Lyc. Suddenness of pains, &c., Bell., Lyc. Symptoms > by flow, Lach.

Causation.—Over-exertion. Strain.

SYMPTOMS.

1. Mind.—(Deep melancholy; in connection with ovarian pain.).—Depression before menses.—Hopeless, tearful mood.—Profound melancholy, without knowing cause, passing off like a cloud.

2. Head.—Whirling sensation in head and sense of depression.—Dizziness, fear of failing, and catching her breath on descending stairs; or walking on anything narrow when raised above the ground.—Fulness of head with great pressure outward in mastoid region, with headache in occiput (cured).—Occipital headache.—Aching pain, afternoon, from back of l. ear, extending down towards shoulders half-way from neck.

3. Eyes.—Sharp darting pains in l. eye through to occiput; very violent compelling him to press eye to prevent its leaving its socket, which it seemed as if it would do (Ballard).—Sensation of a shade over eyes.—Sunken eyes, haggard look.

5. Nose.—From a slight change of underclothing, severe cold and coryza, with much mucous discharge from nose, came suddenly, lasted three days, ceased as suddenly, much mucus discharged from nose (quite different from usual colds).—Sensation of severe cold, sneezing catarrh, cracked lips.

6. Face.—Looks haggard; eyes sunken; skin discoloured, dark.—Eruption of small pustules on forehead and chin.—Slight soreness and stiffness of jaw (passed off in a few hours).

8. Mouth.—Exceedingly and peculiarly offensive breath during menses (a lady near said it was indescribable, seemed to enter her mouth and pass directly to her womb).—Taste of fresh eggs in the mouth.—Exceedingly acid saliva (cm).

9. Throat.—Sore throat l. side as if it had been scalded; lasted several days, only at night; catarrh with hard clinkers hawked back, which would invariably shoot down the throat.—Sore throat with sensation of a lump on l. side low down causing cough; throat looked inflamed; tonsils swollen.—Sensation of dryness causing cough, tonsils inflamed on one side (*Kalm.* >).

11. Stomach.—Nervous dyspepsia; low spirits; very weak; sleeplessness occurring every week.—Sensation of lump between lower end of sternum and back as if a hard potato had been swallowed; with this severe sacral pain (relieved with cm).—Burning and heaviness in pit of stomach (cured).—Vomited three gall-stones.

12. Abdomen.—Suddenly a pain in epigastrium passing down in middle line, then pain in l. ovary to l. limbs.—Distended almost to bursting, before menses, with bearing-down pain.—Heavy pressing down in lower abdomen.—Between periods, l. side of abdomen very sore, with sharp pains occasionally darting through it, and bearing down in womb as if weight hanging to it.—Pain in hypogastrium, < on side lain on, and in sacrum when lying on back.

13. Stool and Anus.—Constipation; stools irregular, from five to eight days.—Stool mixed with a sand-like substance that fell heavily to bottom of vessel and was voided with much pain.—Diarrhœa with cutting colic pains (was icy cold), in a collapsed state.—Increased peristalsis.—Diarrhœa mixed with corrugated skins.—Griping cramps and diarrhœa coming suddenly; at night.—While riding in cars, sudden (bright) hæmorrhage from rectum, severe pain across sacrum.—During menses, followed by burning at anus; hæmorrhage from bowels.

14. Urinary Organs.—Every time she sneezes or coughs the urine spurts out (after cessation of menses).—Urine scalds vulva, esp. r. side, which itches intensely.—Urine dark yellow-red.

16. Female Sexual Organs.—(At age of sixteen, whilst shovelling snow, felt something give way in l. groin, causing great pain, extending down thigh to knee, feet, and toes, compelling her to keep in bed; afterwards always set up afresh by any slight extra exertion, using arms, reaching up, lifting; also and esp. whilst menstruating when the ovarian pain was <, and severe bearing-down pains were added; entirely > by keeping quiet and idle. Took *Ovi p. g.* cm (Swan) whilst in the middle of an attack from over-exertion. In about an hour the pains *left suddenly*, she got up and dressed, and was never affected by exercise again).—During menses excessively and peculiarly offensive breath.—Night before menses, awaked 1 a.m. with pushing sensation downward in lower abdomen as though the blood might rush out in torrents, suffering intense, but no blood appeared or any fluid, till following night, when menses came on; during the sensation abdomen was distended as if it would burst.—Four days later, whilst playing banjo, seized with whirling sensation in head, sense of depression, weakness, giving-way feeling in lower limbs and knees, followed by a pushing down (no pain), rushing feeling in

womb followed immediately by a profuse flow of blood, rushing out, lasting an hour and then ceasing, during flow other symptoms completely >.—At 8.30 a.m. seized with a pain in epigastric region passing down middle line, then pain in l. ovarian region, then l. hip, then back of l. thigh to hollow of knee, with weakness of l. side, and esp. l. limb; then another discharge of blood, coming on alternate days.—Heavy pressing down in lower abdomen.—Sensation as if menses coming on (but they did not).—After menses, leucorrhœa, thick, white, cream-like; preceded by sharp pain in womb as during menses; leucorrhœa lasted as long as menses, occurring every morning and not on alternate days as menses did.—While stooping had a pain in l. lower abdomen, and a sensation as if something within her turned or rolled over; ever since has felt exceedingly well, more joyous and happy and more free from attacks of depression; no pain; no blood; no leucorrhœa.—Pains and aches in uterine region and l. ovary as if menses coming on (eighteen days before due).—Itching of r. labia extending outward to edge.—During menses very sleepy.—After menses: slight pain in front of l. thigh; sore spot on pressure in l. ovary; breasts sore, sensitive to pressure.—Menses flowed all night, colourless, profuse, penetrating clothing; in morning began to be red, profuse, painless.—Before menses for twenty-four hours, depression, dull, digging pains in lower abdomen.—Between periods bearing down as if weight hanging to womb.—After menses cannot bear pressure of clothes, has to suspend them from shoulders (passed off suddenly).

17. Respiratory Organs.—Violent cough, with coryza, oppression, and tightness of chest.

18. Chest.—Tightness across chest, oppression.—Congested, suffocative feeling in chest as from wind, in centre under sternum, > beating it with the hand; by jarring; (query: in heart?).—Breasts sore, sensitive to pressure (after menses).

19. Heart.—Dull, heavy aching in region of heart, generally apex, with cold, numb feeling internally, extending at times to l. ovary (cured).

20. Back.—Backache, with feeling as if a vertebra had dropped out of lumbar region, and as if spine were tied together with strings.—Pain in every vertebra of spine.—Sharp pain through spine crosswise.—Severe pain across sacrum (with hæmorrhage from rectum).—Awakened at night with much heat in sacrum, rest of body cool; good deal of aching pain across sacrum and nates.

23. Lower Limbs.—Pain in l. hip (from ovarian region), down back of thigh and knee; whole limb weak.—Ache over l. hip, seemed to extend in deep, > during menses, < after.

24. Generalities.—Weakness and giving way feeling,< in lower limbs, esp. knees, followed by pushing down, rushing in womb.—Debility with dread of motion; wants to keep quiet.—Intolerance of bands on wrists, arms, waist, or garters.

26. Sleep.—During sleep, and immediately on going to sleep, whole body jerked (during menses).—Very sleepy during menses; between the hours of 10 a.m. and 3 p.m. suddenly taken with intense drowsiness, sometimes overcoming the will to keep awake.

27. Fever.—Griping chills.

Calcarea Ovi Testæ.

Egg-shell. Trituration of the shell, not including its lining membrane.

Clinical.—Leucorrhœa. Warts.

Characteristics.—This preparation of *Calcarea* has been used in preference to others in cases of simple bland leucorrhœa. Water in which eggs have been boiled is popularly supposed to have the property of causing warts if brought in contact with the hands. This suggests *Calc. ov. test*. as possibly the best *Calcarea* preparation to prescribe in cases of warts. No doubt *Calc. ov. test*. has the general properties of *Calc. carb. ostrear*. (i.e., ordinary *Calc. carb*.), but it has been little used clinically, "Backache, as if broken in two," is a keynote.

Oxalicum Acidum.

Oxalic Acid. Hydrogen Oxalate. $C_2H_2O_42H_2O$. Trituration. Tincture.

Clinical.—Angina pectoris. *Back, pain in. Chest, affections of*. Cholera infantum. Convulsions. Deltoid rheumatism. Enuresis. *Eyes, affections of. Gastrodynia. Gout. Gravel*. Hernia. Indigestion. *Meningitis. Myelitis*. Nails, blue. Neuralgia. Neurasthenia. *Nose, affections of. Numbness. Oxaluria. Paralysis*. Pregnancy, sickness of. *Side, pain in*. Spasms. Spermatic cord, neuralgia of. *Stomach, affections of*. Tetanus. Testicles, induration of; pains in. *Tongue, affections of. Urine, abnormal. Voice, altered*.

Characteristics.—If *Opium* is the painless remedy, *Oxal. ac*. may be considered its antithesis: it causes pains excruciating beyond description, and it has this grand keynote distinction, that its pains are all < when the patient thinks of them. And not only that, thinking of pains and conditions will bring them on when they are not actually present. If the patient thinks about urinating he must go instantly and relieve the bladder. Full doses of the poison cause corrosion of the passages, excruciating agony in back, chest, stomach, and abdomen, destruction of mucous membrane, bloody vomit and stool, and death by exhaustion, consciousness being

generally retained to the end, though sense of sight may be lost. Coldness of surface, numbness, mottled skin, blue nails, are present in all degrees of the drug's action, and are leading notes for its use. The excruciating pain in lower back and loss of power in the lower limbs shows an unmistakable action on the spinal cord and its meninges. These symptoms are better seen in less severe cases of poisoning. I take two cases from *C. D. P.* (*1*) A middle-aged shoemaker, a hard drinker, took 1/4 oz. of *Oxal. ac.* in crystals. Prepared chalk was given freely. Symptoms: Severe burning sensation in mouth and throat with great thirst and difficulty in swallowing; excruciating pain in epigastrium, and cold, clammy perspiration; numbness and tingling in extremities, legs drawn up towards abdomen; pulse was just perceptible; breathing slightly spasmodic; features anxious, pallid. At 8 p.m. (nine hours after observer's first visit) hot feeling in throat and tingling in extremities continued. *Voice altered*; instead of a remarkably deep bass it was reduced to a very low key, like one talking in an undertone. This lasted a month, during which period the legs used to "go to sleep" several times a day. After nine weeks the voice, though stronger, was still "a complete old man's voice." (*2*) A woman took three drachms in three ounces of water. Most of it was evacuated within fifteen minutes by stomach-pump. Symptoms: Convulsions; spastic contraction of jaws and limbs; forcible closure of mouth and drawing down of its angles. Dilated alæ nasi, corrugated brows, twitching of facial muscles and insensibility. Great cerebral excitement afterwards occurred with dry coldness of surface and imperceptible pulse. Symptoms were less marked during intermission of tetanic spasms, and declined in three hours. In animals poisoned with *Oxal. ac.* the first symptom is stiffness of hind limbs. Farrington sums up the indications of *Oxal. ac.* in spinal affections: Weak loins, hips, legs, numb back; numb limbs. Limbs blue and cold; weak and numb; < going up stairs. Limbs *stiff*; paroxysm of dyspnœa (as in spinal meningitis). [The mottled purpuric surface of meningitis gives another indication.—J. H. C.] Pains in small spots [especially linear spots]. Pains < when thinking of them. Erections with dulness in occiput. In a case of paraplegia, affecting first right then left leg, of a year's duration, in an American lady, mother of four children, W. M. Butler (*N. A. J. H.*, i. 797) gave great relief with *Oxal. ac.* 3. In a few weeks the motory symptoms were better, then the sensory. Sensation to heat and cold was restored, general tactile sensibility was improved. Some control was gained over bladder and rectum.—The involuntary muscles are affected by *Oxal. ac.* no less than the voluntary. There is frequent ineffectual urging to stool, preceded by a sick, distressing feeling from navel downwards, < when thinking of it, < from drinking coffee. Sugar < pain in stomach. Wine = headache. Faintness and vomiting during stool. After stool > of pain in back. The heart may be paralysed in a few minutes if the dose of the poison is very large, and then it is found flaccid or distended with blood. In an interesting study of *Oxal. ac.*, J. W. Ellis (*J. B. H. S.*, vii. 285) cites a fatal case of poisoning recorded by Boericke (*Med. Cent.*, August, 1894) through exposure of the hands to a saturated solution used for chemical purposes. The symptoms were: Intense pains in head. Hyperæsthesia, especially to light. Spasms of pain down extremities, along

throat muscles, and through spermatic cord. Sensitive spots on spine. De Noë Walker told me of a case of his in which the patient, an elderly, gouty man, was suddenly seized with congestion of spinal meninges with great coldness, blueness, and numbness; complete prostration of strength. *Oxal. ac*. 6 rapidly cured. A patient of mine who used *Oxal. ac*. in his work suffered from: "*Rheumatism of left side*. Starting on falling asleep. When actually at work, acidity." This *left-side* rheumatism is noteworthy, for *Oxal. ac*. is a very *left-sided* remedy. But it has one special region of the left side, as Burnett has graphically illustrated, in which it is supreme. Sharp pains through the lower lobe of the left lung. It matters not what the name of the disease may be—pleurisy, pneumonia, phthisis—when that pain is present *Oxal. ac*. will do its work. The provings give: Sharp shooting pain in left lung and heart, extending down to epigastrium, and lasting some seconds.—In afternoon, stitches several times in left lung.—Sharp, lancinating pain in left lung, coming on so suddenly that it deprives him of breath for a few seconds. Sore sticking in chest extending back to between scapulæ." *Oxal. ac*. has cured many cases of angina pectoris, with symptoms recalling these. A powerful action is developed on the kidneys in the poisoning cases, albumen, blood, and oxalate crystals being found in the urine. *Oxal. ac*. in the attenuations has given good results in cases of oxaluria in which some of the leading symptoms of the remedy, as the backache, numbness, &c., were present.—Enuresis has also been cured (*H. P*., vi. 232) with *Oxal. ac*. 6 in a blonde boy of six. The guiding symptom was: "Sharp shooting pain in left chest, close to sternum and parallel to it. Ellis suggests that *Oxal. ac*. corresponds to many cases of neurasthenia. It is a favourite remedy with S. A. Jones in cardiac trouble, occurring in highly "nervous" patients (*H. R*., v. 13). [Hale cured a case of palpitation with action of heart irregular in force and rhythm, alternating with aphonia, with *Oxal. ac*. 6 (*Org*., ii. 222).] Jones's remarks just quoted are made in reference to a case reported by "*C. F. M*." (*H. R*., iv. 257), and described by the reporter as "lumbago," but considered (in my opinion, correctly) by Jones to be spinal meningitis. This is the case: Mrs. S., 55, suffered for several days with: Terrible pain in lumbar region, extending down thigh and over region of both kidneys. Extremely anxious to change position frequently, but slightest movement, assisted or unassisted, caused her to shriek out in agony. Frequent desire to pass large amounts of urine, but the pain on moving was so great that she would shrink from the attempt. Legs numb and very weak and cold. Pulse rapid. Short, distressed breathing in general, though there were intervals of easier breathing. Appetite normal, though swallowing was difficult and painful. *Oxal. ac*. 30, every half-hour, was given. In two hours she could be placed on the vessel with very little pain. In twelve hours she sat up. In twenty-four hours was entirely relieved. Banergee (*H. P*., xiii. 157) cured a case of strangulated hernia of left side with *Oxal. ac*. 6 trit. He had no definite indication. John Moore reports the case (*H. W*., xv. 53) of a sea captain who suffered much from indigestion. Two years before Moore saw him he had had to undergo operation for strangulated hernia. Ever since he had been subject to these symptoms: Pain in region of navel coming on two hours after eating, accompanied by much flatulence

and bitter and sour eructations. Pain < in night, arousing the patient 3 a.m., and keeping him awake. *Burning sensation from throat downwards* to the region of the pain. The patient had always had a weak digestion, and had met with many severe accidents at sea. *Oxal. ac*. 3, two drops, an hour after meals. He was a little better the first night, and after that slept the night through, and said he had not had so much comfort for years. *Oxal. ac*., the chief constituent of Sorrel (*Rumex Acetosa*) and Wood Sorrel (*Oxalis acetosella*), exists in plants that are ordinarily deemed anti-scorbutic and are remarkable for the grateful acidity of their herbage. Inspissated solutions of sorrel have been used successfully as local applications for epithelioma, and with a solution of *Oxal. ac*. and of *Tannic acid*, applied locally, Cooper removed a large patch of erythematous lupus on the cheek. With a solution of 5 gr. to two drachms of water Cooper has often removed troublesome small nævi in infants upon the face and elsewhere, using it perseveringly for weeks or even months. From this it would appear, taking into account that *Oxal. ac*. produces wart-like growths, that, well diluted, it may be regarded as having a beneficial influence, locally and probably internally as well, upon epithelial proliferations of the cuticle. *Ox. ac*. is said to enter largely into the inspissated juice of the Clover (*Trifol. pratense*) which formed Thomson's "cancer plaster," and which is strongly escharotic. Among the *Peculiar Sensations* are: jerking pains, like short stitches, confined to small spots, lasting only a few seconds. Sensation as if all blood had left the brain. As if blood in head was coursing upward and outward. As from a screw behind each ear. Hypogastrium as if bound. Back as if broken or bruised. Wrist as if sprained. Hands as if dead. During shaving as from chafing. Symptoms are < by touch (small spots on head); slightest touch = excruciating pain. < Shaving. Eating > pain in stomach. Soup > gnawing in stomach. Sugar, coffee, wine <. After eating: pains at navel, colic, rumbling in abdomen, urging to stool, weakness. Motion and exercise <. Rest < colic. Lying down = swimming sensation; palpitation; erections; return of colic and diarrhœa; < headache; > pain in left lung. Change of position > pain in back. Slightest exertion = heat. < Evening, night, and early morning. Walking in open air = tickling in larynx. Shaving < (skin of face). After stool: headache and backache >.

Relations.—*Antidoted by:* Carbonates of Lime and Magnesia. *Compare:* Kali ox. In cholera infantum, Ars., Ip., Ver. In gastralgia, Colch. Gastric symptoms, Kre. In spinal disease, Pic. ac. (Pic. ac. more heaviness; Ox. ac. more numbness, blueness; and pains in small spots), Arg. m., Phos. ac. Induration of testicles, Puls. Headache < from wine, Zn. Faintness during scanty stools, Crot. t., Dulc., Pet., Sars., Sul. (stools not scanty, Apis, Nux m., Pul., Spi., Ver.). Pain lower lobe left lung, Sul. < From sugar, Arg. n. Backache, Variol., Ant. t. < Shaving, Carb. an., Ant. c. < Thinking of ailments, Oxytr., Piper meth. (> thinking of them, Camph.).

Causation.—Coffee.

SYMPTOMS.

1. Mind.—Diminished power to concentrate ideas.—Great cheerfulness and clearness of mind.—Very much exhilarated; quicker thought and action.—Thinking of his ailments < them.—As soon as he thinks about the pains they return.—Mania.—Aversion to talk; with headache, fulness in face.

2. Head.—Vertigo: with darkness before eyes and sweat; with weakness and thirst; anxiety; headache and perspiration.—Vertigo while looking out of the window; when rising from a seat.—Vertigo; swimming sensation on lying down.—Sensation of emptiness in head; faint feeling, as if all the blood had left the brain.—Dulness in forehead (morning).—Pain in forehead and vertex (dull, heavy headache); on l. side of the forehead on waking.—Pressing pain or, small spots.—Pressing, like screwing, behind both ears.—Headache < after lying down, after sleeping, and on rising; > after stool.—Head affected by drinking wine.—Small spots on head painful to touch.

3. Eyes.—Pain in the balls of the eyes; < in the l.—Pain in both orbits, < l.—Inclination to close the eyes.—Type blurs when reading.—Small, esp. linear, objects appear larger; they are thought to be more distant than they really are.—Vanishing of sight, with giddiness and perspiration; with bleeding of nose.

5. Nose.—Sneezing; watery coryza.—Sneezing, with chilliness.—Stitches in r. nostril on taking a long inspiration.—Pimples in r. side of nose; wing of nose swollen.—Red, shining swelling of r. side of nose, beginning at tip and from there extending.

6. Face.—Face pale and livid, with open mouth and unconsciousness.—Pale colour, with sunken eyes.—Face red, swollen, feeling full; hot or cold; covered by cold perspiration.

7. Teeth.—Pain in decayed molar teeth.—Gums bleed and are painful in spots.—Small ulcers on gums.

8. Mouth.—Tongue swollen, sensitive, red, dry, burning; swollen, with thick, white coating.—Tongue coated white, with nausea, thirst, and loss of taste.—Sour taste in mouth.—In mouth, pain, accumulation of saliva, water, or mucus.

9. Throat.—Burning in throat and stomach (heartburn).—In the throat, scraping (rawness), increased accumulation of thick mucus.—Dryness in throat (in morning) after diarrhœa.—Painful deglutition, esp. in morning.—Difficult deglutition, with sour eructations.

10. Appetite.—Appetite: increased; absent, with loss of taste.—Thirst, with vertigo, loss of appetite, nausea, colic.—Unquenchable thirst.

11. Stomach.—Pain in stomach is > by eating; soup is pleasant when there is gnawing at stomach.—Empty feeling, compelling one to eat.—After eating, eructations, nausea, pains at navel, colic, rumbling in abdomen, urging to stool, weakness.—Heartburn; < evenings.—Empty or sour eructations; of tasteless wind, after each meal.—Sudden hiccough, with eructations; frequent hiccough.—Nausea and thirst with colic; after diarrhœa.—Nausea and frequent vomiting.—Stomach sensitive; slightest touch causes excruciating pain.—Violent pressive pain at pit of stomach.—Burning at pit of stomach.

12. Abdomen.—Violent colic, waking one at night.—Colic, rumbling evening and night).—Colic pain around navel, as if bruised; stitches, with pressing and discharge of flatulence; < on moving, > when at, rest.—Difficult emission of flatus.—Continuous pain in l. hypochondrium as if bruised; stitches.—Incarcerated flatulence (in l. hypochondrium).—Stitches in liver > by taking a deep breath.—Burning in small spots in abdomen.—Cutting pain in abdomen.

13. Stool and Rectum.—Morning diarrhœa; stools soft or watery, with colic around navel and pressing in rectum returning as soon as one lies down again.—Stools: dark, muddy, copious mucus and blood.—Before stool, and from pain with stool, headache.—During stool: micturition; fainting; vomiting.—After stool: nausea and tension in calves; dryness in throat; > of pain in small, of back.—Diarrhœa as soon as one drinks coffee.—Pressing and straining in rectum; tenesmus.—Constipation; no stool.

14. Urinary Organs.—Thinking of urinating = necessity to urinate.—Nocturnal incontinence; sharp, shooting pain in l. chest, close to sternum and parallel to it.—Pain in region of kidneys.—Frequent and copious urination, which is clear, straw-coloured; oxaluria.—Albuminuria.—Burning in urethra, as from acrid drops.—Pain in glans penis when urinating.

15. Male Sexual Organs.—Great increase of sexual desire.—Red points on glans without itching or soreness.—Erections (forenoon).—Erections with dulness in occiput.—Sensation of heaviness and contusion in testicles; < l.—(During a walk) heaviness of testicles, with drawing pain, extending into (shooting along) the spermatic cords.—Terrible neuralgic pain in cords, < from slightest motion.—Emissions at night with lascivious dreams.—(After taking rhubarb tart, boys with long foreskins often get balanitis from deposit of oxalate of lime crystals.)

16. Female Sexual Organs.—Much burning pain in genital organs.—During pregnancy, nausea and painful vomiting, a tormenting, cramp-like feeling between pit of stomach and navel; sour taste, heartburn, and waterbrash.

17. Respiratory Organs.—Hoarseness; larynx feels swollen, contracted, raw, with tickling in it (sensation of mucus during talking).—Voice completely altered from a

deep bass to a very low key, like one talking in an undertone; later, though improved, still "a complete old man's voice.".—Constant dry cough on violent exertion.—Mucous secretion in throat increased.—Mucus in small lumps, or hard or thick, yellowish-white phlegm, with black lumps in centre of it.—Difficulty of breathing, with oppression of chest (r. side) when moving about in evening.—Difficulty of breathing, with constrictive pain in the larynx and wheezing (angina pectoris).—Spasmodic breathing.—Paroxysms of short, hurried breathing, with intervals of ease.

18. Chest.—Sharp, shooting pain in l. lung and hepatic region.—Congestion localised base of l. lung.—Dull, heavy, sore pain in chest.—When breathing, stitches in chest and pain above the hip.—Pain in the middle of chest, extending through to back.—Sudden lancinating pain in l. lung, depriving him of breath.—Stitches in l. breast; < during walking.

19. Heart and Pulse.—Pain in heart; soreness, stitches from behind forward or from above downwards.—Sharp darting in heart and l. lung, extending to epigastrium.—Pain commencing in præcordial region, extending up sternum and darting out across chest, esp. towards l. side; must keep perfectly quiet (angina pectoris).—Palpitation of heart after lying, down at night; heart in a continual fluttering palpitation.—Beats of heart intermit when thinking of it.—Pulse increased in frequency, almost imperceptible; with coldness, clammy sweat, &c.

20. Back.—Pain in back, under point of shoulder-blade, between shoulders, extending from shoulders to loins; bruised sensation, < beneath tip of l. scapula, with stiffness.—Stitches from chest into scapulæ.—Acute pain in back, gradually extending down thighs, with great torture; seeks relief in change of posture.—Numbness, pricking, causing a sensation of coldness and weakness in back; weakness in loins and hips, extending down to lower extremities; back feels too weak to support body.

21. Limbs.—Strange sensation of numbness in limbs.—Pains in rheumatic gout < from sweets.

22. Upper Limbs.—Pain first in l., later in r. deltoid muscle, with inclination to move.—Sharp, lancinating pains in arms; angina pectoris.—R. wrist feels sprained, with inclination to stretch it, and stitches in ulnar region; cannot hold anything.—Numbness of shoulders to tips of fingers.—Numbness of finger-tips.—Pain in (r.) metacarpus and fleshy part of r. thumb, with sensation of fulness, heat, and numbness.—Heaviness of hand; can move fingers but slowly.—Hands are cold, as if dead.—Arthritic pains in fingers; they are drawn in.—Twitching of fingers.—Fingers and nails livid.

23. Lower Limbs.—Blueness, coldness, and almost complete immobility of lower limbs.—Numbness and tickling or pricking in thighs.—Numbness, pain, and

weariness in lower limbs, making it difficult to ascend stairs.—Restlessness in legs.—Knees feel tired.—Violent contracting pain in external tendon of l. knee.—Weariness of lower extremities; they are gone to sleep; paralysis, stiffness.

24. Generalities.—Pains appear on small longitudinal (circumscribed) spots.—Jerking pains, like short stitches, confined to small spots, lasting only a few seconds.—Pains come on periodically.—Peculiar numbness, approaching to palsy.—Paralysis of l. side.—Symptoms recur in paroxysms; intermit for hours or a day.—Blood coagulates very slowly.

25. Skin.—Skin very sensitive, sensation during shaving as from chafing.—Marbled skin (mottled in circular patches).—Skin of face, head, chest, and nates covered with red spots or petechiæ, appearing as if bespattered with blood.—Itching on neck or fingers.—Itching eruption with redness.—Warts.

26. Sleep.—Frequent yawning; sleepiness during day.—Starts when falling asleep.—Awakens at night with palpitation.—Dreams, with fright and fear; sits up and looks around.

27. Fever.—Pulse more rapid in morning; slower, irregular, weak.—Chilliness, ascending from below upwards.—Creeping chill up spine.—Chilliness with sneezing (evening).—Chill after diarrhœa (afternoon).—Shaking chill, with red face (evening).—Heat from every exertion.—Heat, esp. in the face or on hands.—Flushes of heat, with perspiration.—Perspiration with weakness, or with giddiness.—Night-sweat clammy and cold.

Oxydendron.

Oxydendron arboreum. Sorrel-tree. Sour-wood. Elk-tree. (Rich woods of the Alleghenies.) N. O. Ericaceæ (tribe Andromedeæ). Tincture of leaves.

Clinical.—Dropsy.

Characteristics.—*Oxydend. arbor*. is the only species of its genus. It is an unproved remedy, and there is only one observation with it that I know of. M. E. Douglass (quoted *H. W*., xxxii. 547, from *S. J. of H*.) treated Mrs. H. for general dropsy—ascites and anasarca—which dated from an attack of measles treated with ice-drinks and ice-applications seven months before. When Douglass saw her the urine was nearly suppressed, but contained very little albumen. Menses suppressed. Great difficulty of breathing even when sitting, lying down impossible. Had to sit in one chair with feet in another. After the failure of *Apocy*. and several carefully chosen medicines, the legs having burst in several places, Douglass was about to tap the abdomen, but before doing so put *Oxydend*. Ø one drachm in a tumbler of

water and gave three teaspoonfuls every three hours. In forty-eight hours the breathing was better and urine increased. *Oxd*. was continued (with the exception of three days during which *Rhus* was given to combat erysipelas which had set in on left leg), and on the tenth day the patient lay down on the bed and slept three hours. Appetite increased, and in two months she was quite free from dropsy and felt perfectly well though much emaciated.

Oxygenium.

Oxygen (including Ozone, which is Nascent Oxygen.). O. (A. W. 16). Dilutions of distilled water charged with the gas. Dilutions of the preparation called Oxydol.

Clinical.—Anćmia. Cancer. Coryza. Cough. Diabetes. Influenza. Morphia poisoning. Mouth, canker sores in. Strychnine poisoning. Whooping-cough.

Characteristics.—As we learn more and more how to handle gases they will take a more definite part in the materia medica. I have incorporated in the present Schema a proving by Swan of *Oxy*. 200 (*Organon*, iii. 280), and a proving of *Ozonum* by Dewar, McKendrick and two others, recorded by Allen. Their symptoms I have marked "Oz." With another preparation called *Oxydol*, or *Eau Maiche* (from its inventor), I have had some experiences. It is not chemically distinguishable from Peroxide of Hydrogen, but it has none of the disagreeable features of that substance. It does not bleach articles it may touch, or cause effervescence. It is said to liberate oxygen in nascent state in the tissues when it is taken internally diluted with five or six parts of water. Undiluted its taste is disagreeably metallic, though it can be used undiluted as a gargle without inconvenience. Diluted it has no taste at all. When taken as directed in doses of a tablespoonful with six of water it sometimes causes relaxation of the bowels followed by constipation. In myself it set up all the symptoms of a common cold. As an antiseptic lotion and application I have found it of great value, and as a gargle in cases of sore throat, or rather rawness of the throat when ushering in a cold, I have often known it stop the irritation from going further either up or down. In cases of gonorrhśa it has a useful function in rendering the urine antiseptic, supplying an antiseptic lotion from within, without interfering with the action of the specific homśopathic remedy. I have found it more useful than *Salol* or *Urethane* in such cases. But the disease for which it is chiefly commended by its inventor is cancer. I have given it in a number of cases and have obtained favourable temporary results in some. In one case seen with a colleague in an elderly woman of the working class who had a large fungating cancer of the left breast, Oxyd. was given internally and applied also externally. It caused excessive discharge with corresponding reduction of the tumour, and we hoped for a cure. But after several weeks the patient's legs suddenly swelled; the swelling rapidly increased and she sank, the tumour having

at least three-quarters disappeared. The effect of the *Oxydol* was probably to liberate the disease elements too rapidly for the organism to eliminate them, as Dr. Cooper suggests in his account of *Ornithogal*. Swan's symptoms have been verified in some instances (*H. P.*, x. 400), the following cures being recorded: (*1*) Cough from dryness in upper larynx and constant tickling in throat-pit. Hard, shaking cough causing soreness in epigastric region. Expectoration with every cough, thick, lumpy, tasteless; *Oxy*. 1m.—(*2*) Passing quantities of uric acid like ruby sand; *Oxy*. cm.—(*3*) Cough excited by tickling in throat and causing soreness of chest; 2 to 3 a.m.; > lying on back. *Oxy*. cm cured this case. As a mouth wash in canker sores dilute *Oxydol* is a useful preparation. Now that Oxygen inhalation has become so popular, we may expect some symptoms from those who become addicted to it. With inhalation of Oxygen kept up for ten hours, D. T. Playfair (*Lancet*, quoted *N. A. J. H.*, xiv. 139) cured a desperate case of morphia poisoning (30 grains *Morph. acet*. had been taken) in a young woman of 37. All the usual antidotes had been given before without avail. The patient was entirely well In twenty-four hours. Osterwald of Berlin (*Med. Press*, Jan. 9, 1901) has also shown by experiments on guinea-pigs that *Oxygen* gas is a most efficient antidote to poisoning by *Strychnine* in these animals. After injecting the strychnine in two animals, he placed one in an atmosphere of Oxygen, and no convulsions occurred in this one, whilst they were fully developed in the other. Other experiments fully confirmed these. Korndoerfer (*H. R.*, iii. 189) relates this case illustrating how *Ozone* inhalations may sometimes assist homśopathy: Miss X, 18, tall, slender, intensely pale, chlorotic, had been two years ill, and neither homśopathy nor allopathy had given any relief. She suffered from great weakness, could scarcely walk a hundred yards. Prostration and loss of breath and palpitation from least exertion. Frequent violent headache, < after exertion, especially after going up stairs. Pains along spine, especially aching about small of back. Rheumatic pains in lower limbs. Desires motion, but owing to exhaustion dares not indulge the desire. Stooping gait. Poor appetite. Menses much delayed, and, when appearing, scanty, watery, brownish. All symptoms < in wet weather, and on change from clear to cloudy weather. *Puls*. gave slight relief. *Rhus* caused severe aggravation. It covered the case, but something prevented its acting properly. Korndoerfer thought the action of *Ozone* on the red corpuscles might help. Inhalations, of ten minutes each, three times a week, were given, and then Rhus acted well. The improvement was prompt and continued, and was only interrupted when the experiment was made of trying to do without either of the remedies. Neither was efficacious when given without the other. A cure of diabetes with large doses of *Oxy*. is on record (*H. W.*, xxxii. 567); and many cases of whooping-cough have been cured with inhalations of *Ozone* (*H. W.*, xxxii. 46).

Relations.—*Antidote to:* Morphia and Strychnine poisoning. *Compare:* Chr. ac., K. bich., K. chl., K. perm., Osm. ac., and oxydising agents generally; Chlorum, Electricitas. In antidotal relations, Camph.

Causation.—Morphia. Strychnine.

SYMPTOMS.

2. Head.—Headache in outer half r. eyebrow; pain still in frontal region.—Dull frontal headache, < in spot over l. eye.—Pain in l. temple, which feels cold to touch.—Continued sweat on scalp.

3. Eyes.—Lancinating, paroxysmal pain in r. eyeball, a little to l. of pupil.—Occasional rush of pain, filling whole r. eyeball and extending into r. temple, which then became hot.—Tingling of conjunctivć and skin of face (Oz.).

5. Nose.—Much indurated mucus in nose, necessitating frequent picking; in morning blowing out of lumps, generally tough, opaque, whitish yellow.—Sneezes with the cough (Oz.).

6. Face.—Tingling of skin of face (Oz.).—Rawness in throat (Oz.).

8. Mouth.—Canker sores in mouth and cheeks.

9. Throat.—Irritation of fauces and glottis.

12. Abdomen.—Great flatulence, passing large quantities at stool.; flatus seems to accumulate in rectum; causes desire for stool and fears to pass flatus lest stool should also pass.

15. Male Sexual Organs.—Fine stinging rash r. side of scrotum, lasting one day.

17. Respiratory Organs.—Violent irritating cough and sneezing, followed, by rawness in throat and air passages (Oz.).—Irritation of respiratory tract as when recovering from attack of influenza (same irritation can be produced by breathing electricity given off from a conductor) (Oz.).—Aphonia, with difficulty of controlling voice.—Slight, hoarseness, dryness of throat; towards evening dryness increased round rim of glottis; at midnight woke with choking, burning dryness of glottis and upper larynx; no thirst.—Hoarseness, and hard, shaking, tearing cough from tickling under sternum in night, < lying either side, > lying on back, with profuse, lumpy, tasteless whitish sputa.—Sputa occasionally yellow, purulent.—Dry, hacking cough; 2 to 5 a.m.—Cough = hawking; blowing nose; bursting sensation in chest.

18. Chest.—Tickling under sternum.—Tightness under sternum < bringing shoulders forward.—Suffocating feeling in chest; tendency to breathe slowly (Oz.).

20. Back.—Pains excessive in whole sacral region, apparently in articulations; esp. a sensation of tiredness all through pelvic viscera, even in perineum (Oz.).

22. Upper Limbs.—Itching of skin of metacarpal end of first phalanx of l. index finger, no redness of eruption.

23. Lower Limbs.—Thighs and legs as if overworked; excessively fatigued (Oz.).—Eruption of pimples in the fold of r. side of nates, near anus, becoming very sore and seemingly like blisters; as skin rubbed off it was left very sore.

25. Skin.—Tingling of skin of face and conjunctivć.

27. Fever.—Sweat all over and headache between eyes.—Sweat on scalp and slight moisture over body.

Oxytropis Lamberti.

Oxytropis Lamberti (Pursh). (Including O. Campestris, Hook.) "Loco" Weed. Rattle-weed. N. O. Leguminosæ. Tincture of fresh plant (without root).

Clinical.—Amblyopia. Bladder, irritability of. Cough. Fever. Impotence. Locomotor ataxy. Ovary, pain in. Paralysis. Rheumatism. Spermatic cord, pain in. Sphincters, relaxation of. Testicles, pain in. Vertigo.

Characteristics.—The "Loco-weed" or "Crazy-weed" ("loco" is of Spanish origin, and means "crazy") has been variously identified by Gray as *Astragalus legum*, by others as *Astragalus mollissimus*, and by W. S. Gee, who made the proving, as *Oxytropis Lamberti* (*M. A.*, xvii. 441). Probably the writer of the botanical articles in the *Century Dictionary* is nearest the mark in saying that Loco-weed is "any one of several leguminous plants producing the loco-disease in animals. Among them are *Astragalus mollissimus* and *A. Hornii*, with several other species of the genus, and *Oxytropis Lamberti*." Henfry's Botany remarks that the foliage of "*O. Lamberti* is said to be injurious to cattle"; so Dr. Gee was quite justified in taking this plant for the proving. (The Astragali are very closely related to the Oxytropi. *A. gummifera* is the source of *Gum tragacanth*. A few observations with *A. Menziesii* will be found in Vol. I. of this work.) Gee's specimens were obtained by Dr. Hawkes, of Chicago, and a tincture was made from these by Boericke & Tafel. Gee quotes from Coulter's *Manual of the Botany of the Rocky Mountain Region* a description of *Oxytropis Lamberti*. W. D. Gentry in June, 1895, sent Boericke & Tafel specimens of Loco-weed, and as this firm are extremely careful about the botany of the plants they make their tinctures from, I conclude these plants must have been *Oxyt. Lamberti* or they would have mentioned the fact. Gentry makes these remarks concerning the plants he sent (*H. R.*, x. 364): "My attention was first called to this plant last winter during January, soon after my arrival on the territory, as it was almost the only green thing showing itself above the snow, which covered the ground at that time for two or three days. Some cattle had been eating the weed, and as I approached them they tried to move away; but in spite of their efforts they backed towards me, and in their efforts to escape made some ludicrous manœuvres. I observed them closely for more than an hour, and was reminded most forcibly by their actions of the symptoms of locomotor ataxy." Gentry made provings of the Ø tincture of the whole plant and seeds on three

persons. He gives the "leading symptoms," which will be found with his authority (Gent.) appended to each in the Schema. Gentry's observation of loco-disease in *winter* bears out what is said by other writers, namely, that it is only in winter, when food is scanty, that animals can be induced to commence eating the weed; and then they cannot leave off. An account of loco-disease appeared in *Brit. Med. Jour*. of March, 23, 1889 (*H. W*., xxiv. 177), which contains some observations bearing on the *season* at which the disease occurs, and at which the plant is poisonous. I quote from the article: "The animal affected loses flesh; has a feeble, staggering, uncertain gait; a rough coat, and general appearance which is said to be characteristic; it loses all sense of distance or direction, and is liable to fits of rearing, plunging, and wild excitement; pregnant animals drop their offspring prematurely." The account goes on to say that the plant is generally identified as *Astragalus mollissimus*. H. C. Wood and Mr. Kennedy, of Texas, failed to produce poisoning in animals experimented on. Later, Dr. Mary Gage Day made experiments with a decoction of roots, leaves, and stems *gathered in September*. She is convinced from experiments made with materials gathered in different months that the greatest amount of poison is present in autumn and winter after the seeds have ripened—the seasons at which the disease is most rife. The account does not give the botany of the plants she used, but cats, kittens, and a jack-rabbit were decidedly "locoed," and died, the jack-rabbit in ten days after commencing to eat the plant, for which he speedily acquired a liking. In Gee's proving the Ø tincture and potencies from 1x to 30x were used. A number of mind and brain symptoms were produced; despondency, forgetfulness; a feeling as if consciousness would be lost; fulness in the head and instability standing. Two provers had "symptoms < when thinking of them." Gentry's provers had "pleasant, intoxicated feelings." Both Gentry's and Gee's provers had well-marked pains in the eyes and disturbance of vision; and Gentry's had "numb, pithy, or woody feeling about and on the spine"; and "loss of power to control movements of limbs." In Gee's provings there were pains both in testes and ovaries, and one male prover, naturally passionate, became impotent. The symptoms are < on thinking of them (urging to urinate if he thinks of it); > on side lain on; < immediately after eating, > an hour after. Sick, exhausted feeling at 10 a.m.; chill 11.40 a.m. Pain (also bladder irritation) > when moving about; > in cool air. Any little exercise = dry cough. > After stool. > After sleep. Pains go from r. to l. Dyspnœa with chill.

Relations.—*Compare:* Lath., Astrag. menz., Physostig., Laburn., and other Leguminosæ. In symptoms < when thinking of them, Ox. ac. (>, Camph.). Pain in cord and testes, Ox. ac. Pains r. to l., Lyc. > moving about, Rhus.

SYMPTOMS.

1. Mind.—Great mental depression.—Stimulation of mind; pleasant, intoxicated feeling (Gent.).—Satisfied indifference to all influences and interests (Gent.).—Cannot think or concentrate his thoughts.—Very forgetful of familiar

words and names.—Disinclination to talk or study.—Wants to be alone.—A feeling as if I would lose consciousness.—All symptoms < when thinking of them.

2. Head.—A feeling as if I would lose consciousness, or as if I would fall when standing.—Sense of fulness of head, and of instability, when standing or sitting.—Head has a feeling of great pressure, esp. on moving eyeballs.—Head, hot.—Was unable to move around on account of this strange, uncertain feeling of numbness, with prickling sensation in l. arm and hand.—Full, uncomfortable feeling in head.—Slight headache in vertex and occiput in forenoon, over eyeballs about noon.—Pain in helix of ear for two or three minutes, then pain commenced between the eyes and went in a straight line up over head and down to base of brain.—Pain across base of brain ("gone in a minute or two").—Pain in occipital region; heavy ache, as if a weight were attached to lower edge, pulling it back, but pain does not extend down back; 1 p.m. to 3 p.m.—Head very sensitive, < on side on which he lies.—Pressure on head > after sleep.—Dull, heavy feeling in head, with uncertain gait and walk, so that she was obliged to lie down, when she fell into a deep sleep and woke up with the metallic taste.—Full, warm feeling about head (Gent.).

3. Eyes.—Feel dull and heavy, blurred, pupils dilated.—When reading, it seems as if a light were reflected from a bright copper plate seen at l. side, as if the light were at the end of the room.—Pain in eyeball.—Pain over r. eye.—Strange feeling of fulness about eyes with sight obscured, so that it appears that one is looking through clear water which produces the seven prismatic colours (Gent.).—Amblyopia from paralysis of nerves and muscles of eyes (Gent.).—Pupils contracted, do not respond to light (Gent.).—Sight lost, with feeling as if from long exposure to strong electric arc-lights. (Gent.).

4. Ears.—Roaring sound in ears.

5. Nose.—Nose very dry; scabs form in it.—Frequent violent sneezing, with fluent coryza in evening.—Nose feels as if sunburnt; red and shining, esp. on alæ.—Feeling of pressure over bridge of nose.—Fluent coryza, somewhat bloody.

8. Mouth.—Mouth very dry, esp. in morning.—Metallic taste in mouth strongly marked.—Gumboil on l. lower jaw; profuse saliva.—Pain in l. lower jaw.

9. Throat.—Slight inflammation of pharynx, a "husky" feeling.—Throat dry and sore.

10. Appetite.—Appetite gradually increasing.—Appetite good; symptoms < after eating, > after an hour.—Loss of appetite (unusual).

11. Stomach.—Eructations, as after taking soda-water (after each powder), with colicky pains, and looseness of bowels (constipated before taking remedy).—Tenderness in epigastric region.—Cold during the chill.

12. Abdomen.—Sharp, lancinating pains all through abdomen, early in evening (observed but once).—Sharp pain, running from r. to l. across bowels, for several minutes, followed by a very strong desire to go to stool; entire relief after stool.—Slight griping pain in region of umbilicus, working down at 8 p.m., followed at 10. p.m. by discharge of flatus.—Full feeling in abdomen, causing short breathing after lying down in bed.

13. Stool and Rectum.—Fæces of consistency of mush, which slips through sphincters in little lumps, very similar to lumps of jelly.—Stools dark brown, or like jelly.—Urgent desire for stool, sometimes removed by passing wind; quantity normal.—Sore feeling in rectum.—Crawling sensation in rectum as if little worms were there.—Stool inclined to be hard; unsatisfied feeling, as though not done.—Stool solid at first, then diarrhœa.—Movement of bowels at an unusual time (6.30 p.m., had moved morning of same day).—Sharp pain from r. to l. across bowels, followed by very strong desire for stool.—Stool, first hard, then loose.—Entire > from pain after stool.

14. Urinary Organs.—Characterised from first by a very profuse flow of clear, or almost colourless urine, nearly colour of water.—Three or four times normal quantity.—When thinking of urinating I had to go at once.—No sediment whatever.—Pain in kidneys, hardest in r., with some tenderness.—At expiration of every two or three hours after stopping the remedy there was an enormous flow of pale, straw-coloured urine, and with this would gradually disappear the metallic taste which was so well marked.—Free urination, dark in colour, no distress.—Urine scanty, and looked that of a child troubled with worms, light red-coloured stain on bottom of vessel.—Awoke with a heavy pain in kidneys.—Urine clear on passing, but becomes turbid on standing (third day).—During day urine scanty, with considerable irritation as if muscles of bladder were contracting, > moving about.

15. Male Sexual Organs.—From being naturally of a passionate nature, the desire and ability diminished to impotence.—No sexual desire or ability.—Bruised feeling in testicles, beginning in r. and extending to l. (after going to bed).—Occasional pain of short duration, in glans.—The pain in testicles becomes worse, with extension along spermatic cord and down thighs.

16. Female Sexual Organs.—At l.30 p.m. pain in l. ovary, like something grasping or holding tightly for about an hour, then disappeared.

17. Respiratory Organs.—Slight accumulation of mucus in larynx, hard to cough it up.—Short and quick breathing from the full feeling in abdomen.—Hard

breathing, as though lungs and bronchi were closing as the chill passes off.—A dry cough, from any little exercise.—A short cough, with tightness across chest.

18. Chest.—Oppression in lungs at 9 p.m.—A warm tingling sensation over l. chest, just under skin.

19. Heart and Pulse.—Palpitation after lying down at night, for 15 to 20 minutes.—On going to bed, pain, like a wave over heart, < lying down.—Pulse 84, intermittent.

20. Neck.—Pain and stiffness of muscles of back of neck.—Numb, pithy or woody feeling about and in the spine (Gent.).

21. Limbs.—Flesh on under side of limbs sore.—Sore feeling of all the muscles of r. side of body.—All 'the pains come and go quickly, but the muscles remain sore and stiff.—Frequent fine pains all over body until 3 p.m., when all disappeared and felt as well as usual.—Loss of power to control movements of body or limbs (Gent.).

22. Upper Limbs.—Stitching pain in r. wrist for half an hour, leaving a tired feeling in joint.—At 12.30, a sharp, cutting pain running from point of shoulder down front of chest to point of hip-bone, going suddenly.—Flesh feels as though she had taken a heavy cold.—Sharp pain, with coldness, from l. shoulder-joint extending down arm < in shoulder-joint, > sleep; goes away gradually.—Prickling sensation in l. arm and hand.

23. Lower Limbs.—Swaying, staggering gait (Gent.).—Patellar-reflex lost (Gent.).—Stitching pain in r. leg and knee-joint for half an hour, leaving a tired feeling in the joint.—Hard pain in l. big toe-joint.—Pain inside of l. leg from groin to knee.

24. Generalities.—At 10 a.m. a very sick, exhausted feeling.—Weakness and insecurity of all power of locomotion (Gent.).—Feeling of intoxication with almost entire loss of vision (Gent.).—Sense of touch greatly impaired (Gent.).—Animals eating it become slaves to it and can never be kept from it; they droop, lose flesh, stand with head hanging down, eyes half closed; suddenly will commence to kick violently at imaginary enemies; they are devoid of malice, but cannot be worked as they don't know when to stop or when to start, or which way to turn, or how to change gait or meet changes in level of road.

26. Sleep.—Dreams of a pleasant or lascivious character.—Wakes often.—On rising feels sad, weary, despondent.—Twitching of muscles on falling asleep roused him (once, for three or four nights).—Dreamed of spiders, bugs (first night), of swimming in water (second night), (not in the habit of dreaming).

27. Fever.—Chill at 11.40 a.m., beginning in back and between shoulders, down over body to feet; stomach feels cold; pains all over body during chill; a peculiar sensation of crawling or contraction of abdominal muscles, hardest about navel, lasted about half an hour.—As chill passes off a smarting in throat and a feeling as though lungs and bronchi would close up, making breathing very difficult; chill lasted until 2 p.m., when all disappeared.—No thirst in either stage.—For four weeks on every seventh day had a chill with all the above symptoms; coldness of spine was continuous for eight weeks, and was then removed by Gels.

Pćonia.

Pćonia officinalis. Peony. N. O. Ranunculaceć. Tincture of the fresh root dug in spring (in autumn the root is said to be inert).

Clinical.—Anus, fissure of; fistula of; affections of. Bed-sores. Breast, ulceration of. Ciliary neuralgia. Coccyx, ulcer on. Hćmorrhoids. Headache. Head, rush of blood to. *Nightmare*. Perineum, ulcer on. Sternum, pain in. *Ulcers*. Varicose veins. Vertigo.

Characteristics.—*Pćonia* belongs to the great order of Ranunculaceć, which includes the *Aconites, Actćas*, and *Hellebores*. The proving brings out many symptoms of congestion—rush of blood to head, face, chest; burning heat and redness of eyes and face; burning, itching, and swelling of anus; heat in throat; in skin. The symptoms are well characterised, but it is principally the anal and skin symptoms which have been verified in practice. One of the symptoms of the proving is this: "A small ulcer on perineum near anus that constantly oozes very offensive moisture; painful for eight days." This symptom has been expanded by clinical observation, principally Ozanam's, into ulceration in general, ulcers from pressure, as bed-sores, and from ill-fitting boots. "Sensation of splinter sticking in skin of right great toe when touched," and "violent pain as from pressure in left little toe," are guiding symptoms of the provings which put that great prescriber on the right track here. The ulcers are the seat of severe shooting pains. The symptoms of Ozanam's cases are bracketed in the Schema. These observations show the relationship between *Pćon*. and the *Hellebores*. The situation of the ulcer of the proving, together with the anal symptoms—biting, itching, swelling, burning—clearly point to *Pćon*. as a remedy in anal affections such as abscess, fissure, fistula, and piles. The leading indications are intolerable pain during and after stool and oozing of moisture. Experience has proved that varicose veins as well as anal varices are amenable to *Pćon*. The dreams experienced by the provers were of a terrifying nature; and it is interesting to note, as Geyer, one of the provers, does, that both Dioscorides and Plinius cured nightmare with *Pćon*., the

former with the seeds, the latter with the root. Geyer was ignorant of this fact until after he had experienced the nightmare-causing power of the drug. As the tissues are sensitive to pressure and injury, the mind is also sensitive: "Griping pain in abdomen, preceded, and especially followed, by anxiety, trembling of legs and arms as though he were frightened; he became apprehensive if any one spoke to him, and unpleasant news affected him exceedingly." There is fainting with diarrhśa; and the stools are followed by intense chilliness, occurring generally a few hours after he felt the worst. The symptoms were < by motion; by walking. Bad pain in anus compelling him to walk the floor all night; or to roll on the floor. < Coming into warm room. < Touch or pressure. Keeping jaws open > pressure from lower jaw to inner ear. Drinking water > vertigo with nausea. The right side is more affected than the left.

Relations.—*Antidoted by:* Alo., Ratan. *Compare:* In varices, Ham. In splinter sensation, anal fissure and abscess, in ulcer, Nit. ac. In splinter sensation and ulcers, Arg. n., Hep. In ulcers, Helleb. n., Helleb. v., Silic. In ulcers about the toes, Magn. aust. In diarrhśa, Sul. In effects of bad news, Gels.

Causation.—Bruises. Pressure (bed-sores, tight boots). Bad news.

SYMPTOMS.

1. Mind.—Delirium.—Excitement.—Apprehension; in evening, with anxiety.—Anxious, afraid to talk with any one; much affected by bad news, after pinching in belly.—Ill-humour.—Depression; after 5 p.m., with irritability.

2. Head.—Vertigo: on every motion (in a warm room), with constant reeling and staggering.—Dulness, heaviness, vertigo, and feeling of heat in head.—Syncope and cold sweat.—Fulness; and rush of blood to head; after 5 p.m., with pain below forehead; and to face with sweat.—Pain and confusion of head.—Pain with dulness of head, roaring in ears, and flickering before eyes.—Gnawing headache.—Headache, with pressive pain in l. side, after a meal (dinner).—Pain in forehead: in morning and evening, and in orbits; above l. brow, with sticking.—Jerking tearing in r. temple, extending into head.—Boring outward in r. temple.—Pain in occiput and in nape.—Heaviness in occiput.

3. Eyes.—Eyes red and watery.—Pain in l. eye; becoming a tearing, with inflammation, injection of conjunctiva, difficult opening of eye on account of pain and photophobia, with lachrymation.—Eyes dry, smarting, not easy to open.—Burning, itching and dryness; of eyes and lids.—Violent tearing around r. eye.—Conjunctivitis of ball and lid, with lachrymation and contracted pupils.—Inflammation of l. ball, with pain as if a grain of sand were under upper lid.—Sticking in r. upper lid towards inner canthus.

4. Ears.—Jerking in cartilages of ears.—Sticking outward in r. ear.—Pinching behind r. ear.—One ear cold, the other hot, 3 p.m.—Itching in concha.—Ringing in ears; in l.

5. Nose.—Stoppage of nose: in evening, in morning in bed, with dryness.—Crawling in tip of nose.

6. Face.—Face red and puffy.—Burning heat in face.—Crawling in upper lip.—Pain extending from articular fossa of lower jaw through inner ear, > keeping jaws open for a long time, as, e.g., when drinking, < pressing them together.

8. Mouth.—Tongue red.

9. Throat.—Biting posteriorly in palate in evening.—Hawking caused by tenacious mucus in throat, with scanty expectoration.—Scraping in throat, necessity to cough and hawk to loosen it, and feeling in posterior nares as if full of mucus.—Sensation as if an acrid, burning vapour ascended throat.—Heat: in fauces extending to pharynx; in throat and śsophagus, < hawking.—Swallowing difficult.

10. Appetite.—Appetite lost.—Thirst.

11. Stomach.—Nausea (on entering a warm room after a moderate walk, with seething in head, vanishing or obscuration of senses, and attacks of faintness).—Vomiting and painful diarrhśa.—Anxious aching (pressing) in epigastrium.—Periodical sticking upward from middle of epigastric region.—Burning in epigastric region at night.

12. Abdomen.—Borborygmi.—Griping pain in forenoon, preceded, and esp. followed, by anxiety, trembling of limbs and arms, as if frightened, and apprehension when any one spoke to him, unpleasant news affected him exceedingly.—Pinching in abdominal muscles.—Cutting; in umbilical region.—Colic; with diarrhśa; transversely across upper abdomen.—Sensitiveness, < along transverse colon and epigastric region, that were hard and retracted.—Crawling in abdomen.

13. Stool and Anus.—Biting itching in anus that provokes scratching in afternoon; the orifice seems somewhat swollen.—Hćmorrhoids with fissure in anus; intolerable pains during and after a stool.—Hćmorrhoids and ulceration of rectum.—Very painful and sensitive ulcers and rhagades in rectum.—Very painful ulcer, partly in enlargement, round, sharp-cut edges, and exuding much moisture.—Funnel-shaped ulcer just below coccyx.—Running and fetid ulcer in the anus, towards the perineum.—Sudden pasty diarrhśa, with faintness in abdomen and burning in anus after stool, returning after six hours, then internal chilliness, generally a few hours afterwards he felt the worst.—Stools thin, frequent.

14. Urinary Organs.—Constriction in region of neck of bladder, so that urine passed only in driblets.—Frequent and copious micturition, disturbing sleep at night.—Micturition burning and urine scanty.

16. Female Sexual Organs.—External genitals swollen and painful.

18. Chest.—Sticking in l. chest; parallel with axis of body, on every inspiration from 3.30 to 5 and at 9 p.m.—Sticking: in r. side near sternum, on a level with nipples, at 4 p.m.; near r. nipple, < walking; to r. of ensiform process, with pressure; downward sticking in l. chest; backward sticking as if through heart.—Sticking through whole l. half of chest, beginning beneath clavicle and extending to diaphragm, < region of heart at moment of expiration, and < walking.—Cutting in l. side when sitting bent over.—Sharp pain in ribs above hepatic region, in morning.—Pain: near middle of sternum; beneath manubrium in morning; near both sides of lower part of sternum when eating; in middle of sternum, > night, < next morning, and recurring all the forenoon.—Pain beneath the heart as from anxiety.—Throbbing extending through r. side and from posterior part to nape, where it ended in intermitting pinching.—Rush of blood.—Heat in chest.—(Ulcer on lower part of l. breast, consequent on abscess which had never healed.)

19. Heart.—Dull shooting from front to back through heart.—Pulse contracted.

20. Neck and Back.—Sticking in last cervical vertebra.—Sticking in scapulć; in places in back, > scratching.—Pinching or griping now in dorsal, now in abdominal muscles.—Boring in l. scapula, > motion.—Ulcers over sacrum, bed-sores.

21. Limbs.—Jerking and tearing in extremities; paroxysmal tearing, then numbness; weakness in evening.

22. Upper Limbs.—Acute lancinations under axillć.—Aching in r. upper arm, extending to region of elbow, > motion.—Tickling as if an insect were creeping on forearm.—Tense feeling in muscles across elbow on flexing arms.—Cramp in ulna at wrist.—Sticking griping in l. wrist, behind thumb.—Pain almost a tearing in l. finger-tips.—Shootings and tinglings in fingers.—Dead feeling in one finger.—R. ring finger, which received four weeks previously a blow from a blunt rapier, seems as far as the first and second phalanges dead, cold, devoid of blood, shrivelled, yellow, and without sensation, in afternoon.

23. Lower Limbs.—Cramp in r. knee (joint) when sitting.—Sudden thrusts (blows) outward or inward side of l. knee.—(Ulcer on anterior surface of r. tibia, from a blow.—Chronic ulcer of r. leg, serpiginous, spreading at edges; severe shooting pains hindering walking by day and rest by night.—Ulcer on l. great toe; on dorsum of foot, from tight boots.).—Sensation in lower part of calf as if aponeurosis of muscles and tendons were tense or bruised, making walking difficult, towards

evening.—Weary pain in ankles when sitting.—Pain in corns.—Swelling of toes, with contraction, intermittent sticking (jerking pains) through them.—Sticking in skin of great toe, as if pressed by shoe, in evening.—Pain in l. little toe as from pressure.

24. Generalities.—Weakness: when walking, with heaving of chest and limbs, so that often she must stand still; > eating, with heaviness of limbs.—< After sleep at night, at noon and in rainy weather.

25. Skin.—Painful ulcer, oozing offensive moisture on perineum, near anus.—Sensitive ulcers on lower part of body.—Crawling in a spot on l. forearm, with a bristling sensation; sticking in the fingers, in the sides; drawing beneath umbilicus, > scratching.—Itching: on calves, > rubbing; on head, chest, and limbs, with burning biting as from nettles; prickling in open air, with sticking; prickling on chest, then in axillć and arms down to sides of chest.

26. Sleep.—Sleepiness all afternoon.—Starting on failing asleep, even during day.—Sleep: restless, and dreams unremembered; restless, disturbed the first night by burning in epigastric region, afterwards by voluptuous dreams with emissions, or by anxious and vivid dreams of death, &c.—Sleep unrefreshing, disturbed by many and unrefreshing dreams.—Dreams: unremembered; frightful, of the death of relatives, &c.; quarrelsome; anxious; vivid, wonderful, and amorous; amorous, with emission; amorous after midnight, disturbing sleep; of a ghost sitting upon his chest and oppressing his breath, so that he often woke groaning; of a figure sitting upon his chest, making respiration anxious.

27. Fever.—Shivering.—Coldness of one ear at 5 p.m., with heat of the other.—Coldness of limbs, with (burning) heat in face, back, and chest.—Heat: at night disturbing sleep; general, waking after midnight, with heat in region of stomach.—Hot skin.—Heat in head; in face; as from nettles, on chest, neck, back, and shoulders.—Rush of blood to head and face with sweat.

Palladium.

Palladium. The Metal. Pd. (A. W. 106.5). Trituration.

Clinical.—Constipation. Egotism. Eyelids, margins, blisters on. Headache. Hysteria. Leucorrhœa. *Ovaries, affections of*. Sciatica. Sexual power, diminished. Uterus, affections of; prolapse of. Warts.

Characteristics.—*Palladium*, one of the rare metals, was first separated from native *Platinum* by Wollaston in 1803, and Was named after the planet Pallas, which had been discovered just before that time by Olbers. Hering, who made the

first provings in 1850, says: "If we classify the Sulphides according to their solubility in dilute acids, *Pallad*. must be placed with *Argentum, Rhodium, Ruthenium*, and *Osmium*, and *Platina* remains with the less soluble *Mercury, Aurum*, and *Iridium*. *Platinum* and *Palladium*, both proved in dust form, showed such similarity in their effects that the question arose whether corresponding *differences* might be found. These data can only be furnished by frequent use of *Pallad*. in practice." Clinical experience has done much to distinguish between these two remedies, related as closely in their effects on the human organism as they are closely related in nature. The chief characteristic of *Pallad*. is affections of the right ovary attended with pains which are > by pressure. Skinner cured with *Pallad*. a young lady who had excessive pain in the right ovary during the menses. The only relief she could get was by inducing her sister to sit on that region. This > by pressure distinguishes the pain of *Pallad*. from the similar ovarian pain of *Plat*. Lippe was the first to turn the provings to account, and the mental symptoms provided his best guides. The chief characteristic of *Pallad*. in the mental sphere is "Love of approbation," which lays its victim an easy prey to slights real or imaginary, and easily gives place to a state of "wounded pride and fancied neglect"; irritability which often finds vent in violent expressions. Such a patient is > in society, and < after the party or entertainment. This state of mind (which differs from the hauteur of *Plat*.), when found associated with uterine and ovarian disorders, will surely indicate *Pallad*. There is much uterine bearing down, and even prolapse. Many head symptoms were noted, and this has been confirmed: "Headache across top of head from one ear to the other." According to Hering the pains of *Pallad*. are fleeting and transient and hard to describe. *Peculiar symptoms* are: As if he had grown taller. As if something horrible would happen. As if she were going crazy. As if she could not touch anything. As if head were swung from behind forward. As if brain were being shaken. As if a weight were lying on brain, and were pushed from occiput to forehead. Pressure on head as from finger-tips. As if something hanging in throat near hyoid bone, or a crumb had lodged there. Crawling in abdomen. As if intestines strangulated. As if air-bubbles pressed forcibly through intestines and passed upward. As if an animal were snapping and biting off small portions inside abdomen. As if testicles were bruised. As if parts of groins would tear. As if viscera had gone from flanks. As if bladder was filled. As if uterus would prolapse. As if neck becoming stiff. As if hand shattered. As if heads of femurs were forced out of their sockets and expanded. The symptoms are: > By touch (headache). > By pressure (pains in kidney and ovary). > By rubbing (pain in ovary; burning spot on right cheek bone). Warmth > sciatica; colic (hot cloths). Undressing = itching all over body. Cold < sciatica. Open air > stitches in chest; lameness in arm. Rest >. Motion <. Lying on left side > abdominal symptoms. Walking > stitches in chest. Every step = pain in groin. Keeping thigh flexed > pain in groin. < After exertion. < After social excitement, concerts, &c. > After sleep. Expiration = pushing forward of weight in head. Cutting pains in uterus are > after

stool. Coughing and sneezing < pain in abdomen. Menses come on at full moon (two weeks late, being due at new moon).

Relations.—*Antidoted by:* Chi. (diarrhœa); Glon. and Bell. (headache). *Complementary:* Plat. *Compare:* Irid., Osm., Plat. (natural allies). Right ovary, Ap., Graph., Pod., Plat. Left ovary, Arg. met. (feeling as if left ovary growing enormously large), Lach. (Lach. < pressure), Lil. t., Act. r., Sul. Tired backache, Helon. Hysteria, introverted state of mind, Tarent. Crumb in throat, Hep. Pain in spleen, Cean. (Pallad. at menses).

SYMPTOMS.

1. Mind.—Extremely fatigued evening; feels mentally "gone.".—Greatly inclined to use strong language and violent expressions.—Fond of the good opinion of others; also too much weight is laid on their judgment; therefore very excited in society, and her complaints are < next day.—> In company, wants to be flattered.—Easily wounded pride.—Imagines herself neglected.—Great inclination to weep.—Depressing news < all symptoms.—Mental agitation, esp. from society, or musical entertainments, or excited conversation, or motion, < the pain in r. ovary.—Excited and impatient (from headache).—Time passes too slowly.

2. Head.—Is so tired that he reels on coming into a room.—Sensation as if head were swung from behind forward; as if brain were being shaken.—Painful dulness in head with darting to and fro in l. side of it.—Headache across top of head from one ear to the other.—Headache: < in afternoon, had to lie down; inability to sleep; with pulsations over whole body; < or > after sleep.—Headache causing irritability and impatience.—Sensation as if a weight lying on centre of brain; each expiration = sensation as if the weight were pushed from occiput to forehead.—Morning headache with weakness in back.—Sensation of roughness on forehead and slight itching.—Itching on sides of head.

3. Eyes.—Dull, heavy pain in and behind l. eye, in evening, after walking.—Pustule under r. eyelid, < by touch.—Pain in r. eye, temple, and ear.—Pain around l. eye, extending beyond r. eyebrow, while walking at 11 a.m.—Sensation of dryness on the edges of the lids.—Small watery blisters on edges of lower lids.—Dryness and itching of eyes in evening, which is not > by rubbing.—Blue half-circles under eyes.

5. Nose.—Burning in nose with coryza, evening.—When sneezing or coughing, pain in abdomen.—Blood pustule r. cheek, near wing of nose.—Painful pustule on point of nose, bleeds long after being squeezed.

6. Face.—Itching pimples in the face, on the nose, behind the ears; back of r. and l. zygoma; in whiskers.—Growth of whiskers more slow.—Soreness and painfulness of the r. corner of mouth.—Pain in r. and l. lower jaw.

7. Teeth.—Sensation as if upper incisors projecting.—L. upper and outer incisor sensitive, and feels like a foreign body.

8. Mouth.—Tongue red in the middle (morning).—Burning sensation on surface of tongue near tip.—Much tough mucus in mouth and slimy taste.

9. Throat.—Accumulation of tough mucus in throat, with slimy taste, which returns after rinsing out the mouth.—Frequent hawking of small solid lumps, which he must swallow.—Dryness in throat and on tongue, without thirst.—Tickling (or sticking) as if a crumb of bread had lodged in throat.—Sensation when swallowing as if something hanging near hyoid bone.

11. Stomach.—No desire for beer.—At dinner, and after coffee, headache.—Nausea; tasteless eructations, which do not >.

12. Abdomen.—Pain and soreness in liver.—Pain in l. hypochondrium; > by eructations.—Pain in region of spleen.—Crawling sensation in abdomen.—Sensation as if the intestines were entangled and twisted in different directions.—Stitches in l. side near hip-bone but more inward; in intervals peculiar pain as if air bubbles pressed forcibly through intestines and passed upward; sometimes as if an animal tearing off small portions from inside; stitches extend to r. side next day.—Sensation in flanks as if viscera gone.—Violent colic in abdomen, more on the r. side; growing < under continuous eructations; can only endure the pain when lying on l. side; < from sneezing, coughing, and urinating, and in afternoon; returning next day in afternoon, with cold hands and feet, continuous chilliness, and passing of urine like blood mixed with water; after going to bed cramps in legs, which prevent her from moving in bed; > by external heat (hot cloths).—Shooting pains from navel to pelvis.—(Soreness and shaking pain from navel to breasts.).—Swelling and hardness in r. side of abdomen (ovary).—Sharp pains, as darts with a knife, low down in abdomen; > after stool.—Distended abdomen from flatulency.—Every step hurts in l. groin.—Sensation as if something in groin would tear.

13. Stool and Anus.—Frequent soft stool.—Diarrhœa with very little pain, night and day; cured by *Chi*.—Stool in afternoon or evening instead of morning.—Dull stitches felt at approach of a stool; dull aching twitches l. side of rectum; morning.—Dull pains in rectum, as from too long retained stool, but without urging, at noon.—Knife-like pains in uterus are > after stool.—Constipation; stools hard, frequently whitish (like chalk).

14. Urinary Organs.—Single stitches through bladder, with painful weakness in it.—Frequent micturition; bladder feels full, but little urine is passed.—Pressure in bladder, as if very full.—Dark urine with brick-dust sediment, or colouring, the vessel red.—Muddy (not dark) urine; urine like water mixed with blood.

15. Male Sexual Organs.—In evening and at night no proper erection could be obtained.—Single stitches in urethra, extending down to corona glandis.—Sensation as if testicles were bruised, with pain in abdomen.

16. Female Sexual Organs.—Pain and weakness as if uterus were sinking down; every motion was esp. painful; she could not well stand.—Heaviness, like a weight in pelvis.—Bearing-down pain.—R. ovary swollen, sore to pressure, with bearing-down pains.—In the region of r. ovary, drawing down and forward; > by rubbing (pressure).—Pain in r. ovary; urgency to urinate but scanty emission and sensation of weight and bearing down in pelvis; prolapsus uteri.—Swelling and induration of r. ovary, with soreness and a shooting pain from navel to pelvis; with a heaviness and weight in pelvis; < from exertion and while standing up, > lying on l. side.—Menses appeared later, at full moon instead of new moon, and accompanied by headache, &c., which were > by *Glon*. and *Bell*.—Pain in abdomen and region of spleen at return of menses.—Feels sore in abdomen after menses, with fear and apprehension that something horrible will happen.—Menstrual discharge while nursing.—Leucorrhœa transparent, like jelly; < before and after menstruation.—Yellow leucorrhœa turned white and thicker and then disappeared.

17. Respiratory Organs.—Frequent hawking of small solid lumps which he must swallow.—When making an expectoration, sensation as if something were pushed into head; when taking a deep breath, stitches in chest.—Coughing and sneezing < pain in abdomen.

18. Chest.—Stitches in r. side of chest, through to the back; < from taking a long breath, > when walking in the open air.—Stitches in r. breast near nipple, running in deep; < deep inspiration.

19. Heart.—Pain in region of heart.—Pressing deep in the l. side of the chest periodical, as if in the heart.—Pain in heart, with paralysis of l. arm.

20. Neck and Back.—Frequent painful spasm in muscles r. side of neck; esp. morning.—Painful drawing in neck, shoulders, and down l. arm.—Pain in back and hips, with coldness of limbs.—Tired feeling in back.

22. Upper Limbs.—Sudden stitches in r. shoulder-joint; rheumatic pains in r. shoulder.—Sensation as if sprained in r. shoulder-joint.—Stitches from shoulders into middle of chest.—Pain in r. arm and temple.—Pain in r. wrist extending into forearm.—Sensation of numbness in l. arm, as if paralysed.—Numbness of r. arm and hand at night.

23. Lower Limbs.—Rheumatic pains in the r. hip.—Sciatica: r. side; dull aching pain; < towards night and in evening, in cold and from motion; > by warmth and rest.—Darting pain from toes to hip, or from trochanter to hollow of knee.—Tension in l. calf; while walking it becomes tensive in hamstrings.—Itching in l. ankle.

24. Generalities.—Aversion to make any effort to exercise; must lie down.—Stitches; rheumatic pains, suddenly changing and often lasting but a short time; soreness as if bruised.

25. Skin.—Redness of knuckles; warts on knuckles.—Itching and crawling as from fleas on different spots, back, arms, abdomen, thighs, ankles.

26. Sleep.—Great sleepiness; in afternoon (3 p.m.), and early in the evening.—Wakeful till 2 a.m.—Starting in sleep; afternoon.—Dreams: every night; of buildings; wide stairs; many rooms.—Symptoms > by sleep.

27. Fever.—Chilliness with cold hands and feet, with colic.—Coldness of the limbs, with pain in the back.

Pancreatinum.

Extract of Pancreatic and Salivary Glands of Ox or Sheep. Trituration.

Clinical.—Diabetes, pancreatic. Diarrhœa. Mumps. Gout. Pancreas, disease of.

Characteristics.—*Pancreatinum* has been used with success in conditions due to disease or faulty action of the pancreas on the analogy of *Thyroidin* and the other Sarcodes. Burnett says pancreatics are often of great service in gout.

Relations.—*Compare:* In action on pancreas and salivary glands, Ir. v., Nux, Puls., Merc., Iod., jabor., Pilocarpine.

Asimina Triloba.

Paw Paw, or Custard Apple. N. O. Anonaceæ. Tincture of ripe and unripe fruit, green leaves, bark, and root.

Clinical.—Aphthæ. Carbuncle. Cramp. Diarrhœa. Fever. Scarlatina. Throat, sore.

Characteristics.—The *Anonaceæ*, to which *Asimina* belongs, are allied to the Magnolia family. From eating the unripe fruit five children developed high fever, sore throat, and a scarlet eruption, with diarrhœa, one of them having eventually a carbuncle. It has also been proved. The mouth, throat and stomach are irritated. Drinks much. Desire for ice-cold things and < after eating.

Relations.—*Compare:* Caps., Bell., Illic. anis (colic).

SYMPTOMS.

8, 9. Mouth and Throat.—Mouth feels corroded; fauces red, swollen; tonsils and submaxillary glands enlarged.

11. Stomach.—Nausea and belching; soreness in regions of stomach and abdomen on pressure.

12. Abdomen.—Colic.

13. Stool and Anus.—Diarrhœa after eating; yellowish discharges; soreness of anus when wiping it.—Sudden urging to stool, with sensation as if a stick the thickness of a thumb passed down the rectum; followed by a sudden diarrhœic stool, repeated every ten or fifteen minutes, with. chilliness, drowsiness, and weak voice.

17. Respiratory Organs.—Hoarseness; the voice is weak and talking is an effort, as if the mucous membrane was thickened.

18. Chest.—Cramp in chest, lasting three hours, with blueness of face.

25. Skin.—Itching when undressing.—Scarlet rash followed by desquamation.

26. Sleep.—Fever, with sleepiness.—Drowsiness and sleeplessness alternating.

27. Fever.—Fever heat, with desire for something icy-cold; with drowsiness; with much thirst.

Paraffinum.

Paraffin. Trituration.

Clinical.—Abdomen, swelling of. Breasts, affections of. Constipation; of children. Diaphragmitis. Indigestion. Leucorrhśa. Menorrhagia. Muscć volitantes. Spine, pains in. Spleen, pain in. Umbilicus, pain in. Uterus, affections of. Vertebrć, affections of. Vision, disorders of.

Characteristics.—"Paraffin" as a *generic term* includes all those substances which have *no affinity for Sulphuric Acid*, and cannot be destroyed by it, Petroleum itself coming within this designation. *Specifically* "Paraffin" is a "tasteless, inodorous, fatty matter, which resists the action of acids and alkalis, obtained by the dry distillation of wood, peat, bituminous coal, petroleum, &c." In the distillation of Petroleum, *Naphthalin* is the first substance that comes off; *Paraffin* is the next. This is the substance the attenuation of which I have successfully used on the indications of Wahle's proving (translated by W. F. Robinson from the Italian, *H.*

R., v., 193), and I conclude this is the substance Wahle proved, though no description of it is given. The symptoms of the proving, which was made on persons of both sexes, are very striking. The pains are: Knife-like stabs; twisting, wrenching pains; stinging and twisting; electric pains. The pains extend from one part to another and alternate. Pain in the stomach alternates with pains in throat and spine. There is sensitiveness to touch about the head. Sensation as if there were fat on the eyes. Sensation as if whole body was swaying to and fro. Sensation of a cord round abdomen. The pains are < bending over. < Standing or walking (these soon bring back the symptoms). > After sleep. > After rest. > By supporting the part. Aversion to tobacco; smoking = pain in stomach. Palpitation accompanies stomach pain. A number of pains were experienced in the groins; stabbing in mons veneris; cutting pain from one iliac crest to the other. With these pains there was leucorrhśa, pruritis vulvć, and other disturbances of the female generative organs. The homśopaths of Rome (says the *H. R*.) have found it serviceable in uterine and other troubles, particularly constipation. I have recorded (*H. W*., xxvi. 319) this case: Mrs. W., 37, mother of three children, suffered since last confinement, five years before, with bearing-down pains, excessive menses, leucorrhśa, constant and violent indigestion with morning retching or vomiting. Pain in back, shoulders, and abdomen after any food, however light. The pains, which "double her up," are < on standing. Much thirst. Constipation with piles. Constant desire to pass water. After *Murex* and *Alston*. had given some relief, the indigestion returned in full force. A few globules of *Paraf*. 30 were dissolved in water and a teaspoonful taken every two or three hours.—In a few days all symptoms of indigestion were gone and did not return. Other symptoms were markedly ameliorated. The catamenia instead of recurring too soon were delayed much beyond the normal time. *Paraf*. has a remarkable action in nodous joints. Cooper has seen swollen joints lessen considerably from its use as a liniment.

Relations.—Compare. Naph., Petr., Eupn., Kre. (Eupn. and Kre. have to each other a relation similar to that between Naph. and Paraf.). Desire to walk fast, Buf., Iod. Uterine symptoms, Sep., Murex, Nat. m., Nat. sul. Intolerance of tight clothing, Lach.

SYMPTOMS.

1. Mind.—Sensation of fear with electric pains in axilla.

2. Head.—Bruised feeling in l. occiput.—Knocking and hammering in head as if all the pulses were beating.—Head heavy and dull; a feeling when leaning forward as if a weight fell toward forehead.—Pressing pain in head, extending from vertex toward forehead as if something would come out.—Pricking stinging in head, extending to l. temporal bone.—Pain as of a contusion in occiput.—At 9 a.m. a pain in l. side of vertex as if a nail were being driven into head, with extension of the pain to l. lower jaw.—Touching l. side of head = pain as if the part were crushed and a feeling as if the whole side of the head were soft and spongy.—Twisting and

wrenching in sinciput so that he must lie down (which >); having lain down a quarter of an hour, and having placed r. hand under head, there was experienced a feeling of painless shock so that the hand under the, head was drawn away and the legs were thrown down from the sofa; soon afterward occurred severe palpitation of heart.—Twisting and wrenching in the whole head as well as the face; of l. side; l. teeth ache as if they would fall out.—Feeling as of knife-stabs under r. temporal bone, extending into r. eye and becoming < on bending over.—On the outside of forehead a pressing pain which seems to thrust inward, passing in half an hour into inside of head.—The l. side of head and face suffers most; pains stinging and twisting, often going and returning at the same time.—Sticking in the forehead extending into the nose.—On touching the vertex the skin pains as if it were suppurating, in the afternoon.—Skin of head feels soft on being touched, or as if suppuration was going on beneath it.—Falling out of hair.

3. Eyes.—Throbbing and sticking over r. eyebrow laterally and from without, extending into lower jaw and there disappearing.—Stinging pains above the l. eye and toward temple.—Raised spots upon cornea.—Eyes seem as if there was a veil before them, morning.—In morning, lids closed with mucus; dry mucus in internal canthi.—Itching in internal canthi which ceases a moment on rubbing, but a sore pain remains, and very soon the itching returns.—Pressing pains under r. upper lids as if from a foreign body; or as if from the prick of a needle.—Lids red, as after crying.—Pain as of a wound in l. external canthus, morning.—Itching of lids, lasting the whole day.—Rubbing > only for a short time.—Feeling in eyes as if they had fat in them.—Feeling in eyes as if always moist.—Eyes moist and fearful.—The mucus in internal canthi is cold and viscid.—Lachrymation and itching of eyes in morning on rising.—In morning, l. eye closed with mucus, and seems to have a veil before it.—Eyes dim, she sees nothing, but feels everything.—On fixing any object for some time eyes become moist, as if a cold wind was blowing into them, with a gentle itching.—In open air there seems to be a black veil before eyes; objects seen seem to be pale, with short sight; little black flies are seen before the eyes.—She sees objects as if in a mist.—White of eye full of blood; < toward the external angle.

4. Ears.—Roaring in r. ear like rumbling of a mill wheel, afternoon.—Gurgling in l. ear like beating of pulse.—Ringing in both ears, morning.—Stinging and twisting in l. ear with a feeling as if it was stopped up; pushing things into ears > temporarily.

5. Nose.—Odour of cordials in nose.—Nose moist, frequent desire to blow it, but without sneezing.—Blood from nose of a dark red colour.

6. Face.—Itching in face as from urticaria, smooth red spots appear.

7. Teeth.—Tearing in r. teeth, extending to r. ear; > by supporting painful cheek.—Stabbing pain in one of the l. lower molars.—Twisting in teeth with

stinging in ear, which after some hours affects whole l. side of head and face, down to lower jaw.—Twisting pain in l. lower teeth and l. temple, sleep impossible.

8. Mouth.—In evening, under upper lip, on the gum, a hard, painless swelling, which broke during the night.—Mouth full of saliva; she was obliged to spit constantly, lasting for twenty-four hours.—Mouth feels sticky.—Mouth without taste and the appetite fails.—Bitter taste in mouth.—Tongue slightly coated; dirty-white in colour; chill, followed by dry heat with thirst, which is soon followed by sweat, lasting a long time.

9. Throat.—Dryness of throat, fauces as if dried up, but without thirst.—Sense of suffocation in pharynx.

11. Stomach.—Acid eructations some hours after eating.—A constant feeling of satiety.—Appetite good, but nothing seems to taste as it should.—Inclination to vomit at 9 p.m.—After eating repeated urging to vomit with expulsion of the ingesta.—Disturbance of stomach with increase of saliva in mouth as if emesis must occur, with stinging pains in forehead and cold over whole body, without thirst or feeling of heat following.—Hunger almost all the time.—Pain across stomach as if a blow had been received; lasts thirty-six hours; can only breathe slowly and carefully.—The pains in stomach extend to chest, causing oppression thereof, and then pass into shoulders, with much belching, and alternating with pains in throat and spine.—Great sensibility of stomach; cannot draw the vest together.—In walking, feeling of relaxation in region of stomach, as if a sore in it were causing pain.—Smoking soon = pain in stomach, and tobacco is distasteful.—Pain as if from a beating in region of stomach; she wished to gape and was obliged to support region of stomach with hand, thereupon a fixed pain in l. hypochondrium as if some of the parts were being twisted.—Stomach swells up like a ball and forces itself upwards; hard and very painful to the touch; there is also very little appetite.—When the pains in stomach subside, those in teeth also disappear (as if a causal relation between the tow).—Weight in stomach as if there was a stone placed upon it, in morning, evening, and after dinner during time of digestion (from half an hour to an hour after meals).—Palpitation of heart with stomach symptoms, so severe as to incapacitate him.—After breakfast, between 9 and 10 a.m., griping and drawing with crawling in stomach, which extends into chest and between shoulders, causing oppression of chest with a sense of heat.

12. Abdomen.—Sense of lassitude in abdomen > when supported.—Swelling of abdomen and nausea as if about to vomit.—Feeling in the abdomen as if he had been disembowelled; he wishes to walk fast which causes the parts to pain severely.—Cutting pains in abdomen, preventing sleep the whole night.—At 9 a.m. colicky pains in abdomen, which ceased after some minutes, and a quantity of white mucus issued from vagina; these attacks are often repeated.—Under umbilicus a cutting pain as if caused by a sharp knife, extending downward to genitals.—Colicky pains for some hours internal to umbilicus with a painful

sensation as if a cord was bound around abdomen above stomach, lasting ten minutes.—Griping sensation in region of umbilicus, extending to spine.—When sitting, spasmodic pains in lower abdomen, extending into rectum and coccyx.—After long sitting the pains are >, but walking makes them <, so that the body must be held in a slightly curved position.—Toward 6 p.m. griping and cutting internal to umbilicus with nausea, afterwards vomiting of acid water and at the end a little food, with twisting pains in vertex and temples; dryness of mouth with much thirst.—At 10 p.m., without having supped, abdomen suddenly swelled as if she had eaten to excess; before and during the attack flat and viscid taste in mouth.—She went to bed in this condition, and on waking in morning the attack was entirely gone, the bowels, however, refused to move.—Painless swelling of abdomen lasting twenty-four hours.—Abdomen hard, tense, and swollen, with painless rumblings unaccompanied with belching of wind; he goes to bed with these symptoms but they are gone in morning.—Pressing arm against stomach and squeezing it > the pain, and then she was able to breathe deeply, which she could not do otherwise.—Stomach swollen in the afternoon; went to bed at 10 p.m. and slept one hour, awoke with urging to vomit, and soon after threw up acid water and the food taken the preceding day.—Griping in abdomen, extending down into rectum, with a feeling as if this organ was ligated; she feels so weak that she has to support herself to keep from failing, with cold sweat in face, lasting half an hour.—Severe itching in abdomen which ceases, and is always followed by copious white expectoration, with flashes of heat in face and great weakness.—At first coldness in feet, then stinging and pressing pains in r. hypochondrium.—From here the pains pass to stomach with swelling of abdomen; then they extend up the spine to the shoulders.—Spasmodic stabbing pains one after the other in mons veneris, when standing on her feet she has a desire to put one foot over the other.—Spasmodic pain in l. inguinal region as of incarcerated wind, which extends upward across abdomen, causing a painful spot in region of spleen.—Drawing and cutting pain from one iliac crest to the other as if a knife had traversed abdomen; often intermitting, and always returning.

13. Stool and Anus.—Constrictive pain below ribs, passing across stomach, with much thirst; five hours later stools, at first very hard with much tenesmus and retracted abdomen; later, fluid, abundant, constant tenesmus, relieving swelling of abdomen a little.—Bowels confined for two days and very hard; evacuation in small pieces.—No evacuation for three days, abdomen seems very full, as if much had been eaten, with loss of appetite.—Evacuations accompanied with stinging, cutting pains in rectum, which persist more than an hour, with vehement tenesmus.—Obstinate constipation in children is readily cured.—The child has a movement only once in three or four days, accompanied with severe pain in anus.—Frequent desire for stool without result.—Stools hard but occurring every day.—After going for three days without stool he is obliged to remain an hour before expelling anything, and becomes very much fatigued.—Evacuations hard as nuts expelled with much difficulty, with spasmodic pains in intestines; the fćces

escape in small pieces.—Chronic constipation with hćmorrhoids and continual urging to stool without result.

14. Urinary Organs.—Passes much urine of ten.—Frequent desire to pass urine after cramps in stomach.—Was obliged to urinate three times in the space of four hours, but only a small quantity each time; otherwise she only urinated once during the same length of time and with strangury.—Urine very hot and light coloured.—Passes much urine, and after a quarter of an hour passes an equally large quantity although she had drunk but little.

16. Female Sexual Organs.—Slight itching and burning in vulva when not urinating.—Feeling of heat in the vulva.—Very hot urine causing heat at vulva.—The menstruation appears several days too late.—The menstruation comes on six days too soon, when on the feet the blood flows continuously.—The blood is black and abundant; reddish-black.—During menses: feels cold externally and hot internally and must drink a great deal; cutting pains through body on second day.—White fluid discharge like milk coming away in drops; sweetish odour.—Very profuse white discharge, leaving white and grey spots on the linen, with itching in abdomen.

17. Respiratory Organs.—Voice hollow and harsh.—A chronic rattling in throat causes a dry cough.

18. Chest.—Whole chest pains as if compressed, and when breathing sharp stabbing pains traverse chest, < l. side.—Stinging in chest which prevents him from taking a long breath.—Pain in region of diaphragm as if it was inflamed; when gaping, drawing pains under r. ribs, extending as far as spine; they come and go frequently and are < by respiration.—Stinging pains under false ribs on l. side, < on lying down, on external pressure and on deep respiration with flashes of heat.—Stabbing pains one after another in upper portion of breast, < when breathing, lasting half an hour.—Twisting pains in l. breast.—The nipples pain on touching them, as if sore inside.

19. Heart.—Pulse weak, thready, increased in frequency.

20. Back.—Drawing and stinging between the shoulders with oppression of breath.—Drawing pains between the shoulders, extending downward along spine, toward liver and upward into chest, then respiration becomes oppressed and frequent shooting pains traverse entire body.—Pains in spine, extending into lumbar vertebrć and then into both sides above crests of ilia and into inguinal regions, where a pain as of inflammation is felt.—The dorsal pains are < by bending.—Pains in spine as if it had been injured, as bad during repose as when in motion.—Pains as if from fatigue in both loins, when ascending stairs.

22. Upper Limbs.—In l. axilla an electric shock which shakes whole body, and in all the joints there occurs a trembling, such as might be produced by an electric machine, and which causes each time a sensation of fear.—Whole r. arm, but esp. axilla, feels as if it had been dislocated by a blow.—Stabbing pain under r. arm toward breast.—R. arm feels heavy and she cannot lift it well; feels a sensation of numbness as if the clothing was too tight, with turgescence of the veins.—Muscles of forearm seem to grow large and have a feeling of stiffness.—Wrenching pains in elbow-joints.—Wrenching pain in joints of l. hand.—Palms very hot.

23. Lower Limbs.—Painful tension in muscles of thigh as if a long walk had been taken.—Wrenching pain on outside of r. knee extending down r. side of leg to malleolus, from thence into the heel, where it ceases.—Wrenching pains in calves, extending into toes; prevent sleep; she does not know where to put her legs.—Trembling of legs from knees to toes so that there is difficulty in walking or raising the feet.—Tearing pains in the calves of the legs, with a feeling of heat, extending down to the toes; the palms of the hands and soles of the feet are very hot.—Tearing pains in articulations of feet and in toes for several hours.—Back and soles of feet are swollen, after thirty-four hours, with tearing pains in ankles and soles, on account of which, though very tired, he was not able to sleep.—A feeling as of electric shocks in all the joints.

24. Generalities.—General weariness, lasting several days.—When sitting down a feeling as if whole body were swaying to and fro.—At 4 p.m. great fatigue with profuse cold sweat and somnolence for two hours.

26. Sleep.—Frequent gaping with great somnolence.—Continued yawning although the joints of the jaw are painful.—She would like to sleep all the time, day and night.—She cannot keep awake and goes to sleep in her chair; her feet go to sleep.—After having passed the night rolling around in bed without waking and passing from one dream to another, she wakes at 5 a.m., the bed-clothing thrown aside and without her nightcap, a thing which had never happened to her before.—Sensual, lascivious dreams.

27. Fever.—Chill, followed by dry heat with thirst, which is soon followed by sweat, lasting a long time.—Chill, heat, and sweat frequently alternating.—Face and hands hot and red; hot sweat on upper part of body, esp. forehead.

Pareira.

Pareira brava. Cessampelos pareira. Velvet Leaf. Virgin Vine. N. O. Menispermaceæ. Tincture of fresh root.

Clinical.—*Bladder, catarrh of. Calculus*. Dysuria. Gonorrhœa. Leucorrhœa. Prostate, enlargement of. Renal colic. Urine, slimy.

Characteristics.—*Pareira* is a climbing plant, a native of the West Indies, Central America, and India. The root has a traditional use in diseases of the bladder and urinary organs. A short proving by C. M. Fox, of Denver (*Med. Adv*., xvi. 319), brought out some characteristic symptoms which have been clinically confirmed. Among these are: Violent pains with strangury; must go on "allfours" and press head against floor to pass water at all." "Urethritis with severe pain when passing water, and discharge of mucus from urethra." "Pains down thighs and even to feet when attempting to pass water." "Violent pain in glans penis" with the straining. Fox relates two cases of prostatic enlargement with dysuria in which *Par*. gave complete relief. (*1*) Man, 68, old prostatic affection constant urging with entire inability. Feet and legs much swollen had to be put in a warm bath before catheter could be passed. Only on hands and knees, with forehead pressed on the floor, could he pass a few drops of scalding urine. *Par. b*. 1x gave rapid relief. Swelling disappeared from legs, and he was able to resume his business and continue at it for years. (*2*) Enlarged prostate with retention; severe attacks two or three times a year, when he would have to have the urine drawn off for a week or two. After using *Par. b*. the catheter was not required more than twice in two years. When he feels the symptoms coming on a few drops of *Par. b*. relieve him at once. Many other remedies had been used in vain before *Par. b*. was prescribed.

Relations.—*Compare:* Coccul. (botan.). Spasm and burning in bladder, ropy urine, Chimaph., Uva ursi. Prostatic affections, Hydran., Sabel ser. Renal colic, Ocim. c., Berb. Dysuria, Berb. (Berb. has pain in back extending to hips; Par. b. has pain extending to thighs and even toes. Berb. has paralysis of bladder with discharge of great quantities of mucus, which deposits itself at bottom of vessel and is viscid. Berb. urine lacks the ammoniacal smell of Pareira.) Dribbling urine after micturition, Selen.

SYMPTOMS.

14. Urinary Organs.—Excruciating pains in l. lumbar region; pain radiates from l. kidney to groin, following course of ureter.—Bruised pains in region of kidneys.—Micturition difficult, with much straining only in drops, with sensation as if urine should be emitted in large quantities.—Dropsical swelling of feet and legs; urethritis with severe pain when passing water, and discharge of mucus from urethra.—Violent itching in entire length of urethra with scalding when passing water; distress after urinating, with shooting pain in orifice of urethra.—Urethritis

with prostatic trouble.—Dribbling of urine after micturition.—Violent pains in bladder, and at times in back; l. testicle is painfully drawn up; frequently pains down thighs, during efforts to urinate, shooting down into toes and soles of feet.—Paroxysms of violent pain with the strangury; he cries out loud and can only emit urine when he goes on his knees, pressing his head firmly against the floor; remaining in this position for ten to twenty minutes, perspiration breaks out, and finally the urine begins to drop off with interruptions, accompanied by tearing, burning pains in glans penis.—Dysuria; since confinement, two weeks previously, cannot pass urine in any position except on hands and knees.—Urine smells strongly of ammonia, and contains a large quantity of viscid, thick, white mucus.—Black, bloody, foaming urine, depositing a brick-dust sediment of uric acid; deep red and mucous urine.—The paroxysms appear generally from 3 to 6 a.m.; > through the day.—Almost cartilaginous induration of mucous membrane of bladder.—Enlargement of prostate gland, with retention of urine; pains extending down thighs.

15. Male Sexual Organs.—Urethritis with prostatic disorders.—Gonorrhœa.

17. Respiratory Organs.—Viscous matter lodged in and obstructing bronchi.

23. Lower Limbs.—Œdema of lower limbs.

Parietaria.

Parietaria officinalis. Pellitory-of-the-Wall. N. O. Urticaceæ. Tincture of fresh plant.

Clinical.—Calculi. Nightmare.

Characteristics.—*Pariet*. belongs to the nettles. It grows on old walls, and its ashes contain much Nitre (*K. nit*.). Cooper has used it with success in a case of renal calculus; and in one case it produced nightmare, the patient dreaming of being buried alive in the midst of ruins.

Relations.—*Compare:* Urt. urens, Kali nit.

Paris.

Paris quadrifolia. One-berry. True Love. Herb Paris. (Moist, shady woods in Great Britain.) N. O. Trilliaceæ. (Sometimes considered a sub-order of Smilaceæ, or of Liliaceæ.) Tincture of whole plant when in fruit.

Clinical.—Acidity. After-pains. Brachial neuralgia. Ciliary neuralgia. Ciliary paralysis. Digestion, slow; weak. Gonorrhœa. Headache. Hiccough. Hoarseness.

Hysteria. Mania. Neuralgia. Panaritium. Paralysis. Saliva, sour. Spine, affection of. Touch, sense of, disordered.

Characteristics.—*Paris* betrays its relation to the Lilies and Arums in the symptoms of irritation which it causes in mucous membranes and skin with burning sensations and cramps. The *Treasury of Botany* says of *Paris* that the leaves and stems were "formerly used in medicine, the juice of the berry, though considered poisonous, has been employed in curing inflammation of the eyes." The provings made by Hahnemann, Stapf, and others, bring out a very marked and characteristic action on the eyes, and develop some of the keynote symptoms of the drug. One of these is a sensation of expansion and consequent tension. The head feels as if distended and the scalp too tight. The eyes feel as if much too large for their sockets; as if they were projecting and were being drawn tightly backward by a string to the middle of the brain. *Paris* is one of the drugs which are credited with producing garrulity, vivacity with love of prattling, like tea. A case of loquacious insanity cured with *Paris* 3 was recorded by B. Nath Banerjee (*Calc. J. of Med.*, xii. 60). It brings out many of the leading symptoms of *Paris*, which I have put in italics. Mrs. B., 45, suddenly became loquacious and insane. After a month of Kavirajee treatment without benefit she came under Banerjee's care, October 3, 1893. A year before, the last of her five children, a grownup son, died, and she could not be consoled, and gradually became morose and dull. She ceased to menstruate in February, 1893, but had no uterine troubles or any other illness previous to the present. The symptoms were: *Loquacity*, but not continuous. Every three or four days, if interfered with, maniacal attacks lasting about half an hour. At times foolish behaviour. With difficulty Banerjee obtained the following symptoms from the patient: Vertigo, and whenever she thinks of her lost son, severe headache, the vertex being sensitive to touch. When telling these symptoms, suddenly her *looks became wandering*, and her eyes appeared *as if protruding from their sockets*. She could not relish her food because everything, especially fish, *smell putrid*. Whole body painful, *especially when touched*. She complained of a ball *lodging in the throat and giving her trouble, with burning*. Acidity and *badly smelling diarrhœa*. A peculiar feeling of *coldness of right side of the body while the left side was hot*. All symptoms < in *evening and on motion*. *Ign.* 30, and later 200, was given without any effect. *Paris* acted promptly, and on the third day the patient assured the doctor that she was quite well. The remedy was not repeated and the cure held good. *Paris* is in general a left-side remedy, but it has coldness of the right side, whilst the left side is natural or hot. I cured with *Paris* "numb feeling of left side of head." Numbness affects the upper limbs. The left arm is paralysed, feels stiff, and fingers contracted. "Numbness and prickling in left hand" was removed in a case of spinal affection. "Fingers often feel as if asleep; *objects seem rough to touch*." This disorder of the sense of touch is a marked symptom. And at the same time there is great sensitiveness of the surface. The characteristic mucous secretions are green and tenacious. The diarrhœic stools smell like putrid meat. There is great sensitiveness to offensive odours; also imaginary bad smells: milk and bread smell like putrid meat. The eyes

give out a fetid, ulcer-like smell. *Paris* has "hunger soon after a meal," which is the same thing as the "sinking of the antipsorics, and of the Hellebores, Veratrums, &c. *Peculiar sensations* are: As if scalp were contracted and bones scraped sore. As if a thread were drawn tightly through eye to middle of head. As if head were puffed up, and temples and eyes were pressed out; as if distended the size of a bucket and the walls were too thin. Eyes as if too large; projecting; as if pulled into head by a thread drawn through eyeball; as if he could not open eyes. Ear as if forced apart by a wedge; as if pressed out or torn out; as if a burning heat was rushing out of ears. As though face were drawn to root of nose then back towards occiput as if by a string. Tongue feels too large. Ball in throat. Throat constricted. Stone in stomach. As if internal parts contracted. Heavy load on nape. Fingers as if asleep; dead. All joints as if broken, swelled or dislocated at every motion. Hot stitches in left malar bones. Acidity, sour saliva. The symptoms are < by touch. The scalp is very sensitive to touch. Pressure on a sore spot on head = cries. Pressure with the hand > pressive pain in head. Motion < rest >. Sitting = stitches in coccyx; burning in orifice of urethra vertigo. < From mental exertion; thinking. All symptoms < evening. Tenacious expectoration < morning. Dull pain in neck > in open air. Smoking tobacco = headache. < After eating (hiccough). > By eructations.

Relations.—*Antidoted by:* Coffea. *Compatible:* Calc., Led., Lyc., Nux, Pho., Rhus, Sep., Sul. *Incompatible:* Fe. ph. *Compare:* In spinal headache rising from nape, Sil. (Paris = feeling as if head immensely large). Wild look in eyes, Bell. As if eyes drawn back by thread, Crot. t. Eyeballs feel too large, Sil. Garrulity, Lach., Meph., Stram., Act. r., Agar. Laryngeal affections, Arg. n. (Paris has expectoration noticed mostly in morning, and it is green and tenacious). String-like pain, Al. cp. Heart, Lil. t., Conval. Panaritum, Bor. ac. Imaginary foul smells, Anac. < Motion, Bry.

Causation.—Injury. Suppressions.

SYMPTOMS.

1. Mind.—Disposition to treat others with contempt and disdain.—Silly conduct.—Disposition to utter absurdities with complacency.—Mania with loquacity.—Repugnance to intellectual labour.—Discontent, ill-humour.

2. Head.—Bewildered, confused head.—Vertigo on reading aloud, with difficulty of speech and sight.—Sensitiveness of vertex to contact.—Pains in head are < by meditation.—Pressive pain in the head, which disappears when the hand is pressed upon it.—Sensation of swelling in head, with pressure, as if contents of cranium were forcing themselves through temples and eyes.—Head feels like a bushel, and walls too thin.—Sticking pain in middle of head and in temples; afterwards heavy pressure on forehead, esp. on stooping.—Benumbing stitches in l. side of forehead.—(Numb feeling l. side of head.).—A very sore, painful spot, only when touched, in l. parietal bone.—Tension in brain and integuments of

forehead.—Shootings and lancinations in head.—Pulsative, bubbling headache on waking at night, with great agitation.—Pulsative headache, with a wavering sensation on going up stairs.—Headache after having smoked.—Pain as of excoriation on the exterior of vertex when touched.—Painful sensitiveness and falling off of hair.—Severe pains in occiput, from mental exertion, after a blow.—Headache of Spinal origin rising from nape and producing a feeling as if head unusually large.—(Acute congestion to brain.).—Tension of scalp on forehead and occiput.—Brain, eyes, and skin feel tense, and the bones scraped sore; < from motion, excitement, or using eyes; < in evening.—Scalp sensitive to touch; sore pain in small spots on forehead.—Pain in scalp when touched as if the hair were painful.—Scabs on the head.

3. Eyes.—Pain in eyes, like a pressure on orbital bones.—Sensation as if eyeballs were too large or swollen; as if orbits too small and lids could not close.—Burning pain in eyes, with lachrymation, esp. after rising in morning.—Jerking and twitching of (r.) upper lid.—Eyes feel heavy as lead.—Eyeballs pain on slightest attempt at motion.—Confused sight and wavering before eyes.—Eyes feel as if projecting with a sensation as if a thread were tightly drawn through eyeball, and backward into middle of brain, very painful; weak sight; stitches through middle of eye.—Wandering, unsteady looks.—Fetid, ulcer-like smell from eyes.

4. Ears.—Otalgia, with tearings.—Sensation as if ears were pressed out or torn out, or forced apart by a wedge.—Sensation as if a burning heat were rushing out of ears.—Pains in ears on swallowing.—Diminution of hearing.—Tinkling in ear.—Ringing in l. ear.

5. Nose.—A sensation of obstruction in upper part of nose, with a discharge of blood when it is blown.—Bread and milk have a putrid smell.—Great sensitiveness to offensive odours; imaginary foul smells.—Obstruction of the nose in the morning, with discharge of thick and sanguineous mucus when it is blown.—Dry alternately with fluent coryza.—Discharge of liquid mucus from nose and eyes, which excites a panting respiration.—Red or greenish mucus blown from nose.

6. Face.—Pains in face, with burning shootings in zygomatic process.—Hot stitches in l. malar bone, painful when touched.—Violent itching, biting, and burning on edges of lower jaw, frequently with red, small, easily-bleeding (miliary) eruption.—Purulent pimples under nose and on chin.—Sanguineous pimples, like grains of millet, on lower jaw.—Pimples on forehead, with pressive pain when touched.—Lips cracked.—Vesicles on the surface of the lower lip.—Herpes round mouth.

7. Teeth.—Drawing toothache, or with drawing pulsations, esp. in teeth which are carious, < by cold things.—Incisive pains in gums every morning.—Gums shrivelled, as if they had been burnt.

8. Mouth.—Mouth dry and parched on awaking in morning.—Collection of water in mouth.—Accumulation of rough and astringent saliva.—White and slimy froth in corners of mouth in morning.—Tongue coated white.—Swelling, pain as of excoriation, and desquamation of velum palati.—Hard (almost painless) swelling of size of a pigeon's egg in palate, which is also hard.—Tongue rough and dry, with sensation as if it were too large.—Clammy and insipid taste.

9. Throat.—Pain in throat as from pressure of a ball.—Shootings, scrapings, and burning pain in throat.—Burning in throat when eating or drinking.—Much mucus in fauces, causing hawking.

11. Stomach.—Voracious appetite.—Hunger very soon after a meal.—Disgusting and pressive risings.—Watery risings.—Nausea with sour taste.—Weakness and slowness of digestion.—Continued hiccough after a meal.—Pressure at stomach, as by a stone, > by risings.—Burning pain extending from stomach into abdomen.

12. Abdomen.—Rumbling and rolling in abdomen; cutting, griping pains.—Tensive pain throughout abdomen.—Hard pressure in abdomen.—Incisive drawing and boring in one side of abdomen, at night, while lying upon it.

13. Stool.—Frequent but scanty evacuations of the consistence of pap.—Loose, fetid evacuations, which smell like putrid flesh.

14. Urinary Organs.—Diminished secretion of urine.—Frequent and urgent want to urinate, with burning pain during the emission.—Urine with greasy cuticle on surface.—Acrid, excoriating urine.—Fiery urine, with clouds in centre, a reddish sediment, and a variegated pellicle after standing for some time.—Sticking in forepart of the urethra.—Burning pain and shootings in urethra (when sitting).

16. Female Sexual Organs.—Increased sexual desire.—Premature catamenia.—Intense after-pains but very imperfect contractions suppressed lochia for forty-eight hours with ineffectual urging to stool weak and feverish; agonising headache, with sensation as though face were drawn to root of nose then back to occiput; eyeballs sore, < on slightest attempt at motion.

17. Respiratory Organs.—Sensation of dryness in trachea in morning (on waking).—Troublesome hoarseness and low voice, with continued hawking up of mucus (and burning in larynx).—Periodical painless hoarseness.—Cough with expectoration in the morning, without expectoration in the evening.—Cough with expectoration of viscid mucus, difficult to raise in the morning and evening on lying down.—Cough as if excited by vapour of sulphur in trachea, or as if caused by slimy mucus in pharynx.—Nocturnal cough when lying on the l. side.—Cough with expectoration of slimy, greenish mucus, proceeding from larynx.—Burning in the larynx (bronchitis).

18. Chest.—Obstructed respiration, with necessity to take a full inspiration.—Aching in the r. side of chest.—Shootings in chest and sides of chest.

19. Heart and Pulse.—Palpitation of heart during repose and movement: in evening.—Pulse full but slow.

20. Neck and Back.—Tension and weakness in muscles of neck and nape.—Sensation as if neck were stiff and swollen on turning it.—Dull pain in nape, increasing at times in acuteness, with numbness, heat, and weight; > from rest and in open air; < from exertion.—Violent pains in both sides of neck, extending down to fingers, esp. l. side; < from mental exertion.—Pain l. side of neck and shoulders, paralysing arm and depriving of power of mental or bodily exertion.—Pains in the back and nape of the neck on stooping, as if a load were pressing upon them.—Shootings and lancinations in back, also in and between the shoulder-blades, and pulsating stitch in the os coccygis when sitting.

21. Limbs.—Stinging pains in limbs.—All joints painful on motion.—Paralytic pain in limbs.—Stitches in all limbs.—Heaviness in all limbs.—Contractive pressure in joints.

22. Upper Limbs.—Heaviness and paralytic weakness in arms and joints of fingers.—Tearings and drawings in fingers, from shoulder to fingers.—Trembling of the hands.—Shootings in the fingers.—Fingers at one time hot, at another cold or dead.—Numbness of fingers.—Panaritium.

23. Lower Limbs.—Tearing and drawings in legs, and esp. in coxo-femoral joint.—Paralytic pain in joint of foot.—Tingling in tendo Achillis.—Tearings, drawings, and shootings in toes.—Coldness of feet in bed at night.

24. Generalities.—Affections of any kind on the eyebrows; inner temples.—Continual lancinations in all limbs.—Stinging pains in all parts of body, esp. limbs.—Cramp-like contraction in joints, or sensation on moving and turning them as if broken, swollen, and dislocated.—Sensation of heaviness in whole body.—Sensation of extension in size, *i.e.*, patient feels very large.

25. Skin.—Papular eruptions, esp. on face and lips.—Violent itching in various parts.—Subcutaneous tingling without itching.—Pain as of excoriation in skin, on touching the parts.—Crawling sensations.—Panaritium.

26. Sleep.—Urgent inclination to sleep during the day and early in evening.—Yawning and sleepiness.—Incomplete, broken, and agitated sleep at night, with continued tossing and numerous dreams.—Voluptuous dreams with erections and pollutions.

27. Fever.—Pulse full and slow.—During chill sensation as if skin and other parts of the body were contracted.—Cold feet all night in bed.—Coldness in r. side; l. side natural.—Shiverings, esp. in chest, abdomen, and legs, with cutis anserina and yawning.—Constant coldness with trembling internally (mostly towards evening).—Heat extending from neck down back.—Heat with perspiration on upper part of body.—Itching sweat in the morning, which compels scratching.—Coldness on one side of the body only (r.), with heat on the other side of the body (l.).

Parotidinum.

The nosode of Mumps.

Clinical.—Glandular affections. Meningitis. Mumps. Orchitis. Salivation.

Characteristics.—*Parotidinum* has been used as a prophylactic against infection by mumps. In this instance it is generally given in the 6th or 30th two or three times a day to those exposed to infection. In the disease itself it may be given every four hours, either by itself or alternated with other indicated remedies. The well-known complications which sometimes occur with mumps, cerebral inflammation and orchitis suggest its possible use in these conditions.

Relations.—*Compare:* Merc.

Parthenium.

Parthenium hysterophorus. Bitter-broom. Escoba amarga. N. O. Compositæ (tribe Heliantheæ). Tincture of the dry plant. Trituration or solution of the alkaloid Parthenia.

Clinical.—Abortion. Amenorrhœa. Cheyne-Stokes breathing. Debility. Dyspepsia. Ear, affections of. Fevers. Headache; extending to nose. Liver, pain in. Milk, increased. Neuralgia, periodic. Salivation. Spleen, affections of. Syncope. Toothache. Vision, disordered.

Characteristics.—E. Fornias brought *Parthen*. to light (*H. R.*, i. 42, 71). It is a Cuban remedy of great repute in the treatment of fevers. An alkaloid *Parthenia* was isolated by C. J. Ulrice, of Havana, and Dr. J. L. Duenas published experiments with this on the human organism and on animals. Dr. B. H. B. Sleight proved increasing doses of the Ø tincture, and later on of 6x, which reproduced most of the symptoms of the first proving. The Schema is made up chiefly of Sleight's symptoms; additions from Duenas being marked (D). Dr. Ramirez Tovar has reported these cures by *Parthenia*: (*1*) A lady living in the lower part of the city, where the rain leaves channels of infection, had daily attacks

of intermittent, more intense each day. One grain of the alkaloid was divided into six powders, one every hour after the attack. No further attacks. The patient was nursing at the time, and she noticed a marked increase of milk in the breasts. Half a grain divided into five doses completed the cure. (*2*) A tailor, 30, moved to lower part of the city, and contracted tertian intermittent, the fourth seizure being attended with much pain in left hypochondrium. One grain in five doses cured, though the conditions were unchanged. [The removal of this left hypochondriac pain is important in connection with Burnett's experience with *Helianthus*.] (*3*) Girl, 6, lymphatic, living near the beach of the harbour, ill for seventeen days with malaise, loss of appetite, sleepiness, and fever. Had had Quinine internally and externally and was wasting visibly. The alkaloid, aided by a tonic wine prepared from the extract of the plant, cured. (*4*) Man, 45, of delicate constitution, poorly nourished, straw-yellow face, yellow sclerotics, enlarged liver and spleen, spleen painful to pressure. Had had fever in Panama, had taken Quinine; complained of a pain in right side (more severe in some parts than in others), which commenced at 1 p.m. with shiverings, disappeared in two hours, and returned at precisely the same hour next day. Five doses of ten centigrams each removed the pain. About six weeks later there was a relapse, the pain this time being located in the stomach. One grain in five doses, one dose every two hours, removed the pain, but it returned the third day. The same treatment then removed it permanently. (*5*) Young lady, 18, had periodical facial neuralgia; cured by same treatment., Fornias adds this case: His niece, 5, living in Havana, had been suffering from a continued fever with periodical midday exacerbations, which later on assumed an intermittent form. She had been saturated with Quinine, and complained at the time of *malaise, lassitude, headache, gastric intolerance*, &c., when she was seen by Dr. Govantes, who prescribed an extract of *Parthen. hyst*., three doses a day, each the size of a pea. In four or five days she was free from fever, and made a quick recovery. In the proving the pains were sudden, congestive, out-pushing. A large number were experienced in the head and ears, and singing and fulness in the ears was among them, which points to its antidotal action towards Quinine. The symptoms were < by sudden motion; < after sleep; > after getting up and going about.

Relations.—It *antidotes* Quinine. *Compare:* In spleen affections, Helianth., Ceanoth. In malaise and periodic neuralgia, Malar. off., Chi., Cedr.

SYMPTOMS.

1. Mind.—Feels dull and stupid.—Difficult to fix attention.—Malaise, apathy, lassitude (D).—Indifference (D).

2. Head.—Vertigo; while sitting, with heat of face and blurred vision.—Heaviness and dulness of head.—Full feeling, esp. in vertex, pressing from within.—Stitching pain in l. temple, of short duration.—Aching pain at l. supra-orbital foramen.—Head heavy, brain feels loose; < moving head.—Head feels as if in a vice.—Sudden stitching and severe plunging pain in l. frontal eminence.—On rising, after restless

night, throbbing deep in brain as if it would push through top of head; "big head," > after moving about and washing face.—Sudden darting pains in r., then l., frontal eminence, < by sudden movement.—Head feels swelled; brief feeling as if blood would burst through face; returning in a few minutes, esp. above nose and root of nose.—Heart beat felt all over head and over eye, < motion.—Pressure at r. frontal eminence, increasing to sharp, penetrating pain, going to root of nose, then to tip, where it is most severe; restlessness succeeds; seems in an bones of nose, < l.—Front of head feels big.

3. Eyes.—Eyes heavy; drowsy.—Aching in eyeballs.—Must look intently to see the words; when writing the letters seem pale and eyes ache.—Aching over eyes; wants to close them.

4. Ears.—Ringing in ears, < l.—Some sharp pain in ears.—Aching at lower edge r. ear spreads over face; ear feels plugged up.—Stitching at lobe of l. ear, deep in and above external auditory meatus.—Dulness and aching in ears, coming suddenly.—Splitting pain over both ears in spots size of a dollar.—Stabbing pain in l. ear.—Singing, dull aching, pushing out in ear.

5. Nose.—Pain at root of nose and in nose; in all bones of nose, < l.—At root of nose stuffed feeling as with dry coryza.—Nose feels swollen; and tender to touch.—Aching in bridge of nose (< l. side) and of upper l. molars.—Aching at end of nose, which feels full of blood.

6. Face.—Bursting, pain in r. malar bone.—Seems as if blood would burst through face.—Aching pains run up from above l. eye-tooth to eye and over face; occurs by starts and stops.

8. Mouth.—Upper teeth feel on edge; pricking pains in sockets.—Head thick, heavy.—Sharp aching twinges in upper molars.—Upper incisors tender at sockets when biting.—Sharp pain in l. upper and lower molars.—Teeth feel too long.—Tingling in tip of tongue.—Profuse, very fluid, salivation.

11. Stomach.—Goneness in epigastrium; hunger.—Irrepressible, tasteless eructations.—Eructations tasting of the drug.—Hard lumps at epigastrium.—Heat and weight in stomach.

12. Abdomen.—Severe pain in l. hypochondrium, with tertian fever (cured with *Parthenia*).—Spleen painful to pressure; pain in r. side, worse in some parts than in others, with shiverings 1 p.m. daily (cured with *Parthenia*).—Loud rumbling in bowels; about navel.—Slight colicky pains at navel.—Colic deep in pelvis; pains run down backs of thighs to knees.—Sore.

13. Stool and Anus.—Stabbing pain runs up rectum after passing flatus.—No desire at usual time (10 a.m.), 10.30 p.m. mushy stool.

14. Urinary Organs.—Kidneys enlarged and congested (D).—Increased urine.

16. Female Sexual Organs.—Given to pregnant women for febrile conditions, it has caused abortion and premature delivery (D).—Given in a case of subacute tuberculosis, it restored the menses, which had been absent since the illness commenced.—Great increase of milk in breasts of nursing women cured with *Parthenia* of intermittent fever.

17. Respiratory Organs.—Slow, irregular (Cheyne-Stokes) breathing (D).

19. Heart.—Excitation of heart-beats; or slow heart (D).—Progressive slowness of pulse, followed by syncope, cardiac paralysis, and death (D).—Pulse slow, soft, compressible.

22. Upper Limbs.—Hands feel numb, esp. their dorsa.

23. Lower Limbs.—Pains run from pelvis down backs of thighs to knees.—Marked diminution of reflex in hips and extinction of voluntary movements (D).

24. Generalities.—Tremors (D).—Muscular relaxation; anæsthesia (D).—Coagulation of blood retarded (D).—The alkaloid is very rapidly absorbed and eliminated.—General depression and lassitude.

26. Sleep.—Restless night, wakes at 3 and 4 a.m., then dozes and dreams till 7.30.—Increased stupor; desire to be quiet (D).

27. Fever.—Rise and fall of temperature, shivering, diminished perspiration (D).

Passiflora.

Passiflora incarnata. Passion Flower. N. O. Passifloraceæ (of the Violal alliance). Tincture of fresh or dried leaves gathered in May. Fluid hydro-alcoholic extract. Powdered inspissated juice.

Clinical.—Burns. Cholera infantum. Convulsions. Delirium tremens. Dentition. Epilepsy. Erysipelas. Exophthalmos. Levitation. Sciatica. Sleeplessness. Tetanus; neonatorum.

Characteristics.—*Passiflora* has not been proved. Its curative action appears to be of a direct kind. Hale introduced it to homœopathy, citing in the *New Remedies* a paper by L. Phares. Phares learned its action from W. B. Lindsay, who used it with extraordinary success in tetanus of the newborn. An aqueous extract of the root Lindsay commended as an application for chancre, erysipelas, irritable piles, and

new burns. Phares confirms the efficacy of *Passif.* in erysipelas (he "never saw anything act so promptly"), ulcers, neuralgia, and tetanus. He cites the case of an old lady who was seized with convulsions of a tetanic nature, and refers to several cases of tetanus in the horse cured by himself and his son, J. H. Phares. One of his own horses was seized with tetanus, and all hope of saying him was given up, when Phares gathered some *Passif.*—stems, leaves, and flowers-pounded, moistened with water, expressed ten or twelve ounces, and poured it down the animal's throat through a tube introduced at the side of his mouth. Though not expected to live half an hour, the horse was found grazing next morning. Farrington considers *Passif.* suited especially to tetanus of hot countries, and refers to two cures by Archibald Bayne of Barbados with the Ø and 1x. It has also been used in convulsions of children and other complaints of dentition, and even in epilepsy. J. W. Covert (*Hom. News*, xxii. 153) reports this case: Mrs. X., 28, had epileptic convulsions for years, from one to twenty fits in a week. The aura was a tight feeling in the chest. By homœopathic treatment Covert succeeded in diminishing the frequency of the attacks, but they would invariably return at the menstrual period. *Passif.* Ø, gtt. vi., six times a day, was given. The next period was passed without a convulsion, but the patient had a violent headache as if the top of the head would come off. This was rapidly controlled by *Glon.* 6. The three following periods passed without any attack. E. S. Prindle (*H. R.*, xv. 21) relates a case of delirium tremens. A German, driver of a beer-waggon, was laid up with a broken arm, when he was seized with delirium tremens of a most ferocious type, which the usual remedies entirely failed to control. *Passif. succus* was now given, two drachms every half-hour. After the third dose the patient quieted down and slept three hours. On awaking he again began to rave, but not as badly as before. Another teaspoonful of *Passif.* put him to sleep, and next morning he was quite sane and allowed his arm to be reset. *Passif.* has been also used for ordinary sleeplessness; for restlessness of fevers for tedious labours when the patient becomes nervous and excitable for breaking off the Morphine habit; cholera infantum with restlessness, excitement, and spasms; neuralgias, internal and of the limbs. G. C. Buchanan (quoted *H. W.*, xxviii. 411) observed some curious effects in a patient, Mrs. V., to whom he gave teaspoonful doses for neuralgia, sleeplessness, and nervousness: "Her eyes seemed to push out of her head and lie on the quilt, her heels seemed to be up in the air; top of her head seemed to lift off." To the observer the eyes seemed to protrude. Later a severe attack of piles developed. The dose was reduced to half-teaspoonfuls, which produced sleep and caused no ill effects. The *Live Stock Journal* (June 28, 1901) mentions an experience recorded in "The Stock Poisoning Plants at Montana". Mr. T. A. Melter gave to a horse a large quantity of passion-flower vine *collected three months after the flowering season* and the horse thrived and fattened on it. At another time the horse accidentally obtained access to a quantity of the same fodder, which, however, had been *collected in the flowering season*, and ate eagerly of it. The day after the meal the horse was found in a stupid state and so remained, steadily losing flesh for six weeks, when he died.

Relations.—*Compare:* In tetanus and epilepsy, Œnan., Nux. Heels seem to go up, Phos. ac.

SYMPTOMS.

2. Head.—Violent headache as if top of head would come off (> by *Glon.*).—Top of head seemed to lift off.

3. Eyes.—Eyes looked as if starting from head; seemed to her to push out of her head and lie on the quilt.

13. Stool and Anus.—Severe attack of piles developed.

23. Lower Limbs.—Her heels seemed to be up in the air.

Pastinaca.

Pastinaca sativa. Parsnip. N. O. Umbelliferæ. Tincture of roots of second year.

Clinical.—Delirium tremens. Loquacity. Milk, intolerance of.

Characteristics.—The root of the Parsnip, after the first year, is very poisonous, and some cases of poisoning have been observed, the symptoms of which make up the Schema. A state of perfect "delirium tremens" was observed in several persons, illusions of vision, catching at imaginary objects; fighting with one another. A peculiar effect was produced on the stomach; the irritability was depressed and emetics would not act.

Relations.—*Compare:* Æthus, Ziz.

SYMPTOMS.

1. Mind.—Delirium tremens.—Quiet delirium, illusions of vision, grasped at imaginary objects; incoherent speech; uninterrupted attempts to get out of bed.—Incessant talking.—Fighting.—Fits of convulsive laughter.

2. Head.—Vertigo and general uneasiness.—Sense of weight in head.

6. Face.—Look: staring; vague.—Face pale.

8. Mouth.—Tongue clean, moist, trembling.

11. Stomach.—Vomiting of milk in large curds (child, æt. 2, poisoned).—Irritability of gastric nerves depressed; emetics in double the usual doses have no effect.

17. Respiratory Organs.—Breathing somewhat difficult and slow.

19. Heart.—Suppressed beating of heart; pulse small, weak, slow.

24. Generalities.—In constant motion.

25. Skin.—Skin, red, hot, swollen; eyelids œdematous, translucent.—Blebs on hands and fingers (child, æt. 2, ate and handled wild parsnip).

Paullinia Pinnata.

Paullinia pinnata. N. O. Sapindaceæ. Tincture of fresh root.

Clinical.—Cramps. Diarrhœa. Head, pains in. Heart, pain in. Neuralgia.

Characteristics.—*Paul. p.* is less well known than *Paullinia sorbilis*, better known under its name *Guarana* (*see* Vol. I.). It was proved by Mure, but I do not know of any clinical experience with the remedy. The predominating pains were lancinating, stitching, and pressing. Constricting pains as with iron bands or with iron plates. Head, abdomen, and chest furnished the largest number of symptoms. The symptoms were < by motion; by inspiration. > In open air (neck); by friction (pain in right shoulder). There was an unusual longing for coffee—to smell and drink it. Sensation as if the chest opened on drawing a breath.

SYMPTOMS.

1. Mind.—Fear of becoming consumptive.—Sad; drowsy; lazy.

2. Head.—Pain above eyes piercing to brain.—Pain with inability to bend head forward.—Hammering sensation in l. temple; in vertex.—Headache as if head were covered with a leaden cap and then struck upon.—Great itching and suppuration at back of head.

3. Eyes.—Pains in eyebrows intersecting at root of nose.—Lancinations in eyes with lachrymation.

4. Ears.—Cutting in cartilage of l. ear extending to neck.—Heat in ears.—Roaring in l. ear.

8. Mouth.—Pain in r. teeth.—Rough, swollen tongue; it feels thick.—Mouth dry; bitter.—Profuse saliva.

9. Throat.—Scraping; digging; itching in throat.

11. Stomach.—Appetite increased; or diminished.—Desires coffee and fruit.—Nausea on waking.—Sensation while talking as if a stone were buried deep in stomach.

12. Abdomen.—Pain as from tight cord round hypochondria.—Borborygmi.—Lancinations: in liver; spleen; umbilicus; groins.

13. Stool.—Constipation.—Diarrhœa.—Colic followed by reddish diarrhœic stool, mixed with slime.

14. Urinary Organs.—Frequent and ineffectual urging to urinate.—Ardor urinæ.

16. Female Sexual Organs.—Momentary stabbing in ovaries.

17. Respiratory Organs.—Hoarse voice.—Violent cough with inflammation of throat.—Dry cough.—Yellowish, bitter, difficult, and tenacious expectoration.—Short, rapid breathing.

18. Chest.—Oppression.—Pressure as from an iron band round waist; with pricking in upper chest, < during movement.—Pressure on chest as if squeezed between iron plates and then stabbed.—Burning; itching; lancinations in chest.—Chest feels if breaking open with a crash; while drawing a breath.—Burning in chest across breast, which feels as if compressed by an iron band.—Lancinations under r. breast.—Pain in l. breast.—Pain as of knife thrust in l. nipple at regular intervals.

19. Heart.—Pain in heart extending to last ribs, 6 p.m.—Lancination in præcordial region.

20. Neck and Back.—Pain in neck > in open air.—Burning all down back.—Bruised pain in loins; cannot raise herself after stooping.

22. Upper Limbs.—Numbness in shoulders and arms.—Pain in wrists.—Cramp in l. palm.

23. Lower Limbs.—Pricking as with innumerable pins in l. thigh.—Weakness and heaviness of legs.—Numbness of feet after going up stairs.—Pain under sole when walking, < by pressure.

24. Generalities.—Staggering gait.—Pressive and lancinating pains; as if stone or knife driven into side.—Feels bruised all over.—Pains in joints.

25. Skin.—Red patches on face and chest.—Itching in hands and fingers so that she scratches them raw.

26. Sleep.—Sleepless.—Sleep restless.—Dreams: disgusting; of lepers; of dead people.

27. Fever.—Coldness.—Shuddering with drowsiness.—Alternate heat and coldness of face.—Heat: of face; of soles of feet.

Guarana.

Paullinia sorbilis. Brazilian Cocoa. N. O. Sapindaceæ. Alcoholic solution of dried paste made from seeds.

Clinical.—Alcohol, effects of. Coffee, effects of. Diarrhœa. Eyelids, twitching of. Headache.

Characteristics.—Guarana is a climbing shrub of Brazil, the seeds of which contain *Coffeine*, and are used by the natives for making a beverage. In medicine it has found its principal use in conditions of nervous exhaustion; sick headache in those who have abused tea and coffee, the headache being followed by vomiting and excited by any error in diet or depression of mind. Throbbing, congestive headache after excessive use of liquor. Persistent twitching of eyelids is one of its indications. Diarrhœa.

Relations.—*Compare:* Agar. (twitching of eyelids); Ign., Nux in sick headache; Coff., Coca., Thea.

SYMPTOMS.

1. Mind.—Gaiety; extravagant behaviour.—Mental hyperæsthesia; intellectual excitement.

2. Head.—Sick headache in those who have abused tea and coffee, or in whom nervous headaches followed by vomiting are excited by any error in diet or depression of mind.—Throbbing, congestive headache after excessive use of alcohol.

3. Eyes.—Persistent twitching of eyelids.

13. Stool.—Profuse, green, odourless mucous stools.—Diarrhœa of phthisis.

14. Urinary Organs.—Spasm of bladder.

24. Generalities.—Restlessness, nervousness, weariness.—Neuralgia.—Reduced vital powers; grief; depression of spirits; loss of appetite.—Debility after prostrating diseases.—Paralysis.—Chlorosis.

25. Skin.—Urticaria.—Prurigo.

Pecten.

Scallop. N. O. Pectinidæ. Trituration or tincture of the animal.

Clinical.—Asthma; humid.

Characteristics.—Swan (*Org*., ii. 449), having learned "from a gentleman that every time he entered a room where scallops were being opened he had such a severe attack of asthma that he had to leave or suffocate," potentised the Scallop, and used the preparation with success in similar cases. T. Franklin Smith (*Ibid*.) reports a case of humid asthma cured quickly and permanently with *Pecten* 1m. and c.m., characterised as follows: Quick, laboured breathing; cannot lie flat or on left side; constriction of chest, especially right side. Attacks preceded for two or three days by sneezing and excessive coryza; burning sensation in throat and chest; fulness of head; pulse very quick and wiry; subsequently copious expectoration of tough, stringy, and frothy mucus. Cough < after 6 p.m. Symptoms < at night. *Arsen*. did not relieve.

Pediculus.

Pediculus capitis. Head Louse. N. O. Hemiptera. Tincture of the insects.

Clinical.—Children, diseases of. Colic. Diarrhœa. Ganglion of foot. Hair, falling off. Irritation. Œdema. Psora, hereditary. Skin, affections of. Stammering.

Characteristics.—*Pediculus* belongs to the same class of remedies as *Cimex* and *Trombidium*. It was proved by Mure, who says that he thought that nature pointed to the Louse as a specific for hereditary psora, in which belief he was strengthened by the fact that *Psorinum* develops pediculosis in healthy persons, and he adds that he has found *Pedic*. one of the most useful agents in diseases of children. This is the only clinical observation I have met with in regard to the remedy. Five persons, took part in the proving, but no particulars are given as to the doses they took. All developed symptoms. Among these were: Eagerness and aptitude for study and work. One prover, a stammerer, had unusual fluency of words. Constriction of pharynx. Jerks and starts in evening when sitting or lying. Miliary eruptions, itching, and formication almost all over. The symptoms are < by contact; in evening; after dining; after eating; standing; stooping; walking.

Relations.—*Antidoted by:* Chi. (anasarca). *Compare:* Colic and diarrhœa after eating, Trombid. Skin, Pso., Sul.

SYMPTOMS.

1. Mind.—Excessive merriment, laughs at everything.—Causeless melancholy.—Irritability, causeless anger.—Entire carelessness about present or future.—Disposition for study; quick of apprehension; eager for work; writes with feverish rapidity.—(Stammering improved.)

2. Head.—Confusion, on rising, with beating in r. temple.—Headache: with pressure on root of nose; on orbits; with lancinations.—Hair ceases to fall out.—Horripilation of l. half of scalp.—Contraction of scalp.—Sensation as if lifted up by the hair.—Itching of scalp as if lice were running all over it.

3. Eyes.—Rings round eyes.—Eyes: weary; smart as if from weeping.—Sight dim; brain feels compressed.

4. Ears.—Heat in ears.—Roaring in ears.—Cracking in r. ear, when eating.—Whizzing in ears when whistling.

5. Nose.—Inflammation of nasal fossæ.—Lancinations in root of nose.

6. Face.—Face deep red, scarlet.—Swelling of l. cheek.—Lips: dry, swollen, very red; black and cracked.

8. Mouth.—Burning and pricking on sides of tongue, which is red and much cracked.

9. Throat.—Dryness, scraping, soreness, constriction of throat.—Constant swallowing of saliva.

11. Stomach.—Hunger with inability to swallow food; the pharynx feels contracted, followed by faintness and nausea.—Constant nausea; difficult digestion with contraction in stomach.

12. Abdomen.—Violent colic making her scream and weep for half an hour at 9 p.m.—Colic and diarrhœa after dinner.

13. Stool and Anus.—Diarrhœa in evening, continuing next morning.—Small, hard stool.

14. Urinary Organs.—Frequent and copious discharge of yellowish green urine, with stool almost every day (before the proving, was constipated).—Urine light yellow and very odoriferous.

15. Male Sexual Organs.—Prolonged erection; without desire.—Emission at night without amorous dreams.

16. Female Sexual Organs.—Very painful lancinations; great heat, and itching in uterus.—Shifting pain in uterus; she cannot lean upon it, evening.—Painful stitch in uterus.—Leucorrhœa.

17. Respiratory Organs.—Dry; spasmodic cough.—Suffocative feeling (4 to 6 p.m.) in chest; which is painful to touch.—Chest pains < by contact.—Pain in breasts when drawing breath.

22. Upper Limbs.—Bruised pain in shoulders and arms, which are very sensitive to touch.—Hands tremble so much she cannot sew.

23. Lower Limbs.—Great weakness of legs.—Violent lancinations above r. and l. patella.—Throbbing in l. patella.—Ganglion under foot, very painful when walking.—Skin comes off front of l. leg in patches.

24. Generalities.—Eleven days after all symptoms had disappeared, swelling of breast, face, and almost whole body set in, accompanied by several of symptoms of last days of proving, esp. constriction of pharynx; > by *Chi*. 10, but the itching and large pimples produced by the drug remained long after.—Increased physical strength.—Jerks and startings in evening.—Numbness while drawing breath; shuddering and rigors.—Great weariness when standing; dizziness and faint feeling.

25. Skin.—Red spots on cheeks; white spots on hands.—Red face, hands, feet.—Miliary pimples, on red base and swollen in centre, at nape of neck.—Miliary eruption on inside of arms, forearms, and thighs.—Small red pimples with black points.—After putting feet in hot water they are covered with small red pimples.—Horripilation all over.—Itching and pricking all over.—Itching r. on wrists; on beard; on nape; face and scalp; backs of hands; backs and soles of feet.

26. Sleep.—Yawning.—Drowsy.—Restless sleep.—Dreams: frightful; monstrous; of a hospital, full of vermin; amorous; confused; of being pursued.

27. Fever.—Coldness with rigors.—Heat and dryness of extremities.—Heat: head burning hot, face bright red; of hands.—Sweat of face.—Sweat (cold) of feet, followed by great coldness.

Pelargonium Reniforme.

Rabassum (Dutch). N. O. Geraniaceæ. Tincture of fresh root.

Clinical.—Dysentery.

Characteristics.—*Pel. ren*. (G. M. H. in *H. W*., xxxiv. 546) is a Kafir remedy for dysentery. The root is cut up very fine or bruised, and then boiled in milk for a considerable time. Many British soldiers were cured of dysentery with it in the Boer War. It is also used for purging in horses. When a horse is attacked during a journey the root (which is very thick) is wrapped up and tied to the bit. The juice mingles with the saliva and is swallowed.

Penthorum Sedoides.

Penthorum sedoides. Virginia Stone-crop. N. O. Crassulaceæ. Tincture of fresh plant.

Clinical.—Coryza. Diarrhœa. Hæmorrhoids. Headache. Post-nasal catarrh. Sacrum, pain in. Varicocele.

Characteristics.—*Penth*. was proved by Dr. D. B. Morrow (twice), Dr. Scudder, and a young man, who all took substantial doses. The majority of the symptoms are Morrow's, including the catarrhal symptoms, which have been verified in practice: "A peculiar wet feeling in nares as though a violent coryza would set in," but it did not; the secretion became thickened and pus-like but not increased. The same "wet feeling" was experienced at the same time in trachea and bronchi, which passed from above down as if coryza would set in, followed by a slight feeling of constriction in the chest, which also passed from above down. The next day the nose felt stuffed. The third day the first symptoms were repeated, and the discharge became thick, pus-like, and streaked with blood, and there was an odour in the nose as if from an open sore. Scudder had "fulness in nose and ears." Morrow experienced itching at anus, hæmorrhoids, and pains and sensations in rectum, sacrum, and sacro-iliac joints; his first proving cured "heat and soreness in sacrum with a dull, heavy headache." Hale says *Penth*. is reputed to be curative in catarrh and in diarrhœa. A scalded sensation in the tongue is one of the symptoms. A sense of levitation was also produced. The symptoms proceed from above downward. Morrow (*Med. Adv*., xviii. 540) reports these cures: (*1*) Miss P., 17, blonde, had severe cough of several weeks' duration. < Talking or singing. Frothy, greenish sputa. *Pul*. and *Pho*. failed; *Penth. s*. soon cured. (*2*) Decrepit old lady, 75, sufferer from eczema for twelve years. Previous winter cured of asthma (probably from suppressed eczema) with *Sul*. c.m. Now paretic right side, for which *Pho*. was given. But *Pho*. did not relieve a loose, continual, rattling cough, caused by

tickling at bifurcation of bronchi, with raising much thick, frothy, greenish sputa. *Penth*. Ø pellets quickly cured.

Relations.—*Compare:* Sedum., Hydrangea. In scalded sensation on tongue, and in catarrh, Sang. Catarrh, Puls. Levitation, Can. i., Coccul., Phos. ac., Sticta, Sul., Thu. Jerking of limbs, Meny., Pso.

SYMPTOMS.

1. Mind.—Dull; discouraged; desponding.—Mind is dull, study impossible.

2. Head.—On closing eyes, felt like floating; vertigo.—Dull, heavy headache, with heat and soreness in sacrum (cured during proving).—Catarrhal aching in forehead.—Weight in sinciput.—Itching of hairy scalp.

3. Eyes.—Inner, upper tarsal borders itched and burned.—Full sensation in supra-orbital region.

4. Ears.—Ringing and singing in both ears.

5. Nose.—Discharge from nares thick, pus-like, streaked with blood, and an odour as if from an open sore.—A peculiar wet feeling in nares, as though a violent coryza would set in, which did not; the secretion from the nose became thickened and pus-like, but not increased.—Nose: stuffed as if swollen; fulness of nose and ears.—Contractile feeling of muscles of side of nose affected with catarrh (a secondary symptom).—Itching in nares.

8. Mouth.—Prickling, burning sensation on tongue as though scalded.—Increased flow of saliva (bloody).

9. Throat.—Posterior nares feel raw as if denuded of epithelium.

11. Stomach.—Appetite increased.—Forcible eructation and dejections of small quantities of odourless flatus.—Disgust and nausea.

12. Abdomen.—Borborygmus.—Parieties of abdomen felt thickened.—A clawing, uneasy sensation about umbilicus, which gradually passed to lower bowel.—Twitching in muscles of abdomen.

13. Stool and Anus.—Crawling in lower rectum as though a worm tried to escape.—Burning in rectum at stool, continuing after.—Itching of anus; hæmorrhoids with aching in sacrum and sacro-iliac joint.—After being constipated, semi-fluid evacuation next morning.—Constipation; an atonic condition of bowels and rectum.

14. Urinary Organs.—Dull aching in kidneys.—Bladder sore to pressure.—Urine increased; burning along urethra when micturating.—Urine alkaline.

15. Male Sexual Organs.—Sexual orgasm.—Erethism, almost satyriasis; followed by long-continued depression, approaching impotence.—Varicocele (cured).

17. Respiratory Organs.—(Connected with wet feeling in nose) wet feeling in trachea and bronchi; passing from above down, as if a coryza would set in, followed by a slight feeling of constriction, which passed from above down through chest.—In morning a cough (dry, "as though he would cough his insides out") from deep in chest, with soreness throughout chest.

20. Neck and Back.—Aching through basilar region from back to front.—Aching in sacrum and sacro-iliac joint.—Heat in sacrum with headache (cured).

22. Upper Limbs.—Arm numb.—Hand felt swollen.

23. Lower Limbs.—Trembling feeling of legs for several days, with soreness of knees.—While on lounge muscles of l. leg suddenly contracted, jerking foot up as in stepping; in a moment r. leg performed same manœuvre.

24. Generalities.—General malaise, headache, weakness of limbs, inability to attend to business.

25. Skin.—A long-cured impetiginous eczema reappeared on both legs.—A few hot prickings in skin.—Itching on face and forehead.

26. Sleep.—Dreams: fantastic; voluptuous and increased desire sympathetic with urinary excitement.

27. Fever.—A very few cold chills rushed in succession up spinal column.

Pepsinum.

A proteolytic ferment found in the gastric juice. The Pepsin in general use is extracted from the stomach of the pig. [Alcohol, tannin, and the alkaline carbonates destroy its power. It is prepared in granular form or in glycerinated extract for general use. Homœopathic attenuations maybe made by triturating the secretory layer of a fresh pig's-stomach; by triturating the granular Pepsin with sugar of milk; or by making the lower attenuations of the liquid extracts with distilled water.]

Clinical.—Dyspepsia.

Characteristics.—*Pepsin*. has been supposed to act purely as a *digestive*, but recent discoveries in regard to the action of the sarcodes makes this now scarcely tenable. *Pepsin*. may digest the contents of the stomach; but, like the secretions of other glands, it will in all probability act also, by its specific affinity, on the secretory tissues of the stomach itself.

Persica.

Amygdalus persica. Peach. N. O. Rosaceæ. Tincture of the flowers. Infusion of the bark. Infusion of the leaves.

Clinical.—Eyes, irritation of. Gastric irritation. Genital weakness. Smell, loss of. Sprains. Taste, loss of. Toe-nails, affections of. Vision, disordered. Wrists, affections of.

Characteristics.—The symptoms were obtained by Demeures whilst pounding the flowers for the purpose of making a tincture, and from later provings with the tincture on himself. The sense of vision was disordered and the eyes irritated. The senses of smell and taste were abolished. Pains in vertical lines in abdomen, heart, limbs; weak wrists; pains under great toenails and persistent itching were the chief effects observed. O. S. Haynes (*H. R*., v. 214) relates a case *apropos* of remarks by C. C. Edson on the value of an infusion of Peach *bark* in the gastric irritability of children. An infant in its second summer had acute dyspeptic diarrhœa, with persistent vomiting of all food. No remedy helped, and the child was sent to the mountains; but the change made it worse, and death was hourly expected, when an old local practitioner was called in and prescribed: Two or three fresh Peach *leaves* to be put into a cup of boiling water; the infant to have a drink of the infusion at frequent intervals. The effect was rapid; food was soon retained and the child got well.

Relations.—*Compare:* Amyg. (the peach is hardly distinguishable from the almond, *A. communis*, botanically; almonds have been known to have fleshy drupes), Pru. spi., Pru. virg.

SYMPTOMS.

3. Eyes.—Pressure and itching in eyes from reading, evening; sensation of foreign body in eyes.—Lachrymation from reading.—Dazzling before eyes; objects wave in zigzags; reading impossible; < candle-light.

4. Ears.—Tumour size of nut on lobe of r. ear, very painful to touch.

5. Nose.—Nasal cartilage and upper jaw painful as if bruised (only when touched); nasal cartilage feels thinner than usual.—Persistent loss of smell.

6. Face.—Raw pain middle of lower lip.—Swelling on l. lower jaw.

8. Mouth.—Persistent loss of taste.

12. Abdomen.—Vertical internal pain in line from tip of l. tenth rib cartilage to anterior superior spine of l. ilium.

15. Male Sexual Organs.—During stool ejaculation of semen, without erection followed by empty feeling in hypogastrium and pain in genitals as after excess; painful lassitude in legs, then pain above hips, < in sacral region.

18. Chest.—During dinner stinging pain under false ribs, as from a sharp point, also under scapulæ.—Severe deep-seated prickings above l. nipple.

19. Heart.—Sharp vertical pains in heart region.

22. Upper Limbs.—Wrists sprain easily.—Fatiguing pains in both wrists, and at same time in feet.

23. Lower Limbs.—Vertical lancinations in r. thigh.—Pain in both knees and r. ankle.—Pricking and lancinations, numbness, stiffness of legs.—Itching and sharp pains under great toenails.

24. Generalities.—A single glass of wine is sufficient to intoxicate him.

25. Skin.—Obstinate, intolerable itching on different parts of body, pimples appear.—Sudden local itching.

Polygonum.

POLYGONUM ACRE. P. punctatum, Ell. P. hydropiperoides, Pursh. Smart Weed. (North America.)

And

POLYGONUM HYDROPIPER. Persicaria urens. Water-pepper. (Britain.) Tincture of whole fresh plant. N. O. Polygonaceæ.

Clinical.—Amenorrhœa. Antrum, pain in. Blepharitis. Colic, flatulent. Cough. Diarrhœa.—Dysentery. Dysmenia. Dysuria. Eczema. Epilepsy. Gonorrhœa. Gravel. Hæmorrhoids. Heart, affections of. Hysteria. Laryngitis. Nephritis. Neuralgia.

Orchitis. Prostatitis. Sciatica. Spermatic cord, pain in. Spleen, affections of. Strangury. Ulcers.

Characteristics.—*Polyg*. was proved by W. E. Payne and others. Additions by Ed. Bayard, included by Hering, appear in the Schema. "Smart Weed," says Hale, "is a popular domestic remedy throughout U.S.A. Applied externally it has the effect of a mustard plaister, and the leaves saturated with hot water are applied to relieve cramps and colic, and as an emollient in inflammation and sprains. The provers were all men, but clinical experience has shown a definite action in the female generative sphere, amenorrhœa, aversion to coitus, and congestion of the ovaries having been cured by it. Leading symptoms are: Aching pains in hips and loins, with weight and tension in pelvis, and "Tearing in groin, < right." The pains are: Lancinating, cutting, pulsating, shooting, wandering, and flashing. One prover described them as like aurora borealis, and a case of sciatica with pains of this description was cured with *Polyg*. The left temple was markedly affected; left side generally more so than right. Sensations of cold were numerous, and alternated or coincided with heat in the same or other parts. Coldness of right side of face when pain in left side was most severe. Burning in chest with cold feeling at pit of stomach. Feet burning, then suddenly cold. Diarrhœa, as with its relations, *Rheum* and *Rumex*, is marked, and also dysuria. There is excessive weakness, trembling, and sensitiveness to cold. Epilepsy and hysteria have been cured with it. The Polygonums are named by Gerarde "Arse-smarts." Burnett (who prescribed *Polyg. hydropiper* under its name *Persicaria urens*) regarded it as a splenic, and as useful in old cases of syphilis. As a splenic he found it often required in cases of gout; and in gouty eczema with much irritation he used it with much benefit in the 6th, 12th, and 30th. *Peculiar Sensations* are: As of sudden rising of scalp. As if whole intestinal contents were fluid. As if hips drawn together. As of galvanic shock through lower extremities. The symptoms are < by cold; damp; change of temperature: this is the most characteristic condition. Warmth >. Pressure of clothing = distress. Lying down = pressure in occiput; dizziness and wavering of sight. Rising = sudden pain in occiput. Bending head down =, and bending head back >, pain in ears.

Relations.—*Compare:* Botan., Fago., Rheum, Rumex. Cough, diarrhœa, Rumex. Burning in mouth and throat, Caps. < Pressure of clothes, Lach. Headache waking him from sleep, Lach. Wandering pains, Puls., K. bi. < From cold and damp, Dulc., Merc., Rhus. > Bending head back, Seneg. Averse to coitus, Nat. m. Plumb. Also Asar., Caulo., Senec., Xanth.

Causation.—Cold. Damp. Sprains.

SYMPTOMS.

1. Mind.—Great depression followed by excessive irritability.—Gloomy views of life, dislike of change and excessive dread of death.

2. Head.—Dizziness.—Pulsative, acute pain in l. temple.—Under pressure of great weariness or excitement a dull, depressing pain through whole head, causing a sensation of torpor and strong desire to sleep, but inability to do so.—Pressure in back of head on lying down.—Pressure and soreness in head during menses.—Pain on sudden rising in back of head with pain over eyes.—Headache < in damp weather, > in moderately warm temperature.—Sensation of sudden rising of scalp, with extreme irritation and increased dry exfoliation.

3. Eyes.—Burning in eyeballs; dry sensation in lids.—Convulsive twitching in lids when closed and when lying down, dizziness and wavering of sight.—Inflammation of edges of lids.

4. Ears.—Dull hearing.—Ringing in ears.—Sudden sounds on tympanum, producing momentary cessation of hearing.—Acute pain in ear when bending head down; > bending head back.—Ear symptoms < in damp atmosphere.—Secretion of ears increased.

5. Nose.—Inflammation, smarting, raw feeling of Schneiderian membrane.—Tickling in nose.—Frequent sneezing as from cold.—Red, inflamed appearance of nostrils, with swollen sensation.—Feeling of congestion through eyes and nose.—Coldness in external nose.

6. Face.—Acute pain in l. face extending to temples, sometimes darting through whole l. side of head.—Excruciating pain and heat in l. side of face, < by cold or damp.—Coldness in r. face when pain most severe in l.—Pain in r. antrum as if proceeding up from a tooth (sound).

8. Mouth.—Gums tender.—Cold or cooling temperature in mouth, producing acute toothache.—Tongue: coated yellow; feels swollen.—Heat and burning: from root of tongue to pit of stomach; from tip of tongue to mouth and throat (r. upper).—Heat in roof of mouth with excitation of salivary glands.—Increased flow of hot saliva, gives no > to parched condition.—Saliva abundant and thin (before thin and scanty).—Taste: bitter; pungent, like pepper.

9. Throat.—Throat dry, hot, burning, with sense of excoriation.—Glands feel swollen; < from cold or moist air.—Contracted feeling in throat after swallowing, followed by thirst.

11. Stomach.—Appetite: voracious; lost.—Food tasteless.—Great thirst for cold water, yet drinking = nausea.—Nausea: as if proceeding from small intestines; with coldness in abdomen.—Acidity.—Weight in stomach.—Burning in stomach.—Cold feeling in stomach: with headache; with burning in chest.—Pressure of clothes = distress.—Pain on pressure followed by throbbing and distress.—Uneasiness in stomach and abdomen.

12. Abdomen.—Burning heat in stomach and bowels.—Tympanites and flatulent colic.—Cutting, lancinating, griping pains, with great rumbling as if whole intestinal contents were in a fluid state and in violent commotion, the movement proceeding from below up, producing nausea and disposition to vomit, with liquid fæces discharged with great force, with pain in loins.—Pain in hypogastric region, rectum, and anus.—Throbbing in l. inguinal glands.

13. Stool and Anus.—Copious stool followed by smarting in anus.—Straining at stool with mucous, jelly-like discharges.—Stools: yellowish green; hard, lumpy; dark, followed by burning in rectum.—Urging with discharge of much fetid flatus.—Tenesmus; with nausea; with pulsative pains in hips and loins.—Constipation alternating with diarrhœa.—Interior of anus studded with itching eminences, as from corrugation without contraction, a kind of hæmorrhoidal tumour.—Hæmorrhoids with itching and burning.—Pruritus ani (used as a wash).

14. Urinary Organs.—Inflammation of kidneys from cold.—Cutting pains along ureters to bladder.—Painful cutting and feeling of strangulation at neck of bladder while urinating, lasting long after.—Strangury.—During an attack of gonorrhœa extremely violent pains on urinating, causing him to tremble and cry.—Pulsating pain; pain; and burning in prostate on urinating.—Pains in bladder.—Deposit in urine of mucus and phosphates.—Frequent and profuse discharge of clear, light, or straw-coloured urine.—Albumen.

15. Male Sexual Organs.—Pain in testicles, spermatic cords, and neck of bladder when urinating.—Itching at orifice of urethra and around glans with desire to urinate.—Itching and stinging of prepuce.—Pain and soreness in l. testis, extending along l. spermatic cord; occasionally darting at same time in r. cord and testis.—Loss of power and semen, sometimes followed by inflammation of glans.—Extremely convulsive action in the functional uses.

16. Female Sexual Organs.—Intense dislike to coition, followed by perturbation and irritation if approached; inaction of flow of secretions.—Aching pain in hips and loins, and sensation of weight and tension in pelvis.—Menses: absent; delayed, with distress and pain; too copious; tardy; fetid.—During menses: pressure and soreness in head; grinding pain through abdomen.—Congestive weakness and loss of power.—Congestion of ovaries; tearing sensation in groin, < r.—Burning in vagina.—Acrid, excoriating leucorrhœa.—Shooting pains through breasts, with great soreness, distension, and tenderness.

17. Respiratory Organs.—Stifling sensation in larynx; irritability of whole system; weakness of sexual function.—Constriction of larynx.—Crowding and pressure about larynx with irritation of bronchi.—Roughness as of adhesion of mucus to larynx, producing spasmodic hacking and hoarseness.—Hacking cough, < by change of temperature.—Dry cough, in night, excited by tickling,

prickling-tingling in upper anterior part of chest, behind sternum; dry sensation in larynx when coughing.

18. Chest.—Sharp pain under r. scapula, extending into chest and pit of stomach, with heavy beating of heart and throbbing of carotids.—Pulsative pressive pains about xiphoid cartilage.—Cutting in l. chest.—Burning in chest with cold feeling in pit of stomach and shooting pains.

19. Heart.—Sharp, cutting, shooting pains in region of heart, extending to l. scapula.—Increased action of heart with loss of rhythm.

20. Neck and Back.—Awoke at midnight with lameness l. side neck to shoulder, making movement painful; with pulsative, wandering pains.—Pulsative pains in l. loin.—Aching in loins with pain around l. hip-joint.—Pain in back and at lower extremity, acute or drawing, lateral in its action, as if hips being drawn together (kidney affection).—Tearing and drawing in loins on exposure to cold, followed by lameness and soreness.

21. Limbs.—Trembling; bruised feeling; weakness in limbs.—Shooting pains in arms and back of legs.—Distension of blood-vessels in hands and feet.

22. Upper Limbs.—Pains in arms and inability or sense of weakness on lifting slightest weight.—Pains pulsating, intermittent, shooting, wandering, generally shooting down to finger-tips, sometimes shooting up.

23. Lower Limbs.—Sciatica; pain flashing like aurora borealis.—Pulsative pains in hips and loins with ineffectual urging and tenesmus.—Swelling of legs and feet.—Superficial ulcers and sores.

24. Generalities.—Pulsating, wandering, flashing pains, like aurora borealis.

25. Skin.—Skin dry.—Scarlet eruption round waist; itching, burning spasm.—Eczema.—Chronic erysipelatous inflammation.—Old and indolent ulcers.

26. Sleep.—Sleep, restless, uneasy, full of dreams.—Dreams: unremembered; laborious and fatiguing; of headache and wakes with headache.

27. Fever.—Alternation of heats and chills and chills and heats.—Feet alternately hot and cold; burning for an hour, then suddenly cold.—Profuse sweat and trembling of whole body from moderate exercise.

Pestinum.

Plaguinum. Nosode of Plague. Trituration of the virus.

Clinical.—Bubo. Plague. Typhus.

Characteristics.—The prophylaxis and treatment of plague with injections of more or less modified virus of plague by old-school practioners affords evidence that the nosode of plague is available, like other nosodes, for the treatment of cases of the disease from which it is derived.

Petiveria.

Petiveria tetrandra (Gom.). Erva de Pipi. N. O. Phytolaccaceæ. Trituration of fresh root.

Clinical.—Conjunctivitis. Paralysis. Paraplegia.

Characteristics.—Mure proved *Petiv*., and I have given his terminology. Allen says in a note that it is probably identical with the Mexican and West Indian species, *P. alliacea*. Mure's figure corresponds to this, and he says the roots, which are branching and fibrous, "smell strongly of garlic." *P. alliac*. (according to *Treas. of Bot*.) is called "Guinea-hen Weed" in West Indies," and "Raiz de Guine" in Brazil, in which country "it is put into warm baths to restore motion to paralysed limbs." Mure does not mention these names or this fact; but his proving brings out some strongly confirmative symptoms in numbness and paralytic sensations; weariness and weight of eyelids. Cold saliva; internal coldness; coldness inside bones were experienced. The symptoms in general were < by movement; in the morning on waking and on rising; after breakfast and during and after dinner; bending backward.

Relations.—*Compare:* Botan., Phytolacc. In paralysis, Rhus. Cold saliva, Cist.

SYMPTOMS.

1. Mind.—Excessive gaiety; inclination to sing, laugh, jest; followed by sadness and tears.—Vanishing of thought.

2. Head.—Head heavy.—Compressed feeling as if head bound with a warm cloth.—Head feels as if it would split.—Headache > by motion.—Sensation of hot water on scalp penetrating to brain.—Weight at vertex pressing into brain.

3. Eyes.—Eyes half-closed, swollen, surrounded by blue rings, esp. next to nose.—Rapid inflammation of l. eye while at dinner, lasts three days.—Weight on lids compelling to close eyes; on doing so sees a variety of figures.—Pain in eyes as if the balls were pushed out of their sockets.—Painful burning at margin of lids, < on closing them.—Lachrymation.—Conjunctivitis.—Dim sight.

4. Ears.—R. ear deaf, as if stopped.

5. Nose.—Coryza.—Veins of nose swollen, bluish.—Redness of l. wing of nose and cheek.—Dull pain over root of nose, evening.—Nose slightly inflamed and shining.—Intense and sudden itching of bridge of nose.

6. Face.—Redness of l. cheek.—Bruised pain in zygomatic process.—Sensation as if needle stuck in upper lip from within out.

8. Mouth.—Burning tongue as if scalded, morning, on rising.—Dry mouth.—Flow of watery cold saliva, depositing ashy sediment and whitish granules.—Offensive breath.

9. Throat.—Sensation in throat as after eating something astringent.—Pain in throat with difficulty of swallowing saliva.

11. Stomach.—Sharp lancinations in epigastrium from within out; evening; after dinner; on rising.—Stomachache with sensation, of internal coldness.

12. Abdomen.—Long blue horizontal spots on r. hypochondrium.—Lancinations: in hypochondria; through spleen from below up.—Borborygmi, on moving in bed.—Dull pain in hypogastrium.—Circumscribed acute pains in groins.—Colic of descending colon.

13. Stool.—Diarrhœa of dark mucus, mixed with fecal matter in separate hard pieces.—Constipation.

14. Urinary Organs.—Micturition every five minutes from 11 a.m. till evening, with heat in urethra.—Urine: pale, copious.

17. Respiratory Organs.—Voice seems to come from afar.—Voice hoarse from coughing.—Suffocation, with cold feet.

18. Chest.—Deep-seated, dull pain beneath sternum, < moving neck or bending head forward.—Violent lancinations under r. breast at each inspiration.

19. Heart.—Contraction and throbbing in region of heart, evening.

20. Back.—Strained feeling in spine, g,: sitting upright and bending back, > bending forward.

21. Limbs.—Paralytic numbness, heaviness, and weariness in all limbs; after rising from bed.—Bruised pains in arms and legs.

22. Upper Limbs.—Twitching sensation in shoulder-joint on stooping.—Pricking, burning, crampy pains in arms; with inflammatory redness.—Numbness; at r. arm; at wrist; at fingers (r.); at finger-tips.—Lancinating and heat as from whitlow at tip of r. thumb.—Itching in l. palm.

23. Lower Limbs.—Weakness of lower limbs.—Sudden numbness of knees with dull pain in tibia.—Numbness, itching and weakness of legs; from knees to soles.

24. Generalities.—General rigor when lying down.—Prostration as from drowsiness but without inclination to sleep.—When walking seems as if she does not touch the ground and would fall.—On lying down body numb.

25. Skin.—Itching, pricking, and formication of skin.

26. Sleep.—Drowsy: all day; with frequent yawning; after dinner.—Sleep deep and prolonged.—Dreams: of corpses and starts up in cold sweat; sad; unpleasant; of quarrels.

27. Fever.—Excessive coldness of hands and feet piercing to bones.—Cold feeling in interior of bones.—Febrile heat with pale face and cold hands.—Dry heat all over, esp. of palms.—Profuse cold sweat all over, with shuddering, after first sleep.—Sweat in palms.

Petroleum.

Oleum petrć. Rock-oil. Coal Oil. Trituration and tincture of the rectified oil. (Preparations of the non-rectified oil should also be made.)

Clinical.—Addison's disease. Albuminuria. *Anćmia*. Angina pectoris. Anus, fissure of. Bed-sores. *Breath, offensive*. Burns. *Chilblains*. Chlorosis. Constipation. *Cracks in skin*. Deafness. *Diarrhśa*. Dysmenia. Dyspepsia. *Ear, affections of. Eczema. Face, rough*. Facial paralysis. *Feet, soles painful. Fester, tendency to*. Fistulć. Frost-bite. Gastric ulcer. Gonorrhśa. Hćmorrhoids. *Hands, chapped*. Headache; occipital. Herpes. Herpes preputialis. *Irritation. Jaw, easily dislocated*. Myopia. *Nose, sore*. Otorrhśa. *Perspiration, offensive. Pregnancy, sickness of*. Presbyopia. Prostatitis. *Psoriasis*. Rheumatism. *Sea-sickness. Skin, affections of*. Sprains. Syphilis. Tabes mesenterica. Toothache. Urethra, stricture of; chronic inflammation of. Varices. *Vomiting*. Warts.

Characteristics.—The *Petrol*. proved by Hahnemann is made by agitating the liquid commercial Petroleum with Sulphuric Acid and then rectifying the portion which this acid does not act upon. It is "a light oily fluid, colourless or of a pale straw colour, and strong characteristic naphthalic smell. Dropped on white paper it evaporates completely, leaving no greasy stain." Under PARAFFIN I have described the relation between *Petrol., Naph*., and *Paraff*. Commercial "Petroleum" and commercial "Paraffin oil" are one and the same. The *Petrol*. of homśopathy is this substance purified and rectified. But in the pathogenesis are included effects observed on those engaged in petroleum works, and those who use "Paraffin oil" in various trades; it would therefore be well to have also a preparation of the crude, non-rectified liquid. *Petrolatum* (Vaseline) consists of hydrocarbons of the Paraffin series, obtained from residues after distillation of lighter oils from crude petroleum; or deposited from crude petroleum on standing. The affections met with in petroleum extractors and refiners are—(*1*) Diseases of the skin and subcutaneous tissue; depressed nutrition, ancćmia, dyspepsia, nerve troubles, irritability, insomnia, respiratory affections. In addition to these is a species of intoxication. A man, a patient of mine who suffered from inveterate eczema, and who had formerly been employed in a factory where much petroleum was used, noticed that his eczema was much better whilst working with petroleum. He told me that the vapour had the singular effect of making some of the workmen insane, causing: Desire to kill; hallucinations, they will see things not actually visible; for instance, "they will see the rails in a station when a train is on them." Boys (who are much affected) will jump at a straight wall and try to scramble up it. A rickety boy, ćt. 2 1/2, who had an unconquerable desire to drink anything liquid within his reach I took one day e good draught of paraffin oil. An Ipecacuanha emetic and a Castor Oil purge got rid of a good deal of it, and a month after he was brought to me with these symptoms: Appetite had. Pale, dark rings round eyes. Every now and then seems to collapse; goes into a corner and will not play; after tea quite bright. Cold sweat in bed; complains of burning heat; then goes cold and clammy. I prescribed *Phos*. 2. In three weeks he was brought back much better. He had lost the pallor and dark rings round the eyes, and had ceased to mope; but he had come out, all over small boils which discharged, the discharge having the odour of paraffin. There was A slight recurrence of the old symptoms a fortnight later, and after that I did not see the boy again till a year later, when he was brought to me for diphtheritic paralysis. Two years after this he was brought to me again. He was now well grown and had no sign of rickets, but some of the old symptoms came back: Languid; inclined to be quiet; averse to play. At times clammy all over body. This time *Petrol*. 30 soon put him right. In the case of a woman who drank paraffin oil when intoxicated, there was epigastric pain so severe that she thought she would go out of her mind, > lying with knees drawn up; tenderness of ileo-cćcal region and of epigastrium; swollen feeling of abdomen, without actual swelling; blood and albumen in urine; pain in back and slight return of menses, which had ceased a week before. These cases show the profound action of *Petrol*. on the organism. It is one of Hahnemann's leading antipsorics, and is

especially closely related to *Graph*. It is *suited* to long-lasting, deep-seated, wasting diseases; lingering gastric and intestinal troubles with or without ulceration. In my experience no remedy corresponds to more cases of chlorosis in young girls, with or without ulceration of the stomach. *Petrol*. (says Kent) corresponds to low conditions in which there is inability to throw out eruptions on the skin; or conditions in which an eruption has disappeared without improvement in health: to reflexions of disease on mucous membranes setting up catarrh. Ozćna; intestinal catarrh. Soreness and cracks about muco-cutaneous orifices. Irritability of skin and irritability of mind are both found in *Petrol*., as in many other remedies: Excitable; angry at trifles. Anxiety with fear. Mental weakness and forgetfulness are also very characteristic, and are generally met with in connection with deep-seated disease. An illusion that there is another person, or another baby in bed, is very characteristic of the remedy, and has led to cures with *Petrol*. of cases of typhoid and puerperal fever. "Falling out of the hair" is a characteristic symptom of *Petrol*., and accounts for the popularity of Petroleum hair-restorers. [*Petrol*. "probably acts on the sebaceous rather than the sudoriferous secretions of the skin, and its local action is on parts where the sebum is abundant."—R. T. C.]. The use of these hair-restorers has caused many violent headaches. So has the use of "Coal Oil" (a tablespoonful to a bucketful of water) by washerwomen to improve the colour of linen. M. T. Bleim (quoted *H. W*., xxvi. 318) thus describes the result in one case: Severe occipital headache, loss of strength, emaciation, diarrhśa, dyspepsia with fulness on eating very little; accumulation of gas; very severe attacks of suffocation, > by eructations of gas. The headaches of *Petrol*. may be in any part, but they are most marked in occiput. Heaviness like lead; pressure, sticking; pulsating; < on shaking head or any jar. Pain travels from occiput to eyes, and is associated with temporary loss of sight and fainting. The vertigo and heaviness of *Petrol*. are often associated with nausea and bilious vomiting. This (nausea with or without vomiting) is one of the grand characteristics of the remedy. It is < by motion in a carriage or on the sea; hence *Petrol*. is one of the first remedies in train-sickness or sea-sickness. The other side of this nausea is another grand characteristic: Awful ravenous hunger, the "sinking" of the chief antipsorics. It is particularly noticed immediately after a stool, in diarrhśa, nervous affections, spinal disease, &c. (Kent). In pulmonary affections *Petrol*. has gained much repute of late in the form of an emulsion. A leading indication for it is "Oppression of the chest; < in cold air." *Petrol*. has a peculiar cough, not infrequently met with in young girls and boys, coming from deep down in the chest, and frequently waking the patient up at night. A student who had a deep, hollow-sounding, hacking cough, excited by laughing, waking him up in the middle of the night, I cured with *Petrol*. 30 after *Arg. n*. and *Arg. met*. had failed to do anything. The cough had persisted some time and caused his family no little anxiety. The discharges of *Petrol*. are thick, purulent, and yellowish green. For the cracked nostrils accompanying and following cold in the head I find the application of vaseline more often useful than other forms of unguent.
The *localities* of *Petrol*. are very like those of *Graph*.: Scalp, behind ears, scrotum,

genitals. The modality "< in winter" has given Nash the key to several cases of eczema, chapped hands, chilblains, and one case of chronic diarrhśa, as soon as he discovered that the patient had eczema of the hands in winter. *Petrol*. 200 was given. The skin is extremely sensitive; all clothing is painful; slight injuries suppurate. Allen's *Appendix* quotes an important case reported by O. Lassar in *Virchow's Archiv*. A man used for four days extensive inunctions with *Petrol*. to relieve himself from scabies. A week later his feet began to swell, and the dropsy, increasing rapidly, spread over abdomen and thorax. In a fortnight it disappeared, but eight days later returned and persisted till death, four months after the inunction. The urine was highly albuminous, and contained hyaline and granular cylinders; but the necropsy revealed no lesion of any organ to account for the dropsy. The, body was extremely śdematous; there was śdema of the lungs and dropsy of the cavities, and whilst in hospital the wrist pulse was small, empty, and of low tension; the blood corpuscles were few, but their relative proportions were normal. Temperature normal, and the skin showed localised areas of inflammation. Along the veins and lymphatics a small-celled growth existed, and in all the layers of the cutis there was a widely distributed nuclear proliferation. *Peculiar symptoms* are: Brain as if wrapped in a fog. As if everything in head were alive. As if head made of wood, or as if bruised. As if a cold breeze were blowing on head. As if head would burst. Veil before eyes. Sand in eyes. As if skin over bridge of nose drawn stiff and tight. As if something were tearing off from pit of stomach. As if a cold stone at heart. Splinter in heel. Upper and lower limbs as if stiff without joints. Jaw as if distended. There is great weakness; fainting; tremor; twitching of limbs; catalepsy; tonic spasms; left-sided paralysis. The notes of the skin affections are: Itching; burning; rawness; bleeding. Burning sensations are very marked; and as *Petrol*. is accountable for so many burning accidents it is fitting that it should make a very good application for burns in the form of vaseline, cosmoline, or *Petrol*. mixed with equal parts of olive oil. *Petrol*. is *suited to:* Persons with light hair and skin. Especially for lean, slender persons. The symptoms are < by touch; by contact of clothing; by scratching; by riding in carriage or ship. Pinching the parts > hćmorrhoids. < From mental exertion. Headache < on shaking head; > by epistaxis; < from light and noise. After stool: hunger immediately. Ravenous hunger; frequently awakened by it at night; easily satisfied, with aversion to meat, fats, cooked or hot food; desire only for dainties, which are eaten with avidity. Eating > gastralgia. Gastralgia comes on whenever the stomach is empty. Empty, weak sensation in stomach. < After eating or drinking. After eating: giddiness; heat in face; cutting in abdomen; eructations; drowsiness; uneasiness. Cabbages, saurkraut = diarrhśa. Colic > by bending double. Exertion, motion, riding, sitting <. Lying down < cough, and distension of abdomen. Vertigo when head lies low. < Cold air. < Winter. < Open air. < Before and during thunderstorm. < Bathing. > Warmth and warm air. < Warmth of bed (itching). Cough is < at night and 2, 4, and 6 a.m. Smoking befogs him; = cough. < After coitus (nervous irritability). Cough < by laughing

(cured). < During day (diarrhśa and dysentery). Throat affections go right to left. Headache back to front.

Relations.—*Antidoted by:* Coccul., Nux, Phos. (in my case), *Antidote to:* Lead poisoning (one of the best remedies), Nit. ac. *Complementary:* Before Sep. *Compatible:* Bry., Calc., Lyc., Nit. ac., Nux, Puls., Sep., Sil., Sul. *Compare:* Graph., Naph., Paraf., Eupn., Kreas., and other Carbons. In sea-sickness, Arn., Coccul., Tab. Nausea of pregnancy, Coccul., Sep. Cracking of joints, Caust. Gastralgia > by eating, Chel., Anac., Graph., Lach. Imagines he has a limb double; illusions of shape, Bap., Stram. Epistaxis > headache (Borax <). Aversion to hot food, Pho. (opp. Lyc.). < From thunderstorms, Pho., Merc., Sil., Rho., Pso. Skin sensitive to clothing; every injury suppurates, Hep. Tender feet, which are bathed in foul-smelling sweat, Graph., Sanic., Sil. Heat and burning of soles and palms, Sang., Sul. Skin < in winter, > in summer, Alm.

Causation.—Vexation. Riding in carriage or ship. Nitric acid (deafness from). Cabbage. Suppressed eruptions. Sprains.

SYMPTOMS.

1. Mind.—Anxious and timorous disposition.—Sadness and mental dejection.—Great irresolution.—Uneasiness respecting the future.—Hypochondriacal humour.—Inclination to anger and to scold.—Violent, irascible, insolent temper.—Frequent tears; on slightest provocation.—Loss of memory.—Does not know where she is in the street.—Unfitness for reflection.—Weakness of Apprehension.—Delirium; thinks another person is lying with him in bed (or that he is double, or one limb is double); or always and continuously delirious talk of the same distressing subject.—Imagines he has a third leg which will not keep quiet.—Desire to kill.—Hallucinations of vision.

2. Head.—Head bewildered.—Feeling as if brain wrapped in fog.—Frequent vertigo, esp. on raising eyes.—Vertigo, like that produced by a swinging motion.—Vertigo on stooping, or on rising from bed, or from a seat.—Headache after a fit of anger, or when fasting in morning, as also after a walk in evening.—Attacks of semi-lateral

headache, which compel patient to lie down.—Heaviness and fulness in head in morning, and when stooping.—Pressive or lancinating pressive pains in head, esp. in occiput.—Headache < by all kinds of intellectual labour, to the extent of complete stupefaction.—Tension in head, as if dura mater were tightened.—Cramp-like, drawing, pinching pains in head.—Neuralgic headache, beginning in occiput and extending forward.—Occipital headache, extending to vertex, with vertigo.—Occipital headache, with nausea, esp. in sea-sickness.—Pulsative headache, esp. in occiput (cerebellum).—Pressing stinging in the cerebellum.—Sensation as if all were alive in head.—Scalp painful to touch, as if bruised or ulcerated (followed by numbness and very sore on scratching, < in morning and on becoming heated).—Headache in forehead; every mental exertion causes him to become quite stupid.—Drawing pains in head, forehead, and temples, extending into teeth.—Seborrhśa of scalp.—Eruption on head and nape of neck.—Śdematous swelling and scabs on scalp.—Hair falls off.

3. Eyes.—Itching in eyes.—Itching of lids; obliged to rub them.—(Lids everted.).—Aching, smarting, shooting, and burning pain in eyes.—Conjunctivitis and blepharadenitis.—Inflammation of eyes (with itching and stitches in eyes).—Lachrymal fistula (with dryness of r. side of nose).—Lachrymation.—Jerking and quivering of eyes and lids.—Convulsion of eyes.—Myopia or presbyopia.—Diplopia.—Scintillation and appearance as of a veil before sight; or sparks and black spots.

4. Ears.—Inflammation and painful swelling of meatus auditorius.—Otalgia, with cramp-like and jerking pain.—Dryness, and distressing sensation of dryness, in interior of ear.—Discharge of blood and pus from ears.—Eruption of ears.—Redness, excoriation, and oozing behind ears.—Deafness.—Tinkling, rolling, roaring, ringing, rumbling, cracking, and buzzing in ears.—Excessive secretion of cerumen.

5. Nose.—Epistaxis.—Slight epistaxis > headache.—Purulent blisters on nose.—Ulcerated nostrils (and stopped catarrh).—Ozćna, scabs, purulent mucus, cracked nostrils.—Swelling of nose, with discharge of pus, and pair, above root of nose.—Stoppage of nose.—Dryness, and distressing sensation of dryness, in nose.—Much mucus in nose.—Itching on tip of nose.—Coryza with hoarseness.

6. Face.—Heat in face, sometimes after a meal, and with thirst.—Dryness and constriction of skin of face and eyelids as though covered with a thin layer of albumen; cheeks look glazed and contracted.—Pale, yellowish complexion.—Facial paralysis (from inflammatory products in Fallopian canal).—Eruption of pimples on face.—Scurfs around mouth.—Scabby pimples, with shooting pain on lips, and commissures.—Furuncles on lower lip.—Swelling of sub-maxillary glands.—Easy dislocation of maxillary joint in bed in morning with sharp pains.

7. Teeth.—Toothache from contact with open air, < at night, with swelling of cheek.—Numbness of teeth, with pain on clenching them.—Pustule above a hollow tooth like a fistula.—Fistulous vesicles in gums.—Swelling of gums, with shooting pain on being touched.

8. Mouth.—Fetid breath, sometimes like garlic.—Ulcers on inner surface of cheeks (painful when closing teeth).—Much mucus in mouth and throat.—Tongue coated white.—Painful soreness on chewing.—Great dryness of mouth (and throat in morning) with violent thirst (for beer).

9. Throat.—Sore throat, with shooting pain during deglutition.—Swelling and great dryness of throat.—Swelling of the submaxillary glands.—Rawness (stitching and burning) in pharynx, < on swallowing.—Tickling on swallowing, extending to ear.—Dryness and burning in pharynx.—When swallowing the aliment rises towards nasal fossć.—Hawking up of mucus in morning.

10. Appetite.—Putrid, mawkish, mucous, or else bitter or acid taste.—Excessive thirst for beer.—Bulimy.—Hunger with speedy satiety.—Voracity.—Daintiness.—Anorexia.—Repugnance to meat and fat, also to hot and cooked aliments; < by eating cabbage.—Uneasiness during digestion, after almost every kind of food, however little may have been eaten.—After a meal: obscuration and vertigo; nausea; heaviness and pressure at stomach; sleep; or colic, with eructations; or sour risings, congestion in head, cramp in chest, &c.

11. Stomach.—Noisy eructations.—Sour (or bitter eructations or) risings and regurgitations.—Pyrosis.—Frequent nausea, esp. in morning, often with accumulation of water in mouth, obstructed respiration, sour risings, tongue dry and white, stitches in hepatic region, heat in face, vertigo, &c.—After eating, vertigo and giddiness.—Nausea from motion of a carriage.—Nausea and vomiting of pregnant women.—Water-brash.—Heartburn toward evening.—Inclination to vomit.—Greenish, bitter vomiting.—Aching of stomach.—Cramps in stomach.—Pressure on the stomach; colic (at night).—Sensation of emptiness and weakness in stomach.—Weak digestion.—Diarrhśa from suppressed eruptions.—Pain in epigastrium, as if something were being torn away.—Swelling of epigastrium, with pain when touched.—Sensation of fulness in epigastrium.

12. Abdomen.—Pain (cutting) in abdomen, shortly after a meal.—Sensation of great emptiness in abdomen.—Distension and tension in abdomen, with cramp.—Pinchings and cuttings in abdomen, sometimes, with pressing want to evacuate.—Colic, with diarrhśa, at night, towards morning.—Colic > from bending double.—Borborygmi in abdomen, with sensation as if abdomen were entirely empty.—Inguinal hernia.—Fetid flatus.—Sensation of coldness in abdomen.

13. Stool and Anus.—Difficult, hard, knotty, and insufficient evacuations.—Frequent diurnal stools, sometimes with evacuation of serous,

yellowish matter.—Diarrhśa, often preceded by cuttings (colic only during the day).—Mucous stools, often mixed with blood.—Burning pain in rectum after evacuation.—Itching tetters in perineum.—Diarrhśa < from riding in carriage.—In anus burning itching; pressure.—Weakness of rectum.—Piles with great itching, < at night from heat of bed; < from rubbing or scratching.—Fissure with great rawness.

14. Urinary Organs.—Constant dribbling of urine after micturition.—Discharge of mucus with the urine.—Frequent emission of urine, with scanty stream of a red or brown and fetid urine.—Urine bloody and turbid; it deposits a red, slimy sand, that adheres tightly to vessel; urine contains albumen, hyalin, and granulated casts; covered with a glistening film and with a red sediment.—Involuntary discharge of urine.—Emission of urine at night.—Wetting the bed.—Burning in urethra.—Stricture of urethra.—(Chronic urethritis.)

15. Male Sexual Organs.—Burning pain, itching, redness, excoriation, and oozing, or itching pimples and tetters, on scrotum and between scrotum and thigh.—Diminished sexual desire.—Frequent pollutions.—Discharge of prostatic fluid.—(Prostatitis.).—Weakness and nervous irritability after coition.—Reddish eruption on glans, with itching.

16. Female Sexual Organs.—Itching, soreness, and moisture on external parts.—Repugnance to coition.—Catamenia too early, with a menstrual flux which excites itching.—Leucorrhśa like white of egg.—Leucorrhśa with lascivious dreams.—During pregnancy diarrhśa and vomiting.—Itching and furfur on the mammć; the nipples itch, and have a mealy coating.

17. Respiratory Organs.—Hoarseness, with or without coryza.—Cough, with dryness in throat.—Vexatious cough that takes away the breath; cannot cough it out.—Suffocating cough at night.—Dry cough at night, or in evening, after lying down.—At night dry cough, coming deep from chest, caused by a scratching in throat.—Cough from low down in chest.—Hollow, hacking cough, coming on when laughing, waking him in middle of night (cured).—Dry cough, with shootings under sternum.

18. Chest.—Respiration obstructed in cold air.—Rattling and snoring in trachea.—Sensation of heaviness, anxiety, and uneasiness in chest.—Oppression of chest at night.—Shootings in sides of chest.—Herpes on chest.

19. Heart.—Palpitation of heart.—Feeling of coldness about heart; as if there was a cold stone in heart.—Fainting, with ebullitions, heat, pressing on heart, palpitation.

20. Neck and Back.—Herpes on nape of neck.—Heaviness and pain in nape of neck.—Painful drawing extending from nape to occiput.—Swelling of glands and eruption on nape of neck.—Sacral pains, which do not permit standing

upright.—Coccyx painful on sitting.—Stiffness in coccyx.—Pain in back, which obstructs every movement.—Weakness and stiffness in back and loins.—Suppuration of the axillary glands.

21. Limbs.—Cracking of the joints.—Inflexibility of the joints.—Sprains; chronic sprains.

22. Upper Limbs.—Fetid sweat of axillć.—Drawing pains in arms and fingers.—Great weakness of arms.—Stiffness of arms and fingers.—Erysipelatous inflammation in arms.—Brown or yellow spots on arms.—Furunculi on forearm.—Tearings in hands.—Burning sensation in palms of hands.—Sweating of hands.—Pain in wrist-joint as if sprained.—Brown spots on wrist.—Bleeding fissures in hands and lingers, esp. in winter.—Salt-rheum, red, raw, burning; moist or covered with thick crusts.—Chilblains and warts on lingers.—Pricking and pain in waits on fingers, evening in bed.—Arthritic stiffness in joints of fingers.—Finger-nails painful when touched as if bruised.—Finger-tips rough, cracked, fissured, with sticking, cutting pain.

23. Lower Limbs.—Cracking in joints of legs.—Cramps in thighs, calves, and feet (all day; in soles at night).—Furunculi in thighs and calves.—Tension in the ham.—Lancinations in knee.—Weakness of knee.—Herpes on knee.—Tuberous, itching eruption on calves of legs.—Herpes on ankle bones.—Burning sensation in soles.—Profuse perspiration on feet.—Fśtid perspiration of feet with tenderness.—Coldness of feet.—Swelling of feet.—Hot swelling of soles.—Swelling and redness of heel with burning pain and shootings, < by walking.—Heels blistered.—Sensation of splinter in heel.—Chilblains on toes, esp. when they itch and are moist; itch and burn; inflamed in cold weather.—Ulcers on the toes, originating in blisters on the toes.—Corns on feet.—Burning and stitching in corns.—Obstinate superficial ulcers on toes, with elevated margins and red bases, with oozings.—Eruption between toes.

24. Generalities.—Affections in general of any kind, appearing on the r. eye; internal or external occiput; behind ears; inner surface of thighs; ball or under part of toes; knee-joint.—Drawing pains in limbs.—Stiffness and tendency to numbness of limbs.—Cracking of joints, with arthritic rigidity and drawing, tearing pains.—Swelling and induration of glands, also after a contusion.—Jerking of limbs by day and during sleep.—Catalepsy; tonic spasms.—Epileptic fits.—Fainting fits, with ebullition of blood, heat, palpitation, and pressure at heart.—Great weakness after least exertion, sometimes with confused sight, trembling of body, buzzing in ears, and nausea.—Weakness, nausea, and other sufferings, from motion of a carriage.—Weakness in morning in bed.—Many of the symptoms appear, or are <, during stormy weather.—Transient heat, ebullition of blood, and perspiration after a walk, or after a fit of anger.—Emaciation; also in children.—Sensation of insupportable and general-uneasiness, with trembling and dejection.—Heaviness and lassitude in all limbs.—Great lassitude morning and evening.—Great tendency

to take cold.—Repugnance to open air, with shivering when exposed to it.—Several symptoms manifest themselves in morning.

25. Skin.—Swelling and induration of the glands; also after contusions.—Great sensibility of the surface of skin.—Miliary urticaria.—Itching tetters.—Itching, excoriated, and running spots on skin.—Brown and yellow spots on skin.—Eruption of itching and burning pustules.—Pruritus of the aged.—Dreadful irritation all over body, very intense in vagina, anus and perineum, preventing sleep (cured—R. T. C.).—Papular eruptions, esp. on face and lips.—Skin sore, crawling sensations.—Rhagades.—The skin is hard to heal.—Skin unhealthy every injury tends to ulceration.—Furunculi.—Ulcers with shooting pains often deep ulcers, with raised edges.—Proud flesh in ulcers.—When a person complains of eruption or itching at night (affecting scrotum particularly), the eruption being either dry or moist.—Chilblains particularly where they itch a good deal and are moist.—Exanthema corroding and spreading; very difficult to heal.—Sensibility of the skin in general.—Sores produced by lying in bed.—Warts.—Corns on feet.—Chilblains, sometimes painful.

26. Sleep.—Disposition to sleep by day and in evening when sitting quietly (yawning).—Broken and agitated sleep at night, with many vivid, anxious, and frightful dreams (as if somebody were lying alongside of him in bed), frequent awakening with a start, and heat with anxiety.—Sensation in morning as of having slept too short a time.

27. Fever.—Shivering with headache, and coldness in hands and face.—Chilliness in open air.—Frequent shivering over whole body, and, on becoming warm, excessive itching of skin.—Shivering or coldness, generally in evening (with heat at the same time), and sometimes with blueness of nails.—Sweat immediately after shivering.—Intermittent fever: Violent chilliness and coldness of hands and face at 10 a.m.; half all hour later heat in the face, esp. in the eyes, with thirst.—Shaking fits, 7 p.m., followed by perspiration, first in face, later all over, except in legs, which are quite cold.—Fever in evening, with hot face and cold feet, after shivering.—Frequent flushes of heat.—Heat after midnight and in morning in bed.—Fever, with full pulse and burning sensation in skin.—Pulse accelerated from every exertion; as soon as reposing, pulse becomes again slow.—Nocturnal heat.—Nocturnal sweat.

Petroselinum.

Carum petroselinum. Petroselinum sativum. Apium petroselinum. N. O. Umbelliferæ. Tincture of whole fresh plant when coming into bloom.

Clinical.—Catheter fever. Cystitis. Dysuria. Gleet. Gonorrhœa. Gravel. Intermittent fever. Night-blindness. Priapism.

Characteristics.—*Petrosel*. is referred to by Hahnemann as a gonorrhœal remedy when frequent desire to urinate exists. It was proved by Bethmann. He obtained only thirty-six symptoms, all in the genito-urinary sphere, but these were very characteristic, and have given the remedy a definite place in homœopathic medicine, especially in gonorrhœa and gleet. The leading indication is: *Sudden urging* to urinate; and drawing, tingling, crawling, or itching in navicular fossa. During micturition, burning and tingling from perineum through whole urethra. After micturition cutting biting in fossa navicularis. Milky or yellow discharge. Parsley tea is a recognised remedy for gonorrhœa in domestic country practice. Parsley eaten after meals, with or without salad oil, is reputed to act as a solvent on uric acid if there is a tendency to its formation in the urine. I have seen a case in which this effect was apparently produced. In gonorrhœa and gleet I have confirmed its efficiency, given in ten-drop closes of the tincture. In a case of dysuria from prostatic enlargement (quoted in *Critique*, vii. 84) there was frequent urging to urinate every half to three-quarters of an hour, with burning pains in bladder and urethra. *Petrosel*. 4x, three drops every hour, took away all the pains and relieved the tenesmus in a few days. The prostate gland itself was not influenced. Hering has collected symptoms from other observers. Farrington says *Petrosel*. is a great "baby medicine" in urinary difficulties. It has cured numbers of cases of intermittent fever; and traumatic or other urethral fevers. [Parsley is said to be poisonous to ferrets. Fresh butter mid parsley applied warm is an old remedy for bruises. An infusion is given to all children recovering from scarlatina by the matron of a suburban infectious hospital. An old gleet has been known to disappear from parsley infusion; and an old Edinburgh surgeon used to give it in all nephritic and vesical diseases that were chronic.—R. T. C.]

Relations.—*Compare:* In gonorrhœa with sudden and frequent urging, Cann. s., Canth., Merc. Screams before urinating from irritation of mucous membrane, Aco., Caust., Borax (Sars., Lyc., and Benz. ac. have screaming before urinating when due to gravel). Gonorrhœa, strangury, frequent urging to urinate; white stools, Dig. (Dig. has slow pulse; often puffed prepuce; Sul. indurated prepuce). Cystitis, Con. (Con. has *intermittent* urination; Petrosel. has inflammation that has travelled back, *sudden*, irresistible desire). Bubbling in back; urinary disorders, Berb. Uric acid tendency, intermittent fevers, Urt. ur.

SYMPTOMS.

3. Eyes.—Blind at night, with swelling of eyes.

4. Ears.—Shrill singing in ears, like a bell ringing out of time, which affects the whole organism.

11. Stomach.—Thirsty and hungry, yet as soon as they begin to eat or drink they lose all desire.—Twitching, jerking pains in epigastrium, flatulent eructations, colic, nausea, and vomiting.

13. Stool and Anus.—Whitish evacuations, like clay; chronic diarrhœa.—Burning at anus.

14. Urinary Organs.—Sudden urging to urinate.—Child suddenly seized with desire to urinate; if not gratified immediately, jumps up and down with pain.—So much pain when he passes urine as to cause him to shiver and dance round room in agony.—Discharge of a milky fluid from urethra.—Albuminous yellow discharge from urethra; gonorrhœa.—Orifice of urethra agglutinated with mucus.—Creeping and crawling throughout whole length of urethra.—Frequent and almost fruitless want to urinate, every half-hour.—Tingling, lancinating, pressure and drawing, in urethra.—Crawling and pressure in region of Cowper's glands in morning in bed, > while standing and sitting.—During micturition, burning and tingling from perineum through the whole urethra.—Drawing, afterwards itching in fossa navicularis; burning in navicular fossa while urinating.—Frequent desire to urinate, caused by crawling stitch behind navicular fossa.—Frequent voluptuous tickling in navicular fossa.

15. Male Sexual Organs.—Priapismus, without curvature of penis.—Pollutions; profuse emission toward morning.

20. Back.—Jerking (or bubbling sensation) in muscles of back and arms.

25. Skin.—Urticaria.

26. Sleep.—Sleep late, with many anxious dreams.

27. Fever.—Ague, esp. quotidian; marked periodicity; stages regular; acute fevers from defective assimilation or perverted innervation, accompanied by flatulent dyspepsia.—Intermittents, complicated with abdominal affections.—Intermittent fevers; complicating traumatic or chronic inflammation of urethra, or even stricture.

Phallus Impudicus.

Stinkhorn. N. O. Fungi. Tincture or infusion of whole fungus.

Clinical.—Gastro-enteralgia. Sweat, viscid. Vertigo. Vomiting.

Characteristics.—Kalieniczensko took live or six teaspoonfuls of an infusion of *Phallus* in twenty-four hours, and the symptoms of the Schema are the effects

observed. There is a general resemblance to the effect of the *Agarici*—vertigo, disordered vision, gastro-enteric disturbance and viscid sweat.

SYMPTOMS.

2. Head.—Vertigo.

3. Eyes.—Vision: difficult; obscured.—Objects seem coloured grey, as in smoke.

8. Mouth.—Profuse salivation.

9. Throat.—Great dryness of throat, with irritation as from black pepper.

11. Stomach.—Loss of appetite.—Devouring thirst.—Violent vomitings with profuse salivation.—Gastro-enteralgia.

12. Abdomen.—Painful sensitiveness of whole abdomen.

13. Stool.—Watery diarrhœa.

14. Urinary Organs.—Urine deep red, depositing a sediment of urates of lime and soda.

17. Respiratory Organs.—Dry, oppressive cough.

24. Generalities.—Great feebleness of whole body.

26. Sleep.—Sleepiness.

27. Fever.—After four days all the pores became opened, profuse viscid perspiration.

Phaseolus.

PHASEOLUS NANUS. Dwarf-bean. N. O. Trituration of the dried bean. Decoction of dried beans and pods.

PHASEOLUS VULGARIS. Kidney-bean. Leguminosæ. Trituration of the dried bean. Decoction of dried beans and pods.

Clinical.—Albuminuria. Breast, tumour of. Diabetes. Dropsy. Hæmaturia. Headache. Heart, affections of; failure of; palpitation of. Hernia. Hydrothorax. Impotence. Pericarditis. Pleurisy. prostate, diseases of; hæmorrhage from. Wounds, punctured.

Characteristics.—I have included under the heading, *Phaseolus* both *P. nanus* and *P. vulgaris*, as I cannot discern any difference in their action. The proving of *P. vulg*. is by Demeures. Some effects of eating mildewed beans in a child recorded by W. Dale are distinguished in the Schema by (D). A. M. Cushing proved *P. nanus*, but has only published the symptoms observed on the heart. These are distinguished by (C). Cured symptoms are bracketed. Some symptoms observed in patients taking the remedy are included in the Schema. The *New Eng. Med. Gaz*. (quoted by Lambert, *H. W*., xxxi. 125) published a translation of a pamphlet by Dr. Heinrich Ramm on the uses of "Bean tea." A lady whom Ramm had treated in vain for mitral disease with liver and kidney complications and dropsy, presented herself one day apparently cured by drinking Bean tea. This led Ramm to try it in other cases, and he found that renal and cardiac dropsies were speedily relieved; urine largely increased in quantity, and in cases of albuminuria, the albumen quickly disappeared. Dropsical effusion into pleura, pericardium, and peritoneum, according to Ramm, also yield to it; and all chronic disorders of the urinary tract from kidneys to urethra; pyelitis, vesical catarrh, gravel, calculi, uric acid, he says, quickly disappear; Ramm considers *Phas*. a most important remedy in gout and in diabetes. Ramm used a decoction of the whole dried ripe pod "of the taller variety." He names it *P. vulgaris*. [The inside of the pod rubbed on warts is said to cure them.—R. T. C.] We owe to A. M. Cushing (*New Eng. Med. Gaz*., January, 1897) the best definition of the power and sphere of action of this remedy. He names it from Gray *P. nanus*, "the common white bean," His paper was read in Boston, and he refers to the "bean-eating city" and to its reputation "for sudden deaths from brain or heart trouble," and for premature ageing of young men. I am not quite sure whether this was jest or earnest, but it points the action of the remedy which in Cushing's proving caused disturbance of the nervous system, genital organs (impotence), stomach, bowels, and kidneys, and this symptom, which brought the proving to an abrupt close: "I suddenly felt a curious sensation in the region of the heart. It was so sudden and strange I immediately felt my pulse, and found it very irregular and feeble, so much so I think I was frightened; at least, I did not take any more of the medicine." "Irregular, weak pulse," "Heart failure," are the chief keynotes of the remedy in heart cases, and correspond with the one heart symptom recorded by Allen. Demeures in his proving experienced severe headache from *fulness* in the brain. Cushing relates two experiences bearing on this. (*1*) He gave a decoction of the dried pods in a hopeless case of uterine cancer with severe general dropsy with apparent relief. Calling one day and expecting to find the patient comfortable, he found her dead. "She suddenly screamed, 'Oh, my head!' grasped it with both hands and was dead." (*2*) A lady doctor, 30, married, no children, never ill except with children's diseases, had had much mental trouble two years before, and had done much cycling. Since then her heart had given trouble. About five times in a minute the heart would give one hard, unpleasant throb, then omit one beat. During the night it was much worse and prevented sleep. *Phas*. 10 was given. Thirty-six hours later the heart would beat a hundred heats without varying, and improvement continued; but the patient had to give up

the remedy on account of the headache it caused, "as if something were pressing hard against each temple", much worse after each close of the medicine. The patient was never subject to headaches. Other cases of Cushing's were: (*3*) Man, 45, dropsy, heart, and other complications. Bean pod decoction enabled him to lie down on a couch, and markedly diminished the dropsy. (*4*) Clergyman, 69, many years invalided on account of heart disease, after unusual exertion was greatly exhausted, and became entirely pulseless, and so remained four days in spite of treatment till *Phas*. 9x was given. In a few hours pulse returned. In thirty-six hours it was regular and strong, and so remained till his death, which occurred two weeks later. (*5*) Lady, 50, weak, tired, badly acting heart for some years. *Phas*. 9x was given, and in forty-eight hours "her heart wheeled into line all right and remains so." (*6*) Lady, 87, heart acted badly, every third beat omitted. After taking *Phas*. two days pulse quite right. (*7*) Confinement case, primapara, urine loaded with albumen, frightful convulsions, forceps delivery. Two hours later the heart failed and no stimulants would start it. *Phas*. 9x was given, and in ten minutes the heart was all right. Twice in the night the dose had to be repeated, but that was all. The albumen rapidly disappeared and a quick recovery was made. (*8*) Man, 92, had been passing bloody urine (apparently as much blood as urine) for a week. Had previously had urinary troubles, urinating several times in the night, and passing catheter twice in twenty-four hours; but for a little time past had not had to use the catheter. Cushing diagnosed prostatic trouble and gave *Phas*. 4x, No. 25 globules in water, a teaspoonful every two hours. (*9*) Another case of prostatic hæmorrhage in a man, 70, was cured by *Phas*. 4x globules dry on the tongue. Well in four days. (*10*) Cushing gives an interesting account (*Med. Vis*., xiii. 375) of *Phas*. as a vulnerary. Fifty years ago he accidentally ran one tine of a hay fork into the top of his foot. A backwoods doctor promised to have him all right next day. He split a medium-sized white bean, bound one half, the flat, split side, on the wound. The pain was so severe Cushing became delirious, went to sleep, and woke well. In forty-one years of practice he has tried it in punctured wounds by rivets, nails, &c., and with perfect success every time. (*11*) A lady, 30, took a tablet containing gr. 12 1/2 of Morphine placed in the middle of a baked bean with suicidal intent. It was in the evening, having fasted since noon. She went to sleep and woke at 7 a.m. next morning, surprised to find herself in this world. She slept again till 11 a.m., when she had to get up, but could not walk. A doctor was sent for. She vomited a little mucus, some dark specks like blood, and a small piece of lettuce, eaten the previous noon. Query: Did *Phas*. antidote Morph.? (*12*) Robust man, 50, had grippe, which developed rheumatism, worse in arms, occasionally below elbows. Pain so severe he could not lie in bed at nights. Drank much water. Passed much urine, which Cushing found to contain 3.5 per cent. of sugar. *Phas*. 5x every four hours removed all but a trace of sugar in eight days, and the patient was in other respects well. S. R. Stone (*Amer. Hom*., xxiv. 123) reports the case of Mr. T., 69, whom he found semi-conscious, yet suffering severely, having been seized with distress in heart region; respiration laboured; pulse 51. Had had attacks previously, but lighter, and the pulse in them had always been slow. *Phas*. 6x was given, at

first every half-hour, then every hour. Next day patient was nearly well, and said he "could feel every dose working." In a case reported by Cushing, a nurse, 50, "had fearful time with her heart palpitating and feeling as if she should die;" *Phas*. 15x cured. Patient "never took anything in her life that did her so much good" (*H. R*., xii. 237). Remarkable symptoms of the proving were: *Soreness to touch*—eyeballs, right rib, epigastrium, right humerus. The headache was < by movement of the head or any mental exertion, reading, writing, &c. Pressure <. Breathing slow; pulse slow or extinct.

Relations.—*Compare:* The Leguminosæ. In heart, Dig., Cratæg., Spig., Lach., Thyr. Punctured wounds, Hyper., Led. Diabetes, Syzyg., Thyr., Nat. sul., Uran. nit.

SYMPTOMS.

1. Mind.—Could only be roused by speaking loudly (D).—Frightened by irregular action of heart (C).—(Feeling that she would die, with palpitation.)

2. Head.—Headache, chiefly in forehead and orbits, from fulness of brain; < every movement of head; from 12 noon to bedtime; > in bed, < again 10 a.m. next day.—Pain r. side forehead while writing.—Severe headache, as if something pressing hard against each temple, much < after each dose of *Phas*. (in patient cured of heart symptoms, not a subject of headaches).—Suddenly screamed, "Oh, my head!" grasped it with both hands, and was dead (in cancer case taking a decoction of *Phas*., including dried pod, C).

3. Eyes.—Eyeballs (esp. r.) painful to touch as from a blow.—Scalding pain in r. orbit.—Pain in r. orbit when wrinkling skin of forehead.—Very smart itching in inner canthi.—Pain over r. orbit < by any mental exertion.—Pupils widely dilated and insensible (D).

6. Face.—Features expressed suffering (D).

11. Stomach.—Pain in epigastrium when touched, esp. in region of pylorus.—(Severe, dull pain in epigastrium, vomiting, &c., *Phas*. 4x cured.)

12. Abdomen.—Pressure on abdomen apparently gave pain, child shrank from it and drew up legs (D).—Pain like hernia in r. inguinal ring, lasting all day.

14. Urinary Organs.—Bloody urine.—Diabetes.—Uric acid gravel.

15. Male Sexual Organs.—Complete impotence (C).—Prostate, enlargement of.

17. Respiratory Organs.—Breathing slow and sighing (D).—(Respirations eight a minute.)

18. Chest.—Cartilage of last true r. rib painful as if bruised.—A hard, rounded, projecting, movable tumour, painful to touch, appears suddenly, above r. nipple, in full state of development (15th day).—(Hydrothorax.)

19. Heart.—Pulse at wrists rapid and almost imperceptible (D).—Sudden curious sensation in region of heart; so sudden and strange he immediately felt his pulse and found it very weak and irregular; was frightened and discontinued the proving (C).—(Sick feeling about heart with weak pulse.).—(Last stage of heart disease, pulseless.—*Phas*. 9x restored pulse, and it remained good till death, three weeks later.).—(For two years, about five times each minute heart would give one hard throb, then omit one beat; < night. *Phas*. 10 cured this and caused headache.).—(Restored heart action in case of puerperal convulsions and albuminuria when heart failed.).—(Unconscious, pulseless, respirations eight a minute.).—(Distress in region of heart, pulse very slow.—Stone.).—Dropsy of pericardium.).—(Fearful palpitation and feeling that she should die.)

22. Upper Limbs.—Pain to touch in extremity of head of r. humerus.

27. Fever.—Bedewed with cold perspiration (D).

Phellandrium.

Œnanthe phellandrium. Phellandrium aquaticum. Water dropwort. Fine-leaved water-hemlock. Horse-bane. N. O. Umbelliferæ. Tincture of fresh ripe fruit.

Clinical.—Abdomen, coldness in. Asthma. Breasts, affections of. Bronchitis. Catarrh. Ciliary neuralgia. Coryza. Cough. *Headache*. Influenza. Intermittent fever. *Nipples, painful*. Phthisis. Sleepliness, excessive. Tongue, soreness of.

Characteristics.—*Phelland*. which, like *Œnanthe croc*., grows in moist places, and even in the water itself, has not shown the poisonous properties of the latter. The provings were made by Nenning and Richter with tincture of the seeds. The symptoms show a general resemblance to those of the poisonous Umbelliferæ—vertigo, headache, nausea, vomiting, diarrhœa, drowsiness and weakness, but *Phelland*. is easily distinguished from the rest in its particular features. The provings developed many symptoms in both mammæ, especially the right, stitches shooting inward being most marked. Clinical experience in nursing women has further brought out its characteristics. The keynote is "Intolerable pain in lactiferous tubes between the acts of nursing." It has also "Pain in nipples on each application of child." Either breast may be affected, but the right breast and nipple were more affected than the left. The breast and chest symptoms have led to the use of *Phelland*. in phthisis and other chest affections, and it is in right-side

affections that *Phelland*. has done its best work. The cough is continuous and suffocating; the sputa purulent and horribly offensive. There are also offensive eructations, smelling of bed-bugs. There is burning as from vesicles on the tongue, and again the right border is most affected. Nausea sick, empty, faint feeling at epigastrium. Burning and stitches. Desire for acids" is a leading symptom. The headaches and eye-pains are a leading feature of *Phelland*. Headaches involving the eyes; with inflammation of the eyes. Heavy headaches; as if a crushing weight were on vertex; as if the head would be drawn back by a weight in the nape. Ciliary neuralgia. Obscured vision. *Phelland*. has the sense of enlargement of the head with fulness. Abnormal sleepiness following confinement has been cured by it. Goullon, junr., calls attention to the value of *Phelland*. as a cough remedy (*H. R*., iii. 151). He regards it as a "universal cough remedy," but particularly useful in phthisicy coughs. He gives this case: Mrs. E., of spare build, has almost always a slight cough, and has had repeated attacks of influenza of weeks' and even months' duration. Of late she suffers early in the morning with continuous cough for an hour or more accompanied by dyspnœa and prostration. *Phelland*. 2x in water, thrice daily, effected a rapid cure. *Phelland*. 2x also cured a young teacher who was harassed by a chronic persistent cough. A. J. T. (*H. R*., i. 170) with *Phelland*. 200 removed in an inveterate coffee-drinker this symptom: "In the evening turns purplish-red in the face, with staring eyes and extreme difficulty in breathing." He found in an old repertory under *Phelland*.: "Livid redness of face 7 to 8 p.m." Ussher (*H. W*., xxiv. 20) had a patient who suffered from excessive sleepiness after the birth of her last child. She would even go to sleep standing over her washtub. *Phelland*. Ø, and later 200, repeated thrice daily, quickly relieved her. *Peculiar sensations* are: As if head were moving to and fro. Sound in brain as if striking a piece of silver. As if a stone or lump of lead on vertex. As if a red-hot iron were moved close to left side of neck. As if blood-vessels in whole body were in vibrating motion. Though there were many symptoms of heat and burning, symptoms of coldness are also pronounced. Coldness of head with headache (also sweat with headache); coldness in abdomen, with movements; icy coldness after stool. *Phelland*. is *suited to:* Persons of a feeble, irritable, lymphatic temperament, with weak and deficient nutrition. The symptoms are < in open air; after dinner; during and after eating; on appearance of menses; sitting; standing; lying down; after spirituous drinks; after drinking water; while swallowing; after stool (coldness in abdomen). > In open air (vertigo and head symptoms); during dinner (headache); eating bread (sore throat); motion, in open air; lying on left side; scratching; rubbing. Chilliness predominates, and the catarrh and asthma of *Phelland*. are > in warm and < in cold seasons. Open air = sense of intoxication; < vertigo. < During increasing moon.

Relations.—*Antidoted by:* Rheum (diarrhœa). *Compare:* Breast symptoms, Con., Phyt., Bry., Ol. an. (Ol. an. has stitches shooting *out*; Phelland. stitches shooting *in*). Painful nursing, Crot. t. (pains in breast go through to back when nursing), Bov. (empty feeling). Stitches, K. ca. Headache involving eyes, Onos. Pains in right chest, Zn. (right apex, Calc., Ars.; r. middle, Sep.; right base, Chel.,

Lachn., K. ca., Sep.; left apex, Ars.; left base, Ox. ac., Sul.). Last stage of phthisis, sputa terribly offensive, Sil. Offensive breath with cough, Caps. Sleepiness, Op., Nux m.

SYMPTOMS.

1. Mind.—Character sad, anxious, profoundly meditative, sometimes given to extravagant merriment.—Peevish arrogance.

2. Head.—Confusion in head, as from intoxication.—Heaviness of head, as if too large and too full; as if it would be drawn back by a weight in nape.—Vertigo, which almost occasions falling backward, forward, or sideways, esp. to side to which one turns in room; < (sometimes >) in open air, > by lying down.—Sound in brain as if one were beating on a metal that was freely swinging, which woke him, after which the sound died away (5 a.m.).—Headache, which disappears in open air, and during dinner.—Headache with perspiration on top of head, fifteen minutes after dinner, soon followed by coldness of the head.—Dizzy headache in (l.) forehead with increased warmth of head and hands without perspiration.—Headache involving nerves going to eyes, crushing feeling on vertex with burning of eyes and lachrymation.—Painful heaviness of vertex as if a hard body were lying on it.—Pain like weight on vertex with aching, burning, shooting pains in temples.—Compressive pain in sides of head.—Digging pain in head.—Ebullition of blood, with heat and throbbing in head.—In occiput: intermitting pressure; burning, constrictive sensation; tearing; burrowing; stitches.—Itching, biting like flea-bites in scalp.

3. Eyes.—Itching in eyes.—Burning sensation in lids, morning and evening.—Frequent twitching of l. lids.—Twitching of lids, which close easily from a sensation of heaviness and sleepiness.—Dryness of eyes, with shooting and burning pain.—Frequent tearing in upper r. orbital margin in the bone.—Ciliary neuralgia, < attempting to read or sew; fearful intolerance of light; lids swollen and half-closed.—Lachrymation, esp. in open air.—Sight cloudy, as if directed through a fog, < when looking intently at any object.

4. Ears.—Tearings and boring in ears.—Singing and noises in r. ear.

5. Nose.—Nostrils red, burning, and (with upper lip) swollen.—Itching, confluent vesicles in nostrils.—Loss of smell.—Coryza, with obstruction of nose, can only breathe through mouth.

6. Face.—Heat in face.—Livid redness of face from 7 to 8 p.m.—Tension in skin of face.—Violent, and almost tearing, quivering in cheek.

8. Mouth.—Toothache with tearing or shooting pain.—Gums red, swollen, and painful.—Dryness of mouth and throat at night.—Increase of frothy saliva in mouth,

which it is necessary to expectorate.—Burning pain and burning vesicles on tongue (r. margin towards lip).—Clammy or cheese-like taste.—Sweetish taste after drinking water.—Beer has a bitter taste.

9. Throat.—Sore throat, with pressive and shooting pain when not swallowing, and during empty deglutition, but not when swallowing food.

11. Stomach.—Thirst for milk and for beer, with repugnance to and dread of water.—Desire for acid drinks with thirst.—Disgust and nausea with inclination to vomit and to eructate.—Offensive risings, which have the smell of bugs, or with taste of food.—Pain in stomach, as if it were empty.—Sensation as if stomach were full of water, that would run up, followed by a sensation as if a large round body were twisting about in stomach, that afterwards fell downward, followed by rumbling in stomach.—Burning pain in stomach.

12. Abdomen.—Pinchings in the abdomen.—Sensation of coldness in the abdomen, with movements in intestines.—Icy coldness in intestines; after stool; after spirituous drinks.—Burning extending from abdomen up into stomach, following eructations of the drug.—Pinching and cutting pains as if diarrhœa would come on.—Cutting and pinching in hypogastrium.—Dull stitch in r. flank; on bending to that side violent shock in r. inguinal region, after dinner.—Incarcerated flatus in hypochondria and lumbar region.

13. Stool and Anus.—Hard fæces, with clawing and pressure at anus.—Liquid evacuation, with tenesmus, followed by pain as of excoriation in anus.—Abundant expulsion of flatus during and after the evacuation.—Burning in anus.—Itching in anus that becomes a burning after rubbing.

14. Urinary Organs.—Pale and scanty urine.—Desire to urinate, but only very little passed, with violent burning in evening.—Urine pale, almost greenish.

15. Male Sexual Organs.—Itching on prepuce, > by scratching.

16. Female Sexual Organs.—Menses too early.—At commencement of menses, lassitude, yawning, and bruised pain in thighs.—She could neither sit, stand, nor lie for the pain.—Menses flowed only morning and evening, and rather more profusely than usual.—Menses that had just begun ceasea.—Menses twelve days early, lasting only a day and a half, very scanty, though without any difficulties, quite unusual.—Pain in nipples on each application of child.—Always after nursing intolerable pain in r. breast along course of lactiferous tubes; physical and mental distress; hysterical weeping; this occurred some time after micturition, the nipples were sore with purulent discharge, the pain appearing after nipples were healed.—Intolerable pains in lactiferous tubes between the acts of nursing.

17. Respiratory Organs.—Hoarseness and roughness in throat and fluent coryza.—Suffocating, dry cough, with shortness of breath.—Nocturnal cough from accumulation of mucus in throat.—Frequent expectoration of mucus, without cough, in morning.—Shortness of breath, esp. when walking.

18. Chest.—Oppression of chest when standing and taking a deep inspiration.—Stitches in chest.—(Phthisis, esp. of r. lung cavity; burning on breathing; continuous cough; profuse sweat; diarrhœa vomiting of, food; copious purulent sputa, terribly offensive; emaciation.).—Pressure on side of chest in bed in morning, which disappears when lying on the side affected.—Sharp stitches, extending inward beneath l. mamma, not affected by breathing.—Painful tearing stitches extend through whole l. mamma.—Violent stitch through r. mamma, near sternum, extending to back between shoulders, then down into r. side of sacrum, that was very painful on breathing, immediately after dinner.—Biting sticking in r. nipple, evening before lying down.

20. Neck and Back.—Sensation on l. side of neck below jaw as if red-hot iron were moved along close to the part.—Tearing in l. side of neck to jaw.—Stitches: between shoulders; in lower end of l. scapula; in sacrum.—Pain as from a bruise in loins when seated.

22. Upper Limbs.—Tearing in shoulders and arms.

23. Lower Limbs.—Tearing along anterior surface of r. thigh.—Vibration in calves.—Sensation as of congested blood in knees.

24. Generalities.—Tearing pains in limbs.—Sensation of trembling in all the vessels of the body.—The majority of symptoms appear when patient is quietly seated, standing, or lying down; they are > by movement and in open air.—Great dejection and lassitude.

25. Skin.—Itching, sometimes burning or smarting, disappearing quickly when the parts are scratched.—Small blue spots, like petechiæ.

26. Sleep.—Sleepiness during day, with frequent yawning.—So sleepy would fall asleep standing at work, lasting an hour.—Retarded sleep.—Frequent and early waking, or prolonged sleep in morning.—Dreams: of lightning with fright; of a robbery in which he received many blows.

27. Fever.—Predominance of shivering, sometimes with shaking chills, generally neither accompanied nor followed by heat or thirst.—Shuddering, generally in evening, sometimes as if cold water had been poured over body.—Inability to urinate the day after ague attack.—Accelerated pulse.

Phenacetinum.

Para-acetphenatidine. $C_6H_4OC_2H_5NHC_2H_3O$.

Clinical.—Cyanosis. Face, eruption on. Fevers. Headache. Perspiration, excessive. Typhoid fever. Uræmia.

Characteristics.—*Phenacet*. belongs to the Aniline group, and was introduced into old-school practice as a remedy in febrile states and neuralgias, free from the dangers of *Antfeb., Antipyr., Exalg*., &c. Though not so dangerous as these, it is not free from ill effects. These have been well summed up by F. G. Oehme (*H. R*., xv. 506), and I have put them in Schema form, and added a symptom observed by myself on a young lady who had taken *Phenacet*. for headaches: A circumscribed rash on both cheeks which came out red, lasted four days and then peeled, and as soon as it was clear the process was repeated. I tried many remedies with varying success, but it finally disappeared under *Alm*. 30, one powder at bedtime.

SYMPTOMS.

1. Mind.—Anxiety.

2. Head.—Vertigo, faintness.—Headache and flushed face.

3. Eyes.—Œdema of lower lids and fingers.

4. Ears.—Permanent deafness.

6. Face.—Circumscribed, erythematous, exfoliating eruption on both cheeks; fading away and recurring for several weeks (finally cured with *Alm*. 30).

11. Stomach.—Nausea; epigastric pains.

14. Urinary Organs.—Large doses may cause uræmia.—Frequent urination at night (cured in two cases).

17. Respiratory Organs.—Dyspnœa.

19. Heart.—Decrease of cardiac vigour; pulse slow, almost imperceptible.

24. Generalities.—Severe cyanosis, esp. of limbs, chilliness, nausea, epigastric pains, faintness, vertigo.—Trembling from nervous excitement.—Weakness and numbness of whole body, cold perspiration, collapse.

25. Skin.—Febrile exanthema; patches profusely scattered on limbs, scanty on trunk; disappearing on pressure, headache, flushed face (from five grains daily).

26. Sleep.—Incessant yawning; drowsiness.

27. Fever.—Chilliness.—Sweating; frequently profuse in low states of the system.

Phlorizinum.

Phlorizin. (A substance discovered in the fresh bark of the Apple, Pear, Cherry, and Plum.) $C_{21}H_{24}O_{10}$. Solution. Trituration.

Clinical.—Diabetes. Herpes preputialis. Intermittent fever.

Characteristics.—*Phloriz*. exists in fine, silky, four-sided, colourless needles, soluble in water. It has a bitter and slightly astringent taste, and has been used in old-school practice as a remedy for intermittent fever, and whilst being administered for this it has produced glycosuria. This observation has led to its successful use by homœopaths in cases of diabetes. Successes with the 3x and 6 have been reported. A patient to whom it was given by Burnett accused him of having given him *a preparation of apples*. The man discovered it because it produced herpes along the dorsum of the penis, an effect which invariably occurred whenever he ventured to eat apples. V. Mering. (*H. W*., xxiv. 535) produced glycosuria in dogs with *Phlor*.; but. if *Syzyg*. was given simultaneously with *Phlor*., no glycosuria appeared.

Phosphoricum Acidum.

Phosphoric acid. H_3PO_4. Dilution. (The dilute acid of B. P. forms the homśopathic 1x. In U.S. the first solution is made of glacial Phosphoric Acid.)

Clinical.—*Amblyopia*. Asthma. Boils. *Brain-fag*. Bronchitis; capillary. Chancre. Chilblains. Cholera. Climacteric flushes and vertigo. Coccygodynia. Condylomata. Corns. Cough. Coxalgia. *Debility. Diabetes. Diarrhśa*. Dyspepsia. *Emissions. Enteric fever*. Enuresis. *Feet, sore*. Flatulence. Ganglion. Gout. *Gravel. Hair, falling off. Headache*; of school children. Hectic. Herpes. *Hip-joint disease. Home-sickness. Impotence. Joints, scrofulous*. Lactation defective. Levitation. Lienteria. Locomotor ataxy. Love, disappointed. Masturbation. *Mental weakness*. Mercurial syphilis. Navel, pains in. Neurasthenia. Nymphomania. Osteo-myelitis. *Perspiration, profuse*. Phosphaturia. *Physometra*. Pimples. *Pregnancy, diarrhśa of*; nausea of. Prepuce, warts on. Psoas abscess. Puerperal eclampsia. *Purpura*. Rheumatism. Sciatica. Scurvy. *Self-abuse. Spermatorrhśa*. Spinal caries. Sycosis Hahnemanni. Syphilis. Tetters. Typhus fever. Ulcers. *Urine, phosphatic*. Uterus, prolapse of. Varices. Vertigo. Warts. Wens. Worms.

Characteristics.—*Phos. ac*. is less poisonous than *Phos*. Our chief knowledge of it is derived from Hahnemann's provings in *M. M. P*. These show a marked action on the emotional and sensorial faculties, a drowsy, depressed, apathetic state being produced, such as is not unfrequently met with in typhoid fevers. The keynote of the *Phos. ac*. stupor is that the patient is easily aroused and then is fully conscious. Indifference; prostrated and stupefied with grief; effects of disappointed love. Home-sick. The mind is confused; thoughts cannot be connected; thinking makes him dizzy. The legs tremble in walking and the limbs are as difficult to control as the thoughts. Many symptoms of vertigo are produced, and one is peculiar. *Phos*. has a sensation as if the chair he was sitting on was rising; *Phos. ac*. has this: Sensation as if the feet were rising until he stood on his head. This very symptom occurred in a patient of Skinner's suffering from small-pox. The disease had been cut short by *Variol*., when the patient, a lady, complained that her feet were rising to the ceiling, and begged her nurses to keep them down. *Phos. ac*. speedily put her straight. *Phos. ac*. causes illusions of the senses as well as of the sensorium, bells are heard, ciphers, sparks, &c., are seen. At the same time there is exalted sensitiveness to light, sound, and odours; "odours take away his breath." A remarkable effect was noted by Becher, one of Hahnemann's provers (the same who experienced the topsy-turvy symptom just mentioned), namely, that the right pupil became widely dilate while the left remained normal: the more he strained the eye the wider the pupil became until the iris almost disappeared. Franz had this symptom "Sees things lying near him (outside the sphere of vision) moving." Meyer had a somewhat analogous mental symptom: "When reading a thousand other thoughts came into his head, and he could not rightly comprehend anything; what he read became as if dark in his head, and he immediately forgot all; what he had long known he could only recall with difficulty." Such states of mind and the senses are frequently observed in those under the influence of grief and other depressing emotions; from over-study; and in the subjects of venereal excesses and seminal loss. But whilst these losses produce extreme weakness of mind and body, and an abashed, sad state of mind with despair of cure, there is one drain which does *not* debilitate—a diarrhśa. "Persistent, painless, watery diarrhśa, often containing undigested particles of food, and which does not debilitate," is a keynote of *Phos. ac*. Another characteristic in connection with the debility of *Phos. ac*. is that though the weakness is very great the patient is *rested by a short sleep*. (*Phos*. also has > by sleep, but not so markedly by a *short* sleep.) The copious discharges of *Phos. ac*. appear in the sweat and urine. The keynote of the enuresis of *Phos. ac*. is that the child passes a *great quantity* of urine. The polyuria and dry mouth and throat give leading correspondences for *Phos. ac*. in diabetes; and when there is in addition a history of sexual excess, or of severe mental or emotional over-strain, the indications will be very clear. White, milky urine; and also white stools, are very characteristic of *Phos. ac*. The urine may be passed clear but turns milky at once, and is very offensive. If flatulence is to be regarded as an excretion that is another instance of the excess of *Phos. ac*. There is meteoristic distension and passing of flatus in large quantities; sometimes with odour of garlic.

"Meteoristic distension; rumbling or gurgling and noise as if there were water in abdomen, < when touched and when the body is bent backward and forward." A case quoted from *H. Maandblad*. illustrates the action of *Phos. ac*. in gastric affections. A married woman, 36, mother of eight children, had for some time been so melancholy and depressed as to be unable to fulfil her household duties. There was no discoverable mental cause, though her condition had been made < by a sudden death in the family. The beginning of the illness was apparently a weakness of the stomach: small appetite; always pain and distension after eating; the food seemed to lie long in the stomach undigested. *Phos. ac*. 6x, ten drops three times a day, soon restored the patient. In connection with the flatulence of *Phos. ac*. there is even bloating of the uterus with gas. The menses are excessive and premature; and there are many symptoms connected with the pregnant and puerperal state, including debility from lactation, *Phos. ac*. has many respiratory symptoms, and this is a keynote: "Weak feeling in chest from talking, coughing, or sitting too long; > by walking." Hoarseness and nasal voice; dyspnśa; capillary bronchitis. The cough seems to be caused by tickling of a feather from middle of chest to larynx, low down in chest, about ensiform cartilage, pit of stomach; is < evening after lying down; expectoration muco-purulent; salty; bloody; offensive. Every draught of air = fresh cold. Cough = headache; nausea and vomiting of food; spurting of urine. A very prominent sensation running through the proving is that of pressure; pressure as from a crushing weight in vertex, forehead, sternum. Pressure in eyes; in navel; in left breast. Squeezing above the knee; in the sole. The hćmorrhages of *Phos. ac*. are dark, profuse, with passive hćmorrhages. A case of land scurvy (quoted *Amer. Hom*., xxii. 421) Contracted in mining camps presented the usual condition of the gums, and also purpureal spots covering the whole body. Patient was able to be about, and had little pain, but was despondent. Pulse weak, very slow. Had been months ill under old-school treatment. *Merc. sol*. was given but did not relieve. *Phos. ac*. given strong enough to taste acid speedily cured. A peculiar symptom of *Phos. ac*. is involuntary biting of tongue in sleep. The sphincters are weakened, and there is involuntary escape of fćces and urine, the latter especially on coughing or movement. *Peculiar sensations* are: As if intoxicated. As if head would burst. As if feet going up. As if weight in head. As if brain crushed. Bones as if scraped with a knife. As if eyeballs too large. As if white of egg had dried on face. As if lower jaw were going to break. Nausea as if in soft palate; in throat. As if stomach being balanced up and down. Heavy load in stomach. Ants crawling over body. Uterus as if filled with wind. Tickling in chest as with a feather; as with down in larynx. Red-hot coal on arm and shoulder, *Phos. ac*. is *suited to:* (*1*) Persons of originally strong constitution weakened by loss of fluids; excesses; violent, acute diseases; chagrin or a long succession of moral emotions. (*2*) Persons of mild disposition. (*3*) Children and young people who have grown too rapidly, tall, slender, and slim; with pains in back and limbs as if beaten; growing pains. Lutze (*Hahn. Adv*., 1900, 664) cured with *Phos. ac*. a German woman, 66, of chronic, early morning, painless diarrhśa after the failure of *Pod*. and partial success of *Gels*. The patient had been ill two years, dating from the time

she came to Brooklyn from Germany to be near her daughters. One of the latter gave Lutze the keynote of the case by telling him that her mother was *home-sick, and wanted to return to Germany, though she had not a single relative there*.—The symptoms are: < By music (every note = stitch in ears; violent pains in head). Slight shock or noise = pressure in head to be extremely violent. Odours = vomiting. Bad news; depressing emotions = cough, diarrhśa, &c. Touch <. Movement of child = escape of stool. Many symptoms are < evening and night. > After short sleep. Many symptoms are > walking. Sitting <. Standing <. < Lying on left side. < Side on which he lies. < Talking. < From mental affections; suppressed eruptions; loss of fluids, especially seminal; masturbation; perspiration; urination. There is desire for warm food; which > pressive pain in stomach. Warm room <. Warmth of bed > pains in bowels. Aversion to uncover in heat. < By draught; wind; snowy air. Cannot bear draught on chest. Every draught fresh cold. Catching cold in summer = diarrhśa. Least cold arthritic pains. Coldness of part < pains. Fresh air = invigoration.

Relations.—*Antidoted by:* Camph., Coff., Staph. *Compatible:* Chi., before or after, in colliquative sweats, diarrhśa, and debility; after Nux in fainting after a meal; after Rhus in typhoid. *Followed well by:* Ars., Bell., Caust., Lyc., Nux, Puls., Sep., Sul., Calc. p., Fer. p., K. ph., Nat. p. *Compare:* Effects of grief, &c., Ign. (Phos. ac. deeper, more settled despair, hair turns grey, crushing weight on vertex). Growing too fast, Calc. (Calc. fast and fat; Phos ac. fast and tall). School headaches, Nat. m., Calc. ph. Typhoid and typhus, Rhus (both have nose-bleed at beginning of typhus, with Rhus it >; with Phos. ac. not: Phos. ac. follows Rhus; both have > by movement). Cina (bores fingers in nose). Pho. (Pho. has more dryness of tongue, more sensorial excitement and intolerance of noises or odours; if diarrhśa is present it is blood-streaked and looks like flesh water). Nit. s. d. (sensorial apathy); Arn. (more developed stupor); Op. (stertor; countenance deeper red, almost brownish red; Phos. ac. sunken hippocratic). Home-sickness, Caps. (Caps. has red cheeks). Lienteric diarrhśa, Chi. (Chi. exhausts rapidly; Phos. ac. not). Loss of seminal fluids, Chi. (Chi. acute; Phos. ac. chronic effects). Tuberculosis, Pho. (Phos. ac. better than Pho. when there is cough from tickling at ensiform cartilage, < evening and lying down at night; weakness causing dyspnśa; < from draught on chest). Diabetes, Lact. ac. Growing pains, Guaiac. Bad news, effects of, Coloc., Gels. As if white of egg had dried on face, Alm., Bar. acet. Affections of palate, Mang. Aversion to bread; effects of masturbation, Nat. m. Effects of music, Ambra, Pho. Over-lifting, Calc. Nausea at sight of food, especially during pregnancy, Eu. perf.; at sight of food, Colch., Lyc., Mosch., Phos. ac., Saba., Spi.; at smell of food, Colch., Eu. perf. Inquietude about health and life, Calc., Pho. Apathy, K. ca. (Phos. ac. sensorial; K. ca. from exhaustion—puerperal mania, puerperal fever). Cerebro-spinal exhaustion from overwork, Pic. ac. Apathy with indifference (Mur. ac. taciturnity with indifference; Sul. listless; Hell. n. not easily roused). Mild, yielding disposition, Puls. Headache > by lying down, Bry., Gels., Sil. Neurosis in stump-after amputation, Cepa. Masturbation when patient distressed by culpability of act, Dros., Staph. Sycosis, Thuj., Sabi. Escape of urine

during cough, Caust., Nat. m., Puls. Nausea in throat, Cupr., Cycl., Pul., Stan. Feet as if in air, Passif.

Causation.—Bad news. Grief. Chagrin. Disappointed love. Separation from home. Loss of fluids. Sexual excesses. Injuries. Operations. Over-lifting. Over-study. Shock.

SYMPTOMS.

1. Mind.—Disposition to weep, as from nostalgia.—Bad effects from grief, sorrow, unfortunate love, with great emaciation, sleepiness, and morning sweat.—Sadness and uneasiness respecting the future.—Anxious inquiries respecting the disease under treatment.—Restlessness and precipitation.—Silent (sadness) peevishness and aversion to conversation.—Great indifference.—A complete indifference to everything; not a soporous, delirious, or irritable condition, but simply an indifferent state of mind to all things; patient does not want anything, nor to speak, shows no interest in the outside world (may occur in any disease in fevers of very low type).—Difficulty of comprehension, patient will think a little while about a question, perhaps answers it, then forgets all about it; dizziness of the mind.—When reading, a thousand other thoughts came into his head, could not rightly comprehend anything; what he read became as if dark in his head and he immediately forgot all; what he had long known he could only recall with difficulty.—Inability to endure noise or conversation.—Dulness and indolence of mind, with want of imagination.—Weakness of memory.—Imbecility.—Cannot connect his thoughts.—Paucity of ideas and unfitness for intellectual labour.—Illusions of the senses; hears a bell pealing; sees only ciphers before his eyes.

2. Head.—Vertigo: head sinks forward or backward; on closing eyes; at climaxis with flushes and sweat; in typhus; when lying in bed, as if fee; were going up and he was standing on his head; after reflection.—Stupefaction in forehead, with somnolency without snoring, eyes closed.—Head bewildered, as after intoxication or immoderate pollutions.—Sensation as if intoxicated, evening, in warm room, with humming in head, which feels as if it would burst when coughing.—Stunning vertigo when standing and walking, esp. in evening.—Pressure as from a weight in head, or as if vertex had been beaten.—Headache in morning.—Aching with tingling in head.—Headache usually from behind forward.—Constant headache, which compels to lie down, < to an insupportable degree by the slightest commotion or by noise.—Heaviness of head, as if full of water.—Violent pressure in forehead in morning on waking.—As if temples and sides of head were squeezed together by forceps.—Cramp-like and hard pressure in head, < by pressing on head and by turning it I also by meditation and by going up stairs, but esp. after midnight, in the part which presses pillow.—Compression in brain.—Tearing headache.—Lancinations in temples or above eyes.—Stitches over one (the r.) eye.—Jerks or shocks, blows and hammering in head.—Drawing pains in bones of

occiput.—Grey, lank hair, like tow.—The hair becomes grey early or flaxen, and very greasy, falls off; also hair of beard, esp. after grief and sorrow.—Pain in bones of skull; it feels as if somebody scraped the swollen and tender periosteum with a knife, < at rest, > from motion; caries of skull with burning pain.—Itching of scalp.

3. Eyes.—Eyes dull, glassy (but without lustre), downcast.—Pressure in eyes, with sensation as if eyeballs too large; as if eyeballs were forcibly pressed together and into head.—Coldness in internal surface of lids.—Eyes dazzled on looking at bright objects.—Burning pain in lids and their angles, esp. by candle-light in evening.—Inflammation in eyes, with congestion of veins in internal angles.—Agglutination, mornings.—Inflammation of lids.—Hordeolum.—Yellow spot in sclerotica.—Lachrymation.—Pupils dilated.—R. pupil much dilated, l. pupil constantly normal.—Fixed look.—Sight confused as if directed through a mist.—Myopia.—Black band before eyes; ciphers; sees objects lying near him (outside sphere of vision) moving.—A dull, shooting, burning pain forced r. eyeball to its outer canthus; could then see nothing with this eye but a limitless white expanse with fiery points falling on it; later, expanse became fiery and the falling points dazzling white.

4. Ears.—Shootings in ears, sometimes with drawing in cheeks, jaws, and teeth, < only by sound of music.—At every stroke of a bell or musical note stitches in ears like earache, also on singing himself; non-musical sounds had no effect.—Cramp-like drawings in ears.—Inability to endure music, noise, and conversation.—Every sound re-echoes loudly in the ears.—Nervous deafness, shrill sounds most painful and most distressing (R. T. C.).—Deafness for distant sounds.—Squeaking in ear on blowing nose.—Roaring in ears with difficult hearing.

5. Nose.—Swelling on bridge of nose with red spots.—(Redness of tip of nose with dyspepsia.—R. T. C.).—Each dose (3x) goes to his nose as effervescing waters do, and < the redness (agg.—R. T. C.).—Scabs on nose.—Disposition to put fingers into nose.—Itching on point of nose; must scratch there.—Fetid exhalation from nose.—Discharge of (bloody) pus from nose.—Epistaxis (dark blood).—Violent coryza, with redness of margins of nostrils.—Fluent coryza, with cough and burning pain in chest and throat.

6. Face.—Face pale, wan, with (lustreless) hollow eyes surrounded by a blue circle, and pointed nose.—Drawings in cheeks and jaws.—Irregular features.—Heat of side of face on which he is not lying.—Heat in face, with tension of skin of face, as if the white of an egg had dried upon it.—Large pimples on face.—Burning pain in cheeks.—Humid and scabious tetters on cheeks, lips, and commissures.—Lips dry, scurfy, covered with suppurating cracks, with pains as from excoriation.—Yellow-brown, crust-like eruptions, with pus on lower lip towards corner of mouth.—Pimples and scabs on red part of lips.—Violent burning pain in r. lower lip, persisting when moving it.—Pimples on chin.—Swelling of sub-maxillary glands.—Pain in lower jaw as if dislocated.

7. Teeth.—Toothache with tearing pain (burning in the front teeth), < by heat of bed and by cold or hot things.—Violent pains in incisors at night.—Violent aching in a hollow tooth when particles of food get into it, going off when they have been removed.—The teeth are yellow.—Gums bleeding easily, swollen, stand off from teeth.—Painful nodosities in the gums.

8. Mouth.—Dryness of mouth and palate without thirst.—Viscid, tenacious phlegm in mouth and on tongue.—Shootings and burning sensation on tongue.—Involuntary biting of tongue at night.—Swelling of tongue, with pain when speaking.—Red streak in middle of tongue, widens in front.—Nasal tone of voice.—Smarting in mouth during mastication of solid food.—Excoriation and ulceration of velum palati, with burning pain.

9. Throat.—Pain as from excoriation in throat, with smarting, scraping, and shooting, esp. during passage of food.—Contractive pain in pit of throat.—Hawking up of tough mucous phlegm.

10. Appetite.—Loss of appetite.—Putrid, acid, herbaceous taste.—Prolonged after-taste of food, and esp. of bread.—Repugnance to bread, which seems bitter.—Aversion to coffee.—Violent thirst for cold milk or for beer, as well as in general for cool and juicy things; bread appears too dry.—Insatiable thirst, excited by a sensation of dryness in whole body.—Acids excite bitter risings and other inconveniences.—Ate heartily, much oppressed after with flatulence.—After a meal pressure, or a sensation of wavering in stomach, with confusion of head, uneasiness, fulness, and disposition to sleep, or dejection, as if about to faint.

11. Stomach.—Sour, incomplete, or burning risings.—Constant nausea in throat.—Nausea which compels lying down.—Nausea at sight of food.—Vomiting of food.—Sour vomiting.—Pressive pain in stomach, as from a weight, when fasting, and after any food whatever (with sleepiness), as also on touching pit of stomach.—Sensation of coldness or of burning in stomach.—Feeling in stomach as if everything had stuck fast and was dry.

12. Abdomen.—Spasmodic aching, with (pressure and) anguish in hypochondria, and esp. in liver.—Sensation as if liver were too heavy.—Shootings in regions of liver and spleen.—General tympanites with enlarged spleen.—In navel periodical aching, squeezing.—Contractions in abdomen on both sides of umbilical region.—Spasmodic pains in abdomen, esp. in umbilical region.—Shootings and cuttings in abdomen.—Sensitiveness in lower cćcal region.—Burning sensation in hypogastrium.—Meteoristic distension of and frequent grumbling and borborygmi in abdomen, as if from water in it; esp. when it is touched, and when the body is bent backwards and forwards.—Production and expulsion of much flatus, esp. after eating acid things.—Swelling of inguinal glands.

13. Stool and Anus.—Hard fćces in small portions, difficult to evacuate.—Frequent evacuations.—Diarrhśa, particularly painless, which may be very fetid.—Diarrhśa lasting a long time, apparently without any weakening effect.—Stools: loose, slimy, whitish-grey; undigested, greenish-white.—Yellowish and very offensive.—Escape of stool when child is moved or turned.—Involuntary stools of the consistence of pap (bright yellow), with sensation as if flatus were expelled.—Choleraic diarrhśa as if rectum remained open.—(Chronic diarrhśa, thin and greenish, almost involuntary with gastric irritability.—A. E. Small.).—In evening great discharge of garlic-smelling flatus; great yawning.—Protrusion of hćmorrhoidal tumours from rectum during stool.—Intolerable pain in hćmorrhoids when sitting.—After stool tenesmus; sickening pain about navel.—Tearing, smarting, and itching in anus and rectum.—Itching prick on outer circumference of anus.

14. Urinary Organs.—Urgent want to urinate, with scanty emission of urine, paleness of face, heat, and thirst.—Frequent and profuse emission of aqueous urine, which immediately deposits a thick and white cloud.—Urine like milk, with sanguineous and gelatinous coagulum.—Fetid urine.—Flow of urine with spasmodic pains in loins.—Urgent and irresistible desire to urinate.—Urine like that which passes in diabetes mellitus.—Anguish and uneasiness before urinating.—Nocturnal enuresis.—Children pass a *great deal* of water in bed at night; persons get up in the night to urinate and pass a great deal.—Burning pain in urethra during and after emission of urine; cutting before.—Creeping in urethra when not urinating.—Spasmodic (painful) constriction of bladder (without urging).—Incisive pains in urethra when making water.

15. Male Sexual Organs.—Lancinating pains in glans.—Fine pricking at point of penis.—Burning cutting in glans with an out-pressing pain in both groins.—A feeling of heaviness in glans, esp. when urinating.—Tingling and oozing vesicles round frćnum.—Sycotic excrescences with heat and burning.—Crop of warts on prepuce.—A crop of pedunculated warts come round corolla glandis after taking *Pho. ac*. in summer drinks (agg.—R. T. C.).—Condylomata.—Eruption on penis and scrotum.—Inflammatory swelling of scrotum.—Pain in testes when touched.—Gnawing pain in testes.—Swelling of testes (l.). while spermatic cord is enlarged, hard, and tightened.—Absence of sexual desire.—Frequent erections (in morning in bed; in morning when standing), without desire for coition.—Weakness of sexual organs, with onanism, and little sexual desire.—Exhaustion after coition.—Frequent and very debilitating pollutions, esp. where the patient is much affected by the flow.—Onanism; esp. when patient is much distressed by the culpability of the act.—Discharge of semen when straining during an evacuation.

16. Female Sexual Organs.—Oophoritis, metritis, or prolapsus from debilitating or emotional influences; amenorrhśa.—Very irritable uterus.—Uterine ulcer, with copious, putrid, bloody discharge, itching or corroding pain, or no pain.—Hepatic pains during menses.—Menses too early and too long; too copious; too late; dark clotted; preceded by leucorrhśa, and for one or two days by griping and rumbling

in abdomen.—Yellowish, itching leucorrhśa after menses.—Distension of uterus as by gas.—Itching pricking like flea-bites between mammć, obliging her to rise at night.—Dysuria during pregnancy; cutting pains.—Vomiting at sight of food during pregnancy.—Puerperal convulsions; albuminuria; hćmorrhage.—Scanty milk with debility and great apathy.—Deterioration of health during nursing.—Constant vomiting of milk in a suckling; waxy face; blue rings round eyes; child does not cry; mother has little milk.—Sharp pressure on l. breast; and nipple.

17. Respiratory Organs.—Voice nasal.—Great hoarseness and roughness in throat.—Pain in pit of throat, which contracts throat.—Cough excited by a tickling and a scraping in larynx; or above epigastrium, which is dry in evening, and with a yellowish-white expectoration in morning.—The cough is < morning and evening; during rest if one sits or lies long in the same position; after sleeping; from cold air; from loss of fluids.—(Cough after food of any kind.).—Cough with (nausea) vomiting of food and headache; involuntary emission of urine.—During cough expectoration (of dark blood, or of tough white mucus, lasting acid), having an herbaceous smell and taste.—Cough with purulent (very offensive) expectoration and pains in chest.—Salty expectoration in morning.

18. Chest.—Shortness of breath and inability to speak long, from weakness of chest.—Capillary bronchitis, < evenings, with fever, pain under sternum, then violent sneezing, thirst and coryza, profuse, purulent secretion.—Spasmodic and contractive oppression of chest, as if tightened.—Weakness in chest after speaking.—Pressure at chest often spasmodic or incisive.—Pressive pain in middle of chest, < when expiring; felt as if sternum would be pressed out; < by pressure with hand, stooping, coughing, &c.—Pressure behind sternum rendering inspiration difficult.—Lancinations in sides of chest.—Burning and pressure in chest.

19. Heart and Pulse.—Stitches through heart.—Palpitation: in young persons growing too fast; after onanism.—Pulse irregular, with irregular beating of heart; pulse intermitting.—Swollen veins.

20. Neck and Back.—Tension and cramp-like drawing in muscles of neck, esp. on moving head.—Miliaria on neck.—Boils under axillć; on nates.—Boring pain between scapulć.—Spondylitis of cervical vertebrć.—Eruption, painful to touch, on back, shoulder-blades, neck, and chest.—Burning pain in a spot above small of back.—Itching stitch in coccyx; fine stitches in coccyx and sternum.—Crawling (formication) tingling in back and loins.

21. Limbs.—Bruised feeling in hips, thighs, arms, nape, like growing pains; at same time repeated single tearing stitches in all these parts at once; the stitches occur on commencing to walk, esp. to go up stairs; bruised pain continues all the time.—Bruised pain in all joints in morning, and in arms and legs.—Burning, gnawing, tearing pains in bones of extremities.—Weakness of extremities after loss of fluids.

22. Upper Limbs.—Boring, digging, drawing pain in l. shoulder-joint, intermittent, < lying on l. side, > moving arms.—Cramp-like pressure in arms, hands, and fingers.—Drawings and jerking tearings in arms and fingers.—Eruption of pimples on arms.—Drawing, incisive pains in joints of elbows, hands, and fingers.—Sharp, shooting, boring pains under l. forearm near elbow, < at rest.—Numbness in course of r. radial nerve.—Weakness and trembling of arms.—Trembling of hands (when writing).—Ganglion on back of hand.—Skin of hands and fingers dry, shrivelled, parched.—Fingers dead, sometimes on one side only, and within well-defined limits.—Lancinations (stitches) in fingers and joints of fingers.

23. Lower Limbs.—Swelling and furunculi on buttocks.—Contusive pains in hips and thighs, esp. when walking or rising from a seat.—On l. hip-joint and l. thigh, a neuralgic or rheumatic pain, from gluteal muscles or hip-joint, running down leg to knee, and often to calf or ankle; gets a little > after walking, but is still very bad.—Cramp in coxo-femoral joint, with tearing throughout the limb, insupportable when seated, and during repose.—Aching, cramp-like pains in thighs, legs, feet, and toes.—Tearing throughout leg, with heaviness in joints.—Weakness of legs, so that a false step (or tripping) occasions falling.—Burning tearing in tibia at night.—Pimples on knees and legs, which become confluent, and are transformed into easily bleeding ulcers.—Itching ulcers on legs.—Burning sensation in feet and soles, with excoriation between toes.—Swelling of feet.—Feet swollen and sore on putting on walking shoes.—In evening spasmodic drawing in feet, < r. sole and ball of great toe, preventing sleep till midnight.—Sweating of feet.—Corns on feet.—Blisters on balls of toes.—Chilblains on toes.—Swelling of joint of great toe, with burning, throbbing, and incisive, dull pains on being touched.

24. Generalities.—Affections of any kind in inner navel; lower part of chest, buttocks, thighs, external side.—Squeezing or contracting pain; lassitude of the body; feeling very weak.—Drawings and jerking tearings in limbs.—Cramp-like, pressive pains.—Painfulness in general in bones or periosteum.—Sensation as if the periosteum were scraped with a knife; after contusions.—Aching, burning, tearing pains at night.—Swelling (and sponginess) of the bones or periosteum; burning sphacelus.—Caries with smarting pains.—Neurosis of stump after amputation.—Ulcers with stinking pus; painless.—Burning through lower half of body from small of back and pit of stomach downwards, while extremities are cold to touch.—Weakness from loss of fluids without any other pain than burning.—Swellings of glands.—Contusive pain in limbs and joints, as from paralysis, or like growing pains, esp. morning and evening.—Numbness and weakness of limbs.—Heaviness in limbs and joints, with great indolence.—Great fatigue after walking.—Great general weakness, physical or nervous, with strong tendency to perspire, during day (esp. in morning), or with burning sensation in body.—Very pale face; nausea in throat.—Emaciation, with sickly complexion, and eyes surrounded by a livid circle.—Sensation as if body and limbs were bruised, as from growing, esp. in morning.—Formication in different parts.—Agreeable feeling

of buoyancy and lightness.—Violent ebullition of blood, with great agitation.—The pains are < during repose, and > by movement, and those which manifest themselves at night are > by pressure.—Symptoms < from mental affections; after suppression of cutaneous eruptions, i.e., any bad result that ensues from such suppression; from loss of fluids, particularly seminal; sunlight; masturbation; after perspiration; sexual excesses, talking, esp. when it causes a weakness in the chest; while urinating.

25. Skin.—Insensibility of skin.—Crawling tingling under skin.—Formication of skin.—Red and burning spots on limbs.—Eruption like scarlatina.—Erysipelatous inflammations.—Eruption of small pimples, and of miliary pimples collected in clusters and red.—Eruption of pimples with burning pain, or pain as from excoriation.—Scabious vesicles.—Humid and dry tetters, squamous; variola.—Corns with shootings and burning pain.—Chilblains.—Wens.—Warts: large, jagged, often pedunculated, exuding moisture and bleeding readily; indented.—Condylomata.—Furunculi.—Flat, indolent ulcers, with secretion of a dirty-looking pus, and having a serrated bottom.—Itching ulcers.

26. Sleep.—Great tendency to go to sleep during day, early in evening, and in morning, with difficulty in waking.—Coma.—Retarded sleep and sleeplessness at night, caused by agitation and dry heat.—Arithmetical figures appear before eyes on falling asleep.—Profound sleep; can scarcely be roused in morning.—Jerking and involuntary movements of hands, moaning, talking, and singing, or an aspect during sleep at one time of laughing, at another of weeping, with eyes half-opened and convulsed.—Anxious dreams of death, with fear on waking.—Lascivious dreams, with emissions.—Awakened by: canine hunger; dry heat; sensation of falling; sad thoughts.—Patient though quite weak is rested by a very short sleep.

27. Fever.—Pulse irregular, sometimes intermitting one or two beats, generally small, weak, or frequent, at times full and strong.—Violent ebullitions with great restlessness.—Swollen veins.—Shuddering and shivering, sometimes with shaking, or with coldness in hands and fingers, generally in evening, and without thirst (followed by heat without thirst, or by excessive heat, depriving one almost of consciousness).—Sensation of coldness on one side of the face.—Sensation of coldness, with shiverings and coldness in abdomen.—Internal dry heat without being hot to touch; and without any complaint at any time of the day.—General heat with loss of consciousness and somnolence.—Heat in head with cold feet.—Febrile heat in evening, without thirst, with anguish, and great activity of the circulation.—Shivering alternately with heat.—Malignant (typhus) fever with great weakness (quiet delirium with dulness of head), apathy, stupidity, aversion to conversation, diarrhśa, &c.—Tertian ague with profuse perspiration, anxiety of look, thirst and vomiting.—Night-sweat.—Sweat in morning.—Perspiration mostly on back part of head and in neck, with sleepiness during the day.—Profuse perspirations during night and in morning, with anxiety.—Great inclination to perspire during day and night; clammy perspirations.

Phosphorus.

The Element. P. (A. W. 30.96). Saturated solution in absolute alcohol. Trituration of Red amorphous Phosphorus.

Clinical.—Alopecia areata. *Amaurosis. Amblyopia. Anćmia, acute pernicious*. Anus, fissure of. *Antrum, disease of. Arteries, disease of*. Asthma. *Bone, diseases of. Brain, affections of*; softening of. Brain-fag. Breast, abscess of; fistulć of. *Bronchitis*; membranous. *Cancer; of bone. Cataract*. Catarrh; intestinal; nasal. Chilblains. Chlorosis. Chorea. Ciliary neuralgia. Coccygodynia. Cold. Constipation. *Consumption. Corpulency. Cough*. Croup. Dandruff. Diarrhśa. Dropsy. *Ecchymosis. Enteric fever*. Ephelis. Epilepsy. *Erotomania*. Exophthalmos. Exostosis. *Eyes, affections of*. Fainting. *Fatty degeneration*. Fistula. Flatulence. Fungus hćmatoides. *Gastritis*. Glaucoma. Gleet. *Gums, ulceration of. Hćmoglobinuria. Hćmorrhagic diathesis*. Headache. *Heart, degeneration of*; murmurs of. Hydrocele. *Hydrocephalus*. Hysteria. Impotence. Intussusception. *Jaundice*; malignant; of pregnancy; of anćmia. *Jaw, disease of. Joints, affections of*. Keratitis. *Lactation, disorders of. Laryngitis*. Levitation. Lightning, effects of. Lienteria. *Liver, diseases of; acute yellow atrophy of. Locomotor ataxy. Lumps, hćmorrhage from*; śdema of; paralysis of. Marasmus. Menorrhagia. *Menstruation, symptoms before. Mollities ossium. Morphśa. Muscć volitantes. Nćvus. Nails, ulcers round. Neuralgia*. Nightmare. Nipples, sore. *Nose, bleeding from. Numbness*. Nymphomania. *Odour of body, changed. Śsophagus, pain in*. Ozćna. Pancreas, disorders of. *Paralysis; pseudo-hypertrophic; general of insane*. Periostitis. *Perspiration, abnormal*. Petit mal. *Plague. Pneumonia. Polypus*. Pregnancy, vomiting of. Proctalgia. *Proctitis. Progressive muscular atrophy*. Pruritus ani. Psoriasis. Puerperal convulsions. *Purpura. Pylorus, thickening of*. Retinitis. Rheumatism; paralytic. *Rickets. Screaming*. Scurvy. *Shiverings. Sleep, disordered*. Somnambulism. *Spine, curvature of*. Spleen, enlargement of. Sprains. Stammering. Sterility. Syphilis. *Syringo-myclia. Throat, mucus in. Tobacco habit. Trachea, tickling in*. Tuberculosis. Tumours; erectile; polypoid; cancerous. *Typhus fever. Ulcers. Urethra, stricture of*. Vaccinia. Variola. Voice, loss of. *Whitlow*. Wounds. Yellow fever.

Characteristics.—*Phosphorus* (Light-bearer, Morning Star) "was discovered in 1673 by Brandt, an alchymist of Hamburgh, and shortly afterwards by Kunkel, in Saxony." Teste, from whom I quote, says that attempts were made to use *Phos*. in medicine immediately after discovery. Kunkel made it into his "luminous pills," and Kramer claimed to have cured with it diarrhśa, epilepsy, and malignant fevers. Teste gives a list of old-school cures, which include: Continuous, bilious, and intermittent fevers; general śdema; measles; two cases of pneumonia of left lung, with ataxic symptoms; chronic rheumatism of the legs; apoplexy; hydrocephalus; periodic headaches (in one case with menstrual irregularity); catalepsy; epilepsy;

gutta serena; asthenia facilis; chronic lead poisoning,—a list which shows a very good idea of the range of action of *Phos*. Hahnemann's proving brought out the fine indications, without which the generals are of little service, and to Hahnemann's symptoms have been added those of later provings and of numerous cases of poisoning, and the effects on workers in match factories, especially necrosis of the lower jaw. The vapour given off by unignited *Phos*. is *Phosphorus oxide*. The jaw affection, called "Phossy-jaw" by the workpeople themselves, is accompanied by profound adynamia, and not unfrequently ends in death. The form of the disease differs according to whether the upper or lower jaw is attacked. In the, former case it pursues generally a chronic and mild course, ending in exfoliation, cicatrisation, and cure. In the latter the necrosis may be either acute or chronic., but is always severe, and the patients usually die of "consumptive fever" (*C. D. P*.). Here is a typical case quoted in *C. D. P*. from *B. J. H*., iv. 287: J. D., 21, had been four years in a match factory. For two and a half years he had only laryngeal irritation from the local action of the fumes. He then began to cough very much and expectorate thick white mucus. Then most violent toothache set in, with swelling on right side of face. A molar was extracted but without relief, and one tooth after another dropped out. He became too weak to walk. A swelling as big as an egg formed below right orbit, burst in a fortnight, and discharged a large quantity of white pus. He grew worse all the teeth fell out; gums of lower jaw were retracted. Examination found right cheek swollen. At right angle of lower jaw an opening discharging laudable pus, through which a probe can be passed two inches along bare bone, and two inches anterior to this another aperture leads to the same. On opening mouth the whole lower jaw as far as ascending rami and down to reflection of mucous membrane is denuded and of leaden greyish colour. On right upper jaw probe can be passed over bare bone. Pareira (*C. D. P*.) has observed in phosphorus workers "a peculiar sallow, bloated complexion, with dull expression of eye and gastric derangement," when there was no affection of the jaws. [Wagner found *Phos*. symptoms long before local disease appeared, *e.g*., cardialgia, anorexia, eructation of gas smelling of *Phos*.; also dizziness, faintness, and cachectic appearance. The first symptoms in the jaws are tearing pains, the teeth being sound, swelling and suppuration of the gums, and loosening of the teeth follow, and the bone becomes denuded. Langenbeck objects to the term "necrosis," stating that it is a periostitis in which bony deposit occurs, enclosing the jaws more or less as in a sheath. There is no exfoliation. This osteo-periostitis may arise from rheumatism.—*Klin. Woch*, Jan. 2, 1872.] In cases of acute poisoning the most remarkable effect noted is acute fatty degeneration of the liver and engorgement of the lungs. At first there is tenderness of the liver, but as it shrinks this passes away. The right lung is more affected than the left. The symptoms of acute *Phos*. poisoning are exceedingly painful if consciousness is retained; violent tearing pains in śsophagus, chest, stomach; vomiting and diarrhśa; rectal, vesical, uterine tenesmus; bloating of abdomen; sensitiveness to touch; hćmorrhages from all orifices. Death may take place in a few hours, or it may be delayed for months. In the case of a child of 2 1/2 who had sucked the heads of matches, two days

afterwards there was some feverish excitement, later violent convulsions, lasting three hours, and ending in death. There were found after death no fewer than ten *invaginations* of the small intestines, which, however, were empty, and there was no sign of strangulation (*C. D. P.*). In a woman, 45, who swallowed the *Phos.* from 120 matches, Ozanam found a typhoid febrile state, profound prostration; inability to raise herself; dry tongue; much thirst; stomach sensitive; vomiting of black, sooty matter. Death took place on the second day (*C. D. P*). A man, 48, inhaled vapour of burning *Phos.* Among his symptoms were: A sensation as if something twitched under skin or was creeping between skin and flesh. Twitching of single bundles of fibres at different times like playing on a piano. Tongue when speaking often refuses to move, so that he stammers (*C. D. P.*). A case reported by J. O. Müller and translated in *C. D. P.* brings out some very characteristic symptoms of *Phos.* A strong woman, 30, took about three grains of *Phos.* from matches. Among her symptoms were: After eight hours violent and noisy, vomitings. Prostrated, cold, pallid, as if moribund and unconscious. Cold, clammy sweat, general; skin here and there waxy yellow; complexion leaden grey; dark blue rings round eyes; pulse small, hard, slow, unrhythmic, intermitting. Abdomen distended, very sensitive all over, the slightest touch causing violent pains; could not bear weight of nightdress. Senses and mind in unconscious apathy; could only be roused by loud calling into her ear. *Aco.* 1 every ten minutes revived her. She complained of very violent burning pain in lower chest (śsophagus?), stomach, and whole abdomen < by every touch or change of posture. Vomiting and diarrhśa had ceased, but she still had retching and *ineffectual straining at stool with burning like fire in large intestine and anus*. She passed with difficulty small quantities of dark yellow urine, smelling strongly of garlic, *after micturition very severe burning*. Boring, burning pains in bones, especially of skull, palate, nose, jaws, and teeth, < taking cold or warm things into mouth or chewing, only tepid liquid nutriment could be borne. At times numb pain in teeth; they felt loose as if they would fall out. Apathy alternating with angry words and actions. After menses, burning leucorrhśa that made the parts sore. Soft parts of joints swollen. Considerable rigidity of joints. The skin, which had been pale, put on a yellow tint, bloated swellings appeared in places on eyelids and face, pitting on pressure. On nape, back, and other parts the skin could be raised by the fingers in large folds, which slowly smoothed down again. Finally a peculiar exanthema appeared on the skin about the joints like eczema; vesicles in groups turned rapidly into scabs and frequently recurred. *Sulph.* was given and gradual recovery occurred. In a youth poisoned by *Phos.* there was nausea and sour taste; milk tasted burnt; every smell (tobacco, wine, beer) < the nausea. One of the provers had: Loathing of butcher's meat and bad appetite. *Phosphorus* burns are among the most painful of all burns, and the burning sensations of the poisonings are prominent also in the provings: "Glowing sensation throughout epigastrium and chest." "A flame seemed passing through me." "Warming sensation right side of heart and below left clavicle. This heat spread to apex of left scapula and to acromion, when it left the heart." "From 11 a.m. till 4 p.m. remarkable numb feeling in left leg from knee to toes,

sometimes sensation as if hot blood flowed into it." Other symptoms from the provings are: "Drawing forcing towards pelvis and rectum as if menses coming on." Intense sexual excitement in men with erections, emissions; later impotence. Dr. Sorge, 34, had this symptom: "Weight in occiput and nape, down whole spine a dull feeling as if over-filled with blood, and in sacrum a peculiar paralytic feeling like what one feels in the limbs when exposed to unavoidable danger; heaviness of feet, which were not placed on ground with usual energy. Walk less strong, often stumbled on a smooth road. Diminished sexual appetite, and feeling as if the penis would not become erect when excitement was present. Mental indifference (quite unusual)." E. R. Heath had some decidedly "phosphorescent" symptoms: Darting, cutting pains, causing much distress, starting from different points and flashing over whole abdomen; imagined an aurora borealis and seemed to hear distinctly voices shouting "Beautiful, oh! was not that splendid?" as the pains became more severe and lasting. He sprang from bed and tried to collect his thoughts; had numbness all over with sensation of myriads of needles slightly pricking him. Throat dry and parched; a flame seemed to pass through him. Feet seemed glued to the floor. With great difficulty he reached the vessel, and as soon as the bowels began to act the pains changed to cramps. Stools were like scrapings of intestines, almost constant, with tenesmus, for over two hours, after which he lay down in bed, weak, sore, almost helpless. The same prover had: Intolerable thirst; drink did not quench it, but caused cold, clammy sweat to exude the moment the water entered the stomach. Later: Involuntary passages, periodic; rectum insensible; sphincter paralysed; slight prolapse after each stool. Stools inodorous save for a slight mouldy smell. H. Noah Martin proved *Red amorphous Phosphorus*. The symptoms do not differ from those of transparent *Phos*., and are included in the Schema.─Such are the materials out of which the picture of the great remedy known in homśopathy by the name *Phosphorus* has been drawn, the characteristic features being pointed up with the added light and shade of clinical experience. The types of constitution in which *Phos*. has been found particularly *suitable* are strongly marked: (*1*) Tall, slender persons, of sanguine temperament, fair skin, blonde or red hair, quick, lively perceptions and sensitive nature. (*2*) Young people who grow too rapidly and are inclined to stoop; chlorotic; anćmic. [In experiments on young animals *Phos*. has produced rickets. Kessel (*H. W*., xxxi. 394) gave *Phos*. to young dogs, in whom it caused fatal disturbance of digestion and fatty liver, and "marked atrophic process where bone was being deposited."] (*3*) Persons of waxy, translucent skin; half anćmic, half jaundiced. (*4*) Tall, slender, narrow-chested, phthisical patients; delicate eyelashes, soft hair. (*5*) Tall, slim, dark-haired persons, especially women, disposed to stoop. (*6*) Nervous, weak persons who like to be magnetised. (*7*) Hćmorrhagic patients; slight wounds bleed profusely. *Phos*. profoundly affects the nutrition and function of every tissue, notably the hardest (bone) and the softest (nerve and blood). It causes irritation, erethism, exaltation of all the senses, and later a typhoid state and fatty degeneration. In fevers of typhoid type and in pneumonia *Phos*. has an important place. It is indicated especially when the morbid action becomes localised in the right lung, particularly the lower

lobe. In the year 1876, in the course of a severe attack of typhus fever during my residence in Liverpool, my state, as I am told (for I was in delirium), suddenly became very critical through pneumonic consolidation of the right lung. *Phos*. was the remedy selected by Drs. Drysdale, Hayward, and Hawkes, who attended me, and under its action I made a rapid recovery.─Hard, dry cough, rusty sputa; < *at twilight* and *till midnight*; < *lying on left side*; > *lying on right side*; abdomen *distended, sore, very sensitive to touch*; stools offensive, bloody, involuntary; *the anus appearing to remain open*. Each one of the symptoms I have italicised is a keynote of *Phos*. When any of them are present (with or without the pneumonia) *Phos*. is likely to be the remedy. The delirium is low, muttering, stupid; or violent; or there may be a state of ecstasy; or odd ideas, that his bones are in fragments and he cannot fit the pieces together. As a leading constituent of nervous matter *Phos*. has a deep action on the organ of mind and sensation. It produces an excitable condition, exaltation of mental faculties, and the condition which follows over-exertion. The mind, like the special senses, is too excitable and impressionable. Easily angered and becomes vehement; actually gets beside himself with anger and suffers physically in consequence. At other times anxious and restless, especially in the dark and at twilight (the restlessness of *Phos*. is universal; patient cannot sit or stand still a moment; it belongs to the stage of irritation, and is succeeded by apathy if the condition is not arrested). Imagines he sees faces grinning at him from the corners of the room. Such conditions are found in cases resulting from losses of fluids; over-work of brain; sexual excesses and abuse, and take shape in general paralysis of the insane with mania of grandeur; and in apoplexy and its sequelć; in Duchenne's pseudo-hypertrophic paralysis, in locomotor ataxy and other paralyses. A very characteristic condition of *Phos*. in nervous cases is *fibrillary twitching* of individual bundles of fibres in muscles. Numbness and formication in paralysed limbs indicate it in hemiplegia and paraplegia. Spasms on paralysed side. In other cases the burning pains of *Phos*. are prominent: burning between the scapulć; burning in spots along the spine; *feeling of intense heat running up the back* (no other remedy has exactly this symptom). The uncertain gait, neuralgic pain, and fuzzy feeling of the feet, give the correspondence with locomotor ataxy, when the conditions correspond. Epilepsy from masturbation. Petit mal: epilepsy with consciousness. Man of Itzehoe (*H. R*., xv. 268) cured this case of sciatica: An elderly lady had for eight weeks a continual burning pain running along back of left thigh and leg, compelling her to spend most of the day in bed. Entire limb so weak that she could hardly walk. < Lying on left side. > Lying on right side or on back. < By movement. < By cold air. > Being warmly-covered. < In evening. *Phos*. 6x, every two hours, caused aggravation for the first three days, and after that gave relief, but did not cure. *Phos*. 30, one powder every evening, completed the cure in a week. But the action of *Phos*. is not confined to the brain and spinal cord, it also affects the cranial bones and spinal column. I cured mainly with *Phos*. 1m a case of spinal caries with paralytic symptoms in a lady aged 67. That is, I cured the caries and removed the paralysis, though the curvature remained. There was a history of a strained back thirty-five

years before, and of lumbago and sciatica five years before I saw her. She had many pains in the scapula and chest, and could not walk unless supported about the waist. Incidentally *Phos*. set up a symptom of its own: Dryness of mouth, lips, and throat. *Phos*. has burning thirst for cold water; cold water relieves, but as *soon as it becomes warm in the stomach it is vomited*. This is one of the keynotes of *Phos*., and distinguishes it from all other remedies in cases of vomiting. Desire for cold foods and preference for cold meat is very characteristic of *Phos*., and the cold food, like the cold drink, may be vomited as soon as it becomes warm inside. Ice cream > the gastric pains. There is nausea on putting hands into warm water; sneezing and coryza from putting hands in water. Regurgitation of ingesta in mouthfuls. During pregnancy the sight of water = vomiting. The appetite of *Phos*. is remarkable: *Must eat often or he faints*. Hungry soon after a meal; hungry in the night, must eat. Craving for salt (*Phos*. remedies the effects of excessive salt-eating). The sinking, faint feeling of *Phos. is felt in the whole abdominal cavity*; also in head, chest, and stomach. The stools of *Phos*. are peculiar, whether constipated or diarrhśic: Long, tough, hard fćces (like a dog's); voided with great difficulty and straining. Diarrhśa as soon as anything enters the rectum; profuse pouring away as from a hydrant; watery with sago-like particles; with sensation as if the anus stood open involuntary; during cholera-time painless; morning of old people bloody stool; blood-streaked stool; stool like shreddy membranes. With the stool there is burning in the anus and tenesmus. There are also pains of all descriptions in the anus, notably stitches shooting up rectum. A man suffering from pneumonia, to whom I gave *Phos*. 3, after a few days developed attacks of violent pain in rectum and anus, with distension of abdomen and desire for stool; stool light, lumpy, constipated, only passed by aid of glycerine enema; after stool, complete relief of pain; sometimes the attack waked him from sleep. With *Phos*. 200 I cured a very severe proctalgia coming on at every menstrual period. During urination, and also when not urinating, there is burning in the urethra. Another very characteristic burning of *Phos*. is *burning palms*, cannot bear to have the hands covered. Flashes of heat beginning in hands and spreading to face. The fever is more of the yellow fever, typhus, or typhoid, nervous or hectic, type. In intermittents when there is heat at night beginning in stomach; faint and hungry in night; heat of hands. There is also chilliness towards evening; icy coldness of hands, knees, and feet, even in bed. Sweat is anxious, profuse, exhausting on slightest exertion; profuse at night; cold and clammy, smelling of sulphur or of garlic. *Phos*. corresponds to yellow fever in many particulars; disorganisation of the liver and blood with jaundice; hćmorrhages. It has caused acute fatty degeneration of the liver; and corresponds also to fatty degeneration of pancreas with gastric symptoms and oily stools, and fatty and amyloid degeneration of the kidneys. *Phos*. stands at the head of hćmorrhagics, and corresponds to the hćmorrhagic diathesis. The blood loses its coagulability. Very small wounds bleed profusely. *Blood-streaked discharges* are very characteristic when from lungs, nose, bowels, or other orifices. Hćmorrhoids. Menses are more profuse and longer-lasting than usual. There may be vicarious menstruation in the form of hćmoptysis,

epistaxis, or hćmaturia. Left ovarian pain. Leucorrhśa which causes blisters. Sexual excitement is great in both sexes, going to the extent of satyriasis and nymphomania. Frequent erections in men, and sexual thoughts entirely beyond the patient's control. Erections in spite of efforts to control passion in young men. Impotence from over-indulgence or from celibacy. The female breasts are the seat of many burning, shooting, cramping pains, and *Phos*. has proved a leading remedy in mammary abscess and fistulć. The characteristics are: Erysipelatous appearance; red streaks starting from opening; thin, ichorous discharge. The hćmorrhagic action of *Phos*. is seen in many forms of pulmonary hćmorrhage and congestion: blood-streaked or rusty sputa; tasting salty; when patients with delicate chests bring up phlegm tinged with blood whenever they take cold *Phos*. will generally clear up the case. Phthisis florida may also need *Phos*. It has also a "stomach-" or "liver-" cough; cough comes on after eating, and starts from a tickling in pit of stomach. Cough < when strangers enter the room. Cough < from strong odours (part of the general sensitiveness of the drug). Bronchial catarrh > in all grades may require it. Cough = tearing pain under sternum as if something was being torn loose. Suffocative pains in upper part of chest with constriction of larynx and engorgement of lungs; mucous râles; panting and laboured breathing, even emphysema. After the cough an asthmatic attack. The *Conditions* of *Phos*. will generally decide when it should be given. T. D. Stow (*J. of Homśopathics*, August, 1890) reports the case of H. B., 52, farmer, who had for six months a sharp pain with soreness in third intercostal space, three inches to left of sternum, limiting inspirations. Dyspnśa on exercise; dry cough during the day till 10 p.m. Thick, yellow, sweetish sputa from 6 a.m. to 10 a.m. Cough < lying on left side; when talking; when eating and just after eating; on going into cold air; by change of weather. > In fairly warm room; lying on right side. Prefers cold food. Has become alarmed by the persistence of the attack and loss of flesh. Three doses of *Phos*. 500 (Dunham), taken on three successive days, cured. This case was translated in *Hahn. Month*, September, 1890, from *Alg. H. Zeit*.: Whilst walking rapidly against the west wind three months before, X. felt a pain under middle of sternum with sensitiveness of the part to pressure. Pulse rapid. *Phos*. 6 removed the symptoms for two weeks, when pain and sensitiveness returned, and with the pain a sensation as though gas would rise from epigastrium. *Phos*. 3 cured. W. A. Nicholas (*H. W*., xxv., 495) reports the case of T. B., 51, whom he saw after a four months illness, which began with congestion of the brain on the sudden death of his wife, and was followed by bronchitis. During all this time he was heavily drugged. A rather long walk brought on a severe attack of angina pectoris. *Bell*. 1x gave much relief. Nicholas noticed the patient at times put his hand to the back of his neck. *Phos*. 1 relieved entirely. *Phos*. corresponds to headache and other sufferings from grief. Hot vertex after grief. It has shocks in occiput; coldness in cerebellum; congestion of brain seeming to rise from spine into head. *Phos*. has "splitting headache caused by cough." Neuralgic pains of many kinds, and impending paralysis. The attacks are induced by mental exertion; worry; *washing clothes*; and are < by music; noises; strong odours. Gale, of Quebec, discovered

in *Phos*. a remedy for "washerwoman's headache" (*Organon*, iii. 30). His patient had these symptoms: Whenever she washes clothes or walks fast she has─rush of blood to head, red face and eyes, heat on head, scalp sensitive to touch, sudden shooting pains, especially in vertex. *Phos*. cm cured. I cured a somewhat similar case (*H. W*., xxiv. 455) with *Phos*. 30 every four hours; only in my case the headaches always appeared the morning after washing: violent shooting pains left side of vertex, > wrapping head in flannel. I had given several medicines previously which had improved the general health, but had done very little for the headaches. *Phos*. affects all parts of the eye─retina, choroid, vitreous and crystalline lenses, cornea, and conjunctivć. It has arrested cataract and glaucoma, and cured retinitis albuminuria from suppressed menses. The leading symptoms are: Colours appear black before the eyes. Always sees green. Halo round candle. Letters appear red whilst reading. As if a grey veil over everything. Blindness after typhoid; sexual excess; loss of fluids; lightning. Twitching of lids. Pustule on cornea. Burning pains. The characteristic skin of *Phos*. is *waxy*, and either clear and pale or yellow. Under a "*Phosphorus* treatment" which was in vogue a generation ago, patients had a peculiarly waxy, fine, clear complexion; and in one case which came under my observation there was also very marked enlargement of the liver. In a case of rheumatism in an old lady who had *waxy pallor*, Cooper gave *Phos*. and set free all the joints. All kinds of eruptions May be set up. Exanthema with pustules (like small-pox), ulcers, psoriasis, lichen, eczema, blood boils, purpura. Hansen cured a case of purpura in a girl of ten (*H. W*., xxxv. 105). The disease began with loss of appetite and pains in the stomach, but as soon as the purpura spots appeared the pains ceased and the appetite returned. The inner aspects of the thighs were affected. *Phos*. 2 cured. The ulcers of *Phos*. bleed easily at the slightest touch, and open cancers or fungus hćmatodes with this characteristic have been cured with *Phos*. "Large ulcers surrounded by smaller ones." Ulcers affecting the nails. Inflammation and eruptions about joints. Fistulć with callous edges from glands. The joints most affected by *Phos*. are the hip and knee. The left side of the lower jaw is more affected than the right. Caries and exostoses of spine and other parts have been cured with *Phos*. De Noë Walker cured with *Phos*. 6 a large exostosis of the femur which had been pronounced osteo-sarcoma by old-school authorities. There are some forms of rheumatism which only *Phos*. can cure. These are characterised by great *stiffness* of the joints, more stiffness than pain. A drawing, tearing, *tight* feeling in parts. Stiffness of old people. Paralytic rheumatism from exposure to rain. The *tight* sensation appears in the girdle pain of spinal affections; *tightness* of skin of face and forehead. (Also stiffness in brain; in eyes.) Allied to the rheumatic symptoms of *Phos*. is its sensitiveness to effects of storms, especially thunderstorms. *Phos*. has cured more cases of headache always coming on when thunderstorms are about than any other remedy in my experience. It has also cured blindness from lightning stroke. The headaches from inhaling the steam of a washtub perhaps come in the same category as effects of vapour-laden air when storms are about. Mills (quoted *H. W*., xxxi. 33) relates a typical case of thunderstorm effect: Mrs. R, tall, thin, dark, of

mild and gentle disposition, was seen by the doctor during a thunderstorm. He found her sitting on the stairs, trembling and cold and bathed in cold, clammy sweat, full of nervous dread, and almost beside herself. One dose of *Phos*. cm cured. Some weeks later she witnessed a worse storm with complete unconcern. The power of *Phos*. over septic conditions is illustrated in a case of Howard Crutcher's (quoted *H. W*., xxxiii. 405). A girl, 16, had perforating appendicitis, operation having been delayed too long in consequence of opposition of friends. Although he deemed it useless he was persuaded to operate, and found a large abscess behind the colon, freely communicating with the peritoneal cavity. Up to the fourth day the patient progressed favourably. Then there was a collapse: pulse 130, mind wandering, urine and fćces passed without restraint. The patient was rapidly sinking; *Arsen*. gave no help. The doctor sent word to the students who were nursing the patient that they might try a hot saline enema. On attempting to give it the *rectum was found to be open*, no resistance being offered by the sphincter. *Greyish-while fćcal discharges, watery and offensive, passed constantly*. "The students, recognising the indication for *Phos*., gave a dose of that remedy, and instead of dying the girl got well." *Peculiar sensations* are: As if about to die. As if immersed in hot water. Anxiety as if below left breast. As if he had been lying at night with head too low. As if everything had stopped in head. As if chair were rising. As if eyes would be pressed out; or pressed down by weight about them. As if painful nodes under scalp. As if pulled by hair. As if head would burst. As if something exploded in head. As if skin of face too tight. As if something were pulled tight over ears. As if dust in right eye; sand in left eye; eyeballs large. As if something lay before ears; foreign body in ears. As if nose stuck together. As if nails driven into jaws. As if food did not digest properly. As if heavy Weight in stomach. Stomach as if freezing. As if something cooking in stomach. Anus as if open. Larynx as if lined with fur. As if skin on larynx. As if a piece of skin hanging loose in larynx. As if something in middle of sternum torn loose. As if heart had grown fast. As if chest eviscerated. As if a narrow band encircled body and lay upon heart. As if great weight lying on middle of sternum. Back as if broken. As if quicksilver moved up and down spinal cord. Coccyx as if ulcerated. Soles as if he had walked too much. Feet as if asleep. Ankles as if sprained. *Suddenness* is a feature of *Phos*.: Sudden prostration such as may occur in diphtheria, measles, scarlatina, or any disease in which the system has sustained a profound shock. The left side is somewhat more affected than the right, the venous more than the arterial system. The symptoms of *Phos*. are < from touch (cannot bear touch of nightdress); from pressure (but pressure > feeling as if something before ears and pains in chest). Rubbing >. Mesmerism >. Rest < pain in arms and shoulders. Lying down = intense pains in eyes; < colic and tearing in jaws; > heat of scalp and incarcerated flatus. Weakness after stool and after urinating, compelling lying down. Lying on back < diarrhśa; asthma; > pneumonia; pain in arm. Lying on left side <; on right side >. Sitting <. Motion; exertion; walking, especially fast walking, <. Exertion physical or mental <. Laughing < (cough).
Coughing = headache. Talking < pain in larynx. < From spraining parts. < Lifting

arms. < Before sleep, > after. (Some symptoms are < on waking, but this is less characteristic.) < Morning; evening (especially *twilight*); before midnight. Heat < boring in teeth; back pains; itching spots of skin. Warm food and drink < (but hot drinks > flatulent colic). Warm water, putting hands in = toothache. Warm wraps > neuralgia of head and heat of scalp. Weather changes (either way) <. Open air > pain in forehead; hemicrania; stuffed feeling in nose; < vertigo; toothache cough tearing in labia taking cold easily. Wind <. Thunderstorm <. Washing with cold water >. Washing clothes; wet weather <. < Light noise music; piano playing. > In the dark.

Relations.—*Antidoted by:* Nux, Coff., Tereb.; Kali permang. well diluted and given freely (Dr. Antal). *It antidotes:* Tereb., Rhus ven., Camph., Iod., Nat. m. (excessive use of salt), Petrol. *Complementary:* Ars., Cepa (all three have alliaceous odours), Carb. v., Ipec. *Incompatible:* Caust. *Compatible:* Ars., Bapt., Bell., Bry., Calc., Cart). v., Chi., K. ca., Lyc., Nux, Pul., Rhus, Sep., Sil., Sul. *Compare:* Ars., Merc., Petr., Sul. Asthma after cough, Ars. (Ars. before and after). Fancies himself in pieces, Bapt. Stitches up vagina, Sul., Sep., Pul., Nit. ac., Alum., Berb., Am. c. Weakening night-sweats, Chi., Calc., Lyc. Sweats towards morning, Calc., Lyc. (Phos. on awaking). Tongue glazed, Lach. (Lach. red; Phos. dry, cracked, black). Lienteria, Chi. Cough < entering cold air from warm room (Bry. opposite). Fear of darkness, Am. m., Calc., Stro., Val., Stram. Fear of ghosts, Pul. Sense of insecurity in bowels, Alo. Piles during menses, Collins., Ign., Lach., Pul. Effect of raising arms high to lift things, Rhus. Chilblains; general paralysis, Agar. Headache with increased intellectual powers (Phyt. with increased hearing). Hunger at night, Chi. s., Pso., Pul., Ign., Lyc. (Pho. unappeasable hunger with febrile heat). Left ovarian pain, Coloc., Thuj., Lach., Bry. Somnambulism, Can. i., Sul., Luna. Sensation of anus open, Phos. ac., Apis (Lach. as if vagina Open). < Walking fast, Pul. Regurgitation of food, Sul. Nocturnal salivation, Cham., Nux, Rhus. Difficult swallowing of liquids, Bell., Caust., Can., Hyo., Ign., Lach., Lyc. Blood from bowel, Merc., Nit. ac., Sul., Caps., Merc. c. Menorrhagia, Calc. Laughs at serious things, Anac., Lyc., Nux m., Plat. Hćmorrhage, blood does not coagulate, Sanguisuga. Fatty changes in blood, kidneys, spinal cord; brain-fag; crawling and tingling sensations; sexual excitement with erethism; backache as if it would break Pic. ac. (Phos. has more irritability and over-sensitiveness to external impressions with the weakness; the senses are too acute, or if failing, accompanied by photopsies; Pic. ac. has more intense erections and less lasciviousness than Phos.). In general features; taciturn and distrustful; inclined to be angry and scold; sensation of tension; nervous weakness and restlessness, Caust. (Phos. has great soreness of larynx, fears to cough or talk; Caust, has cough > by cold drink, Hoarseness of Phos. is < evening, of Caust. < morning). Scrofula, tuberculosis, swelling of glands, indolent ulceration, difficult learning to talk and walk (Phos. has delicate, refined skin, features sharp and rather handsome; Calc. large, swollen lips). Small ulcers surrounding large ones (Hep. pimples round sore eyes). Phthisis florida, Fer. (Fer. has apparent plethora with great oppression of chest from least exertion). Weakness and goneness in stomach at 11 a.m.; softening of brain;

enervation accompanied by trembling; restlessness, Zn. (Zn. has ptosis; < from wine; restlessness of feet, Phos. of entire body). Functional paralysis from fatigue or emotion, Stan., Coccul., Ign., Nat. mur., Collins. Hoarseness, < evening, weak chest, cough, copious expectoration, hectic, Stan. (Phos. has more blood-streaked sputa; tightness across chest). Bone disease, abscess, especially of breast, with fistulous openings; over-excitability of nervous system; cough excited by speaking, Sil. Phthisis; rapidly growing young people, Iod. (Phos. is nearest Iod. in phthisis). Aphonia with rawness of larynx, Carb. v. Heat at vertex; imperfect growth of tissue; morning diarrhśa, Sul. (Sul. has hunger at 11 a.m. with the heat at vertex, Phos. has not; Phos. has green painless stools, Sul. stools changing colour, and raw sore anus). Irritation of respiratory tract, sore larynx (Phos. has irritation lower down; sore larynx, < from talking or pressure, Bell. only from pressure). Capillary bronchitis, Ipec. (Phos. more inflammatory). Prostration, Chi. (Phos. sudden, Chi. not). Vicarious menstruation, Bry., Puls., Senec. Typhoid, Rhus; and erotic mania, Hyo. Cold; cerebral softening, Nux (Phos. follows Nux in both; if cold goes to chest in spite of Nux). Cough from reflex nervous influence, Ambra (Amb. < when strangers in room). Irritability; intolerance of mental strain, Nux. Vomiting: after drinking cold water, Ars. (Ars. immediately; Pho. as soon as warm in stomach), Bism. (immediately after eating, with burning cardalgia), Kre. (of undigested food hours after eating). Diarrhśa as soon as he eats, Ars. Weakness after stool, Con., Nux. Sensitive to storms and electricity, Rhod., Merc., Morph. Polypi. Teuc., Calc., Sang., Pso., Lemn. > From cold drinks and food (Lyc. opposite). Hysteria, Ign. Deafness, especially to human voice (Ign. opposite). Small wounds bleed much, Lach. < Putting hands in water, Lac. d. Apathy; weakness and prostration from loss of fluids, Pho. ac. (Phos. has more dryness of tongue and sensorial excitement). Diarrhśa blood-streaked and looking like flesh water, Canth., Rhus. Shreddy, membranous diarrhśa, Ars., Caust. < Twilight, Puls. Hepatisation of lungs, Ant. t., Sul., Lyc. (these correspond to the later breaking-up stage). Can only lie right side (Merc. can only lie left). Levitation, Phos. ac., Stict. pul. Desire for acids, Phell. Affections of skin about joints, Sep. Tongue as if burnt, Sang. Deafness after typhoid, Ars., Petrol. Nymphomania, Calc. ph., Orig. Tuberculosis, Bacil., Tuberc. Explosion in head, Alo. Jerks in head during stool, Indm. Numb, stiff feeling in brain, Graph. Duchenne's paralysis, Curar. Growing ends of bones, Conch. Effects of hair-cutting, Bell. Teste puts Phos. in three of his groups, of which Puls., Ipec., and Fer. are the types.

Causation.—Anger. Fear. Grief. Worry. Mental exertion. Strong emotions. Music. Strong odours. Gas. Flowers (fainting). Thunderstorms. Lightning (blindness). Sexual excesses. Loss of fluids. Sprains. Lifting. Wounds. Exposure to drenching rains. Tobacco (amblyopia). Washing clothes. Having hair cut.

SYMPTOMS.

1. Mind.—Affections of the mind in general; amativeness; dizziness of the mind.—Nymphomania.—Melancholy sadness and melancholy, sometimes with

violent weeping, or interrupted by fits of involuntary laughter.—Laughs at serious things.—Stupor, low, muttering delirium; loquacious.—Thinks he is several pieces, and cannot adjust the fragments.—Stupor from which he could be aroused for a moment only to lapse back into a muttering lethargy; and forgetfulness.—Great apathy; very sluggish; dislike to talk; answers slowly or not at all.—Anguish and uneasiness, esp. when alone, or in stormy weather, principally in evening, with timorousness and fright.—Anguish respecting the future; or respecting the issue of the disease.—Susceptibility to fright.—Fear: in evening; of darkness; of spectres; of things creeping out of corners.—Hypochondriacal sadness.—Disgust to life.—Apathy alternating with angry words and acts.—Becomes easily vexed and angry, which makes him exceedingly vehement, from which he suffers afterwards.—Any lively impression = heat, as if dipped in hot water.—Great irascibility, anger, passion, and violence.—Involuntary and spasmodic weeping and laughter.—Misanthropy.—Repugnance to labour.—Shamelessness, approaching insanity.—Great indifference to everything, and even to patient's own family.—Great forgetfulness, esp. in morning.—Great flow of ill-assorted ideas.—Zoomagnetic condition; state of clairvoyance.—Ecstasy.

2. Head.—Cloudiness and dizziness, esp. in morning.—Vertigo when rising from bed in morning; when rising from a seat, with faintness and falling to the floor; < morning and after meals.—Dulness of head > washing face with cold water.—Frequent attacks of vertigo at different times, and at different hours in the day, esp. in morning, in middle of day, and in bed in evening.—Vertigo when seated; with hypochondriasis, during which chair appears to rise.—Vertigo with nausea and pressive pains in head.—Obstinate vertigo; falls back whenever he attempts to rise from bed.—Vertigo very pronounced; up and down vertigo; things move up and down, or else patient feels sinking through the floor (R. T. C.).—Apoplectic unchanging vertigo (R. T. C.).—Vertigo with loss of ideas.—Stupefying headache, morning, when moving, and < on stooping; ceasing for a short time after eating; > when lying down and in cold air.—Attacks of headache, with nausea and vomiting, and throbbing, jerking pains.—Nocturnal headache, preceded by nausea in evening.—Headache caused by vexation.—Headache in morning.—Headache with increased mental power.—Weakness of head, which is fatigued by music, laughter, a heavy step, a warm room, &c.—Pain in brain as if it had been bruised.—Stunning headache, sometimes with violent ebullition of blood, and paleness of face.—Congestion to head, with burning, singing, and pulsations in head, red face, puffiness under eyes, < morning when sitting and in evening in bed.—Sensation of emptiness in head with vertigo.—Headache as if too full of blood from intense study.—Headache above l. eye with floating spots before vision.—Numb, dizzy sensation in brain, inability to work.—Feeling as if everything had stopped in brain.—Jerks in head, esp. during stool.—Sensation as if brain stiffened on remaining in open air.—Sensation of heaviness, of fulness, and pressure in head.—Tearing in head, and esp. in temples, or semilateral.—Lancinations in different parts of head, esp. in evening.—(Incessant shooting pains through brain with sensation as if eyes being

pulled out, beginning in forehead, lasting day and night, with vomiting, > by either warmth or cold.—R. T. C.).—Shocks in occiput, loud snaps; shocks in whole head, with shattered sensation as if something had exploded; brought on by over-work or worry.—Washerwoman's headache.—Burning in forehead, with pulsations, morning and afternoon, after eating < in warm room, > in open air.—Pulsation in head, with singing and burning in it, mostly in forehead, with nausea and vomiting from morning till noon; < from music, while masticating, and in warm room.—Congestion in head, with beating, buzzing, heat, and burning sensation, esp. in forehead.—Splitting headache from cough.—Sensation of coldness in head.—The headaches are > by open air.—Neuralgia of head, when it must be kept warmly wrapped up night and day.—External shootings in side of head.—Distressing sensation, as if skin of forehead were too tight, and tension in face, as if the skin were not large enough, frequently only on one side; < from change of temperature and while eating; > after eating, with anxiety.—Tendency to suffer from a chill in head, with a sensation in open air as if brain were congealed.—(Sensation of coldness in cerebellum, with sensation of stiffness in brain.).—Inflammation of brain with pulsations and singing in head; the heat enters head from the spine, and from it extends to feet; < in warm room, > when moving about in cold air.—Headache over l. eye.—Headache extending to eyes; to root of nose.—Itching in scalp, < from scratching, with dandruff.—Falling off of hair (in large bunches on forepart of head, and) esp. above ears (alopecia areata).—Dry scabs and great scaliness of scalp.—Dry, painful heat of scalp, compelling one to uncover head; temperature of body not increased; > when lying down.—Clammy perspiration on head only, and in palms of hands, with discharge of much turbid urine.—Sensation as if pulled by the hair.—Exostosis on cranium.

3. Eyes.—Pains in eyes, as if in orbital bones.—Pressure in eyes as from a grain of sand.—Frequent itching in eyes.—Pressure as if eyes would be pressed out.—Shootings, smarting, heat, and burning sensation in eyes, esp. in external canthi.—(Eyeballs feel sore, with tendency to cold sweat and giddiness.—R. T. C.).—Eyes sore to touch and feel full (cured. Qy. glaucoma?-R. T. C.).—Congestion of blood in eyes.—Redness of sclerotica and of conjunctiva.—Yellowish colour of sclerotica.—(Episcleritis shifting from one eye to the other.—R. T. C.).—Inflammation of eyes of various kinds (with pressing and burning pains).—Lachrymation, esp. in open air, and when facing the wind.—Agglutination of eyes, morning, with lachrymation in open air, < in wind.—Sees better in morning, in twilight, or by shading eyes with hand.—Small burning spots on eyeballs.—Balls seem large, difficult to get lids over them.—Stiffness in eyes.—Nocturnal agglutination of eyes.—Hordeolum.—(Styes constantly appearing; suppurate.—R. T. C.).—Quivering of eyelids and of their angles.—Difficulty in opening eyelids.—Swelling of eyelids.—Pupils contracted.—Śdema of the lids and about the eyes.—Amblyopia.—Weakness of sight on waking in morning.—Eyes give out while reading.—Myopia.—Diurnal blindness, which is sometimes instantaneous (as from fainting); everything seems to be covered with a grey veil.—As if a black veil were before the eyes.—Clouded sight by candle-

light.—Weak-eyed people who see a halo around the lamplight.—Shortsightedness; momentary loss of sight.—One sees variegated colours when there may be, only one colour.—Black reflections or sparks, and black spots before sight.—Sensibility of eyes to both daylight and candle-light (aversion to light).—Greenish (or red) halo round candle.—Cataracta viridis.

4. Ears.—Otalgia.—Acute tearings and shootings in ears and head.—Beating and pulsation in ears.—Congestion of blood in ears.—Sensation of dryness in ears.—Yellow discharge from ears, alternating with deafness.—Acuteness of hearing.—Strong echoing of sounds, esp. of human voice, in ears, with vibration in head.—Deafness, esp. to human voice.—Feeling as if something were in front of the ears.—(Deafness after typhoid, &c.).—Deafness, l. side, and throbbing headache (produced.—R. T. C.).—Deafness from cold in head.—(Deafness with decayed teeth.—R. T. C.).—Murmuring before ears.—Buzzing in ears.—Roaring, ringing in the ears.—Aching; tickling; itching in ears.—Frequent tinnitus sometimes changing into beautiful tunes.—(Never-ceasing tinnitus like steam; seems to cause vertigo and feeling of falling through floor.—R. T. C.).

5. Nose.—Nose red, swollen, and painful to touch.—Dry and hard scabs in nose.—Polypus in nose (bleeding easily).—Excoriation at angles of nose.—Ulcerated nostrils.—Numerous freckles on nose.—Fetid exhalation from nose.—Blowing of blood from nose (every time it is blown).—Profuse nose-bleed; slow bleeding.—Epistaxis, sometimes during a stool or in evening.—Acute sense of smelling, esp. during the headaches.—Foul imaginary smells.—Loss of smell.—Uncomfortable (painful) dryness of nose.—Constant (profuse) discharge of yellow, greenish, bloody, purulent mucus from nose; without coryza.—Coryza; with inflammation (soreness) of throat and dulness (confusion) of head; fluent and dry alternating.—Frequent sneezing.—Obstruction of nose, esp. in morning.

6. Face.—Face pale, wan, sallow, earth-coloured, with hollow eyes, surrounded by a blue circle.—The colour of the face is very changeable.—Paleness, alternately with redness of face, and transient heat.—Redness and burning heat of cheeks.—Circumscribed red spots on cheeks.—Ashy, anćmic; blue lips; waxy.—Bloatedness of face, esp. round eyes.—Jerking of muscles of face.—Tension of skin of face and forehead, sometimes on one side only.—Desquamation of skin of face.—Painful sensibility of one side of face on opening mouth.—Painful, drawing, and tearing shootings in bones of face, esp. in evening, or at night in bed, or after the slightest chill.—The pains in face are renewed by speaking or by slightest touch.—Eruption of pimples and of scabs on face.—Lips bluish.—Lips dry and parched, swollen, covered with brownish scabs.—Cracked lips; crack in middle of lower lip.—Tetters and pimples round the mouth.—Ulceration of corners of mouth.—Cramp in jaw.—Necrosis of lower jaw, more rarely of upper.—Necrosis of l. lower jaw; swelling of jawbones.—Engorgement of submaxillary glands.

7. Teeth.—Drawing or tearing (pricking, stinging) toothache, or else gnawing, boring, pulsative, jerking, and shooting, esp. in open air, or in evening and morning, sometimes at night only, esp. in heat of bed, or else from contact with hot food.—Toothache after washing clothes; from having the hands in cold water.—Toothache with salivation, after slightest chill.—Pains as of ulceration in teeth during a morning meal.—Caries in teeth.—Teeth become very loose.—Bleeding of teeth.—Grinding of teeth.—Painful sensibility, inflammation, unfixing, ulceration, swelling and ready bleeding of gums.—Gums separated from teeth, and bleed easily, esp. from touch.

8. Mouth.—Excoriation of mouth.—Bitter taste in mouth; sour after milk; bloody erosions on inner surface of cheeks.—Accumulation of saliva, which is watery, saltish, sweetish; or excessive dryness of mouth.—Soreness of mouth.—Spitting of blood.—Viscid mucus in throat.—Hćmoptysis.—Purulent vesicles in palate.—Skin of palate shrivelled, as if about to be detached.—Tongue swollen, dry, loaded with a blackish brown coating.—The tongue swells (agg.—R. T. C.).—Stinging in tip of tongue.—Tongue: chalky white; dry and white; dry and red; dry and brown in centre; coated yellow.—Difficult articulation; speech slow; tongue refuses to move so that he stammers.

9. Throat.—Dryness of throat day and night.—Aching in throat.—Smarting, scraping, and burning pain in throat.—Burning in śsophagus.—(Spasmodic) stricture of śsophagus.—Tonsils and uvula are much swollen.—Hawking up of mucus in morning.—Pain as from excoriation in throat.

10. Appetite.—Clammy or cheese-like taste.—Bitterness in mouth and throat after eating, with roughness.—Taste saltish, sour, or sweetish in mouth, esp. after a meal.—Loss of taste.—Want of appetite from a sensation of fulness in gullet and violent thirst.—Excessive craving for cooling things.—Longing for acids and spicy things.—Hunger after a meal.—Bulimy, even at night (during an attack of gout), with great weakness, so great that he faints if the hunger is not soon allayed.—Thirst, with longing for something refreshing.—Sensation of faintness and softness in abdomen after breakfast.—After a meal drowsiness and indolence, heat and anxiety, burning sensation in hands, acidity increased, pressure and fulness in stomach, chest, and abdomen, accompanied by obstructed respiration, vomiting of food, inflation of abdomen, or headache, risings of sour ingesta, hiccough, debility, colic, and many other sufferings.—Throwing up of ingesta by mouthfuls.

11. Stomach.—Risings, with pain in stomach, as if something were being torn out of it.—Tobacco smoke produces nausea and palpitation of heart.—Frequent risings, generally empty, esp. after a meal and after drinking; sometimes also abortive, or spasmodic, or else sour, or with taste of the food.—Sour regurgitation of food.—Pyrosis.—Hiccough.—Nausea of various kinds, esp. in morning or in evening, or else after a meal.—Nausea with violent hunger or thirst, which disappears on eating or drinking water.—As soon as the water (or food) becomes

warm in the stomach it is thrown up.—Waterbrash, esp. after eating acid things.—Vomiting with violent pains in stomach and great weakness.—Greenish or blackish vomiting.—Vomiting of acid matter.—Vomiting of food, esp. in evening.—Vomiting of bile or of mucus at night, sometimes with coldness and numbness of hands and feet.—Vomiting of blood.—Vomiting with diarrhśa.—Pain in stomach, esp. when it is touched and when walking.—Violent pains in stomach, > by a cold drink.—Sensation of contraction in cardia; the food, scarcely digested, returns into throat.—Fulness in stomach.—Shootings and pressure in stomach, esp. after a meal, with vomiting of food.—Pain in scrobiculus when it is touched, also in morning.—Sensation of coldness, or heat and burning sensation in stomach and scrobiculus.—Inflammation of stomach.—Ulceration of stomach in anćmic girls (R. T. C.).—Spasmodic pain, sensation of clawing and contraction in stomach, sometimes with choking.—The pains in the stomach are > by cold food (ice-cream, ice).—General uneasiness, but which is felt more particularly in stomach.—The pains in stomach manifest themselves chiefly after a meal, as well as in evening and at night.—Oppression and burning in epigastrium.—Drawing pain in pit of stomach, extending to chest.

12. Abdomen.—A very weak, empty, or gone sensation, felt in whole abdominal cavity (this is an indicative point whether found existing among a complication of troubles or occurring alone, and esp. when accompanied by sensation of heat in the back between shoulder-blades.—H. N. G.).—Sharp pains through abdomen.—Shootings in hepatic region.—Distension of abdomen, esp. after a meal.—Abdomen hard and distended.—(Distended abdomen with bilious tendency.—R. T. C.).—Acute yellow atrophy of the liver.—Enlargement and induration of liver, with pain.—Pain in hepatic region on pressure.—Enlargement of spleen.—Sensitiveness in hepatic region, < when lying on r. side, with pain on touch.—Painful pulsation in r. hypochondrium.—Contractive pain in abdomen.—Spasmodic colic.—Pinchings, cuttings, and tearings in abdomen, esp. in morning, in bed at night, and in evening, and often with urgent want to evacuate and diarrhśa.—Shooting pains in abdomen, sometimes with pallid face, shiverings, and headache.—Sensation of coldness, with heat and burning sensation in abdomen.—Inflammation of intestines.—Intussusception.—Uneasiness in abdomen after breakfast.—Pressure outwards against sides of abdomen.—Soreness of abdomen to touch when walking.—Flaccidity of the abdomen.—Obliged to lie down from weakness across abdomen.—Inguinal hernia.—Large yellow spots in abdomen.—Swelling and suppuration of inguinal glands.—Incarcerated flatus.—Flatulent colic, deeply seated in abdomen; < when lying down, with grumbling (rumbling and rolling in bowels) and borborygmi.—Flatus in general.

13. Stool and Anus.—A very characteristic symptom is found in the stool, which is long, slim, hard, and dry, and is evacuated with a great deal of difficulty; it may be compared to a dog's stool in appearance and in manner of evacuation, is often accompanied with the same straining, trembling of the limbs, &c.—Diarrhśa: in great quantity, like water from a hydrant, and is very exhausting to the patient

(often accompanied with a very weak, empty, or gone feeling in abdomen); painless; stools large; involuntary; mucous.—(Emaciating diarrhśa, skin dry and hard.—E. A. Small).—Constipation.—Fćces hard, small, slow, interrupted, difficult to evacuate, and much too dry (like a dog's).—Urgent and distressing want to evacuate.—Prolonged looseness of bowels.—Fćces of the consistence of pap.—Serous diarrhśa.—Diarrhśa with diminished strength (< in morning).—Mucous diarrhśa.—Bloody diarrhśa.—Undigested fćces.—Greenish, grey (or whitish-grey), or black fćces (with flakes of mucus).—Stools watery, with whitish-yellow and cheesy masses; lumps of white mucus.—Stools odourless save for a slight mouldy smell.—Stools like scraping of intestines.—Involuntary evacuations.—Discharge of mucus from anus, which remains continually open.—Tenia, or ascarides from rectum, during stool.—Discharge of blood during the evacuation.—After stool: pressure, burning pain, and tenesmus in anus and rectum, with great exhaustion.—Dartings and shakings in rectum and anus (this may occur in children, causing them to cry out, is usually < in evening or night; they appear to have worms; they will put their hands to the seat, and show by various signs where and what the matter is).—Nettle-like stitches in rectum when not at stool.—Stitches in anus.—Biting and itching in anus.—Tearing in rectum; and genitals, even to sinking down.—Pain in anus so violent it seemed as though the body would be torn asunder, with cutting and movements in whole abdomen, constant ineffectual desire for stool, heat in hands and anxiety; > only by application of warm cloths.—Shaking and clawing l. side of anus.—Crawling stitches.—Pruritus ani.—After stool, frightful tenesmus for some time.—Paralysis of lower intestines; of sphincter ani.—Anus wide open.—Sensation of rectum paralysed.—Cramps and contraction of rectum.—Protrusion and ready bleeding of hćmorrhoidal tumours in rectum and anus, with pain as from excoriation, when sitting or lying down.—Fissure of anus.

14. Urinary Organs.—Increased secretion of watery urine.—Frequent emission of a scanty stream of urine (only a small quantity each time).—Urine with white, serous, sandy and red, or else yellow sediment.—Turbid urine, with sediment like brick-dust.—Pale, aqueous, or whitish urine.—Variegated pellicle on surface of urine.—Hćmaturia (with acute pain in region of kidneys and liver, and jaundice).—Smarting and burning sensation when urinating.—Tension and jerking, or burning pain in urethra when not urinating (with frequent desire to urinate).

15. Male Sexual Organs.—Very strong sexual desire, with constant wish for coition.—Impotence after excessive excitement and onanism.—Erections which are too energetic in evening or morning.—Frequent (involuntary) pollutions.—Feeble erections or none at all.—Feeble and too speedy emission during coition.—Pains in testes and swelling of spermatic cord.—Hydrocele.

16. Female Sexual Organs.—Nymphomania.—Aversion to coitus.—Tearing in genital organs, and stitches upward from vagina into uterus.—(Small pustulation of vulva with great irritation.—R. T. C.).—Śdema of labia (< l.), later

gangrene.—Catamenia too early and too profuse (and of too long duration), or too early and too scanty and serous.—[*Phos*. patients generally menstruate regularly but profusely, and not uncommon symptoms are, vertigo on rising in morning, with weakness of legs, so that for a few moments after getting out of bed, they cannot stand.—H. N. Martin.].—Discharge of blood from uterus during pregnancy.—Catamenia of too long duration, with toothache and colic.—Before menses: abundant bleeding of ulcers; leucorrhśa; want to urinate; and weeping.—Frequent and profuse metrorrhagia.—On appearance of menses incisive, griping pains in the back and vomiting.—After menses: weakness, blue circles round eyes, and anxiety.—Menses: of too short continuance retarded.—During menses shooting headaches; fermentation in abdomen; expectoration of blood pains in (small of) back; soreness of limbs; great lassitude and fever; or palpitation of heart; shiverings; swelling of gums and cheeks, and many other sufferings.—Sterility on account of excessive voluptuousness, or if the menstruation comes on too late and is too profuse.—Smarting, corrosive leucorrhśa (drawing blisters).—Hard and painful nodosities in breasts.—Inflammation (erysipelatous) of breasts, even after formation of pus.—Erysipelatous inflammation of mammć, with swelling, burning pains, and shootings.—Anxious feeling beneath l. breast, with bitter eructations.—Burning, pinching in r. breast, heat mounting to head.—Cramp pain in breast, high tip, under sternum, with eructations.—At 3.30 p.m. pain from l. nipple to r. nipple, thence to r. shoulder and r. little finger.—Pain below nipple shooting like electricity.—Nipples hot and sore.—Papular eruption on breasts.—Abscess in mammć, also with fistulous ulcers; bluish colour.

17. Respiratory Organs.—Hoarseness and scraping in throat, sometimes prolonged.—Aphonia, so as to be unable to speak except in a whisper.—Catarrh with cough, fever, and fear of death.—Very painful sensibility of larynx, which prevents speaking.—Stitches, soreness, roughness, and dryness in the larynx.—Croup; bronchitis.—Great sensibility of larynx with burning pain.—Dryness in trachea and chest.—Expectoration of mucus from larynx.—Cough excited by a tickling and itching in chest, or with hoarseness and sensation as if chest were raw.—Hollow, hacking, spasmodic, tickling cough, esp. if caused by tickling in chest; at night, preventing sleep.—Cough with shootings in throat, chest, and scrobiculus, sometimes only at night.—Dry cough every day, which continues several hours, with pains in stomach and abdomen.—Cough with stitches over one eye.—Cough from a change in the weather and from strong odours; from lying on l. side or on back.—Cough from going from warm into cold room (H. N. Martin).—Dry, shaking cough, with sensation as if head were going to burst, excited by cold air, by drinking, or by reading aloud.—Cough with vomiting.—Cough excited by laughing.—Dry cough, as if caused by tubercles, or chronic pneumonia.—Cough in paroxysms, brings up a viscid, muco-purulent expectoration, branched like the bronchial tubes.—Cough with purulent and saltish expectoration, esp. morning and evening.—Cough with expectoration in morning, without expectoration in evening; expectoration frothy, pale red, rust-coloured,

streaked with blood; white and tough; cold mucus, tasting sour or sweet; transparent mucus in morning after rising.—Greenish expectoration from cough.—Cough with expectoration of slimy mucus or of blood, with smarting in chest.

18. Chest.—Noisy and panting respiration.—Difficult respiration, esp. in evening, with anguish in chest, < by sitting down.—Respiration oppressed, quick, anxious.—Difficult inspiration; heaviness, fulness, and tension on chest.—Obstructed respiration and oppression of chest of various kinds, esp. in morning or evening, as also during movement.—Spasmodic asthma.—Constrictive spasms in chest.—After a cough, asthma.—Fits of suffocation at night.—Pressure at chest.—Heaviness, fulness, and tension in chest.—Contractive spasms in chest.—Tearing in chest.—Lancinations in chest, and esp. in l. side, sometimes prolonged, or else when the parts are touched.—Burning pain as from excoriation in chest.—Inflammation of lungs (l. side).—Pneumonia nervosa (lungs hepatised).—Tuberculosis (phthisis mucosa).—Sensation of fatigue in chest.—Anguish in chest.—Congestion in chest, with sensation of heat which ascends to throat.—Pain under l. breast, when lying upon it.—Yellow spots on chest.

19. Heart and Pulse.—Anxiety about heart with nausea and a peculiar hunger, somewhat > by eating, distressing even in bed.—Sensation of warmth about r. side of heart.—Pressure; heaviness; aching in heart.—Rush of blood to heart and palpitation, that becomes very violent after eating.—Palpitation of heart of different kinds, esp. after a meal, morning and evening, as also when seated, and after all kinds of mental excitement.—Palpitation of heart with obstructed respiration; palpitation from every mental emotion.—Violent palpitation with anxiety, evenings and mornings in bed; on slight motion.—Blowing sounds in heart.—Pressure in middle of sternum and about heart.—Pulse rapid, full, and hard; small, weak, easily compressed.

20. Neck and Back.—Rigidity of nape of neck.—Pressure on shoulders.—Swelling of neck.—Engorgement of axillary glands and of those of nape of neck and of neck.—Itching and shooting under axillć.—Fetid sweat under axillć.—Paralysed sensation in upper sacrum and lower lumbar vertebrć.—Contusive pain in loins and back (as if back were broken), esp. after having been seated a long time, hindering walking, rising up, or making the least movement.—Pain in small of the back when rising from a stooping position.—Burning in back or small of back (esp. with delayed menses).—Tabes dorsalis.—Burning pains in loins.—Sensitiveness of spinous processes of dorsal vertebrć to pressure.—Softening of spine.—Heat or burning in back, between scapulć.—Tearings and stitches in and beneath both scapulć.—Pain in coccyx impeding easy motion, can find no comfortable position; followed by painful stiffness of nape.—Coccyx painful to touch as from an ulcer.—Transient pain from coccyx through spine to vertex that drew head back during the stool.—Backache and palpitations prevail (R. T. C.).

21. Limbs.—Weakness in all the limbs as if paralysed; esp. in joints, trembling from every exertion.—Swelling of hands and feet.—Bruised pain in limbs.—Extremities, esp. hands and feet, heavy as lead.—Numbness and falling asleep of limbs.—Exanthema on skin about joints.—Swelling of soft tissues of joints.—Joints stiff.

22. Upper Limbs.—Stiffness in morning on washing, with pressure.—Rheumatic tearing (and lancinating pains) in shoulders, arms, and hands (particularly in joints), esp. at night.—Burning pain in palms of hands and arms; clammy perspiration in palms and on head.—Burning pain in hands and arms.—Numbness of arms and hands.—Lassitude and trembling in arms and hands, and esp. when holding anything.—Furfuraceous tetters on arms.—Congestion of blood in hands, with swelling and redness of veins, esp. when allowing arms to hang down.—Wrenching pain in joints of hands and fingers, with tension.—Swelling of hands, even at night.—Heat in hands.—Coldness of hands at night.—Contraction and jerking of fingers.—Deadness of fingers.—Paralysis of fingers.—Numbness of finger-tips.—Skin cracked at joints of fingers.—Chilblains on fingers.

23. Lower Limbs.—Uneasiness, weakness, < on ascending steps, with heaviness.—Pain as from ulceration (suppurative) in buttocks when seated.—Pain in r. hip-joint.—(Exostosis of femur.).—Wrenching pain in coxo-femoral joints, and those of knees and feet, with external heat.—Swelling of tibia.—Bruised pain in periosteum of tibia.—Gangrenous periosteum of tibia, with fever; the periosteum peeled off as far as knee, leaving the bone rough.—Painful fatigue and heaviness of legs.—Heaviness in hollow of knees.—Burning sensation in legs and feet.—Tension and cramps in legs, esp. in knees.—Rheumatic stiffness of the knee.—Shocks in legs before going to sleep, (lay and night.—Drawing and tearing (rheumatic pain) in knees, extending into feet.—Paralytic weakness in legs, and arthritic rigidity of knees.—Tetters on knee.—Spots like petechić on legs.—Ulcers on legs, with surrounding small pustules.—Exostosis on tibia.—Jerking, and cramp in calves.—Tearings and shootings in feet, esp. at night (in feet of a pregnant woman).—Swelling of feet, or only of the malleoli, esp. in evening or after a walk, sometimes with shooting pain.—Sprained pain in ankles on walking.—Easy dislocation of foot.—Coldness of feet, esp. at night.—Paralytic feeling in feet.—Pain (as if bruised) as from ulceration in soles when walking.—Shocks in feet day and night before going to sleep.—Numbness of tips of toes.—Inflammation and redness of ball of great toe with lancinations.—Chilblains and corns on toes.

24. Generalities.—Affections of inner chest; shinbones; bones of legs; of r. upper or r. lower extremity; r. upper or r. lower side.—Profuse secretion of mucus.—Affections of axillary glands; inflammation of glands in general; glands painful, particularly stitching pains; hot swelling of glands.—Glandular diseases, esp. after contusion.—Bleeding from inner parts; threatened phthisis pulmonalis.—The pains of *Phos*. are continuous, or, at least, irregular as to time.—Arthritic and rheumatic tearings and stitching pains, principally in limbs,

sometimes after a slight chill, esp. in bed at night.—Burning pain in limbs.—Tension, cramp, jerking, and distortion of some of the limbs.—Sprains, easy dislocations.—Ataxia and adynamia.—Convulsions.—Rigidity of some parts.—Fits of paleness and numbness in some of the limbs, which then appear dead.—Mucous membrane pale.—Trembling of limbs from least exertion, but chiefly during labour.—Tendency to strain the back.—Ebullition and congestion of blood, sometimes with pulsation throughout body.—Sensations: of fulness; of itching or tickling; of knocking, beating, or throbbing; of darting; darting pain; of roughness-all occurring in inner parts.—Sensation of dryness or of festering in internal parts.—Bleeding from various (internal) organs.—Inflammation and stinging pain of inner parts.—Itching of inner parts.—Small wounds bleed much.—Blood fluid non-coagulable.—Bleeding from all cavities; also from soft cancer.—Weakness and soreness in joints, esp. knees.—Great weakness and paralytic lassitude, which sometimes come on suddenly, esp. in bed in morning, or after a very short walk.—Can only lie on the r. side.—Lying on the l. side at night causes anxiety.—Spasms of the paralysed side.—Paralysis, formication, and tearing in limbs; ańcsthesia; increased heat.—Exostosis, esp. of skull.—Hip-joint disease, oozing a watery pus.—Epilepsy with consciousness.—Fainting fits; from strong odours.—Excessive sensibility of all the organs.—Hysterical lassitude.—General dejection and nervous debility.—Heaviness of limbs and sluggishness.—Paralysis with tingling in the parts affected.—Emaciation and consumption.—Inability to remain in open air, esp. when cold.—Strong tendency to take cold, which is often followed by headache and toothache, coryza, with fever, shivering, &c.—Effects of hair-cutting and chill to head.—Pains in limbs on change of weather.—The majority of symptoms manifest themselves morning and evening, in bed, as well as after dinner, while several others appear at the beginning of a meal and disappear after it.—<: In morning; evening; before falling asleep; on waking; before breakfast; after taking cold; while coughing; before or after eating; from violent bleeding; from spraining parts; while lying on back; lying on l. side; from laughing (often producing cough); from light in general; light of the lamp; warm food ("very thirsty, takes water, likes it, feels better, gets warm in stomach and is vomited"); reading aloud; from strong smells; after stool (exhausted, &c.); while Swallowing drink; in the wind; when singing; when the weather changes either way.—>: In the dark; lying on r. side; from being mesmerised; from rubbing; from scratching; after sleep; from cold things; cold food; cold water (till it gets warm).

25. Skin.—Exanthema which comes out in pustules; is scaly.—Ulcers in general.—Summer freckles.—Hard swellings here and there on body.—Wounds which appear to have healed break out again and bleed; wounds that continually heal and break out again.—Desquamation of skin.—Burning in the skin.—Excoriated spots on skin, with cracks and shootings.—Round, tettery spots over whole body.—Freckles (nose).—Dry, furfuraceous tetters.—Yellow or brown spots on skin (esp. chest and abdomen).—Copper-coloured or bluish spots, like petechić.—Red spots.—Jaundice.—Pale skin.—Ecchymosis.—Furunculi.—Lymphatic abscess with fistulous ulcers (which have callous margins, secreting a fetid and

colourless pus) and hectic fever.—Large ulcers surrounded by small ones.—Ulcers bleed on appearance of menses.—Fungus hćmatodes.—Copious bleeding even from very small wounds.—Polypus.—Chilblains (fingers and toes) and corns on feet, sometimes very painful.—Tingling in skin.—Nettle-rash.

26. Sleep.—Falling asleep late.—Complaints preventing sleep.—Over-powering sleep coming on after dinner, if only a moderate dinner has been eaten.—Sleeplessness before midnight.—Sleepy at 7 p.m.; wakeful at night (produced.—R. T. C.).—Strong tendency to sleep by day, as from lethargy.—Stupefying sleep.—Sleep retarded in evening, and sleeplessness at night, or frequent waking, with difficulty in going to sleep again, caused by restlessness, with anguish, tossing, heat, vertigo, and ebullition of blood.—Inability to remain lying on back or on side.—Coma vigil.—Sleep unrefreshing; sensation in morning as after insufficient sleep.—At night vertigo with nausea, painful sensibility of limbs, pains in stomach and abdomen, suffocating and spasmodic asthma, &c.—Frequent waking from feeling too hot, without perspiration.—Frequent waking, with starts and fright.—During sleep, jerks in limbs, cries, talking, tears, complaints, lamentations, and moans.—Dreams: anxious, distressing; lascivious; frightful and horrible; or vivid and uneasy; of animals which bite; of robbers fire; the business of the day (which he could not finish); bloodshed; death quarrels; creeping things, &c.—Nightmare.—Somnambulism.

27. Fever.—Shuddering and shivering, esp. in bed, in evening (without thirst, with aversion to being uncovered and with swollen veins on hands), sometimes with yawning, followed by heat or otherwise.—Coldness of limbs.—Internal chilliness and chill not > by heat of stove.—Chilliness in evening till midnight, with great weakness and sleep.—Chill running down back.—Shiverings, followed by heat, with thirst and sweat, esp. at night, and in afternoon.—(Chronic feverishness with recurring albuminuria.—R. T. C.).—Internal or external heat of single parts.—Flushes of heat running up back.—Burning in back, between shoulder-blades.—Burning pain of external parts or of internal parts.—Transient or anxious heat.—Nocturnal heat (disturbing sleep).—Flushes of heat over whole body, beginning in hands.—Perspiration most profuse on head, hands, and feet, with increased secretion of urine.—Perspiration on fore part of body.—Perspiration frequently smells of sulphur or of garlic.—Intermittent fever: heat and perspiration at night, with faintness and ravenous hunger, which could not be satisfied with eating; afterwards chilliness with chattering of teeth and external coldness; the chilliness was succeeded by internal heat, esp. in hands, while the external coldness continued.—Fevers with soporous condition, dry, black lips and tongue and open mouth.—Typhus fever (often with pneumonia and bronchitis, that developed into consumption).—Hectic fever, with dry heat towards the evening, esp. in palms of hands, sweat, and colliquative diarrhśa, circumscribed redness of cheeks (l. more than r.), &c.—Pulse changed; quick, full, and hard; occasionally small and weak.—Nocturnal and viscid sweat.—Sweat in morning.—Cold, clammy sweat.

Phosphorus Hydrogenatus.

Phosphoretted Hydrogen. Phosphine. PH_3. Solution.

Clinical.—Amblyopia. Diarrhœa. Hyperæsthesia. Locomotor ataxy. Stammering. Teeth, crumbling.

Characteristics.—Breunar (quoted by Allen) relates the effects of inhaling this gas, given off in the preparation of some "hypophosphites." The symptoms began to appear after three months in visional disturbances, diarrhœa, paralysis, and a complete state of locomotor ataxia, < on closing eyes. The teeth crumbled without pain. Articulation and swallowing were difficult. The diarrhœa was accompanied by weakness of the anus.

Relations.—Electricity *antidoted* the effects. *Compare:* Locomotor ataxy, Arg. n., Alm., Helod. Visional defects, Benz. din., Carb. s.

SYMPTOMS.

3. Eyes.—Flickering points in field of vision, rapidly enlarging and rendering it impossible to fix vision on any object, esp. in reading.—Optic nerves very irritable to reflex stimuli.

4. Ears.—Auditory hyperæsthesia.

8. Mouth.—Teeth, both healthy and carious, crumble, without pain.—Ataxia of muscles of articulation, great effort of will required to form the word.

9. Throat.—Swallowing somewhat difficult.

12. Abdomen.—Shooting pains in limbs and abdomen.

13. Stool and Anus.—Diarrhœa with weakness and unsteadiness of arms.

22. Upper Limbs.—Weakness and unsteadiness of arms, making difficult to write.

23. Lower Limbs.—Limbs unsteady; gait tottering; associated with undercurrent shooting pains in limbs and abdomen.

24. Generalities.—Complete expression of ataxia stood with limbs separated; walking wholly impossible when eyes closed would stagger and fall.—No anæsthesia; electric irritability of muscles greatly increased.

Phosphorus Muriaticus.

Phosphorus pentachloride. PCl_5. Solution.

Clinical.—Asthma. Coryza. Ophthalmia.

Characteristics.—J. Meredith (*H. W.*, xxxiii. 127) has recorded the effects observed on a science student from grinding up this salt and inhaling the fumes. Eye-soreness, coryza, sore throat and chest with difficult breathing, were the main symptoms. They lasted fourteen days from the exposure; and were cured by *Bell.* 3x internally and a one per cent. *Iodine* lotion locally as a compress at night.

SYMPTOMS.

3. Eyes.—Great soreness of mucous membranes of eyes and nose, with copious intermittent runnings; lasts all night.—Shades eyes from light reflected from tablecloth at dinner.—Whites of eyes congested.

5. Nose.—Irritation and copious intermittent running.—The intolerable smell of the fumes cannot be forgotten at night, and sleep is impossible.

9. Throat.—Throat and chest sore.

17. Respiratory Organs.—In morning breathing difficult; lungs wheezy; chest and throat sore.

26. Sleep.—Symptoms kept him awake all night.

Physalia.

Physalia pelagica. Portuguese man-of-war. N. O. Physophoridæ.

Clinical.—Urticaria.

Characteristics.—G. Bennett was stung by the animal on second and ring fingers. The sensation was as if stung by a nettle, succeeded in a few minutes by violent aching, affecting the finger-joints and spreading up arm, involving elbow-joint. The pain was < by application of water; < by motion; and < when joints became affected. The pain spread to the shoulder-joint and pectoral muscles causing oppression of breathing. After half an hour the symptoms began to abate, leaving numbness of the limb and a vesicle at the spot which was stung.

Relations.—*Compare:* Medusa, Urt. ur.

Physostigma.

Physostigma venenosum. Calabar Bean. Eséré. N. O. Leguminosæ.
Trituration of the bean.

Clinical.—Astigmatism. Bathing, effects of. Blepharospasm. Chorea. Ciliary spasm. Climacteric. Constipation. Coccygodynia. Dentition. Diarrhœa. Dyspepsia. Epilepsy. *Eyes, affections of*; injuries of; strain of. General paralysis. Glaucoma. Hæmorrhoids. Headache. Heart, affections of. Hemiplegia (l.) Herpes, preputialis. Hiccough. Hysteria. Iris, prolapsed. Leucorrhœa. Levitation. Locomotor ataxy. *Myopia*. Navel, inflammation of. *Paralysis, local*; agitans; spinal. Paraplegia. Progressive muscular atrophy. Prostration; muscular. Sleeplessness. Spinal irritation. Spinal sclerosis. Stiff neck. Tetanus. Throat, sore; fish-bone sensation. Water, effects of. Wounds.

Characteristics.—"The Ordeal-bean" of Old Calabar, the Eséré of the natives, is the type of a genus of *Leguminosæ* of the tribe *Phaseoleæ*, with flowers very like *Phaseolus*, except that its bearded style is terminated by a great oblique hood, covering the blunt stigma." It is this hood which distinguishes the genus and gives it its name. *P. ven*. is a great twining climber, and has purplish flowers. Its seeds are very poisonous, and are used by the Calabari as an ordeal, suspected persons being compelled to eat them until they either vomit or die. In the latter case they are considered guilty, in the former innocent. In cases observed in Calabar convulsions have been noted, and twitchings, especially in the back, and death in thirty minutes. A number of cases of poisoning have occurred in this country, and in these the most notable feature was complete muscular prostration. According to Brunton, the tetanising properties of the bean belong to an alkaloid, *Calabarine*, and the paralysis to *Eserine* (or *Physostigmine*, as it is now called). In animals poisoned by it speedy general paralysis is set up, and death occurs from failure of respiration; though the heart may be poisoned both directly and through its nerves. The paralysis is seated in the spinal cord itself. The muscles are affected by fluttering tremors; involuntary muscles are excited to active movements and expulsive efforts. The intestines are often twisted up in knots. All the secretions are somewhat increased (*C. D. P.*). A crowd of children in Liverpool ate beans which they found among the sweepings of a ship from Africa. Forty-six were admitted to hospital with loss of muscular power, prostration, feeble, slow pulse, cold, perspiring skin, cold extremities; vomiting in nearly all cases, diarrhœa in one-third of them. At first there was colic, but later on remarkable freedom from pain. Pupils contracted in many; in one contracted during sleep, dilated when aroused. Only one (a phthisical boy) succumbed. He staggered as he walked, then fell, kicking and rolling as if in pain, but afterwards became quiet; much purged; pulse hardly perceptible; skin cold, face livid; quite conscious and able to swallow water. Directly after drinking he died without a struggle, some froth issuing from nose and mouth. After death the blood was found to be fluid; the heart distended with it,

and its muscular substance very flaccid (*C. D. P.*). Many excellent provings have been made with *Physo.*, among which one made by Christison on himself is remarkable. Simpson and Douglas MacLagan were sent for to attend him in his collapsed state, which Simpson could only compare to that produced by severe flooding, though Christison's only sensation was one of "extreme but not unpleasant faintness." MacLagan thought it like *Aconite* poisoning. Christison could not get his *will* into his muscles except by a tremendous effort. Warmth to feet and a sinapism to whole abdomen gave great relief, and he was then able to turn on his left side; but only remained there a very short time on account of the tumultuous action of the heart it set up. He became drowsy and slept; but his mind was so active in sleep that on awaking he did not know that he had slept. The tumultuous action of the heart continued on waking, but strong coffee quickly restored the whole condition and made the heart regular. A symptom observed by Christison and many other provers was one of indigestion, "as if large pieces of food had been suddenly swallowed." It began under upper sternum, descending and increasing in intensity till it reached the epigastrium; eructations then occurred, and a reversal of direction followed, the sensation ending where it began. With other provers there was a sensation of weight and hardness. Christison also had very much giddiness and dimness of vision. It is for its action on the eye, especially for its power of contracting the pupil, and thereby antagonising *Atropine*, that *Physo*. and its alkaloid *Eserine* are best known in old-school practice. The effects are more definite when the drug (tincture, extract, or solution of alkaloid) is applied to the eye direct; but one myopic prover had his myopia much diminished. In glaucoma it has been used with signal success to diminish intra-ocular tension; and especially when glaucoma has been the result of injury. Dudgeon (*B. J. H.*, xxxviii. 60) relates the case of A. E., 26, struck by the cork of a soda-water bottle on inferior and outer part of left eyeball. Intense burning pain and effusion into the eyeball followed. Under *Arn.*, prescribed by Mr. Engall, the effusion disappeared, and later the pain and inflammation subsided under *Aco*. and *Merc. c*. The pupil was now egg-shaped, the long diameter perpendicular, smaller end downwards; vision extremely myopic. *Bell*. dilated the pupil, but had no effect on the vision. Engall sent the patient to Dudgeon, who found the pupil was sluggish, and a book had to be held within four inches of the eye to be read. *Physo*. 3x, every three hours, was given. After the first dose objects could be seen at a considerable distance, and next day sight was nearly as good as ever. Dudgeon considers that the lens was tilted by the blow, and that *Physo*. restored the over-stretched or paralysed portion of the ciliary muscle. Woodyatt (*Org*. iii. 99) states that *Physo*. has produced corneal astigmatism in a young lady, who found any attempt at close work caused redness of tarsal edges and a hot, sandy feeling in conjunctiva. *Lil. t*. 30 cured. Paralysis and tremors predominate over the cramps, twitchings, stiffnesses, and tension of *Physo.*, but these are also characteristic, and tetanus has been cured by *Physo*. Paralysis of left side is very proeminent, and the numbness is more apparent on left side, especially in left arm; which may be associated with heart symptoms. The apex of the left lung is also affected. A feeling of levitation was

observed in one prover on stepping. Ataxic gait and shooting pains down limbs show its appropriateness in locomotor ataxy. The inability to get the *will* into the muscles is a striking feature of many paralyses. Spinal, sacral, and coccygeal pains were experienced, and associated with some of them, numbness of the womb. The association of *muscular prostration* (in any form, of which laboured respiration is one) with any affection is a keynote of *Physo*. This case was cured: Great muscular prostration with continual inclination to sigh; leucorrhœa < by exercising during the day, especially 4 p.m.; sighing < when leucorrhœa is <; dread of cold water. This *dread of cold water* is a grand keynote of *Physo*. One of the provers (a water drinker) developed a perfect disgust for cold water and cold drinks; and though used to a cold morning plunge, was obliged to omit it on account of his horror. Other provers felt uncomfortable after bathing, and had great reluctance to their bath. Weakness was felt on change of weather, and on cold, bracing days. A paralytic state of mind and body from grief has been cured with *Physo*. Sleeplessness of a peculiar kind occurs in *Physo*. Nash (*Med. Adv*., xx. 258) cured with *Physo*. 12 and 30 persistent sleeplessness in a patient who had been in an insane asylum, and feared she would have to go again. Her symptom was: "If she chanced to get a nap she awoke suddenly as if in a fright, and felt no > from what she had slept." *Peculiar sensations* are: As if stomach were full. As if she must lose her mind. As if a ball were coming up throat. Lower limbs as if asleep. Back as if paralysed. Tongue as if burnt (left margin); as if swollen and paralysed. Sensations of contraction and tension. Wavering in brain. Weak feeling in stomach. H. L. Chase, one of the provers, had a "very severe pain in the right popliteal space," and he afterwards cured a patient who came to him with pain in the same region two years later (*H. R*., xiii. 117). (Allen gives the symptom as in the *left* popliteal space.) The symptoms are < by pressure (of finger between vertebræ causing wincing); by falls and blows. < Motion; descending stairs (wavering in brain). < Walking; stepping; jar of misstep. > Lying supine. < Lying l. side; > lying on r. side. < 4 p.m. < Night (headache unbearable). If pain began at any hour it always continued till 12 o'clock following, either noon or midnight. < Cold water; perfect horror of cold drink; cold bath. < From bathing; from change in weather; on bracing days. < In church. > In cool open air. < On waking. > Closing eyes. > By sleep (hiccough). > Warmth to feet; sinapisms to abdomen.

Relations.—*Antidoted by:* Coffee; Sinapisms; Arn.; (emetics are of the first importance. Injection of Atropine antagonises its effects). Lil. t. cured astigmatism of Physo. *Compare:* Eserin. In paralyses, Lathyr., Oxyt., Strych., Ciner., Con., Gels. Heart, Phaseol., Phos. Eyes, Onos., Lil. t., Rut., jabor., Bell. Headache with drowsiness, Brucea, Gins., Herac. Spinal irritation, hungry sensation, numbness, muscles of back rigid, wavering in brain, Act. r. Headache < by music, Phos., Phos. ac. (Physo. of organ.). Levitation, Phos., Phos. ac. Headache with inability to stop thinking (Phos. with increased mental power), Globus, Ign., Asaf. < Descending stairs, Borax. Increased irritability, tetanic spasms, cramp, tenesmus recti, stiff spine and legs, Strych. and Nux (Physo. has diminished

reflexes, spinal paralysis; unsteady gait with eyes closed; death by paralysis, Strych. has death from respiratory spasm dilated pupils). Tetanus, Passif. Tongue as if scalded, Sang.

Causation.—Emotions. Grief. Bathing. Injuries. Blows.

SYMPTOMS.

1. Mind.—Uncommon mental activity.—Foolish actions, said it made him crazy.—Exhilarated in morning, gloomy towards noon.—Nothing was right, too many things in room; continually counting them.—Irritable.—Nervous, cannot endure pain.—Exhaustion, cannot remember anything.—Disinclined to work.—Difficult thinking; cannot concentrate the mind.

2. Head.—Vertigo: on moving, with fainting and muscæ volitantes; with nausea; in evening, if people stepped in front of tier in the doorway; at night; when reading; on getting up after dinner; when walking; on descending stairs, with dim vision and unsteady gait; wavering in brain; as if drunk; with sensation of wavering in brain.—Confusion and dizziness; dull, heavy, oppressive headache.—Intolerable pain over both eyes.—Head drooping listlessly.—Darting pain in various parts, < motion.—Aching in morning with epistaxis l. side.—Bruised pain in brain all day, < a heavy step; < l. temple, with general fatigue and sensitiveness to cold or change of temperature.—Pressure encircling head, with sleepiness.—Constriction as from a bandage or tight cap pressed down as far as temples.—Severe, dull, frontal headache, esp. in the morning.—Darting pain in forehead, < motion, and in temples.—Sharp pain in supra-orbital region, running off towards nose.—Pain: over r. eye, in morning on waking, by noon pain in whole cerebrum, fulness of blood-vessels of brain, and contracted feeling in forehead, which extended to eyelids, causing an effort to open or close them; in l. side at 10 a.m., with heat in abdomen and nausea, the pain is heavy at 11, pain over whole head from 4 till 10 p.m., with nausea and general sweat, headache next day with lame, bruised feeling in region of kidneys.—Pain in temples; showing from r. temple to 2nd bicuspid.—In evening sound of the organ caused headache, < forehead and temples.—One-sided headache with fear of opening eyes lest it should < the pain.—Inability to stop thinking with headache.—Sensation of rush of blood to frontal and temporal regions.—Sharp, shooting pains in temples.—Throbbing of temporal and carotid arteries; heart beats felt in head on lying down.—Intense, painful pressure in vertex and both temples, the pressure in vertex extending over to occiput.

3. Eyes.—Eyes inflamed, first r., then l.; sclerotic dry, red, and swollen; eyeballs pain and smart; lids feel sore.—Eyes bloodshot all the forenoon, with burning in them.—Pain on attempting to use binocular vision, as in reading, so that one eye must be closed, > by a weak concave glass.—Pressure; with muscæ volitantes, dark and light long worms or snakes, also tremulous vision.—Bright marks when looking at an object; dark yellowish spots covering one or two letters when

reading.—Sharp, shooting pains, and drawing, twisting sensation in eyes.—Eyes sore and painful when moved from side to side.—Pain deep in, over top of eyeball, running up from inner canthus to r. frontal eminence, then down obliquely outward into temple.—Sharp stitches in r. eyeball, > by motion in open air.—The muscularis internus seems not to do its work rightly, and the axis of the eyes differs in each; eyes feel weak, with lachrymation.—Eyes convulsed.—Sight blurred, hazy, or misty, film over eyes; objects mixed; after which dull pain over the eyes and between the eyes.—Aching in posterior part of orbit, extending back into the brain; < on reading, causing nausea.—Lids (esp. l.) heavy; cannot bear to raise them; twitching of lids (upper, < l.).—Contracted sensation in lids with difficulty in opening them and lachrymation when wide open, difficulty in keeping l. eye open.—Lids immovable.—Tight feeling in ciliary region as if something were creeping about in it, with sharp pain, < reading.—Contraction of pupils; in morning; by small and rapid jerks, with sensitiveness to light; then mydriasis, < morning, seeming to depend on fatigue of sphincter, which was > during day by reflex stimulus of light.—Pupils dilated.—Pupils contracted when asleep, dilated when aroused.—Disturbed accommodation; approximation of far point (myopia) and also of near point (the accommodation recovers before the pupil).—Vision abnormally acute; double; dim and indistinct; blurred, hazy, misty.—(Lens dislocated by blow.)

4. Ears.—Sharp, shooting pains in the ears.—Shooting in l. ear; in r.—Pain in r. ear when writing.—Hammering in r. in evening, with feeling in external ear as from a hot wind.—Painful pressure on tympani.—Discomfort in r., with inclination to bore in with finger; after removal of wax some pain; with eructation a sudden pain from throat along Eustachian tube to middle ear.—Crawling in l. ear.—Fulness.—Stopped feeling.—Partial deafness of r.—Sensitive to every sound.—Singing or tuning like escaping steam, at night after lying down.—Hissing, buzzing, ringing in the ears.

5. Nose.—Fluent coryza, sneezing; burning, smarting, itching, and tingling of nostrils; nose stuffed and hot.—Twitchings in nose and involuntary expansion of nostrils.—Small boil inside r. nostril.—Epistaxis while at supper.—Smarting at end of nose, it feels as if burnt by hot liquid.—Tension in skin of nose and forehead.

6. Face.—Face pale; flushings of the face; heat.—Neuralgic pain in r. side of face.—Sensation of cramps or spasms in face extending to neck; with numbness of l. hand.—Sensation of contraction of l. side of face, with numbness.—Severe pain in r. upper jaw like toothache (though all teeth on that side had been extracted).—Numbness of lips.

7. Teeth.—Dentition: nervous children with vacillating pupils who have trouble when nursing or taking food; pain in stomach as soon as they begin, but going off if they continue to nurse.

8. Mouth.—Tongue sore on tip and rough.—Smarting of end of tongue; feels as if burnt.—Scalding sensation l. side.—Tongue coated, more heavily at

root.—Numbness and tingling of tongue and lips, with constant desire to moisten them.—Bad taste in mouth.—Profuse salivation; thick, leathery saliva.—Difficult speech.—Power of speech retained long after inability to swallow.

9. Throat.—Sore throat, painful swallowing.—Tonsils and soft palate dark red.—Burning, scraping, raw feeling in throat.—Tonsils enlarged; swollen, elongated uvula.—Small ulcers, with yellow centres in pharynx.—Feeling as of a fish-bone in throat; swallowing saliva very painful.—Constriction of throat and dysphagia.—Pain extending from throat to l. ear when swallowing.—Feeling as if a ball were coming up in throat.—Submaxillary gland tender and tumefied.

10. Appetite.—Hunger but can find nothing to satisfy it; food has a flat taste.—No appetite, disgust for food, tobacco, and coffee; and esp. for cold drinks.

11. Stomach.—Tasteless eructations.—Burning in stomach with hot eructations.—Violent hiccough.—Nausea and vomiting.—In stomach: prickling, sharp pains; darting pains, with paralysed feeling of l. side; heaviness and weight, as if undigested food were lying there; hard pain; griping; emptiness and weakness; sensation of nervousness and trembling.—Soreness in region of stomach.—Sensation at epigastrium as when large pieces of food are suddenly swallowed.

12. Abdomen.—Lancinating pains in hypochondria.—Hard, sore pain in splenic region; descending to groin and across hypogastrium, < by motion.—Soreness and pain at navel, which was found much inflamed.—Severe pain in umbilical region.—Pain and soreness in umbilical region.—Stitches in l. side of abdomen.—Much rumbling and distension in abdomen, with discharge of large quantities of flatus.—Dull pain in transverse and descending colon.—Colicky pains, with feeling as if diarrhœa would occur.—Shooting pains in l. iliac region and down thigh.—Sharp, cutting pains in lower part of abdomen.—Dull pain in groins.

13. Stool and Anus.—Stools: copious; soft, thin; watery; yellowish; bilious; part natural, part black like tar; lumpy, mixed with watery discharge; dark and offensive.—Constipation; from atony.—Sphincter ani swollen and rigid; evacuation painful; rectum protruding, swollen and very sensitive.—Tenesmus and burning, with diarrhœa; also tenesmus of bladder.—Stool irregular and loose, anus sore and inclined to protrude; piles (absent for three years) return.—Severe piles following childbirth.

14. Urinary Organs.—Bruised, sore feeling in region of kidneys.—Bladder feels distended.—Frequent desire to urinate, often ineffectual.—Frequent and copious urination.—Urine: yellow; high coloured; strong-smelling; clear; muddy; pale and copious.

15. Male Sexual Organs.—Frequent erections with but slight desire.—Two emissions without dreams or excitement.—Strong-smelling sweat about genitals, prepuce tender and swollen, many small vesicles on glans with burning itching.

16. Female Sexual Organs.—Leucorrhœa; < exercising during day, esp. about 4 p.m.; with inclination to sigh; sighing < when leucorrhœa is worse; dread of cold water.—Menses irregular.—Numbness of womb with pain in back.—Condition like that produced by flooding after delivery.—Metrorrhagia.—Pain as if menses were coming on.—Menstruation, with palpitation; congestion of the eyes, with tonic spasms, rigidity, sighing respiration, consciousness retained.

17. Respiratory Organs.—Cough from tickling in throat.—Slight constant inclination to cough from filling lungs.—Laboured, sighing respiration; yawning.

18. Chest.—Stitches in the chest.—Cannot fill l. lung as inspiration = dull pain at l. apex, > by pressure.—Stitches under inferior angles of scapulæ during expiration.—Heavy weight at chest.—Twitches across pectoral muscles.—Stitches in l. breast, and unable to draw long breath.

19. Heart and Pulse.—Dull pain, uneasiness and distress about the heart.—Violent palpitation of the heart, with feeling of pulsation through whole body.—As the fresh, bracing air strikes me, a choking sensation with fluttering of heart.—Heart's action irregular and tumultuous, when lying on l. side, > when lying on the back.—Pulse: variable; accelerated; small, frequent, slow, feeble, intermittent.

20. Neck and Back.—Inclination to stretch out the neck.—Pain at base of brain as if it were cutting off body from head; going through to back part of throat, which is stiff and sore.—Stiffness in neck.—On waking, pain in r. head and neck as if latter was stiff.—While taking morning bath suddenly stiff neck (r.).—Drawing on turning head.—Rheumatic pains in l. neck and shoulder.—Feeling of weakness passed down from occiput through back to lower limbs.—Cramp-like stitches up and down spine; stiffness of l. neck.—Chilly, creeping sensations up back, 7 p.m.—Back very weak, unable to stand erect.—Dull pain in back.—Backache (in renal region) kept him restless all night; no > in any position; passed copious colourless urine.—Creeping numbness from back of head down spine.—Cramp-like stitches up and down the spine.—Pain under r. shoulder-blade.—Dull, heavy pain in lumbar region; also over l. hip, extending to back.—Pain in back between hips, with numbness of womb.—Pain in (l.) sacral region, as if strained by lifting, < on motion.—Contractive pain of anterior surface of coccyx; as if dysentery coming on; (since verified).

21. Limbs.—Limbs feel weary, as after great fatigue.—(Pleasant) numbness in all the limbs; and paralytic feeling.—Neuralgic pains in the limbs.—Stiffness or bruised feeling in the joints.—Staggering gait.—Cold extremities.

22. Upper Limbs.—Wrists feel weak; dull aching pain in them.—Sharp, shooting pain in l. shoulder.—Itching of l. palm.—Paroxysms of burning in palms.—Hands feel cold, then hot and red.—Pain in r. deltoid > only by violent motion.—Numbness in l. arm.—Sharp pain in l., then r. arm.

23. Lower Limbs.—Unsteadiness from knee downward when walking, esp. with eyes shut.—Dragging pain in l. hip towards back.—Thrusts with aching down l. thigh from iliac region.—Stiffness in hip and knee.—Cramp-like pain in l. (and r.) popliteal space.—Sensation of a drawing cord behind leg and knee, impeding walking.—Gnawing in l. tibia.—Legs feel asleep.—Numbness in l. foot.

24. Generalities.—Indescribable torpidity as from opium; "this is not debility but volition is inoperative" (Christison's experiment).—Great sense of fatigue and weariness; weakness.—Convulsive twitchings.—Constant fibrillary twitchings of the muscles.—Violent trembling all over the body.—Great prostration of the muscular system.—Diminished reflex action.—Omits bath on account of horror for cold water.—Sore and stiff all over, as from a cold.—Severe, sharp pains in various parts of the body.—In nerves in front of body waves like tremblings going up and down; at back nerves paralysed and numbed with pain as when the nerve of a tooth is being killed.—Stiff all over as after taking cold.—Paralysed feeling in l. side.—On raising foot in walking, momentary feeling as if he were floating upwards, and on foot touching ground an unpleasant feeling making a shuddering sensation pass all over him.

26. Sleep.—Irresistible desire to sleep; soporific sleep.—Restless sleep with dreams.—During sleep mind so active was unaware he had been asleep.—Falls asleep frequently, but awakes suddenly without relief; following night scarcely closed eyes in sleep; thoughts very active; an idea once started kept on with unusual persistence.

27. Fever.—Creeping, chilly sensation in back; yawning; every movement and draught = shuddering.—Hands and feet cold.—Cold, clammy skin.—Heat in head and face; flushed and hot.—Heat in face and down back with chilliness of legs.—Dry burning in hands.—Perspires very easily.—Cold sweat in drops over whole body.—Strong-smelling sweat around genitals.—Copious sweat all over body.

Phytolacca.

Phytolacca decandra. Virginian Poke. Poke-root. Red Ink Plant. Garget Weed. N. O. Phytolaccaceć. Tincture of fresh root dug in winter. Tincture of the ripe berries. Tincture of fresh leaves. Solution of the resinous extract, Phytolaccin.

Clinical.—Abortion, threatened. Albuminuria. Angina pectoris, Anus, fissure of. Asthma. Barber's itch. *Boils. Bone, diseases of*; tumours of. *Breasts, affections of. Cancer*. Cholera. *Cicatrix*. Ciliary neuralgia. Constipation. *Corpulence*. Cough. Dentition, difficult. Diarrhśa. *Diphtheria*. Diplopia. Dysentery. Dysmenia. Ears, affections of. Erythema nodosum. Eustachian tubes, affections of. Glands, enlarged. Gleet. Glossitis. Gonorrhśa. Gout. Granular conjunctivitis. Hćmorrhoids. Headache. Hearing, altered. Heart, affections of; hypertrophy of; fatty. Impotence. Influenza. Intestinal catarrh. Itch. Lactation, abnormal. Laryngismus. Leucorrhśa. Lichen. Liver, affections of. Lumbago. Lupus, Mercury, effects of. Mouth, ulcerated. Mumps. *Neuralgia*. Nipples, sore; painful. Nursing, painful. Orchitis. Ozćna. Panophthalmitis. Paralysis, diphtheritic. Parotitis. Prostate, affections of. Rectum, cancer of. *Respiration, abnormal. Rheumatism*; syphilitic; gonorrhśal. Ringworm. Rodent ulcer. Salivation. Sciatica. *Sewer-gas poisoning*. Spinal irritation. Spleen, pain in. Stiff-neck. *Syphilis*. Syphilitic eruptions. Tetanus. *Throat, sore*; diphtheritic; herpetic; granular. Toothache. Tumours. Ulcers. Uterus, affections of. Warts. *Wens*.

Characteristics.—*Phyt. dec*. is a branching herbaceous plant, with a thick perennial root, sometimes larger than a man's leg in diameter. The young shoots, though extremely acrid, are rendered harmless by boiling, and are eaten like asparagus in the United States. The berries have a popular repute as a remedy for cancer and rheumatism. The berries of *P. octandra* are used in Mexico and the West Indies as a soap. According to Raffinesque, quoted by Hale (who introduced the remedy into homśopathy), the ash of the plant (which has been used as an escharotic in cancers, ulcers, &c.) contains 45 per cent. of caustic potash; and the plant contains besides an acid, *Phytolaccic acid*, which is closely allied to *Malic acid*. The plant is common throughout North America, the Azores, North Africa, and China. It grows in damp places. Some rather severe cases of poisoning have been reported. Vomiting, diarrhśa, frontal headache, sore throat, are the most common symptoms observed. One boy who drank two or three drachms of a tincture of the root had none of these symptoms, but developed complete tetanus: Extremities stiff; hands firmly shut; feet extended; toes flexed; lower lids drawn down; teeth clenched; lips everted and firm, general opisthotonos. Respiration difficult, râles heard all over the room. For an hour muscular rigidity increased generally, with convulsive action of muscles of face and neck; chin drawn close on sternum. This condition would last five or ten minutes, to be succeeded by perfect relaxation, and return in twenty minutes more with the same violence. After cold-water affusion, cupping, and sinapisms, the boy slept about twenty-five minutes. On awaking some twitchings, especially of lower limbs; pain in back of head and stomach. Next day he was quite recovered. A boy, 8, who ate a quantity of berries, was found in great agony, complaining that his stomach was "pinched together." He had nausea, violent vomiting; throat sore and dry; fauces dark red, tonsils swollen. After vomiting ceased, purging set in; stools dark brown and thin; severe pain in stomach on pressure, extorting cries. Later he had burning griping in umbilical region; dim vision; tongue coated white; spasmodic jerkings in arms and

legs. In a woman, 45, who took *Phyt*. as a "blood purifier," a general rash, in appearance not unlike the rash of secondary syphilis, was set up. In a family of four poisoned by eating the root in mistake with their food, these symptoms were observed: Dread of movement; seems stupid; falls asleep after a paroxysm of cramping pain has ceased; pain in forehead < after eating; vomiting of clotted blood and slime; copious discharge of blood and mucus which looked like scrapings of intestines; involuntary stools from straining, which occurred even in sleep. In the mother of the family, seven months pregnant, it very nearly produced miscarriage; the uterus could be felt contracting under the hand; involuntary straining and hćmorrhage from the vagina; intense griping pain in small of back and cramps in legs coming and going suddenly, coldness and withered appearance of extremities, whole body cold. In all the above cases the spasmodic action of the drug is evident in some form. From inhaling the dust of the powdered dried root, or the odour given off on slicing the fresh root, intense irritation of eyes, nose, and throat, and severe headache and diarrhśa have occurred. Given to animals, *Phyt*. has caused convulsive symptoms, vomiting, and vomiting of worms. Wild pigeons and other birds which eat the berries acquire a highly red colour and lose their fat. This last observation has led to the use of a tincture of *Phyt*. berries as an anti-fat, and many successful results have been reported. This observation may be taken as the key to one of the great spheres of the action of this remedy─the absorption of tissues, especially new growths. There are few remedies which have a wider range in the cure of tumours and indurations, particularly of the female breast. Hale tells us that among dairymen in America the root is used to regulate any abnormality in the milk of cows─scanty; thick; watery; curdy; containing blood or pus. But its chief repute is in caked udders. In breast induration and abscesses of nursing women, and even in cancers (internally and sometimes externally as well), its action has been well confirmed. But it must not be supposed that this action is purely physiological, as is the absorption of fat in birds. A patient of mine, about forty-five, took *Phyt*. 30 for sore throat. After a few-doses she was compelled to desist because of its effects on her breasts; both became full and uncomfortable, and in the left one appeared a large lump in its upper segment, which lasted five days, and was only got rid of by dint of vigorous rubbing with camphorated oil. A case of cancer of the rectum has been cured with *Phytolaccin* 3x. In the uterus and the prostate gland (the male uterus) specific symptoms were evoked in the poisonings and provings. Muscles, joints, bones, brain, and spinal cord, as well as the special senses, were all more or less disordered. The intense action of the drug on the throat has led to its being used as a routine remedy in diphtheria. It is not a specific; but it has some very characteristic symptoms which will indicate it when present. Among these are: Great pain at root of tongue when swallowing; pains shooting from throat into ears on swallowing; hot feeling as if a red-hot ball in throat; burning < by hot drinks; dark redness of fauces. Eclectics (*H. R*., xi. 429) give the expressed juice of the berries in "spasmodic or membranous croup, or diphtheria." There is one form of sore throat in which I have found it of the greatest service-the so-called "diphtheritic sore throat." Dark red, swollen mucous

membrane and tonsils, pain on swallowing, eruption of herpetic, whitish, or grey spots on fauces, swelling and tenderness of the glands externally at the angle of the jaw. With these symptoms there are generally headache, backache, wandering rheumatic pains and fever. I have cleared up numberless cases of this kind with *Phyt*. 30. Not infrequently epidemic influenza has taken this form, and then *Phyt*. has been my most successful remedy. (Nash has relieved chronic follicular pharyngitis in public speakers when there has been much *burning*, as if a hot substance in throat.) One of the provers had "swollen and tender gland right side of neck"; and swollen and tender glands in many other localities have been remedied with *Phyt*. The headaches of *Phyt*. are chiefly frontal, pressive, involving eyes, < right side. One headache is peculiar, being associated with *increased sense of hearing*. The irritation of the mucous membrane of the throat extends to nose, ears, and eyes, producing characteristic symptoms in each. The discharges are tough, stringy, difficult to detach, and may take the form of clinkers. Offensiveness and acridity are also common features. The nervous irritability of *Phyt*. has led to its successful use in disorders of dentition, a keynote symptom being: Irresistible inclination to bite the teeth or gums together. The pains of *Phyt*. come and go suddenly; move about, radiate from a centre, or change place. Pain in sore nipples of nursing women radiate all over the body when the child is put to the breast. When pain in intestines disappears pain in extremities comes on. Pain leaves heart and appears in right arm (this association is unusual, and therefore important). Pains in head and chest go from before backward. Pains run down spine from nape; from sacrum down outer aspect of thighs to toes. The *outer* aspects of the limbs are chiefly affected. The shreddy discharge of *Phyt*. mark it as a remedy in certain forms of intestinal catarrh and dysmenorrhśa. It is hćmorrhagic and hćmorrhoidal, acting strongly on rectum and anus, curing tenesmus, bloody discharges and heat. One characteristic pain (noted in a case of constipation) is: Shooting pain from anus to lower part of rectum, along perinćum to middle of penis. "Gurgling in the prostate gland, repeatedly in the afternoon," was noted by one prover, and pains in spermatic cords. Entire suspension of sexual appetite with relaxation of the genitals was caused. *Stiffness* is a characteristic effect of *Phyt*., noted in the tetanus case, and in others in less degree. Stiff neck, especially right side. The prostration is so rapid and profound that it has led to the successful use of *Phyt*. in diphtheritic paralysis. Faint and dizzy when standing. Soreness of all the muscles. Restlessness, but he fears to move because motion < the pains. The rheumatic swellings are hard, tender, and intensely hot. *Phyt*. is *suited to* rheumatic or syphilitic subjects who are sensitive to damp weather. *Peculiar sensations* are: Brain as if bruised. Right side of head as if pressed firmly. As if sand in eyes. As if eyes too large. As if lids granulated. As if tarsal edges raw. As if lids on fire. Nostril as if tickled with a stiff feather. Nose and eyes as if a cold would come on. Tongue as if scalded. As if a ball of red-hot iron in throat. As if lump in throat. As if apple core in throat. Throat so full it felt choked. Pharynx feels like a cavern; chest as if it were a big empty cask. Body as if bruised; pounded all over. As if joint were being chopped with an axe. The right side is most affected, and many symptoms were experienced in the

liver; there were also some severe ones in the spleen. The liver-pains were < lying on right (painful) side. The spleen pain was > lying on left (painful) side. Nash has removed many breast tumours by giving a single dose of *Phyt*. cm during the wane of the moon. The symptoms are < by touch (liver, &c). There is great general sensitiveness. Pressure < pain in joints and ulcers. Pressure with hand > pain in breasts. Pressure on trachea facilitates expectoration. Rubbing > pain in hip. Riding < nose and breathing. < Stepping down high step. Rising from bed = faint feeling. Sitting up = sick and giddy. Standing = faint and dizzy. Gaslight < eyes. Swallowing <. After breakfast head and throat >, gastric symptoms <. Vomiting < headache, > nausea. Hunger soon after eating. (This is like the deadly sinking so often met with in the cancerous diathesis.) < At menstrual periods. Must lie down. < Lying right side. > Lying left side. > Lying on stomach. < Standing and < motion. < Walking. < Raising arm. < Night. < Morning; 3, 4, or 5 a.m.; on waking. < Damp weather; washing; hot drinks. < Exposure to air; open air (but it > eyes). The external use of *Phyt*. has been attended with good results in cases of ulceration, and I have found a gargle of a few drops of the Ř to a tumbler of water useful in many throat cases. A preparation of the *leaves* has been used successfully by Hurndall (*H. W*., xxxi. 217) as an external application for carcinomatous growths in dogs; and an ointment prepared with a strong tincture of the leaves as well as the juice of the leaves have been used for malignant ulcers in human beings.

Relations.—*Antidoted by:* Milk, Salt, Coffee (vomiting), Nit. sp. dulc., Bell., Ign., Merc., Mez., Sul. (eyes), Op. (large doses). *Compare:* Botan., Petiver. Diphtheria, Ar. t., Lach. [Lach. has not the great pain at root of tongue when swallowing of Phyt. S. M. Pease (*Med. Adv*., xxv. 27) found *bleeding from the buccal cavity* a keynote symptom of Phyt. in one epidemic.] Hypertrophy of heart, Rhus (Phyt. has right arm numb; Rhus has left arm numb, also Aco., Act. r., Puls.). Breast abscess, Bry. (Phyt. follows Bry. when suppuration seems inevitable; pain goes from nipples all over body). < Motion, Bry. Tetanic spasms, Nux (Phyt. is slower than Nux, has everted lips, alternate relaxation and spasm). Pain in breasts when suckling, Crot. t., Phell., Lac c., Borax (Borax, like Phyt., has > from pressure; Borax alone has empty, sucked-out feeling). Sensation of apple core in throat, Hep., Nit. ac. Stringy discharges and clinkers, electric shocks, flying pains, K. bi. Desires cold water (Physt. opp.). Symptoms fly from centre outward (Abrot. opp.) Pains in breast at menstrual period, Calc., Con. Diarrhśa with shreddy membranes, Caust., Ars. < In damp weather, Rhus, Dulc. Pains in tibia, Carb. v., Lach. < After sleep, Lach. Loss of fat (Sabal ser. opp.). Loss of sense of delicacy, Hyo. Bruised, sore feeling, Arn. Hale says K. iod. is the nearest analogue (rheumatism, syphilis, wasting); Merc. and its antidotes are also closely related.

Causation.—Exposure to cold and damp.

SYMPTOMS.

1. Mind.—Delirium.—Indisposition to mental exertion; disgust for business on waking early in morning.—Melancholy, gloom.—Indifference to life.—Great fear; is sure she will die.—Loss of personal delicacy, complete shamelessness and indifference to exposure of her person.—Irritability; restlessness.—Irresistible desire to bite teeth together.—Cannot be persuaded to take nourishment.—Over-sensitive; pain intolerable.

2. Head.—Vertigo: staggering with danger of falling; with dim vision; when rising from bed feels faint.—Headache: with nausea; dull; heavy; neuralgic; rheumatic; syphilitic; with backache and bearing down; weekly; < from wet weather.—Sore pain over head, < on r. side.—Pain in vertex; and sensation of soreness deep in brain as if bruised; when slipping from a high step to ground.—One-sided pain, just above eyebrows, with sick stomach; < in forehead, or above eyebrows (glabella most affected); comes every week.—Dull, pressive pain in forehead, with slight nausea, cold sweat on forehead and feeling of weakness.—Shooting pain from l. eye to vertex.—Violent pain at back of l. eye and over eyebrow extending down side of head.—Heavy aching in forehead after dinner.—Slight pain in forepart of head with increase of hearing.—Heaviness of head, with feeling in back part of tongue as if burnt.—Headache commencing in frontal region and extending backward.—Nausea and headache > by eating, but returning soon with vomiting which < headache and > the nausea.—Pressive pain on forehead and upper part of both eyes; on vertex with dryness.—Pain in back of head and neck.—Head thrown backward.—Pain in occiput; and stomach.—Rheumatism of r. frontal region with nausea, < morning; of scalp when it rains, with depression.—Syphilitic nodes on skull.—Tinea capitis.—Crusta lactea, moist, fearful itching, with little raw tubercles on scalp, face, and arms.

3. Eyes.—Eyes staring.—Blue round eyes.—Eyes sunk deep in sockets with livid circles.—Sclerotica dark yellow.—Sharp pain through ball of eye on reading or writing.—Dull aching in eyes, < from motion, light, or exercise.—Pressure around eyes in afternoon as if eyes too large.—Circum-orbital pains in syphilitic ophthalmia.—Panophthalmitis.—Aching along lower half r. orbit.—Orbital cellulitis.—Lids feel granulated; tarsal edges feel scalded, hot, raw.—Burning and smarting sensation (feeling of sand) in eyes and lids, with profuse lachrymation and coryza, which is > in the open air.—Smarting in inner canthi (< l.), < by gaslight in evening.—Lids agglutinated and swollen, as if poisoned.—Reddish-blue swelling of lids (< l.), < morning; cannot close eyes without pain all forenoon, > afternoon.—Fistula lachrymalis.—Lids feel on fire.—Lupus, epithelioma, &c., of lids.—Pupils: contracted (tetanus); much dilated.—Photophobia.—Motion of one eye independent of that of the other.—Double vision; with giddiness and headache.—Objects quintupled.—Far-sighted.

4. Ears.—Shooting in r. ear.—Pains in both ears, < r.; < swallowing.—Obstruction in l. Eustachian tube, rushing in l. ear, a feeling as if hearing were dull, while at same time sensitive to minutest sounds.—Irritation in one Eustachian tube.—Increased sense of hearing (most r.); with pain in forehead.—Very peculiar pressure and tension in parotids.

5. Nose.—Flow of mucus from one nostril while the other is stopped.—Drawing sensation at root of nose.—Feeling in nose and eyes as if a cold would come on.—Acrid, excoriating discharge.—Wakes 3 a.m. with nose stopped up, discharges clinkers from both nostrils in morning.—Sensation in nostrils as if tickled with a stiff feather.—Total obstruction of nose, when riding must breathe through mouth; not > by blowing nose; mucus discharged with difficulty.—Syphilitic ozćna with bloody sanious discharge and disease of bones.—Rodent ulcer.

6. Face.—Face: pale; sunken, blue, suffering; hippocratic distorted.—Stupid.—Cool sweat on forehead.—Heat in face (l.) after dinner with redness of face, coldness of feet, eruption in upper lip (l.).—Face very red, almost purple; alternately very pale.—Pains in bones of face and head at night, keeping her awake many nights; proceeding esp. from "nodes" on frontal bone, very much like pains of periostitis.—Pains in upper jaws.—Jaws ached awfully the whole time, it seemed he could not open or shut them.—Blotches in face, < afternoon, after washing and eating.—Swelling round l. ear and side of face, like erysipelas; thence over scalp; very painful.—Ulcers and scaly eruption on face.—Chin drawn closely to sternum by convulsive action of muscles of face and neck; lips everted and firm (tetanus).—Eruption on upper lip.—Ulcers (cancerous) on lips.

7. Teeth.—Teeth all ache; feel elongated and are very sore.—Shooting pains in r. upper and lower molars.—Irresistible inclination to bite teeth together.—Difficult dentition; crying, moaning, restless at night; diarrhśa in hot weather; > biting something hard.

8. Mouth.—The mouth fills with saliva; tenacious, yellowish, ropy, with metallic taste.—Cold, sticky, stringy saliva.—No saliva.—Taste: disagreeable; metallic; burnt; nutty; bitter at first; leaving smarting and coldness towards tip of tongue.—Burnt feeling on back of tongue (with heavy head).—Tongue: coated white; furred; thick at back; dry, and lips; feels scalded; thick; protruding.—Tongue feels rough, with blisters on both sides, and very red tip; great pain in root of tongue when swallowing.—Roof of mouth sore.—Mouth dry.—Submaxillary glands swollen.

9. Throat.—Sensation of dryness in throat and the posterior fauces (provoking cough, with disposition to hawk and clear the throat); tonsils swollen.—Uvula large, almost translucent.—Fauces congested and of a dark red colour.—Sore throat (roughness and rawness), swelling of soft palate in morning, with a thick, white, and yellow mucus about the fauces.—Sensation of a lump in throat (when

swallowing), causing a continuous desire to swallow; also when turning head to l.—Could not swallow, throat so dry and rough.—Throat feels like a cavern.—< From hot drinks.—Difficult swallowing; with every attempt excruciating shooting pains through both ears.—Sensation of apple-core in throat.—While riding in forenoon sensation of plug in throat, not > by hawking; this sensation was replaced by increased discharge of mucus from posterior nares, discharged with difficulty, constantly exciting attempts to expel it.—Sensation of rawness and scraping in throat and tonsils.—Burning heat in throat as from coal of fire, as if red-hot iron ball lodged in fauces and whole length of śsophagus; catarrh in throat; diphtheria.—Eruption on fauces and śsophagus.—Herpes pharyngalis.—Soreness of posterior fauces extending into Eustachian tube.—Fulness in throat.

11. Stomach.—Intense thirst.—Canine hunger; soon after eating.—Loss of appetite.—Eructations: of air; sour fluid; food in evening.—Hiccough, with great inclination to vomit but no nausea.—Nausea followed by violent vomiting of mucus, bile, ingesta, worms; of clotted blood and slime, with retching, intense pain, and desire for death to relieve.—Vomits undigested food.—Frequent vomiting; prostration, fainting, even convulsions, followed by gripes, cramps, vomiting of dark bilious substance.—In great agony; said his stomach was pinched together.—Bruised and sore feeling at pit of stomach.—Heat in stomach.—Cutting in pit of stomach, tender to touch.—Pains in cardiac portion of stomach, < full respiration and by walking.—Pain in region of pylorus.

12. Abdomen.—Intense vomiting and purging, with griping pains and cramps in abdomen.—Soreness and pain in r. hypochondrium (during pregnancy).—Sore spot, r. hypochondrium, size of dollar, extremely sensitive to touch.—Digging in upper and lower portions of liver.—Lying on r. side = penetrating pain in r. hypochondrium.—Violent dull pressing pain l. hypochondrium, cannot remain in sitting posture, lies on painful side all night and pain is gone in morning.—Heavy aching pain in hypochondrium which left as soon as leucorrhśa commenced.—Chronic hepatitis, with enlargement and induration.—Burning, griping pain in umbilical region.—Much rumbling, pain in umbilicus, stools of blood and mucus; gastro-enteritis.—Bearing-down pains.—Violent pains in abdomen during menstruation in a barren female.—Rheumatism extending to abdominal muscles.

13. Stool and Anus.—Constipation, hard stools.—Stool with mucus and straining.—Constipation habitual; patient says the bowels will not move without the aid of purgatives; feeling of fulness in abdomen before stool, which remains after stool, as if all had not passed.—Constipation from torpor of the rectum.—Constipation: of the aged; of persons with weak heart.—Diarrhśa with sickly feeling in bowels; passage only of mucus and blood, or like scrapings from intestines.—Tenesmus.—Continual inclination to stool but passes constantly fetid flatus.—Diarrhśa early in morning after lemonade.—Dysentery.—Intense vomiting or purging, with prostration and cramps, as in cholera.—Stools: thin, dark brown; of

mucus and blood; of bile; from 1 or 2 a.m. till after breakfast; mushy; yellow, then greenish, then dark, bloody; dark, lumpy.—Hćmorrhoids permanent and obstinate; bleeding and mucus.—Neuralgic pains in anus and lower part of rectum, shooting along perinćum to middle of penis; in middle of night (with constipation).—Bloody discharge with heat in rectum.—Heat in rectum with burning in stomach.—Ulceration; fissure.

14. Urinary Organs.—Weakness, dull pain, and soreness in region of kidneys, < r., connected with heat; uneasiness down ureters; chalk-like sediment in urine.—Albuminuria; after scarlatina or diphtheria; chills at night without special fever, accompanied by a form of insanity.—Pain in bladder before and during urination.—Slight suppression of urine, with pains in loins.—Violent, painful urging to pass urine.—Copious nocturnal urination.—Thick, chalk-like sediment.—The dark-red urine leaves a mahogany stain in the chamber.—Urine: acid and albuminous; excessive or scanty; stains clothes yellow.

15. Male Sexual Organs.—Sharp pains (and hard, grinding pain) running up each spermatic cord; later continued soreness in place of the pains.—Gurgling sensation in prostate gland.—Complete loss of desire, absence of erections and relaxation of parts during the proving.—Impotence.—Gonorrhśa; gleet; orchitis, with suppuration and fistulous ulcer.—Syphilis: chancres; ulcerated throat; ulcers on genitals; bubo; rheumatism.

16. Female Sexual Organs.—Menses: too frequent and copious; mammć painful; increase of tears, saliva, bile, urine; rheumatic subjects.—Menses: amenorrhśa complicated with ovarian irritation or disease; very painful menstruation in apparently barren women when occurring in connection with rheumatism; shreds of membrane are passed with the menstrual flow.—Leucorrhśa: uterine, thick, tenacious, irritating.—Profuse, thick, tenacious, from swollen Nabothian glands.—Threatened miscarriage; bearing-down pains; involuntary straining and hćmorrhage per vaginum caused in woman seven months pregnant.—Sensation as though menses would appear all the time.—Dysmenorrhśa accompanying erosion or ulceration of the cervix; menses too often; too profuse, with corresponding increase of the tears, and other secretions.—Metrorrhagia.—Inflammation, swelling, and suppuration of the mammć.—Neuralgia of breasts.—Mastitis, where the hardness is very apparent from the first, with great burning; very sensitive nipples or breasts, which are more or less painful; even after suppuration these characteristics continue.—Fulness of both breasts; lump in upper part of l.—Abscesses; Fistulć; tumours; cancer; hypertrophy.—Irritable tumour; very sensitive and painful; < at menstrual period.—Nipples cracked and excoriated; intense suffering on putting child to breast; pains radiate from nipple all over body.—Breasts hard as stones after confinement.—Breasts full of hard, painful nodosities.—Suppression of lochia.—Pain in sacrum, down to knees and ankles, then up to sacrum, jerks here and there, after confinement.

17. Respiratory Organs.—Hoarseness and aphonia.—Tickling in l. side larynx with hacking cough, aching r. side of breast, great dryness of throat.—Sensation of roughness in the bronchia.—Laryngismus, thumbs and toes flexed; features distorted; eye muscles act independently.—Respiration difficult and oppressed; loud mucous riles.—Faint, with sighing, slow breathing.—Panting.—Cough: hacking, dry, hawking; from tickling in larynx or dryness in pharynx: < night, on lying down; dry, bronchial.—Cough with: scraping and tickling in throat; burning pains in trachea and larynx, sensation of contraction of glottis, laboured breathing; sensation of ulcerated spot in trachea just above breast-bone, could only expectorate (pus) by pressing on this spot pains through mid-sternum.—Hoarse, croupy, barking cough, < at night < out of doors.—Expectoration: thick, tough; thick, starch-like mucus, profuse and exhausting with pharyngitis.—Dryness of larynx and trachea, < evening.

18. Chest.—Sharp pains through upper part of chest, preventing a long breath.—Stitch from r. chest to back.—Pain and suffocation in lungs, throat, and fauces.—Pains in lungs, 7 a.m.—Tenderness and lameness of muscles of chest, as if bruised.—(Chest feels as if it were a big empty cask.).—Rheumatism of lower intercostal muscles from exposure to cold and dampness.—Spots size of lentil on chest.—Hard, tender swelling midway between nipple and sternum, but nearer latter; restless nights; (in baby a few months old).

19. Heart.—In night awoke with lameness near cardiac region, with much nervous restlessness, < motion, esp. < expiration; kept him awake long time.—Constrictive feeling in prćcordia with pressure in temples.—Great pain in prćcordia, much < walking.—Occasional shocks of pain in heart region, as soon as this ceases similar pain appears in r. arm.—Heart-beats distinctly felt.—Fatty degeneration; lassitude and indisposition to move.—Pulse: small, irregular, with great excitement in chest, esp. in cardiac region; full but soft; intermittent; weak.

20. Neck and Back.—Hardness of gland in r. side of neck.—Stiff neck, < on r. side; in bed; after midnight; on waking.—Back very stiff every morning.—Sensation as if cold iron were pressed on painful scapula.—Both scapulć ache continually.—Towards evening, while riding, laming pain began l. side back below scapula; 9.30 p.m. it had reached spine and was a pricking stitching.—Severe pain behind scapulć when walking.—Intense griping in small of back.—Pain running down spine from nape.—Pain in loins with suppression of urine.—Constant, dull, heavy pain in lumbar and sacral regions.—Pains shooting from sacrum down both hips to feet.

21. Limbs.—Intense cramps, muscles gather in large knots, hard and ridged; come and go suddenly.—Rheumatism of all joints 3 p.m.—Sudden transference of internal pains to extremities.—Pains in limbs always in outer aspects.—Patient is subject to rheumatic pains on change of weather, esp. in hips and thighs; rheumatic muscular or chronic rheumatism.—Rheumatic pains in arms and hands.—Cold hands and feet.

22. Upper Limbs.—Enlarged glands in axillć.—Shooting in r. shoulder-joint with stiffness and paralysis.—Rheumatism of (l.) shoulder (esp. in syphilitics); pains fly like electric shocks from one part to another; < night and damp weather.—Pains at attachment of deltoid.—Weakness and aching in r. humerus, < motion and extension.—Dull aching and excessive tenderness, as from a bruise, in outer muscle of r. arm.—Hands tremble.—Rheumatic pains in hands; sudden pricking.—Painful, hard, shiny swelling of joints of all fingers.—Bony growth in palmar aspect of one finger.—Whitlow.—Ends of fingers all throb and ache as if going to suppurate.—Shooting like needles in finger-joints; in top of l. thumb.

23. Lower Limbs.—Neuralgic pain in outer side of both thighs (shooting from sacrum); sciatica.—Sharp, cutting pain in hip, drawing, cannot touch floor; pain runs down outside of thigh, < night, and esp. < after sleep.—Rheumatic pains in lower extremities, < damp weather.—Sensation of shortening of tendons back of knee when walking.—Leg drawn up.—Legs tremble.—Pain in dorsum of r. foot, 4 a.m.—Syphilitic and mercurial rheumatism; nightly pains in periosteum of tibia, with nodes and irritable ulcers on lower leg.—Stitches in various parts, always from without inward and near surface.—Ankles swollen.—Feet puffed, soles burn.—Ulcers on inner sides of soles.—Aching of heels, dull, wearing; > raising feet above level of body.—Pain in great toe waking him at night.—Corn painful.

24. Generalities.—Extremities stiff, hands clenched, feet extended, toes flexed, teeth clenched, lips everted, firm, chin drawn on sternum, opisthotonus.—Great desire for cold water, for bathing in it.—Pains are pressing, shooting, and sore.—Great exhaustion and prostration.—Sore and stiff.—Soreness from head to foot in all muscles.—Pains and numbness followed by itching and burning.—Pains came suddenly in full force and so continued till they ceased; followed by drowsiness, stupor, or sleep.—Bones and glands inflamed and swollen.

25. Skin.—Skin cool, shrivelled, dry, lead-coloured.—Syphilitic eruptions and ulcerations-secondary and tertiary.—Squamous eruptions; tinea capitis; lupus.—Shingles.—Itch.—Pityriasis.—Psoriasis.—Warts.—Lipoma.—Erythematous blotches, slightly raised, pinkish, slowly desquamating, ending in purple spot, as old ones died away others came.—Suppuration of painless tumours.—Drawing in cicatrices.—Itching began on hands and feet and spread over whole body; rash followed four hours later; itching < by scratching; < heat of bed.—Itching and lichen-like eruption on l. leg, < fore part of night, preventing sleep till midnight.—Boils; esp. near ulcers; on back; behind ears.—Ulcers: punched-out looking; lardaceous base; pus watery, fetid, ichorous; shooting, lancinating, jerking pains; syphilitic; cancerous.—Warts.—Corns.

26. Sleep.—Frequent yawning; drowsiness.—Restlessness at night, pains drive him out of bed.—On awaking feels wretched.

27. Fever.—Great coldness, withered appearance of extremities.—Coldness, faintness, dyspnśa; limbs cold, head and face hot.—Internal shiverings during the pains.—Chill: every morning; sudden, followed by fever after confinement; at night without special fever.—Heat: with pain in joints; high fever; in face after dinner; with red face; on l. side of face.—Sweat: cold on forehead; esp. under toes; night-sweat, acrid.

Pichi.

Fabiana imbricata. N. O. Solanaceæ. Fluid extract.

Clinical.—Cystitis. Gall-stones. Gonorrhœa. Liver, affections of. Prostate, disease of.

Characteristics.—*Pichi* is a solanaceous shrub of South America. It is unproved, but in 1 to 20 drop doses of the fluid extract it has been used with good effect in cases of chronic cystitis with enlarged prostate; liver affections and gall-stones; excess of uric acid. Hansen gives these indications: Excoriating urine and urinary calculi. Inflammation of whole urethral tract, must pass water frequently; burning pains and violent vesical tenesmus after urination. Acute or chronic cystitis, caused by gravel, painful urination, much mucus and pus. Subacute or chronic gonorrhœa, painful urination, much mucus and pus.

Picricum Acidum.

Picric Acid. Carbazotic Acid. Tri-nitro-carbolic Acid. ($C_6H_2(NO_2)_3OH$). Trituration. Solution in rectified spirit.

Clinical.—Acne. *Ancmia*. Boils. Brain, base of, pain in. *Brain-fag*. Burns. Cancerous cachexia. Condylomata. Debility. Diabetes. Ears, boils in. *Emissions*. Enuresis. Epistaxis. *Erotomania*. Erythema. *Hćmoglobinuria*. Hands, perspiration of. Headache, of students. Hemiplegia. Jaundice. *Leucocythćmia*. Liver, congestion of; fatty. *Locomotor ataxia. Lumbago*. Myelitis. Neurasthenia. Otitis. *Paralysis*. Paraplegia. Pernicious anćmia. Priapism. Pruritus vulvć. *Self-abuse*. Spinal exhaustion. Spinal irritation. Spinal sclerosis. Styes. Sycosis. Urine, bloody. Writer's cramp.

Characteristics.—*Pic. ac*. was discovered by Hausman in 1788. It is formed by the action of *Nitric acid* on *Carbolic acid, Salicin, Silk*, and many other substances. It crystallises in bright yellow needles or scales, of very bitter taste, sparingly soluble in water. The yellow colour is imparted to the eyes and skins of patients who take

it in the crude, and it not only produces a semblance of jaundice, but actually disorganises the liver if pushed. In some experiments by Parisel (*C. D. P.*) these symptoms were observed: Buzzing and whistling in ears; sparks, whirling round of objects; heaviness of head alternately with sense of emptiness. Moderately copious, *oily-looking*, yellowish stool, with > of cerebral symptoms. Pulse slow, small, very feeble. *Great weakness, compelling to lie down*; limbs hardly able to stir themselves; *no anxiety*, profound calm. *Vivid colouration of sclerotics and integuments; urine coloured blood-red*. These were effects of 0.5 grm. doses. Slow poisoning set up an intermittent fever of quotidian type, and "anorexia, thirst, often sweat, *cancerous tint about skin, tendency to cachexia*." These observations give the chief features of the drug's action: Fatigue, mental and bodily; symptoms < by least exertion fatigue going into actual paralysis; brain fatigue, nerve fatigue at the same time absence of anxiety—indifference. Like so many other *yellow* substances, *Pic. ac*. acts powerfully on the liver, and produces jaundice, cachexia, and cancerous tints. "Tired-out, washed-out feeling—must give in," is the chief keynote of *Pic. ac*. and its salts. Nash cured promptly with *Pic. ac*. 6 trit. an old man who had been failing for a year, and complained of heaviness in the occiput, inability to exert the mind, talk, or think, and general "played-out" feeling. Nash had feared brain softening. Halbert (*Clinique*, September, 1898) reports a case illustrating the power of *Pic. ac*. over the effects of fatigue in professional neuroses. A stenographer and typewriter after using her right index finger continuously for six years, noticed weakness of her thumb and index, and inability to hold pen or pencil. Next there was difficulty in striking correctly the keys of the typewriter and some wrist-drop. The finger when Halbert first saw her was quite rigid and straight, showing extreme spasticity. Massage, electricity, &c., had failed to give any relief. *Pic. ac*. 3x six times daily cured the case and made great improvement in the patient's general health. Evans has found it Curative in girls and young women who, under the strain of many studies, show signs of breaking down—lose appetite—sleep lightly and lie awake (*Pic. ac*. 30 *caused* a patient of mine, previously a good sleeper, to lie awake a long time at nights.—J. H. C.), exhaustion after the day's studies, fatigue even from a short walk, twitchings of muscles when asleep or awake; hysterical state, loss of will power; constant headache, irregular menses. Such patients are usually given iron, which does little or no good. *Pic. ac*. and its compounds are among the most powerful explosives known, lyddite being an example. *Pic. ac*., like *Glon*., has occipital headaches and *bursting* headaches. The headache, frontal or occipital, is < on any attempt to use the mind, and it may extend down the spine. There is also a headache extending from the top of the spine up over the head to the eyes. In a case of spinal irritation I relieved with *Pic. ac*. 30 a pain which shot up from the spine into the head. The pains referable to the spinal cord are strongly marked. Any attempt to study = burning along spine; with great weakness of back and legs; soreness of muscles and joints. To the spinal congestion must be attributed the remarkable disturbance in the sexual sphere: Priapism; penis distended almost to bursting. Terrible erections, disturbing sleep. When over-excitement of sexual system is

associated with spinal or cerebellar affections in either sex. Great sexual desire with emissions. Amorous fancies. On the skin *Pic. ac*. produces jaundice with itching; small painful furuncles, particularly in the auditory meatus; and erythema and pruritus of abdomen and feet. Théry of Paris accidentally discovered in *Pic. ac*. solution a remedy for burns. He twice dropped burning matter on his hands whilst working with a *Pic. ac*. disinfectant, and was astonished at the absence of pain or injury. From that date *Pic. ac*. became his principal remedy for burns, and though others have complained that it caused violent pains, Théry has only once in some thousands of cases had to abandon its use on that account. A. C. Blackwood (*Clinique*, October, 1898, *H. W*., xxxiv. 133) gives the details of its use. Burns of the first and second degree only are suitable. A saturated solution (*Pic. ac*. gr. xc to alcohol three ounces) diluted with one quart of water is used. The clothing is removed and the burnt surface cleansed with the solution and absorbent cotton. Blisters are opened but the epithelial covering is carefully preserved. If extensive, the whole surface may be bathed with the solution, and strips of sterilised gauze soaked and applied to entirely cover it, a layer of absorbent cotton held with a light bandage over all. After three or four days the dressing is removed carefully after thorough moistening, as it adheres closely. The second dressing is applied as at first, and allowed to remain a week. Blackwood finds it painless, anodyne, antiseptic, preventing inflammation and suppuration and septic poisoning. It coagulates the albuminous exudation, and healing takes place under the coagulum. The staining of the hands and linen caused by the dressing can be removed by *Boracic acid*. Gaucher (*Sem. Méd*., May 26, 1897) has removed acute vesicular eczema by the same treatment. The skin and kidneys are intimately related, and *Pic. ac*. has a powerful action on the latter. Among other affections it has cured diabetes. Halbert (*Clinique*, quoted *H. W*., xxxiv. 542) reports this case-Mrs, C., 49, had "nervous prostration" since the shock of the loss of a child three years before. Wasting with great appetite. Intense thirst and copious urination, especially at night. Great perspiration and some jaundice. Heart flabby, mitral bruit, dyspnśa; emaciation, anćmia, exhaustion. Urine 1040, 7 1/2 per cent. of sugar and some albumen. *Pic. ac*. 6x six times daily. Rapid and continuous improvement followed. Kent (*H. P*., viii. 168) says *Pic. ac*. cures fig-warts and gonorrhśa; he was led to infer its relation thereto by its power over pernicious anćmia, which he has often traced to a gonorrhśal base. *Pic. ac*. is *suited to* dark complexioned persons, with dirty appearance about knuckles (from bile pigments); anćmic and cachectic persons; worn-out persons, overtaxed mentally and bodily. *Peculiar sensations* are: As if sand, or sticks, in eyes. As if throat would split. As if legs enclosed in elastic stockings; as if chest encircled in a tight band. Pricking as from needles in legs. As of a lump back of thyroid cartilage. As if stairs or ground coming up to meet him. As of ants crawling over surface. Nose-bleed accompanies heat and congestion of head. Heaviness of head alternates with emptiness. The right upper part of the body is more affected than the left, the left leg more than the right. Touch < pimples. The headache is > by binding head tightly; > by rest; lying down. < By motion; walking; raising head; sitting up; stooping; ascending stairs. < By study or slightest

mental exertion. The throat is > by eating; < empty swallowing. Turning over, and turning the head < headache. < Morning; 5 a.m. nausea. Open air and cold room > headache. Work in open air = prostration. Wet weather < pains. > From cold air and water. Chilliness predominates. Lamplight, strong light, moving eye < pain in eyes. During and after micturition, burning.

Relations.—*Compare:* Am. pic., Calc. pic., Fer. pic., Zn. pic. Spinal exhaustion, Ox. ac. (Ox. ac. more numbness, blueness, pains in small spots; symptoms < thinking of them. Pic. ac. more heaviness; extreme spinal softening). Tired feeling, exhaustion from sexual excess, Phos. ac. Fatty degeneration, sexual excess and priapism, brain-fag, congestive vertigo, burning in spine, Phos. (Phos. has more irritability and excessive sensitiveness, sexual excitement very strong; Pic. ac. has more intense erections but less marked lasciviousness). Brain-fag, inability to study, gastric symptoms, sour eructations, < morning, Nux. Brain-fag, occipital headache, sexual neurasthenia, Gels. Lascivious thoughts in presence of women, Con. Headache and backache, Arg. n. Spinal pains, Alm. (Alm. pain as if hot iron had been thrust into the part). Nervous exhaustion, sensitive spine, Sil. (Pic. ac. washed out, *must* give in; Sil. *won't* give in). Nervous exhaustion, Zn. Violent erections, Canth., Graph., Hyo., Phos., Myg., Sil. Acne, K. bro., Bels., Arct. l. Hands sweat, Sil. Burning in back, Lyc., Phos. Writer's cramp, Gels., Plat.

Causation.—Fatigue. Study. Mental exertion.

SYMPTOMS.

1. Mind.—Nervous feeling, which I never have except when fever is leaving me, feeling as if about to be crushed by the bed-clothes, arms, face, tongue, and forepart of brain seemed to reach the clouds when I was going to sleep.—Although enjoying the society of men, idea of marriage unendurable.—Desire to be alone.—Irritable.—Low spirits.—Indifference, lack of will power to undertake anything.—Disinclination for mental or physical work, aversion to talking or movement, with headache.—Mental prostration after reading a little; after writing a little.—The least study = burning along spine and other symptoms.

2. Head.—Vertigo: at noon, < rising from a seat; at 6 p.m. on least motion, with nausea, both repeated at 9 p.m., with pain in forehead and vertex and inability to sit up; on stooping or bending head or lying down; < evening.—Headache: < rising, > open air; > pressure; > bandaging head; morning, probably from over-sleeping; in forenoon, < afternoon; in afternoon and evening, with trembling; in evening.—Headache in evening, with thirst and heat, chiefly in temples, and burning in external ears, < stooping, = vertigo, head feels too small, scalp sore to touch, sore aching in infra-orbital region.—Heat and congestion of head with nose-bleed.—Pressure outward as if head would fly apart, at 8 p.m., < motion and study.—Heaviness; and dulness; alternating with emptiness.—Head feels as if failing forward.—Shooting from outside to centre of

forehead in evening.—Intermittent, sharp, and vibrating pain in r. supra-orbital region.—Aching in r, supra-orbital region; and in nape.—Throbbing over r. eye.—Shooting from r. to l. temple with headache.—Neuralgic pain alternately in l. and r. temples.—Pressure outward at sides of head at 9 p.m., < turning head, moving eyes or least motion, with sensation as if frontal bones would split open.—Contracted, squeezed sensation in l. hemisphere of brain at 6.30 p.m. on going into open air.—Pain in r. lower occiput, with sensation as of a hand passing along r. parietal eminence.—Pain in occiput and in nape; pain in r. lower occiput, as if r. side of cerebellum were loose, 6 till 7 p.m., < walking, > quiet, with throbbing.—Heavy pain extending down neck and spine.—Heavy throbbing and burning pains, extending from nape to supra-orbital foramen and thence into eyes, which throb and feel sore to touch.—(Pain shooting up from spine into head.).—Confusion in base of brain.

3. Eyes.—Eyes yellow.—Shooting in centre of eye, extending along optic nerve to occiput, with soreness of balls on touch, and photophobia.—Sensation of sand in eyes, with smarting pain and acrid tears.—Feeling as if sticks were in eyes on waking, with inflammation, afterwards feeling as if sticks were in them in evening.—Styes; with sore feeling.—Eyes < on moving them.—Lachrymation.—Pupils dilated.—Conjunctivitis; < r. eye, > washing with cold water and by cold air, < warm room, with difficulty in keeping eyes open, and sticky feeling on reading.—Shooting from r. eyeball to l. side of occiput; pain < moving eyes, > closing them and quiet, with soreness; heavy, smarting, and burning pains, > pressure; sore pains, < strong light and by turning eyes.—Throbbing pain in l. eyeball much < going upstairs.—Inability to keep eyes open when studying.—Air looks smoky.—Vision: dim and confused; dim, can read clearly at only one point, about five inches from eyes; blurred; whirling of objects.—Vision of sparks.

4. Ears.—Puffy and burning sensation in ears as if worms were crawling in them.—Pain behind r. ear running down side of neck.—Painful boils in meatus.—Buzzing and hissing in ears.—(Noises in ears, with vertigo and headache at the base of brain.).—(Chronic deafness, apparently caused by excessive headache, with noises in the ears when tired, membrane pale.)

5. Nose.—Boil in l. nostril.—Stinging on r. side of nose.—Acne along edges and sides of nose, indurated, elevated papules, rather dark red, painless but sore to touch, very small pustules on tips.—Weight or pressure on bridge.—Nose full of mucus, call breathe only through mouth, > open air.—Bleeding from r. nostril; with heat and congestion of head.

6. Face.—Pustular acne on face, burning and stinging when touched; on chin.—Irregular pain in lower jaw, with beating in molars.—Tingling in lips.

8. Mouth.—White, frothy saliva hangs in strings to the floor.—Taste: bitter; with thirst; sour, bitter; sour; bad; bad, of gas.

9. Throat.—Redness of throat, with raw, scraped, stiff, and hot feeling, as if burnt, and with thick white mucus on tonsils, difficulty in swallowing, with sensation as if throat would split open.—Rawness in l. side, extending forward to submaxillary gland, < swallowing; rawness with roughness and scraping.—Soreness back of and above soft palate, with debility.—Dry and husky.—Feeling of a plug on swallowing saliva and afterwards.—Sensation of something in lower part of śsophagus.

10. Appetite.—Appetite great in evening; increased, then lost; lost; lost for breakfast.—Aversion to food; at noon.—Thirst: great, with bitter taste; unquenchable, for cold water.

11. Stomach.—Eructations: empty; sour, of gas and ingesta; bitter after breakfast.—Waterbrash.—Nausea: on retiring; after retiring, with headache; deathlike, in stomach and abdomen on waking at 5 a.m., < rising and moving about, returned on waking a second time, repeated next morning on waking.—Vomiting.—Sharp pain in epigastric region; when eating breakfast.—Oppression of epigastric region.—Weight in pit of stomach, with ineffectual desire to eructate.—Faint feeling in epigastrium most of the time.

12. Abdomen.—Sticking through hepatic region, < in muscles.—Liver full of fat granules (in animals poisoned with *Pic. ac.*).—Tendency to jaundice.—Fulness of abdomen.—Rumbling: in small intestines; at 7 a.m. on waking, with colic; with crampy pain and flatus.—Emission of flatus; during the day; in evening.—Crawling stinging.—Pain in abdomen all forenoon, with slight headache.—Pain in abdomen on waking, with strong erections, and on moving emission of much flatus.—Pain in neck of bladder.—Sticking backward through l. umbilical region.—Sharp pain l. side of umbilicus.—Shooting, wandering pain in region of coccyx, bladder, rectum, and umbilicus, caused by wind.—Sharp pain in r. iliac region, above ovary at 11 p.m., with soreness on pressure.—Pain: in lower part of large intestines; in l. groin on walking, < ascending stairs.—Occasional sensation of giving way in hypogastrium all day.—Vacant and sore feeling in hypogastric region.

13. Stool and Anus.—Stinging in anus during and after stool, with itching.—Shooting around anus at 9 p.m.—Stool like gruel, yellow or yellowish-grey, twice before 9 a.m.—Diarrhśa: with burnings and smarting at anus; frequent with prostration, light-coloured, with cutting and smarting at anus during and after stool.—Stool: soft; light-coloured, with tenesmus, then drawing up of anus; scanty, with burning and smarting at anus; in plugs, easy, shooting away, then much flatus; yellowish, copious, oily, frequent.—Stool quick, as if greased, of sweetish smell, as of boiling sap, at night and morning, then with much wind.—Difficult stool, next day ineffectual desire for stool.

14. Urinary Organs.—Sharp pain in region of bladder; in evening < r. side.—Frequent micturition in morning.—Dribbling micturition.—Urethra: jerking drawing in; pain in after micturition burning pain during micturition.—Urine: yellow; of a milky, olive hue dark; indications of sugar; dark yellow, with strong odour; dark yellow, scanty, afterwards profuse and yellow; red; dark, in evening.—Urine copious and pale; and light coloured, sp. gr. increased; and hot when passed, with burning pain in urethra; afterwards scanty.—Urates abundant.—Urine contained much indican, numerous granular cylinders and fatty degenerated epithelium.

15. Male Sexual Organs.—Erections: in morning on waking; at 11 a.m., with bruised pain in l. testicle, extending up cord to external abdominal ring; firm in morning, with pain in abdomen, next morning woke with emission and firm erection, which lasted about ten minutes after the emission; terrible at night, with restless sleep; violent, all night; violent, all night, then profuse emissions.—Lascivious thoughts in presence of any woman.—Desire: at night, with emissions; at night, with hard erections, lewd dreams and emission, priapism night and day.

16. Female Sexual Organs.—Occasional aching and twinges in l. ovarian region.—Menses delayed; during the period yellowish-brown leucorrhśa.—During menses, bruised pain in abdomen with sickening sensation.—Excessive and voluptuous pruritus at night, after retiring, making her feel irritable and exasperated (night before menses; usually had slight pruritus *after* menses, never *before*).—(Used locally in diseases of nipples, inflammation diminishes, skin becomes tougher.)

17. Respiratory Organs.—Dry cough, as from dust in throat, then nausea.—Can get the breath only half-way down.

18. Chest.—Twitching: in l. side over eighth and ninth ribs; in l. side over tenth and eleventh ribs from 6 till 11 p.m., with throbbing in muscles.—Pain in r. side, extending across l.—Pain in l. lung in evening.—Sharp pain under r. clavicle.—A heavy throbbing in l. chest under tenth and eleventh ribs at 11 a.m., changing at noon to region of kidneys, extending at 2 p.m. into legs, < l.—Stunning pain at 9.30 a.m., with twitching in throat.—Tightness of chest, as if encircled by a band.—Numbness in lower part of sternum.

19. Heart and Pulse.—Pain in apex of heart in evening.—Intermittent fluttering at base of heart all day, it seemed to move.—Palpitation.—Pulse: frequent; slow, feeble, afterwards rapid; slow, small, and feeble; irregular.

20. Neck and Back.—Terrible pains in neck and occiput, extending to supra-orbital notch and thence into eyes.—Muscles on r. side of neck felt as if they would give way in afternoon when lying; at night when lying on r. side, with feeling as if neck

would be dislocated.—Pain in back and lower limbs, with heaviness, tired aching, and weakness.—Burning along spine and very great weakness, < by study.—Heat in lower spine; aching and digging in loins, < from motion.—Pain extending from r. scapula to r. loin when bending forward.—Sticking: under r. scapula; in lumbar region or bending forward when sitting.—Pain in lumbar region; and anteriorly in thighs, in muscles, < motion, with weakness in the same, < legs; extending down legs, < motion, legs and lumbar region sensitive to pressure; heavy at 6 p.m.—Dragging pains in region of kidneys and at nape, extending upward and downward till they meet between scapulć, at 2 p.m.—Weakness in sacral and lumbar regions.—(Myelitis with tonic and clonic spasms, keeps legs wide apart when standing; looks steadily at objects as if could not make them out.—Spinal exhaustion following acute disease.).—Sharp pain in region of coccyx.

21. Limbs.—Rheumatic pains in joints.—Weakness from a short walk, with excessive heaviness.—Heaviness, < l.; of arms and legs on exertion, < legs, legs weak and heavy all the time.—Extremities cold.

22. Upper Limbs.—Lame sensation in shoulders.—Shoulders tired and sore; r.—Twitching of lower part of l. biceps; in forenoon.—Shooting in l. elbow, extending down arm.—Pain in r. elbow between ulna and radius.—Shooting in hands.—L. hand goes to sleep.

23. Lower Limbs.—Weakness of limbs (< l.); on ascending stairs; and heaviness.—Numbness and crawling in legs with trembling and pricking as from needles.—Twitching on back of l. hip at 9 p.m.—Pain anteriorly in l. thigh, can hardly flex and extend legs.—Hips and legs heavy all day.—Knees weak.—Twitching of flesh of r. leg.—Sticking in legs and feet.—Pain in legs anteriorly, on touch; in calves all night.—Deep-seated, sore pain in upper part of l. Scarpa's triangle, < night, > sleep, returning on waking.—Numb, sleepy sensation, extending to soles, > cold water and in the open air.—Calves lame and sore.—Weakness of legs; < l., which trembles; with soreness; with heaviness.—Heaviness of legs, < l.—Numbness of anterior muscles.—Crawling pain in l. sole and under patella.—Feet feel as if frostbitten.—Numbness of l. foot.—Soreness in ball of l. big toe in afternoon and evening, > continued walking.

24. Generalities.—Veins sunken and small, < l. side.—Bright yellow colour of sclerotic, skin, and urine.—Cancerous cachexia.—Trembling of all muscles.—Rheumatic stitches in different parts, with muscular debility.—Darting pains in various parts, extending into bones, every hour of the day.—All pains lasted till 8 p.m.—Soreness and lameness, < l. side, in morning when rising, with heavy, throbbing pains and dilated pupils, conjunctivitis, and lachrymation.—Tired feeling: in morning on waking, with heaviness; on least exertion; > open air; with lame sensation over whole body; with no desire to talk or do anything, indifferent to anything around, sleepiness and desire to lie down.—Numbness, with pains, as when taking cold.

25. Skin.—Yellow skin.—Pimples on face and neck that he had for years were now increased in number and size.—Reddish, painful boils about mouth and face, when opened they exude a thin, clear serum, which dries into a transparent scab, then become painful and contain pus like condensed milk.—Reddish boils on face, becoming pustular, with burning stinging on touch.—Erythema of abdomen and feet.—Tight feeling in skin over epigastrium.—Itching; at night.—(Burns.)

26. Sleep.—Frequent gaping in church.—Sleepiness, slept an hour in afternoon, then felt better.—Sleepiness in evening, > walking in open air; at 9 p.m.—Sleep sound but unrefreshing.—Sleepless all night.—Late falling asleep from a crowd of ideas.—Woke earlier than usual and dozed till time to rise.—Woke at 3 a.m., then difficulty in going to sleep.—Constant dreams; dreamt that she was pregnant.

27. Fever.—Chilliness, with cold, clammy sweat.—Cold limbs; feet; hands and feet.—Fever; and chilliness, then cold, clammy sweat.—Chilliness predominates.—Heat in head; r. side; in forehead.—Burning: along coronal suture; along spine, < trying to study, > motion.—Heat in lower dorsal and lumbar regions.—Sweat.—Cold, clammy sweat: in evening; on hands; on hands and feet in daytime; on hands in forenoon; on feet in evening, next day feet cold and sweaty all day.

Picrotoxinum.

Picrotoxin. An Alkaloid obtained from the fruit of Cocculus indicus. $C_{15}H_{16}O_6H_2O$. Trituration.

Clinical.—Dysentery. Dyspepsia. Hernia. Locomotor ataxy. Night-sweats. Urine, excess of.

Characteristics.—*Coc. ind*. is used to stupefy fishes, and when *Picro*. is added to water in which fishes are swimming "they make winding and boring movements of the body, alternating with quiet swimming, open their mouths and gill caverns frequently, fall on their side and rapidly die of asphyxia" (Falk, quoted *C. D. P*.). J. H. Henry proved *Picro*. on himself. The symptoms were so severe that he was alarmed, and took *Opium* and *Camphor* to antidote them. Nausea with tendency to faint, violent intestinal pain and purging, dysenteric diarrhœa and excessive secretion of urine, cramps and paralytic sensations were experienced. The symptom which gave the most concern was the pain in the bowels and sensation as if the bowels would protrude at left inguinal ring. Brunton says the local application of *Picro*. as an ointment to the head for tinea capitis and to destroy pediculi has been followed by convulsions and death. Hansen mentions that it has been given at bedtime to relieve the night-sweats of phthisis. With *Picrotoxicum acidum* 3x Dörr cured in a few weeks a case of advanced locomotor ataxy with amaurotic amblyopia (*B. J. H*., xxxvii. 378).

Relations.—*Compare:* Coccul. In tetaniform convulsions, Nux (with Picro. respiration is accelerated more from spasm of glottis than of respiration, and there is less susceptibility to slight touch; more choreic symptoms.—Farrington).

SYMPTOMS.

1. Mind.—Sad thoughts, desires sleep.

2. Head.—Nausea with headache.

11. Stomach.—Pressure on stomach, with coated tongue and eructations.—Pain in pit of stomach.

12. Abdomen.—Pain extending all over bowels.—Fainting, violent subacute irritation of intestinal lining membrane.—Pain in bowels as if bruised.—Soreness in l. inguinal ring as if bowels would protrude.

13. Stool and Anus.—Flatulence with fetid diarrhœa, followed by tenesmus, painful and continued.—Diarrhœa and dysentery.

14. Urinary Organs.—Large quantity of clear urine passes twelve times a day.

17. Respiratory Organs.—Wants more breath; respiration impeded.—(Asphyxia in fishes.)

20. Back.—Bruised pain in back; drawing pain (l.).

22. Upper Limbs.—Dragging sensation of r. arm.—Pains in l. forearm running up to shoulder.

23. Lower Limbs.—Lower limbs feel bruised and paralysed (l.); have a tendency to draw back with the back, giving great > to limbs.—Constrictive painless sensation.—Cramp pains.

Pilocarpinum.

PILOCARPINUM. Pilocarpia. Pilocarpine. $C_{11}H_{16}N_2O_2$. Solution in distilled water.

P. MURIATICUM. Hydrochlorate of Pilocarpine. $C_{11}H_{16}N_2O_2HCl$. Solution in distilled water.

P. NITRICUM. Nitrate of Pilocarpine. $C_{11}H_{16}N_2O_2HNO_3$. Solution. Trituration.

Clinical.—Albuminuria. Alopecia. Convulsions, uræmic; puerperal. Deafness. Ménière's disease. Mumps. Myopia. Perspiration, excessive. Pregnancy, nausea of; salivation of. Salivation. Vertigo, aural.

Characteristics.—*Pilocarpin*. is one of the most characteristic of several alkaloids which have been isolated from *Jaborandi* (*Pilocarpus pinnatus*). It has been used, like *Jabor*., to produce and cure profuse sweating; and by oculists to produce contraction of the pupil, which it does whether it is injected subcutaneously or applied directly to the eye. It has also an action on the ear. G. P. Field (*Brit. Med. Jour*., May 17, 1890, &c.) has given it with good effect in labyrinthine deafness, tinnitus, and auditory nerve vertigo. The cases least amenable to its influence were those in which the hearing was > in a noise as of a train, &c.; and those in which the hearing is < after a cold. Subjects of syphilis, hereditary or acquired, and patients who are more deaf when tired, are the most suitable. The method of administration is as follows: A solution of *Pilo. nit*., gr. 1/2 to 10 minims, is used, and the initial dose (injected into the back of the arm) is gr. 1/12, gradually increased to 1/8, 1/6, and, if well borne, to 1/4. Salivation and sweating speedily occur. After each injection a drachm of sal volatile is given in a small tumbler of water. The patient is made to lie on a sofa, well covered with rugs, the head being wrapped in a shawl. The wraps are removed very gradually as the effects wear off. If there is any faintness brandy is given. The treatment is continued for a period of six weeks. [According to Cooper the improvement. is only temporary. Moreover, the injections create tendency to take cold in some patients.] James C. Wood (*Med. Cent*., i. 301) relates two instructive cases. (*1*) A primipara, 22, eight months pregnant, was seized with violent convulsions the night after a long walk in the month of June, and exposure whilst perspiring. Delivery was effected with extreme difficulty, and only under chloroform and after incision of the imperfectly dilated os and craniotomy of the fetus, which was evidently already dead. A sharp hæmorrhage followed. The week previous the urine had been examined and found normal. It was now scanty and loaded with albumen. *Apis* 3x was given. This was about noon. At 5 p.m. the convulsions returned. Two ounces of urine drawn off by the catheter became almost solid on boiling. *Pilo*. gr. 1/6 was administered hypodermically. In a few moments saliva began to pour from the mouth, drops of sweat gathered on the head, and sweating soon became general; nausea and some retching; laryngeal and nasal secretions increased; blood pressure diminished; face and entire body flushed red. These symptoms lasted four hours, when a second injection kept them up. The saliva was thick, stringy, exceedingly tenacious. The urine rapidly increased in quantity, whilst the albumen disappeared. Consciousness was restored, and the patient made a perfect recovery under *Apis, Arsen*., and *Merc*. Wood has seen *Pilo*. relieve uræmic convulsions in the same way, the diaphoresis, free elimination by the skin and other secretive organs, removing the pressure on the overburdened kidneys until they have time to recover themselves. (*2*) From the bedside of No. 1 Wood went to see a woman three months pregnant. She was a picture of distress and despair. For eight weeks she had saturated from six to ten handkerchiefs daily with tenacious saliva. Nausea and vomiting were

constant, emaciation extreme. Nausea < by slightest movement. Alternate redness and paleness of face, flushes of heat and perspiration. Urine scanty, high coloured, depositing much uric acid. Very chilly; obstinate constipation. *Pilo*., a tablet containing gr. 1/6 was dissolved in half a glass of water: to take a teaspoonful every two hours. Next day Wood found his patient sitting up, cheerful, and free from nausea and salivation. The improvement, with some fluctuations, continued. *Merc., Ipec., Nit. ac., K. bi., Hydrast., Act. r*. had all previously failed. Lambert (*H. W*., xxxii. 460) had under treatment a severe case of rheumatic iritis of *left* eye, for which *Atropine* (gr. iv. to the ounce) was being instilled several times in the day. There developed profuse night perspiration of the *right* half of the body, and during the day the right side was much moister than the left. *Pilo. mur*. 4x gr. iv. at bedtime reduced the excessive secretion of sweat. Lambert queries whether the *Atropine* instillations into the left eye were accountable for the absence of sweat on the left side of the body.—The hair as well as the skin is affected by *Pilo*., which is an ingredient in many "hair restorers." Schmitz, of Cologne (*H. W*., xiv. 180) treated two bald men with injections of *Pilo. mur*. to produce absorption of inflammatory residue within the eye. In both a secondary effect occurred—the growth of young downy hairs on the bald parts of the scalp. One, æt. 60, in four months had his head covered "partly with grey and partly with black hairs" of considerable growth, so as to entirely obliterate his previous baldness. *Pilo*. has also been known to turn white hair black.—A woman who had had *Pilo*. injections complained to Cooper that thereafter she had been constantly taking cold and in fear of bronchitis. Her skin, too, became irritable. *Pilo. mur*. 3x is Burnett's chief remedy in mumps. He regards it (and *Jaborandi*) as an organ remedy of the sweat glands, parotid, and pancreas. Frohling (*H. R*., xii. 320) relates a case showing the power of *Pilo*. (he used *Pilo. mur*. 4th trituration) over debilitating sweats left after acute diseases. With *Merc. sol*. 12 he had cured a case of rheumatic fever so far as the articular affection was concerned, but the sweats persisted and strength declined in spite of remedies until Pilo. was given, when the sweating stopped after the first dose.

Relations.—*Antidoted by:* Atrop., Amm. c. (sal volatile); brandy. *Follows well:* Merc. (in sweating of rheumatic fever). *Compare:* Jaborandi, Myosot., Eser., Phys.

SYMPTOMS.

2. Head.—Throbbing in temples with acceleration of pulse.—Turns white hair black.

3. Eyes.—Profuse lachrymation.—Pupils contracted to pin-head.—Sight for distance improved.

4. Ears.—(Labyrinthine deafness; < when tired; in syphilitics.—Aural vertigo.—Deafness with tinnitus.—Tinnitus of l. ear.).—Increases the secretion of wax.

5. Nose.—Nasal secretion increased.

6. Face.—Forehead and face red, veins stand out.—Perspiration begins on face.

8. Mouth.—Sudden salivation; maximum reached in fifteen minutes, continues two hours, one and a half pints of thin saliva being secreted in the time.—Saliva thick, stringy, exceedingly tenacious.

11. Stomach.—Intense thirst following the sweating.—Nausea; only occurring when salivation is complete; does not go on to vomiting as that of Jaborandi does.—Nausea and retching.

13. Stool.—Urging to stool.

16. Female Sexual Organs.—Menses two days early.

17. Respiratory Organs.—Increased bronchial mucus; much cough and expectoration.—Constantly taking cold and in fear of bronchitis.

19. Heart.—Weakness of heart.—Pulse accelerated, blood pressure diminished.—After the perspiration the pulse sinks to normal.

24. Generalities.—Dilatation of blood-vessels; temporal artery becomes a thick, pulsating cord; veins of forehead stand out blue.—Exhaustion (after the perspiration) during which most of the patients fell asleep.—Faintness.—In a case of lead paralysis it produced profuse salivation and perspiration, with sensation of great coldness and excessive tremors of limbs.

25. Skin.—Irritable skin.

26. Sleep.—Patients fall asleep under its influence.

27. Fever.—Sensation of coldness and shaking chill without fall of temperature.—Increase of temperature with feeling of intense cold.—Redness of face with sensation of warmth; perspiration at first over forehead along margin of hair, invading successively neck, chest, trunk, arms, and, finally lower limbs.—Sweat profuse; may lose from two to four pounds in the sweating.—Sweat begins about five minutes later than salivation, often accompanied by feeling of intense cold, chattering of teeth and desire for wraps.—After sweat: thirst; feeling of relief and sense of increased vigour.

Pimenta.

Eugenia pimenta. Myrtus pimenta. Pimenta officinalis. Allspice. Jamaica Pepper. [Pimento, or Allspice, consists of the dried berries of the West Indian Eugenia pimenta and E. acris.] N. O. Myrtaceæ. Tincture of the fruit.

Clinical.—Chill. Neuralgia.

Characteristics.—"Allspice" is so named because its odour is said to resemble a combination of cinnamon, nutmeg, and cloves. A tincture was proved by Becket and developed one-sided neuralgias and disturbed sensations of heat and cold.

Relations.—*Compare:* Eucalyp., Eug.

SYMPTOMS.

2. Head.—Semi-lateral neuralgic lesions.

11. Stomach.—Very imperious desire to eat.

24. Generalities.—Semi-lateral neuralgic lesions, esp. of head.

27. Fever.—Disturbance in calorification and sensibility; parts of body burning hot, others cold.—Peculiar cold sensation as if sponge filled with cold water passed here and there over the surface, succeeded by sensation of heat, as in the reaction after a cold bath.

Anagallis Arvensis.

Scarlet Pimpernel. Weather-glass. Red Chickweed. N. O. Primulaceæ. Tincture of whole fresh plant.

Clinical.—Amblyopia. Cataract. Constipation. Dropsy. Epilepsy. Epistaxis. Gonorrhœa. Gout. Hæmorrhoids. Headache. Hypochondriasis. Hysteria. Mania. Neuralgia. Rheumatism. Ringworm. Skin, unhealthy. Snake-bites. Syphilis. Tetters. Ulcers, ill-conditioned. Wounds.

Characteristics.—Like the *Primula obconca, Anagallis* has a marked action on the skin. Skin itches all over; becomes dry and rough; has bran-like tetters in rings; ulcers and swellings on joints. Ill-conditioned ulcers. It favours expulsion of splinters. Has been used for snake-bites and hydrophobia. It produces great exhilaration and activity of mind: thinks of everything. Great hilarity. (The Greek name of the plant means to laugh out loud.) Tickling and itching in left ear. Bran-

like, ring-shaped tetters on face. Dull pains in gums accompanied by very hard stools. Sensation on tongue as if something cold were placed on it. Dryness and scraping in throat. Scraping, scratching of larynx and trachea with hoarseness; < after eating. Tickling prickling along urethra; orifice agglutinated. Tearing in spermatic cord. Syphilis with nose-bleed, deranged mind, pain in small of back, and itching skin. Soreness on chest with pain. Eruption on chest. Tensive drawing ascending from left shoulder to nape of neck (*Eupat. perf*). Skin of hands dry, sticky, and dirty-looking. Tetters. Vesicles in groups. Pain and tightness in bend of left knee. It is a vulnerary of some importance. Symptoms are < by touch; < after eating.

Relations.—*Compare:* Prim. obc. and Cyclamen. (bot.); Coff. (joyous; excited); Lith. c. (rough skin, ringworm); Sep., Tellur. (ringworm); Puls. (chilly, catarrh); Rhus t.

SYMPTOMS.

1. Mind.—Exhilarated, mind active, thinks of everything.—Cannot collect his thoughts whilst listening to sermon on account of jovial feelings.—Great hilarity for several days; everything gives him pleasure.—Despondency.—After mental exertion great prostration.

2. Head.—Heat rising to head, slight sweat on forehead, followed by pressing stitching in eyeballs, and a tickling, pricking in urethra, inclining him to coition.—Headache just over supra-orbital ridges with eructations and rumbling in the bowels.—Spasmodic lancinations in both temples, extending to eyes.—Pressive aching in forehead and occiput from a current of air blowing on him.—Intense headache and nausea with pains throughout the body.—Occiput: dull or tearing pains and inclination to vomit; violent headache, with hard, knotty stools; knocking pain in l. side; dull pain all night.—Headache > by coffee.—Skin of forehead feels too tight.

3. Eyes.—Things seem to float to and fro, he cannot write.—Glittering before l. eye.—Pressing in eyes after headache.—Stitches in temples extending into eyes.—Pain in r. eyeball < on touching lids.—Itching of lids.

4. Ears.—Obstruction and pain in r. ear following the pressure in eyes.—Stitches in r. ear.—Tickling and itching in l. ear.

5. Nose.—Nose-bleed (syphilis).—Unpleasant tickling on top of nose, with violent sneezing.—Copious secretion of yellow mucus.

6. Face.—Neuralgic pains in r. cheek-bone, extending to supra-orbital region; during the night.—Pains in facial muscles.—Bran-like, ring-shaped tetters on

face.—Itching on cheekbones.—Itching and tickling stitches on l. corner of mouth and lower lip, just under the border.

7. Teeth.—Dull pain in a hollow tooth with trembling of the heart.—Dull pain in upper molars and tearing pain in r. cheek-bone.—Teeth pain as from cold; < from touch; chilly sensation in teeth.—Dull pain in gums accompanied by very hard stools.

8. Mouth.—Sensation on tongue as if something cold were placed upon it; also near frænum.—Viscid saliva in mouth, raised by coughing.—Collection of water in mouth, with slight tearing in molars.

9. Throat.—Sensation of dryness in throat with scraping.—Tickling at soft palate at night, as from touch of something cold.

11. Stomach.—Eructations, nausea, inclination to vomit, and rumbling in bowels with headache.—Causes inflammation of the stomach in horses.

12. Abdomen.—Hepatitis and induration of liver.—Abdomen distended with wind.—Visceral obstructions.

13. Stool and Anus.—Inflammation of rectum in horses.—Itching in rectum; pressure in sacrum; piles.—Passes offensive flatus.—Stools: watery; soft and pappy; hard like stones; knotty.—Itching at anus after stool.

14. Urinary Organs.—Burning in urethra when urinating, mostly in the morning.—Orifice agglutinated; presses to urinate; stream divided.—Tickling prickling along urethra inclining to coitus.

15. Male Sexual Organs.—The burning in urethra before and during erection ceases during coitus.—Drawing pains in r. testicle and cord.—Tearing pains in spermatic cords.—Tickling in symphysis pubis.

17. Respiratory Organs.—Scratching and scraping in throat, esp. after meals.—Hoarseness proceeding from the trachea.—Cough dry, with a scratching sensation when reading aloud; with yellow phlegm from the nose; with spitting of saliva.

18. Chest.—A kind of restlessness in chest.—Soreness on the chest with fever.—Pressure in r. lung after a meal or when walking fast.—Suddenly a feeling internally in chest as if struck with a cushion full of pins.—Itching on l. side of chest, principally on nipple.—Eruption on chest.

19. Heart.—Violent trembling of heart, with general trembling and weakness, preceded by aching in a carious tooth and anxiety in chest in evening in bed.—Palpitation.

20. Neck.—Tensive drawing from l. shoulder up to neck; returns when lifting or stretching the arm.—Trembling of muscles of neck (horses).

22. Upper Limbs.—Pains in muscles of upper arm, outside, near shoulder.—Pains in forearm; in carpal and metacarpal bones.—Gouty swellings on joints of fingers.—Skin of hands and fingers very dry, sticky and dirty-looking.—Tetter on hands; moist or dry and hairlike.

23. Lower Limbs.—Pain in hip.—Tickling pains in r. leg and at the os ilium.—Drawing pains in muscles of l. leg; tearing during night.—Weakness and lameness in r. leg, as if it was too short.—Pains in bend of l. knee; sensation of tightness as if something swollen or sore.—Pains in shin bones; < when extending the leg.—Cramps.—Pains in metatarsus and sole (l.), in concave part of l. sole and near toes.

24. Generalities.—A chilly trembling.—Exhausted and drowsy.

25. Skin.—Itches all over; rough, dry.—Dry bran-like tetters in rings.—Ulcers and swellings on joints.—Ill-conditioned ulcers.—Promotes expulsion of splinters.

26. Sleep.—Falls asleep late; sleep restless; awakens early; feeling unrefreshed.

Pimpinella.

Pimpinella saxifraga. Burnet saxifrage. Bibernell. N. O. Umbelliferæ. Tincture of the fresh root.

Clinical.—Chilliness. Corns. Epistaxis. Fever. Headache. Lumbago. Stiff neck. Tinnitus.

Characteristics.—The majority of the symptoms of *Pimpinella* were obtained by Schelling from chewing the fresh root. The rest were contributed by Berridge, who proved the 1x on a man. Chilliness was a marked symptom, chilly in the back even in a warm room, and much < if a window was opened. Sensitive to draughts. Sensation of coldness in occiput as from a cutting wind behind. Cold stream from hip and into right leg. The pains and sensations extended from one part to another, principally from above downward and from before backward (temples to nape; forehead to eyes; nape to shoulders), from within outward; or alternated between different parts. There was rush of blood to head, followed by nose-bleed; whizzing in head, roaring in ears. Sinking sensation in intestines. Weariness and falling asleep of parts rested on. Frequent yawning and desire to take a long breath, which was difficult. Great drowsiness. The symptoms were < morning (vertigo sweat); afternoon (heat and rush of blood to head); by chewing reading; writing; reflecting;

rest (weary pain in limbs); standing; stooping; after stooping; walking; by opening window; in warm room.

Relations.—*Compare:* Rush of blood preceding nose-bleed, Graph. Occipital pains, Hell. n., Nat. s., Glon.

SYMPTOMS.

2. Head.—Vertigo: inclination to one side, morning, on rising; dizzy confusion.—Heat, rush of blood and confusion of head, soon followed by nose-bleed; afternoon.—Rushing in whole head, esp. down back part, with pressure.—Whizzing in head and sounds as in an empty barrel.—Dulness and heaviness in head, with drowsiness when reading.—Head feels tied up and compressed.—Sticking in forehead, extending to both sides along eyes.—Sticking burning from vertex to both sides and down over temples.—Pressing and pushing from temples to occiput and nape.—Sensation of coldness in occiput as though a sharp draught constantly blowing from behind; in a closed room.—Tension and pressive pain from occiput into nape.—Pain in occiput, < reading or thinking.—Acute stitches in occiput concentrated in protuberance.—Itching on vertex.—Shivering of scalp, hair bristles.

3. Eyes.—Smarting pain in r. eye.—Burning in eyes, esp. upper surface of eyeballs; disagreeable coolness.—Smarting in lids.—Vision dim, misty.

4. Ears.—Fine stitches extending out through r. ear, with roaring.—Roaring in ears as from a distant sound.

5. Nose.—Dry, stopped catarrh.

6. Face.—Pain as from an ulcer in r. cheek.

8. Mouth.—Sore, pressive pain in stump of tooth, l. lower jaw.—Burning aroma on tongue, palate, and throat.—Saliva increased during and after chewing.—Collection of mucus in mouth and fauces, obliging hawking.—Taste: acrid, burning, earthy; penetrating while chewing, later spreading a warmth through whole body; mouldy.

9. Throat.—Hawking of tenacious whitish mucus from arch of palate, and a crumbly, cheesy, offensive concretion from fauces.

11. Stomach.—Eructations: frequent, of gas; with vertigo and yawning; tasteless; acid, after stooping.

12. Abdomen.—Fine stitches just above navel.—Rumbling and gurgling.—Sensation as if intestines would sink down from their own weight.

13. Stool.—Purging.—Stool dry, harder than usual.

17. Respiratory Organs.—Oppression whilst walking, in open air and in house.—Breathing short, difficult; feeling of apprehension in chest.—Frequently impelled to take a long breath, which is difficult.

18. Chest.—The portion of the chest against which he leans becomes painful as if weary.—Transient, needle-like stitches, back and forth in sides of chest, back, small of back, and walls of abdomen.

19. Heart.—Sensation of heaviness in præcordial region and abdomen as if intestines would sink down of their own weight.

20. Neck and Back.—Stiff neck.—Pressive, tensive pain from nape to shoulder.—Constant, pressive, contractive pain alternately in nape, side of neck, and r. shoulder.—Constant tension and sticking in nape and occiput.—Constrictive, cramp-like pain in small of back, esp. on stooping; on standing upright; on walking.—Tension and tearing in small of back, extending into hips and back.—Burning in loins and small of back.—Pressive stitches in loins.—Tensive pain in back, esp. sacral region.

21. Limbs.—Weary pain in limbs while at rest.

22. Upper Limbs.—Pressive, sticking pains in r. shoulder; stitches shoot deep into r. chest.—The arm that is resting on the table feels weary and falls asleep.—Fine sticking, drawing from r. upper arm to hand, with a shivering extending through the limb.—Stinging as from nettles on last joint of r. ring finger.

23. Lower Limbs.—Pain in hips and pelvis as if broken.—A cold stream, extending into r. leg and foot, with fine stitches now and them.—Painful burning in corns (quite unusual).

24. Generalities.—The whole body feels weak and weary.—Weakness and general sick feeling.

25. Skin.—Fine stinging as from nettles deeply piercing the skin on last joint of r. ring finger, while writing.

26. Sleep.—Frequent yawning; with eructations.—Overpowering sleepiness (for an hour after chewing the drug).—Sleep dreamy.

27. Fever.—Unusual chilliness over whole body (in warm room).—Chilliness and shivering of scalp, the hair bristles (in warm-room).—Chill runs up middle of back; rest of body warm, and icy cold hands.—Great sensitiveness to every cool temperature, shivering in back when window is opened.—Violent catarrhal fever.—Sweat every morning.

Pinus Lambertiana.

Sugar Pine. (North America.) N. O. Coniferæ. Trituration of inspissated sap.

Clinical.—Abortion. Amenorrhœa. Constipation.

Characteristics.—The inspissated sap of *P. Lamb*. makes a sugary substance like manna. A small quantity (from a bit the size of a pea to a teaspoonful) has a decided but gentle laxative action, and in larger quantities emphatically so. It has also an action on the menstrual function, restoring menses when suppressed; and producing abortion in pregnant women.

Relations.—*Compare:* Sabina, Junip., Pin. syl., and other coniferæ.

SYMPTOMS.

13. Stools.—Gentle cathartic action.

16. Female Sexual Organs.—Used by Indian women to procure abortion.—In suppressed menses restores the flow and removes painful sensations resulting from suppression.

Pinus Sylvestris.

Scotch Fir. Red, Norway, Riga, or Baltic Pine. (The typical pine of Europe.) N. O. Coniferæ. Tincture of leaves and young twigs.

Clinical.—Ankles, weak. Anus, itching of. Bronchitis. Constipation. Diarrhœa. Dysuria. Emaciation of lower limbs. Glands, submaxillary and inguinal, swollen. Gout. Hæmorrhoids. Heart, palpitation of. Joints, stiff. Kidneys, pains in. Liver, enlargement of. Rheumatism. Scrofula. Squint. Tinnitus. Urine, increased; strong. Vertigo. Walking, late. Worms (lumbrici).

Characteristics.—*Pinus syl*. was proved by Demeures in the Ø tincture; and Patzack observed the effects of bathing in an infusion of the leaves. Pine baths may also be made by adding *Oleum Pini sylvestris* to an ordinary bath in the proportion of one minim to the gallon. These baths have a reputation in the treatment of rheumatism, gout, paralysis, scrofula, and skin diseases. The provings show that this reputation is founded on a specific relationship. Rheumatic, gouty, and paralytic pains in limbs, bones, and joints; stiffness; glandular swellings; enlarged and painful liver and spleen; chilliness and sensitiveness to touch. Scalp sensitive. Chest walls sensitive, with a peculiar feeling of *thinness*, as if they would give way at a touch. The kidneys were stimulated; burning on micturition; flow increased;

urine strong. Itching of the nose and discharge of round worms was noted. The menstrual function was deranged. Bronchial mucus was increased. Hansen gives "emaciation of lower extremities" and "weak ankles in children" as indications for it, and mentions that the Ø tinctures may be used externally, whilst the attenuations are given internally. Chilliness alternating with flushing; the face is alternately red and pale. Itching in general. The symptoms are < by exertion; walking; touch; in morning; in evening. In a patient of Cooper's *Pinus syl*. caused "headache < by any movement of the eyes"; and it cured a case of squint.

Relations.—*Compare:* Tereb., Sabi., Junip., Thuj., Aloe, Pix. Strong urine, Benz. ac. Red margin of eyes, Sul., Bac.

SYMPTOMS.

1. Mind.—Anxiety.—Despondency.—Wants to do many things, undertakes all and finishes none.—Mind dull, unable to think; caused by any exertion.

2. Head.—Vertigo, even to falling down.—Dulness; fulness; heaviness of head.—Pressive headache.—Tearing in temples.—Scalp sensitive.—Headache < by any movement of eyes.

3. Eyes.—Eyes inflamed.—Margins of lids red.—Vision dim; veiled.—(Squint.)

4. Ears.—Sticking in ears.—Roaring in ears.

5. Nose.—Violent nose-bleed several days in succession.—Mucous discharge from nose.—Sensation of coryza.—Itching of nose.

6. Face.—Face alternately pale and red.—Tearing in face.

8. Mouth.—Pain in teeth, with heat of face and pain in head.—Dry mouth with increased thirst.

9. Throat.—Uneasiness in throat as if something in the way.—Painful swelling of submaxillary glands.

11. Stomach.—Appetite at first decreased, afterwards increased.—Pressure in pit of stomach after eating, with great distension.

12. Abdomen.—Distension of hypochondrium, with pressive, burning pains.—Enlargement of liver.—Pressure and fulness in liver and spleen.—Colic with incarcerated flatus.—Pain in inguinal glands with swelling.

13. Stool and Anus.—Troublesome itching at anus.—Stool: thin, pasty, with colic and great excitement; bilious.—Discharge of round worms; itching and burning on anus; bloody, slimy, hæmorrhoidal discharge for several days.—Constipation.

14. Urinary Organs.—Violent boring-burning pains in kidneys, extending along ureters.—Spasms of bladder.—Burning pains when urinating.—Micturition difficult.—Very greatly increased secretion of urine.—Urine of strong odour.

16. Female Sexual Organs.—Menses, usually scanty, became more profuse.—Menses: earlier; delayed.

17. Respiratory Organs.—Hoarseness.—Increased bronchial mucus.—Short, dry cough.—Expectoration greater when coughing.—Breath tight, esp. when walking.

18. Chest.—Oppression.—Anterior portion of chest painful to touch; it seems as if very thin and ready to give way on the slightest pressure; all evening.—Burning in sides of chest.—In middle of sternum sensation as if a cupping-glass had been applied inside.

19. Heart.—Palpitation.

20. Neck and Back.—Drawing and stiffness in nape extending into occiput.—Pressive, tensive drawing pain between shoulders and small of back; motion difficult.

21. Limbs.—Limbs: stiff; heavy; weak, can hardly walk.—Gouty pain in all joints of hands and feet, esp. finger-joints.—Pressive-tensive pains in limbs.—Drawing-paralytic pains in limbs.

23. Lower Limbs.—Knees stiff with stinging-burning pains, so that they give out.—Pain in l. tibia when walking, it = sensation as if he would double up on himself (in morning only); next day same pain in r. tibia, with gripings in whole abdomen.—Cramps in calves when stretching in bed at night.—In evening, itching lancinations, crosswise, in fold separating first and second phalanges of r. great toe, > by applying hand.

25. Skin.—Nettle-rash.—Itching of whole body, < about joints and on abdomen.—Itching of nose.

26. Sleep.—Great sleepiness, esp. forenoon, with restless sleep in evening.—Sleepless.—Dreams which seem when remembered like real occurrences.

27. Fever.—Chilliness, esp. towards evening, alternating with flushes of heat.—Perspiration: general; easy.

Piper Methysticum.

Macropiper methysticum. Ava. Kava-kava. Kawa. N. O. Piperaceæ. Tincture of fresh root.

Clinical.—Albuminuria. Anus, prolapse of. Brachialgia. Brain-fag. Catalepsy. Cystitis. Dysuria. Eczema. Gonorrhœa. Headache. Head, enlarged feeling. Ichthyosis. Leprosy. Neuralgia. Neurasthenia. Orchitis. Paraplegia. Prostatorrhœa. Rheumatism. Toothache. Urethritis. Uric acid, excess of.

Characteristics.—*Piper methysticum* (it is called *Macropiper methysticum* in most recent botanical works, but I retain the older name by which it is best known in homœopathy) furnishes the root called Kava in Polynesia. The natives use it as a stimulant, either chewing the root or drinking a beverage made of it before undertaking any important business or religious rites. Excessive indulgence in it produces a skin disease like leprosy, called at Tahiti Arevareva. Lutz (quoted *H. W.*, xxviii. 175) describes the disease as observed amongst natives of the Sandwich Islands: "The skin, particularly that of the extremities, assumes the appearance of well-marked ichthyosis, associated with a certain degree of atrophy, such as is observed in senile skin. There is an absence of inflammatory symptoms." The mental symptoms of the" Intoxicating Pepper" (μέθνσις, drunkenness) are the most interesting feature of the drug's action. W. N. Griswold proved the third and second dilutions, and developed a large number of nervous, mental, and brain symptoms, among which are some which have proved to be keynotes. The drug causes a feeling of buoyancy, as if every nerve was strung up to the highest pitch; feels he can work without fatigue, quickly followed by a feeling of tired brain, and over-sensitiveness to all external impressions. Mental tension; feeling as though the head were enlarged even to bursting. The mental symptoms, excitement or depression, and the headache, were > by diversion of mind. This is one of the keynotes, and it has served to indicate Piper m. in connection with other symptoms. Griswold cured a case having burning in chest, > *by diverting mind* (*Org.*, i. 229); and three cases having: "Agonising pain, with tossing, twisting, and writhing; patient *driven irresistibly to change position, which generally gives little or no* >." This italicised passage is the second keynote of *Piper m*. These cures were with the 1x or Ø tinctures. Skinner gave fractional doses of Ø tincture in water to a highly excitable young girl who had severe toothache and earache, and had worn out her family by the incessant day and night attendance she required. The pains were dragging, heavy, < at night in bed, and after or when eating, "forgets all about her pains if amused with anything, but directly she is tired of it she exclaims, 'Oh, my tooth or ear!' " In addition she had "Agonising pain with tossing, twisting, and writhing; irresistibly driven to change position." The patient slept well that night the first time for a fortnight, and had no more pain. The remaining swelling was removed by *Puls*. 200. Skinner also reports this case: Miss R., 20, has toothache in a decayed molar, > if attention is diverted

by anything sufficiently exciting. When pain is at all violent she has no rest in any position, must keep continually changing it. *Piper m*. 500 (F. C.) was given, and there was relief very soon after the first dose. A few doses completely removed the pain (*Org*., i. 299).—*Piper m*. has much dizziness and vertigo; > on closing eyes. The forehead was full, "solid with pain;" this shifted to occiput and cervical spine, where it became a compression, extending as a constricting sensation to stomach and chest. The sensation of enlargement of head was marked and persistent. Farrington says convulsions simulating catalepsy are produced. Cerna (quoted *H. W*., xxvi. 556) as a result of his investigations found *Piper m*. a general and local anæsthetic. It diminishes reflex action by its action on the cord, and kills by paralysing respiration. Cerna illustrated its relationship to *Cubeba* by citing cases of gonorrhœa, acute and chronic cystitis, gleet, prostatorrhœa, vaginitis, cured with it. The provings give the indications. The symptoms were < before meals (sour eructations); reading and thinking; urinating (burning in urethra); walking. Going down stairs = symptoms to rush up. > Moving; diverting mind; open air; closing eyes (vertigo).

Relations.—*Antidoted by:* Puls. and Rhus (partially). *Compare:* Cubeba, Piper nig., Matico (botan.). In > by diverting mind, Ox. ac. > By motion, Rhus. Feeling of buoyancy, Coff. (but with Coff. the reverse condition of brain-fag does not quickly follow). Neurasthenia, Pic. ac., Arg. n., Avena. Unbearable pains, Coff., Aco., Cham.

SYMPTOMS.

1. Mind.—Hilarious from 10 a.m. till 1 p.m.—Lively after an emission.—Lively and inclined to work, can dance with more ease than usual.—Agreeable excitement and support against great fatigue.—From increased doses intoxication of a sorrowful, silent, and sleepy character, different from that produced by alcohol.—Faculties sharpened.—(Capable of working more without fatigue or brain-fag.).—Lazy and drowsy.—Deep torpor and irritation from least noise (intoxication from root grown in damp soils).—Want of vigour, timid, apprehensive.

2. Head.—From 5 to 9 p.m. very dizzy; swimming sensation and faintness.—Intoxication, with fantastic ideas and desire to skip about, although he cannot for a moment hold himself on his legs.—Vertigo in morning in bed, with frontal pressure.—Brain tired; in morning on waking, > getting on feet.—Tired feeling in brain at night.—Fulness, sometimes in one part, sometimes in another, < in forehead.—Heaviness of head.—Headache with pressure in upper part of orbit; with sleepiness.—Shooting: intermittent after 3 p.m., in l. supra-orbital nerve; in l. temple.—Headache: in l. supra-orbital nerve; back of eyes; l. brain from front to back; over eyes and deep-seated; at 9 a.m., < 3 p.m.; in afternoon and evening, with drowsy and stupid feeling; above eyes at 5 p.m.; at 7 p.m.; in l. side and deep in upper part of orbits, with pain on moving eyes; intermittent in r. frontal eminence, > open air and motion; above r. eye radiating over eyes, at 10 a.m.;

heavy in forehead and temples, < thinking and reading.—Frontal brain "solid with pain"; this ache during day generally moved to base of brain and along medulla, > by slight motion, < by large, continued and active motion; slight mental effort, passing from topic to topic, for an instant >; sustained effort <.—Compressive pain and soreness back of head and cervical cord; disappear later leaving cerebellum sensitive; parts feet treble their normal size.—Dulness in forehead, with fulness and pressure, and on raising head or moving it to either side vertigo, after the noon meal the pressure shifted to lateral and occipital regions, < lying down, but not amounting to real pain, pressure; < remaining in one position, > moving, apprehension of pain by rapid movement, but temporary relief from it.

3. Eyes.—Conjunctivæ red.—Pain along r. optic nerve when reading at 3 p.m.—Pain deep in l. eye as if ball would be pressed out, in the street at 5.30 p.m.—Dizzy blindness when dressing, vertigo, > closing eyes, directing attention to head and exerting the will, at the same time vertigo, then rush of blood and fulness in forehead, then similar sensation in occipital and basilar regions.

4. Ears.—Singular pressure in lobules of pinna of l. ear.

6. Face.—Pressure outward in face at 7 p.m.

7. Teeth.—Teeth deep yellow.—Teeth sensitive to cold water, cold air, brushing, &c.

8. Mouth.—Tongue feels as if covered with velvet or fur at night.—Burning on tongue.—Burning in whole mouth followed by numbness.—Dryness of mouth on waking from afternoon nap, with sweat (in a hot day).—Salivation.—Taste: nauseous; sweet, then piquant and sharp; pappy; everything tasteless; lost to food, but ravenous haste in eating.—Taste and relish to food not as usual, at noon, but appetite unusually good.

10. Appetite.—Appetite: formidable at 8 p.m.; slight; hungry at noon, but not able to eat much; able to eat but little supper.

11. Stomach.—Sour eructations, < an hour before meals and at night, at times rolling up and rumbling from stomach to mouth, but generally breaking at throat-pit, and in throat-pit sensation of something that cannot be swallowed, the latter temporarily > by eructations.—Bloating at 11 p.m.—Constriction extending from base of brain.—Crampy pain, > pressure against edge of table.—Warmth in stomach.

12. Abdomen.—Pain: every day about 9 a.m.; in forenoon after first stool, with distressing full sensation; > motion.—Pain in abdomen, above umbilicus; in r. groin when walking, then a large stool, the latter part soft.

13. Stool and Rectum.—Diarrhœa threatened.—Stool: loose in morning, more difficult in evening; soft, difficult.—Constipation: stool hard; large; light-coloured.—Stool large; soft.—Urging: all day; every evening.—Continuous desire, next day forced a large stool, which caused prolapsus ani.—Burning in rectum.

14. Urinary Organs.—Micturition at 4.45 a.m.—Burning in urethra during micturition.—Urine nearly neutral at 10 a.m., hot and over-acid at night.—Urine: increased; scanty in morning.

15. Male Sexual Organs.—Shooting in penis.—Erection: in afternoon; at night; at 4 a.m. after an emission.—Pain in r. testicle.—Emission early in morning, without dreams.—Amorousness.

18. Chest.—Heaviness behind upper part of sternum, as from wind that cannot be eructated.—Constriction of chest and stomach, extending from base of brain.

19. Pulse.—Pulse steadied.

20. Back.—Pain in back only felt on pressure.—Soreness about second dorsal vertebra.

21. Limbs.—Pain: in r. foot and wrist and l. toe at 10. p.m.; r. elbow and l. knee, with stiffness; r. foot and back of l. hand at 11.30 p.m., with heat of them.—Pain in r. arm as if marrow would be affected, changing its location, with paroxysmal paralysed feeling in hands, in toe at 9 p.m.

22. Upper Limbs.—Pain: in l. shoulder; in l. arm in the street, with flushing heat in l. hand.—Excoriating pain in r. arm, as if the marrow would be affected; paralysed feeling in hands.—Pain in r. arm, running in all directions, with heaviness, soreness, and tired sensation.—Dragging in l. arm at 8 p.m., > 10 p.m.—Tingling as from an electric current from l. elbow to fingers.—Numbness of r. elbow.—Pain in r. wrist, < writing.—Weakness of l. hand.—Pain in joint of l. thumb, < pressure.

23. Lower Limbs.—Drunk in his walk, but intellect unclouded, aware of his inability to control the movements of his legs.—Numbness of lower limbs.—Weakness; all day; in afternoon; in thighs as if unable to stand.—Sticking in l. knee at 4 p.m. when walking.—Heaviness of legs when walking.—Pain: in feet; l. foot and toe; r. sole; at outer and under border of l. foot and in r. great toe, with coldness of l. foot.—Sticking: in end of l. toe on waking at 4.45 a.m., in great toe when moving and walking.

24. Generalities.—Emaciation and decrepitude.—Trembling.—Pains (esp. of head) temporarily > by turning mind to another topic.—Feeling as if drug descended and impressed lower part of system, causing trembling of abdomen and lower limbs and blood-vessels connected therewith, but on descending stairs the drug seemed

to come upward through the circulation, reaching the brain, causing exhilarating dizziness and disposition to swing and stagger, as if under the influence of liquor, felt talkative and happy, after the dizziness felt a "toned-up" condition of brain and nervous system, dizziness returned on beginning to move.—Nervous system strung up to its highest tension.—Stimulating and sedative effects, then sweat.—Vigour; all day, with exhilaration, next day feelings varying and generally depressed.—Uneasiness and weakness during day, with timidity and apprehension.—Weakness in morning, > rising and moving around.—Want of tone and life in all functions towards night.—< In open air and on motion.

25. Skin.—Covered as in leprosy with large scales, which fall off and leave white spots, and these often become ulcers.—Dryness, esp. where it is thick, as on hands and feet, with scales, cracks, and ulcers.—Painful hard swelling in lower corner of l. ear; red, painful lump, threatening to become an abscess, on forehead above r. inner canthus and on back.

26. Sleep.—Sleepiness: at 10 p.m., soon afterwards liveliness and wakefulness; irresistible.—Hard sleep several times a day.—Stupid sleep.—Heavy sleep with disturbing but unremembered dreams.—Sleepless; from 12 till 2.30 a.m.; at 4 a.m., after an emission, then sound sleep, next night wakeful after an emission till I got up for breakfast; latter part of night, mind working on business problems, next morning tired feeling before and after rising.—Difficult falling asleep.—Restless sleep last part of night.—Fragmentary sleep last part of night.—Fragmentary sleep from 12.30 till 4.20 a.m., with varied and exciting dreams, then sleeplessness so that I had to get up at 4.30 a.m., did excitedly all kinds of unusual office work.—Dreams: curious, nonsensical, wild; amorous; of travelling by rail; active, vivid, last part of night, alternating with half-conscious waking; in afternoon, of fighting unknown men, left them to follow an unknown woman, and when she left me found that she had conducted me to a prayer-meeting, which must have changed to a restaurant, for I ordered a Hamburg beef steak, but woke before it was served; of a fire, heard the engines and firemen.

27. Fever.—Chilliness for the last few hours, at 8 p.m.—Heat: at 9 a.m.; flush of general heat; in face and hands, < l. hand; flushing, in cheeks; heat in l. ear-flap and l. hand; over upper part of body in evening.—Hands sought cool places, otherwise no perceptible increase of heat.—Heavy perspiration, with great dryness of mouth on waking from afternoon nap.

Piper Nigrum.

Pepper. N. O. Piperaceæ. Trituration or tincture of dried fruits (peppercorns).

Clinical.—Anus, fissure of. Blenorrhagia. Breasts, swelling of; eruption on. Constipation. Cough. Dysuria. Hæmorrhoids. Headache. Menses, irregular; scanty.

Milk, excessive flow of. Neuralgia. Priapism. Speech, difficult. Teeth, caries of. Tongue, eruption on; heavy. Toothache. Uterus, cramps in.

Characteristics.—The Peppers are tropical climbing shrubs. *Piper nig*. yields the pepper of commerce. The fruit when ripe is red. It is gathered before it is fully ripe and spread on mats in the sun, when it loses its red colour and becomes black and shrivelled. This is Black pepper. White pepper is the same fruit freed from its outer skin by maceration in water and subsequent rubbing (*Treas. of Bot.*). The symptoms of the proving are Houat's. The only additional symptom is one recorded by Berridge as having occurred in a lady on two occasions from taking a large quantity of pepper: "Feeling as if temples and malar bones were pressed in, < on left side." This confirms one of Houat's symptoms. The full, heavy headache of Houat's provings I can confirm by personal experience: I get the headache whenever I take food highly peppered; and I know others who do the same. Sensations of *burning* occur almost everywhere. *Pressure* is almost as common: Pressure in nasal bones, in temples and facial bones. Contraction of uterus and sensation as if something about to enter it. Sensation of a foreign round body rising to stomach. The symptoms are < by change of temperature; in damp weather; in evening; by motion.

Relations.—*Compare:* Piper m., Cubeba (botanical; also mental, genito-urinary, skin, and general symptoms).

SYMPTOMS.

1. Mind.—Hot-headed, irascible, and often gay.—Amorousness with hypochondriasis.—Fear of being poisoned.

2. Head.—Heaviness and congestion of the cerebellum, with pale face.—Rushing and congestion of blood to head with throbbing.—Brain: empty feeling; numbness causing swooning; fluctuation and oscillation in morning.—Pressure on head; as if bones of cranium and face rested on lower jaw.—Neuralgic pain through whole head at every change of temperature.—Violent headache; feels as if it would burst at vertex.—Pressing pains at temples as if they would be broken in.

3. Eyes.—Eyes inflamed and burning, with sensation of cold in lids.—Lids ulcerated and bleared.—Lachrymation and photophobia.—Dim sight and vertigo, with headache, nausea, and vomiting.

4. Ears.—Crusty ulcers in concha of ears.

5. Nose.—Frequent sneezing, epistaxis.—Dry and fluent coryza.—Dryness and burning in nostrils; nostrils stopped up.—Pressure on nasal bones as if being crushed.

6. Face.—Feeling as if temples and malar bones were pressed in, < l. side.—Red, burning face.—Drawing faceache; as if muscles and bones were ranging themselves on one another.—Convulsive closure of jaws.—Eczema on lips.

8. Mouth.—Tooth decays.—Violent toothache, < in warmth and evening.—Eruption of little vesicles on margin of tongue.—Painful, heavy tongue; impeded speech.—Whitish coating on middle of tongue.—Burning dryness of mouth and throat.—Heat and dryness of palate and tongue, as if burned.

9. Throat.—Constant accumulation of mucus in throat and expectoration.—Burning in throat with sensation of stiffness as if it were an iron tube.—Burning pains in tonsils, with sensation as if they were being pierced.—Paralysis of muscles of throat; can cry but not articulate intelligibly.

11. Stomach.—Constant, unquenchable thirst.—Vomiting with great exertion; it seemed as if stomach itself would be vomited.—Sensation of heat and dryness in stomach.—Cramps and drawing in stomach, with desire for coarse and extravagant food.—Gastric discomfort.

12. Abdomen.—Burning and lancinating pains in liver, as if a tumour there.—Disposition of abdomen to obesity.—Abdomen swollen, hard, burning.—Tympanites with sensation as if everything in it were in ebullition.—Borborygmi.—Inflammation of intestines with great thirst.—Heaviness, flatulence.—Colic and cramps; sensation as if intestines would burst.—Painful restlessness and anxiety in intestines.—Sensation of round foreign body rising to stomach, with heavy pain in intestines.—Electrical-like discharges in intestines when he moves.

13. Stool and Anus.—Inflammation of rectum, anus swollen and burning; fear to go to stool on account of the difficulty and pain.—Fissures at anus.—Large flowing hæmorrhoids.—Long-lasting constipation, then involuntary, thin stools.

14. Urinary Organs.—Full, swollen bladder, frequent inclination to urinate without success.—Burning pains in bladder as from live coals.—Burning in glans and urethra.—Blennorrhœa, greenish, offensive.—Difficult micturition.—Urine: turbid, brownish; diabetic; bloody; containing sand.

15. Male Sexual Organs.—Excessive priapism.—Inflammation and swelling of penis, with priapism and burning pains.—Burning, pricking, excoriating pains in glans.—Strong ejaculation, or almost none, and very difficult.

16. Female Sexual Organs.—Ovaries and uterus congested, with pricking and lancinating pains.—Contraction of uterus with sensation as if something strove to penetrate into it.—Burning and distending pains in uterus.—Menses: difficult, retarded; capricious, irregular, with colic and black blood.

17. Respiratory Organs.—Ulceration and false membranes thick, deep in larynx.—Voice: low, deep, rough, unintelligible.—Hoarseness with coughing and constant snuffing.—Severe coughing, esp. evening and when going to sleep.—Cough: violent, occasionally spitting of blood; croupy; hollow.—Dyspnœa and attacks of suffocation.

18. Chest.—Disposition to obesity of chest.—Painful spots an chest, < coughing, breathing, motion.—At each coughing spell it seemed as if chest would be torn and he would spit blood.—Burning, lancinating pains; sensation of heat and dryness of chest.—Burning and swollen heat.—Great flow of milk.—Dartrous eruption on l. breast.

19. Heart.—Sensation as if heart were surrounded with water.—Frequent palpitation.

20. Back.—Burning in loins and kidneys, with contractive movements.

21. Limbs.—Inflammation and swelling of joints.

24. Generalities.—Bones brittle.—Motion of carriage deafens and = spasms.—Spasms with tetanic stiffness of limbs.—< From motion; in evening; in damp weather.

25. Skin.—Crusty ulcers in ears.—Large pustules on face, leaving scars.—Eczema on lips.—Very tender skin.—Itching, < by scratching, heat, and motion.

26. Sleep.—Irresistible drowsiness.—Lethargic sleep.—Wakens at night without being able to sleep again.—Nightmare.

27. Fever.—Dryness and coldness of skin, heat with biting dryness.—Heat in forehead with heaviness of head and vertigo.—Cold sweat with great heat through whole body.—Sweat which seems to corrode the skin.

Piperazinum.

Piperazine. Piperazidine. Ethylenimine. Diethylene-diamine. $C_4H_{10}N_2$. Trituration. Solution.

Clinical.—Glaucoma. Gout. Lead paralysis. Renal colic.

Characteristics.—*Piperaz*. is a synthetic product which was intended to replace Spermin (C_2H_5N), and was named Dispermine. It was found, however, to be a different body both in chemical and physiological properties. It occurs in well-

defined, colourless, acicular crystals (Helbing), or in lustrous tables (J. Gordon); is deliquescent and mostly soluble in water. It readily unites with uric acid, forming a very soluble compound (urate of piperazine). When taken by the mouth it is not entirely oxydised, as part is discoverable unchanged in the urine. John Gordon experimented with *Piperaz*. and found that a 1-per cent. solution in normal urine at body temperature dissolved to a large extent a fragment of uric acid calculus, and converted undissolved portions to a granular and pulpy condition. The amount of urea is increased in the urine of those taking it; and Helbing (*Modern Materia Medica*) says it has been used with success in mental diseases, and in a case of lead paralysis with "very remarkable results." J. R. Hamilton, of Hawick (*Lancet*, December 30, 1893), reports success in treating renal colic with *Piperaz*.; and Walter, of Odessa (quoted *H. W*., xxv. 10), cleared up two cases of glaucoma, giving one grain daily in carbonated water, all the symptoms disappearing within three weeks. [After a teaspoonful dose of an effervescing preparation of *Piperaz*., a patient complained that he was seized with a bad attack of acute gout, that was quite unexpected (Cooper).]

Relations.—*Compare:* Phloriz., Hydrang., Urt. u.

Piscidia.

Piscidia erythrina. Jamaica Dog-wood. N. O. Leguminosæ. Tincture of root bark obtained when the plant is in flower, before leaf.

Clinical.—Fever. Sleep, sudden. Sweat, profuse.

Characteristics.—The pounded leaves and young branches of *Piscidia eryth*. and some allied species are used, like *Cocculus*, for poisoning fish—hence the name *Piscidia* (*Piscis-cædere*). The experiment recorded in Allen is by W. Hamilton, who took a drachm of the tincture in water for toothache, and went off to sleep with such suddenness that when he awoke, twelve hours later, he was still holding the glass and vial from which he had taken the dose.

SYMPTOMS.

8. Mouth.—When chewed, unpleasant acrimony in mouth, like that of *Mezer*.

26. Sleep.—"A sleep the most profound I ever experienced, arrested me so suddenly that I remained motionless the whole night with the uncorked vial in one hand, and the glass out of which I had taken the dose in the other, until the sun was high above the horizon, a space of twelve hours, when I first returned to consciousness, free from every pain or ache, and without any of the unpleasant sensations which invariably succeed an overdose of *Opium*"

27. Fever.—"Violent sensation of heat generally, increasing in intensity; the sensation of burning gradually extended to the surface, and while I was considering what antidote I ought to employ, a profuse diaphoresis burst out from every pore."

Pix Liquida.

Liquid Tar. (A product of dry distillation of various coniferous woods.) Tincture.

Clinical.—Acne. Ardor urinć. Bronchitis. Desquamation. Diarrhśa. Eczema. Enuresis. Eruptions. Hands, eruptions on. Phthisis. Psoriasis. Vomiting, black.

Characteristics.—In old-school practice Tar is known as a "stimulant expectorant" in chronic bronchitis and phthisis, a stimulant to the skin in psoriasis and scaly eczema. Buckley (quoted by Allen) has recorded severe constitutional effects following the local application of preparations of tar in skin affections. Among these are: High fever; black vomit; black stools; dark-coloured urine; acute eczema; acne. Homśopaths (led by Jeanes) have brought out the special indications for the remedy; and chief among them is a pain at the third left costal cartilage, where it joins the rib. This is really a pain of the left bronchus (Hering), and when associated with offensive muco-purulent expectoration the indications for *Pix* are complete. Cases of phthisis and chronic bronchitis with these characteristics have been cured by it. A case of chronic bronchitis in a merchant, 55, is recorded in *Hom. News* (xxix. 414). The cough was < nights, breath short, copious expectoration, some fever and night-sweats. Ill three years and growing worse. Raynaud's prescription of Wood Tar, a teaspoonful four times a day, after meals and at bedtime, cleared up most of the symptoms.—*Pix* often cures the enuresis somni of children (R. T. C.).

Relations.—*Compare:* Tereb., Pinus syl., Kre., Eupn., Petrol. In chest pains, Illic. (Illic. has pain at third *right* costal cartilage; occasionally also left), Myrica, Therid. Desquamation, Chi. sul.

SYMPTOMS.

2. Head.—Fulness and pain in head.

11. Stomach.—Pain in stomach.—Vomiting: constant; of blackish fluid (from application to skin).

12. Abdomen.—Excessive pain in bowels and loins.

13. Stool and Anus.—Dark-coloured stools (from application).

14. Urinary Organs.—Ardor urinć.—Dark-coloured urine (from application).

17. Respiratory Organs.—Expectoration of purulent matter, offensive in odour and taste, and accompanied by pain referred to third l. costal cartilage (really in l. bronchus); pain may or may not go through to back.—(Third stage of phthisis.).—Pain at third l. costal cartilage where it joins the rib; râles; muco-purulent expectoration.—Suppuration of l. lung with pain at third rib.—Cough chronic, < night; expectoration purulent; fever at night.

24. Generalities.—Great exhaustion.

25. Skin.—Acute eczema.—Acne.—Eruptions, esp. on backs of hands, itching intolerably at night and bleeding when scratched.—Skin cracked, bleeding when scratched, with sleeplessness.—Violent itching.—Desquamation.

27. Fever.—Occasionally high fever (from application).

Plantago.

Plantago major. Plantain. Ribwort. N. O. Plantaginaceæ. Tincture of whole fresh plant. Tincture of the root.

Clinical.—Ague. Breast, inflammation of. Burns. Ciliary neuralgia. Diabetes. Diarrhœa. Dysentery. *Earache. Ear, inflammation of.* Emissions. Enuresis. Erysipelas. Erythema. Hæmorrhoids. Impotence. *Neuralgias*; of herpes. Polyuria. Rhus poisoning. Snake-bites. Spleen, pains in. Tobacco habit. *Toothache*. Urination, delayed. Worms. Wounds.

Characteristics.—Hale sums up the ancient and modern history of *Plantago maj*. the weed which furnishes food for our *cage-birds*. (*Plant. m*. must not to be confounded with *Musa*, sometimes called "Plantain," which belongs to a different class, viz., the Endogens.) *Plantago* has had a reputation in medicine from remote antiquity, a reputation which homœopathy has revived. It was used in intermittent fever in remotest times. In *A. D*. 1558 the *Herbal of Dodoens* commends the juice of leaves or roots for "toothache and bleeding of gums." John Parkinson in his *Theatre of Plants* (A. D. 1640) says "the root taken fresh out of the ground, washed and gently scraped with a knife, then put into the *ear*, cures the toothache like a charm." In Switzerland the leaf fibres are frayed out and put into the ear for the same purpose, and if they relieve the pain they "turn black" (says Reutlinger) and have to be removed, if there is no relief they remain green. In domestic practice, says Hale, it is constantly resorted to as an application in all affections of the skin with irritation, pain, and heat, the bruised leaves being applied to the part. Hale enumerates the following as having been relieved by it: Erysipelas, *Rhus*-

poisoning, erythema, burns, scalds, inflammation of the glands (notably the breasts), bruises, incised wounds, bites of animals, chilblains, frostbite. A case is related (*H. R.,* xi. 241) of a man who allowed himself to be bitten by rattlesnakes and cured himself by drinking the juice of the plant and applying bruised leaves to the bites, changing them frequently. The tincture has been extensively proved by F. Humphreys (who wrote a monograph upon it), Heath, and others, and the homœopathicity of its cures was clearly brought out. The neuralgic pains of teeth, ears, and face were especially pronounced. Some new symptoms were brought to light. The very copious discharge of urine along with the thirst suggest diabetes; and the laxity of sphincters has led to the cure of a number of cases of enuresis. Foul breath, sinking and weight in stomach, flatulence, diarrhœa, dysentery, and hæmorrhoids, all appeared in the proving. *Plant*. is one of the most useful of *local* remedies in homœopathy, and one of its local uses is as an application to inflamed and painful piles. In all neuralgic conditions where the suffering part can be reached *Plant*. Ø may be painted on without any fear of injury, and often with the most signal relief of suffering. In common with others, I have used it with success in numberless cases of toothache and earache; but I have also given relief in the painful neuralgia of shingles and in pleurodynia. F. P. Stiles (*Minn. H. Mag*., v. 225) relates three brilliant cases: (*1*) Mrs. S., 39, for ten days had terrible neuralgic pain in right side of face, shooting into temporal, superior, maxillary, and orbital regions. Plant. Ø applied locally to gums, temple, and cheek, removed the pain in a few minutes. Some days later a slight return was promptly relieved in the same way. (*2*) Mr. R. had neuralgia in left superior maxillary and lower orbital region of long standing. Promptly relieved in the same way. (*3*) Mrs. N., neuralgia of right upper jaw, pain unbearable, radiating to ear, temple, and cheek. A tooth had been extracted without relief. *Plant*. Ø removed all the pain. "Toothache with earache," "toothache with salivation," are leading indications. *Plant*. has a relation to tobacco. It produces disgust for it in chewers; and it cures neuralgia resulting from tobacco. The pains are tearing, boring, bruised. There is great surface sensitiveness. Pains come suddenly and are apt to be erratic. Unendurable pains. There is darting up and down the urethra. Breath and flatulence are offensive. *Some characteristics are*: Loud noises going through one. *Sudden* discharge of yellowish (or saffron-coloured) water from nose. The *left* side was most affected. The symptoms are < at night. > By eating (colic). < By contact; mental exertion; by motion; heat and cold; cold air; sharp wind: heat of room.

Relations.—*Antidote to:* Apis, Rhus, Tabac. *Antidoted by:* Merc. (toothache). *Compare:* In neuralgias, Cham., Merc., Spig., Kalm., Coloc. Unendurable pains, Aco., Cham., Hep. Wounds and bruises, fetid breath and flatus, Arn. Wounds, Calend. Punctured wounds, Led., Hyper. Hæmorrhoids, external and internal use, Ham. Enuresis, Bell., Caust. (Bell. has irregular action of sphincter; Plant. and Caust. relaxation). Earache with toothache; intolerance of warm room, Puls.

Causation.—Bruises. Burns. Cuts. Punctured wounds. Snake-bites.

SYMPTOMS.

1. Mind.—Mind inactive, with dull, muddled feeling in head.—Despondency, confusion of thought.—Irritable, morose; impatient, restless mood, with dull, stupid feeling in brain.—Great mental prostration, < by mental exertion, which = rapid breathing and anxiety.

2. Head.—Twinges of pain indifferent parts of head, now through r. temple, extending backward; then through occiput from ear to ear; then in other parts of head more or less severe.—Severe, lightning-like stitches over l. eye, extending to r. 12.30 to 5.45 p.m., disappearing suddenly, involving whole forehead, and accompanied at the height with nausea at pit of stomach; > hard pressure with cold hand, < warmth.—Severe pain in l. side of head, from forehead extending deep into brain, coming on in paroxysms.—Intermittent pulsative pain in vertex and in small spot beneath scalp.—Headache with toothache.—Dull headache.—Oppression deep in head, and sense of something lying in the head, through from one ear to the other.—Itching of scalp.

3. Eyes.—Ciliary neuralgia from decayed teeth; dull, heavy ache in l. eye, with exquisite tenderness of ball; l. upper incisor decayed.—Eyes red; dim; inflamed; sore.—Aching deep in orbit.—Lids sore, swollen.

4. Ears.—Pain in r. ear with pains in teeth and face; pains sharp, twinging, running.—Earache: neuralgic; with toothache; darting, twinging, stabbing pains in lower maxillary branch of trifacial.—Pains often centre in ear (l.).—Hearing: more acute; least noise goes through one; ringing in ears.

5. Nose.—Frequent sneezing, with sudden attacks of profuse, watery, bland coryza.—Sudden discharge of yellowish (or saffron-coloured) water from (r.) nostril.—Red papules round nose.—Sensation at bridge as if nasal bones being pressed together.

6. Face.—Neuralgia l. side of face, pains shooting and tearing, extending from jaw to ear.—Violent bruised, aching pain, r. face.—Drawing in r. malar bone.—Eruption on forehead.—Small, red, rough, scaly erythematous patches size of pea on (esp. l.) face.—L. cheek swollen.—Lips livid, dark, sickly, rough.—Water bladder on upper lip.—Dry, scaly eruption on lower lip.

7. Teeth.—Teeth (l.) feel elongated, sore; pain unbearably severe, boring digging in sound teeth; < from contact and extremes of heat and cold.—Aching in decayed teeth, or shooting up l. side of face; face red.—Rapid decay.—Sharp stabbing along upper maxillary nerve, < by contact.—Violent pain in l. upper molars; sound teeth; excessive boring, digging pain, profuse flow of saliva; < by walking in cold air and

by contact, by much heat; partial > lying down in a moderately cool room; pain unendurable (> by *Merc*. 30).—Teeth sensitive, sore.—Grinds teeth at night.—Gums bleed easily.—Gumboil.

8. Mouth.—Tongue coated white, with dirty, putrid, clammy taste.—Food tasteless.—Breath putrid.—Aphthæ in children.

9. Throat.—Dry, parched throat.—Scraping in throat.—Profuse secretion of (very tenacious) mucus; with much hawking.—Soreness and swelling of submaxillary glands on both sides.

10. Appetite.—Appetite poor.—Thirst.—Causes disgust for tobacco in chewers.

1l. Stomach.—Eructations; frequent, empty; tasting like sulphur or carbonic acid gas.—Nausea with drowsiness or faint, tremulous feeling.—Sinking sensation.—Heaviness of stomach as from a stone; even after a light meal.—Heat in præcordia with fulness in abdomen while walking in fresh air.—Coolish, painful sensation, as from over-distension after hearty meal.

12. Abdomen.—Gone sensation.—Severe pains in l. (and r.) hypochondrium.—Distension with passage of fetid flatus.—Violent griping, esp. upper abdomen.—Colic: > by eating; flatulent.—Pain in abdominal muscles; in l. and r. ilia.

13. Stool and Anus.—Stool: brown, fermented, frothy; watery, brown; watery papescent; excoriating.—Diarrhœa: loose, frequent stools with flatulence < 8 to 10 a.m.—Before stool: colic, frequent discharge of offensive flatus.—During stool: griping, tenesmus, partial prolapse, weakness, faintness.—(Chronic diarrhœa.—Cholera infantum.—Dysentery.).—Painful blood piles (locally).—Angry, inflamed piles.—Worms.

14. Urinary Organs.—Tenderness over region of kidneys on pressure.—Frequent passage of large quantities of pale urine; < night; stools grey; irritable; puffy under eyes; eats heartily; sleeps soundly.—Copious nocturnal enuresis from laxity of sphincter.—Irritable bladder with frequent micturition.—Delayed, dribbling urine.—Urethra: tingling with unpleasant itching in meatus; sudden darting stinging running up sharp cutting in from within out.—Urine: large quantities, clear, frequent very dark red, of strong odour; deep orange colour; white sediment.

15. Male Sexual Organs.—Sexual debility.—Unconscious emission in sleep.

16. Female Sexual Organs.—Erysipelas of breasts.—Mastitis.

17. Respiratory Organs.—Hoarseness.—Cough in cold air.—Panting breathing; inclined to sigh.

18. Chest.—Orgasm.—Oppression; < reading or talking.—Sharp stitches.—Muscular drawing.

19. Heart.—Heat in præcordia when walking in open air.—Violent palpitation; on ascending stairs.—Pulse strong, full, intermittent.

20. Neck and Back.—Neck stiff and sore.—Stiffness of sterno-cleido mastoid (< r.), < moving head to side affected, > moving it to opposite side.—Pulsative pain between scapulæ.—Pain in sacrum.

22. Upper Limbs.—Stinging, dull pains here and there.

23. Lower Limbs.—Hard, white, flattened, isolated papules on inside of thighs, some having red points in centre.—Great pain and stiffness in l. leg and knee, < stooping.

25. Skin.—Violent itching, < night.—Pricking, stinging pains.—Tensive sensation.—Burning after rubbing where scratched.—Redness, swelling, and vesicles on hands and face.—Papules which exude yellowish humour and form a crust.—Erythema.—Burns.—Rhus poisoning (local use).—Inflammatory affections of skin and involvement of cellular tissue.

26. Sleep.—Excessive and continued yawning.—Insomnia from abdominal trouble.—Grinding teeth during sleep.—Sleep restless; disturbed by dreams.

27. Fever.—Chilliness with sensation of heat in chest, with erratic pains in limbs, chest, head; from 1 to 3 p.m. with disposition to stretch and chilliness on moving about; cold hands in a warm room.—Chill: without thirst; with gooseflesh, 2 p.m., running over body, < moving about; fingers cold, coldness of body with shivering; head feels irritable; feet and hands cold even in warm room.—Heat, with thirst; great excitability, mental agony, restlessness; room seems hot and close; oppression of chest, rapid respiration; breathing difficult as if there was no air in room; burning heat of head, face, hands, feet; head hot, painful, dull, stupid; hands hot, clammy.—Sweat: cold over lumbar and sacral region; heat of room unbearable, producing perspiration.

Platanus.

Platanus acerifolia ("the tree commonly grown in and about London as P. occidentalis."--*Treas. of Bot.*). N. O. Platanaceæ (of the Urtical alliance). Tincture of young shoots.

Clinical.—Cataract. Ichthyosis.

Characteristics.—Burnett has recorded (*Dis. of Skin*) a case of ichthyosis in an aged lady, in which *Platanus* caused considerable improvement in the condition of the skin. Another case (*Delicate Children*) was that of a girl, 5 1/2, "of the coal-black variety of the strumous, her forehead low and projecting," who was blind from double cataract due to the shock of a fall in the first instance, the lenses having gradually silted up. In this case *Platanus* Ø was given (five drops night and morning) for a number of months, "with very evident improvement in the nutrition of the child's lenses." [Burnett names the remedy *Plat occ*.; but his tincture was made from the London tree, which is *Plat. acer*. It sheds its bark annually, which was the signature of its skin action.]

Platinum.

Platinum. An Element. (Also called Platina.) Pt. (A. W. 194.3.) Trituration.

Clinical.—Amenorrhœa. Chlorosis. Constipation. Convulsions. *Delusions*. Dentition. *Depression of spirits*. Dysmenia. *Erotomania. Fear*. Gout. Hæmorrhage. Hæmorrhoids. *Hysteria*. Lead poisoning. Masturbation. *Melancholia*, Menorrhagia. Menses, suppressed. *Mind, affections of. Neuralgia. Neurasthenia. Numbness*. Nymphomania. *Ovaries, affections of*. Pruritus vulvæ. Rheumatism. Sexual perversion. Spasms. Tapeworm. Uterus, induration of. Vaginismus. Yawning, spasmodic.

Characteristics.—The original name of *Platinum* was "Platina," being a Spanish word meaning "like silver" (*Plata* being Spanish for silver). The metal was introduced into Europe from South America in the middle of the eighteenth century. It is always found in association with other metals, chiefly Rhodium, Osmium, Iridium, Palladium. Hahnemann was the first to think of it as a medicine, and his proving in the *Chronic Diseases* is the basis of our knowledge of its action. One characteristic symptom, either when found alone or in association with other conditions, has led to many cures with *Plat*.—Lost sense of proportion in both ocular and mental vision. Objects look small or the patient thinks them small. This becomes pride and hauteur in the mental sphere; the patient (generally a woman) looks down on everything and everybody. This is a keynote of *Plat*. Another is the occurrence of cramps, cramping pains and spasms, developing into convulsions. The cramping pains = numbness and tingling in the parts affected. Pains as if nipped, squeezed in a vice, and these pains increase gradually to an acme and then as gradually decline. In the rectum this becomes tenesmus; in vagina, vaginismus. Another general keynote is the alternation of mental and physical symptoms: as physical symptoms disappear mental symptoms appear, and *vice versâ*. Nash cured a case of insanity of some duration with *Plat*., being led to the remedy by an alternation of the mental symptoms with a pain the whole length of the spine. This alternating feature is also seen between one mental state and another: Changing

moods; sad and gay alternately; laughs and cries by turns. There is also a perverse state: Laughs immoderately, but in the wrong place; laughs at serious things. The mental disorder at times takes a homicidal form. Jahr cured with *Plat*. a woman who had an inspiration to kill her child, and Jules Gaudy recorded (*Jour. Belge d'H*., quoted *Amer. H*., xxii. 314) the case of a woman who was tormented with an almost irresistible impulse to kill her husband, whom she loved passionately, and with whom she was perfectly happy. The sight of a knife had an irresistible fascination for her, and she was often obliged to leave the table to free herself from the impulse. A few months before, she had lost a child a short time after confinement, which had been followed by profuse and desperately persistent hæmorrhage. Recovering from this she became restless, irritable, and her whole existence was ruled by this terrible impulse. *Plat*. 6x and 30x relieved and finally cured her. Kent (*Med. Adv*., xxv. 184) records the case of a middle-aged lady, mother of several grown-up daughters, who complained of a peculiar mental symptom: A fear, in the absence of her husband, that he would never return, that he would die, or be run over. She wept all the time he was away. Kent discovered that she had been treated for uterine displacement, and was then wearing a pessary. This was removed. Menstrual flow was copious, black, clotted. The external genitals were so sensitive that the usual napkin was intolerable. *Plat*. cured the whole case, including the displacement. Almost every symptom in this case was a characteristic. The sensitiveness of the external genitals is often so great as to make coition impossible. Digital examining of such a patient causes great pain. The action of *Plat*. to a large extent centres in and radiates from the sexual organs, male and female. It corresponds to masturbation before puberty, and also to the effects of masturbation. It was one of Gallavardin's remedies for the impulse to pederasty and sodomy. Tendency to uncover completely in sleep is a leading note of it. Excessive desire, especially in virgins. Premature and excessive development of sexual instinct and organs. Nymphomania < in puerperal state. During menses uterine spasms, convulsions. Convulsions of puerperal state. Catalepsy during menstruation. Spasms alternate between convulsive actions and opisthotonos; full consciousness. Spasms alternate with dyspnœa. Excessive itching in uterus; pruritus vulvæ. *Plat*. has some characteristic symptoms in relation to the bowels. Its cramping tendency makes it an antidote to lead poisoning; and it has constipation scarcely less marked than that of *Pb*., though differing from it. The stools of *Plat*. are tenacious and sticky, adhere to the rectum and anus like putty; or they may be hard as if burnt; the constipation comes on whilst travelling; in emigrants; during pregnancy. *Peculiar Sensations* and *Symptoms* are: As if her senses would vanish. As if parts of malar bones were between screws. As if everything about her were very small. As if she were constantly growing longer and longer. As if she did not belong to her own family. Vertigo as if torn and pulled with threads. Forehead as if constricted; screwed on; as if a board pressed against it. As if temples too tightly bound. Scalp as if contracted; as if a heavy weight on it. As if head were enlarged. As if throat constricted; palate elongated; tongue scalded. As if abdomen, chest, nape, limbs, thigh, great toe, tightly wrapped

or constricted. Back and small of back as if broken. Crawling, tingling, numb sensations. Spasmodic yawning. Pains go from right to left. The right side is somewhat more pronouncedly affected than the left. Severe stitches in right ovary. The symptoms are periodic and paroxysmal, as well as alternating. *Plat*. is *suited to* women with dark hair; thin, sanguine, bilious; with too frequent and too profuse menses; sexual organs exceedingly sensitive. Hysterical and hæmorrhoidal patients. The symptoms are: < By touch and pressure. < Fasting. < During menses. < Rest; sitting; standing; bending backward. > By motion. Walking and going upstairs < pressure in genitals; > hysteric rheumatism. Walking against wind = sudden arrest of breathing. < Evening and night. Headache commences on waking. < In warm room; > in open air (but open air = fluent coryza and shaking chill on going from room; heat > cramp pain in legs and irritability and chilliness. Obliged to stretch, which >.

Relations.—*Antidoted by:* Puls., Nit. sp. d. (Teste, who classes Plat. with Thuj., Brom., and Castor, says Colch. is the best antidote to all four). *Antidote to:* Lead. *Complementary:* Pallad. (both affect right ovary, but Pallad. has > from pressure). *Compatible:* Bell., Ign., Lyc., Puls., Rhus, Sep., Ver. *Compare:* Pride, Pall. (Plat. egotistical, despises others; Pall. easily wounded, attaches importance to others), Lyc. (imperious). Spasms and emaciation from antepuberty masturbation, Staph. Uterine affections, nymphomania, Aur., Sep. (the nymphomania of Plat. is more intense; Plat. is intermediate between Aur. and Sep. in weariness of life; the uterine cramps of Plat. are followed by numbness; those of Sep. are a clutching as if suddenly seized then Suddenly relaxed). Hysteria, indurated ulcers, Tarent. Sees ghosts and demons, Hyo., K. bro. Shamelessness, uncovers, Pho., Hyo. (Hyo. sees things larger; Plat. smaller). Thinks death near and fears it, Aco., Ars. Dark, stringy hæmorrhage, Cham., Croc. (Croc. has sensation of something alive). Pains come and go gradually, Stan., Arg. n. (Bell. and Lyc., suddenly). Sensitive to coitus, Sep., Bell. (dry vagina), Fer., Nat. m., Apis (with stinging in ovary), Thuj., Kre. (followed by bloody flow), Murex, Orig. Constipation when travelling (Lyc. when from home; Bry. when at sea). Weak and exhausted feeling for two hours after stool, Sep. Sticky stools like soft clay, Alm. Hysteria, pressure at root of nose, Ign. Excessive sexual development, especially in virgins, K. pho. Masturbation in girls, Orig., Gratiol. Dark-haired women, Sep. Laughs immoderately at serious things, Anac., Nat. m., Lyc., Pho.

Causation.—Fright. Vexation. Bereavement. Fit of passion. Sexual excess. Masturbation.

SYMPTOMS.

1. Mind.—Sadness, esp. in evening, with strong inclination to weep often (every second day) alternating with excessive gaiety and buffoonery.—Involuntary inclination to whistle and sing.—Involuntary weeping.—Loud cries for help.—Thinks she stands alone in the world.—Anxietas præcordium to an excessive

degree, with great fear of death, which is believed to be very near, accompanied by trembling, palpitation of heart, and obstructed respiration.—Sensation of dread and horror.—Fear, with trembling of hands and feet and confusion of ideas, as if all persons approaching were demons.—Hysterical humour, with great mental depression, nervous weakness, and over-excitement of vascular system.—Mental symptoms in general: amativeness; state of disposition.—Great irritability, with prolonged ill-humour, after a fit of passion.—Apathetic indifference and absence of mind.—Pride and self-conceit, with contempt for others, even for those who are usually most beloved and respected; < indoors, > in open air and sunshine.—Impulse to kill her own child; her husband; (on seeing a knife).—Distraction and forgetfulness.—Loss of consciousness.—Incoherency of speech.—Delusion of the senses; feeling as of being too large, and, on the contrary, all other things and persons seem to be too small and too low.—Delirium, with fear of men, often changing, with over-estimation of oneself.—Mania: with great pride; with fault-finding; with unchaste talk; trembling and clonic spasms, caused by fright or from anger.

2. Head.—Tensive confusion in forehead, as if head were compressed in a vice.—Pressing headache from without to within the forehead and temples, gradually increasing and decreasing, < in evening from stooping, while it rest, in the room; > from exercise and in open air.—Transient attacks of vertigo in evening with loss of consciousness.—Vertigo on sitting down or ascending stairs.—Headache which increases gradually, or by fits, until it becomes; very violent, and which diminishes progressively in same manner.—Attack of headache, with nausea and vomiting.—Sensation of numbness in head, and externally at vertex, preceded by a sensation of contraction of brain and of scalp; < in evening and while sitting, > from motion and in open air.—Pain in sides of head, as if caused by a plug.—Constrictive headache, as if a tape were tightly drawn around it, with sensation of numbness in brain, flushes of heat and ill-humour, < from stooping and exercice.—Formication in one temple, extending to lower jaw, with sensation of coldness on that spot; < in evening and when at rest, > from rubbing.—Pressive, cramp-like, compressive pains in the forehead and temples, esp. in root of nose, greatly < by movement and by stooping, sometimes with heat and redness of face, inquietude, and weeping.—Tingling in temples, as if caused by insects.—Buzzing and noise in head, like that of a mill.

3. Eyes.—Pain in eyes after fatiguing the sight by looking attentively at an object.—Tension in sockets, with gnawing pain, as from excoriation in margins.—Cramp-like pain in edges of orbits.—Compressive tension in eyeballs.—Aching in eyes with sleep.—Creeping tingling in canthi.—Sensation of heat or of coldness and smarting in eyes.—Trembling or spasmodic quivering of eyelids.—Eyes convulsed.—Objects appear smaller than they really are.—Confused sight, as if directed through a veil, often with painless twitchings round the eye.—Quivering and sparkling before sight.

4. Ears.—Otalgia with cramp-like pain.—Shocks in ears.—(Sticking jerking in r. outer ear with) sensation of numbness and of coldness in ears, extending to cheeks and lips.—Gnawing tingling in ears.—Roaring, whizzing, and ringing in ears.—Dull thundering and rumbling in ears.

5. Nose.—Cramp-like pain, with sensation of numbness in nose and at root of nose.—Ineffectual want to sneeze and tingling in nose.—Dry coryza, often semi-lateral.—Corrosive sensation on nose, as of something acrid.

6. Face.—Face pale, wan, and sunken.—Burning heat and glowing redness in face, with ardent thirst and dryness of mouth, esp. in evening.—Distortion of muscles of face.—Sensation of coldness, with tingling and sensation of numbness throughout (r.) side of face.—Cramp and tensive pressure in zygomatic processes.—Benumbing, dull pressure in malar bone.—Pulsative digging in jaws, esp. in evening and during repose, with involuntary weeping.—Lockjaw.—Gnawing, with pain as from excoriation in lips and chin, which compel scratching.—Smarting and lancinating vesicles on lips.—Lips dry and cracked.—Plexus venarum, of a reddish blue colour, on chin.—Sensation of torpor or coldness round mouth and chin.—Cramp in jaw.

7. Teeth.—Odontalgia with pulsative and digging pain.—Cramp-like drawing, which recurs by fits, in teeth.—Numb pain in l. lower teeth.—Fissures in gums.

8. Mouth.—Sensation of coldness, esp. in mouth.—Crawling sensation on tongue.—Burnings pain under tongue.—Sensation in tongue as if it had been burnt or scalded.

9. Throat.—Sensation as if throat were raw during (empty) deglutition and at other times.—Cramp-like drawing in throat, like a constriction.—Sensation as if palate or uvula were elongated.—Scraping and accumulation of phlegm in throat.—Hawking up of phlegm.

10. Appetite.—Mucous, clammy taste.—Sweetish taste on tip of tongue.—Adipsia.—Loss of appetite after the first mouthful.—Complete loss of appetite.—Repugnance to food, arising from sadness.—Dislike to food.—Bulimy.—Voracious rapidity in eating, with a disposition to find fault with everything (to detest everything around, himself).—After a meal, risings, pressure on stomach; and colic.

11. Stomach.—Ineffectual effort to eructate.—Empty, noisy eructations.—Serum of a disagreeable sweetish bitterness ascends throat, and puts patient in danger of choking.—Continued nausea, with lassitude, trembling, and anxiety.—Aching (pressure) in stomach, esp. after a meal.—Sensation of constriction in pit of stomach, extending into abdomen.—Fermentations in epigastric region.—Flatulent soreness towards hypogastrium.—Contractive pain in scrobiculus, as if it were

squeezed too tightly.—Pressure or shocks, or else throbbings, shootings, and pinchings in scrobiculus.—Burning sensation in scrobiculus, sometimes extending from throat into abdomen.

12. Abdomen.—Pains in abdomen, with dull and jerking pressure.—Inflation of abdomen, with difficult and interrupted expulsion of flatus.—Pressing and bearing down in abdomen extending into pelvis.—Lead colic.—Constriction in abdomen.—Pinchings in umbilical region.—Shootings in the side of abdomen and in umbilical region.—Gnawing in abdomen.—Drawing in groins, commencing from sacrum.

13. Stool and Anus.—Constipation: after lead poisoning or while travelling; sometimes very obstinate.—The stool is discharged with difficulty, seeming to stick to anus and rectum like putty.—Frequent want, with scanty evacuation, which is voided in pieces, and with great efforts.—Evacuations of consistence of pap.—Stool hard, as if burnt.—Tenia and ascarides are discharged from rectum during evacuation and at other times.—After evacuation general shuddering or sensation of weakness in abdomen.—Frequent itching, tingling, and tenesmus in anus, esp. in the evening (before sleep).—Violent and dull lancinations in rectum.

14. Urinary Organs.—Red urine with a white cloud, or else which becomes turbid, and deposits a red sediment.—Slow but frequent emission of urine.

15. Male Sexual Organs.—Burning pain and gnawing in scrotum.—Unnatural increase of sexual desire, with frequent erections, esp. at night (with amorous dreams).—Voluptuous crawling in genital organs and abdomen, with anxious oppression and palpitation, then painless pressure downwards in genitals with sticking in sinciput and exhaustion.—Flow of prostatic fluid.—Coition of too short duration, with but little enjoyment.

16. Female Sexual Organs.—Sensation of bearing down towards genital organs, with aching in abdomen.—Unnatural increase of sexual desire, with painful sensibility and voluptuous tingling from genitals up into abdomen.—Nymphomania, which may occur even during the lying-in period.—Induration of uterus.—Sanguineous congestion in uterus.—Miscarriage.—Metrorrhagia (with great excitability of the sexual system) of thick, deep-coloured blood, with drawings in groins.—Catamenia too early and too profuse (blood dark and coagulated), sometimes with headache, restlessness, and tears.—Menstruation, when the discharge is very abundant, thick and black like tar, and is very exhausting; spasms and screaming at every menstrual period.—Catamenia too long continued.—Before catamenia, cuttings and pains like those of labour in hypogastrium.—Cramps at commencement of catamenia.—Painful sensitiveness and constant pressure in mons veneris and genital organs, with internal chill and external coldness, except face.—Severe stitches in r. ovarian region.—During catamenia, pressure as of a general bearing

down towards genital organs, which are very sensitive.—Leucorrhœa, like white of eggs, flowing chiefly after urinating, and on rising from a seat.

17. Respiratory Organs.—Aphonia.—Short, nervous, dry cough, with palpitation and dyspnœa.—Short, difficult, and anxious respiration.

18. Chest.—Shortness of breath, with constrictive oppression of chest.—Inclination to draw a long breath, prevented by a sensation of weakness in chest.—Anxious oppression of chest, with sensation of heat, which ascends from epigastrium.—Pain in chest, as if a weight were pressing upon it, with want to take a full inspiration, which is hindered by a sensation of weakness.—Tension, pressure, and shootings in sides of chest, which do not permit lying down on either side.—Aching and dull blows in chest.—Spasmodic pressure in one side of chest.—Spasmodic pain in chest, commencing slightly, increasing to a certain intensity, and gradually diminishing in same way.—Dull lancinations in sides of chest, during an inspiration.

19. Heart.—Burning and sticking low down by heart.—A dull pressure in region of apex of heart.—Anxious palpitation of heart.

20. Neck and Back.—Rigidity of nape of neck.—Weakness and sensation of tensive numbness in nape of neck (the head sinks forward).—Contusive pain in loins and in back, esp. when pressing upon them, or else when bending backwards.—Pains in back and small of back as if broken, after a walk < bending backwards.—Spasmodic pain in loins.—Sensation of numbness in coccyx, as after a blow.

21. Limbs.—Cramp-like jerking and drawing pains in limbs and joints.—Tension in limbs (esp. thighs) as if bound too tightly with ligatures.—Attack of spasmodic rigidity in limbs, without loss of consciousness, but with clenching of jaws, loss of speech, eyes convulsed, and involuntary movements of the commissures of lips and eyelids.—Tingling restlessness, sensation of weakness and trembling in limbs, esp. during repose and in open air.

22. Upper Limbs.—Heaviness and lassitude of arms, with paralytic pulling.—Paralysed sensation in l. arm; in both arms.—Aching and spasmodic pain in forearms, hands, and fingers, esp. when grasping anything firmly.—Itching, gnawing, pricking, and burning sensation in arms, hands, and fingers.—Sensation of stiffness in forearms.—Painful throbbing in fingers.—Distortion of fingers.—Numbness of fingers.—Trembling of r. thumb, with numbness.—Numbness of little finger.—Ulcers on fingers.

23. Lower Limbs.—Spasmodic pain and tension in thighs, feet, and toes.—Weakness of thighs and knees, as if they were broken.—Pain as from a blow in l. knee.—Shocks and blows in legs.—Lassitude of legs.—Restlessness and

trembling in legs, with a sensation of numbness and rigidity.—Lassitude and numbness in feet when seated.—Coldness of feet.—Gnawing, excoriation, and smarting in ankle-bones, greatly < by least touch.—Painful throbbing in toes.—Swelling on ball of toe, with tearing and nocturnal pulsations.—Ulcers on toes.—Pain in great toe as if too tightly enveloped.

24. Generalities.—Dark-haired females.—Face changing colour frequently.—Rising in throat.—Tapeworm, other symptoms agreeing.—Contraction of inner parts.—Catalepsy; epilepsy with rigor; tonic spasms.—Very great paleness of skin.—Spasmodic yawning.—Pains like labour pains.—Sensation as of a hoop around parts.—Violent shocks as if from pain.—Sensation of prickling in the outer parts.—Sensation of coldness in outer parts.—Compressive, cramp-like, constrictive, or pressive pains, as if caused by a plug, or by dull blows.—Cramp-like, jerking, and drawing pains in limbs and joints.—Tension in limbs, as if bound too tightly with ligatures.—Pains, as from a contusion, a blow, or a bruise, esp. when pressing on part affected.—Pains, slight at commencement, increase gradually, often at regular intervals, and diminish in same manner.—Sensation of torpor and paralytic rigidity in various parts, often with trembling and palpitation of heart.—Attack of spasmodic rigidity in limbs, without loss of consciousness, but with clenching of jaws, loss of speech, eyes convulsed, and involuntary movements of commissures of lips and eyelids.—The spasmodic attacks manifest themselves chiefly at daybreak.—Affections caused by fright, by vexation, or by a fit of passion.—Moral and physical affections, appearing alternately.—Excessive weakness (paralytic weakness in limbs).—Dull, pushing, or inward pressing pains, as from dull blows.—Tingling restlessness, sensation of weakness and trembling in limbs, esp. during repose and in open air.—Majority of symptoms < by repose, in the evening; from anger; more in females than males; after lying down and rising again; when sitting; after rising; and > by movement.—The affections which are > in open air are generally < towards evening and in a room.

25. Skin.—Tingling gnawing, with pain as of excoriation, and itching or burning, pricking, and shooting pain on various parts of skin, which provokes scratching.—Ulcers (on fingers and toes).

26. Sleep.—Convulsive and spasmodic yawning, esp. in afternoon.—Great disposition to sleep in evening.—Prolonged sleep in morning.—Anxious dreams of wars and bloodshed.—Lascivious dreams.—Waking at night, esp. after midnight (with frightful dreams, want of consciousness), or with anxious, sad, and distressing thoughts.—Bewilderment at night on waking.—At night patient lies on back, with arms above head, legs drawn up, with strong inclination to uncover them.

27. Fever.—Pulse small, feeble, frequently tremulous.—Constant shivering and shuddering over whole body, esp. in open air.—Shaking chill when going from the room into the open, even warm air.—Chilliness predominates, with low spirits,

which ceases during heat.—Heat with sensation of burning in face, without any visible change in colour of face (she thought she was very red, but colour the same as usual).—Flushes of heat, interrupted by chilliness.—Gradually increasing, and in the same manner gradually decreasing heat.—Perspiration only during sleep, ceasing as soon as one wakens.

Platinum Muriaticum.

Chloride of Platinum. $PtCl_4$. Solution.

Clinical.—Caries. Chancre. Condyloma. Laryngismus. Mercury, abuse of. Śsophagus, stricture of. Stomach, cancer of.

Characteristics.—*Plat. mur*. was experimented with by Hofer, of Pau, who applied locally a saturated solution and administered solutions internally. Fever, headache, constricting sensations and fibrillary twitchings were induced by internal doses; the local application produced acute irritation of the skin and glans penis, with an eruption on the latter like commencing chancre. *Plat. mur*. has been used in cases of caries (especially of nasal bones and bones of tarsus); of syphilitic caries; syphilitic rheumatism; chronic gonorrhśa; condylomata; gastric carcinoma; acne.

SYMPTOMS.

1. Mind.—Thinks he has been poisoned.

2. Head.—Some headache, with slight acidity of stomach.—Severe headache, esp. in occiput, with fever.

8. Mouth.—Metallic taste.

11. Stomach.—Acidity of stomach with headache.—Warmth and heaviness in epigastrium.—Nausea and inclination to vomit.

15. Male Sexual Organs.—[From application of saturated solution to the parts.].—Violent itching on glans and prepuce, with sensation of warmth and very troublesome sticking; symptoms of acute inflammation of urethra, pain on urinating, slight dysuria; after some hours an eruption about glans penis, somewhat livid, slightly raised, size of pin head, looks like commencing syphilitic sore, but disappears in twelve hours.

17. Respiratory Organs.—Violent constriction of larynx, so that speech and swallowing were decidedly impeded.

24. Generalities.—Involuntary movement of fibres of muscles of nape, back, and extremities for several hours.

25. Skin.—Skin discoloured yellow, becoming covered with rosy red eruption that disappears after a few minutes (from local application).

27. Fever.—Slight shuddering, pulse accelerated, warmth in epigastrium.

Platinum Muriaticum Natronatum.

Chloroplatinate of Sodium. $PtCl_4 2NaCl$. Solution.

Clinical.—Flatulence. Polyuria. Salivation.

Characteristics.—Hofer experimented with *Plat. m. n*. on the same man who took *Plat. mur*. The chief additional symptom was decided by increased secretion of urine and saliva.

SYMPTOMS.

2. Head.—Slight headache.

8. Mouth.—Decided increase in saliva.

11. Stomach.—Feeling of warmth and heaviness in stomach.—Eructation of gas.—Nausea and inclination to vomit.

12. Abdomen.—Rumbling in abdomen.—Transient colic.

13. Stool.—Emission of flatus.

14. Urinary Organs.—Decidedly increased secretion of urine.

Plectranthus.

Plectranthus fruticosus. N. O. Labiatæ. Tincture of fresh plant.

Clinical.—Abdomen, coldness of. Cholera. Cramps. Dentition. Diarrhœa. Dysphagia. Fever. Intermittent fever. Lumbrici. Neuralgia. Rheumatism. Shoulder (r.), pains in. Spastic paralysis. Stiff-neck. Sweat, local. Throat, sore. Toothache. Wrists, pains in.

Characteristics.—*Plectranthus* was extensively proved by the Austrian Provers' Association. Severe symptoms were induced in head, throat, intestines, and rectum, limbs and joints. Toothache with swelling of face and difficulty of opening mouth. "Pain near right jaw-joint as if a tooth were coming through" suggests a use for the remedy in difficult cutting of wisdom teeth. Burning sensation extended throughout the digestive tract; and there was also coldness of abdomen, > in open air. Many pains about the navel. Paralytic pains in joints. Pains of many kinds in right shoulder. Exhaustion, bruised sensation, general discomfort were experienced. Cramps and paralytic pains in joints. Hansen mentions spastic paralysis as having been remedied by it. Among the *peculiar symptoms* are: As if a morsel stuck in throat after swallowing. As though air were piercing the marrow of the bones. Cool sensation followed by burning at root of tongue and palate. Pressure as from a heavy weight in stomach. Discharge of white mucus from anus causing scratching. Pressure on rectum and bladder. Whites of eyes yellow, < left. Sweat of right foot, left foot dry; of right foot and both hands and no other part; of scalp. The right side was more affected than the left. The symptoms are < after eating (pressure in stomach; pain in umbilical region). < By all food and drink (burning in mouth). Chewing = pain in temples. < By motion; moving head; turning body; by swallowing; whilst urinating, > after. < By warmth of stove. > By application of ice; by eructations. Many of the pains and symptoms were *sudden*, and came and went suddenly.

Relations.—*Compare:* Urinary symptoms, Ocim. Black stools, Lept. Stitches in chest, K. ca. Pains come and go suddenly, Lyc., Bell. Crumb in throat, Hep., Nit. ac., Arg. n.

SYMPTOMS.

1. Mind.—Fretful.—Ill-humoured.—Peevish.—Distracted in mind; cannot keep his attention on an interesting subject.

2. Head.—Head confused, heavy, dull.—Pressure (and stitches) in r. frontal eminence.—(Violent headache in anterior part of skull as far as vertex, becoming intolerable.—Swashing and throbbing with every motion; not > by cold applications; thirst and difficulty of swallowing.).—Pressive pain in occiput; < lying on back; < out of doors; tension in cervical muscles.—Profuse perspiration on scalp.

3. Eyes.—White of eyes yellow (< l.).—Vision seemed remarkably clear (on a dull day).—Flickering before eyes.

4. Ears.—Sticking and stitches in both ears.—Roaring in ears.

5. Nose.—Excessive catarrh, frequent inclination to sneeze; great stoppage with at times discharge of tenacious yellow mucus.—Dryness, mornings.

6. Face.—Painful drawing in r. cheek, infra-orbital region; extending to last upper molars; continued through the night with fever; next day r. cheek swollen and very sensitive.—Lips very dry; burning.

8. Mouth.—Violent drawing in upper and lower incisors with swelled cheek.—Periodic drawing in r. teeth extending to temple and ear, < chewing, > going out.—Pressive pain in r. lower sound teeth.—Upper incisors sensitive.—Tongue coated.—Sensation on root of tongue and on soft palate, at first cool, then burning.—Dry mouth.—Burning through mouth and fauces, < by all food and drink.—Opening the mouth became very difficult; ulcers on r. side of palate; digging in r. upper teeth with increased secretion of saliva; sticking and burrowing extending to r. articulation of jaw as though a tooth erupting.

9. Throat.—Scraping in throat; stitches.—Dryness with thirst, not > by glass of water.—Burning as from pepper, from root of tongue to stomach (6 a.m. to 4 p.m.).—Sensation as if a morsel of food stuck in throat on swallowing.—Tension in pharynx when drinking, with disagreeable tickling in both ears, that obliges frequent hawking.—Acute pressure in pharynx, on swallowing became a burning, not affected by external pressure, increased to 9 a.m., when it became a sensation of swelling.—Dysphagia.

11. Stomach.—Appetite great; eats hastily, though without satiety; On rising from a meal pressure as from a weight in stomach with desire to drink a great deal; after taking a few sips a pulling in stomach causing tension in œsophagus.—Loss of appetite.—Great thirst.—Eructations: frequent; empty; and hiccough.—Nausea; vomiting.—Sudden gushing vomiting twice at night without any other symptoms.—Weight on stomach < after eating.—Cutting in epigastrium followed by two thin, frothy stools.

12. Abdomen.—Contractive pain in umbilical region always < after eating.—Violent griping at umbilicus with desire for stool.—Rumbling and movement.—Crawling about umbilicus disappearing along rectus muscle towards symphysis pubis.—Cutting low in abdomen with desire for stool.—Coldness through (upper) abdomen in warm room, morning.—Drawing sticking in l. inguinal region.

13. Stool and Anus.—Painful pressure in rectum, with constant griping followed by profuse, dark, frothy stool, succeeded by burning and tenesmus in anus; later sudden desire and painful pressure; only a little mucus and gas evacuated with burning in anus.—Discharge of white mucus provoking scratching of anus and followed by burning.—Stool: almost black; pasty, yellowish brown; watery, mixed with mucus; first pasty, then liquid; omitted for five days, then bluish nodular evacuated with great effort.—During stool: griping and rumbling in abdomen; painful dragging in rectum.—After stool: weakness of lower limbs; coldness of abdomen; cold sweat on forehead.—Evacuation of round worms.

14. Urinary Organs.—Pressure in bladder, immediately followed by desire to urinate, sudden cutting pain from root of penis to base of bladder, compelling to sit still.—Burning in navicular fossa during and after micturition, which was scanty and unsatisfactory.—Frequent, sudden desire, had hardly time to reach the closet, but only a few drops passed, followed by a sensation as though bladder full, afternoon; in evening copious micturition with great >.—Increased urination.—Urine dark with reddish-yellow sediment.

15. Male Sexual Organs.—Transient drawing sticking along r. side of penis and urethra.—Violent erection.

18. Chest.—Burning at sterno-clavicular joint.—Stitches: in pectoralis major, arresting breath; between r. fourth and fifth ribs; in r. side.—Pain in r. chest extends up to r. scapula and nape of neck, so violent at night was compelled to jump out of bed and cry out; is though a number of needles sticking into head till head was turned towards the side; with profuse sweat, painful inspiration, great heat of head; < by application of mustard paste, > gradually by application of ice.—Tension in chest.

19. Pulse.—Pulse hard, full with the fever.

20. Neck and Back.—Stiffness and pressive tension in nape, < by every motion of the head.—Drawing in nape.—Coarse stitches from without inward between scapulæ, while walking; during expiration.

21. Limbs.—Sticking and paralytic drawing in all the joints and limbs.—Sensation of paralysis in joints of fingers and toes.

22. Upper Limbs.—Paralysed sensation: in upper limbs; r. shoulder; r. shoulder and wrist, suddenly appearing and disappearing in both shoulders.—Lameness; sprained feeling; weariness; shaking drawing tearing in r. shoulder.—Sensation in l. shoulder as if one were beating on it with a knuckle.—Drawing tearing in joints of upper-arms, fore-arms, and fingers, < r.—Sudden pain in outer condyle of l. wrist.—Stitches in r. wrist.

23. Lower Limbs.—Weariness in lower limbs.—Painful cramps in calves waking him up, not > by stretching.—Stitches in l. hip-joint; burning in r.—Cramp in adductor.; tension in hamstring.—Drawing in fascia of r. thigh.—Tearing beneath r. patella; stitches in l.—Pains in both knees.—Wakened at night by sudden start from a violent sticking in malleoli of ankles.—Burning in periosteum of r. tibia.—Numbness in leg.—Toes painful as if burnt.

24. Generalities.—Weariness.—Stitches.—Sensation as though air were piercing the marrow of the boners.

25. Skin.—Prickling in l. palm.—Crawling in l. little finger; in ball of l. thumb.

26. Sleep.—Drowsiness.—Waked often.—Troubled by confused, unremembered dreams before midnight.

27. Fever.—Sudden, violent, shaking chill with chattering of teeth, waking him from sleep, followed by dry heat.—Chilliness through whole abdomen with warm face and hands; < by heat of stove; > moving about in open air.—Coldness over back and heat of hands; could not get warm in heated room.—Sudden heat on scalp lasting a few minutes, followed by profuse sweat; after sweat dried up, forehead cold to touch.—Sour sweat at night.—Sweat on r. foot and both hands; no other part.—Profuse sweat r. foot, l. foot dry.

Plumbago.

Plumbago littoralis (Mure.—Allen says P. scandens corresponds to Mure's figure, and grows in Brazil. Mure says P. lit. is "a creeper inhabiting the shores in the bay of Rio Janeiro"). N. O. Plumbaginaceæ. Tincture of leaves.

Clinical.—Costiveness. Eyes, inflammation in. Fever. Kidneys, pain in. Saliva, milky.

Characteristics.—Mure proved this plant. The most *peculiar symptoms* were: Saliva profuse, milky. Ulceration of commissures of lips. Costiveness with red urine. Vertigo after eating. Pain in humerus on lifting anything. Hot arms with cold hands. "Many of the plants of this genus are acrid and caustic in the highest degree. The root of *P. scandens*, the Herbe du Diable of San Domingo, is a most energetic blistering agent when fresh; so also is that of *P. rosea*. The beggars employ *P. europea* to raise ulcers on their body to excite pity; and used internally it is said to be as effectual an emetic as *Ipecacuanha*" (*Treas. of Bot.*). In Mure's proving "Aversion to everything" is noted; also "ulceration of commissures of lips," which is an evidence of its acridity.

Relations.—*Compare:* Costiveness with red urine, Lyc. The Plumbaginaceæ are allied to the Primulaceæ and the Plantaginaceæ (the root of Plumb. europ. is used dried as a remedy for toothache).

SYMPTOMS.

1. Mind.—Taciturn.

2. Head.—Vertigo; after eating.—Excessive heat about head.—Dartings in head.—Pain in temples.—Frontal headache.

3. Eyes.—Heat in eyes.—Inflammation and running of l. eye.

4. Ears.—Acute pain l. ear.

5. Nose.—Sensitive smell all day.

8. Mouth.—Saliva: profuse; milky.—Ulceration of commissures of lips.—Bitter mouth.

9. Throat.—Painful constriction of throat.—Sore throat.

11. Stomach.—Aversion to everything.—Heaviness at stomach.

12. Abdomen.—Pain in iliac region.—Pain behind false ribs when inspiring.

13. Stool.—Costiveness with red urine.

15, 16. Sexual Organs.—Violent sexual desire.

18. Chest.—Pain: at r. ribs; sides of chest.—Prickings in chest.

19. Heart.—Pain at heart.—Painful stitch in heart region.—Palpitation.—Pulse hard and small.

20. Neck and Back.—Pain in kidneys as if pinched.—Pain in back.

22. Upper Limbs.—Pain in r. shoulder; burning and pricking.—Pain in humerus when lifting anything.

23. Lower Limbs.—Weakness of joints of lower limbs.

24. Generalities.—Prostration.—Darting pains here and there.—Pain in joints.—Acute pains all over for three hours.

26. Sleep.—Drowsy.—Dreams of dead bodies.

27. Fever.—Chilliness when moving.—Hot arms with cold hands.—Internal heat coming and going.—Very hot internally at night.—Heat in limbs.

Plumbum.

PLUMBUM METALLICUM. The Element. Pb (A. W. 206.39). Trituration.

PLUMBUM ACETICUM. Acetate of Lead. Sugar of Lead. $Pb(C_2H_3O_2)_2 3H_2O$. Trituration.

PLUMBUM CARBONICUM. Carbonate of Lead. Pure White Lead. Plumbic Carbonate. $PbCO_3$, Trituration.

Clinical.—*Amaurosis. Anćmia*. Anćsthesia. Aneurism. *Anidrosis*. Appendicitis. Asthma. *Atrophy. Bone, exostoses on*. Brain, softening of; tumour of. Bright's disease. *Colic. Constipation*. Cystitis. *Depression of spirits*. Diplopia. Dropsy. Dysmenorrhśa. Dysuria. Emaciation. *Epilepsy. Epulis. Eyes, inflammation of*. Ganglion. Gout. Hćmoptysis. Hćmorrhoids. *Headache*. Hernia, strangulated. Hyperćsthesia. Hypopion. *Ichthyosis*. Intermittent fever. *Intestines, obstruction of*. Intussusception. Jaundice. *Jaw, tumour of. Kidneys, affections of*; granular. Liver, affections of. Lockjaw. Locomotor ataxy. *Melancholia*. Metrorrhagia. *Myelitis*. Nephritis. *Numbness*. Śsophagus, stricture of. *Paralysis*; diphtheritic; agitans. *Perichondritis*. Proctalgia. *Progressive muscular atrophy*. Prolapsus ani. Sciatica. Spine, diseases of; sclerosis of; tumour of. Spleen, affections of. Stricture. *Tabes mesenterica. Tobacco habit*. Tongue; paralysis; of. Typhlitis. Umbilicus, abscess of; hernia of. Uric-acidćmia. Vagina, spasm of. Vaginismus. *Veins, varicose*.

Characteristics.—*Plumbum*, the *Saturn* of the Alchemists, has been proved by Hartlaub, Trinks, Hering, and Nenning. To their symptoms have been added those of numberless cases of poisoning among workers with lead and painters, symptoms from drinking lead-contaminated waters, from the use of lead in cosmetics, and from cases of suicide. In the old school metallic lead was seldom used, being considered inert; but Bśrhaave gave it internally reduced to an impalpable powder for leucorrhśa, dysentery, syphilis, and gout (Teste). In the form of plaisters and "Goulard water" the salts of lead have been largely used as external applications in skin diseases, vaginal and urethral injections, and much injury has not infrequently resulted, especially from repelled eruptions. The effect of the three preparations of lead enumerated above have all been included in the Schema, as no attempt has ever been made to keep them separate; nor has any specific difference been noted. Among painters and lead manufacturers the best-known symptoms are the colic and drop-wrist. In addition there are set up conditions of kidney irritation with albuminuria, ending in granular degeneration with attendant heart hypertrophy, optic neuritis, and blindness. There is an excess of uric acid in the blood of persons under the influence of lead, and actual gouty deposits and gouty attacks have been observed. In one case of lead poisoning I saw there was chronic enlargement of the knees and contraction of the lower limbs, completely crippling the patient. In another case there were small aneurisms almost all over the body. In those who

have drunk lead-contaminated water the effects vary in intensity according to the amount of contamination and duration of exposure. When the poisoning has been going on insidiously for years a state of anćmia is set up, with dry, inactive, scaly skin, and inveterate constipation. Tunzelmann (*B. J. H.*, xxxii. 17─quoted *C. D. P.*, where a full collection of cases may be found) reports a number of cases of *acute* poisoning from drinking water containing lead: (*1*) A cook, ill three weeks. Unable to retain any food on stomach; constant nausea, and even when no food was taken frequent vomiting of greenish watery fluid, < night. Skin yellowish; conjunctivć decidedly yellow. Tongue furred, coat at back very yellow; horrible taste, fśtor of breath; bowels confined. Extreme debility. *Hydrast*. 3 gave great relief, but three months later the hands became paralysed, which led to the testing of the drinking-water and the discovery of lead. (*2*) Youth, ćt. 12, had bronchial catarrh with loose cough and consolidation of left apex. As soon as the poisoned water was stopped he rapidly got quite well. (*3*) An elder brother had hćmoptysis, coughing up half a pint of blood. Nothing was found wrong with the lungs beyond slight feebleness of respiration at apices. Three months later, after a day's rowing, the hćmatemesis returned with epistaxis. Now distinct dulness was found at right apex. Rapid recovery followed stopping the water. Caspar (*C. D. P.*) relates the case of a pregnant young woman who swallowed three ounces of white lead on October 8th. The first symptoms set in some hours later with vomiting. Next morning she was found suffering from inflammatory pain and jaundice. The evening of the 10th she gave birth to a seven-months' child, and died the following morning. The autopsy revealed: Features relaxed; skin dirty yellow. Bloody, frothy ichor escaped from nostrils in large quantities, and from genitals, saturating the bed; the mouth also, from which the tongue point protruded, was full of it. Abdomen distended and of stony hardness, genitals swollen and discoloured; brain markedly bloodless; pleura contained 8 ozs. of bloody fluid, lungs distended, filled with frothy, decomposed blood; heart empty, very soft, dirty brown; trachea dark cherry-colour. Pectoral muscles very soft, brown, the blood exuding from them being greasy. Liver dirty brown, very soft; spleen filled with black, tar-like blood; both kidneys very soft and full of blood. Blood in vena cava black, tar-like. Women who work with lead frequently abort; women who do not work with lead but whose husbands do, abort in even greater proportion. Children born under these conditions are frequently idiotic or epileptic. According to Teste, *Plumb*. is *particularly adapted* to adults, males rather than females; particularly to persons of a dry, bilious constitution, with somewhat jaundiced complexion, irascible, hypochondriac, or disposed to religious monomania. (But children are by no means excluded. I have seen apparently hopeless cases of marasmus in infants with large, hard abdomens and extreme constipation cured with *Plumb*., usually in 3rd trituration of the metal or the acetate.) Teste mentions the following cases as having been successfully treated by him with *Plumb*. (*1*) Chronic cystitis. (*2*) Stricture after gonorrhśa. (*3*) Tenacious salivation (mercurial), < in damp weather, saturating pillow in sleep. (*4*) Excessively painful retraction of testes and penis, which seemed to re-enter hypogastrium (consequence of sexual excesses and

repelled tetters). (*5*) Nightly bone pains (after failure of *Merc*, &c.). (*6*) Pulling and pressive chronic headache in forehead, < by mental labour; intolerable in company. (*7*) Mental derangement from syphilis with obscure paralysis of right arm, paroxysms of religious monomania, erotism without erection, periodic fever without sweat, cramp-like retraction of abdomen from time to time. (*8*) Nervous disease characterised chiefly by wandering pains in limbs, spasms of facial muscles, paroxysms of screaming, fright without cause, sudden fainting in passing from one room to another or entering a room full of company. (*9*) Marsh intermittent with quotidian or double tertian type, especially when splenic region is painful to touch. In such cases, says Teste, neither *Ars*. nor *Chi*. can be compared to *Plumb*. These cases bring out some of the keynotes of *Plumb*., and chief among them is: *Retraction* and *sense of retraction*. "Violent colic, sensation as if abdominal wall were drawn back by a string to the spine." Actual drawing in of abdomen is frequently present and is characteristic. The cheeks are retracted, sunken. Excessive and rapid emaciation. In the same category with colic are: Cramps, spasms, convulsions, paralyses, tremors. Fröhling (*A. H. Z*., cxxxii. 68─*Amer. Hom*., xxii. 422) relates the case of N., farmer, 46, who was taken ill in November, 1893, with attacks of colic with vomiting and extreme constipation; action only obtained by large enemata. Had been constipated in former years but without illness. *Opium* had given only temporary relief. After December, 1893, vomiting was rarer, but colic increased in intensity up to February, 1894, when Fröhling saw him first, and found him *wasted to a skeleton, abdomen drawn in*; appetite bad, felt ill, mind somewhat affected, unable to give sensible answers to questions. *Constant urgent call to stool, only small, hard, black balls* passed. Liver dulness only heard from upper border of sixth to upper border of seventh rib. Lead poisoning was suspected, but as no evidence of it could be found *Plumb*. 6 three times a day was prescribed. In six days colic attacks were less frequent, and less severe; two stools passed without enema; mind clearer. Improvement continued in all respects, and in fourteen days N. was able to leave his bed, to which he had been confined since November. By the middle of March he made an hour's journey to see Fröhling, and was hardly recognisable, he had gained so much flesh, and his liver was found of normal size. Wingfield (*M. H. R*., quoted *Amer. Hom*., xxi. 426) reported two characteristic cases: (*1*) Mrs. D., 50, no children, sparely built, very nervous, constipated fifteen years, takes a teaspoonful of Cascara extract every other night. Tongue coated with yellowish white fur. Has constant headaches, and after each motion is thoroughly exhausted, and has to lie down the rest of the day. *Plumb*. 6x gr. iii. twice a day. In two days bowels commenced acting naturally. In three weeks headaches gone, tongue clean, much less nervous. (*2*) Miss M., 25, florid; has boils appear on face and arms, and chronic constipation. The constipation had been a trouble since she was twelve years old. Slight spinal curvature. Tongue furred, occasionally has headaches. Suffers much at menstrual periods. *Plumb*. 6x twice daily at once relieved the constipation, and soon the boils disappeared. Patient soon felt quite well. Arriaga (*La Homśopatia*, No. 9) 1893; *H. M*., xxix. 190), of Mexico city, reports the case of a woman, 73, seized with

symptoms of intestinal occlusion, violent colic, nausea, obstinate constipation, meteorism, complete anorexia, and no fever. *Nux* relieved the colic, and then *Plumb*. 12, and later 13, gradually brought about recovery in four days. Nash cured a severe case of post-diphtheritic paralysis in a middle-aged man. The leading symptom was *excessive hyperćsthesia*—could not bear to be touched anywhere, it hurt so. *Plumb*. 40m (Fincke), a single dose, cured. Nash tells of a man, 70, attacked with severe pain in abdomen, and finally a large, hard swelling developed in ileo-cćcal region, *very sensitive to contact* or least motion. It began to assume a bluish tint, and on account of his age and weakness the man's life was despaired of. But his daughter, the wife of a medical man, found the symptoms in *Raue* under *Plumb*., in the chapter on Typhilitis, and *Plumb*. 200 cured. Anćsthesia is as strongly marked as the hyperćsthesia of *Plumb*. The excessive emaciation of *Plumb*. and the action on the spine make it a remedy of the first importance in progressive muscular atrophy. Among the spasms are: Vaginismus; spasm of uterus and expulsion of its contents; sensation as if there was not room enough for fśtus; spasm of bladder; of śsophagus; strangulated hernia. Clonic or tonic convulsive movements of limbs from cerebral sclerosis or tumour. Epilepsy preceded by vertigo, sometimes sighing, followed by stupid feeling. (In a case cured by Skinner, after a fit the head turned to the right. There was < 8 to 9 a.m.) Paralysed parts lose flesh. Progressive locomotor ataxia. Restlessness; lassitude; faintness. Sensation in abdomen at night which causes patient to stretch violently for hours; must stretch in every direction. Assumes strangest attitudes in bed at night. *Peculiar sensations* are: As if something were working at top of head, with a sense of screwing from behind forward. Eyelids as if paralysed. As of a ball rising from throat into brain. As if a wheat-hull in throat. Cornea as if breathed upon. Eyes as if too large. As of a plug in throat. As if everything were weighted down. As if abdomen and back were too close together; abdomen drawn to spine with a string. Bowels as if twisted; constricted; distended with gas. As if abscess forming near umbilicus. Sphincter ani as if drawn in. As if a bag not quite filled with fluid lay in bowels. As if fluid rolled from one side to other of abdomen. As if thighs pierced with needles. As if feet made of wood.—Pains are wandering or radiating, vague, paroxysmal. Ailments develop slowly and intermit for a time. Alternations are common: Delirium with colic; diarrhśa and constipation; jerks of flexors and extensors; paralysis and colic. Right side is most affected, symptoms go from left to right (throat). In ladies poisoned by cosmetics the vaginismus which resulted increased *pari passu* with paralytic symptoms. With *Plumb*. 6 Theuerkauf cured in six weeks a case of hypopion with great pain (*B. J. H*., xxxvii. 303). W. H. Woodyatt (*Ibid*., 205) reports a case of "vaso-motor neurosis" affecting left eye. Mrs. D., 29, had been ill two weeks, and supposed she had caught cold in the eye. The symptoms were: Drooping upper lid, intense photophobia, very profuse lachrymation of hot tears, pericorneal injection, *deep bluish redness of sclerotica*, most marked at corneal margin. Cornea very faintly hazy. *Pupil contracted. Sight misty. Ars*. 6x and *Plant*. 6x failed to relieve. *Plumb*. 6x was then given with immediate improvement, which went on to cure in seven days. The italicised

symptoms were the leading indications for *Plumb*. In a case of right-sided sciatica which had been greatly benefited by *Gnaph*. 1, but which had returned, the symptoms being: Stiffness; soreness from great trochanter and point of exit of nerve to knee; weakness in thigh; < by stooping; walking = sensation as if pushing a knife in thigh, *Plumb*. 6 was given four times a day. Up to the twelfth day there was no change; on that day the pain suddenly went. The case had lasted nine months. The symptoms are < by touch. > By hard pressure and by rubbing. > At rest. < By motion. Mental exertion <. > Lying down. < Lying right side (swelling in abdomen; cough). Lying on left side < violent palpitation. Bending back > pressure in stomach,:; pain in epigastrium; pain in back. Bending forward = pressure in stomach; > pain in back. Bending double > colic. Back sensitive when leaning on it. > Stretching limbs. < At night, < In rough, foggy weather. Open air, coldness in; sensitive to; > vertigo. Damp weather = profuse salivation. < In room full of company.

Relations.—*Antidoted by:* Sulphuric acid, diluted, taken as a lemonade, is one of the best antidotes to the chronic effects of lead; Alcohol is a preventive; Alumen, Alumina, Ars., Ant. c., Ben., Coccul., Hep., Kreos., Nux, Op., Petrol., Plat., Piperaz., Zn. (Teste, who classes Plumb. with Merc. and Ars., says Ćthus cyn. is the best antidote in his experience; he names also Hyo., Plect., Strm., and Electric.) *It antidotes:* Bad effects of long abuse of vinegar. *Compatible:* Ars., Bell., Lyc., Merc., Phos., Pul., Sil., Sul. *Compare:* Constipation, inertia, hard black balls, Op. (Plumb. has also some spasmodic constriction at anus). Delirium, bites and strikes, Bell. (Plumb. has tremors of head and hands; yellow mucus about teeth; colic alternating with delirium). Head and abdominal symptoms alternating, Pod. Brain softening, Zn. (Plumb. has pain in atrophied limbs alternating with colic), Vanad. Constipation from inertia, vaginismus, Plat. (Plat. > these conditions of Plumb.). Irritable piles with drawn-up sensation at anus, Lach. Peritonitis with retracted abdomen, Euphb. Head turns to right, Stram. (to left, Lyc.; to either, Bufo, Camph.).—Globus, Ign., Lach., Lyc. Diseases originating in spine, Pho., Pic. ac., Zn. Weak memory, unable to find right word, Anac., Lac c. Face greasy, shiny, Nat. m., Sanic. Desire to stretch, Amyl. n. Illusion of smell, Anac.

Causation.—Repelled eruptions. Sexual excess.

SYMPTOMS.

1. Mind.—Silent melancholy and dejection.—Great anguish and uneasiness, with sighs.—Anxiety, with restlessness and yawning.—Weariness and dislike to conversation and labour.—Discouragement.—Weariness of life.—Weakness or loss of memory.—Slow of perception; increasing apathy.—Unable to find proper word while talking.—Coma.—Imbecility.—Dementia.—Mania.—Delirium; alternating with colic.—Fury.—Frantic delirium (bites, strikes), sometimes with demented aspect.—Dread of assassination, poisoning; thinks every one about him a murderer.

2. Head.—Head confused and heavy, as from apathy and melancholy.—Dizziness to the extent of failing senseless.—Intoxication.—Vertigo, esp. on stooping, or looking up into the air.—Headache, as if caused by a ball rising from throat into brain.—Heaviness of head, esp. in (cerebellum) occiput and forehead.—Tearing in forehead and temples.—Lancinating headache.—Congestion of blood to head, with pulsation and heat.—Violent pains in integuments of skull from occiput to forehead.—Great dryness of hair.—Hair becomes very greasy.—Falling off of hair of scalp, also of eyebrows and whiskers (moustaches).

3. Eyes.—Pressive and very acute pain, as if eyeballs were too large.—Heaviness of eyes when moving them.—Paralysis of upper eyelids.—Contraction in eyes and eyelids.—Tearing in eyelids, with sleep.—Sanguineous congestion in eyes.—Inflammation of eyes and of iris.—Nocturnal agglutination of eyes.—Swelling of eyes.—Yellowish colour of sclerotica.—Spasmodic closing of eyelids.—Eyes convulsed.—Pupils contracted.—Sight confused, as if directed through a mist, which forces the patient to rub eyes.—Hypopion.—Myopia.—Diplopia.—Blindness, as from amaurosis.—Optic neuritis.

4. Ears.—Tearing in ears.—Boring and shooting in ears.—Sensibility to noise.—Occasional sudden diminution of hearing.—Deafness; sudden.—Buzzing in ears.—Hears music, with frightful delirium.

5. Nose.—Coldness of nose.—Erysipelatous inflammation of nose.—Red, purulent vesicles in nasal angles.—Fetid smell in nose.—Loss of smell.—Obstruction of nose.—Accumulation of tenacious mucus in nostrils, which can only be expelled by way of the nasal fossć.—Fluent coryza, with discharge of serous mucus.

6. Face.—Face pale, yellow, hippocratic.—Bewildered air; distorted countenance.—Bloatedness of face.—Semilateral swelling of face.—Paralysis of lower two branches of r. facial nerve.—Skin shining and greasy to sight and touch.—Tearing in maxillary bones, which is removed by friction, or made to appear in another place.—Boring in lower jaw.—Exfoliation (painless) of lips.—Cramps in jaw.—Lockjaw.—Swelling of submaxillary glands.

7. Teeth.—Tearing, jerking pains in teeth, < by cold things.—Teeth coated with yellow slime.—The teeth become black.—Fetid, hollow, carious teeth, which break off in notches.—Looseness and falling out of teeth.—Grinding of teeth.—Gums pale and swollen; purple-coloured thin border on gums nearest teeth.—Painful and hard nodosities on gums.

8. Mouth.—Dryness of mouth.—Copious accumulation of sweetish saliva in mouth, with dryness of gullet.—Salivation; tenacious; mercurial; < during sleep.—Froth in mouth.—Viscid mucus in mouth on waking in morning.—Hćmoptysis.—Aphthć and fetid ulcers in mouth, and purple blotches in mouth and on tip of tongue.—Breath

fetid.—Inflammation, swelling, and heaviness of tongue.—Tongue brown and dry, with rhagades.—Tongue green, slate-coloured, or coated yellow.—Paralysis of tongue, preventing speech; cannot put tongue out.

9. Throat.—Sore throat, as if caused by a swelling (plug) or foreign body in gullet.—Sensation as if a ball were rising in throat (globus hystericus).—Sensation of constriction in throat (as soon as the least effort is made to swallow, with great urging to do so).—Paralysis of gullet, with inability to swallow.—Drawing in throat when eating, as if śsophagus were being torn out.—Sensation as if an insect were crawling in śsophagus.—Inflammation and induration of tonsils; granular sore throat, going from l. to r.—Formation of consecutive, small, exceedingly painful abscesses in tonsils.

10. Appetite.—Sweetish, bitter, metallic, or horribly offensive taste.—Sulphurous, acid taste in bottom of throat.—Violent thirst, esp. for cold water.—Anorexia.—Violent hunger, even shortly after a meal.—Great desire for bread and fried things, cakes, rye bread, tobacco.

11. Stomach.—Risings, with a taste of food.—Empty risings, sometimes very violent and painful.—Sweetish risings.—Hiccough.—Regurgitation of sweetish or sour water.—Disgust and frequent nausea, with disposition to vomit, sometimes with retching.—Continued and violent vomiting of food, or of greenish and blackish matter, or yellowish, with violent pains in stomach and abdomen.—Vomiting of bile or of blood.—Vomiting of fćcal matter, with colic and constipation.—Very violent pains in stomach.—Sensation of heaviness and aching in stomach, sometimes after a meal.—Dull and anxious pressure in scrobiculus.—Constrictive cramps in stomach.—Shootings from pit of stomach into back.—Cuttings and burning pain in stomach.—Inflammation of stomach.

12. Abdomen.—[Drawing pain from before backward, as though abdomen were drawn in and through towards backbone, sometimes making abdomen concave; sensation as though a string were inside abdomen drawing it in; generally there is great despondency with this pain.—Painters' colic with this sensation, as though abdomen were drawn in and touching the spine; pulse may be down very low, 50, or even 40.—Gastralgia with sensation as though abdomen and backbone met.—Great liver remedy; inner belly in general; inner region of navel; sometimes umbilical hernia, and is an excellent remedy for this; l. side of abdomen generally (H. N. G.).].—Pain in liver, with lancinating pressure.—Hepatic region sensitive to pressure.—Heat and burning in liver and spine.—Sticking and darting in liver, first anteriorly, then posteriorly.—Jaundice.—Cirrhosis; first enlarged, then contracted.—Affections of spleen.—Very violent pains in abdomen, with retraction of navel.—Inflation and induration of abdomen.—Violent colics, with constrictive pain, esp. in umbilical region, with violent contraction of abdomen (navel and anus are violently drawn in), sometimes forming elevations and depressions, < by slightest touch, and sometimes increased at night to the highest degree.—Large,

hard swelling in ileo-cćcal region, very sensitive to contact or least motion; sneezing or coughing.—Colic and paralysis of lower extremities.—Pinchings and cuttings in abdomen.—Shootings round navel.—Sensation in upper part and in sides of abdomen as if something detached itself and fell down.—Pulsation in abdomen.—Burning sensation or coldness in abdomen.—Inflammation, ulceration and gangrene of intestines.—Hard nodosities in abdomen, as if caused by internal induration.—Soreness of abdominal muscles, < by movement and by touch.—Continued production and incarceration of flatus, with, grumbling and borborygmi in abdomen.—Abundant expulsion of very offensive and hot, burning flatus.—In rectum very urgent effort to expel flatus without any result.

13. Stool and Anus.—Most obstinate constipation; stools blackish.—Continued and ineffectual want to evacuate.—Fćces difficult to evacuate, hard, sometimes in round pieces, like sheep dung, and tenacious.—Balls in conglomerate masses, discharged with difficulty.—Loose evacuations.—Long-continued diarrhśa, generally of yellow excrement, or else painful, and often very offensive.—Sanguineous diarrhśa.—Watery diarrhśa, with vomiting and violent colic, esp. pain in umbilicus.—Painful retraction and constriction of anus.—Intolerable pain from spasms of rectum, with every evacuation lasting an hour or two; horrible constriction, much < if stool solid.—(Constipation from anal spasm in children.—R. T. C.).—Prolapsus ani, with paralysis.—Fissures of anus.

14. Urinary Organs.—Retention of urine.—Difficult emission of urine, only drop by drop, dark coloured, scanty, albuminous.—Tenesmus of bladder.—More frequent and more copious emission of urine.—Watery, or reddish, fiery, turbid, and sometimes thick urine; sediment consisting of red blood-corpuscles and cylinders; all the symptoms of acute nephritis; with amaurosis and cerebral symptoms.—Discharge of blood from urethra.—Diabetes.

15. Male Sexual Organs.—Swelling and inflammation of genital organs (of penis and scrotum).—Contraction and constriction in testes, with jerking in spermatic cord.—Retraction of testes.—Excoriation of scrotum.—Sexual desire excessively increased, with frequent erections and pollutions.—Loss of sexual desire.—Insufficient emission of semen during coition.—(Impotence.)

16. Female Sexual Organs.—Retarded menstruation.—Amenorrhśa, chloro-anćmia.—Nymphomania.—Wants to stretch limbs during ovarian pains.—Spasmodic dysmenorrhśa.—Cessation of menses on invasion of colic; may reappear after paroxysm, or not again until next period.—Metrorrhagia with sensation of strong pulling from abdomen to back; during climacteric, dark clots alternating with fluid blood or bloody serum.—Strangulation of prolapsed portion of vagina, intense pain.—Mucous discharge per vaginam.—Feels a lack of room for fśtus in uterus; inability of uterus to expand; threatened abortion.—During pregnancy cannot pass urine, from lack of sensation; or from paralysis.—Puerperal eclampsia; albuminuria.—Pulling, tearing, contractive pains in breasts, uterus, and

vagina, with or without colic; the breasts become momentarily harder, or with the colic they become smaller.—Induration and inflammation of breasts.—Leucorrhśa.—Miscarriage.—Vaginismus.—Hyperćsthesia of genitals.—Obstructed bowels during pregnancy.—Milk scanty and watery.

17. Respiratory Organs.—Hoarseness and roughness in throat.—Aphonia.—Constriction of the larynx.—Copious expectoration of mucus from larynx, which is viscid, transparent, or yellowish green, and in lumps.—Dry, convulsive cough.—Expectoration of pus with the cough.—Cough, with expectoration of blood, hćmorrhages from lungs.

18. Chest.—Difficult, anxious, oppressed, and panting respiration.—Shortness of breath.—Spasmodic asthma.—Oppression of chest, appearing periodically.—Fits of suffocation.—Pressure on chest, esp. when breathing deeply or laughing.—Shootings in chest and sides, sometimes with obstructed respiration.—Apices of lungs affected.—Small red papules on chest, which desquamate.

19. Heart.—Ebullition in chest, with anxietas prćcordium, and perceptible palpitation.—Change in muscular structure without coincident disease of valves, with or without atheromatous degeneration of vessels, usually hypertrophy and dilatation of l. ventricle, sometimes with parenchymatous nephritis.—Bruit de souffle.—Palpitation, < on ascending stairs or running.—Pulse rapid, jerky, weak.—Tachycardia.

20. Neck and Back.—Tension in nape of neck, extending into ear on moving head.—Tearings and shootings in loins, in back, and between shoulder-blades.—Distortion of spine.—Itching on coccyx above anus, going off when scratched.

22. Upper Limbs.—Convulsive movements of arms and hands, with pain in joints.—Drawing and tearing in arms and fingers.—Wrist-drop.—Weakness and painful paralysis of arms and hands.—Dilatation of veins on back of hands, arms, and calves.—Ganglion on back of hands.—Wens on hands.—Difficulty in moving fingers.—Red and swollen spots on fingers.

23. Lower Limbs.—Drawing in hip-joints when lying down.—Painful sensation of paralysis in hip-joints, and in those of hands and feet, esp. on going up stairs.—Violent pains in limbs, esp. in muscular parts of thighs; < evening and night.—Sciatica; walking causes great exhaustion; with consecutive atrophy.—Cramp in calves, < at night.—Paralysis of thighs and feet.—Numbness outer side r. thigh from hip to knee.—Numbness of legs and feet.—Tearings and shootings in thighs and knees.—Sensation of numbness in feet, with difficulty in putting them to the ground.—Cramps in soles of feet.—Swelling of feet.—Fetid sweat on feet.—Distortion of toes.—Pain in great toe at night.—Ingrowing toenails.

24. Generalities.—[Jaundice, where the sclerotica is yellow, face yellow, urine yellow; vomiting in bed after retiring for the night, restless, sleepless, &c.—Loss of smell; reddish-yellow face.—Affections in lower teeth; tongue; sweetish taste, as in expectoration of cough with sweetish taste.—Obstructed flatus with terrible colic.—Retraction of soft parts in general; pinching pain with sensation of tearing; sphacelus; grey ulcers.—H. N. G.].—Drawing and tearings in limbs, < at night, sometimes shifting their position on the parts being scratched.—Burning sensation in various parts of body.—Violent tingling pains in bones, coming on fitfully.—Cramps and constrictive pains in internal organs.—Numbness, stiffness, pain as from fatigue, and contraction of some of the limbs.—Paralysis; of the limbs of those who work in lead.—Convulsive trembling and jerking of limbs, convulsions and cramps, sometimes followed by paralysis.—Epileptic fits (without consciousness).—Swooning, esp. in a large company.—Heaviness and torpor of limbs.—Great weakness, with trembling of limbs.—Depression, with want to lie down, and throbbing of arteries in whole body after slight exercise.—Muscles flaccid.—General emaciation, esp. in paralysed parts, followed by swelling of those parts.—Excess of uric acid in the blood.—Anćmia.—Anćsthesia.—Hyperćsthesia.—Arthralgic and neuralgic pains in trunk and limbs.—Dropsical swellings, sometimes of whole body.—Sensitiveness in open air.—The symptoms develop themselves slowly, and sometimes disappear for a time and reappear subsequently.—< In the night; from rubbing.

25. Skin.—Sensitiveness of skin to open air.—Lead coloured, dry, rough, bluish, or yellow skin.—Dark brown spots over whole body.—Tendency to inflammation and suppuration of slight wounds.—Burning pain in ulcers.—Excoriations.—Decubitus.—Sphacelus.

26. Sleep.—Great drowsiness during day; tendency to fall asleep, even while speaking.—Coma and lethargy, sometimes with dizziness.—Retarded sleep.—Nocturnal sleeplessness, with abdominal spasms.—Jerks during sleep.—Must stretch in every direction.—Assumes strangest attitudes in bed at night.—Many dreams, sometimes lascivious, with erections.—Talking during sleep.

27. Fever.—Pulse very variable, generally contracted, small and slow; at times hard and slow, occasionally small and quick.—Predominance of shiverings and coldness, esp. in the limbs and in open air.—Chill predominates, increasing towards evening, with violent thirst and redness of face.—Coldness in open air and when exercising.—Cold or clammy sweat.—Transient, anxious heat (with thirst, redness of face, and sleepiness).—Internal heat in evening and at night, with yellowness of buccal cavity.—Entire lack of perspiration.

Plumbum Chromicum.

Chromate of Lead. Chrome Yellow. $PbCrO_4$. Trituration.

Clinical.—Colic. Convulsions. Cramps. Diarrhœa. Dysphagia. Erythema. Screaming. Tenesmus.

Characteristics.—Several cases of poisoning by Chrome Yellow have been observed. The symptoms present the cardinal features of lead poisoning-cramps, convulsions, retracted abdomen. Characteristic features were a violent diarrhœa of yellow colour. Yellow stools with constipation. Convulsions with terrible pains. Erythematous redness of chest and abdomen. Pupils enormously dilated. The face was red and hot, and there was heat of the body generally. The symptoms were < towards evening. > By drinking warm milk.

SYMPTOMS.

1. Mind.—Apathetic, but when questioned knew what was going on around.—Apathetic, almost soporous.

2. Head.—Headache with ringing in ears, pains in chest, loss of appetite, inclination to vomit.

3. Eyes.—Pupils enormously dilated.—Eyeballs fixed, staring.

4. Ears.—Ringing in ears with headache.

6. Face.—Face pale.—Face red and hot.—Face livid during convulsions.—Expression of most profound prostration.—Lips violet.—Lips dry.—Jaws firmly closed.

8. Mouth.—Tongue coated yellow.—Point of tongue red.—Bad odour from mouth.

9. Throat.—Swallowed with difficulty; shortly before death.

11. Stomach.—Appetite lost.—Great thirst.—Nausea and vomiting.—Softening of coats of stomach.—Pain in epigastric region.

12. Abdomen.—Abdomen hard and forcibly retracted.—Pain in umbilical region.—Violent cramps in abdomen with constipation.

13. Stool and Anus.—Violent diarrhœa.—Yellow diarrhœa.—Constipation with yellow fæces.—Constipation.

17. Respiratory Organs.—Respiration short; laboured.

18. Chest.—Pain in chest.—Redness of chest and abdomen.

19. Heart.—Pulse tumultuous.—Pulse irregular and intermittent.

20. Back.—Pain in spine.

24. Generalities.—Frequent convulsions, during which face becomes livid.—Frequent screaming.—Convulsions with terrible pains.—Prostration.—Restlessness.

25. Skin.—Skin of chest and abdomen remarkably erythematous.

26. Sleep.—Sleeplessness.

27. Fever.—Whole body hot.

Plumbum Iodatum.

Iodide of Lead. Plumbic Iodide. PbI_2. Trituration.

Clinical.—Arterio-sclerosis. Atrophiæ. Crusta lactea. Glands, enlarged. Paralysis. Pellagra. Scrofula. Spleen, enlargement of. Tonsils enlarged. Ulcers.

Characteristics.—*Plumb. iod*. is used in old-school practice as an external application in cases of enlarged glands, chronic ulcers, and porrigo capitis. It has also been given internally for enlarged glands and chronic enlargement of the spleen. Hansen mentions "arterio-sclerosis; atrophiæ; pellagra; paralyses," as conditions relieved by it. A combination of *Plumb*. and *Iod*. indications will be the chief guide.

Podophyllum.

Podophyllum peltatum. May Apple. Mandrake (American). N. O. Berberidaceć (by some placed in the Ranunculaceć and closely related to both). Tincture of root gathered after fruit has ripened; of whole fresh plant; of ripe fruit. Solution of resinous extract, Podophyllin.

Clinical.—Acidity. Amenorrhśa. *Anus, Prolapse of*. Asthma, bronchial. *Bilious attack*. Bronchitis. Cataract. Cholera infantum. Cornea, ulcer of. Dentition. *Diarrhśa*; camp. *Duodenum, catarrh of*. Dysentery. Dysmenia. Dyspepsia; from calomel. Fevers. Flatulence. Gagging. Gall-stones. Gastric catarrh. Goître. Hćmorrhoids. Headache, sick; bilious. Heart, pains in. Hydrocephaloid. Intermittents. Jaundice. Leucoma. *Liver, affections of*.

Ophthalmia. Ovaries, pains in; numbness in; tumour of. Palpitation. Pneumonia. *Proctitis*. Prostatitis. Pustules. Sciatica. Stomatitis. Strabismus. Taste, lost, perverted; illusions of. *Tenesmus*. Tongue, burning in. Urticaria. Uterus, prolapse of. Whooping-cough. Worms.

Characteristics.—*Pod*. grows throughout the United States in damp, shady places in woods, has leaves five to nine-lobed, large white nodding flowers, yellowish fruits, egg-shaped, not unlike a small lemon, hence the plant is sometimes called Wild Lemon. It flowers in May and June, and the fruit ripens in October. Indian tribes use the root to expel worms, and drop the juice of the root into the ear to cure deafness. "All the tribes are fond of the fruit," says Rafinesque, quoted by Hale, who gives a full account of the medicine. The botanic and eclectic practitioners adopted the remedy and used it as the "vegetable mercury." The first homśopathic proving was made by Williamson. An unintentional proving recorded by E. V. Rose (*H. W*., xxv. 246) brings out the chief characteristics of *Pod*., and shows that its reputation as a "vegetable mercury is not undeserved: Mr. J., 26, took at 11 a.m. gr. x of *Pod*. 1x to "stir up his liver." At 6 p.m. was taken with an indescribable sick feeling all over, and a persistent dry, rough feeling in pharynx and śsophagus, extending along right Eustachian tube, with dull, aching pain in right ear; feeling as though a ball or lump in upper śsophagus. At 8 p.m. dull and stupefying headache, chiefly frontal, < lying down. Fulness in stomach, belching of gas, sour eructations; marked salivation and offensive odour from mouth. Sleep disturbed, full of confused dreams; rolled and tossed about, bed felt too hard; and a feeling as though head and shoulders were lying too low. At 3 a.m. call to stool, which was profuse, watery, dark green. Calls frequent. *Before* stool: peculiar weak, dull, griping pain below umbilicus; fulness in rectum. *During* stool: weak feeling in stomach. *After* stool: tenesmus and faint feeling. These symptoms passed off in two or three days, the diarrhśa being followed by constipation, which was quickly removed by *Nux*. These symptoms are nearly all proved characteristics of *Pod*.: The early morning <; the *profuse* stools, faint, gone sensation; fulness and tenesmus in rectum. *Pod*. is an irritant wherever applied. Externally on the skin it produces a rawness like intertrigo. The dust of the powdered root getting into the eyes sets up intense inflammation, ulceration, and leucoma. These effects have proved leading indications for its internal use in eye affections. The fulness and tenderness of the rectum noted in Ross's case went on to actual prolapse in the provings. I have many times cured with *Pod*. 6 prolapsus ani in children. With *Pod*. 1x Mr. Knox Shaw relieved "continual urging and straining" in a case of rectal cancer too far gone for operation. The genital organs were involved with the rectum in the tendency to prolapse. "Symptoms of prolapsus uteri with pain in sacrum; with muco-gelatinous stools"; "sensation at stool as if the genital organs would fall out" are keynotes of the provings which have led to many cures. Pains in the ovaries, especially the right, extending down the anterior and inner side of thighs. In the pregnant and puerperal state *Pod*. is frequently indicated: in the vomiting of pregnancy; swelling of labia; severe after-pains with strong bearing-down sensation; hćmorrhoids and prolapsus recti after confinement. A peculiar

symptom of pregnancy indicating *Pod*. is: "Can lie comfortably only on stomach (early months)." The irritation of *Pod*. is shown in the brain, but it is then generally reflected even from the abdominal viscera (cholera infantum) or the teeth (dentition). There is moaning and whining during sleep; the head is thrown back and rolls from side to side; the child grates its teeth. "Great desire to press gums or teeth together" is a keynote. The salivation, foul breath, and moist, tooth-indented tongue of *Merc*. are reproduced in the *Pod*. provings, and so also is the congested, sensitive liver, with excess or absence of bile. These, combined with the feverishness and proneness to sweat, make *Pod*. one of the important antidotes to *Merc*. Fevers of many kinds are met by *Pod*.—remittent, chiefly bilious remittent, intermittent. Delirium is not rare, and is apt to be loquacious. Moaning and whining during sleep. Much drowsiness and desire to stretch. *Alternating* conditions are noted: Diarrhśa alternating with constipation; headache alternating with diarrhśa; headache in winter, diarrhśa in summer; inflammation of scrotum *or* of the eyes; not of both. Some *Concomitants* are important: Pains in sacrum, in lumbar region with rectal and uterine symptoms; cramps in calves with stools. The stools may be painless, or may be preceded, accompanied, and followed by colic, tenesmus and other symptoms. The concomitance of diarrhśa with other affections points to *Pod*. Loquacity during chill and heat is a keynote in fevers. Nash cured an obstinate case of intermittent through this symptom: Chills violent, followed by intense fever with great loquacity; when the fever was past patient fell asleep, and on waking remembered nothing of his loquacious delirium. "Burning tongue" is another leading symptom. A case is related by W. A. Burr (*Critique*, quoted *Hom. News*, xxviii. 87) of a young man who had for some weeks a burning sensation along left edge of tongue, occasionally shooting to tip, or through to opposite edge. He had been in poor health, "bilious," for years. With catarrh of stomach, duodenum, and bile ducts extreme discomfort followed even the blandest foods. *Pod*. 3x improved in two days, and the tongue was well in a week. L. M. Barnes (*Hom. News*, xxix. 45) reports these cases: (*1*) A lady for four months after miscarriage had much ovarian pain, < at night. She was sleepless, nervous, restless. Much bearing down in abdomen and back. She was a large, stout woman, with a pendulous abdomen. *Pod*. cured after *Puls*. and *Act. r*. had only partially relieved. (*2*) A stout woman, 60, complained of burning, aching, cutting pain in rectum. Was obliged to be on her feet all day. Nervous, cross, irritable. *Pod*. cured. *Pod*. is *suited to* bilious temperaments, especially after mercurialisation. *Peculiar sensations* are: As if strabismus would occur. Pain in head as from ice on occipital protuberance. As if tongue, throat, and palate had been burned. As if a thousand live things moving about in abdomen, or of fish turning over. As if everything would drop through pelvis. As if heart ascending to throat. Ball in upper śsophagus. *Notable symptoms* are: Thirst for large quantities of cold water. Intense desire to press the gums together. Viscid mucus in mouth, coating teeth. Diarrhśa whilst being bathed or washed; of dirty water soaking through napkin; with gagging. Patient is constantly shaking and rubbing region of liver with his hands. Great loquacity

during chill and heat. *Pod*. is predominantly right sided—right throat; hypochondrium; ovary. Guernsey mentions that it is often called for in complaints of pregnant and parturient women, with sensation as if intestines were falling down. He mentions also "whooping-cough with costiveness and loss of appetite." The symptoms are < by touch (spot on right hypochondrium); > by pressure. > Rubbing (inclination to rub liver region with hand). > Lying down; lying on abdomen; stretching in bed. Pain in left leg < by straightening out the limb. < Motion; walking; ascending stairs; exertion. < Morning, especially early morning, 2 to 4 a.m. Some symptoms < night. < Open air; while washing. External heat > pain in bowels. Heat of stove does not > chilliness, but wrapping warmly in bed does >. Hot weather, summer, < diarrhśa. < After eating and drinking; after acid fruit and milk. < By swallowing. < Before, during, and after stool.

Relations.—*Antidoted by:* Lact. ac., Nux, Coloc., Lept. *Antidote to:* Merc. *Compatible:* After Ipec. and Nux in vomiting; after Calc. and Sul. in liver diseases. *Incompatible:* Salt, which increases its action. *Compare:* Morning diarrhśa, Sul., Dros., Bry., Nat. s., Rx. c. Hot, yellowish, green, offensive diarrhśa, Cham. (Cham. < evening; Pod. < morning, in one gush). Cholera morbus, profuse stools, Ver. (Ver. has much pain; Pod. may have absence of pain). Diarrhśa < after eating; headaches alternating with uterine and bowel affections, Alo. (Plumb. delirium alternating with colic). Prolapsus ani *before* stool with weakness in abdomen (Alo. *after* stool). Prolapsus uteri < during stool, Stan. (with Pod. the stool is diarrhśic and comes with a rush). Prolapsus recti et uteri, Nux, Sep. Bearing down in hypogastric and anal regions, > lying down, Sep. Prolapsus of rectum, Bell., Ćsc. h., Nit. ac., Rut. (especially in children, Chi., Chi. s., Pod.). Duodenal catarrh, Berb., Chi., Hydras., Lyc., Merc., Ric. c. Diarrhśa immediately after eating, Alo., Ars., Chi., Lyc., Staph., Trbd. (*whilst* eating, Fer.). < After eating or drinking, Dig., Trbd. Headache from over-excitement, Epipheg. Blur before headache, K. bi., Ir. v. Wants to bite gums together, Phyt. Tongue as if burnt, Sang. Blue tongue, Gymno. As if something alive in abdomen, Croc. Regurgitation of food, Sul. Pain under right scapula, Chel. Diarrhśa, ovarian pain, ovarian tumour, dysmenia, Coloc.

Causation.—Over-lifting or over-straining (prolapsus uteri). Summer (diarrhśa).

SYMPTOMS.

1. Mind.—Conscious during chill, but cannot talk, forgets words.—Delirium, loquacious during heat; forgetful after of what has passed.—Depression: imagines he is going to die or be very ill; in gastric affections.—Disgust for life; headache; biliary disorders.—Over-fatigue of mind from business; when in bed he rolled his head on waking and while awake.

2. Head.—Vertigo: while standing; in open air; with tendency to fall forward; with sensation of fulness over eyes; from gastric or bilious disorders.—Momentary darts

of pain in forehead, obliging one to shut eyes.—Stunning headache through temples, > by pressure.—Sudden pain in forehead, with soreness of throat, evening.—Pressing in temples, forenoon, with drawing in eyes as if strabismus would follow.—Throbbing in temples, aching eyes, hot tears, in morning.—After stool, 10 a.m.: Frontal headache with feverishness; sensation of great dryness in forehead and eyes, > for short time by bathing with cold water.—Sick headache accompanied by constipation.—Headache alternating with diarrhśa.—Bilious headache, burning at vertex and over forehead, pain lasts twenty-four hours, ends in vomiting; pale urine during attack; passes much bile next day; < from over-excitement or walking.—Morning headache with flushed face and heat in vertex.—Dull headache with pain behind eyes; liver, torpid.—Pain in vertex on rising in morning.—Sick headache most in occiput, preceded by blur before vision, coming suddenly.—Head hot, rolling head from side to side; dentition.—Reflex irritation of brain from disorders of bowels; grinding teeth at night; morning in sleep; eyes half-closed; head sweaty.

3. Eyes.—Inflammation of eyes with excruciating, heavy pain, great turgescence of vessels.—Superficial ulceration of each cornea with general congestion of conjunctivć; ulceration central and extensive, in r. eye its base was densely white, as if lead had been used (after ten days, from the dust whilst grinding the root).—Eyes inflamed in morning.—L. eye sore.—(Arcus senilis lessens and a dribbling of saliva ceases in an old man.—R. T. C.).—Eyes glazed and motionless (from ripe fruit).—Eyes sunken.—Heaviness of eyes with occasional pains at vertex.—Smarting; inflammation of lids.—Pain in eyeballs and temples, with heat and throbbing of. temporal arteries.—Drawing in eyes as if squint would follow.—Scrofulous ophthalmia < in morning.—(Cataract has been known to clear after Pod. given internally.—R. T. C.)

4. Ears.—Aching pain in r. ear, with rough feeling extending from there along r. Eustachian tube.

5. Nose.—Nose pinched.—Soreness and little pimples on nose.

6. Face.—Corpse-like pallor.—Complexion sallow, dingy.—Hot, flushed cheeks.—Under jaw fallen.

7. Teeth.—Great desire to press gums together; jaws clenched; grinds teeth at night; difficult dentition.—During dentition; catarrhal cough; catarrh of chest; cholera infantum; hydrocephaloid.—Teeth covered with dried mucus in morning.

8. Mouth.—Total loss of taste, could not tell sweet from sour; sleepless, restless.—Everything tastes sour or putrid; sweet.—Taste of fried liver in mouth at night.—Bad taste after other symptoms had disappeared.—Feeling as if tongue, and sometimes palate and throat, had been burned.—Tongue: furred white with foul taste; white, moist, shows imprints of teeth; dry, yellow; full and broad with pasty

coat in centre; red, not bright red; rough with uniformly erect papillć; dull bluish colour; red, dry, cracked, somewhat swollen and often bleeding.—Offensive breath; at night; perceptible to patient.—Copious salivation.—(Dribbling of saliva in an old epileptic case ceases.—R. T. C.).—Much viscid mucus in mouth (morning).—Mouth and tongue dry on awaking.—Nursing sore mouth; canker.

9. Throat.—Dryness of throat.—Burning in throat (from the ripe fruit).—Soreness of throat extending to ears; r. to l.; l. side sore, < swallowing liquids, morning.—Rattling of mucus in throat.—Goître.—Dry, rough feeling in pharynx and śsophagus, extending along r. Eustachian tube with aching pain in r. ear.

10. Appetite.—Indifference to food; loss of appetite; smell. of food = loathing.—Satiety from small quantity of food, followed by nausea and vomiting.—Appetite variable, at times voracious.—Great thirst for (cold water in) large quantities; Moderate thirst during fever.—Increased thirst after eating.—Desire for something sour.—Thirst towards evening.—After eating: regurgitation of food, sour; hot, sour belching; diarrhśa; vomits food an hour after, craving appetite afterwards; depression of spirits.—After eating and drinking: diarrhśa.—After acid fruit and milk: diarrhśa.

11. Stomach.—Heartburn, waterbrash, heat in stomach.—Eructations: smelling like rotten eggs; hot; sour.—Nausea: distressing and extreme; with attempts to vomit; motion of gagging is made with mouth but not accompanied with retching; stomach contracts so hard and rapidly that the wrenching pain = patient to utter sharp screams; gagging or empty retching.—Gagging in infantile diarrhśa.—Nausea and vomiting with fulness in head.—Vomiting: of milk in infants, with protrusion of anus; of food with putrid taste and odour; of thick bile and blood; of hot, frothy mucus; with congestion of pelvic viscera during pregnancy.—Acidity in afternoon with unpleasant, sickly sensation in stomach.—Tender over stomach and bowels, < least touch or motion.—Hollow, empty, weak, sinking feeling at epigastrium; without hunger.—Stitches in epigastrium from coughing.—Dyspepsia from calomel, aching behind eyes, clayey stools.—Gastric catarrh.—Awakened by violent pains in stomach and bowels.—After breakfast and dinner burning in stomach as if caused by hot steam.—Heat in stomach.—Cold water <; it = oppression and uneasiness; small quantities of it were ejected, tasting bitter and causing much burning in śsophagus.

12. Abdomen.—Acute burning in region of pyloric orifice, with violent retching and vomiting of bile and belching of wind; constipation; after attacks, prostration; slight jaundice and persistent tenderness to touch in one spot corresponding to entrance of common bile duct into duodenum.—Fulness in r. hypochondrium, with flatulence, pain, and soreness.—Twisting in r. hypochondrium with burning.—Stitches in hypochondria, < while eating.—Pain in region of liver with inclination to rub the part with the hand.—Excessive secretion of bile, great irritability of liver.—Hepatitis with costiveness; tenderness and pain in region of

liver.—Gall-stones and jaundice.—Biliousness; nausea and giddiness; bitter taste and risings; tendency to bilious vomiting and purging; dark urine.—Abdomen swelled almost to bursting (fruit).—Flatulence.—Abdominal plethora: bloated feeling; soreness, uneasiness; > after stool; causing uterine troubles.—Rumbling.—Colic.—Awakened by violent pains in stomach and bowels, griping, stitching, > for short time by pressure; 3 a.m. (first night).—Pain in transverse colon, 3 a.m., followed by diarrhśa.—Pain in limbs at daylight, > by external warmth and bending forward whilst lying on side, < lying on back.—Heat in bowels with inclination to stool.—Woke 2 a.m. with stitches in bowels and desire to go to stool; > flexing thighs or abdomen.—Symptoms generally, and esp. abdominal symptoms, < morning, > evening.—Tenderness over hypogastrium.—Pain extended into lower bowels and r. ovary.

13. Stool and Anus.—Emission of fetid flatus.—Morning diarrhśa, then no more stools during day.—Diarrhśa early in morning, continuing through forenoon, followed by natural stool in evening.—Diarrhśa immediately after eating and drinking.—Stools in morning, with strong urgings in bowels and heat and pain in anus.—Small, frequent, bilious stools with tenesmus.—Diarrhśa, yellow stools, one every hour for five hours.—Stools of pure blood (produced.—R. T. C.).—Infantile dysentery (cured.—R. T. C.).—Dysenteric diarrhśa.—Stools: thin, watery, green; green; muco-gelatinous with pain in sacrum; 4 a.m., yellow, undigested fćces, mixed with mucus, offensive; with violent tenesmus; burning, acrid, causing much bearing down during and after stool; with gagging and excessive thirst in children; gushing, watery, profuse, green, with sudden urging, often painless; offensive, < in hot weather; pasty; yellow, watery, with meal-like sediment; smelling like carrion; mucous and blood-streaked; black, only in morning; tar-like; changing colour.—Stool with much pain and deadly nausea.—Diarrhśa and constipation alternating every day or two, for several days after the most prominent symptoms had disappeared.—Diarrhśa with great sinking at epigastrium, sensation as if everything would drop through pelvis, prolapsus ani.—Small stools, yellow, watery, coming after meals with sick feeling, in pregnancy.—Diarrhśa from indigestion after eating canned fruit.—*Before* stool: intense nausea; sudden urging; loud gurgling as of water; rumbling in l. side; violent colic or absence of pain; prolapsus ani.—*During* stool: urging in bowels; heat and pain in anus; sensation as if genital organs would fall out; in women bearing down as from inactivity of rectum; nausea; gagging, tormina, and pain in lumbar region; colic or absence of pain; prolapsus ani; pains in sacrum; tenesmus.—*After* stool: extreme weakness and cutting pain in intestines; exhaustion, even after natural stool; flashes of heat running up back, cutting in bowels, severe and painful tenesmus; colic continues; faintness and pain in lumbar region; prolapsus ani; sore anus; sensation of emptiness in abdomen and rectum.—Aggravation of internal piles; rectum protrudes more than an inch after every stool, or sudden motion as sneezing, even during mental excitement; prolapse sometimes persists for days from swelling and congestion.—Prolapsus ani: in infants, stool bloody, or too large; with uterine

displacement.—Secretion of mucus from anus.—External piles, bleeding or not.—(Cancer of rectum.)

14. Urinary Organs.—Micturition painful; scanty with frequent voidings.—Urine: yellow, containing sediment; very red.—Diabetes mellitus and insipidus; chalky stool, urination immediately after drinking, frequent, profuse.—Urinary tenesmus.—Enuresis; (markedly < on lying down, hence at night.—R. T. C.).

15. Male Sexual Organs.—Sticking pain above pubes and in course of spermatic cords.—Diseases of prostate gland associated with rectal troubles.—Inflammation either of scrotum or of eyes; seldom of both.—Inflammation of scrotum is attended with a pustular eruption which suppurates freely.

16. Female Sexual Organs.—Symptoms of prolapsus uteri, with pain in sacrum, muco-gelatinous stools.—Sensation as if genital organs would fall out at stool.—After-pains with strong bearing down.—Pain in r. ovary and uterus.—Numb aching in l. ovary; heat down thigh; third month of pregnancy.—Pain in ovaries, esp. r.; extending down limbs.—Pain from r. ovary down anterior crural nerve, pain < as it descends; < straightening limb.—Shooting pain in r. ovary, before and during menses.—Ovarian tumour with pains extending up to shoulder.—Prolapsus uteri: with diarrhśa from washing; after over-lifting or straining; after parturition.—Induration of os uteri.—(Extreme tenderness of uterus, backache, sick feeling and enuresis on lying down.—R. T. C.).—Menorrhagia from straining.—Menses, retarded; with ovarian, hypogastric, and sacral pains, < from motion, > lying down.—Bearing down in abdomen and back during menses; ovarian pains running into thighs.—During pregnancy: swelling of labia; can lie comfortably only on stomach, early months; excessive vomiting.—Hćmorrhoids and prolapsus ani after confinement.—Pendulous abdomen.

17. Respiratory Organs.—Chronic bronchitis.—Inclination to breathe deep; sighing.—Sensation of suffocation on first lying down at night.—Bronchial asthma; < after catching cold.—Cough: loose, hacking; with remittent fever; dry; loose; rattling in chest, during dentition; from disease of liver.—Whooping-cough, with constipation and loss of appetite.

18. Chest.—Catarrh of chest during dentition.—Pneumonia.—Snapping in r. lung like breaking a thread, when taking a deep inspiration.—Pains in chest < by deep inspiration.—Oppression in chest with constant desire to breathe deep, which is prevented by feeling of constriction in chest.

19. Heart.—Sensation in chest as if heart ascending to throat.—Sticking (or stinging) in region of heart.—Palpitation: with a clucking sensation rising up to throat, obstructing respiration; from exertion or mental emotion; with heavy sleep and feeling of fatigue on waking; nervous, in consequence of excessive hepatic action.—Pulse: quick and small; slow, scarcely perceptible; pulseless.

20. Neck and Back.—Nape of neck stiff, muscles sore.—Pain under r. scapula.—Pain between shoulders, morning: with soreness, < night and morning, < by motion.—Pain in small of back, when walking or standing, with sensation of back bending inward.—Pain in lumbar region with sensation of coldness, < at night and from motion.—Pain in lumbar and sacral regions < during stool, and still < after.—Pain in loins < walking on uneven ground or from misstep.—Sacral pain.

21. Limbs.—Aching in limbs < night.—Weakness of joints, esp. knees.

22. Upper Limbs.—Pain in course of ulnar nerve of both arms.—Rheumatism in l. forearm and fingers.—Pains from head into neck and shoulders; fingers numb.—Weakness of wrists, sore to touch.

23. Lower Limbs.—Pain and weakness in l. hip, like rheumatism from cold; < by going up stairs.—Sharply defined ache in sacro-ischiadic foramen, with tenderness on pressure.—Slight paralytic weakness of l. side.—Heaviness and stiffness of knees as after a long walk.—Cracking in knee from motion.—Cramps in calves, thighs, and feet, with painless, watery stools.—Sharp pains in outer and upper portion of l. foot.

24. Generalities.—Faintness and emptiness after stool.—Prostration with the pain.—Stiffness on beginning to move.—Sudden shocks of jerking pains.

25. Skin.—Sallow skin; jaundice; also in children.—Skin moist with preternatural warmth.—Scabs on arms and legs.—Pustules slow in healing.—Rawness and itching of genitals; also pustules.—Cold, clammy skin.—Erysipelas.—Rubefaciant and vesicatory.—Intolerable itching of body and arms.—Urticaria.—Skin has peculiar odour in patients taking *Pod*. (Ussher).

26. Sleep.—Sleepiness: in daytime, esp. forenoon; with rumbling in bowels in morning.—Heavy sleep; fatigue on waking.—Drowsy, half-closed eyes, moaning, whining, esp. children.—Great restlessness, tossing about in bed, yawning and stretching, which > completely.—Rising up in sleep without waking.—Drowsiness or restless sleep, with grinding of teeth or rolling of head.—Worrying and sleepless early part of night, apparently from nervous irritability.—Sleep disturbed, full of confused dreams.—Rolled and tossed about, bed felt too hard; feeling as though head and shoulders lying too low.

27. Fever.—Chilliness while moving about during fever, and in act of lying down, with sweat immediately after.—Chilly at first on lying down in evening, followed by fever and sleep with talking and imperfect waking.—Chill 7 a.m.—Backache before chill.—During chill great loquacity.—Shaking and sensation of coldness continue some time after heat commences.—Heat begins during chill or whilst he is yet chilly.—Chilly with stool.—Pain in bowels first attended with coldness, which is

followed by heat and warm sweat.─Feverish during afternoon, with occasional chilliness, not > by heat of stove, but > by covering up warmly in bed.─Heat with violent pains in head; thirst; loquacity.─Flashes of heat running up back during stool.─Ravenous hunger with thirst during fever.─Bilious fever; bilious intermittent; remittent; infantile remittent; intermittent, quotidian, tertian, quartan.─Sweat: profuse, dropped off prover's fingers; of feet in evening; bathed in cold; warm on head and legs.─Sleep during sweat.

Polygonum.

POLYGONUM ACRE. P. punctatum, Ell. P. hydropiperoides, Pursh. Smart Weed. (North America.)

And

POLYGONUM HYDROPIPER. Persicaria urens. Water-pepper. (Britain.) Tincture of whole fresh plant. N. O. Polygonaceæ.

Clinical.─Amenorrhœa. Antrum, pain in. Blepharitis. Colic, flatulent. Cough. Diarrhœa.─Dysentery. Dysmenia. Dysuria. Eczema. Epilepsy. Gonorrhœa. Gravel. Hæmorrhoids. Heart, affections of. Hysteria. Laryngitis. Nephritis. Neuralgia. Orchitis. Prostatitis. Sciatica. Spermatic cord, pain in. Spleen, affections of. Strangury. Ulcers.

Characteristics.─*Polyg*. was proved by W. E. Payne and others. Additions by Ed. Bayard, included by Hering, appear in the Schema. "Smart Weed," says Hale, "is a popular domestic remedy throughout U.S.A. Applied externally it has the effect of a mustard plaister, and the leaves saturated with hot water are applied to relieve cramps and colic, and as an emollient in inflammation and sprains. The provers were all men, but clinical experience has shown a definite action in the female generative sphere, amenorrhœa, aversion to coitus, and congestion of the ovaries having been cured by it. Leading symptoms are: Aching pains in hips and loins, with weight and tension in pelvis, and "Tearing in groin, < right." The pains are: Lancinating, cutting, pulsating, shooting, wandering, and flashing. One prover described them as like aurora borealis, and a case of sciatica with pains of this description was cured with *Polyg*. The left temple was markedly affected; left side generally more so than right. Sensations of cold were numerous, and alternated or coincided with heat in the same or other parts. Coldness of right side of face when pain in left side was most severe. Burning in chest with cold feeling at pit of stomach. Feet burning, then suddenly cold. Diarrhœa, as with its relations, *Rheum* and *Rumex*, is marked, and also dysuria. There is excessive weakness, trembling, and sensitiveness to cold. Epilepsy and hysteria have been cured with it. The Polygonums are named by Gerarde "Arse-smarts." Burnett (who

prescribed *Polyg. hydropiper* under its name *Persicaria urens*) regarded it as a splenic, and as useful in old cases of syphilis. As a splenic he found it often required in cases of gout; and in gouty eczema with much irritation he used it with much benefit in the 6th, 12th, and 30th. *Peculiar Sensations* are: As of sudden rising of scalp. As if whole intestinal contents were fluid. As if hips drawn together. As of galvanic shock through lower extremities. The symptoms are < by cold; damp; change of temperature: this is the most characteristic condition. Warmth >. Pressure of clothing = distress. Lying down = pressure in occiput; dizziness and wavering of sight. Rising = sudden pain in occiput. Bending head down =, and bending head back >, pain in ears.

Relations.—*Compare:* Botan., Fago., Rheum, Rumex. Cough, diarrhœa, Rumex. Burning in mouth and throat, Caps. < Pressure of clothes, Lach. Headache waking him from sleep, Lach. Wandering pains, Puls., K. bi. < From cold and damp, Dulc., Merc., Rhus. > Bending head back, Seneg. Averse to coitus, Nat. m. Plumb. Also Asar., Caulo., Senec., Xanth.

Causation.—Cold. Damp. Sprains.

SYMPTOMS.

1. Mind.—Great depression followed by excessive irritability.—Gloomy views of life, dislike of change and excessive dread of death.

2. Head.—Dizziness.—Pulsative, acute pain in l. temple.—Under pressure of great weariness or excitement a dull, depressing pain through whole head, causing a sensation of torpor and strong desire to sleep, but inability to do so.—Pressure in back of head on lying down.—Pressure and soreness in head during menses.—Pain on sudden rising in back of head with pain over eyes.—Headache < in damp weather, > in moderately warm temperature.—Sensation of sudden rising of scalp, with extreme irritation and increased dry exfoliation.

3. Eyes.—Burning in eyeballs; dry sensation in lids.—Convulsive twitching in lids when closed and when lying down, dizziness and wavering of sight.—Inflammation of edges of lids.

4. Ears.—Dull hearing.—Ringing in ears.—Sudden sounds on tympanum, producing momentary cessation of hearing.—Acute pain in ear when bending head down; > bending head back.—Ear symptoms < in damp atmosphere.—Secretion of ears increased.

5. Nose.—Inflammation, smarting, raw feeling of Schneiderian membrane.—Tickling in nose.—Frequent sneezing as from cold.—Red, inflamed appearance of nostrils, with swollen sensation.—Feeling of congestion through eyes and nose.—Coldness in external nose.

6. Face.—Acute pain in l. face extending to temples, sometimes darting through whole l. side of head.—Excruciating pain and heat in l. side of face, < by cold or damp.—Coldness in r. face when pain most severe in l.—Pain in r. antrum as if proceeding up from a tooth (sound).

8. Mouth.—Gums tender.—Cold or cooling temperature in mouth, producing acute toothache.—Tongue: coated yellow; feels swollen.—Heat and burning: from root of tongue to pit of stomach; from tip of tongue to mouth and throat (r. upper).—Heat in roof of mouth with excitation of salivary glands.—Increased flow of hot saliva, gives no > to parched condition.—Saliva abundant and thin (before thin and scanty).—Taste: bitter; pungent, like pepper.

9. Throat.—Throat dry, hot, burning, with sense of excoriation.—Glands feel swollen; < from cold or moist air.—Contracted feeling in throat after swallowing, followed by thirst.

11. Stomach.—Appetite: voracious; lost.—Food tasteless.—Great thirst for cold water, yet drinking = nausea.—Nausea: as if proceeding from small intestines; with coldness in abdomen.—Acidity.—Weight in stomach.—Burning in stomach.—Cold feeling in stomach: with headache; with burning in chest.—Pressure of clothes = distress.—Pain on pressure followed by throbbing and distress.—Uneasiness in stomach and abdomen.

12. Abdomen.—Burning heat in stomach and bowels.—Tympanites and flatulent colic.—Cutting, lancinating, griping pains, with great rumbling as if whole intestinal contents were in a fluid state and in violent commotion, the movement proceeding from below up, producing nausea and disposition to vomit, with liquid fæces discharged with great force, with pain in loins.—Pain in hypogastric region, rectum, and anus.—Throbbing in l. inguinal glands.

13. Stool and Anus.—Copious stool followed by smarting in anus.—Straining at stool with mucous, jelly-like discharges.—Stools: yellowish green; hard, lumpy; dark, followed by burning in rectum.—Urging with discharge of much fetid flatus.—Tenesmus; with nausea; with pulsative pains in hips and loins.—Constipation alternating with diarrhœa.—Interior of anus studded with itching eminences, as from corrugation without contraction, a kind of hæmorrhoidal tumour.—Hæmorrhoids with itching and burning.—Pruritus ani (used as a wash).

14. Urinary Organs.—Inflammation of kidneys from cold.—Cutting pains along ureters to bladder.—Painful cutting and feeling of strangulation at neck of bladder while urinating, lasting long after.—Strangury.—During an attack of gonorrhœa extremely violent pains on urinating, causing him to tremble and cry.—Pulsating pain; pain; and burning in prostate on urinating.—Pains in bladder.—Deposit in

urine of mucus and phosphates.—Frequent and profuse discharge of clear, light, or straw-coloured urine.—Albumen.

15. Male Sexual Organs.—Pain in testicles, spermatic cords, and neck of bladder when urinating.—Itching at orifice of urethra and around glans with desire to urinate.—Itching and stinging of prepuce.—Pain and soreness in l. testis, extending along l. spermatic cord; occasionally darting at same time in r. cord and testis.—Loss of power and semen, sometimes followed by inflammation of glans.—Extremely convulsive action in the functional uses.

16. Female Sexual Organs.—Intense dislike to coition, followed by perturbation and irritation if approached; inaction of flow of secretions.—Aching pain in hips and loins, and sensation of weight and tension in pelvis.—Menses: absent; delayed, with distress and pain; too copious; tardy; fetid.—During menses: pressure and soreness in head; grinding pain through abdomen.—Congestive weakness and loss of power.—Congestion of ovaries; tearing sensation in groin, < r.—Burning in vagina.—Acrid, excoriating leucorrhœa.—Shooting pains through breasts, with great soreness, distension, and tenderness.

17. Respiratory Organs.—Stifling sensation in larynx; irritability of whole system; weakness of sexual function.—Constriction of larynx.—Crowding and pressure about larynx with irritation of bronchi.—Roughness as of adhesion of mucus to larynx, producing spasmodic hacking and hoarseness.—Hacking cough, < by change of temperature.—Dry cough, in night, excited by tickling, prickling-tingling in upper anterior part of chest, behind sternum; dry sensation in larynx when coughing.

18. Chest.—Sharp pain under r. scapula, extending into chest and pit of stomach, with heavy beating of heart and throbbing of carotids.—Pulsative pressive pains about xiphoid cartilage.—Cutting in l. chest.—Burning in chest with cold feeling in pit of stomach and shooting pains.

19. Heart.—Sharp, cutting, shooting pains in region of heart, extending to l. scapula.—Increased action of heart with loss of rhythm.

20. Neck and Back.—Awoke at midnight with lameness l. side neck to shoulder, making movement painful; with pulsative, wandering pains.—Pulsative pains in l. loin.—Aching in loins with pain around l. hip-joint.—Pain in back and at lower extremity, acute or drawing, lateral in its action, as if hips being drawn together (kidney affection).—Tearing and drawing in loins on exposure to cold, followed by lameness and soreness.

21. Limbs.—Trembling; bruised feeling; weakness in limbs.—Shooting pains in arms and back of legs.—Distension of blood-vessels in hands and feet.

22. Upper Limbs.—Pains in arms and inability or sense of weakness on lifting slightest weight.—Pains pulsating, intermittent, shooting, wandering, generally shooting down to finger-tips, sometimes shooting up.

23. Lower Limbs.—Sciatica; pain flashing like aurora borealis.—Pulsative pains in hips and loins with ineffectual urging and tenesmus.—Swelling of legs and feet.—Superficial ulcers and sores.

24. Generalities.—Pulsating, wandering, flashing pains, like aurora borealis.

25. Skin.—Skin dry.—Scarlet eruption round waist; itching, burning spasm.—Eczema.—Chronic erysipelatous inflammation.—Old and indolent ulcers.

26. Sleep.—Sleep, restless, uneasy, full of dreams.—Dreams: unremembered; laborious and fatiguing; of headache and wakes with headache.

27. Fever.—Alternation of heats and chills and chills and heats.—Feet alternately hot and cold; burning for an hour, then suddenly cold.—Profuse sweat and trembling of whole body from moderate exercise.

Boletus Laricis.

B. purgans. N. O. Fungi. Trituration.

Clinical.—Diarrhœa. Dysentery. Fever. Gall-bladder, affections of. Headache. Liver, diseases of.

Characteristics.—Burt proved the crude substance and the 3rd trituration. The gastro-enteric irritation common to the Fungi was very well marked.
Motion < headache.

Relations.—Compare. Agaric., &c. Coccul. (head hollow).

SYMPTOMS.

1. Mind.—Very gloomy and despondent.—Irritated at the least trifle.—Absent-minded.

2. Head.—Head feeling very light and hollow, with deep frontal headache and great faintness.

3. Eyes.—Agglutination of eyelids every morning, with dull, aching pains in eyeballs.

8. Mouth.—Teeth and gums very sore.—Tongue: white coat; thick yellow coat showing marks of teeth.—Taste: flat; coppery; unnatural, of all food; lost.

11. Stomach.—Feeling in fauces as if would vomit.—Nausea and vomiting.—Great faintness at epigastrium.

12. Abdomen.—Severe cutting pains in stomach every few minutes, with dull, aching distress in umbilicus, and loud rumbling in bowels all night.—Heavy dragging pains in liver, more in r. lobe.—Dull, burning distress; drawing; aching in r. lobe of liver with frontal Headache.—Sharp cutting pains in r. lobe of liver and whole dorsal region on full inspiration.—Sharp cutting pains near gall-bladder.—Burning distress in region of gall-bladder all afternoon, with sharp pains in stomach and heavy aching in whole liver, esp. r. lobe.—Severe, dull, aching distress just below stomach, causing great faintness.

13. Stool.—Straining after stool.—Stool: Thin, yellow papescent; mixed with something looking like oil in large and small drops; followed by aching in liver and umbilicus.—Black, lumpy, dry stools mixed with bile and mucus.—Stools of bile, mucus, and blood, with high fever.—Lienteria.

20. Back.—Dull, aching distress in back and legs.

24. Generalities.—Great restlessness after midnight.—Faintness after stool.—Aching distress in all joints.

27. Fever.—Chilliness along spine with frequent hot flashes of fever.—Disposition to yawn and stretch when chilly.—Face hot and flushed with severe frontal headache.—Hands hot and dry.—Waking at midnight two different nights in a profuse perspiration.

Polyporus Pinicola.

Polyporus pinicola. Pine agaric. N. O. Fungi. Tincture of fresh plant.

Clinical.—Anus, prolapse of. Constipation. Hæmorrhoids. Intermittent fever. Liver, affections of. Malar bone, pain in. Prolapsus ani. Rheumatism. Spleen, affections of. Tonsils, enlarged.

Characteristics.—The Pine agaric, *Pol. pin*., like the Larch agaric, *Polyporus officinalis* (described in this work as *Boletus Laricis*, its older and less correct name), was proved by Dr. Burt. The symptoms of the two have a very close resemblance, and many are common to both. Despondency; aching distress in many parts; stiffness of back; of fingers; enlarged tonsils with dysphagia and

constant inclination to swallow; neuralgic pains in head, face, and temples; pain in liver and spleen with diarrhœa or constipation and piles—these are the chief features of the proving. Hale says it is a remedy for ague in the Middle and Southern States, taken during the intermission macerated in whisky. Quotidian fevers, he says, are most suited to it. The symptoms are < by motion; by walking; > by rest. < In damp air. < After stool.

Relations.—*Compare:* Bol. lar., Bol. lur., Agar.

SYMPTOMS.

1. Mind.—Despondency with the pain.—Gloomy; spells of depression.—Wants to get away out of sight and lie down.

2. Head.—Congestion to head and face; vertigo when walking; lightness; fulness.—Severe headache, < reading or walking; with soreness over eyes.—Sharp, neuralgic, cutting pains in temples.

3. Eyes.—Smarting in eyes.—Dull pains in eyeballs.—Agglutination of lids.

5. Nose.—Nostrils constantly filled with thick yellow mucus.

6. Face.—Face congested.—Severe aching distress in r. malar bone, with neuralgic pains in temples.

8. Mouth.—Tongue: coated white; yellow.—Taste: sweet, flat; flat, rough; slimy, coppery.

9. Throat.—Throat dry, sore, frequent inclination to swallow.—Tonsils much congested, enlarged; frequent efforts to swallow, quite painful.

11. Stomach.—Sour eructations.—Nausea.—Burning in stomach and dragging in r. hypochondrium.—Constant very severe distress in lower epigastrium, causing faintness; < by pressure and by walking.—Severe pain in epigastrium all morning.

12. Abdomen.—Dull, dragging, drawing, aching, burning in both hypochondria.—Pain and distress in liver; and all dorsal region; < walking.—Distress and colicky pains in umbilical and hypogastric regions.—Rumbling.—Hard, distressing, sickening pain in hypogastrium, causing faintness; followed by stool.—Drawing in r. groin.

13. Stool and Anus.—Stool: ran from bowels in deep yellow stream; loose; hard, dry, lumpy, then mushy; lumpy with mucus and bile; costive, hard, dry lumps, brought on piles and slight prolapsus ani.

14. Urinary Organs.—Urine scanty and high coloured.

17. Respiratory Organs.—Pressing sensation in larynx with dryness of fauces.

19. Heart.—Burning distress in præcordial region; sharp pains on full inspiration.—Pulse soft, feeble.

20. Back.—Back stiff.—Aching in back; and hips.—Felt ill with aching and sore sensations along spinal column.

21. Limbs.—Constant rheumatic, drawing pains in fingers, wrists, knees, ankles, feet.

22. Upper Limbs.—Drawing in elbows and flexor muscles of both arms.—Fingers ache; feel quite stiff.

23. Lower Limbs.—Hips ache.—Drawing inside r. thigh.—Sharp pain in r. tibia.—Hard, drawing pains in knees and ankles, causing restlessness.—Aching distress, weakness of ankles and feet, walking very difficult.—Soles of feet and heels feel as if pounded; < when boots on.

24. Generalities.—Rheumatic pains in every part of the body < in damp weather.

26. Sleep.—Sleepy, yawning, and stretching.—Wakeful after 3 a.m.

27. Fever.—Paroxysms of chilliness, cold shivering sensations followed by feverishness.—Chills and a shivering sensation.—Face hot, flushed.—Hands and palms hot and dry.—Slight perspiration.

Populus Candicans.

A variety of P. balsamifera. Balm of Gilead. [This name applies especially to the variety P. candicans; but also to all P. balsamiferæ. In England the name "Balm of Gilead tree" is given to the Black Italian Poplar, which abounds in Italy, but the origin of which is not known.] N. O. Salicaceæ. Tincture of the resinous buds.

Clinical.—Aphonia. Asthma. Brain, base of, congested. Bullæ. Catarrhal fever. Constipation. Coryza. Dysmenia. Dyspepsia. Dysphagia. Ecthyma. Heart, affections of. Hydroa. Liver, enlargement of. Phosphaturia. Sunstroke. Throat, burning in; paralysis of. Vagina, burning in.

Characteristics.—C. F. Nichols (*H. P.*, viii. 234) gives an account of *Pop. cand.*, the effects of which he observed. "The resinous gum exuding from buds and stalks, deliciously aromatic in perfume, is widely used to heal wounds, open sores, and

eruptions, and often suppresses these latter to the harm of the patient." As an application, Nichols says, it is like *Arn*., dangerous, though most people are not susceptible to its poisonous effect. He has never seen blisters of the size of those of *Pop. c*. produced by any other drug: blisters hang down like bags of water the size of walnuts. Burning was a common symptom-eyes, nose, throat, bowels, vagina. W. C. Stilson (*H. P*., xi. 88) relates a case of poisoning in a man who one evening drank rum in which Balm of Gilead buds had been placed for making a liniment. A few hours later his wife heard him breathing heavily, and on waking him found he could not speak. Stilson found him only able to speak in hoarse whispers, and he would forget in the middle of a sentence what he was going to say. Face ashy pale; wild look. Tongue and mouth dry. Throat dry, burning, constricted, felt as if spiders had spun webs on it. It was some days before he recovered. Since this occasion Stilson has cured several cases of catarrhal hoarseness and aphonia with *Pop. c*., and one case of nervous aphonia: Mrs. S. had nervous prostration, and during the attack aphonia. The aphonia remained after the patient got well otherwise. *Pop. c*. Ø cured. Among the *peculiar symptoms* observed by Nichols is surface anæsthesia with or without numbness. The finger-ends are actually thickened, horny, insensible to pinching and pricking. There is numbness in back radiating from spine. The skin is harsh, generally dry and cold, with a stinging burning behind the surface as if an eruption would appear; or as if sweat would break out. Other *peculiar sensations* are: Whole body feels swollen, bruised, lame, sore, and painful, exhausted as in dry, sultry weather. Eye feels twisted with the headache. Constipation, bowels feel hot and dry. The menses were at first scanty, later abundant and early, with dysmenorrhœal pain > by application of hot cloths. The symptoms were < on moving. < Before menses. < After food and drink. < Lifting arms. < By contact of clothes. > Hot applications. < After sleep (mind).

Relations.—*Antidoted by:* Rhus. *Compare:* Salix, Pop. trem., Salicylates. < Contact of clothes, Lach.

SYMPTOMS.

1. Mind.—Hopeless foreboding < after sleep.—Fear and anguish.—Expectation of death.—Feels as if the will were paralysed.—Loquacity.—Vanishing of thought.—Forgets to finish a sentence.—Voices sound distant and words just spoken seem as if uttered long ago; objects seem multiplied.

2. Head.—Vertigo from lifting head.—Vertigo and heat of head as if scorched by sun.—Confusion in head, with expansive fulness, all parts feel lame, swollen, inflamed, thickened, painful, burning, throbbing in head and brain, < cerebellum and cerebro-spinal axis, dulness of the senses as from congestion.—Boring through l. temple.—Weight on vertex.

3. Eyes.—Sensation as if l. eye were twisted during the headache.—Burning irritation in eyes, nose, mouth, throat, and air passages.

6. Face.—Face yellow.—Burning prickling on face.

8. Mouth.—Tongue: white, dry; feels thick and numb.—Tongue and mouth feel burnt and dry, but are moist, wants drink, but can take only a little, < after food and drink.—Speech thick.—Taste: bitter; sweet in morning.

9. Throat.—Distressing burning in throat, as from swallowing hot fat.—Throat red, dry, burning; felt as if spiders had spun webs in it.—Deficient power of deglutition; food stops in œsophagus or is passed with difficulty.

10. Appetite.—Appetite lost, loathes meat.—Nothing relished.—Hungry but dares not eat for fear of choking.

11. Stomach.—Belching of gas feeling like hot steam.—Nausea with sinking in epigastrium.—Vomits bile.

12. Abdomen.—Wears her clothes loose.—Flatulent colic doubling the body forward.—Pain in r. hypochondrium with enlargement.

13. Stool.—Stools watery, green, alternating with constipation.—Constipation, bowels feel hot and dry.—Stools small, round, preceded by cramps in abdomen; lack of expulsive power.

14. Urinary Organs.—Urine: strong, high coloured, hot, scanty; increased, variously coloured, red, dark, light, phosphates abundant.—Urine dark, straw colour; smoky.

16. Female Sexual Organs.—Menses scanty, usually delaying, afterwards absent, then abundant, early, with dysmenorrhœa, > hot cloths.—Vagina burns as if scalded.

17. Respiratory Organs.—Hoarseness.—Aphonia.—Dry cough when tired.—Cough caused by "cobwebs" in his throat.—Suffocation.—Breathing dry, asthmatic, with dyspnœa, sits bent forward, < lifting arms.

18. Chest.—Pulmonic, cardiac, and capillary circulation oppressed, feels as if death must result, as if there must be fatal organic lesions.

19. Heart and Pulse.—Pain in heart, stitches.—Heart's sound irregular, usually muffled, with a systolic murmur, < before menses.—Palpitation when rising or lying on l. side, with vertigo.—Pulse rarely exceeded 60.

20. Back.—Numbness in back radiating from spine.—Burning weariness in small of back.

22. Upper Limbs.—Finger-ends thickened, horny, insensible to pinching and pricking.—Nails blue as in ague (not thickened).

24. Generalities.—Emaciation.—Rheumatic and gouty pains to ends of fingers and toes.—Whole body feels swollen, bruised, lame, sore, and painful, exhausted as in dry, sultry weather, movements heavy, laboured, clumsy, stinging, restless irritation as if an eruptive fever would come to the surface, feeling as if sweat would break out.—Burning irritation of eyes, nose, skin, mucous membrane of mouth, throat, and air passages, and oppression of respiration and circulation.—Catarrhal feverish state of mucous surfaces.—Weakness.—Stiffness of muscles, tendons, ligaments, with lameness and with dry feeling in cartilages, as if lame.—Insensibility of surface, < back and abdomen, so that rubbing and pounding were borne without pain and insisted upon for the sake of warmth.—< Morning; < before menses.

25. Skin.—Skin harsh, generally dry and cold, with burning-stinging below the surface, as if eruption would appear, rarely blotches and fine papules.—Burning prickling on face, chest, and hands, the parts became dark red and swollen, and there were blisters as large as walnuts, hanging down like bags of water, with watery, acrid, sticky oozing, external heat like coals of fire on skin, at times internal heat, with cool skin, > hot applications, the eruption returned each year with fear and expectation of death, loquacity, discussing repeatedly her symptoms, vertigo from lifting head.

26. Sleep.—Sleepless after midnight, with restlessness, < from early morning till noon.—Dreams: frightful, vivid; fearful after fitful sleep.

27. Fever.—Sudden coldness of extremities, with numbness of them and heat of head.—Fever and unrest.—Fever with congestion of brain, fulness, heaviness, dulness, soreness, with expansive pressure, as if swollen, deadening heat in head as if scorched by the sun, vertigo, oppression of vital forces and circulation as if over-heated, fatigue, faintness, and burning, throbbing oppression.—Dry heat.—Heat of cerebellum and neck, with feeling as if the capillary circulation were congested and oppressed.—Sweat on head and neck.

Populus Tremuloides.

Aspen Poplar. (The American Aspen; the British Aspen is P. tremula.) N. O. Salicaceæ. Tincture of inner bark. Solution of Populin.

Clinical.—Ardor urinæ. Bladder, catarrh of. Gleet, chronic. Prostatic affections.

Characteristics.—The few symptoms of the Schema were provided by Paine (eclectic), whom Hale quotes. Paine used *Pop. t*. in affections of the bladder, urethra, and prostate. Hale confirms its action in vesical tenesmus and inflammation of the neck of the bladder. He gives this case: A lady had metritis, vaginismus, and cystitis, and was apparently cured. A ride on the cars brought back: Weight, pressure, and aching in pelvis and vesical tenesmus with frequent desire to urinate. *Pop. p*. 3x removed all these symptoms in three days. In the cases cured by Hale he says there was little pain during urination, but as soon as the last drops were voided, or a little before, a severe cramp-like pain just behind pubes lasting ten to fifteen minutes.

Relations.—*Follows well:* Cannab., Canth. (succeeded after they had only partially helped). *Compare:* Pop. can., Sal. nig., Gaulth., Salicin, and Salicylates.

SYMPTOMS.

1. Mind.—General nervous excitement.

11. Stomach.—Nausea and vomiting.—Warm pungent sensation; (or from larger doses) fierce burning sensation in stomach.

13. Stool.—Slight purging of bilious matter.

14. Urinary Organs.—Very copious discharge of urine; irritation of bladder and urethra.

27. Fever.—Warmth in stomach followed by glow of heat on entire surface.

Ictodes Fœtida.

Pothos fœtidus. Symplocarpus fœtidus. Skunk-weed. Skunk Cabbage. N. O. Orontiaceæ (Calliaceæ, Orontoidæ, allied to Araceæ). Tincture of whole fresh plant-including root.

Clinical.—Asthma. Catarrh. Cough. Dropsy. Herpes. Hysteria. Rheumatism.

Characteristics.—The *Treasury of Botany* thus epitomises the traditional uses of this plant in medicine: "The roots in cases of asthma; the leaves as an application to ulcers. The seeds are also considered to be anti-spasmodic, and useful in coughs." Hering and others proved it, and largely confirmed its popular reputation, as also its clinical relationship to the *Arum* family. Burning sensations from fauces down throat; enlarged glands of throat; swelling of nose and sneezing; spasmodic cough

and skin affections are common to *Ictod*. and the *Arums*. Motion <. All complaints > in open air. Asthma is < or caused by dust.

Relations.—*Compare:* Arum t., Asaf., Meph.

SYMPTOMS.

1. Mind.—Cross; impetuous; inclined to contradict.—Absence of mind and inattention; enters sick-room without knocking, does not listen to patient.

2. Head.—Vertigo and dimness of sight.—Headache in single places, lasting a short while, then changing place; dulness; pressing in temples, now more in one, then more in the other, with violent pulsation of arteries.—Drawing in forehead in two lines from protuberances to glabella, where it draws outward as from a magnet.

5. Nose.—The nose is swollen as far as the nasal bones extend, red like a saddle, sore to touch, < l. side.—Cartilage cold and bloodless, with red spots on cheeks and small pimples on l. side of face.—Violent sneezing, with pains in palate, fauces, and œsophagus to stomach, hurting for a while after in cardiac end of stomach.

6. Face.—Swollen submaxillary glands.

7. Teeth and Gums.—Scurvy.

8. Mouth.—Numbness of tongue, cannot touch teeth with it.—Papillæ elevated.—Tongue red and sore on tip and edges.

9. Throat.—Burning from fauces downwards through chest.—Œsophagus painful on sneezing.

10. Appetite.—Inclined to smoke, but it does not taste good.

11. Stomach.—Nausea and vomiting.—With every firm step, pain in pit of stomach as from something breaking loose.

12. Abdomen.—Expansion and tension in abdomen.—Pain in abdomen here and there in single spots.—When walking, sensation as if the entrails were hanging loose and flabby without any pain.

14. Urinary Organs.—Great urging; urine darker.

15. Male Sexual Organs.—Titillation, voluptuous but painful, around corona glandis.

16. Female Sexual Organs.—Amenorrhœa.
